[\*>==-----HACKING TELENET-----==<\*>]

by:- The Flash

Uploaded by Elric of Imrryr

For Those Who Like Living Dangerously:

These are Telenet access codes. Telenet is a system by which one can access almost every data-base and mainframe on the continantal U.S. Most of these codes do not have passwords with them, so you will have to hack those out yourselves. But be weary. M ore than one group of hackers have gotten busted for using this system for hacking into mainfraimes. An example is the 414's. If you read about them in newsweek, it's pretty scary.

What to do-

The first thing you have to do if you want to hack with Telenet, is find your local Telenet phone number. This can be done many ways. One way that always works, is to call up your local computer store, tell them that you recently purchased The Source o r something like that, but that you lost the sheet that has the phone # written on it. They'll tell it to you. (People who work in computer stores usualy aren't very smart about that sort of thing. (No offence white Eagle.))

Call the number with your computer. Once connection is established, press <RETURN> twice. the computer will display "TERMINAL=" Type <RETURN> again. The computer will then display an at sign: "@" Type in the access code here. Happy Hacking!

Access Codes
