[The Little Creeps](#), Amazing: Dec 1951

[No Moon for Me](#), Astounding: Sept 1952

[Please Me Plus Three](#), Other Worlds, Aug 1952

[Secret of the Death Dome](#), Amazing Stories: Jan 1951

[Six and Ten Are Johnny](#), Fantastic: Summer 1952

[The Song of Marya \(aka Vengeance for Nikolai\)](#), Venture, Mar 1957

[The Song of Vorhu](#), Thrilling Wonder Stories: Dec 1951

[The Soul-Empty Ones](#), Astounding: Aug 1951

[The Space Witch](#), Amazing: Nov 1951

[The Ties that Bind](#), IF: May 1954

[The Triflin' Man \(aka You Triflin' Skunk\)](#), Fantastic Universe: Jan 1955

[Way of a Rebel](#), IF: April 1954

[The Will](#), Fantastic: Jan/Feb 1954

[Wolf Pack](#), Fantastic: Sept/Oct 1953

[The Yokel](#), Amazing: Sept 1953

## **Introduction**

You are holding in your hands (or, more likely, on your hard drive) the complete science fiction of Walter M Miller Jr. Alas, it is not his complete works. There are at least two stories I could not find, 'MacDoughal's Wife' in *American Mercury* (March 1950) and 'Month of Mary' in *Extension Magazine* (May 1950), both of which are non-genre. If anyone has a copy of either of those magazines, please scan those stories, and mail a copy to gorgon776@hotmail.com.

For a good summary of Miller's works, see  
<http://www.depauw.edu/sfs/backissues/8/samuelson8art.htm>.

The stories are presented here in alphabetical order, and were scanned from original sources whenever possible. When available, the original artwork is included.

I scanned and proofed these stories because I have been a Miller fan ever since I read *A Canticle for Leibowitz*. When I started looking for other works by him, I found a few easily...and then the supply dried up. It took almost five years for me to find copies of everything he has written, and it was expensive both in time and money. Many of these stories were never re-printed, and because of tangled copyrights, probably never will be.

That's a shame, but it isn't enough reason to let his stories die, so here they are.

## Novels

The novel "The Reluctant Traitor" is usually included as a novella in bibliographies of Miller's work, but its' length qualifies it (barely) as a novel, so is included as such here.

## A Canticle For Leibowitz

### Fiat Homo

1

## B

rother Francis Gerard of Utah might never have discovered the blessed documents, had it not been for the pilgrim with girded loins who appeared during that young novice's Lenten fast in the desert.

Never before had Brother Francis actually seen a pilgrim with girded loins, but that this one was the bona fide article he was convinced as soon as he had recovered from the spine-chilling effect of the pilgrim's advent on the far horizon, as a wiggling iota of black caught in a shimmering haze of heat. Legless, but wearing a tiny head, the iota materialized out of the mirror glaze on the broken roadway and seemed more to writhe than to walk into view, causing Brother Francis to clutch the crucifix of his rosary and mutter an Ave or two. The iota suggested a tiny apparition spawned by the heat demons who tortured the land at high noon, when any creature capable of motion on the desert (except the buzzards and a few monastic hermits such as Francis) lay motionless in its burrow or hid beneath a rock from the ferocity of the sun. Only a thing monstrous, a thing preternatural, or a thing with addled wits would hike purposefully down the trail at noon this way. Brother Francis added a hasty prayer to Saint Raul the Cyclopean, patron of the misborn, for protection against the Saint's unhappy protégés. (For who did not then know that there were monsters in the earth in those days? That which was born alive was, by the

law of the Church and the law of Nature, suffered to live, and helped to maturity if possible, by those who had begotten it. The law was not always obeyed, but it was obeyed with sufficient frequency to sustain a scattered population of adult monsters, who often chose the remotest of deserted lands for their wanderings, where they prowled by night around the fires of prairie travelers.) But at last the iota squirmed its way out of the heat risers and into clear air, where it manifestly became a distant pilgrim; Brother Francis released the crucifix with a small Amen.

The pilgrim was a spindly old fellow with a staff, a basket hat, a brushy beard, and a waterskin slung over one shoulder. He was chewing and spitting with too much relish to be an apparition, and he seemed too frail and lame to be a successful practitioner of ogre-ism or highwaymanship. Nevertheless, Francis slunk quietly out of the pilgrim's line of sight and crouched behind a heap of rubbled stone where he could watch without being seen. Encounters between strangers in the desert, while rare, were occasions of mutual suspicion, and masked by initial preparations on both sides for an incident that might prove either cordial or warlike. Seldom more than thrice annually did any layman or stranger travel the old road that passed the abbey, in spite of the oasis which permitted that abbey's existence and which would have made the monastery a natural inn for wayfarers if the road were not a road from nowhere, leading nowhere, in terms of the modes of travel in those times. Perhaps, in earlier ages, the road had been a portion of the shortest route from the Great Salt Lake to Old El Paso; south of the abbey it intersected a similar strip of broken stone that stretched east-and westward. The crossing was worn by time, but not by Man, of late.

The pilgrim approached within hailing distance, but the novice stayed behind his mound of rubble. The pilgrim's loins were truly girded with a piece of dirty burlap, his only clothing except for hat and sandals. Doggedly he plodded ahead with a mechanical limp while assisting his crippled leg with the heavy staff. His rhythmic gait was that of a man with a long road behind him and a long way yet to go. But, upon entering the area of the ancient ruins, he broke his stride and paused to reconnoiter.

Francis ducked low.

There was no shade amid the cluster of mounds where a group of age-old buildings once had been, but some of the larger stones could, nevertheless, provide cooling refreshment to select portions of the anatomy for travelers as wise in the way of the desert as the pilgrim soon proved himself to be. He searched briefly for a rock of suitable proportions. Approvingly, Brother Francis noted that he did not grasp the stone and rashly tug, but instead, stood at a safe distance from it and, using his staff as a lever and a smaller rock for a fulcrum, he jostled the weightier one until the inevitable buzzing creature crawled forth from below. Dispassionately the traveler killed the snake with his staff and flipped the still wriggling carcass aside. Having dispatched the occupant of the cool cranny beneath the stone, the pilgrim availed himself of the cool cranny's ceiling by the usual method of overturning the stone. Thereupon, he pulled up the back of his loincloth, sat with his withered buttocks against the stone's relatively chilly underside, kicked off his sandals, and pressed the soles of his feet against what had been the sandy floor of the cool cranny. Thus refreshed, he wiggled his toes, smiled toothlessly and began to hum a tune. Soon he was singing a kind of crooning chant in a dialect not known to the novice. Weary of crouching, Brother Francis shifted restlessly.

While he sang, the pilgrim unwrapped a biscuit and a bit of cheese. Then his singing paused, and he stood for a moment to cry out softly in the vernacular of the region: "Blest be *Adonoi Elohim*, King of All, who maketh bread to spring forth from the earth," in a sort of nasal bleat. The bleat being finished, he sat again, and commenced eating.

The Wanderer had come a long way indeed, thought Brother Francis, who knew of no adjacent realm governed by a monarch with such an unfamiliar name and such strange pretensions. The old man was making a penitential pilgrimage, hazarded Brother Francis—perhaps to the "shrine" at the abbey, although the "shrine" was not yet officially a shrine, nor was its "saint" yet officially a saint. Brother Francis could think of no alternate explanation of the presence of an old wanderer on this road leading to nowhere.

The pilgrim was taking his time with the bread and cheese, and the novice grew increasingly restless as his own anxiety waned. The rule of silence for the Lenten fast days did not permit him to converse

voluntarily with the old man, but if he left his hiding place behind the rubble heap before the old man departed, he was certain to be seen or heard by the pilgrim, for he had been forbidden to leave the vicinity of his hermitage before the end of Lent.

Still slightly hesitant, Brother Francis loudly cleared his throat, then straightened into view.

“Whup!”

The pilgrim’s bread and cheese went flying. The old man grabbed his staff and bounded to his feet.

“Creep up on me, will you!”

He brandished the staff menacingly at the hooded figure which had arisen from beyond the rock pile. Brother Francis noticed that the thick end of the staff was armed with a spike. The novice bowed courteously, thrice, but the pilgrim overlooked this nicety.

“Stay back there now!” he croaked. “Just keep your distance, sport. I’ve got nothing you’re after—unless it’s the cheese, and you can have that. If it’s meat you want, I’m nothing but gristle, but I’ll fight to keep it. Back now! *back!*”

“Wait—” The novice paused. Charity, or even common courtesy, could take precedence over the Lenten rule of silence, when circumstances demanded speech, but to break silence on his own decision always left him slightly nervous.

“I’m not a sport, good simpleton,” he continued, using the polite address. He tossed back his hood to show his monastic haircut and held up his rosary beads. “Do you understand these?”

For several seconds the old man remained in catlike readiness for combat while he studied the novice’s sun-blistered, adolescent face. The pilgrim’s had been a natural mistake. Grotesque creatures who prowled the fringes of the desert often wore hoods, masks, or voluminous robes to hide deformity. Among them were these whose deformity was not limited to the body, those who sometimes looked on travelers as a dependable source of venison.

After a brief scrutiny, the pilgrim straightened.

“Oh—one of *them*.” He leaned on his staff and scowled.

“Is that the Leibowitz Abbey down yonder?” he asked, pointing toward the distant cluster of buildings to the south.

Brother Francis bowed politely and nodded at the ground.

“What are you doing out here in the ruins?”

The novice picked up a chalklike fragment of stone. That the traveler might be literate was statistically unlikely, but Brother Francis decided to try. Since the vulgar dialects of the people had neither alphabet nor orthography, he chalked the Latin words for “Penance, Solitude, and Silence,” on a large flat stone, and wrote them again below in ancient English, hoping, in spite of his unacknowledged yearning for someone to talk to, that the old man would understand and leave him to his lonely Lenten vigil.

The pilgrim smiled wryly at the inscription. His laugh seemed less a laugh than a fatalistic bleat. “Hmmm-hnnn! Still writing things backward,” he said; but if he understood the inscription, he did not condescend to admit it. He laid aside his staff, sat on the rock again, picked his bread and cheese out of the sand, and began scraping them clean. Francis moistened his lips hungrily, but looked away. He had eaten nothing but cactus fruit and one handful of parched corn since Ash Wednesday; the rules of fast and abstinence were rather strict for vocational vigils.

Noticing his discomfort, the pilgrim broke his bread and cheese; he offered a portion to Brother Francis.

In spite of his dehydrated condition, caused by his meager water supply, the novice’s mouth flooded with saliva. His eyes refused to move from the hand that offered the food. The universe contracted; at its exact geometric center floated that sandy tidbit of dark bread and pale cheese. A demon commanded the muscles of his left leg to move his left foot half a yard forward. The demon then possessed his right leg to move the right foot ahead of the left, and it somehow forced his right pectorals and biceps to swing his arm until his hand touched the hand of the pilgrim. His fingers felt the food; they seemed even to taste the food. An involuntary shudder passed over his half-starved body. He closed his eyes and saw the Lord Abbot glaring at him and brandishing a bullwhip. Whenever the novice tried to visualize the Holy Trinity,

the countenance of God the Father always became confused with the face of the abbot, which was normally, it seemed to Francis, very angry. Behind the abbot a bonfire raged, and from the midst of the flames the eyes of the Blessed Martyr Leibowitz gazed in death-agony upon his fasting protégé, caught in the act of reaching for cheese.

The novice shuddered again. “*Apaga Satanas!*” he hissed as he danced back and dropped the food. Without warning, he spattered the old man with holy water from a tiny phial sneaked from his sleeve. The pilgrim had become indistinguishable from the Archenemy, for a moment, in the somewhat sun-dazed mind of the novice.

This surprise attack on the Powers of Darkness and Temptation produced no immediate supernatural results, but the natural results seemed to appear *ex opere operante*. The pilgrim-Beelzebub failed to explode into sulfurous smoke, but he made gargling sounds, turned a bright shade of red, and lunged at Francis with a bloodcurdling yell. The novice kept tripping on his tunic as he fled from flailing of the pilgrim’s spiked staff, and he escaped without nail holes only because the pilgrim had forgotten his sandals. The old man’s limping charge became a skippity hop. He seemed suddenly mindful of scorching rocks under his bare soles. He stopped and became preoccupied. When Brother Francis glanced over his shoulder, he gained the distinct impression that the pilgrim’s retreat to his cool spot was being accomplished by the feat of hopping along on the tip of one great toe.

Ashamed of the odor of cheese that lingered on his fingertips, and repenting his irrational exorcism, the novice slunk back to his self-appointed labors in the old ruins, while the pilgrim cooled his feet and satisfied his wrath by flinging an occasional rock at the youth whenever the latter moved into view among the rubble mounds. When his arm at last grew weary, he flung more feints than stones, and merely grumbled over his bread and cheese when Francis ceased to dodge.

The novice was wandering to and fro throughout the ruins, occasionally staggering toward some focal point of his work with a rock, the size of his own chest, locked in a painful embrace. The pilgrim watched him select a stone, estimate its dimensions in hand-spans, reject it, and carefully select another, to be pried free from the rock jam of the rubble, to be hoisted by Francis and stumblingly hauled away. He dropped one stone after a few paces, and, suddenly sitting, placed his head between his knees in an apparent effort to avoid fainting. After panting awhile, he arose again and finished by rolling the stone end-over-end toward its destination. He continued this activity while the pilgrim, no longer glaring, began to gape.

The sun blazed its midday maledictions upon the parched land, laying its anathema on all moist things. Francis labored on in spite of the heat.

When the traveler had washed down the last of his sandy bread and cheese with a few squirts from his waterskin, he slipped feet into sandals, arose with a grunt, and hobbled through the ruins toward the site of the novice’s labors. Noticing the old man’s approach, Brother Francis scurried to a safe distance. Mockingly, the pilgrim brandished his spiked cudgel at him, but seemed more curious about the youth’s masonry than he seemed eager for revenge. He paused to inspect the novice’s burrow.

There, near the east boundary of the ruins, Brother Francis had dug a shallow trench, using a stick for a hoe and hands for a shovel. He had, on the first day of Lent, roofed it over with a heap of brush, and used the trench by night as refuge from the desert’s wolves. But as the days of his fasting grew in number, his presence had increased his spoor in the vicinity until the nocturnal lupine prowlers seemed unduly attracted to the area of the ruins and even scratched around his brush heap when the fire was gone.

Francis had first attempted to discourage their nightly digging by increasing the thickness of the brush pile over his trench, and by surrounding it with a ring of stones set tightly in a furrow. But on the previous night, something had leaped to the top of his brush pile and howled while Francis lay shivering below, whereupon he had determined to fortify the burrow, and, using the first ring of stones as a foundation, had begun to build a wall. The wall tilted inward as it grew; but since the enclosure was roughly an oval in shape, the stones in each new layer crowded against adjacent stones to prevent an inward collapse. Brother Francis now hoped that by a careful selection of rocks and a certain mount of juggling, dirt-tamping, and pebble-wedging, he would be able to complete a dome. And, a single span of

unbuttressed arch, somehow defying gravity, stood there over the burrow as a token of this ambition. Brother Francis yelped like a puppy when the pilgrim rapped curiously at this arch with his staff.

Solicitous for his abode, the novice had drawn nearer during the pilgrim's inspection. The pilgrim answered his yelp with a flourish of the cudgel and a bloodthirsty howl. Brother Francis promptly tripped on the hem of his tunic and sat down. The old man chuckled.

"Hmmm-hnnn! You'll need a strange shape of a rock to fit that gap," he said, and rattled his staff back and forth in a vacant space in the highest tier of stones.

The youth nodded and looked away. He continued to sit in the sand, and, by silence and by his lowered gaze, he hoped to tell the old man that he was neither free to converse nor free to accept willingly another's presence in his place of Lenten solitude. The novice began writing with a dry twig in the sand: *Et ne nos inducas in...*

"I've not offered to change these stones into bread for you yet, have I?" the old traveler said crossly.

Brother Francis glanced up quickly. So! the old man *could* read, and read Scripture, at that. Furthermore, his remark implied that he had understood both the novice's impulsive use of holy water and his reason for being here as well. Aware now that the pilgrim was teasing him, Brother Francis lowered his eyes again and waited.

"Hmmm-hnnn! So you're to be left alone, are you? Well, then, I'd best be on my way. Tell me, will your brothers at the abbey let an old man rest a bit in their shade?"

Brother Francis nodded. "They'll give you food and water too," he added softly, in charity.

The pilgrim chuckled. "For that, I'll find you a rock to fit that gap before I go. God with you."

*But you need not*—The protest died unspoken. Brother Francis watched him hobbling slowly away. The pilgrim wandered in and about among the rubble mounds. He paused occasionally to inspect a stone or pry at one with his staff. His search would surely prove fruitless, the novice thought, for it was a repetition of a search which the youth himself had been making since mid-morning. He had decided at last that it would be easier to remove and rebuild a section of the highest tier than to find a keystone that approximated the hourglass shape of the gap in that tier. But, surely, the pilgrim would soon exhaust his patience and wander on his way.

Meanwhile, Brother Francis rested. He prayed for the recovery of that inward privacy which the purpose of his vigil demanded that he seek: a clean parchment of the spirit whereon the words of a summons might be written in his solitude—if that other Immensurable Loneliness which was God stretched forth Its hand to touch his own tiny human loneliness and to mark his vocation there. The *Little Book*, which Prior Cherokee had left with him on the preceding Sunday, served as a guide to his meditation. It was centuries old, and it was called *Libellus Leibowitz*, although only an uncertain tradition attributed its authorship to the Beatus himself.

"*Parum equidem te diligebam, Domine, juventute mea; quare doleo nimis . . .* Too little, O Lord, did I love Thee in the time of my youth; wherefore I grieve exceedingly in the time of my age. In vain did I flee from Thee in those days..."

"Hoy! Over here!" came a shout from beyond the rubble mounds.

Brother Francis glanced up briefly, but the pilgrim was not in sight. His eyes fell again to the page.

"*Repugnans tibi, ausus sum quaerere quid, quid doctius mihi fide, certius spe, aut dulcius caritate visum esset. Quis itaque stultior me...*"

"Hey boy!" the cry came again. "I found you a stone, one likely to fit."

This time when Brother Francis looked up, he caught a glimpse of the pilgrim's staff waving signals to him beyond the top of a rubble heap. Sighing the novice returned to his reading.

"*O inscrutabilis Scrutator animarum, cui patet omne cor, si me vocaveras, olim a te fugeram. Si autem nunc velis vocare me indignum . . .*"

And, irritably from beyond the rubble mound: "All right, then, suit yourself. I'll mark the rock and set a stake by it. Try it or not, as you please."

"Thank you," the novice sighed, but doubted that the old man heard him. He toiled on with the text:

"*Libera me, Domine, ab vitiis meis, ut solius tuae voluntatis mihi cupidus sim, et vocationis .*

..”

“There, then!” the pilgrim shouted. “It’s staked and marked. And may you find your voice soon, boy. *Olla allay!*”

Soon after the last shout faded and died, Brother Francis caught a glimpse of the pilgrim trudging away on the trail that led toward the abbey. The novice whispered a swift blessing after him, and a prayer for safe wayfaring.

His privacy having been restored, Brother Francis returned the book to his burrow and resumed his haphazard stonemasonry, not yet troubling himself to investigate the pilgrim’s find. While his starved body heaved, strained, and staggered under the weight of the rocks, his mind, machinelike kept repeating the prayer for the certainty of his vocation:

*“Libere me, Domine, ab vitiis meis . . . Set me free, O Lord, from my own vices, so that in my own heart I may be desirous of only Thy will, and be aware of Thy summons if it come . . . ut solius tuae voluntatis mihi cupidus sim, et vocatinonis tuae conscius si digneris me vocare. Amen.*

“Set me free, O Lord, from my own vices, so that in my own heart...”

A sky-herd of cumulus clouds, on their way to bestow moist blessings on the mountains after cruelly deceiving the parched desert, began blotting out the sun and trailing dark shadow-shapes across the blistered land below, offering intermittent but welcome respite from the searing sunlight. When a racing cloud-shadow wiped its way over the ruins, the novice worked rapidly until the shadow was gone, then rested until the next bundle of fleece blotted out the sun.

It was quite by accident that Brother Francis finally discovered the pilgrim’s stone. While wandering thereabouts, he stumbled over the stake which the old man had driven into the ground as a marker. He found himself on his hands and knees staring at a pair of marks freshly chalked on an ancient stone:

The marks were so carefully drawn that Brother Francis immediately assumed them to be symbols, but minutes of musing over them left him still bemused. Witch markings perhaps? But no, the old man had called: “God-with-you,” as a witch would not. The novice pried the stone free from the rubble and rolled it over. As he did so, the rock mound rumbled faintly from within; a small stone clattered down the slope. Francis danced away from a possible avalanche, but the disturbance was momentary. In the place where the pilgrim’s rock had been wedged, however, there now appeared a small black hole.

Holes were often inhabited.

But this hole seemed to have been so tightly corked by the pilgrim’s stone that scarcely a flea could have entered it before Francis had overturned the rock. Nevertheless, he found a stick and gingerly thrust it into the opening. The stick encountered no resistance. When he released it, the stick slid into the hole and vanished, as if into a larger underground cavity. He waited nervously. Nothing slithered forth.

He sank to his knees again and cautiously sniffed at the hole. Having noticed neither an animal odor nor any hint of brimstone, he rolled a bit of gravel into it and leaned closer to listen. The gravel bounced once, a few feet below the opening, and then kept rattling its way downward, struck something metallic in passing, and finally came to rest somewhere far below. Echoes suggested an underground opening the size of a room.

Brother Francis climbed unsteadily to his feet and looked around. He seemed alone, as usual, except for his companion buzzard which, soaring on high, had been watching him with such interest lately that other buzzards occasionally left their territories near the horizons and came to investigate.

The novice circled the rubble heap, but found no sign of a second hole. He climbed an adjacent heap and squinted down the trail. The pilgrim had long since vanished. Nothing moved along the old roadway, but he caught a fleeting glimpse of Brother Alfred crossing a low hill a mile to the east in search of firewood near his own Lenten hermitage. Brother Alfred was deaf as a post. There was no one else in view. Francis foresaw no reason whatever to scream for help, but to estimate in advance the probable results of such a scream, if the need should arise, seemed only an exercise of prudence. After a careful scrutiny of the terrain, he climbed down from the mound. Breath needed for screaming would be better used for running.

He thought of replacing the pilgrim’s stone to cork the hole as before, but the adjacent stones had shifted slightly so that it no longer fit its previous place in the puzzle. Besides, the gap in the highest tier of

his shelter wall remained unfilled, and the pilgrim was right: the stone's size and shape suggested a probable fit. After only brief misgivings, he hoisted the rock and staggered back to his burrow.

The stone slipped neatly into place. He tested the new wedge with a kick; the tier held fast, even though the jolt caused a minor collapse a few feet away. The pilgrim's marks, though blurred by his handling of the stone, were still dear enough to be copied. Brother Francis carefully redrew them on another rock, using a charred stick as a stylus. When Prior Cheroki made his Sabbath tour of the hermitages, perhaps the priest would be able to say whether the marks had meaning, either as charm or curse. To fear the pagan cabals was forbidden, but the novice was curious at least to learn what sign would be overhanging his sleeping pit, in view of the weight of the masonry on which the sign was written.

His labors continued through the heat of the afternoon. A corner of his mind kept reminding him of the hole—the interesting, and yet fearsome, little hole—and the way the rattle of gravel had caused faint echoes from somewhere below ground. He knew that the ruins all about him here were very old. He knew also, from tradition that the ruins had been gradually eroded into these anomalous heaps of stone by generations of monks and occasional strangers, men seeking a load of stone or looking for the bits of rusty steel which could be found by shattering the larger sections of columns and slabs to extract the ancient strips of that metal, mysteriously planted in the rocks by men of an age almost forgotten to the world. This human erosion had all but obliterated the resemblance to buildings, which tradition ascribed to the ruins in an earlier period, although the abbey's present master-builder still took pride in his ability to sense and to point out the vestige of a floor plan here and there. And there was still metal to be found, if anyone cared to break enough rock to find it.

The abbey itself had been built of these stones. That several centuries of stonemasons might have left anything of interest still to be discovered in the ruins, Francis regarded as improbable fancy. And yet, he had never heard anyone mention buildings with basements or underground rooms. The master-builder, he recalled at last, had been quite specific in saying that the buildings at this site had had aspects of hasty construction, lacked deep foundations, and had rested for the most part on flat surface slabs.

With his shelter approaching completion, Brother Francis ventured back to the hole and stood looking down at it; he was unable to put off the desert-dweller's conviction that wherever a place exists to hide from the sun, something is already hiding in it. Even if the hole was now uninhabited, something would certainly slither into it before tomorrow's dawn. On the other hand, if something already lived in the hole, Francis thought it safer to make its acquaintance by day than by night. There seemed to be no tracks in the vicinity except his own, the pilgrim's, and the tracks of the wolves.

Making a quick decision, he began clearing rubble and sand away from the hole. After half an hour of this, the hole was no larger, but his conviction that it opened into a subterranean pit had become a certainty. Two small boulders, half buried, and adjoining the opening, were obviously jammed together by the force of too much mass crowding the mouth of a shaft; they seemed caught in a bottleneck.

When he pried one stone toward the right, its neighbor rolled left, until no further motion was possible. The reverse effect occurred when he pried in the opposing direction, but he continued to jostle at the rock-jam.

His lever spontaneously leaped from his grasp, delivered a glancing blow to the side of his head, and disappeared in a sudden cave-in. The sharp blow sent him reeling. A flying stone from the rockslide struck him in the back and he fell gasping, uncertain whether or not he was falling into the pit until the instant his belly hit solid ground and he hugged it. The roar of the rockfall was deafening but brief.

Blinded by dust, Francis lay gasping for breath and wondering whether he dared to move, so sharp was the pain in his back. Having recovered a little breath, he managed to get one hand inside his habit and groped for the place between his shoulders where a few crushed bones might be. The place felt rough, and it stung. His fingers came away damp and red. He moved, but groaned and lay quietly again.

There was a soft beating of wings. Brother Francis glanced up in time to see the buzzard preparing to alight on a rubble heap a few yards away. The bird took wing again at once, but Francis imagined that it had eyed him with a sort of motherly concern in the manner of a worried hen. He rolled over quickly. A whole black heavenly host of them had gathered, and they circled at a curiously low altitude. Just skimming the mounds. They soared higher when he moved. Suddenly ignoring the possibility of chipped

vertebrae or a crushed rib, the novice climbed shakily to his feet. Disappointed, the black sky-horde rode back to altitude on their invisible elevators of hot air, then disbanded and dispersed toward their remoter aerial vigils. Dark alternatives to the Paraclete whose coming he awaited, the birds seemed eager at times to descend in place of the Dove; their sporadic interest had been unnerving him of late, and he promptly decided, after some experimental shrugging, that the sharp rock had done no more than bruise and scrape

A dust column which had plumed up from the site of the cave-in was tapering away on the breeze. He hoped someone would see it from the abbey's watchtowers and come to investigate. At his feet, a square opening yawned in the earth, where one flank of the mound had collapsed into the pit below. Stairs led downward, but only the top steps remained unburied by the avalanche which had paused for six centuries in mid-fall to await the assistance of Brother Francis before completing its roaring descent.

On one wall of the stair well a half-buried sign remained legible. Mustering his modest command of pre-Deluge English, he whispered the words haltingly:

## FALLOUT SURVIVAL SHELTER

Maximum Occupancy: 15

Provision limitations, single occupant: 180 days; divide by actual number of occupants. Upon entering shelter, see that First Hatch is securely locked and sealed, that the intruder shields are electrified to repel contaminated persons attempting entry, that the warning lights are *ON* outside the enclosure...

The rest was buried, but the first word was enough for Francis. He had never seen a "Fallout," and he hoped he'd never see one. A consistent description of the monster had not survived, but Francis had heard the legends. He crossed himself and backed away from the hole. Tradition told that the Beatus Leibowitz himself had encountered a Fallout, and had been possessed by it for many months before the exorcism which accompanied his Baptism drove the fiend away.

Brother Francis visualized a Fallout as half-salamander, because, according to tradition, the thing was born in the Flame Deluge, and as half-incubus who despoiled virgins in their sleep, for, were not the monsters of the world still called "children of the Fallout"? That the demon was capable of inflicting all the woes which descended upon Job was recorded fact, if not an article of creed.

The novice stared at the sign in dismay. Its meaning was plain enough. He had unwittingly broken into the abode (deserted, he prayed) of not just one, but fifteen of the dreadful beings! He groped for his phial of holy water.

## 2

"A spiritu fornicationis,  
*Domino, libera nos.*  
From the lightning and the tempest,  
*O Lord, deliver us.*  
From the scourge of the earthquake,  
*O Lord, deliver us.*  
From plague, famine, and war,  
*O Lord, deliver us.*

"From the place of ground zero,  
*O Lord, deliver us.*

From the rain of the cobalt,  
    *O Lord, deliver us.*  
From the rain of the strontium,  
    *O Lord, deliver us.*  
From the fall of the cesium,  
    *O Lord, deliver us.*

“From the curse of the Fallout,  
    *O Lord, deliver us.*  
From the begetting of monsters,  
    *O Lord, deliver us.*  
From the curse of the Misborn,  
    *O Lord deliver us.*  
A morte perpetua,  
    *Domine, libera nos.*

“Peccatores,  
    *te rogamus, audi nos.*  
That thou wouldst spare us,  
    *we beseech thee, hear us.*  
That thou wouldst pardon us,  
    *we beseech thee, hear us.*  
That thou wouldst bring us truly to penance,  
    *te rogamus, audi nos.”*

## S

natches of such versicles from the Litany of the Saints came whispering on each panting breath as Brother Francis lowered himself gingerly into the stair well of the ancient Fallout Shelter, armed as he was only with holy water and an improvised torch lighted from the banked embers of last night’s fire. He had waited more than an hour for someone from the abbey to come investigate the dust plume. No one had come.

To abandon his vocational vigil even briefly, unless seriously ill or unless ordered to return to the abbey, would be regarded as an *ipso facto* renunciation of his claim of a true vocation to life as a monk of the Albertian Order of Leibowitz. Brother Francis would have preferred death. He was faced, therefore, with the choice of investigating the fearsome pit before sunset, or of spending the night in his burrow in ignorance of whatever might lurk in the shelter and might reawaken to prowl in darkness. As a nocturnal hazard, the wolves already made trouble enough, and the wolves were merely creatures of flesh and blood. Creatures of less solid substance, he preferred to meet by the light of day; although, to be sure, scant daylight fell into the pit below, the sun now being low in the west.

The debris which had crashed down into the shelter formed a hill with its crest near the head of the stairs, and there was only a narrow squeezeway between the rocks and the ceiling. He went through it feet first and found himself forced to continue feet first, because of the steepness of the slope. Thus confronting the Unknown face-to-backside, he groped for footholds in the loose heap of broken stone and gradually worked his way downward. Occasionally, when his torch flickered low, he paused to tilt its flame downward, letting the fire spread further along the wood; during such pauses, he tried to appraise the danger about him and below. There was little to be seen. He was in an underground room, but at

least one third of its volume was filled by the mound of debris that had fallen through the stair well. The cascade of stone had covered all the floor, crushed several pieces of furniture that he could see, and perhaps had completely buried others. He saw battered metal lockers leaning awry, waist-deep in rubble. At the far end of the room was a metal door, hinged to swing toward him, and tightly sealed by the avalanche. Still legible in flaking paint on the door were the stenciled letters:

## INNER HATCH SEALED ENVIRONMENT

Evidently the room into which he was descending was only an antechamber. But whatever lay beyond INNER HATCH was sealed there by several tons of rock against the door. Its environment was SEALED indeed, unless it had another exit.

Having made his way to the foot of the slope, and after assuring himself that the antechamber contained no obvious menace, the novice went cautiously to inspect the metal door at closer range by torchlight. Printed under the stenciled letters of INNER HATCH was a smaller rust-streaked sign:

**WARNING:** This hatch must not be sealed before all personnel have been admitted, or before all steps of safety procedure prescribed by Technical Manual CD-Bu-83A have been accomplished. When Hatch is sealed, air within shelter will be pressurized 2.0 p.s.i. above ambient barometric level to minimize inward diffusion. Once sealed, the hatch will be automatically unlocked by the servomonitor system when, but not before, any of the following conditions prevail: (1) when the exterior radiation count falls below the danger level, (2) when the air and water repurification system fails, ( 3 ) when the food supply is exhausted, (4) when the internal power supply fails. See CD-Bu-83A for further instructions.

Brother Francis found himself slightly confused by the Warning, but he intended to heed it by not touching the door at all. The miraculous contraptions of the ancients were not to be carelessly tampered with, as many a dead excavator-of-the-past had testified with his dying gasp.

Brother Francis noticed that the debris which had been lying in the antechamber for centuries was darker in color and rougher in texture than the debris which had weathered under the desert sun and in the sandy wind before today's cave-in. One could tell by a glance at the stones that Inner Hatch had been blocked not by today's rockslide but by one more ancient than the abbey itself. If Fallout Shelter's Sealed Environment contained a Fallout, the demon had obviously not opened Inner Hatch since the time of the Flame Deluge, before the Simplification. And, if it had been sealed beyond the metal door for so many centuries, there was small reason, Francis told himself, to fear that it might come bursting through the hatch before Holy Saturday.

His torch burned low. Having found a splintered chair leg, he set it ablaze with his waning flame, then began gathering bits of broken furniture with which to build a dependable fire, meanwhile pondering the meaning of that ancient sign: FALLOUT SURVIVAL SHELTER.

As Brother Francis readily admitted, his mastery of pre-Deluge English was far from masterful yet. The way nouns could sometimes modify other nouns in that tongue had always been one of his weak points. In Latin, as in most simple dialects of the region, a construction like *servus puer* meant about the same thing as *puer servus*, and even in English *slave boy* meant *boy slave*. But there the similarity ended. He had finally learned that *house cat* did not mean *cat house*, and that a dative of purpose or possession, as in *mihi amicus*, was somehow conveyed by *dog food* or *sentry box* even without inflection. But what of a triple appositive like *fallout survival shelter*? Brother Francis shook his head. The Warning on Inner Hatch mentioned food, water, and air; and yet surely these were not necessities for the fiends of Hell. At times, the novice found pre-Deluge English more perplexing than either Intermediate Angelology or Saint Leslie's theological calculus.

He built his fire on the slope of the rubble pile, where it could brighten the darker crannies of the antechamber. Then he went to explore whatever might remain uncovered by debris. The ruins above ground had been reduced to archaeological ambiguity by generations of scavengers, but this underground

ruin had been touched by no hand but the hand of impersonal disaster. The place seemed haunted by the presences of another age. A skull, lying among the rocks in a darker corner, still retained a gold tooth in its grin—clear evidence that the shelter had never been invaded by wanderers. The gold incisor flickered when the fire danced high.

More than once in the desert had Brother Francis encountered, near some parched arroyo, a small heap of human bones, picked clean and whitening in the sun. He was not especially squeamish, and one expected such things. He was, therefore, not startled when he first noticed the skull in the corner of the antechamber, but the flicker of gold in its grin kept catching his eye while he pried at the doors (locked or stuck) of the rusty lockers and tugged at the drawers (also stuck) of a battered metal desk. The desk might prove to be a priceless find, if it contained documents or a small book or two that had survived the angry bonfires of the Age of Simplification. While he kept trying to open the drawers, the fire burned low; he fancied that the skull began emitting a faint glow of its own. Such a phenomenon was not especially uncommon, but in the gloomy crypt, Brother Francis found it somehow most disturbing. He gathered more wood for the fire, returned to jerk and tug at the desk, and tried to ignore the skull's flickering grin. While a little wary yet of lurking Fallouts, Francis had sufficiently recovered from his initial fright to realize that the shelter, notably the desk and the lockers, might well be teeming with rich relics of an age which the world had, for the most part, deliberately chosen to forget.

Providence had bestowed a blessing here. To find a bit of the past which had escaped both the bonfires and the looting scavengers was a rare stroke of luck these days. There was, however, always a risk involved. Monastic excavators, alert for ancient treasures, had been known to emerge from a hole in the ground, triumphantly carrying a strange cylindrical artifact, and then—while cleaning it or trying to ascertain its purpose—press the wrong button or twist the wrong knob, thereby ending the matter without benefit of clergy. Only eighty years ago the Venerable Boedullus had written with obvious delight to his Lord Abbot that his small expedition had uncovered the remains of, in his own words, “the site of an intercontinental launching pad, complete with several fascinating subterranean storage tanks.” No one at the abbey ever knew what the Venerable Boedullus meant by “intercontinental launching pad,” but the Lord Abbot who had reigned at that time sternly decreed that monastic antiquarians must, on pain of excommunication, avoid such “pads” thenceforth. For his letter to the abbot was the last that anyone ever saw of the Venerable Boedullus, his party, his “launching pad” site, and the small village which had grown up over that site; an interesting lake now graced the landscape where the village had been, thanks to some shepherds who diverted the course of a creek and caused it to flow into the crater to store water for their flocks in time of drought. A traveler who had come from that direction about a decade ago reported excellent fishing in that lake, but the shepherds thereabouts regarded the fish as the souls of the departed villagers and excavators; they refused to fish there because of Bo’dollos, the giant catfish that brooded in the deep.

“...nor shall any other excavation be initiated which does not have as its primary purpose the augmentation of the Memorabilia,” the Lord Abbot’s decree had added—meaning that Brother Francis should search the shelter only for books and papers, not tampering with interesting hardware.

The gold-capped tooth kept winking and glittering at the corner of his eye while Brother Francis heaved and strained at the desk drawers. The drawers refused to budge. He gave the desk a final kick and turned to glare impatiently at the skull: *Why don't you grin at something else for a change?*

The grin remained. The gold-toothed residuum lay with its head pillowed between a rock and a rusty metal box. Quitting the desk, the novice picked his way across the debris at last for a clever inspection of the mortal remains. Clearly, the person had died on the spot, struck down by the torrent of stones and half buried by the debris. Only the skull and the bones of one leg had not been covered. The femur was broken, the back of the skull was crushed.

Brother Francis breathed a prayer for the departed, then very gently lifted the skull from its resting place and turned it around so that it grinned toward the wall. Then his eye fell on the rusty box.

The box was shaped like a satchel and was obviously a carrying case of some kind. It might have served any number of purposes, but it had been rather badly battered by flying stones. Gingerly he worked it loose from the rubble and carried it closer to the fire. The lock seemed to be broken, but the

lid had rusted shut. The box rattled when he shook it. It was not an obvious place to look for books or papers, but—obviously too—it was designed to be opened and closed, and might contain a scrap or two of information for the Memorabilia. Nevertheless, remembering the fate of Brother Boedullus and others, he sprinkled it with holy water before attempting to pry it open, and he handled the ancient relic as reverently as was possible while battering at its rusty hinges with a stone.

At last he broke the hinges, and the lid fell free. Small metal tidbits bounced from trays, spilled among the rocks, some of them falling irretrievably into crevices. But, in the bottom of the box in the space beneath the trays, he beheld—papers! After a quick prayer of thanksgiving, he regathered as many of the scattered tidbits as he could, and, after loosely replacing the lid, began climbing the hill of debris toward the stair well and the thin patch of sky, with the box hugged tightly under one arm.

The sun was blinding after the darkness of the shelter. He scarcely bothered to notice that it was sinking dangerously low in the west, but began at once to search for a flat slab on which the contents of the box could be spread for examination without risk of losing anything in the sand.

Minutes later, seated on a cracked foundation slab, he began removing the tidbits of metal and glass that filled the trays. Most of them were small tubular things with a wire whisker at each end of each tube. These, he had seen before. The abbey's small museum had a few of them, of various size, shape and color. Once he had seen a shaman of the hill-pagan people wearing a string of them as a ceremonial necklace. The hill people thought of them as "parts of the body of the god"—of the fabled *Machina analytica*, hailed as the wisest of their gods. By swallowing one of them, a shaman could acquire "Infallibility," they said. He certainly acquired Indisputability that way, among his own people—unless he swallowed one of the poison kind. The similar tidbits in the museum were connected together too—not in the form of a necklace, but as a complex and rather disorderly maze in the bottom of a small metal box, exhibited as: "Radio Chassis: Application Uncertain."

Inside the lid of the carrying case, a note had been glued; the glue had powdered, the ink had faded, and the paper was so darkened by rusty stains that even good handwriting would have been hard enough to read, but this was written in a hasty scrawl. He studied it intermittently while emptying the trays. It seemed to be English, of a sort, but half an hour passed before he deciphered most of the message:

Carl—

Must grab plane for [undecipherable] in twenty minutes.

For God's sake, keep Em there till we know if we're at war.

Please! try to get her on the alternate list for the shelter. Can't get her a seat my plane. Don't tell her why I sent her over with this box of junk, but try to keep her there till we know [undecipherable] at worst, one of the alternates not show.

I.E.L.

P.S. I put the seal on the lock and put TOP SECRET on the lid just to keep Em from looking inside. First tool box I happened to grab. Shove it in my locker or something.

The note seemed hasty gibberish to Brother Francis, who was at the moment too excited to concentrate on any single item more than the rest. After a final sneer at the notewriter's hasty scrawl, he began the task of removing the trayracks to get at the papers in the bottom of the box. The trays were mounted on a swinging linkage which was obviously meant to swing the trays out of the box in stair-step array, but the pins were rusted fast, and Francis found it necessary to pry them out with a short steel tool from one of the tray compartments.

When Brother Francis had removed the last tray, he touched the papers reverently: only a handful of folded documents here, and yet a treasure; for they had escaped the angry flames of the Simplification, wherein even sacred writings had curled, blackened, and withered into smoke while ignorant mobs howled and hailed it a triumph. He handled the papers as one might handle holy things, shielding them from the wind with his habit, for all were brittle and cracked from age. There was a sheaf of rough

sketches and diagrams. There were hand-scribbled notes, two large folded papers, and a small book entitled *Memo*.

First he examined the jotted notes. They were scrawled by the same hand that had written the note glued to the lid, and the penmanship was no less abominable. *Pound pastrami*, said one note, *can kraut, six bagels,—bring home for Emma*. Another reminded: *Remember—pick up Form 1040, Uncle Revenue*. Another was only a column of figures with a circled total from which a second amount was subtracted and finally a percentage taken, followed by the word *damn!* Brother Francis checked the figures; he could find no fault with the abominable penman's arithmetic at least, although he could deduce nothing about what the quantities might represent.

*Memo*, he handled with special reverence, because its title was suggestive of "Memorabilia." Before opening it, he crossed himself and murmured the Blessing of Texts. But the small book proved a disappointment. He had expected printed matter, but found only a hand-written list of names, places, numbers and dates. The dates ranged through the latter part of the fifth decade, and earlier part of the sixth decade, twentieth century. Again it was affirmed!—the contents of the shelter came from the twilight period of the Age of Enlightenment. An important discovery indeed.

Of the larger folded papers, one was tightly rolled as well, and it began to fall apart when he tried to unroll it; he could make out the words *RACING FORM*, but nothing more. After returning it to the box for later restorative work, he turned to the second folded document; its creases were so brittle that he dared inspect only a little of it, by parting the folds slightly and peering between them.

A diagram, it seemed, but—a diagram of white lines on dark paper!

Again he felt the thrill of discovery. It was dearly a blueprint!—and there was not a single original blueprint left at the abbey, but only inked facsimiles of several such prints. The originals had faded long ago from overexposure to light. Never before had Francis seen an original, although he had seen enough hand-painted reproductions to recognize it as a blueprint, which, while stained and faded, remained legible after so many centuries because of the total darkness and low humidity in the shelter. He turned the document over—and felt brief fury. What idiot had desecrated the priceless paper? Someone had sketched absent-minded geometrical figures and childish cartoon faces all over the back. What thoughtless vandal—

The anger passed after a moment's reflection. At the time of the deed, blueprints had probably been as common as weeds, and the owner of the box the probable culprit. He shielded the print from the sun with his own shadow while trying to unfold it further. In the lower right-hand corner was a printed rectangle containing, in simple block letters, various titles, dates, "patent numbers," reference numbers, and names. His eye traveled down the list until it encountered:

"CIRCUIT DESIGN BY: *Leibowitz, I. E.*"

He closed his eyes tightly and shook his head until it seemed to rattle. Then he looked again. There it was, quite plainly:

CIRCUIT DESIGN BY: *Leibowitz, I. E.*

He flipped the paper over again. Among the geometric figures and childish sketches, dearly stamped in purple ink, was the form:

The name was written in a clear feminine hand, not in the hasty scrawl of the other notes. He looked again at the initialed signature of the note in the lid of the box: *I. E. L.*—and again at "CIRCUIT DESIGN BY . . ." And the same initials appeared elsewhere throughout the notes.

There had been argument, all highly conjectural, about whether the

beatified founder of the Order, if finally canonized, should be addressed as Saint Isaac or as Saint Edward. Some even favored Saint Leibowitz as the proper address, since the Beatus had, until the present, been referred to by his surname.

*"Beate Leibowitz, ora pro me!"* whispered Brother Francis. His hands were trembling so violently that they threatened to ruin the brittle documents.

He had uncovered relics of the Saint.

Of course, New Rome had not yet proclaimed that Leibowitz was a saint, but Brother Francis was so convinced of it that he made bold to add: *"Sancte Leibowitz, ora pro me!"* Brother Francis wasted no idle logic in leaping to his immediate conclusion: he had just been granted a token of his vocation by Heaven itself. He had found what he had been sent into the desert to find, as Brother Francis saw it. He was called to be a professed monk of the Order.

Forgetting his abbot's stern warning against expecting a vocation to come in any spectacular or miraculous form the novice knelt in the sand to pray his thanks and to offer a few decades of the rosary for the intentions of the old pilgrim who had pointed out the rock leading to the shelter. *May you find your Voice soon, boy*, the wanderer had said. Not until now did the novice suspect that the pilgrim meant *Voice* with a capital V.

*"Ut solius tuae voluntatis mihi cupidus sim, et vocationis tuae conscius, si digneris me vocare..."*

It would be left to the abbot to think that his "voice" was speaking the language of circumstances and not the language of cause and effect. It would be left to the *Promotor Fidei* to think that "Leibowitz," perhaps, was not an uncommon name before the Flame Deluge, and that I. E. could as easily represent "Ichabod Ebenezer" as "Isaac Edward." For Francis, there was only one.

From the distant abbey, three bell notes rang out across the desert, a pause, then the three notes were followed by nine.

*"Angelus Domini nuntiavit Mariae,"* the novice dutifully responded glancing up in surprise to see that the sun had become a fat scarlet ellipse that already touched the western horizon. The rock barrier around his burrow was not yet complete.

As soon as the Angelus was said, he hastily repacked the papers in the rusty old box. A call from Heaven did not necessarily involve charismata for subduing wild beasts or befriending hungry wolves.

By the time twilight had faded and the stars had appeared, his makeshift shelter was as well fortified as he could make it; whether it was wolf-proof remained to be tested. The test would not be long in coming. He had already heard a few howls from the west. His fire was rekindled, but there was no light left outside the circle of firelight to permit the gathering of his dally collection of purple cactus fruit—his only source of nourishment except on Sundays, when a few handfuls of parched corn were sent from the abbey after a priest had made his rounds with the Holy Sacrament. The letter of the rule for a Lenten vocational vigil was not so strict as its practical application. As applied, the rule amounted to simple starvation.

Tonight, however, the gnawing of hunger was less troublesome to Francis than his own impatient urge to run back to the abbey and announce the news of his discovery. To do so would be to renounce his vocation no sooner than it had come to him; he was here for the duration of Lent, vocation or no vocation, to continue his vigil as if nothing extraordinary had occurred.

Dreamily, from near the fire, he gazed into the darkness in the direction of Fallout Survival Shelter and tried to visualize a towering basilica rising from the site. The fantasy was pleasant, but it was difficult to imagine anyone choosing this remote stretch of desert as the focal point of a future diocese. If not a basilica, then a smaller church—The Church of Saint Leibowitz of the Wilderness—surrounded by a garden and a wall, with a shrine of the Saint attracting rivers of pilgrims with girded loins out of the north. "Father" Francis of Utah conducted the pilgrims on a tour of the ruins, even through "Hatch Two" into the splendors of "Sealed Environment" beyond, the catacombs of the Flame Deluge where . . . where . . . well, afterwards, he would offer Mass for them on the altar stone which enclosed a relic of the church's name-saint—a bit of burlap? fibers from the hangman's noose? fingernail clippings from the bottom of the

rusty box?—or perhaps *RACING FORM*. But the fantasy withered. The chances of Brother Francis becoming a priest were slight—not being a missionary Order, the Brothers of Leibowitz needed only enough priests for the abbey itself and a few smaller communities of monks in other locations. Furthermore, the “Saint” was still only a Beatus officially, and would never be formally declared a saint unless he wrought a few more good solid miracles to underwrite his own beatification, which was not an infallible proclamation, as canonization would be, although it permitted the monks of the Leibowitz Order formally to venerate their founder and patron, outside of the Mass and the Office. The proportions of the fantasy church dwindled to the size of a wayside shrine; the river of pilgrims shrank to a trickle. New Rome was busy with other matters, such as the petition for a formal definition on the question of the Preternatural Gifts of the Holy Virgin, the Dominicans holding that the Immaculate Conception implied not only indwelling grace, but *also* that the Blessed Mother had had the preternatural powers which were Eve’s before the Fall; some theologians of other Orders, while admitting this to be pious conjecture, denied that it was necessarily the case, and contended that a “creature” might be “originally innocent” but not endowed with preternatural gifts. The Dominicans bowed to this, but contended that the belief had always been implicit in other dogma—such as the Assumption (preternatural immortality) and the Preservation from Actual Sin (implying preternatural integrity) and still other examples. While attempting to settle this dispute, New Rome had seemingly left the case for the canonization of Leibowitz to gather dust on the shelf.

Contenting himself with a small shrine of the Beatus and a casual trickle of pilgrims, Brother Francis drowsed. When he awoke, the fire was reduced to glowing embers. Something seemed amiss. Was he quite alone? He blinked around at the encompassing darkness.

From beyond the bed of reddish coals, the dark wolf blinked back.

The novice yelped and dived for cover.

The yelp, he decided as he lay trembling within his den of stones and brush, had been only an involuntary breach of the rule of silence. He lay hugging the metal box and praying that the days of Lent might pass swiftly, while padded feet scratched about his enclosure.

### 3

“...and then, Father, I almost took the bread and cheese.”

“But you didn’t take it?”

“No.”

“Then there was no sin by deed.”

“But I wanted it so badly, I could taste it.”

“Willfully? Did you deliberately enjoy the fantasy?”

“No.”

“You tried to get rid of it.”

“Yes.”

“So there was not culpable gluttony of thought either. Why are you confessing this?”

“Because then I lost my temper and splashed him with holy water.”

“You what? *Why?*”

Father Cheroki, wearing his stole, stared at the penitent who knelt in profile before him in the scorching sunlight on the open desert; the priest kept wondering how it was possible for such a youth (not particularly intelligent insofar as he could determine) to manage to find occasions or near-occasions of sin while completely isolated on barren desert, far from any distraction or apparent source of temptation. There should be very little trouble a boy could get into out here, armed as he was with only a rosary, a flint, a penknife, and a prayerbook. So it seemed to Father Cheroki. But this confession was taking up quite a lot of time; he wished the boy would get on with it. His arthritis was bothering him again, but because of the presence of the Holy Sacrament on the portable table which he took with him on his

rounds, the priest preferred to stand, or to stay on his knees along with the penitent. He had lighted a candle before the small golden case which contained the Hosts, but the flame was invisible in the sun-glare, and the breeze might even have blown it out.

"But exorcism is permissible these days, without any specific higher authorization. What are you confessing—being angry?"

"That too."

"At whom did you become angry? At the old man—or at yourself for almost taking the food?"

"I—I'm not sure."

"Well, make up your mind," Father Cherokee said impatiently. "Either accuse yourself, or else not."

"I accuse myself."

"Of what?" Cherokee sighed.

"Of abusing a sacramental in a fit of temper."

"'Abusing'? You had no rational reason to suspect diabolic influence? You just became angry and squirted him with it? Like throwing the ink in his eye?"

The novice squirmed and hesitated, sensing the priest's sarcasm. Confession was always difficult for Brother Francis. He could never find the right words for his misdeeds, and in trying to remember his own motives, he became hopelessly confused. Nor was the priest helping matters by taking the "either-you-did-or-else-you-didn't" stand—even though, obviously, either Francis had or else he hadn't.

"I think I lost my senses for a moment," he said finally.

Cherokee opened his mouth, apparently meaning to pursue the matter, then thought better of it. "I see. What next then?"

"Gluttonous thoughts," Francis said after a moment.

The priest sighed. "I thought we were through with that. Or is this another time?"

"Yesterday. There was this lizard, Father. It had blue and yellow stripes, and such magnificent hams—thick as your thumb and plump, and I kept thinking how it would taste like chicken, roasted all brown and crisp outside, and—"

"All right," the priest interrupted. Only a hint of revulsion crossed his aged face. After all, the boy was spending a lot of time in the sun. "You took pleasure in these thoughts? You didn't try to get rid of the temptation?"

Francis reddened. "I—I tried to catch it. It got away."

"So, not merely thought—deed as well. Just that one time?"

"Well-yes, just that."

"All right, in thought and deed, willfully meaning to eat meat during Lent. Please be as specific as you can after this. I thought you had examined your conscience properly. Is there anything else?"

"Quite a lot."

The priest winced. He had several hermitages to visit; it was a long hot ride, and his knees were hurting. Please get on with it as quickly as you can," he sighed.

"Impurity, once."

"Thought, word, or deed?"

"Well, there was this succubus, and she—"

"Succubus? Oh—nocturnal. You were asleep?"

"Yes, but—"

"Then why confess it?"

"Because afterwards."

"Afterwards what? When you woke up?"

"Yes. I kept thinking about her. Kept imagining it all over again."

"All right, concupiscent thought, deliberately entertained. You're sorry? Now, what next?"

All this was the usual sort of thing that one kept hearing time after endless time from postulant after postulant, novice after novice, and it seemed to Father Cherokee that the least Brother Francis could do would be to bark out his self-accusations *one, two, three*, in a neat orderly manner, without all this prodding and prompting. Francis seemed to find difficulty in formulating whatever he was about to say;

the priest waited.

"I think my vocation has come to me, Father, but—" Francis moistened his cracked lips and stared at a bug on a rock.

"Oh, has it?" Cherokee's voice was toneless

"Yes, I think—but would it be a sin, Father, if when I first got it, I thought rather scornfully of the handwriting? I mean?"

Cherokee blinked. Handwriting? Vocation? What kind of a question was—He studied the novice's serious expression for a few seconds, then frowned.

"Have you and Brother Alfred been passing notes to each other?" he asked ominously.

"Oh, no, Father!"

"Then whose handwriting are you talking about?"

"The Blessed Leibowitz."

Cherokee paused to think. Did there, or did there not, exist in the abbey's collection of ancient documents, any manuscript penned personally by the founder of the Order?—an original copy? After a moment's reflection, he decided in the affirmative; yes, there were a few scraps of it left, carefully kept under lock and key.

"Are you talking about something that happened back at the abbey? Before you came out here?"

"No, Father. It happened right over there—" He nodded toward the left. "Three mounds over, near the tall cactus."

"Involving your vocation, you say?"

"Y-yes, but—"

"Of *course*," Cherokee said sharply, "you could *NOT POSSIBLY* be trying to say that—you have received—from the Blessed Leibowitz, dead now, lo, the last six hundred years—a handwritten invitation to profess your solemn vows? And you, uh, deplored his handwriting?—Forgive me, but that's the impression I was getting."

"Well, it's something like that, Father."

Cherokee sputtered. Becoming alarmed, Brother Francis produced a scrap of paper from his sleeve and handed it to the priest. It was brittle with age and stained. The ink was faded.

"*Pound pastrami*," Father Cherokee pronounced, slurring over some of the unfamiliar words, "*can kraut, six bagels—bring home for Emma*." He stared fixedly at Brother Francis for several seconds "This was written by whom?"

Francis told him.

Cherokee thought it over. "It's not possible for you to make a good confession while you're in *this* condition. And it wouldn't be proper for me to absolve you when you're not in your right mind." Seeing Francis wince, the priest touched him reassuringly on the shoulder. "Don't worry, son, we'll talk it over after you're better. I'll hear your confession then. For the present—" He glanced nervously at the vessel containing the Eucharist. "I want you to gather up your things and return to the abbey at once."

"But, Father, I—"

"I command you," the priest said tonelessly, "to return to the abbey at once."

"Y-yes, Father."

"Now, I'm not going to absolve you, but you might make good act of contrition and offer two decades of the rosary as penance anyhow. Would you like my blessing?"

The novice nodded, fighting tears. The priest blessed him arose, genuflected before the Sacrament, recovered the golden vessel, and reattached it to the chain around his neck. Having pocketed the candle, collapsed the table, and strapped it in place behind the saddle, he gave Francis a last solemn nod, then mounted and rode away on his mare to complete his circuit of the Lenten hermitages. Francis sat in the hot sand and wept.

It would have been simple if he could have taken the priest to the crypt to show him the ancient room, if he could have displayed the box and all its contents, and the mark the pilgrim had made on the rock. But the priest was carrying the Eucharist, and could not have been induced to climb down into a rock-filled basement on his hands and knees, or to paw through the contents of the old box and enter into

archaeological discussions; Francis had known better than to ask. Cherokee's visit was necessarily solemn, as long as the locket he was wearing contained a single Host; although, alter it was empty, he might be amenable to some informal listening. The novice could not blame Father Cherokee for leaping to the conclusion that he had gone out of his mind. He was a little groggy from the sun, and he had stammered quite a bit. More than one novice had turned up with addled wits after a vocational vigil.

There was nothing to do but obey the command to return.

He walked to the shelter and glanced into it once again, to reassure himself that it was really there; then he went to get the box. By the time he had it repacked and was ready to leave, the dust plume had appeared in the southeast, heralding the arrival of the supply carrier with water and corn from the abbey. Brother Francis decided to wait for his supplies before starting the long trek home.

Three donkeys and one monk ambled into view at the head of the dust streamer. The lead donkey plodded under the weight of Brother Fingo. In spite of the hood, Francis recognized the cook's helper from his hunched shoulders and from the long hairy shins that dangled on either side of the donkey so that Brother Fingo's sandals nearly dragged the ground. The animals that followed came loaded with small bags of corn and skins of water.

"*Sooooee pig-pig-pig! Sooe pig!*" Fingo called, cupping his hands to his mouth and broadcasting the hog-call across the ruins as if he had not seen Francis waiting for him beside the trail. "*Pig pig pig!—Oh, there* you are, Francisco! I mistook you for a bone pile. Well, we'll have to fatten you up for the wolves. There you are, help yourself to the Sunday slops. How goes the hermit trade? Think you'll make it a career? Just one waterskin, mind you, and one sack of corn. And watch Malicia's hind feet; she's in rut and feels frolicky—kicked Alfred back there, *crunch!* right in the kneecap. Careful with it!" Brother Fingo brushed back his hood and chortled while the novice and Malicia fenced for position. Fingo was undoubtedly the ugliest man alive, and when he laughed, the vast display of pink gums and huge teeth of assorted colors added little in his charm; he was a sport, but the sport could scarcely be called monstrous; it was a rather common hereditary pattern in the Minnesota country from whence he came; it produced baldness and a very uneven distribution of melanin, so that the gangling monk's hide was a patchwork of beef-liver and chocolate splashes on an albino background. However, his perpetual good humor so compensated for his appearance that one ceased to notice it after a few minutes; and after long acquaintance, Brother Fingo's markings seemed as normal as those of a painted pony. What might have seemed hideous if he were a sulking fellow, managed almost to become as decorative as clown's make-up when accompanied by exuberant good cheer. Fingo's assignment to the kitchen was punitive and probably temporary. He was a woodcarver by trade, and normally worked in the carpenter's shop. But some incident of self-assertion, in connection with a figure of the Blessed Leibowitz which he had been permitted to carve, had caused the abbot to order him transferred to the kitchen until he showed some signs of practicing humility. Meanwhile, the figure of the Beatus waited in the carpentry shop, half-carved.

Fingo's grin began to fade as he studied Francis' countenance while the novice unloaded his grain and water from the frisky she-ass. "You look like a sick sheep, boy," he said to the penitent. "What's the trouble? Is Father Cherokee in one of his slow rages again?"

Brother Francis shook his head. "Not that I could tell."

"Then what's wrong? Are you really sick?"

"He ordered me back to the abbey."

"Wha-a-at?" Fingo swung a hairy shin over the jackass and dropped a few inches to the ground. He towered over Brother Francis, clapped a meaty hand on his shoulder, and peered down into his face. "What is it; the jaundice?"

"No. He thinks I'm—" Francis tapped his temple and shrugged.

Fingo laughed. "Well, that's true, but we *all* knew that. Why is he sending you back?"

Francis glanced down at the box near his feet. "I found some things that belonged to the Blessed Leibowitz. I started to tell him, but he didn't believe me. He wouldn't let me explain. He—"

"You found *what*?" Fingo smiled his disbelief, then dropped to his knees and opened the box while the novice watched nervously. The monk stirred the whiskered cylinders in the trays with one finger

and whistled softly. "Hill-pagan charms, aren't they? This is old, Francisco, this is really old." He glanced at the note in the lid. "What's this gibberish?" he asked, squinting up at the unhappy novice.

"Pre-Deluge English."

"I never studied it, except what we sing in choir."

"It was written by the Beatus himself."

"*This?*" Brother Fingo stared from the note to Brother Francis and back to the note. He shook his head suddenly, clamped the lid back on the box, and stood up. His grin had become artificial. "Maybe Father's right. You better hike back and have Brother Pharmacist brew you up one of his toad-stool specials. That's the fever, Brother."

Francis shrugged, "Perhaps."

"Where did you find this stuff?"

The novice pointed. "Over that way a few mounds. I moved some rocks. There was a cave-in, and I found a basement. Go see for yourself."

Fingo shook his head. "I've got a long ride ahead."

Francis picked up the box and started toward the abbey while Fingo returned to his donkey, but after a few paces the novice stopped and called back.

"Brother Spots—could you take two minutes?"

"Maybe," answered Fingo; "What for?"

"Just walk over there and look in the hole."

"Why?"

"So you can tell Father Cherokee if it's really there."

Fingo paused with one leg half across his donkey's back.

"Ha!" He withdrew the leg. "All right. If it's not there, I'll tell *you*."

Francis watched for a moment while the gangling Fingo strode out of sight among the mounds; then he turned to shuffle down the long dusty trail toward the abbey, intermittently munching corn and sipping from the waterskin. Occasionally he glanced back. Fingo was gone much longer than two minutes. Brother Francis had ceased to watch for his reappearance by the time he heard a distant bellow from the ruins far behind him. He turned. He could make out the distant figure of the woodcarver standing atop one of the mounds. Fingo was waving his arms and vigorously nodding his head in affirmation. Francis waved back, then hiked wearily on his way.

Two weeks of near-starvation had exacted their tribute. After two or three miles he began to stagger. When still nearly a mile from the abbey, he fainted beside the road. It was late afternoon before Cherokee, riding back from his rounds, noticed him lying there, hastily dismounted, and bathed the youth's face until he gradually brought him around. Cherokee had encountered the supply donkeys on his way back and had paused to hear Fingo's account, confirming Brother Francis' find. Although he was not prepared to believe that Francis had discovered anything of real importance, the priest regretted his earlier impatience with the boy. Having noticed the box lying nearby with its contents half-spilled in the road, and having glanced briefly at the note in the lid, while Francis sat groggy and confused at the edge of the trail, Cherokee found himself willing to regard the boy's earlier babblings as the result of romantic imagination rather than of madness or delirium. He had neither visited the crypt nor closely examined the contents of the box, but it was obvious, at least, that the boy had been misinterpreting real events rather than confessing hallucinations.

"You can finish your confession as soon as we get back," he told the novice softly, helping him to climb up behind the saddle on the mare. "I think I can absolve you if you don't insist on personal messages from the saints. Eh?"

Brother Francis was too weak at the moment to insist on anything.

“

Y

ou did the right thing,” the abbot grunted at last. He had been slowly pacing the floor of his study for perhaps five minutes, his wide peasant face wearing a thick-furrowed muscular glower, while Father Cherokee sat nervously on the edge of his chair. Neither priest had spoken since Cherokee had entered the room in answer to his ruler’s summons; Cherokee jumped slightly when Abbot Arkos finally grunted out the words.

“You did the right thing,” the abbot said again, stopping in the center of the room and squinting at his prior, who finally began to relax. It was nearly midnight and Arkos had been preparing to retire for an hour or two of sleep before Matins and Lauds. Still damp and disheveled from a recent plunge in the bathing barrel, he reminded Cherokee of a were-bear only incompletely changed into a man. He was wearing a coyote-skin robe, and the only hint of his office was the pectoral cross that nestled in the black fur on his chest and flashed with candlelight whenever he turned toward the desk. His wet hair hung over his forehead, and with his short jutting beard and his coyote skins, he looked, at the moment, less like a priest than a military chieftain, full of restrained battle-anger from a recent assault. Father Cherokee, who came of baronial stock from Denver, tended to react formally to men’s official capacities, tended to speak courteously to the badge of office while not allowing himself to see the man who wore it, in this respect following the Court customs of many ages. Thus Father Cherokee had always maintained a formally cordial relationship with the ring and the pectoral cross, with the office, of his abbot, but permitted himself to see as little as possible of Arkos the man. This was rather difficult under present circumstances, the Reverend Father Abbot being fresh out of his bath, and padding around his study in his bare feet. He had apparently just trimmed a corn and cut too deep; one great toe was bloody. Cherokee tried to avoid noticing it, but felt very ill at ease.

“You do know what I’m talking about?” Arkos growled impatiently.

Cherokee hesitated. “Would you mind, Father Abbot, being specific—in case it’s connected with something I might have heard about only in confession?”

“Hah? Oh! Well, I’m bedeviled! You did hear his confession. I clean forgot. Well, get him to tell you again, so you can talk—though Heaven knows, it’s all over the abbey anyhow. No, don’t go see him now. I’ll tell you, and don’t answer on whatever’s sealed. You’ve seen that stuff?” Abbot Arkos waved toward his desk where the contents of Brother Francis’ box had been emptied for examination.

Cherokee nodded slowly. “He dropped it beside the road when he fell. I helped gather it up, but I didn’t look at it carefully.”

“Well, you know what he claims it is?”

Father Cherokee glanced aside. He seemed not to hear the question.

“All right, all right,” the abbot growled, “never mind what he *claims* it is. Just go look it over carefully yourself and decide what you think it is.”

Cherokee went to bend over the desk and scrutinize the papers carefully, one at a time, while the abbot paced and kept talking, seemingly to the priest but half to himself.

“It’s impossible! You did the right thing to send him back before he uncovered more. But of course that’s not the worst part. The worst part is the old man he babbles about. It’s getting too thick. I don’t know anything that could damage the case worse than a whole flood of improbable ‘miracles.’ A few real incidents, certainly! It has to be established that the intercession of the Beatus has brought about the

miraculous—before canonization can occur. But there can be too much! Look at the Blessed Chang—beatified two centuries ago, but never canonized—so far. And *why*? His Order got too eager, that's why. Every time somebody got over a cough, it was a miraculous cure by the Beatus. Visions in the basement, evocations in the belfry; It sounded more like a collection of ghost stories than a list of miraculous incidents. Maybe two or three incidents were really valid, but when there's that much chaff—well?"

Father Cherokee looked up. His knuckles had whitened on the edge of the desk and his face seemed strained. He seemed not to have been listening. "I beg your pardon, Father Abbot?"

"Well, the same thing could happen here, that's what," said the abbot, and resumed his slow padding to and fro.

"Last year there was Brother Noyon and his miraculous hangman's noose. Ha! And the year before that, Brother Smirnov gets mysteriously cured of the gout—how?—by touching a probable relic of our Blessed Leibowitz, the young louts say. And now this Francis, he meets a pilgrim—wearing *what?*—wearing for a kilt the *very* burlap cloth they hooded Blessed Leibowitz with before they hanged him. And with what for a belt? A rope. What rope? Ahh, the very same—" He paused, looking at Cherokee. "I can tell by your blank look that you haven't heard this yet? No? All right, so you can't say. No, no, Francis didn't say that. All he said was—" Abbot Arkos tried to inject a slightly falsetto quality into his normally gruff voice. "All Brother Francis said was—'I met a little old man, and I thought he was a pilgrim heading for the abbey because he was going that way, and he was wearing an old burlap sack tied around with a piece of rope. And he made a mark on the rock, and the mark looked like *this*.' "

Arkos produced a scrap of parchment from the pocket of his fur robe and held it up toward Cherokee's face in the candle-glow. Still trying, with only slight success, to imitate Brother Francis: " 'And I couldn't figure out what it meant. Do *you* know?' "

Cherokee stared at the symbols and shook his head.

"I wasn't asking *you*," Arkos gruffed in his normal voice. "That's what Francis said. I didn't know either."

"You do now?"

"I do now. Somebody looked it up. That is a *lamedh*, and that is a *sadhe*. Hebrew letters."

"*Sadhe lamedh?*"

"No. Right to left. *Lamedh sadhe*. An ell, and a tee-ess sound. If it had vowel marks, it might be 'loots,' 'lots,' 'lets,' 'lets,' 'latz,' 'litz'-anything like that. If it had some letters between those two, it might sound like *Lllll-guess-who*."

"Leibo-Ho, *no!*"

"Ho, yes! Brother *Francis* didn't think of it. Somebody else thought of it. Brother *Francis* didn't think of the burlap hood and the hangman's rope; one of his chums did. So what happens? By tonight, the whole novitiate is buzzing with the sweet little story that Francis met the Beatus himself out there, and the Beatus escorted our boy over to where that stuff was and told him he'd find his vocation."

A perplexed frown crossed Cherokee's face. "Did Brother Francis say that?"

"*NOO!*" Arkos roared. "Haven't you been listening? Francis said no such things. I wish he had, by gum; then I'd *HAVE* the rascal! But *he* tells it sweet-and-simple, rather stupidly, in fact, and lets the others read in the meanings. I haven't talked to him myself. I sent the Rector of the Memorabilia to get his story."

"I think I'd better talk to Brother Francis," Cherokee murmured.

"*Do!* When you first came in, I was still wondering whether to roast you alive or not. For sending him in, I mean. If you had let him stay out there on the desert, we wouldn't have this fantastic twaddle going around. But, on the other hand, if he'd stayed out there, there's no telling what *else* he might have dug out of that cellar. I think you did the right thing, to send him in."

Cherokee, who had made the decision on no such basis, found silence to be the appropriate policy.

"See him," growled the abbot. "Then send him to me."

It was about nine on a bright Monday morning when Brother Francis rapped timidly at the door of the abbot's study. A good night's sleep on the hard straw pallet in his old familiar cell, plus a small bite of

unfamiliar breakfast, had not perhaps done any wonders for starved tissue or entirely cleared the sun-daze from his brain, but these relative luxuries had at least restored him to sufficient clarity of mind to perceive that he had cause to be afraid. He was, in fact, terrified, so that his first tap at the abbot's door went unheard. Not even Francis could hear it. After several minutes, he mustered the courage to knock again.

"*Benedicamus Domine.*"

"*Deo? gratias?*" asked Francis.

"Come in, my boy, come *in!*" called an affable voice, which, after some seconds of puzzling, he recognized with amazement to have been that of his sovereign abbot.

"You twist the little *knob*, my son," said the same friendly voice after Brother Francis had stood frozen on the spot for some seconds, with his knuckles still in position for knocking.

"Y-y-yes—" Francis scarcely touched the knob, but it seemed that the accursed door opened anyway; he had hoped that it would be tightly stuck.

"The Lord Abbot s-s-sent for—me?" squawked the novice.

Abbot Arkos pursed his lips and nodded slowly. "Mmmm—yes, the Lord Abbot sent for—*you*. *Do* come in and shut the door."

Brother Francis got the door closed and stood shivering in the center of the room. The abbot was toying with some of the wire-whiskered things from the old toolbox.

"Or perhaps it would be more fitting," said Abbot Arkos, "If the Reverend Father Abbot were sent for *by you*. Now that you have been so favored by Providence and have become so famous, eh?" He smiled soothingly.

"Heh heh?" Brother Francis laughed inquiringly. "Oh n-n-no, m'Lord."

"You do not dispute that you have won overnight fame? That Providence elected you to discover *THIS*—" he gestured sweepingly at the relics on the desk "—this *JUNK* box, as its previous owner no doubt rightly called it?"

The novice stammered helplessly, and somehow managed to wind up wearing a grin.

"You are seventeen and plainly an idiot, are you not?"

"That is undoubtedly true, m'Lord Abbot."

"What excuse do you propose for believing yourself called to Religion?"

"No excuse, Magister meus."

"*Ah?* So? Then you feel that you have no vocation to the Order?"

"Oh, I *do!*" the novice gasped.

"But you propose no excuse?"

"None."

"You little cretin, I am asking your reason. Since you state none, I take it you are prepared to deny that you met anyone in the desert the other day, that you stumbled on this—this *JUNK* box with no help, and that what I have been hearing from others is only—feverish raving?"

"Oh, no, Dom Arkos!"

"Oh, no, what?"

"I cannot deny what I saw with my own eyes, Reverend Father."

"So, you did meet an angel—or was it a saint?—or perhaps not yet a saint?—and he showed you where to look?"

"I never said he was—"

"And *this* is your excuse for believing yourself to have a true vocation, is it not? That this, this—shall we call him a 'creature'?—spoke to you of finding a voice, and marked a rock with his initials, and told you it was what you were looking for, and when you looked, under it—there *THIS* was. Eh?"

"Yes, Dom Arkos."

"What is your opinion of your own execrable vanity?"

"My execrable vanity is unpardonable, m'Lord'n'Teacher."

"To imagine yourself important enough to be *unpardonable* is an even vaster vanity," roared the sovereign of the abbey.

"M'Lord, I am indeed a worm."

"Very well, you need only deny the part about the pilgrim. No one else saw such a person, you know. I understand he was supposed to have been headed in this direction? That he even said he might stop here? That he inquired about the abbey? Yes? And where would he have disappeared to, if he ever existed? No such person came past here. The brother on duty at that time in the watchtower didn't see him. Eh? Are you now ready to admit that you imagined him?"

"If there are not really two marks on that rock where he—then maybe I might—"

The abbot dosed his eyes and sighed wearily. "The marks are there—faintly," he admitted. "You might have made them yourself."

"No, m'Lord."

"Will you admit that you imagined the old creature?"

"No, m'Lord."

"Very well, do you know what is going to happen to you now?"

"Yes, Reverend Father"

"Then prepare to take it."

Trembling, the novice gathered up his habit about his waist and bent over the desk. The abbot withdrew a stout hickory ruler from the drawer, tested it on his palm, then gave Francis a smart whack with it across the buttocks.

"*Deo gratias!*" the novice dutifully responded, gasping slightly.

"Care to change your mind, my boy?"

"Reverend Father, I can't deny—"

WHACK!

"*Deo gratias!*"

WHACK!

"*Deo gratias!*"

Ten times was this simple but painful litany repeated, with Brother Francis yelping his thanks to Heaven for each scorching lesson in the virtue of humility, as he was expected to do. The abbot paused after the tenth whack. Brother Francis was on tip-toe and bouncing slightly. Tears squeezed from the corners of clenched eyelids.

"My dear Brother Francis," said the Abbot Arkos "are you *quite* sure you saw the old man?"

"certain," he squeaked, steeling himself for more.

Abbot Arkos glanced clinically at the youth, then walked round his desk and sat down with a grunt. He glowered for a time at the slip of parchment bearing the letters

"Who do you suppose he could have been?" Abbot Arkos muttered absently.

Brother Francis opened his eyes, causing a brief shed of water.

"Oh, you've convinced me, boy, worse luck for *you*.

Francis said nothing, but prayed silently that the need to convince his sovereign of his veracity would not often arise. In response to an irritable gesture from the abbot, he lowered his tunic.

"You may sit down," said the abbot, becoming casual if not genial

Francis moved toward the indicated chair, lowered himself halfway into it, but then winced and stood up again. "If it's all the same to the Reverend Father Abbot—"

"All right, then stand. I won't keep you long anyhow. You're to go out and finish your vigil." He paused, noticing the novice's face brighten a little. "Oh no you don't!" he snapped. "You're not going back to the same place. You'll trade hermitages with Brother Alfred, and not go near those ruins again. Furthermore, I command you not to discuss the matter with anyone, except your confessor or with me, although, Heaven knows, the damage is already done. Do you know what you've started?"

Brother Francis shook his head. "Yesterday being Sunday, Reverend Father, we weren't required to keep silent, and at recreation I just answered the fellows' questions. I thought—"

"Well, your *fellows* have cooked up a very cute explanation, dear son. Did you know that it was the Blessed Leibowitz himself you met out there?"

Francis looked blank for a moment then shook his head again. "Oh, no, m'Lord Abbot. I'm sure it

couldn't have been. The Blessed Martyr wouldn't do such a thing."

"Wouldn't do such-a-*what* thing?"

"Wouldn't chase after somebody and try to hit him with a stick that had a nail in one end."

The abbot wiped his mouth to hide an involuntary smile. He managed to appear thoughtful after a moment. "Oh, I don't know about that, now. It was you he was chasing, wasn't it? Yes, I thought so. You told your fellow novices about that part too? Yes, eh? Well, you see, *they* didn't think that would exclude the possibility of his being the Beatus. Now I doubt if there are very *many* people that the Beatus would chase with a stick, but—" He broke off, unable to suppress laughter at the expression on the novice's face. "All right, son—but who do you suppose he could have been?"

"I thought perhaps he was a pilgrim on his way to visit our shrine, Reverend Father."

"It isn't a shrine yet, and you're not to call it that. And anyway he wasn't, or at least, he didn't. And he didn't pass our gates, unless the watch was asleep. And the novice on watch denies being asleep, although he admitted feeling drowsy that day. So what do *you* suggest?"

"If the Reverend Father Abbot will forgive me, I've been on watch a few times myself."

"And?"

"Well, on a bright day when there's nothing moving but the buzzards, after a few hours you just start looking up at the buzzards."

"Oh you do, do you? When you're supposed to be watching the trail!"

"And if you stare at the sky too long, you just kind of blank-out—not really asleep, but, sort of, preoccupied."

"So that's what you do when you're on watch, do you?" the abbot growled.

"Not necessarily. I mean, no, Reverend Father, I wouldn't know it if I had, I don't think. Brother Je—I mean—a brother I relieved once was like that. He didn't even know it was time for the watch to change. He was just sitting there in the tower and staring up at the sky with his mouth open. In a daze."

"Yes, and the first time you go stupefied that way, along'll come a heathen war-party out of the Utah country, kill a few gardeners, tear up the irrigating system, spoil our crops, and dump stones in the well before we can start defending ourselves. Why are you looking so—oh, I forgot—you were Utah-born before you ran away, weren't you? But never mind, you could, just possibly, be right about the watch—how he could have missed seeing the old man, that is. You're sure he was just an *ordinary* old man—not anything more? Not an angel? Not a beatus?"

The novice's gaze drifted ceilingward in thought, then fell quickly to his ruler's face. "Do angels or saints cast shadows?"

"Yes—I mean no, I mean—how should I know! He did cast a shadow, didn't he?"

"Well—it was such a small shadow you could hardly see it."

"*What!*"

"Because it was almost noon."

"Imbecile! *I'm* not asking you to tell me *what* he was. I know very well what he was, if you saw him at all." Abbot Arkos thumped repeatedly on the table for emphasis. "I want to know if you—You!—are *sure beyond a doubt* that he was just an ordinary old man!"

This line of questioning was puzzling to Brother Francis. In his own mind, there was no neat straight line separating the Natural from the Supernatural order, but rather, an intermediate twilight zone. There were things that were *clearly* natural, and there were Things that were *clearly* supernatural, but between these extremes was a region of confusion (his own)—the preternatural—where things made of mere earth, air, fire, or water tended to behave disturbingly like *Things*. For Brother Francis, this region included whatever he could see but not understand. And Brother Francis was never "sure beyond a doubt," as the abbot was asking him to be, that he properly understood much of anything. Thus, by raising the question at all, Abbot Arkos was unwittingly throwing the novice's pilgrim into the twilight region, into the same perspective as the old man's first appearance as a legless black strip that wriggled in the midst of a lake of heat illusion on the trail, into the same perspective as he had occupied momentarily when the novice's world had contracted until it contained nothing but a hand offering him a particle of food. If some creature more-than-human chose to disguise itself as human, how was he to penetrate its disguise, or suspect

there was one? If such a creature did not wish to be suspected, would it not remember to cast a shadow, leave footprints, eat bread and cheese? Might it not chew spice-leaf, spit at a lizard, and remember to imitate the reaction of a mortal who forgot to put on his sandals before stepping on hot ground? Francis was not prepared to estimate the intelligence or ingenuity of hellish or heavenly beings, or to guess the extent of their histrionic abilities, although he assumed such creatures to be either hellishly or divinely clever. The abbot, by raising the question at all, had formulated the nature of Brother Francis' answer, which was: to entertain the question itself, although he had not previously done so.

"Well, boy?"

"M'Lord Abbot, you don't suppose he *might* have been—"

"I'm asking you not to suppose. I'm asking you to be flatly certain. Was he, or was he not, an ordinary flesh-and-blood person?"

The question was frightening. That the question was dignified by coming from the lips of so exalted a person as his sovereign abbot made it even more frightening, though he could plainly see that his ruler stated it merely because he wanted a *particular* answer. He wanted it rather badly. If he wanted it that badly, the question must be important. If the question was important enough for an abbot, then it was *far* too important for Brother Francis who *dared not* be wrong.

"I-I think he was flesh and blood, Reverend Father, but not exactly "ordinary." In some ways, he was rather *extraordinary*."

"What ways?" Abbot Arkos asked sharply.

"Like-how straight he could spit. And he could *read*, I think."

The abbot dosed his eyes and rubbed his temples in apparent exasperation. How easy it would have been flatly to have told the boy that his pilgrim was only an old tramp of some kind, and then to have commanded him not to think otherwise. But by allowing the boy to see that a question was possible, he had rendered such a command ineffective before he uttered it. Insofar as thought could be governed at all, it could only be commanded to follow what reason affirmed anyhow; command it otherwise, and it would not obey. Like any wise ruler, Abbot Arkos did not issue orders vainly, when to disobey was possible and to enforce was not possible. It was better to look the other way than to command ineffectually. He had asked a question that he himself could not answer by reason, having never seen the old man, and had thereby lost the right to make the answer mandatory.

"Get *out*," he said at last, without opening his eyes.

## 5

# S

omewhat mystified by the commotion at the abbey, Brother Francis returned to the desert that same day to complete his Lenten vigil in rather wretched solitude. He had expected some excitement about the relics to arise, but the excessive interest which everyone had taken in the old wanderer surprised him. Francis had spoken of the old man, simply because of the part he had played, either by accident or by design of Providence, in the monk's stumbling upon the crypt and its relics. The pilgrim was only a minor ingredient, as far as Francis was concerned, in a mandala design at whose center rested a relic of a saint. But his fellow novices had seemed more interested in the pilgrim than in the relic, and even the abbot had summoned him, not to ask about the box, but to ask about the old man. They had asked him a hundred questions about the pilgrim to which he could reply only: "I didn't notice," or "I wasn't looking right then," or "If he said, I don't remember," and some of the questions were a little weird. And so he questioned himself: *Should I have noticed? Was I stupid not to watch what he did? Wasn't I paying enough attention to what he said? Did I miss something important because I was dazed?*

He brooded on it in the darkness while the wolves prowled about his new encampment and filled the nights with their howling. He caught himself brooding on it during times of the day that were assigned as proper for the prayers and spiritual exercises of the vocational vigil, and he confessed as much to Prior Cheroki the next time the priest rode his Sunday circuit. "You shouldn't let the romantic imaginations of the others bother you; you have enough trouble with your own," the priest told him, after chiding him for neglecting the exercises and prayers. "They don't think up questions like that on the basis of what *might be true*; they concoct the questions on the basis of what *might be sensational* if it just happened to be true. It's ridiculous! I can tell you that the Reverend Father Abbot has ordered the entire novitiate to drop the subject." After a moment, he unfortunately added: "There really *wasn't* anything about the old man to suggest the supernatural—was there?" with only the faintest trace of hopeful wonder in his tone.

Brother Francis wondered too. If there had been a suggestion of the supernatural, he had not noticed it. But then too, judging by the number of questions he had been unable to answer, he had not noticed very much. The profusion of the questions had made him feel that his failure to observe had been, somehow, culpable. He had become grateful to the pilgrim upon discovering the shelter. But he had not interpreted events entirely in terms of his own interests, in accordance with his own longing for some shred of evidence that the dedication of his lifetime to the labors of the monastery was born not so much of his own will as it was of grace, empowering the will, but not compelling it, rightly to choose. Perhaps the events had a vaster significance that he had missed, during the totality of his self-absorption.

What is your opinion of your own execrable vanity?

*My execrable vanity is like that of the fabled cat who studied ornithology, m'Lord.*

His desire to profess his final and perpetual vows—was it not akin to the motive of the cat who became an ornithologist?—so that he might glorify his own ornithophagy, esoterically devouring *Penthestes atricapillus* but never eating chickadees. For, as the cat was called by Nature to be an ornithophage, so was Francis called by his own nature hungrily to devour such knowledge as could be taught in those days, and, because there were no schools but the monastic schools, he had donned the habit first of a postulant, later of a novice. But to suspect that God as well as Nature had beckoned him to become a professed monk of the Order?

What else could he do? There was no returning to his homeland, the Utah. As a small child, he had been sold to a shaman, who would have trained him as his servant and acolyte. Having run away, he could not return, except to meet grisly tribal "justice." He had stolen a shaman's property (Francis' own person), and while thievery was an honorable profession among the Utah, getting caught was a capital crime when the thief's victim was the tribal warlock. Nor would he have cared to lapse back into the relatively primitive life of an illiterate shepherd people, after his schooling at the abbey.

But what else? The continent was lightly settled. He thought of the wall-map in the abbey's library, and of the sparse distribution of the crosshatched areas, which were regions—if not of civilization—then of civil order, where some form of lawful sovereignty, transcending the tribal, held sway. The rest of the continent was populated, very thinly, by the people of the forest and the plain, who were, for the most part, not savages, but simple clanfolk loosely organized into small communities here and there, who lived by hunting, gathering, and primitive agriculture, whose birth rate was barely high enough (discounting monster-births and sports) to sustain the population. The principal industries of the continent, excepting a few seacoast regions, were hunting, farming, fighting, and witchcraft—the last being the most promising "industry" for any youth with a choice of careers and having in mind as primary ends, maximum wealth and prestige.

The schooling which Francis had been given at the abbey prepared him for nothing which was of practical value in a dark, ignorant, and workaday world, where literacy was nonexistent and a literate youth, therefore, seemed of no worth to a community unless he could also farm, fight, hunt or show some special talent for inter-tribal theft, or for the divining of water and workable metal. Even in the scattered domains where a form of civil order existed, the fact of Francis' literacy would help him not at all, if he must lead a life apart from the Church. It was true that petty barons sometimes employed a scribe or two, but such cases were rare enough to be negligible, and were as often filled by monks as by monastery-schooled laymen.

The only demand for scribes and secretaries was created by the Church herself, whose tenuous hierarchic web was stretched across the continent (and occasionally to far-distant shores, although the diocesans abroad were virtually autonomous rulers, subject to the Holy See in theory but seldom in practice, being cut off from New Rome less by schism than by oceans not often crossed) and could be held together only by a communication network. The Church had become, quite coincidentally and without meaning to be, the only means whereby news was transmitted from place to place across the continent. If plague came to the northeast, the southwest would soon hear of it, as a coincidental effect of tales told and retold by messengers of the Church, coming and going from New Rome.

If the nomadic infiltration in the far northwest threatened a Christian diocese, an encyclical letter might soon be read from pulpits far to the south and east, warning of the threat and extending the apostolic benediction to “men of any station, so long as they be skilled at arms, who, having the means to make the journey, may be piously disposed to do so, in order to swear fealty to Our beloved son, N., lawful ruler of that place, for such a period of time as may seem necessary for the maintenance of standing armies there for defense of Christians against the gathering heathen horde, whose ruthless savagery is known to many and who, to Our deepest grief, tortured, murdered, and devoured those priests of God which We Ourselves sent to them with the Word, that they might enter as lambs into the fold of the Lamb, of whose flock on Earth We are the Shepherd; for, while We have never despaired nor ceased to pray that these nomadic children of the darkness may be led into the Light and enter Our realms in peace (for it is not to be thought that peaceful strangers should be repelled from a land so vast and empty; nay, they should be welcomed who come peacefully, even should they be strangers to the visible Church and its Divine Founder, so long as they hearken to that Natural Law which is written in the hearts of all men, binding them to Christ in spirit, though they be ignorant of His Name), it is nevertheless meet and fitting and prudent that Christendom, while praying for peace and the conversion of the heathen, should gird itself for defense in the Northwest, where the hordes gather and the incidents of heathen savagery have lately increased, and upon each of you, beloved sons, who can bear arms and shall travel to the Northwest to join forces with those who prepare rightfully to defend their lands, homes, and churches, We extend, and hereby bestow, as a sign of Our special affection, the Apostolic Benediction.”

Francis had thought briefly of going to the northwest, if he failed to find a vocation to the Order. But, although he was strong and skillful enough with blade and bow, he was rather short and not very heavy, while—according to rumor—the heathen was nine feet tall. He could not testify as to the truth of the rumor, but saw no reason to think it false.

Besides dying in battle, there was very little that he could think of to do with his lifetime—little that seemed worth the doing—if he could not devote it to the Order.

His certainty of his vocation had not been broken, but only slightly bent, by the scorching administered to him by the abbot, and by the thought of the cat who became an ornithologist when called only by Nature to become an ornithophage. The thought made him unhappy enough to permit him to be overcome by temptation, so that, on Palm Sunday, with only six days of starvation remaining until the end of Lent, Prior Cheroki heard from Francis (or from the shriveled and sun-scorched residuum of Francis, wherein the soul remained somehow encysted) a few brief croaks which constituted what was probably the most succinct confession that Francis ever made or Cheroki ever heard:

“Bless me, Father; I ate a lizard.”

Prior Cheroki having for many years been confessor to fasting penitents, found that custom had, with him, as with a fabled gravedigger, given it all “a property of easiness,” so that he replied with perfect equanimity and not even a blink: “Was it an abstinence day, and was it artificially prepared?”

Holy Week would have been less lonely than the earlier weeks of Lent, had the hermits not been, by then, past caring; for some of the Passiontide liturgy was carried outside the abbey walls to touch the penitents at their vigil sites; twice the Eucharist came forth, and on Maundy Thursday the abbot himself made the rounds, with Cheroki and thirteen monks, to perform the Mandatum at each hermitage. Abbot Arkos’ vestments were concealed under a cowl, and the lion almost managed to seem humble kitten as he knelt, and washed and kissed the feet of his fasting subjects with maximum economy of movement and a minimum of flourish and display, while the others chanted the antiphons.

*“Mandatum novum do vobis: ut diligatis invicem...”* On Good Friday a Procession of the Cross brought out a veiled crucifix, stopping at each hermitage to unveil it gradually before the penitent, lifting the cloth inch by inch for the Adoration, while the monks chanted the Reproaches:

*“My people, what have I done to thee? or in what have I grieved thee? Answer...I exalted thee with virtuous power; and thou hangest me from the gibbet of a cross...”*

And then, Holy Saturday.

The monks carried them in one at a time—famished and raving. Francis was thirty pounds lighter and several degrees weaker than he had been on Ash Wednesday. When they set him on his feet in his own cell, he staggered, and before he reached the bunk, he fell. The brothers hoisted him into it, bathed him, shaved him, and anointed his blistered skin, while Francis babbled deliriously about something in a burlap loincloth, addressing it at times as an angel and again as a saint, frequently invoking the name of Leibowitz and trying to apologize.

His brethren, forbidden by the abbot to speak of the matter, merely exchanged significant glances or nodded mysteriously among themselves.

Reports filtered to the abbot.

“Bring him here,” he grunted at a recorder as soon as he heard that Francis could walk. His tone sent the recorder scurrying.

“Do you deny saying these things?” Arkos growled.

“I don’t remember saying them, m’Lord Abbot,” said the novice, eyeing the abbot’s ruler. “I may have been raving.”

“Assuming that you *were* raving—would you say it again now?”

“About the pilgrim being the *Beatus*? Oh, no, Magister meus!”

“Then assert the contrary.”

“I don’t *think* the pilgrim was the *Beatus*”

“Why not just a straightforward *He was not*?”

“Well, never having seen the Blessed Leibowitz personally, I wouldn’t—”

“*Enough!*” the abbot ordered. “*Too much!* That’s *all* I want to see of you and hear of you for a long, long time! Out! But just one thing—*DON’T* expect to profess your vows with the others this year. You won’t be permitted.”

For Francis it was like a blow in the stomach with the end of a log.

## 6

# A

s topic for conversation, the pilgrim remained forbidden subject matter in the abbey; but with respect to the relics and the fallout shelter the prohibition was, of necessity, gradually relaxed—except for their discoverer who remained under orders not to discuss them, and preferably to think of the matter as little as possible. Still, he could not avoid hearing things now and again, and he knew that in one of the abbey’s workshops, monks were at work on the documents, not only his own but some others that had been found in the ancient desk, before the abbot ordered that the shelter be closed.

*Closed!* The news jolted Brother Francis. The shelter scarcely had been touched. Beyond his own adventure, there had been no attempt to penetrate further into the secrets of the shelter except to open the desk which he had tried to open, with no success, before he noticed the box. *Closed!* With no attempt to discover what might lie beyond the inner door marked “Hatch Two” nor to investigate “Sealed Environment.” Without even removing the stones or the bones. *Closed!* The investigation abruptly choked off, without apparent cause.

Then there began a rumor.

*“Emily had a gold tooth. Emily had a gold tooth. Emily had a gold tooth.”* It was, in fact,

quite true. It was one of those historical trivialities that manage somehow to outlive important facts which someone should have bothered to remember but which went unrecorded until some monastic historian was forced to write: "Neither the contents of the Memorabilia nor any archaeological source yet uncovered disclose the name of the ruler who occupied the White Palace during the middle and late sixties, although Fr. Barcus has claimed, not without supporting evidence, that his name was—"

And yet, it was clearly recorded in the Memorabilia that Emily had worn a gold tooth.

It was not surprising that the Lord Abbot commanded that the crypt be sealed forthwith. Remembering how he had lifted the ancient skull and turned it to face the wall, Brother Francis suddenly feared the wrath of Heaven. Emily Leibowitz had vanished from the face of the Earth at the beginning of the Flame Deluge, and only after many years would her widower admit that she was dead.

It was said that God, in order to test mankind which had become swelled with pride as in the time of Noah, had commanded the wise men of that age, among them the Blessed Leibowitz, to devise great engines of war such as had never before been upon the Earth, weapons of such might that they contained the very fires of Hell, and that God had suffered these magi to place the weapons in the hands of princes, and to say to each prince: "Only because the enemies have such a thing have we devised this for thee, in order that they may know that thou hast it also, and fear to strike. See to it, m'Lord, that thou fearest them as much as they shall now fear thee, that none may unleash this dread thing which we have wrought."

But the princes, putting the words of their wise men to naught, thought each to himself: If I but strike quickly enough, and in secret, I shall destroy these others in their sleep, and there will be none to fight back; the earth shall be mine

Such was the folly of princes, and there followed the Flame Deluge

Within weeks—some said days—it was ended, after the first unleashing of the hell-fire. Cities had become puddles of glass, surrounded by vast acreages of broken stone. While nations had vanished from the earth, the lands littered with bodies, both men and cattle, and all manner of beasts, together with the birds of the air and all things that flew, all things that swam in the rivers, crept in the grass, or burrowed in holes; having sickened and perished, they covered the land, and yet where the demons of the Fallout covered the countryside, the bodies for a time would not decay, except in contact with fertile earth. The great clouds of wrath engulfed the forests and the fields, withering trees and causing the crops to die. There were great deserts where once life was, and in those places of the Earth where men still lived, all were sickened by the poisoned air, so that, while some escaped death, none was left untouched; and many died even in those lands where the weapons had not struck, because of the poisoned air.

In all parts of the world men fled from one place to other places, and there was a confusion of tongues. Much wrath was kindled against the princes and the servants of the princes and against the magi who had devised the weapons. Years passed, and yet the Earth was not cleansed. So it was clearly recorded in the Memorabilia.

From the confusion of tongues, the intermingling of the remnants of many nations, from fear, the hate was born. And the hate said: *Let us stone and disembowel and burn the ones who did this thing. Let us make a holocaust of those who wrought this crime, together with their hirelings and their wise men; burning, let them perish, and all their works, their names, and even their memories. Let us destroy them all, and teach our children that the world is new, that they may know nothing of the deeds that went before. Let us make a great simplification, and then the world shall begin again.*

So it was that, after the Deluge, the Fallout, the plagues, the madness, the confusion of tongues, the rage, there began the bloodletting of the Simplification, when remnants of mankind had torn other remnants limb from limb, killing rulers, scientists, leaders, technicians, teachers, and whatever persons the leaders of the maddened mobs said deserved death for having helped to make the Earth what it had become. Nothing had been so hateful in the sight of these mobs as the man of learning, at first because they had served the princes, but then later because they refused to join in the bloodletting and tried to oppose the mobs, calling the crowds "bloodthirsty simpletons."

Joyfully the mobs accepted the name, took up the cry: *Simpletons! Yes, yes! I'm a simpleton! Are*

*you a simpleton? We'll build a town and we'll name it Simple Town, because by then all the smart bastards that caused all this, they'll be dead! Simpletons! Let's go. This ought to show 'em! Anybody here not a simpleton? Get the bastard, if there is!*

To escape the fury of the simpleton packs, such learned people as still survived fled to any sanctuary that offered itself. When Holy Church received them, she vested them in monks' robes and tried to hide them in such monasteries and convents as had survived and could be reoccupied, for the religious were less despised by the mob except when they openly defied it and accepted martyrdom. Sometimes such sanctuary was effective, but more often it was not. Monasteries were invaded, records and sacred books were burned, refugees were seized and summarily hanged or burned. The Simplification had ceased to have plan or purpose soon after it began, and became an insane frenzy of mass murder and destruction such as can occur only when the last traces of social order are gone. The madness was transmitted to the children, taught as they were—not merely to forget—but to hate, and surges of mob fury recurred sporadically even through the fourth generation after the Deluge. By then, the fury was directed not against the learned, for there were none, but against the merely literate.

Isaac Edward Leibowitz, after a fruitless search for his wife, had fled to the Cistercians where he remained in hiding during the early post-Deluge years. After six years, he had gone once more to search for Emily or her grave, in the far southwest. There he had become convinced at last of her death, for death was unconditionally triumphant in that place. There in the desert he quietly made a vow. Then he went back to the Cistercians, took their habit, and after more years became a priest. He gathered a few companions about him and made some quiet proposals. After a few more years, the proposals filtered to "Rome," which was no longer Rome (which was no longer a city), having moved elsewhere, moved again, and still again—in less than two decades, after staying in one place for two millennia. Twelve years after the proposals were made, Father Isaac Edward Leibowitz had won permission from the Holy See to found a new community of religious, to be named after Albertus Magnus, teacher of Saint Thomas, and patron of men of science. Its task, unannounced and at first only vaguely defined, was to preserve human history for the great-great-great-grandchildren of the children of the simpletons who wanted it destroyed. Its earliest habit was burlap rags and bindlestiffs—the uniform of the simpleton mob. Its members were either "bookleggers" or "memorizers," according to the tasks assigned. The bookleggers smuggled books to the southwest desert and buried them there in kegs. The memorizers committed to rote memory entire volumes of history, sacred writings, literature, and science, in case some unfortunate book smuggler was caught, tortured, and forced to reveal the location of the kegs. Meanwhile, other members of the new Order located a water hole about three days' journey from the book cache and began the building of a monastery. The project, aimed at saving a small remnant of human culture from the remnant of humanity who wanted it destroyed, was then underway.

Leibowitz, while taking his own turn at booklegging, was caught by a simpleton mob; a turncoat technician, whom the priest swiftly forgave, identified him as not only a man of learning, but also a specialist in the weapons field. Hooded in burlap, he was martyred forthwith, by strangulation with a hangman's noose not tied for neck-breaking, at the same time being roasted alive—thus settling a dispute in the crowd concerning the method of execution.

The memorizers were few, their memories limited.

Some of the book kegs were found and burned, as well as several other bookleggers. The monastery itself was attacked thrice before the madness subsided.

From the vast store of human knowledge, only a few kegs of original books and a pitiful collection of hand-copied texts, rewritten from memory, had survived in the possession of the Order by the time the madness had ended.

Now, after six centuries of darkness, the monks still preserved this Memorabilia, studied it, copied and recopied it, and patiently waited. At the beginning, in the time of Leibowitz, it had been hoped—and even anticipated as probable—that the fourth or fifth generation would begin to want its heritage back. But the monks of the earliest days had not counted on the human ability to generate a new cultural inheritance in a couple of generations if an old one is utterly destroyed, to generate it by virtue of lawgivers and prophets, geniuses or maniacs; through a Moses, or through a Hitler, or an ignorant but tyrannical

grandfather, a cultural inheritance may be acquired between dusk and dawn, and many have been so acquired. But the new “culture” was an inheritance of darkness, wherein “simpleton” meant the same thing as “citizen” meant the same thing as “slave.” The monks waited. It mattered not at all to them that the knowledge they saved was useless, that much of it was not really knowledge now, was as inscrutable to the monks in some instances as it would be to an illiterate wild-boy from the hills; this knowledge was empty of content, its subject matter long since gone. Still, such knowledge had a symbolic structure that was peculiar to itself, and at least the symbol-interplay could be observed. To observe the way a knowledge-system is knit together is to learn at least a minimum knowledge-of-knowledge, until someday–someday, or some century–an Integrator would come, and things would be fitted together again. So time mattered not at all. The Memorabilia was there, and it was given to them by duty to preserve, and preserve it they would if the darkness in the world lasted ten more centuries, or even ten thousand years, for they, though born in that darkest of ages, were still the very bookleggers and memorizers of the Beatus Leibowitz; and when they wandered abroad from their abbey, each of them, the professed of the Order–whether stable-hand or Lord Abbot–carried as part of his habit a book, usually a Breviary these days, tied up in a bindlestiff.

After the shelter was closed, the documents and relics which had been taken from it were quietly rounded up, one at a time and in an unobtrusive manner, by the abbot. They became unavailable for inspection, presumably locked in Arkos’ study. For all practical purposes, they had vanished. Anything which vanished at the level of the abbot’s study was not safe subject matter for public discussion. It was something to be whispered about in quiet corridors. Brother Francis seldom heard the whispers. Eventually, they stopped, only to be revived when a messenger from New Rome muttered with the abbot in the refectory one night. An occasional snatch of their muttering reached adjacent tables. The whispers lasted for a few weeks after the messenger’s departure, then subsided again.

Brother Francis Gerard of Utah returned to the desert the following year and fasted again in solitude. Once more he returned, weak and emaciated, and soon was summoned into the presence of Abbot Arkos, who demanded to know whether he claimed further conferences with members of the Heavenly Hosts.

“Oh, no, m’Lord Abbot. Nothing by day but buzzards.”

“By night?” Arkos asked suspiciously.

“Only wolves,” said Francis, adding cautiously: “I think.”

Arkos did not choose to belabor the cautious amendment, but merely frowned. The abbot’s frown, Brother Francis had come to observe, was the causative source of radiant energy which traveled through space with finite velocity and which was as yet not very well understood except in terms of its withering effect upon whatever thing absorbed it, that thing usually being a postulant or novice. Francis had absorbed a five-second burst of the stuff by the time the next question was put to him.

“Now what about last year?”

The novice paused to swallow. “The–old–man?”

“The old man.”

“Yes, Dom Arkos.”

Trying to keep any hint of a question mark out of his tone, Arkos droned: “Just an old man. Nothing more. We’re sure of that now.”

“I *think* it was just an old man, too.”

Father Arkos reached wearily for the hickory ruler.

WHACK!

“Deo gratias!”

WHACK!”

“*Deo . . .*”

As Francis returned to his cell, the abbot called after him down the corridor: “By the way, I intended to mention...”

“Yes, Reverend Father?”

“No vows this year,” he said absently, and vanished into his study.

# B

rother Francis spent seven years in the novitiate, seven Lenten vigils in the desert, and became highly proficient in the imitation of wolf calls. For the amusement of his brethren, he summoned the pack to the vicinity of the abbey by howling from the walls after dark. By day, he served in the kitchen, scrubbed the stone floors, and continued his classroom study of antiquity.

Then one day a messenger from a seminary in New Rome came riding to the abbey on an ass. After a long conference with the abbot, the messenger sought out Brother Francis. He seemed surprised to find that youth, now fully a man, still wearing the habit of a novice and scrubbing the kitchen floor.

"We have been studying the documents you discovered, for some years now," he told the novice. "Quite a few of us are convinced they're authentic."

Francis lowered his head. "I'm not permitted to mention the matter, Father," he said.

"Oh, that." The messenger smiled and handed him a scrap of paper bearing the abbot's seal, and written in the ruler's hand: *Ecce Inquisitor Curiae. Ausculta et obsequere. Arkos, AOL, Abbas.*

"It's all right," he added hastily, noticing the novice's sudden tension. "I'm not speaking to you officially. Someone else from the court will take your statements later. You know, don't you, that your papers have been in New Rome for some time now? I just brought some of them back."

Brother Francis shook his head. He knew less, perhaps, than anyone, concerning high-level reactions to his discovery of the relics. He noticed that the messenger wore the white habit of the Dominicans, and he wondered with a certain uneasiness about the nature of the "court" whereof the Black Friar had spoken. There was an inquisition against Catharism in the Pacific Coast region, but he could not imagine how that court could be concerned with relics of the Beatus. *Ecce Inquisitor Curiae*, the note said. Probably the abbot meant "investigator." The Dominican seemed a rather mild-humored man, and was not carrying any visible engines of torture.

"We expect the case for canonization of your founder to be reopened soon," the messenger explained. "Your Abbot Arkos is a very wise and prudent man." He chuckled. "By turning the relics over to another Order for examination, and by having the shelter sealed before it was fully explored—Well, you do understand, don't you?"

"No, Father. I had supposed he thought the whole thing too trivial to spend any time on."

The Black Friar laughed. "Trivial? I think not. But if your Order turns up evidence, relics, miracles, and whatever, the court has to consider the source. *Every* religious community is eager to see its founder canonized. So your abbot very wisely told you: 'Hands off the shelter.' I'm sure it's been frustrating for all of you, but—better for the cause of your founder to let the shelter be explored with other witnesses present."

"You're going to open it again?" Francis asked eagerly.

"No, not I. But when the court is ready, it will send observers. Then anything that is found in the shelter that might affect the case will be safe, in case the opposition questions its authenticity. Of course, the only reason for suspecting that the contents of the shelter might affect the cause is—Well, the things you found."

"May I ask how that is, Father?"

"Well, one of the embarrassments at the time of the beatification was the early life of Blessed Leibowitz—before he became a monk and a priest. The advocate for the other side kept trying to cast doubt on the early period, pre-Deluge. He was trying to establish that Leibowitz never made a careful

search—that his wife might even have been alive at the time of his ordination. Well, it wouldn't be the first time, of course; sometimes dispensations have been granted—but that's beside the point. The *advocatus diaboli* was just trying to cast doubt on your founder's character. Trying to suggest that he had accepted Holy Orders and taken vows before being certain his family responsibility was ended. The opposition failed, but it may try again. And if those human remains you found really are—" He shrugged and smiled.

Francis nodded. "It would pinpoint the date of her death."

"At the very beginning of the war that nearly ended everything. And in my own opinion—well, that handwriting in the box, it's either that of the Beatus or a very clever counterfeit."

Frauds reddened.

"I'm not suggesting that you were involved in any counterfeit scheme," the Dominican added hastily, upon noticing the blush.

The novice, however, had only been remembering his own opinion of the scrawl.

"Tell me, how did it happen?—how you located the site, I mean. I'll need the whole story of it."

"Well, it started because of the wolves."

The Dominican began taking notes.

A few days after the messenger's departure from the abbey, Abbot Arkos called for Brother Francis. "Do you still feel that your vocation is with us?" Arkos asked pleasantly.

"If m'Lord Abbot will pardon my execrable vanity—"

"Oh, let's ignore your execrable vanity for a moment. Do you or don't you?"

"Yes, Magister meus."

The abbot beamed. "Well, now, my son. I think we're convinced of it too. If you're ready to commit yourself for all time, I think the time's ripe for you to profess your solemn vows." He paused for a moment, and, watching the novice's face, seemed disappointed not to detect any change of expression. "What's this? You're not glad to hear it? You're not—? Ho! what's wrong?"

While Francis' face had remained a politely attentive mask, the mask gradually lost color. His knees buckled suddenly.

Francis had fainted.

Two weeks later, the novice Francis, having perhaps set an endurance record for survival time on desert vigils, left the ranks of the novitiate and, vowing perpetual poverty, chastity, obedience, together with the special pledges peculiar to the community, received blessings and a bindlestiff in the abbey, and became forever a professed monk of the Albertian Order of Leibowitz, chained by chains of his own forging to the foot of the Cross and the rule of the Order. Thrice the ritual inquired of him: "If God calleth thee to be His Booklegger, wilt thou then suffer death before betraying thy brethren?" And thrice Francis responded: "Aye, Lord."

"Then arise Brother Bookleggers and Brother Memorizers and receive the kiss of brotherhood. *Ecce quam bonum, et quam jucundum . . .*"

Brother Francis was transferred from the kitchen and assigned to less menial labor. He became apprentice copyist to an aged monk named Horner, and, if things went well for him, he might reasonably look forward to a lifetime in the copyroom, where he would dedicate the rest of his days to such tasks as the hand-copying of algebra texts and illuminating their pages with olive leaves and cheerful cherubim surrounding tables of logarithms.

Brother Horner was a gentle old man, and Brother Francis liked him from the start. "Most of us do better work on the assigned copy," Horner told him, "if we have our own project too. Most of the copyists become interested in some particular work from the Memorabilia and like to spend a little time at it on the side. For example, Brother Sarl over there—his work was lagging, and he was making mistakes. So we let him spend an hour a day on a project he chose for himself. When the work gets so tedious that he starts making errors in copy, he can put it aside for a while and work on his own project. I allow everyone to do the same. If you finish your assigned work before the day's over but don't have your own project, you'll have to spend the extra time on our perennials.

"Perennials?"

"Yes, and I don't mean plants. There's a perennial demand from the whole clergy for various

books—Missals, Scripture, Breviaries, the *Summa*, encyclopediae, and the like. We sell quite a lot of them. So when you don't have pet project, we'll put you on the perennials when you finish early. You've plenty of time to decide."

"What project did Brother Sarl pick?"

The aged overseer paused. "Well, I doubt if you'd even understand it. I don't. He seems to have found a method for restoring missing words and phrases to some of the old fragments of original text in the Memorabilia. Perhaps the left-hand side of a half-burned book is legible, but the right edge of each page is burned, with a few words missing at the end of each line. He's worked out a mathematical method for finding the missing words. It's not foolproof, but it works to some degree. He's managed to restore four whole pages since he began the attempt."

Francis glanced at Brother Sarl, who was an octogenarian and nearly blind. "How long did it take him?" the apprentice asked.

"About forty years," said Brother Horner. "Of course he's only spent about five hours a week at it, and it does take considerable arithmetic."

Francis nodded thoughtfully. "If one page per decade could be restored, maybe in a few centuries—"

"Even less," croaked Brother Sarl without looking up from his work. "The more you fill in, the faster the remainder goes. I'll get the next page done in a couple of years. After that, God willing, maybe—" His voice tapered off into a mumble. Francis frequently noticed that Brother Sarl talked to himself while working.

"Suit yourself," said Brother Horner. "We can always use more help on the perennials, but you can have your own project when you want one."

The idea came to Brother Francis in an unexpected flash.

"May I use the time," he blurted, "to make a copy of the Leibowitz blueprint I found?"

Brother Horner seemed momentarily startled. "Well—I don't know, son. Our Lord Abbot is, well—just a little sensitive on that subject. And the thing may not belong in the Memorabilia. It's in the tentative file now."

"But you know they fade, Brother. And it's been handled a lot in the light. The Dominicans had it in New Rome for so long—"

"Well—I suppose it would be a rather *brief* project. If Father Arkos doesn't object, but—" He wagged his head in doubt.

"Perhaps I could include it as one of a set," Francis hastily offered. "What few recopied blueprints we have are so old they're brittle. If I made several duplicates—of some of the others—"

Horner smiled wryly. "What you're suggesting is, that by including the Leibowitz blueprint in a set, you might escape detection."

Francis reddened.

"Father Arkos might not even notice, eh?—if he happened to wander through."

Francis squirmed.

"All right," said Horner, his eyes twinkling slightly. "You may use your unassigned time to make duplicates of any of the recopied prints that are in bad condition. If anything else gets mixed up in the lot, I'll try not to notice."

Brother Francis spent several months of his unassigned time in redrawing some of the older prints from the Memorabilia's files before daring to touch the Leibowitz print. If the old drawings were worth saving at all, they needed to be recopied every century or two anyhow. Not only did the original copies fade, but often the redrawn versions became nearly illegible after a time, due to the impermanence of the inks employed. He had not the slightest notion why the ancients had used white lines and lettering on a dark background, in preference to the reverse. When he roughly resketched a design in charcoal, thereby reversing the background, the rough sketch appeared more realistic than the white-on-dark, and the ancients were immeasurably wiser than Francis; if they had taken the trouble to put ink where blank paper would ordinarily be, and leave slivers of white paper where an inked line would appear in a

straightforward drawing, then they must have had their reasons. Francis recopied the documents to appear as nearly like the originals as possible—even though the task of spreading blue ink around tiny white letters was particularly tedious, and quite wasteful of ink, a fact which caused Brother Horner to grumble.

He copied an old architectural print, then a drawing for a machine part whose geometry was apparent but whose purpose was vague. He redrew a mandala abstraction, titled “STATOR WNDG MOD 73-A 3-PH 6-P 1800-BPM 5-HP CL-A SQUIRREL CAGE,” which proved completely incomprehensible, and not at all capable of imprisoning a squirrel. The ancients were often subtle; perhaps one needed a special set of mirrors in order to see the squirrel. He painstakingly redrew it anyhow.

Only after the abbot, who occasionally passed through the copyroom, had seen him working at another blueprint at least three times (twice Arkos had paused for a quick look at Francis’ work), did he summon the courage to venture to the Memorabilia files for the Leibowitz blueprint, nearly a year after beginning his free-time project.

The original document had already been subjected to a certain amount of restorative work. Except for the fact that it bore the name of the Beatus, it was disappointingly like most of the others he had redrawn.

The Leibowitz print, another abstraction, appealed to nothing, least of all to reason. He studied it until he could see the whole amazing complexity with his eyes closed but knew no more than he had known before. It appeared to be no more than a network of lines connecting a patchwork of doohickii, squiggles, quids, laminulae, and thingumbob. The lines were mostly horizontal or vertical, and crossed each other with either a little jump-mark or a dot; they made right-angle turns to get around doohickii, and they never stopped in mid-space but always terminated at a squiggle, quiggle, quid, or thingumbob. It made so little sense that a long period of staring at it produced a stupefying effect. Nevertheless he began work at duplicating every detail, even to the copying of a central brownish stain which he thought might be the blood of the Blessed Martyr, but which Brother Jeris suggested was only the stain left by a decayed apple core.

Brother Jeris, who had joined the apprentice copyroom at the same time as Brother Francis, seemed to enjoy teasing him about the project. “What, pray,” he asked, squinting over Francis’ shoulder, “is the meaning of “Transistorized Control System for Unit Six-B,” learned Brother?”

“Clearly, it is the title of the document,” said Francis, feeling slightly cross.

“Clearly. But what does it mean?”

“It is the *name* of the diagram which lies before your eyes, Brother Simpleton. What does ‘Jeris’ mean?”

“Very little, I’m sure,” said Brother Jeris with mock humility. “Forgive my density, please. You have successfully defined the name by pointing to the creature named, which is truly the meaning of the name. But now the creature-diagram itself represents something, does it not? What does the diagram represent?”

“The transistorized control system for unit six-B, obviously.”

Jeris laughed. “Quite clear! Eloquent! If the creature is the name, then the name is the creature. ‘Equals may be substituted for equals,’ or ‘The order of an equality is reversible,’ but may we proceed to the next axiom? If ‘Quantities equal to the same quantity may substitute for each other’ is true, then is there not some ‘same quantity’ which *both* name *and* diagram represent? Or is it a closed system?”

Francis reddened. “I would imagine,” he said slowly, after pausing to stifle his annoyance, “that the diagram represents an abstract concept, rather than a concrete *thing*. Perhaps the ancients had a systematic method for depicting a pure thought. It’s clearly not a recognizable picture of an object.”

“Yes, yes, it’s *clearly* *unrecognizable*!” Brother Jeris agreed with a chuckle.

“On the other hand, perhaps it *does* depict an object, but only in a very formal stylistic way—so that one would need special training or—”

“Special eyesight?”

“In my opinion, it’s a high abstraction of perhaps transcendental value expressing a thought of the

Beatus Leibowitz.”

“Bravo! Now what was he thinking about?”

“Why—‘Circuit Design,’” said Francis, picking the term out of the block of lettering at the lower right.

“Hmmm, what discipline does *that* art pertain to, Brother? What is its genus, species, property, and difference? Or is it only an ‘accident’?”

Jeris was becoming pretentious in his sarcasm, Francis thought, and decided to meet it with a soft answer. “Well, observe this column of figures, and its heading: ‘Electronics Parts Numbers.’ There was once, an art or science, called Electronics, which might belong to both Art and Science.”

“*Uh-huh!* Thus settling ‘genus’ and ‘species.’ Now as to ‘difference,’ if I may pursue the line. What was the subject matter of Electronics?”

“That too is written,” said Francis, who had searched the Memorabilia from high to low in an attempt to find clues which might make the blueprint slightly more comprehensible—but to very small avail. “The subject matter of Electronics was the electron,” he explained.

“So it is written, indeed. I am impressed. I know so little of these things. What, pray, was the ‘electron’?”

“Well, there is one fragmentary source which alludes to it as a “Negative Twist of Nothingness.”

“What! How did they negate a nothingness? Wouldn’t that make it a somethingness?”

“Perhaps the negation applies to ‘twist.’ “

“Ah! Then we would have on “Untwisted Nothing,” eh? Have you discovered how to untwist a nothingness?”

“Net yet,” Francis admitted.

“Well keep at it, Brother! How clever they must have been, those ancients—to know how to untwist nothing. Keep at it, and you may learn how. Then we’d have the “electron” in our midst, wouldn’t we? Whatever would we do with it? Put it on the altar in the chapel?”

“All right,” Francis sighed, “I don’t know. But I have a certain faith that the ‘electron’ existed at one time, although I don’t know how it was constructed or what it might have been used for.”

“How touching!” chuckled the iconoclast, and returned to his work.

The sporadic teasing of Brother Jeris saddened Francis, but did nothing to lessen his devotion to his project.

The exact duplication of every mark, blotch, and stain proved impossible, but the accuracy of his facsimile proved sufficient for the deception of the eye at a distance of two paces, and therefore adequate for display purposes, so that the original might be sealed and packed away. Having completed the facsimile, Brother Francis found himself disappointed. The drawing was too stark. There was nothing about it to suggest at first glance that it might be a holy relic. The style was terse and unpretentious—fittingly enough, perhaps, for the Beatus himself, and yet—

A copy of the relic was not enough. Saints were humble people who glorified not themselves but God, and it was left to others to portray the inward glory of the saintly by outward, visible signs. The stark copy was not enough: it was coldly unimaginative and did not commemorate the saintly qualities of the Beatus in any visible way.

*Glorificemus*, thought Francis, while he worked on the perennials. He was copying pages of the Psalms at the moment for later rebinding. He paused to regain his place in the text, and to notice meaning in the words—for after hours of copying, he had ceased to read at all, and merely allowed his hand to retrace the letters which his eyes encountered. He noticed that he had been copying David’s prayer for pardon, the fourth penitential psalm, “*Miserere mei, Deus*...for I know my iniquity, and my sin is always before me.” It was a humble prayer, but the page before his eyes was not written in a humble style to match. The *M* in *Miserere* was gold-leaf inlay. A flourishing arabesque of interwoven gold and violet filaments filled the margins and grew into nests around the splendid capitals at the beginning of each verse. However humble the prayer itself, the page was magnificent. Brother Francis was copying only the body of the text onto new parchment, leaving spaces for the splendid capitals and margins as wide as the text lines. Other craftsmen would fill in riots of color around his simply inked copy and would construct

the pictorial capitals. He was learning to illuminate, but was not yet proficient enough to be trusted at gold-inlay work on the perennials.

*Gloreficemus*. He was thinking of the blueprint again.

Without mentioning the idea to anyone, Brother Francis began to plan. He found the finest available lambskin and spent several weeks of his spare time at curing it and stretching it and stoning it to a perfect surface, which he eventually bleached to a snowy whiteness and carefully stored away. For months afterward, he spent every available minute of his free time looking through the Memorabilia, again seeking clues to the meaning of the Leibowitz print. He found nothing resembling the squiggles in the drawing, nor anything else to help him interpret its meaning, but after a long time he stumbled across a fragment of a book which contained a partially destroyed page whose subject matter was blueprinting. It seemed to be a piece of an encyclopaedia. The reference was brief and some of the article was missing, but after reading it several times, he began to suspect that he—and many earlier copyists—had wasted a lot of time and ink. The white-on-dark effect seemed not to have been a particularly desirable feature, but one which resulted from the peculiarities of a certain cheap reproduction process. The original drawing from which the blueprint had been made had been black-on-white. He had to resist a sudden impulse to beat his head against the stone floor. All that ink and labor to copy an accident! Well, perhaps Brother Horner need not be told. It would be a work of charity to say nothing about it, because of Brother Horner's heart condition.

The knowledge that the color scheme of blueprints was an accidental feature of those ancient drawings lent impetus to his plan. A glorified copy of the Leibowitz print could be made without incorporating the accidental feature. With the color scheme reversed, no one would recognize the drawing at first. Certain other features could obviously be modified. He dared change nothing that he did not understand, but surely the parts tables and the block-lettered information could be spread symmetrically around the diagram on scrolls and shields. Because the meaning of the diagram itself was obscure, he dared not alter its shape or plan by a hair; but since its color scheme was unimportant, it might as well be beautiful. He considered gold inlay for the squiggles and doohickii, but the thingumbob was too intricate for goldwork, and a gold quid would seem ostentatious. The quiggles just *had* to be done jet black, but that meant that the lines should be off-black, to assert the quiggles. While the unsymmetrical design would have to stay as it was, he could think of no reason why its meaning would be altered by using it as a trellis for a climbing vine, whose branches (carefully dodging the quiggles) might be made to furnish an impression of symmetry or render asymmetry natural. When Brother Horner illuminated a capital M, transmuting it into a wonderful jungle of leaves, berries, branches, and perhaps a wily serpent, it nevertheless remained legible as *M*. Brother Francis saw no reason for supposing that the same would not apply to the diagram.

The general shape, over-all, with a scrolled border, might well become a shield, rather than the stark rectangle which enclosed the drawing in the print. He made dozens of preliminary sketches. At the very top of the parchment would be a representation of the Triune God, and at the very bottom—the coat of arms of the Albertian Order, with, just above it the image of the Beatus.

But there was no accurate likeness of the Beatus in existence, so far as Francis knew. There were several fanciful portraits, but none dating back to the Simplification. There was, as yet, not even a conventional representation, although tradition told that Leibowitz had been rather tall and somewhat stooped. But perhaps when the shelter was reopened—Brother Francis' preliminary sketchwork was interrupted one afternoon by his sudden awareness that the presence which loomed behind him and cast its shadow across his copy-table was that of—was that of—*No! Please! Beate Leibowitz, audi me! Mercy, Lord! Let it be anybody but—*

“Well, what have we here?” rumbled the abbot, glancing over his designs.

“A drawing, m'Lord Abbot.”

“So I notice. But what is it?”

“The Leibowitz blueprint.”

“That one you found? What? It doesn't look much like it. Why the changes?”

“It’s going to be—”

“Speak louder!”

“—*AN ILLUMINATED COPY!*” Brother Francis involuntarily shrieked.

“Oh.”

Abbot Arkos shrugged and wandered away.

Brother Horner, a few seconds later, while wandering past the apprentice’s desk was surprised to notice that Francis had fainted.

## 8

# T

o the amazement of Brother Francis, Abbot Arkos no longer objected to the monk’s interest in the relics. Since the Dominicans had agreed to examine the matter, the abbot had relaxed; and since the cause for the canonization had resumed some progress in New Rome, he appeared at times to forget entirely that anything special had happened during the vocational vigil of one Francis Gerard, AOL, formerly of Utah, presently of the scriptorium and copyroom. The incident was eleven years old. The preposterous whisperings in the novitiate concerning the pilgrim’s identity had long since died away. The novitiate of Brother Francis’ time was not the novitiate of today. The newest of the new crop of youngsters had never heard of the affair.

The affair had cost Brother Francis seven Lenten vigils among the wolves, however, and he never fully trusted the subject as safe. Whenever he mentioned it, he would dream that night of wolves and of Arkos; in the dream, Arkos kept flinging meat to the wolves, and the meat was Francis.

The monk found, however, that he might continue his project without being molested, except by Brother Jeris who continued to tease. Francis began the actual illumination of the lambskin. The intricacies of scrollwork and the excruciating delicacy of the gold-inlay work would, because of the brevity of his spare-project time, make it a labor of many years; but in a dark sea of centuries wherein nothing seemed to flow, a lifetime was only brief eddy, even for the man who lived it. There was a tedium of repeated days and repeated seasons; then there were aches and pains, finally Extreme Unction, and a moment of blackness at the end—or at the beginning, rather. For then the small shivering soul who had endured the tedium, endured it badly or well, would find itself in a place of light, find itself absorbed in the burning gaze of infinitely compassionate eyes as it stood before the Just One. And then the King would say: “Come,” or the King would say: “Go,” and only for that moment had the tedium of years existed. It would be hard to believe differently during such an age as Francis knew.

Brother Sarl finished the fifth page of his mathematical restoration, collapsed over his desk, and died a few hours later. Never mind. His notes were intact. Someone, after a century or two, would come along and find them interesting, would perhaps complete his work. Meanwhile, prayers ascended for the soul of Sarl.

Then there was Brother Fingo and his woodcarving. He had been returned to the carpentry shop a year or two ago and was permitted occasionally to chisel and scrape at his half-finished image of the Martyr. Like Francis, Fingo had only an hour now and then to work at his chosen task; the woodcarving progressed at a rate that was almost imperceptible unless one looked at the carving only after intervals of several months. Francis saw it too frequently to notice the growth. He found himself charmed by Fingo’s easy-going exuberance, even while realizing that Fingo had adopted his affable manner to compensate for his ugliness, and he liked to spend idle minutes, whenever he could find them, watching Fingo work.

The carpentry shop was rich with the odors of pine, cedar, spruce shavings, and human sweat.

Wood was not easy to obtain at the abbey. Except for fig trees and a couple of cottonwoods in the immediate vicinity of the water hole, the region was treeless. It was a three-day ride to the nearest stand of scrub that passed for timber, and the woodgatherers often were gone from the abbey for a week at a time before they came back with a few donkeyloads of branches for making pegs, spokes, and an occasional chair leg. Sometimes they dragged back a log or two for replacing a rotting beam. But with such a limited wood supply, carpenters were necessarily woodcarvers and sculptors as well.

Sometimes, while watching Fingo carve, Francis would sit on a bench in the corner of the workshop and sketch, trying to visualize details of the carving which were, as yet, only roughly hewed in the wood. The vague outlines of the face were there, but still masked by splinters and chisel-marks. With his sketches, Brother Francis tried to anticipate the features before they emerged from the grain. Fingo glanced at his sketches and laughed. But as the work progressed, Francis could not escape the feeling that the face of the carving was smiling a vaguely familiar smile. He sketched it thus, and the feeling of familiarity increased. Still, he could not place the face, or recall who had smiled so wryly.

"Not bad, really Not bad at all," said Fingo of his sketches.

The copyist shrugged. "I can't get over the feeling that I've seen him before."

"Not around here, Brother. Not in my time."

Francis fell ill during Advent, and several months had passed before he visited the workshop again.

"The face is nearly finished, Francisco," said the woodcarver. "How do you like it now?"

"I know him!" Francis gasped, staring at the merry-but-sad wrinkled eyes, the hint of a wry smile at the corners of the mouth—somehow almost too familiar.

"You do? Who is it then?" wondered Fingo.

"It's—well, I'm not sure. I *think* I know him. But—"

Fingo laughed. "You're just recognizing your own sketches," he offered in explanation.

Francis was not so certain. Still, he could not quite place the face.

*Hmm-hnnn!* the wry smile seemed to say.

The abbot found the smile irritating, however. While he allowed the work to be completed, he declared that he would never permit it to be used for the purpose originally planned—as an image to be placed in the church if the canonization of the Beatus were ever accomplished. Many years later, when the whole figure was completed, Arkos caused it to be set up in the corridor of the guesthouse, but later transferred it to his study after it had shocked a visitor from New Rome.

Slowly, painfully, Brother Francis was making the lambskin a blaze of beauty. Word of his project spread beyond the copyroom, and the monks often gathered around his table to watch the work and murmur admiration. "Inspiration," someone whispered. "There's evidence enough. It could have been the Beatus he met out there—"

"I don't see why you don't spend your time on something useful," grumbled Brother Jeris, whose sarcastic wit had been exhausted by several years of patient answers from Brother Francis. The skeptic had been using his own free-project time for making and decorating oilskin shades for the lamps in the church, thereby winning the attention of the abbot, who soon placed him in charge of the perennials. As the account ledgers soon began to testify, Brother Jeris' promotion was justified.

Brother Horner, the old master copyist, fell ill. Within weeks, it became apparent that the well-loved monk was on his deathbed. A Mass of Burial was chanted early in Advent. The remains of the saintly old master-copyist were committed to the earth of their origin. While the community expressed its grief in prayer, Arkos quietly appointed Brother Jeris as master of the copyroom.

On the day after his appointment, Brother Jeris informed Brother Francis that he considered it appropriate for him to put away the things of a child and start doing a man's work. Obediently, the monk wrapped his precious project in parchment, protected it with heavy boards, shelved it, and began making oilskin lampshades in his spare time. He murmured no protest, but contented himself with realizing that someday the soul of dear Brother Jeris would depart by the same road as the soul of Brother Horner, to begin that life for which this world was but a staging ground—might begin it at a rather early age, judging by the extent to which he fretted, fumed, and drove himself; and afterward, God willing, Francis might be

allowed to complete his beloved document.

Providence, however, took an earlier hand in the matter, without summoning the soul of Brother Jeris to its Maker. During the summer which followed his appointment as master, a prothonotary apostolic and his retinue of clerks came by way of a donkey train to the abbey from New Rome; he introduced himself as Monsignor Malfreddo Aguerra, the postulator for the Beatus Leibowitz in the canonization procedure. With him were several Dominicans. He had come to observe the reopening of the shelter and the exploration of "Sealed Environment." Also, to investigate such evidence as the abbey could produce that might have a bearing on the case, including—to the abbot's dismay—reports of an alleged apparition of the Beatus which had, so travelers said, come to one Francis Gerard of Utah, AOL.

The Saint's advocate was warmly greeted by the monks, was quartered in the rooms reserved for visiting prelates, was lavishly served by six young novices instructed to be responsive to his every whim, although, as it turned out., Monsignor Aguerra was a man of few whims, to the disappointment of would-be caterers. The finest wines were opened; Aguerra sipped them politely but preferred milk. Brother Huntsman snared plump quail and chaparral cocks for the guest's table; but after inquiring about the feeding habits of the chaparral cocks ("Corn fed, Brother?"—"No, snake-fed, Messér"), Monsignor Aguerra seemed to prefer monks-gruel in the refectory. If only he had inquired about the anonymous bits of meat in the stews, he might have preferred the truly succulent chaparral cocks. Malfreddo Aguerra insisted that life go on as usual at the abbey. But, nevertheless, the advocate was entertained each evening at recreation by fiddlers and a troupe of clowns until he began to believe that "life as usual" at the abbey must be extraordinarily lively, as lives of monastic communities go.

On the third day of Aguerra's visit, the abbot summoned Brother Francis. The relationship between the monk and his ruler, while not close, had been formally friendly, since the time the abbot permitted the novice to profess his vows, and Brother Francis was not even trembling when he knocked at the study door and asked: "You sent for me, Reverend Father?"

"Yes, I did," Arkos said, then asked evenly: "Tell me, have you ever thought about death?"

"Frequently, m'Lord Abbot."

"You pray to Saint Joseph that your death will not be an unhappy one?"

"Umm—often, Reverend Father."

"Then I suppose you'd not care to be suddenly stricken? To have someone use your guts to string a fiddle? To be fed to the hogs? To have your bones be buried in unconsecrated ground? Eh?"

"Nnn-noo, Magister meus."

"I thought not, so be very careful about what you say to Monsignor Aguerra."

"I—?"

"You." Arkos rubbed his chin and seemed lost in unhappy speculation. "I can see it too clearly. The Leibowitz cause is shelved. Poor Brother is struck down by a falling brick. There he lies, moaning for absolution. In the very midst of us, mind you. And there we stand, looking down in pity—clergy among us—watching him croak his last, without even a last blessing on the lad. Hellbound. Unblessed. Unshrived. Under our very noses. A pity, eh?"

"M'Lord?" Francis squawked.

"Oh, don't blame me. I'll be too busy trying to keep your brothers from carrying out their impulse to kick you to death."

"When?"

"Why not at all, we hope. Because you are going to be careful, aren't you?—about what you say to the monsignor. Otherwise I may *let* them kick you to death."

"Yes, but—"

"The postulator wants to see you at once. Please stifle your imagination, and be certain about what you say. Please try not to think."

"Well, I think I can."

"Out, son, out."

Francis felt fright when he first tapped at Aguerra's door, but he saw quickly that the fright was unfounded. The prothonotary was a suave and diplomatic elder who seemed keenly interested in the

small monk's life.

After several minutes of preliminary amenities, he approached the slippery subject: "Now, about your encounter with the person who may have been the Blessed Founder of—"

"Oh, but I never said he was our Blessed Leibo..."

"Of course you didn't, my son. Of course you didn't. Now I have here an account of the incident—gathered purely from hearsay sources, of course—and I'd like for you to read it, and then either confirm it or correct it." He paused to draw a scroll from his case; he handed it to Brother Francis.

"This version is based on traveler's stories," he added. "Only *you* can describe what happened—first hand—so I want you to edit it *most* scrupulously."

"Certainly, Messér. But what happened was really very simple—"

"Read, read! Then we'll talk about it, eh?"

The fatness of the scroll made it apparent that the hearsay account was not "really very simple." Brother Francis read with mounting apprehension. The apprehension soon grew to the proportions of horror.

"You look white, son," said the postulator. "Is something troubling you?"

"Messér, *this*—it wasn't like this *at all*!"

"No? But indirectly at least, you must have been the author of it. How could it have been otherwise? Weren't you the only witness?"

Brother Francis closed his eyes and rubbed his forehead. He had told the simple truth to fellow novices. Fellow novices had whispered among themselves. Novices had told the story to travelers. Travelers had repeated it to travelers. Until finally—*this*! Small wonder that Abbot Arkos had enjoined discussion. If only he had never mentioned the pilgrim at all!

"He only spoke a few words to me. I saw him just that once. He chased me with a stick, asked me the way to the abbey, and made marks on the rock where I found the crypt. Then I never saw him again."

"No halo?"

"No, Messér."

"No heavenly choir?"

"*No!*"

"What about the carpet of roses that grew up where he walked?"

"No, no! Nothing like that, Messér," the monk gasped.

"He didn't write his name on the rock?"

"As God is my judge, Messér, he only made those two marks. I didn't know what they meant."

"Ah, well," sighed the postulator. "Travelers' stories are always exaggerated. But I wonder how it all got started. Now suppose you tell me how it really happened."

Brother Francis told him quite briefly. Aguerra seemed saddened. After a thoughtful silence, he took the fat scroll, gave it a parting pat, and dropped it into the waste-bin.

"There goes miracle number seven," he grunted.

Francis hastened to apologize.

The advocate brushed it aside. "Don't give it a second thought. We really have enough evidence. There are several spontaneous cures—several cases of instantaneous recovery from illness caused by the intercession of the Beatus. They're simple, matter of fact, and well documented. They're what cases for canonization are built on. Of course they lack the poetry of this story, but I'm almost glad it's unfounded—glad for your sake. The devil's advocate would have crucified you, you know."

"I never said anything like—"

"I understand, I understand! It all started because of the shelter. We reopened it today, by the way."

Francis brightened. "Did—did you find anything more of Saint Leibowitz?"

"*Blessed* Leibowitz, please!" monsignor corrected. "No, not yet. We opened the inner chamber. Had a devil of a time getting it unsealed. Fifteen skeletons inside and many fascinating artifacts. Apparently the woman—it was a woman, by the way—whose remains you found was admitted to the outer

chamber, but the inner chamber was already full. Possibly it would have provided some degree of protection if a falling wall hadn't caused the cave-in. The poor souls inside were trapped by the stones that blocked the entrance. Heaven knows why the door wasn't designed to swing inward."

"The woman in the antechamber, was she Emily Leibowitz?"

Aguerra smiled. "Can we prove it? I don't know yet. I believe she was, yes—I believe—but perhaps I'm letting hope run away with reason. We'll see what we can uncover yet; we'll see. The other side has a witness present. I can't jump to conclusions."

Despite his disappointment at Francis' account of the meeting with the pilgrim, Aguerra remained friendly enough. He spent ten days at the archaeological site before returning to New Rome, and he left two of his assistants behind to supervise further excavation. On the day of his departure, he visited Brother Francis in the scriptorium.

"They tell me you were working on a document to commemorate the relics you found," said the postulator. "Judging by the descriptions I've heard, I think I should very much like to see it."

The monk protested that it was really nothing, but he went immediately to fetch it, with such eagerness that his hands were trembling as he unpacked the lambskin. Joyfully he observed that Brother Jeris was looking on, while wearing a nervous frown.

The monsignor stared for many seconds. "*Beautiful!*" he exploded at last. "What glorious color! It's superb, superb. Finish it—Brother, finish it!"

Brother Francis looked up at Brother Jeris and smiled questioningly.

The master of the copyroom turned quickly away. The back of his neck grew red. On the following day, Francis unpacked his quills, dyes, gold leaf, and resumed his labor on the illuminated diagram.

## 9

# A

few months after the departure of Monsignor Aguerra, there came a second donkey train—with a full complement of clerks and armed guards for defense against highwaymen, mutant maniacs, and rumored dragons—to the abbey from New Rome. This time the expedition was headed by a monsignor with small horns and pointy fangs, who announced that he was charged with the duty of opposing the canonization of the Blessed Leibowitz, and that he had come to investigate—and perhaps fix responsibility for, he hinted—certain incredible and hysterical rumors which had filtered out of the abbey and lamentably reached even the gates of New Rome. He made it evident that he would tolerate no romantic nonsense, as a certain earlier visitor perhaps had done.

The abbot greeted him politely and offered him an iron cot in a cell with a south exposure, after apologizing for the fact that the guest suite had been recently exposed to smallpox. The monsignor was attended by his own staff, and ate mush and herbs with the monks in the refectory—quail and chaparral cocks being unaccountably scarce that season, so the huntsmen reported.

This time, the abbot did not feel it necessary to warn Francis against any too liberal exercise of his imagination. Let him exercise it, if he dared. There was small danger of the *advocatus diaboli* giving immediate credence even to the truth, without first giving it a thorough thrashing and thrusting his fingers into its wounds.

"I understand you are prone to fainting spells," said Monsignor Flaught when he had Brother Francis alone and had fixed him with what Francis decided was a malign glare.

"Tell me, is there any epilepsy in your family? Madness? Mutant neural patterns?"

"None, Excellency."

"I'm not an 'Excellency,'" snapped the priest. "Now, we're going to get the *truth* out of you." A *little simple straight-forward surgery should be adequate*, his tone seemed to imply, *with only a minor amputation being required*.

"Are you aware that documents can be artificially aged?" he demanded.

Brother Francis was not so aware.

"Do you realize that the name, Emily, did not appear among the papers you found?"

"Oh, but it—" He paused, suddenly uncertain.

"The name which appeared was Em, was it not?—which *might* be a diminutive for Emily."

"I—I believe that is correct, Messér."

"But it might also be a diminutive for *Emma*, might it not? And the name Emma DID appear in the box!"

Francis was silent.

"Well?"

"What was the question, Messér?"

"Never mind! I just thought I'd tell you that the evidence suggests that 'Em' was for Emma, and 'Emma' was not a diminutive of Emily. What do you say to that?"

"I had no previous opinion, on the subject, Messér, but—"

"But what?"

"Aren't husband and wife often careless about what they call each other?"

"ABE YOU BEING FLIPPANT WITH ME?"

"No, messér."

"Now, tell the truth! How did you happen to discover that shelter, and what is this fantastic twaddle about an apparition?"

Brother Francis attempted to explain. The *advocatus diaboli* interrupted with periodic snorts and sarcastic queries, and when he was finished, the advocate raked at his story with semantic tooth and nail until Francis himself wondered if he had really seen the old man or had imagined the incident.

The cross-examining technique was ruthless, but Francis found the experience less frightening than an interview with the abbot. The devil's advocate could do no worse than tear him limb from limb this one time, and the knowledge that the operation would soon be over helped the amputee to bear the pain. When facing the abbot, however, Francis was always aware that a blunder could be punished again and again, Arkos being his ruler for a lifetime and the perpetual Inquisitor of his soul.

And Monsignor Flaught seemed to find the monk's story too distressingly simple-minded to warrant full-scale attack, after observing Brother Francis' reaction to the initial onslaught.

"Well, Brother, if that's your story and you stick to it, I don't think we'll be bothered with you at all. Even if it's true—which I don't admit—it's so trivial it's silly. Do you realize that?"

"That's what I always thought, Messér," sighed Brother Francis, who had for many years tried to detach the importance which others had attached to the pilgrim.

"Well, it's high time you said so!" Flaught snapped.

"I always said that I *thought* he was *probably* just an old man."

Monsignor Flaught covered his eyes with his hand and sighed heavily. His experience with uncertain witnesses led him to say no more.

Before leaving the abbey, the *advocatus diaboli*, like the Saint's advocate before him, stopped at the scriptorium and asked to see the illuminated commemoration of the Leibowitz blueprint ("that dreadful incomprehensibility" as Flaught called it). This time the monk's hands trembled not with eagerness but with fear, for once again he might be forced to abandon the project. Monsignor Flaught gazed at the lambskin in silence. He swallowed thrice. At last he forced himself to nod.

"Your imagery is vivid," he admitted, "but we all knew that, didn't we?" He paused. "You've been working on it how long now?"

"Six years, Messér—intermittently."

"Yes, well, it would seem that you have at least as many years to go."

Monsignor Flaught's horns immediately shortened by an inch, and his fangs disappeared entirely.

He departed the same evening for New Rome.

The years flowed smoothly by, seaming the faces of the young and adding gray to their temples. The perpetual labor of the monastery continued, daily storming heaven with the ever-recurring hymn of the Divine Office, daily supplying the world with a slow trickle of copied and recopied manuscript, occasionally renting clerks and scribes to the episcopate, to ecclesiastical tribunals, and to such few secular powers as would hire them. Brother Jeris developed ambitions of building a printing press, but Arkos quashed the plan when he heard of it. There was neither sufficient paper nor proper ink available, nor any demand for inexpensive books in a world smug in its illiteracy. The copyroom continued with pot and quill.

On the Feast of the Five Holy Fools, a Vatican messenger arrived with glad tidings for the Order. Monsignor Flaught had withdrawn all objections and was doing penance before an ikon of the Beatus Leibowitz. Monsignor Aguerre's case was proved; the Pope had directed that a decree be issued recommending canonization. The date for the formal proclamation was set for the coming Holy Year, and was to coincide with the calling of a General Council of the Church for the purpose of making a careful restatement of doctrine concerning the limitation of the *magisterium* to matters of faith and morals; it was a question which had been settled many times in history, but it seemed to re-arise in new forms in every century, especially in those dark periods when man's "knowledge" of wind, stars, and rain was really only belief. During the time of the council, the founder of the Albertian Order would be enrolled in the Calendar of Saints.

The announcement was followed by a period of rejoicing at the abbey. Dom Arkos, now withered by age and close to dotage, summoned Brother Francis into his presence and wheezed:

"His Holiness invites us to New Rome for the canonization. Prepare to leave."

"I, m'Lord?"

"You alone. Brother Pharmacist forbids me to travel, and it would not be well for Father Prior to leave while I am ill.

"Now don't faint on me again," Dom Arkos added querulously. "You're probably getting more credit than you deserve for the fact that the court accepted the death date of Emily Leibowitz as conclusively proved. But His Holiness invited you anyway. I suggest you thank God and claim no credit."

Brother Francis tottered. "His Holiness . . . ?"

"Yes. Now, we're sending the original Leibowitz blueprint to the Vatican. What do you think about taking along your illuminated commemoration as a personal gift to the Holy Father?"

"Uh," said Francis.

The abbot revived him, blessed him, called him a good simpleton, and sent him to pack his bindlestiff.

## 10

he trip to New Rome would require at least three months, perhaps longer, the time depending to some extent on the distance which Francis could cover before the inevitable band of robbers relieved him of his ass. He would be traveling alone and unarmed, carrying only his bindlestiff and begging bowl in addition to the relic and its illuminated replica. He prayed that ignorant robbers would have no use for the latter; for, indeed, among the bandits of the wayside were sometimes kindly thieves who took only what was of value to them, and permitted their victim to retain his life, carcass, and personal effects. Others were less

considerate.

As a precaution, Brother Francis wore a black patch over his right eye. The peasants were a superstitious lot and could often be routed by even a hint of the evil eye. Thus armed and equipped, he set out to obey the summons of the *Sacerdos Magnus*, that Most Holy Lord and Ruler, Leo Pappas XXI.

Nearly two months after leaving the abbey, the monk met his robber on a heavily wooded mountain trail, far from any human settlement except the Valley of the Misborn, which lay a few miles beyond a peak to the west, where, leperlike, a colony of the genetically monstrous lived in seclusion from the world. There were some such colonies which were supervised by hospitalers of Holy Church, but the Valley of the Misborn was not among them. Sports who had escaped death at the hands of the forest tribes had congregated there several centuries ago. Their ranks were continually replenished by warped and crawling things that sought refuge from the world, but some among them were fertile and gave birth. Often such children inherited the monstrosity of the parent stock. Often they were born dead or never reached maturity. But occasionally the monstrous trait was recessive, and an apparently normal child resulted from the union of sports. Sometimes, however, the superficially "normal" offspring were blighted by some invisible deformity of heart or mind that bereft them, seemingly, of the essence of humanity while leaving them its appearances. Even within the Church, some had dared espouse the view that such creatures truly had been deprived of the *Dei imago* from conception, that their souls were but animal souls, that they might with impunity under the Natural Law be destroyed as animal and not Man, that God had visited animal issue upon the species as a punishment for the sins that had nearly destroyed humankind. Few theologians whose belief in Hell had never failed them would deprive their God of recourse to any form of temporal punishment, but for men to take it upon themselves to judge any creature born of woman to be lacking in the divine image was to usurp the privilege of Heaven. Even the idiot which seems less gifted than a dog, or a pig, or a goat, shall, if born of woman, be called an immortal soul. thundered the *magisterium*, and thundered it again and again. After several such pronouncements, aimed at curbing infanticide, had issued from New Rome, the luckless misborn had come to be called the "Pope's nephews," or the "Pope's children," by some.

"Let that which is born alive of human parents be suffered to live," the previous Leo had said, "in accordance with both the Natural Law and the Divine Law of Love; let it be cherished as Child and nurtured, whatever its form and demeanor, for it is a fact available to natural reason alone, unaided by Divine Revelation, that among the Natural Rights of Man the right to parental assistance in an attempt to survive is precedent to all other rights, and may not be modified legitimately by Society or State except insofar as Princes are empowered to implement that right. Not even the beasts of the Earth act otherwise."

The robber that accosted Brother Francis was not in any obvious way one of the malformed, but that he came from the Valley of the Misborn was made evident when two hooded figures arose from behind a tangle of brush on the slope that overlooked the trail and hooted mockingly at the monk from ambush, while aiming at him with drawn bows. From such a distance, Francis was not certain of his first impression that one hand grasped a bow with six fingers or an extra thumb; but there was no doubt at all that one of the robed figures was wearing a robe with two hoods, although he could make out no faces, nor could he determine whether the extra hood contained an extra head or not.

The robber himself stood in the trail directly ahead. He was a short man, but heavy as a bull, with a glazed knob of a pate and a jaw like a block of granite. He stood in the trail with his legs spread wide and his massive arms folded across his chest while he watched the approach of the small figure astride the ass. The robber, as best Brother Francis could see, was armed only with his own brawn and a knife which he did not bother to remove from his belt-thong. He beckoned Francis forward. When the monk stopped fifty yards away, one of the Pope's children unleashed an arrow; the missile whipped into the trail just behind the donkey, causing the animal to spurt ahead.

"Get off," the robber ordered.

The ass stopped in the path. Brother Francis tossed back his hood to reveal the eye patch and raised a trembling finger to touch it. He began lifting the patch slowly from his eye.

The robber tossed back his head and laughed a laugh that might have sprung, Francis thought, from the throat of Satan; the monk muttered an exorcism, but the robber appeared untouched.

"You black-sacked jeebers wore that one out years ago," he said. "Now get off."

Brother Francis smiled, shrugged, and dismounted without further protest. The robber inspected the donkey, patting its flanks, examining teeth and hooves.

"Eat? Eat?" cried one of the robed creatures on the hillside.

"Not this time," barked the robber. "Too scrawny."

Brother Francis was not entirely convinced that they were talking about the donkey.

"Good day to you, sir," the monk said pleasantly. "You may take the ass. Walking will improve my health, I think." He smiled again and started away.

An arrow slashed into the trail at his feet.

"Stop that!" howled the robber, then to Francis: "Now strip. And let's see what's in that roll and in the package."

Brother Francis touched his begging bowl and made a gesture of helplessness, which brought only another scornful laugh from the robber.

"I've seen that alms-pot trick before too," he said. "The last man with a bowl had half a heklo of gold hidden in his boot. Now strip."

Brother Francis, who was not wearing boots, hopefully displayed his sandals, but the robber gestured impatiently. The monk untied his bindlestiff, spread its contents for display, and began to undress. The robber searched his clothing, found nothing, and tossed the clothing back to its owner, who breathed his gratitude; he had been expecting to be left naked on the trail.

"Now let's see inside that other package."

"It contains only documents, sir," the monk protested. "Of value to no one except the owner."

"Open it."

Silently Brother Francis untied the package and unwrapped the original blueprint and the illuminated commemoration thereof. The gold-leaf inlay and the colorful design flashed brilliantly in the sunlight that filtered through the foliage. The robber's craggy jaw dropped an inch. He whistled softly.

"What a pretty! Now wouldn't the woman like *that* to hang on the cabin wall!"

Francis went sick inside.

"*Gold!*" the robber shouted to his robed accomplices on the hill.

"Eat? Eat?" came the gurgling and chortling reply.

"We'll eat, never fear!" called the robber, then explained conversationally to Francis: "They get hungry after a couple of days just sitting there. Business is bad. Traffic's light these days."

Francis nodded. The robber resumed his admiration of the illuminated replica.

Lord, if Thou hast sent him to test me, then help me to die like a man, that he may take it only over the dead body of Thy servant. Holy Leibowitz, see this deed and pray for me—

"What is it?" the robber asked. "A charm?" He studied the two documents together for a time.

"Oh! One is a ghost of the other. What magic is this?" He stared at Brother Francis with suspicious gray eyes. "What is it called?"

"Uh—Transistorized Control System for Unit Six-B," the monk stammered.

The robber, who had been looking at the documents upside down, could nevertheless see that one diagram involved a figure-background reversal of the other—an effect which seemed to intrigue him as much as the gold leaf. He traced out the similarities in design with a short and dirty forefinger, leaving a faint smudge on the illuminated lambskin. Francis held back tears.

"Please!" the monk gasped. "The gold is so thin, it's worth nothing to speak of. Weigh it in your hand. The whole thing weighs no more than the paper itself. It's of no use to you. Please, sir, take my clothing instead. Take the donkey, take my bindlestiff. Take whatever you will, but leave me these. They mean nothing to you."

The robber's gray gaze was meditative. He watched the monk's agitation and rubbed his jaw. "I'll let you keep your clothes and your donkey and everything except this," he offered. "I'll just take the charms, then."

"For the love of God, sir, then kill me too!" Brother Francis wailed.

The robber snickered. "We'll see. Tell me what they're for."

"Nothing. One is a memento of a man long dead. An ancient. The other is only a copy."

"What good are they to you?"

Francis closed his eyes for a moment and tried to think of a way to explain. "You know the forest tribes? How they venerate their ancestors?"

The gray eyes of the robber flashed angrily for a moment.

"*We despise* our ancestors," he barked. "Cursed be they who gave us birth!"

"*Cursed, cursed!*" echoed one of the shrouded archers on the hillside.

"You know who we are? Where we are from?"

Francis nodded. "I meant no offense. The ancient whose relic this is—he is not our ancestor. He was our teacher of old. We venerate his memory. This is only like a keepsake, no more."

"What about the copy?"

"I made it myself. Please, sir, it took me fifteen years. It's nothing to you. Please—you wouldn't take fifteen years of a man's life—for no reason?"

"*Fifteen years?*" The robber threw back his head and howled with laughter. "You spent fifteen years making that?"

"Oh, but—" Francis was suddenly silent. His eyes swung toward the robber's stubby forefinger. The finger was tapping the original blueprint.

"That took you fifteen years? And it's almost ugly beside the other." He slapped his paunch and between guffaws kept pointing at the relic. "Ha! Fifteen years! So that's what you do way out there! Why? What is the dark ghost-image good for? Fifteen years to make that! Ho ho! What a woman's work!"

Brother Francis watched him in stunned silence. That the robber should mistake the sacred relic itself for the copy of the relic left him too shocked to reply.

Still laughing, the robber took both documents in his hands and prepared to rip them both in half.

"*Jesus, Mary, Joseph!*" the monk screamed and went to his knees in the trail. "For the love of God, sir!"

The robber tossed the papers on the ground. "I'll wrestle you for them!" he offered sportingly. "Those against my blade."

"Done," said Francis impulsively, thinking that a contest would at least afford Heaven a chance to intervene in an unobtrusive way. *O God, Thou who strengthened Jacob so that he overcame the angel on the rock...*

They squared off. Brother Francis crossed himself. The robber took his knife from his belt-thong and tossed it after the papers. They circled.

Three seconds later, the monk lay groaning on the flat of his back under a short mountain of muscle. A sharp rock seemed to be severing his spine.

"Heh-heh," said the robber, and arose to reclaim his knife and roll up the documents.

Hands folded as if in prayer, Brother Francis crept after him on his knees, begging at the top of his lungs. "Please, then, take only one, *not both!* Please!"

"You've got to buy it back now," the robber chortled. "I won them fair enough."

"I have nothing, I am *poor!*"

"That's all right if you want them that bad, you'll get gold. Two heklos of gold, that's the ransom. Bring it here any time. I'll tuck your things in my shanty. You want them back, just bring the gold."

"Listen, they're important to other people, not to me. I was taking them to the Pope. Maybe they'll pay you for the important one. But let me have the other one just to show them. It's of no importance at all."

The robber laughed over his shoulder. "I believe you'd kiss a boot to get it back."

Brother Francis caught up with him and fervently kissed his boot.

This proved too much for even such a fellow as the robber. He shoved the monk away with his foot, separated the two papers, and flung one of them in Francis' face with a curse. He climbed aboard

the monk's donkey and started riding it up the slope toward the ambush. Brother Francis snatched up the precious document and hiked along beside the robber, thanking him profusely and blessing him repeatedly while the robber guided the ass toward the shrouded archers.

"*Fifteen years!*" the robber snorted, and again shoved Francis away with his foot. "Begone!" He waved the illuminated splendor aloft in the sunlight. "Remember—two heklos of gold'll ransom your keepsake. And tell your Pope I won it fair."

Francis stopped climbing. He sent a glowing cross of benediction after the departing bandit and quietly praised God for the existence of such selfless robbers, who could make such an ignorant mistake. He fondled the original blueprint lovingly as he hiked away down the trail. The robber was proudly displaying the beautiful commemoration to his mutant companions on the hill.

"*Eat! Eat!*" said one of them, petting the donkey.

"Ride, ride," corrected the robber. "*Eat later.*"

But when Brother Francis had left them far behind, a great sadness gradually engulfed him. The taunting voice still rang in his ears. *Fifteen years! So that's what you do over there! Fifteen years! What a woman's work! Ho ho ho ho . . .*

The robber had made a mistake. But the fifteen years were gone anyhow, and with it all the love and torment that had gone into the commemoration.

Cloistered as he had been, Francis had become unaccustomed to the ways of the outside world, to its harsh habits and curt attitudes. He found his heart deeply troubled by the robber's mockery. He thought of Brother Jeris' gentler mockery of earlier years. Maybe Brother Jeris had been right.

His head hung low in his hood as he traveled slowly on.

At least there was the original relic. At least.

## 11

# T

he hour had come. Brother Francis, in his simple monk's habit, had never felt less important than at that moment, as he knelt in the majestic basilica before the beginning of the ceremony. The stately movements, the vivid swirls of color, the sounds which accompanied the ceremonious preparations for ceremony, already seemed liturgical in spirit, making it difficult to bear in mind that nothing of importance was happening yet. Bishops, monsignori, cardinals, priests, and various lay-functionaries in elegant, antiquated dress moved to and fro in the great church, but their comings and goings were graceful clockwork which never paused, stumbled, or changed its mind to rush in the other direction. A *sampetrius* entered the basilica; so grandly was he attired that Francis at first mistook the cathedral workman for a prelate. The *sampetrius* carried a footstool. He carried it with such casual pomp that the monk, if he had not been kneeling, might have genuflected as the object drifted by. The *sampetrius* dropped to one knee before the high altar, then crossed to the papal throne where he substituted the new footstool for one which seemed to have a loose leg; thereupon, he departed by the same route as he had come. Brother Francis marveled at the studied elegance of movement that accompanied even the trivial. No one hurried. No one minced or fumbled. No motion occurred which did not quietly contribute to the dignity and overpowering beauty of this ancient place, even as the motionless statues and paintings contributed to it. Even the whisper of one's breathing seemed to echo faintly from distant apses.

*Terribilis est locus iste: hic domus Dei est, et porta caeli;* terrible indeed, House of God, Gate of Heaven!

Some of the statues were alive, he observed after a time. A suit of armor stood against the wall a few yards to his left. Its mailed fist held the staff of a gleaming battle-ax. Not even the plume of its helmet had stirred during the time Brother Francis had been kneeling there. A dozen identical suits of armor stood at intervals along the walls. Only after seeing a horsefly crawl through the visor of the "statue" on

his left did he suspect that the warlike husk contained an occupant. His eye could detect no motion, but the armor emitted a few metallic creaks while it harbored the horsefly. These, then, must be the papal guard, so renowned in knightly battle: the small private army of God's First Vicar.

A captain of the guard was making a stately tour of his men. For the first time, the statue moved. It lifted its visor in salute. The captain thoughtfully paused and used his kerchief to brush the horsefly from the forehead of the expressionless face inside the helmet before passing on. The statue lowered its visor and resumed its immobility.

The stately decor of the basilica was briefly marred by the entrance of pilgrim throngs. The throngs were well organized and efficiently ushered, but they were patently strangers to this place. Most of them seemed to tread on tiptoe to their stations, cautious to create no sound and as little movement as possible, unlike the *sampetriti* and New Roman clergy who made sound and motion eloquent. Here and there among the pilgrims someone stifled a cough or stumbled.

Suddenly the basilica became warlike, as the guard was strengthened. A new troop of mailed statues tramped into the sanctuary itself, dropped to one knee, and tilted their pike-staffs, saluting the altar before taking their posts. Two of them stood flanking the papal throne. A third fell to his knees at the throne's right hand; he remained kneeling there with the sword of Peter lying across his upraised palms. The tableau became motionless again, except for occasional dancing of flame among the altar candles.

Upon the hallowed silence burst a sudden peal of trumpets.

The sound's intensity mounted until the throbbing *Ta-ra Ta-ra-raa* could be felt upon one's face and grew painful to the ears. The voice of the trumpets was not musical but annunciatory. The first notes began in mid-scale, then climbed slowly in pitch, intensity, and urgency, until the monk's scalp crawled, and there seemed to be nothing at all in the basilica but the explosion of the tubas.

Then, dead silence—followed by the cry of a tenor:

FIRST CANTOR:	<i>"Appropinquat agnis pastor et ovibus pascendis."</i>
SECOND CANTOR:	<i>"Genua nunc flectantur omnia."</i>
FIRST CANTOR:	<i>"Jussit olim Jesus Petrum pascere gregem Domini."</i>
SECOND CANTOR:	<i>"Ecce Petrus Pontifex Maximus."</i>
FIRST CANTOR:	<i>"Gaudeat igitur populus Christi, et gratias agat Domino."</i>
SECOND CANTOR:	<i>"Nam docebimur a Spiritu sancto."</i>
CHOIR:	<i>"Alleluia, alleluia—"</i>

The crowd arose and then knelt in a slow wave that followed the movement of the chair containing the frail old man in white who gestured his blessings to the people as the gold, black, purple, and red procession moved him slowly toward the throne. Breath kept choking up in the throat of the small monk from a distant abbey in a distant desert. It was impossible to see everything that was happening, so overwhelming was the tide of music and motion, drowning one's senses and sweeping the mind along willy-nilly toward that which was soon to come.

The ceremony was brief. Its intensity would have become unendurable had it been longer. A monsignor—Malfreddo Aguerra, the Saint's advocate himself, Brother Francis observed—approached the throne and knelt. After a brief silence, he voiced his plea in plain chant.

*"Sancte pater, ab Sapientia summa petimus ut ille Beatus Leibowitz cujus miracula mirati sunt multi . . ."*

The request called upon Leo to enlighten his people by solemn definition concerning the pious belief that the Beatus Leibowitz was indeed a saint, worthy of the *dulia* of the Church as well as the veneration of the faithful.

*"Gratissima Nobis causa, fili,"* the voice of the old man in white sang in response, explaining that

his own heart's desire was to announce by solemn proclamation that the blessed Martyr was among the saints, but also that it was by divine guidance alone, *sub ducatu sancti Spiritus*, that he might comply with Aguerra's request. He asked all to pray for that guidance.

Again the thunder of the choir filled the basilica with the Litany of the Saints: "Father-of-Heaven, God, have mercy on us. Son, Repurchaser-of-the-World, God, have mercy on us. Ghost-Most-Holy, God, have mercy on us. O Sacred Three-foldhood, God-One-and-Only, *miserere nobis!* Holy Mary, pray for us. *Sancta Dei Genitrix, ora pro nobis. Sancta Virgo virginum, ora pro nobis . . .*" The thunder of the litany continued. Francis looked up at a painting of the Blessed Leibowitz, newly unveiled. The fresco was of heroic proportions. It portrayed the trial of the Beatus before the mob, but the face was not wryly smiling as it smiled in Fingo's work. It was, however, majestic, Francis thought, and in keeping with the rest of the basilica.

*"Omnes sancti Martyres, orate pro nobis . . ."*

When the litany was finished, again Monsignor Malfreddo Aguerra made his plea to the Pope, asking that the name of Isaac Edward Leibowitz be formally enrolled in the Calendar of Saints. Again the guiding Spirit was invoked, as the Pope chanted the *Veni, Creator Spiritus*.

And yet a third time Malfreddo Aguerra pleaded for the proclamation.

*"Surgat ergo Petros ipse. . . ."*

At last it came. The twenty-first Leo intoned the decision of the Church, rendered under the guidance of the Holy Spirit, proclaiming the existing fact that an ancient and rather obscure technician named Leibowitz was truly a saint in Heaven, whose powerful intercession might, and of right ought to be, reverently implored. A feast day was named for a Mass in his honor.

"Holy Leibowitz, intercede for us," Brother Francis breathed with the others.

After a brief prayer, the choir burst into the *Te Deum*. After a Mass honoring the new saint, it was finished.

Escorted by two scarlet-liveried *sedarii* of the outer palace, the small party of pilgrims passed though a seemingly endless sequence of corridors and antechambers, halting occasionally before the ornate table of some new official who examined credentials and goose-quilled his signature on a *licet adire* for a *sedarius* to hand to the next official, whose title grew progressively longer and less pronounceable as the party proceeded. Brother Francis was shivering. Among his fellow pilgrims were two bishops, a man wearing ermine and gold, a clan chief of the forest people, converted but still wearing the panther skin tunic and panther headgear of his tribal totem, a leather-clad simpleton carrying a hooded peregrine falcon on one wrist—evidently as a gift to the Holy Father—and several women, all of whom seemed to be wives or concubines—as best Francis could judge by their actions—of the "converted" clan chief of the panther people; or perhaps they were ex-concubines put away by canon but not by tribal custom.

After climbing the *scala caelestis*, the pilgrims were welcomed by the somberly clad *cameralis gestor* and ushered into the small anteroom of the vast consistorial hall.

"The Holy Father will receive them here," the high-ranking lackey softly informed the *sedarius* who carried the credentials. He glanced over the pilgrims, rather disapprovingly, Francis thought. He whispered briefly to the *sedarius*. The *sedarius* reddened and whispered to the clan chief. The clan chief glowered and removed his fanged and snarling headdress, letting the panther head dangle over his shoulder. There was a brief conference about positions, while His Supreme Unctuousness, the leading lackey, in tones so soft as to seem reproving, stationed his visiting chess pieces about the room in accordance with some arcane protocol which only the *sedarii* seemed to understand.

The Pope was not long in arriving. The little man in the white cassock, surrounded by his retinue, strode briskly into the audience room. Brother Francis experienced a sudden dizzy spell. He remembered that Dom Arkos had threatened to flay him alive if he fainted during the audience, and he steeled himself against it.

The line of pilgrims knelt. The old man in white gently bade them arise. Brother Francis finally found the courage to focus his eyes. In the basilica, the Pope had been only a radiant spot of white in a sea of color. Gradually, here in the audience room, Brother Francis perceived at closer range that the Pope

was *not*, like the fabled nomads, nine feet tall. To the monk's surprise, the frail old man, Father of Princes and Kings, Bridge-Builder of the World, and Vicar on Earth of Christ, appeared much less ferocious than Dom Arkos, *Abbas*.

The Pope moved slowly along the line of pilgrims greeting each, embracing one of the bishops, conversing with each in his own dialect or through an interpreter, laughing at the expression of the monsignor to whom he transferred the task of carrying the falconer's bird, and addressing the clan leader of the forest people with a peculiar hand gesture and a grunted word of forest dialect which caused that panther-clad chieftain to glow with a sudden grin of delight. The Pope noticed the dangling panther headgear and paused to replace it on the tribesman's head. The latter's chest bulged with pride; he glared about the room, apparently to catch the eye of His Supreme Unctuousness, the leading lackey, but that official seemed to have vanished into the woodwork.

The Pope drew nearer to Brother Francis.

*Ecce Petrus Pontifex*.... Behold Peter, the high priest. Leo XXI, himself: "Whom alone, God did appoint Prince over all countries and kingdoms, to root up, pull down, waste, destroy, plant, and build, that he might preserve a faithful people—" And yet in the face of Leo, the monk saw a kindly meekness which hinted that he was worthy of that title, loftier than any bestowed upon princes and kings, whereby he was called "the slave of the slaves of God."

Francis knelt quickly to kiss the Fisherman's ring. As he arose, he found himself clutching the relic of the Saint behind him as if ashamed to display it. The Pontiff's amber eyes compelled him gently. Leo spoke softly in the curial manner: an affectation which he seemed to dislike as burdensome, but which he practiced for custom's sake in speaking to visitors less savage than the panther chief.

"Our heart was deeply grieved when we heard of your misfortune, dear son. An account of your journey reached our ears. At our own request you traveled here, but while on your way, you were set upon by robbers. Is that not true?"

"Yes, Holy Father. But it is really of no importance. I mean—It *was* important, except—" Francis stammered.

The white old man smiled gently. "We know that you brought us a gift, and that it was stolen from you along the way. Be not troubled for that. Your presence is gift enough to us. Long have we cherished the hope of greeting in person the discoverer of Emily Leibowitz' remains. We know, too, of your labors at the abbey. For the Brothers of Saint Leibowitz, we have always felt a most fervent affection. Without your work, the world's amnesia might well be total. As the Church, *Mysticum Christi Corpus*, is a Body, so has your Order served as an organ of memory in that Body. We owe much to your holy Patron and Founder. Future ages may owe him even more. May we hear more of your journey, dear son?"

Brother Francis produced the blueprint. "The highwayman was kind enough to leave this in my keeping, Holy Father. He—he mistook it for a copy of the illumination which I was bringing as a gift."

"You did not correct his mistake?"

Brother Francis blushed. "I'm ashamed to admit, Holy Father—"

"This, then, is the original relic you found in the crypt?"

"Yes—"

The Pope's smile became wry. "So, then—the bandit thought your work was the treasure itself? Ah—even a robber can have a keen eye for art, yes? Monsignor Aguerra told us of the beauty of your commemoration. What a pity that it was stolen."

"It was nothing, Holy Father. I only regret that I wasted fifteen years."

"*Wasted*? How 'wasted'? If the robber had not been misled by the beauty of your commemoration, he might have taken *this*, might he not?"

Brother Francis admitted the possibility.

The twenty-first Leo took the ancient blueprint in his withered hands and carefully unrolled it. He studied its design for a time in silence, than: "Tell us, do you understand the symbols used by Leibowitz? The meaning of the, uh, thing represented?"

"No, Holy Father, my ignorance is complete."

The Pope leaned toward him to whisper: "So is ours." He chuckled, pressed his lips to the relic as

if kissing an altar stone, then rerolled it and handed it to an attendant. "We thank you from the bottom of our heart for those fifteen years, beloved son," he added to Brother Francis. "These years were spent to preserve this original. Never think of them as wasted. Offer them to God. Someday the meaning of the original may be discovered, and may prove important." The old man blinked—or was it a wink? Francis was almost convinced that the Pope had winked at him. "We'll have you to thank for that."

The wink, or the blink, seemed to bring the room into clearer focus for the monk. For the first time, he noticed a moth-hole in the Pope's cassock. The cassock itself was almost threadbare. The carpet in the audience room was worn through in spots. Plaster had fallen from the ceiling in several places. But dignity had overshadowed poverty. Only for a moment after the wink did Brother Francis notice hints of poverty at all. The distraction was transient.

"By you, we wish to send our warmest regards to all members of your community and to your abbot," Leo was saying.

"To them, as to you, we wish to extend our apostolic benediction. We shall give you a letter to them announcing the benediction." He paused, then blinked, or winked, again.

"Quite incidentally, the letter will be safeguarded. We shall affix to it the *Noli molestare*, excommunicating anyone who waylays the bearer."

Brother Francis murmured his thanks for such insurance against highwaymanship; he did not deem it fitting to add that the robber would be unable to read the warning or understand the penalty. "I shall do my best to deliver it, Holy Father."

Again, Leo leaned close to whisper: "And to you, we shall give a special token of our affection. Before you leave, see Monsignor Aguerra. We would prefer to give it to you by our own hand, but this is not the proper moment. The monsignor will present it for us. Do with it what you will."

"Thank you very much indeed, Holy Father."

"And now good-bye, beloved son."

The Pontiff moved on, speaking to each pilgrim in the line, and when it was over: the solemn benediction. The audience had ended.

Monsignor Aguerra touched Brother Francis' arm as the pilgrim group passed out the portals. He embraced the monk warmly. The postulator of the Saint's cause had aged so greatly that Francis recognized him only with difficulty at close range. But Francis, too, was gray at the temples, and had grown wrinkled about the eyes from squinting over the copy-table. The monsignor handed him a package and a letter as they descended the *scala caelestis*.

Francis glanced at the letter's address and nodded. His own name was written on the package, which bore a diplomatic seal. "For me, Messér?"

"Yes, a personal token from the Holy Father. Better not open it here. Now, can I do anything for you before you leave New Rome? I'd be glad to show you anything you've missed."

Brother Francis thought briefly. There had already been an exhaustive tour. "I *would* like to see the basilica just once again, Messér," he said at last.

"Why, of course. But is that all?"

Brother Francis paused again. They had fallen behind the other departing pilgrims. "I would like to confess," he added softly.

"Nothing easier than that," said Aguerra, adding with a chuckle: "You're in the right town, you know. Here, you can get anything absolved that you're worried about. Is it something deadly enough to require the attention of the Pope?"

Francis reddened and shook his head.

"How about the Grand Penitentiary, then? He'll not only absolve you if you're repentant, he'll even hit you over the head with a rod in the bargain."

"I meant—I was asking you, Messér," the monk stammered.

"*Me?* Why me? I'm nobody fancy. Here you are in a whole town full of red hats, and you want to confess to Malfreddo Aguerra."

"Because—because you were our Patron's advocate," the monk explained.

"Oh, I see. Why of course I'll hear your confession. But I can't absolve you in the name of your

Patron, you know. It'll have to be the Holy Trinity as usual. Will that do?"

Francis had little to confess, but his heart had long been troubled—at the prompting of Dom Arkos—by the fear that his discovery of the shelter might have hindered the case for the Saint. Leibowitz' postulator heard him counseled him, and absolved him in the basilica, then led him around that ancient church. During the ceremony of canonization and the Mass that followed, Brother Francis had noticed only the majestic splendor of the building. Now the aged monsignor pointed to crumbling masonry, places in need of repair, and the shameful condition of some of the older frescoes. Again he caught a glimpse of a poverty which dignity veiled. The Church was not wealthy in this age.

At last, Francis was free to open the package. The package contained a purse. In the purse were two heklos of gold. He glanced at Malfreddo Aguerra. The monsignor smiled.

"You *did* say that the robber *won* the commemoration from you in a wrestling match, didn't you?" Aguerra asked.

"Yes, Messér."

"Well then, even if you were forced into it, you made the choice to wrestle him for it yourself, didn't you? You accepted his challenge?"

The monk nodded.

"Then I don't think you'd be condoning the wrong if you bought it back." He clapped the monk's shoulder and blessed him. Then it was time to go.

The small keeper of the flame of knowledge trudged back toward his abbey on foot. There were days and weeks on the trail, but his heart was singing as he approached the robber's outpost. *Do with it what you will*, Pope Leo had said of the gold. Not only that, the monk had now, in addition to the purse, an answer to the robber's scornful question. He thought of the books in the audience room, waiting there for a reawakening.

The robber, however, was not waiting at his outpost as Francis had hoped. There were recent footprints in the trail at that place, but the prints led cross-trail and there was no sign of the robber. The sun filtered through the trees to cover the ground with leafy shadows. The forest was not dense, but it offered shade. He sat down beside the trail to wait.

An owl hooted at midday from the relative darkness in the depths of some distant arroyo. Buzzards circled in a patch of blue beyond the treetops. It seemed peaceful in the forest that day. As he listened sleepily to the sparrows fluttering in nearby brush, he found himself not greatly concerned about whether the robber came today or tomorrow. So long was his journey, that he would not be unhappy to enjoy a day of rest while waiting. He sat watching the buzzards. Occasionally he glanced down the trail that led toward his distant home in the desert. The robber had chosen an excellent location for his lair. From this place, one could observe more than a mile of trail in either direction while remaining unobserved in the thatch of forest.

Something moved on the trail in the distance.

Brother Francis shielded his eyes and studied the distant movement. There was a sunny area down the road where a brush fire had cleared several acres of land around the trail that led southwest. The trail shimmered under a mirror of heat in the sunswept region. He could not see clearly because of the shiny reflections, but there was motion in the midst of the heat. There was a wriggling black iota. At times it seemed to wear a head. At times it was completely obscured in the heat glaze, but nevertheless he could determine that it was gradually approaching. Once, when the edge of a cloud brushed at the sun, the heat shimmer subsided for a few seconds; his tired and myopic eyes determined then that the wriggling iota was really a man, but at too great a distance for recognition. He shivered. Something about the iota was too familiar.

But no, it couldn't possibly be the same.

The monk crossed himself and began telling his rosary beads while his eyes remained intent on the distant thing in the heat shimmer.

While he had been waiting there for the robber, a debate had been in progress, higher on the side of the hill. The debate had been conducted in whispered monosyllables, and had lasted for nearly an hour. Now the debate was ended. Two-Hoods had conceded to One-Hood. Together, the Pope's

children stole quietly from behind their brush table and crept down the side of the hill.

They advanced to within ten yards of Francis before a pebble rattled. The monk was murmuring the third Ave of the Fourth Glorious Mystery of the rosary when he happened to look around.

The arrow hit him squarely between the eyes.

*"Eat! Eat! Eat!"* the Pope's child cried.

On the trail to the southwest the old wanderer sat down on a log and closed his eyes to rest them against the sun. He fanned himself with a tattered basket hat and munched his spice-leaf quid. He had been wandering for a long time. The search seemed endless, but there was always the promise of finding what he sought across the next rise or beyond the bend in the trail. When he had finished fanning himself, he clapped the hat back on his head and scratched at his brushy beard while blinking around at the landscape. There was a patch of unburned forest on the hillside just ahead. It offered welcome shade, but still the wanderer sat there in the sunlight and watched the curious buzzards. They had congregated, and they were swooping rather low over the wooded patch. One bird made bold to descend among the trees, but it quickly flapped into view again, flew under power until it found a rising column of air, then went into gliding ascent. The dark host of scavengers seemed to be expending more than a usual amount of energy at flapping their wings. Usually they soared, conserving strength. Now they thrashed the air above the hillside as if impatient to land.

As long as the buzzards remained interested but reluctant, the wanderer remained the same. There were cougars in these hills. Beyond the peak were things even worse than cougars, and sometimes they prowled afar.

The wanderer waited. Finally the buzzards descended among the trees. The wanderer waited five minutes more. At last he arose and limped ahead toward the forested patch, dividing his weight between his game leg and his staff.

After a while he entered the forested area. The buzzards were busy at the remains of a man. The wanderer chased the birds away with his cudgel and inspected the human remnants. Significant portions were missing. There was an arrow through the skull, protruding at the back of the neck. The old man looked nervously around at the brush. There was no one in sight, but there were plenty of footprints in the vicinity of the trail. It was not safe to stay.

Safe or not, the job had to be done. The old wanderer found a place where the earth was soft enough for digging with hands and stick. While he dug, the angry buzzards circled low over the treetops. Sometimes darting earthward but then flapping their way skyward again. For an hour, then two, they fluttered anxiously over the wooded hillside.

One bird finally landed. It strutted indignantly about a mound of fresh earth with a rock marker at one end. Disappointed, it took wing again. The flock of dark scavengers abandoned the site and soared high on the rising currents of air while they hungrily watched the land.

There was a dead hog beyond the Valley of the Misborn. The buzzards observed it gaily and glided down for a feast. Later, in a far mountain pass, a cougar licked her chops and left her kill. The buzzards seemed thankful for the chance to finish her meal.

The buzzards laid their eggs in season and lovingly fed their young: a dead snake, and bits of a feral dog.

The younger generation waxed strong, soared high and far on black wings, waiting for the fruitful Earth to yield up her bountiful carrion. Sometimes dinner was only a toad. Once it was a messenger from New Rome.

Their flight carried them over the midwestern plains. They were delighted with the bounty of good things which the nomads left lying on the land during their ride-over toward the south.

The buzzards laid their eggs in season and lovingly fed their young. Earth had nourished them bountifully for centuries. She would nourish them for centuries more...

Pickings were good for a while in the region of the Red River; but then out of the carnage, a city-state arose. For rising city-states, the buzzards had no fondness, although they approved of their eventual fall. They shied away from Texarkana and ranged far over the plain to the west. After the

manner of all living things, they replenished the Earth many times with their kind.  
Eventually it was the Year of Our Lord 3174.  
There were rumors of war.

### 12

# M

arcus Apollo became certain of war's imminence the moment he overheard Hannegan's third wife tell a serving maid that her favorite courtier had returned with his skin intact from a mission to the tents of Mad Bear's clan. The fact that he had come back alive from the nomad encampment meant that a war was brewing. Purportedly, the emissary's mission had been to tell the Plains tribes that the civilized states had entered into the Agreement of the Holy Scourge concerning the disputed lands, and would hereafter wreak stern vengeance on the nomadic peoples and bandit groups for any further raiding activities. But no man carried such news to Mad Bear and came back alive. Therefore, Apollo concluded the ultimatum had not been delivered, and Hannegan's emissary had gone out to the Plains with an ulterior purpose,. And the purpose was all too clear.

Apollo picked his way politely through the small throng of guests, his sharp eyes searching out Brother Claret and trying to attract his glance. Apollo's tall figure in severe black cassock with a small flash of color at the waist to denote his rank stood out sharply in contrast to the kaleidoscope-whirl of color worn by others in the banquet hall, and he was not long in catching his clerk's eye and nodding him toward the table of refreshments which was now reduced to a litter of scraps, greasy cups, and a few roast squabs that looked overcooked. Apollo dragged at the dregs of the punch bowl with the ladle, observed a dead roach floating among the spices, and thoughtfully handed the first cup to Brother Claret as the clerk approached.

"Thank you, Messér," said Claret, not noticing the roach. "You wanted to see me?"

"As soon as the reception's over. In my quarters. Sarkal came back alive."

"Oh."

"I've never heard a more ominous 'oh.' I take it you understand the interesting implications?"

"Certainly, Messér. It means the Agreement was a fraud on Hannegan's part, and he intends to use it against—"

"Shhh. Later." Apollo's eyes signaled the approach of an audience, and the clerk turned to refill his cup from the punch bowl. His interest became suddenly absorbed there, and he did not look at the lean figure in watered-silk who strode toward them from the entrance. Apollo smiled formally and bowed to the man. Their hand-clasp was brief and noticeably chilly.

"Well, Thon Taddeo," said the priest, "your presence surprises me. I thought you shunned such festive gatherings. What could be so special about this one to attract such a distinguished scholar?" He lifted his brows in mock perplexity.

"You're the attraction, of course," said the newcomer, matching Apollo's sarcasm, "and my only reason for attending."

"I?" He feigned surprise, but the assertion was probably true. The wedding reception of a half-sister was not the sort of thing that would impel Thon Taddeo to bedeck himself in formal finery and leave the cloistered halls of the collegium.

"As a matter of fact, I've been looking for you all day. They told me you'd be here. Otherwise—" He looked around the banquet hall and snorted irritably.

The snort cut whatever thread of fascination was tying Brother Claret's gaze to the punch bowl, and he turned to bow to the *thon*. "Care for punch, *thon* Taddeo?" he asked, offering a full cup.

The scholar accepted it with a nod and drained it. "I wanted to ask you a little more about the Leibowitzian documents we discussed," he said to Marcus Apollo. "I had a letter from a fellow named Kornhoer at the abbey. He assured me they have writings that date back to the last years of the European-American civilization."

If the fact that he himself had assured the scholar of the same thing several months ago was irritating to Apollo, his expression gave no hint of it. "Yes," he said. "They're quite authentic, I'm told."

"If so, it strikes me as very mysterious that nobody's heard—but never mind that. Kornhoer listed a number of documents and texts they claim to have and described them. If they exist at all, I've got to see them."

"Oh?"

"Yes. If it's a hoax, it should be found out, and if it isn't, the data might well be priceless."

The monsignor frowned. "I assure you there is no hoax," he said stiffly.

"The letter contained an invitation to visit the abbey and study the documents. They've evidently heard of me.

"Not necessarily," said Apollo, unable to resist the opportunity. "They aren't particular about who reads their books, as long as he washes his hands and doesn't deface their property."

The scholar glowered. The suggestion that there might exist literate persons who had never heard his name did not please him.

"But there, then!" Apollo went on affably. "You have no problem. Accept their invitation, go to the abbey, study their relics. They'll make you welcome."

The scholar huffed irritably at the suggestion. "And travel through the Plains at a time when Mad Bear's clan is—" *Thon* Taddeo broke off abruptly.

"You were saying?" Apollo prompted, his face showing an special alertness, although a vein in his temple began to throb as he stared expectantly at *Thon* Taddeo.

"Only that it's a long dangerous trip, and I can't spare six months' absence from the collegium. I wanted to discuss the possibility of sending a well-armed party of the Mayor's guardsmen to fetch the documents here for study."

Apollo choked. He felt a childish impulse to kick the scholar in the shins. "I'm afraid," he said politely, "that would be quite impossible. But in any case, the matter is outside my sphere, and I'm afraid I can't be of any help to you."

"Why not?" *Thon* Taddeo demanded. "Aren't you the Vatican's nuncio to the Court of Hannegan?"

"Precisely. I represent New Rome, not the monastic Orders. The government of an abbey is in the hands of its abbot."

"But with a little pressure from New Rome . . ."

The impulse to kick shins surged swiftly. "We'd better discuss it later," Monsignor Apollo said curtly. "This evening in my study, if you like." He half turned, and looked back inquiringly as if to say *Well?*

"I'll be there," the scholar said sharply, and marched away.

"Why didn't you tell him flatly no, then and there?" Claret fumed when they were alone in the embassy suite an hour later. "Transport priceless relics through bandit country in these times?" It's unthinkable, *Messér.*

"Certainly."

"Then why—"

"Two reasons. First, *Thon* Taddeo is Hannegan's kinsman, and influential too. We have to be courteous to Caesar and his kin whether we like him or not. Second, he started to say something about the Mad Bear clan, and then broke off. I think he knows what's going to happen. I'm not going to

engage in espionage, but if he volunteers any information, there's nothing to prevent our including it in the report you're about to deliver personally to New Rome."

"I!" The clerk looked shocked. "To New Rome—?" But what—"

"Not so loud," said the nuncio, glancing at the door.

"I'm going to have to send my estimate of this situation to His Holiness, and quickly. But it's the kind of thing that one doesn't dare put in writing. If Hannegan's people intercepted such a dispatch, you and I would probably be found floating face down in the Red River. If Hannegan's enemies get hold of it, Hannegan would probably feel justified in hanging us publicly as spies. Martyrdom is all very well, but we have a job to do first."

"And I'm to deliver the report orally at the Vatican?" Brother Claret muttered, apparently not relishing the prospect of crossing hostile country.

"It has to be that way. Thon Taddeo may, just possibly may, give us an excuse for your leaving abruptly for Saint Leibowitz abbey, or New Rome, or both. In case there are any suspicions around the Court. I'll try to steer it."

"And the substance of the report I'm to deliver, Messér?"

"That Hannegan's ambition to unite the continent under one dynasty isn't so wild a dream as we thought. That the Agreement of the Holy Scourge is probably a fraud by Hannegan, and that he means to use it to get both the empire of Denver and Laredan Nation into conflict with the Plains nomads. If Laredan forces are tied up in a running battle with Mad Bear, it wouldn't take much encouragement for the State of Chihuahua to attack Laredo from the south. After all, there's an old enmity there. Hannegan, of course, can then march victoriously to Rio Laredo. With Laredo under his thumb, he can look forward to tackling both Denver and the Mississippi Republic without worrying about a stab in the back from the south."

"Do you think Hannegan can do it, Messér?"

Marcus Apollo started to answer, then closed his mouth slowly. He walked to the window and stared out at the sunlit city, a sprawling disorderly city built mostly of rubble from another age. A city without orderly patterns of streets. It had grown slowly over an ancient ruin, as perhaps someday another city would grow over the ruin of this one.

"I don't know," he answered softly. "In these times, it's hard to condemn any man for wanting to unite this butchered continent. Even by such means as—but no, I don't mean that." He sighed heavily. "In any case, our interests are not the interests of politics. We must forewarn New Rome of what may be coming, because the Church will be affected by it, whatever happens. And forewarned, we may be able to keep out of the squabble."

"You really think so?"

"Of course not!" the priest said gently.

Thon Taddeo Pfardentrott arrived at Marcus Apollo's study as early in the day as could be construed as evening, and his manner had noticeably changed since the reception. He managed a cordial smile, and there was nervous eagerness in the way he spoke. This fellow, thought Marcus, is after something he wants rather badly, and he's even willing to be polite in order to get it. Perhaps the list of ancient writings supplied by the monks at the Leibowitzian abbey had impressed the Thon more than he wanted to admit. The nuncio had been prepared for a fencing match, but the scholar's evident excitement made him too easy a victim, and Apollo relaxed his readiness for verbal dueling.

"This afternoon there was a meeting of the faculty of the collegium," said Thon Taddeo as soon as they were seated. "We talked about Brother Kornhoer's letter, and the list of documents." He paused as if uncertain of an approach. The gray dusklight from the large arched window on his left made his face seem blanched and intense, and his wide gray eyes searched at the priest as if measuring him and making estimates.

"I take it there was skepticism?"

The gray eyes fell momentarily, and lifted quickly. "Shall I be polite?"

"Don't bother," Apollo chuckled.

"There was skepticism. 'Incredulity' is more nearly the word. My own feeling is that if such papers

exist, they are probably forgeries dating back several centuries. I doubt if the present monks at the abbey are trying to perpetrate a hoax. Naturally, they would believe the documents valid.”

“Kind of you to absolve them,” Apollo said sourly.

“I offered to be polite. Shall I?”

“No. Go on.”

The thon slid out of his chair and went to sit in the window. He gazed at the fading yellow patches of cloud in the west and pounded softly on the sill while he spoke.

“The papers. No matter what we may believe of them, the idea that such documents may still exist intact—that there’s even a slightest chance of their existing—is, well, so arousing a thought that we must investigate them immediately.”

“Very well,” said Apollo, a little amused. “They invited you. But tell me: what do you find so arousing about the documents?”

The scholar shot him a quick glance. “Are you acquainted with my work?”

The monsignor hesitated. He was acquainted with it, but admitting the acquaintance might force him to admit to an awareness that Thon Taddeo’s name was being spoken in the same breath with names of natural philosophers dead a thousand years and more, while the thon was scarcely in his thirties. The priest was not eager to admit knowing that this young scientist showed promise of becoming one of those rare outcroppings of human genius that appear only a time or two every century to revolutionize an entire field of thought in one vast sweep. He coughed apologetically.

“I must admit that I haven’t read a good deal of—”

“Never mind.” Pfardentrott waved off the apology. “Most of it is highly abstract, and tedious to the layman. Theories of electrical essence. Planetary motion. Attracting bodies. Matters of that sort. New Kornhoer’s list mentions such names as Laplace, Maxwell, and Einstein—do they mean anything to you?”

“Not much. History mentions them as natural philosophers, doesn’t it? From before the collapse of the last civilization? And I think they’re named in one of the pagan hagiologies, aren’t they?”

The scholar nodded. “And that’s all anyone knows about them, or what they did. Physicists, according to our not-so-reliable historians. Responsible for the rapid rise of the European-American culture, they say. Historians list nothing but trivia. I had nearly forgotten them. But Kornhoer’s descriptions of the old documents they say they have are descriptions of papers that might well be taken from physical science texts of some kind. It’s just impossible!”

“But you have to make certain?”

“We have to make certain. Now that it’s come up, I wish I had never heard of it.”

“Why?”

Thon Taddeo was peering at something in the street below. He beckoned to the priest. “Come here a moment. I’ll show you why.”

Apollo slipped from behind the desk and looked down at the muddy rutted street beyond the wall that encircled the palace and barracks and buildings of the collegium cutting off the mayoral sanctuary from the seething plebeian city. The scholar was pointing at the shadowy figure of a peasant leading a donkey homeward at twilight. The man’s feet were wrapped in sackcloth, and the mud had caked about them so that he seemed scarcely able to lift them. But he trudged ahead in one slogging steep after another, resting half a second between footfalls. He seemed too weary to scrape off the mud.

“He doesn’t ride the donkey,” Than Taddeo stated, “because this morning the donkey was loaded down with corn. It doesn’t occur to him that the packs are empty now. What is good enough for the morning is also good enough for the afternoon.”

“You know him?”

“He passes under my window too. Every morning and evening. Hadn’t you noticed him?”

“A thousand like him.”

“Look. Can you bring yourself to believe that that brute is the lineal descendant of men who supposedly invented machines that flew, who traveled to the moon, harnessed the forces of Nature, built machines that could talk and seemed to think? Can you believe there were such men?”

Apollo was silent.

"Look at him!" the scholar persisted. "No, but it's too dark now. You can't see the syphilis outbreak on his neck, the way the bridge of his nose is being eaten away. Paresis. But he was undoubtedly a moron to begin with. Illiterate superstitious, murderous. He diseases his children. For a few coins he would kill them. He will sell them anyway, when they are old enough to be useful. Look at him, and tell me if you see the progeny of a once-mighty civilization? What do you see?"

"The image of Christ," grated the monsignor, surprised at his own sudden anger. "What did you expect me to see?"

The scholar huffed impatiently. "The incongruity. Men as you can observe them through any window, and men as historians would have us believe men once were. I can't accept it. How can a great and wise civilization have destroyed itself so completely?"

"Perhaps," said Apollo, "by being materially great and materially wise, and nothing else." He went to light a tallow lamp, for the twilight was rapidly fading into night. He struck steel and flint until the spark caught and he blew gently at it in the tinder.

"Perhaps," said Thon Taddeo, "but I doubt it."

"You reject all history, then, as myth?" A flame edged out from the spark.

"Not 'reject.' But it must be questioned. Who wrote your histories?"

"The monastic Orders, of course. During the darkest centuries, there was no one else to record them." He transferred flame to wick.

"There! You have it. And during the time of the antipopes, how many schismatic Orders were fabricating their own versions of things, and passing off their versions as the work of earlier men? You can't know, you can't *really* know. That there was on this continent a more advanced civilization than we have now—that can't be denied. You can look at the rubble and the rotted metal and know it. You can dig under a strip of blown sand and find their broken roadways. But where is there evidence of the kind of machines your historians tell us they had in those days? Where are the remains of self-moving carts, of flying machines?"

"Beaten into plowshares and hoes."

"*If* they existed."

"If you doubt it, why bother studying the Leibowitzian documents?"

"Because a doubt is not a denial. Doubt is a powerful tool, and it should be applied to history."

The nuncio smiled tightly. "And what do you want me to do about it, learned Thon?"

The scholar leaned forward earnestly. "Write to the abbot of this place. Assure him that the documents will be treated with utmost care, and will be returned after we have completely examined them for authenticity and studied their content."

"Whose assurance do you want me to give him—yours or mine?"

"Hannegan's, yours, and mine."

"I can give him only yours and Hannegan's. I have no troops of my own."

The scholar reddened.

"Tell me," the nuncio added hastily, "why—besides bandits—do you insist you must see them here, instead of going to the abbey?"

"The best reason you can give the abbot is that if the documents are authentic, *if* we have to examine them at the abbey, a confirmation wouldn't mean much to other secular scholars."

"You mean your colleagues might think the monks had tricked you into something?"

"Ummm, that might be inferred. But also important, if they're brought here, they can be examined by everyone in the collegium who's qualified to form an opinion. And any visiting thons from other principalities can have a look at them too. But we can't move the entire collegium to the southwest desert for six months."

"I see your point."

"Will you send the request to the abbey?"

"Yes."

Thon Taddeo appeared surprised.

"But it will be your request, not mine. And it's only fair to tell you that I don't think Dom Paulo, the

abbot, will say yes.”

The thon, however, appeared to be satisfied. When he had gone, the nuncio summoned his clerk.

“You’ll be leaving for New Rome tomorrow,” he told him.

“By way of Leibowitz Abbey?”

“Come back by way of it. The report to New Rome is urgent.”

“Yes, Messér.”

“At the abbey, tell Dom Paulo that Sheba expects Solomon to come to her. Bearing gifts. Then you better cover your ears. When he finishes exploding, hurry back so I can tell Thon Taddeo no.”

## 13

# T

ime seeps slowly on the desert and there is little change to mark its passage. Two seasons had passed since Dom Paulo had refused the request from across the Plains, but the matter had been settled only a few weeks ago. Or had it been settled at all? Texarkana was obviously unhappy with the results.

The abbot paced along the abbey walls at sundown, his jaw thrust ahead like a whiskery old crag against possible breakers out of the sea of events. His thinning hair fluttered in white pennants on the desert wind, and the wind wrapped his habit bandage-tight about his stooped body, making him look like an emaciated Ezekiel with a strangely round little paunch. He thrust his gnarled hands into his sleeves and glowered occasionally across the desert toward the village of Sanly Bowitts in the distance. The red sunlight threw his pacing shadow across the courtyard, and the monks who encountered it in crossing the grounds glanced up wonderingly at the old man. Their ruler had seemed moody of late, and given to strange forebodings. It was whispered that the time soon was coming when a new abbot would be appointed ruler over the Brothers of Saint Leibowitz. It was whispered that the old man was not well, not well at all. It was whispered that if the abbot heard the whispers, the whisperers should speedily climb over the wall. The abbot had heard, but it pleased him for once not to take note of it. He well knew that the whispers were true.

“Read it to me again,” he said abruptly to the monk who stood motionless near at hand.

The monk’s hood jogged slightly in the abbot’s direction.

“Which one, Domne?” he asked.

“You know which one.”

“Yes, m’Lord.” The monk fumbled in one sleeve. It seemed weighted down with half a bushel of documents and correspondence, but after a moment he found the right one. Affixed to the scroll was the label:

SUB IMMUNITATE APOSTOLICA HOC SUPPOSITUM EST.

QUISQUIS NUNTIIUM MOLESTARE AUDEAT,

IPSO FACTO EXCOMMUNICETUR.

DET: R’ dissimo Domno Paulo de Pecos, AOL, Abbati

(Monastery of the Leibowitzian Brethren,

Environs of Sanly Bowitts Village

Southwest Desert, Empire of Denver)

CUI SALUTEM DICIT: *Marcus Apollo*

Papatiae Apocrisarius Texarkanae

“All right, that’s the one. So read it,” the abbot said impatiently.

“*Accedite ad eum...*” The monk crossed himself and murmured the customary Blessing of Texts, said before reading or writing almost as punctiliously as the blessing at meals. For the preservation of

literacy and learning throughout a black millennium had been the task of the Brothers of Leibowitz, and such small rituals helped keep that task in focus.

Having finished the blessing he held the scroll high against the sunset so that it became a transparency. “*Iterum oportet apponere tibi crucem ferendam, amice...*”

His voice was faintly singsong as his eyes plucked the words out of a forest of superfluous pen-flourishings. The abbot leaned against the parapet to listen while he watched the buzzards circling over the mesa of Last Resort.

“Again it is necessary to set before you a cross to be borne, old friend and shepherd of myopic bookworms,” droned the voice of the reader, “but perhaps the bearing of the cross will smack of triumph. It appears that Sheba is coming to Solomon after all, though probably to denounce him as a charlatan.

“This is to notify you that Thon Taddeo Pfardentrott, D.N.Sc., Sage of Sages, Scholar of Scholars, Fair-Haired Son-out-of-Wedlock of a certain Prince, and God’s Gift to an “Awakening Generation,” has finally made up his mind to pay you a visit, having exhausted all hope of transporting your Memorabilia to this fair realm. He will be arriving about the Feast of the Assumption, if he manages to evade “bandit” groups along the way. He will bring his misgivings and a small party of armed cavalry, courtesy of Hannegan II, whose corpulent person is even now hovering over me as I write, grunting and scowling at these lines, which His Supremacy commanded me to write, and in which His Supremacy expects me to acclaim his cousin, the thon, in the hope that you’ll honor him fittingly. But since His Supremacy’s secretary is in bed with the gout, I shall be no less than candid here:

“So first, let me caution you about this person, Thon Taddeo. Treat him with your customary charity, but trust him not. He is a brilliant scholar, but a secular scholar, and a political captive of the State. Here, Hannegan is the State. Furthermore, the thon is rather anti-clerical I think—or perhaps solely anti-monastic. After his embarrassing birth, he was spirited away to a Benedictine monastery, and—but no, ask the courier about that...”

The monk glanced up from his reading. The abbot was still watching the buzzards over Last Resort.

“You’ve heard about his childhood, Brother?” Dom Paulo asked.

The monk nodded.

“Read on.”

The reading continued, but the abbot ceased to listen. He knew the letter nearly by heart, but still he felt that there was something Marcus Apollo had been trying to say between the lines that he, Dom Paulo, had not yet managed to understand. Marcus was trying to warn him—but of what? The tone of the letter was mildly flippant, but it seemed full of ominous incongruities which might have been designed to add up to some single dark congruity, if only he could add them right. What danger could there be in letting the secular scholar study at the abbey?

Thon Taddeo himself, according to the courier who had brought the letter, had been educated in the Benedictine monastery where he had been taken as a child to avoid embarrassment to his father’s wife. The thon’s father was Hannegan’s uncle, but his mother was a serving maid. The duchess, legitimate wife of the duke, had never protested the duke’s philandering until this common servant girl bore him the son he had always wanted; then she cried unfair. She had borne him only daughters, and to be bested by a commoner aroused her wrath. She sent the child away, flogged and dismissed the servant, and renewed her grip on the duke. She herself meant to have a manchild out of him to re-establish her honor; she gave him three more girls. The duke waited patiently for fifteen years; when she died in miscarriage (of another girl), he promptly went to the Benedictines to reclaim the boy and make him his heir.

But the young Taddeo of Hannegan-Pfardentrott had become a bitter child. He had grown from infancy to adolescence within sight of the city and the palace where his first cousin was being prepared for the throne; if his family had entirely ignored him, however, he might have matured without coming to resent his status as an outcast. But both his father and the servant girl whose womb had borne him came to visit him with just enough frequency to keep him reminded that he was begotten of human flesh and not of stones, and thus to make him vaguely aware that he was deprived of love to which he was entitled.

And then too, Prince Hannegan had come to the same monastery for one year of schooling, had lorded it over his bastard cousin, and had excelled him in all things but keenness of mind. The young Taddeo had hated the prince with a quiet fury, and had set out to outdistance him as far as possible in learning at least. The race had proved a sham, however; the prince left the monastic school the following year, as unlettered as he had come, nor was any further thought given to his education. Meanwhile, his exiled cousin continued the race alone and won high honors; but his victory was hollow, for Hannegan did not care. Thon Taddeo had come to despise the whole Court of Texarkana but, with youthful inconsistency, he had returned willingly to that Court to be legitimized as the father's son at last, appearing to forgive everyone except the dead duchess who had exiled him and the monks who had cared for him in that exile.

Perhaps he thinks of our cloister as a place of durance vile, thought the abbot. There would be bitter memories, half-memories, and maybe a few imagined memories.

“... seeds of controversy in the bed of the New Literacy,” the reader continued. “So take heed, and watch for the symptoms.

“But, on the other hand, not only His Supremacy, but the dictates of charity and justice as well, insist that I recommend him to you as a well-meaning man, or at least as an unmalicious child, like most of these educated and gentlemanly pagans (and pagans they will make of themselves, in spite of all). He will behave if you are firm, but be careful, my friend. He has a mind like a loaded musket, and it can go off in any direction. I trust, however, that coping with him for a while will not be too taxing a problem for your ingenuity and hospitality.

“*Quidam mihi calix nuper expletur, Paule. Precamini ergo Deum facere me fortiozem. Metuo ut hic pereat. Spero te et fratres saepius oraturos esse pro tremescente Marco Apolline. Valete in Christo, amici.*

“*‘Texarkanae datum est Octava Ss Petri et Pauli, Anno Domini termillesimo . . .’* “

“Let's see that seal again,” said the abbot.

The monk handed him the scroll. Dom Paulo held it close to his face to peer at blurred lettering impressed at the bottom of the parchment by a badly inked wooden stamp:

OKAYED BY HANNEGAN II, BY GRACE OF GOD MAYOR,  
RULER OF TEXARKANA, DEFENDER OF THE FAITH,  
AND VAQUERO SUPREME OF THE PLAINS.  
HIS MARK: X

“I wonder if His Supremacy had someone read the letter to him later?” worried the abbot.

“If so, m'Lord, would the letter have been sent?”

“I suppose not. But frivolity under Hannegan's nose just to spite the Mayor's illiteracy is not like Marcus Apollo, unless he was trying to tell me something between the lines—but couldn't quite think of a safe way to say it. That last part—about a certain chalice that he's afraid won't pass away. It's clear he's worried about something, but what? It isn't like Marcus; it isn't like him at all.”

Several weeks had passed since the arrival of the letter; during those weeks Dom Paulo had slept badly, had suffered a recurrence of the old gastric trouble, had brooded overmuch on the past as if looking for something that might have been done differently in order to avert the future. What future? he demanded of himself. There seemed no logical reason to expect trouble. The controversy between monks and villagers had all but died. No signs of turmoil came from the herdsman tribes to the north and east. Imperial Denver was not pressing its attempt to levy taxes upon monastic congregations. There were no troops in the vicinity. The oasis was still furnishing water. There seemed no current threat of plague among animals or men. The corn was doing well this year in the irrigated fields. There were signs of progress in the world, and the village of Sanly Bowitts had achieved the fantastic literacy rate of eight per cent—for which the villagers might, but did not, thank the monks of the Leibowitzian Order.

And yet he felt forebodings. Some nameless threat lurked just around the corner of the world for the sun to rise again. The feeling had been gnawing at him, as annoying as a swarm of hungry insects that buzzed about one's face in the desert sun. There was the sense of the imminent, the remorseless, the mindless; it coiled like a heat-maddened rattler, ready to strike at rolling tumbleweed.

It was a devil with which he was trying to come to grips, the abbot decided, but the devil was quite evasive. The abbot's devil was rather small, as devils go: only knee-high, but he weighed ten tons and had the strength of five hundred oxen. He was not driven by maliciousness as Dom Paulo imagined him, not nearly as much as he was driven by frenzied compulsion, somewhat after the fashion of a rabid dog. He bit through meat and bone and nail simply because he had damned himself, and damnation created a damnably insatiable appetite. And he was evil merely because he had made a denial of Good, and the denial had become a part of his essence, or a hole therein. Somewhere, Dom Paulo thought, he's wading through a sea of men and leaving a wake of the maimed.

What nonsense, old man! he chided himself. When you tire of living, change itself seems evil, does it not? for then any change at all disturbs the deathlike peace of the life-weary. Oh there's the devil, all right, but let's not credit him with more than his damnable due. Are you that life-weary, old fossil?

But the foreboding lingered.

"Do you suppose the buzzards have eaten old Eleazar yet?" asked a quiet voice at his elbow.

Dom Paulo glanced around with a start in the twilight. The voice belonged to Father Gault, his prior and probable successor. He stood fingering a rose and looking embarrassed for having disturbed the old man's solitude.

"Eleazar? You mean Benjamin? Why, have you heard something about him lately?"

"Well, no, Father Abbot." He laughed uneasily. "But you seemed to be looking toward the mesa, and I thought you were wondering about the Old Jew." He glanced toward the anvil-shaped mountain, silhouetted against the gray patch of sky in the west. "There's a wisp of smoke up there, so I guess he's still alive."

"We shouldn't have to *guess*," Dom Paulo said abruptly. "I'm going to ride over there and pay him a visit."

"You sound like you're leaving tonight." Gault chuckled.

"In a day or two."

"Better be careful. They say he throws rocks at climbers."

"I haven't seen him for five years," the abbot confessed. "And I'm ashamed that I haven't. He's lonely. I'll go."

"If he's lonely, why does he insist on living like a hermit?"

"To escape loneliness—in a young world."

The young priest laughed. "That perhaps makes *his* kind of sense, Domne, but I don't quite see it."

"You will, when you're my age, or his."

"I don't expect to get that old. He lays claim to several thousand years."

The abbot smiled reminiscently. "And you know, I can't dispute him either. I met him when I was just a novice, fifty-odd years ago, and I'd swear he looked just as old then as he does now. He must be well over a hundred."

"Three thousand two hundred and nine, so he says. Sometimes even older. I think he believes it, too. An interesting madness,"

"I'm not so sure he's mad, Father. Just devious in his sanity. What did you want to see me about?"

"Three small matters. First, how do we get the Poet out of the royal guest rooms—before Thon Taddeo arrives? He's due here in a few days, and the Poet's taken root."

"I'll handle the Poet-sirrah. What else?"

"Vespers. Will you be in the church?"

"Not until Compline. You take over. What else?"

"Controversy in the basement—over Brother Kornhoer's experiment."

"Who and how?"

"Well, the silly gist of it seems to be that Brother Armbruster has the attitude of *vespero mundi*

*expectando*, while with Brother Kornhoer, it's the matins of the millennium. Kornhoer moves something to make room for a piece of equipment. Armbruster yells *Perdition!* Brother Kornhoer yells *Progress!* and they have at each other again. Then they come fuming to me to settle it. I scold them for losing their tempers. They get sheepish and fawn on each other for ten minutes. Six hours later, the floor shivers from Brother Armbruster's bellowing *Perdition!* down in the library. I can settle the blowups, but there seems to be a Basic Issue."

"A basic breach of conduct, I'd say. What do you want me to do about it? Exclude them from the table?"

"Not yet, but you might warn them."

"All right, I'll track it down. Is that all?"

"That's all, Domne." He started away, but paused: "Oh, by the way-do you think Brother Kornhoer's contraption is going to work'?"

"I hope not!" the abbot snorted.

Father Gault appeared surprised. "But, then why let him—"

"Because I was curious at first. The work has caused so much commotion by now, though, that I'm sorry I let him start it."

"Then why not stop him?"

"Because I'm hoping that he will reduce himself to absurdity without any help from me. If the thing fails, it'll fail just in time for Thon Taddeo's arrival; That would be just the proper form of mortification for Brother Kornhoer—to remind him of his vocation, before he begins thinking that he was called to Religion mainly for the purpose of building a generator of electrical essences in the monastery basement."

"But, Father Abbot, you'll have to admit that it would be quite an achievement, if successful."

"I don't *have* to admit it," Dom Paulo told him curtly.

When Gault was gone, the abbot, after a brief debate with himself, decided to handle the problem of the Poet-sirrah! before the problem of perdition-versus-progress. The simplest solution to the problem of the Poet was for the Poet to get out of the royal suite, and preferably out of the abbey, out of the vicinity of the abbey, out of sight, hearing, and mind. But no one could expect a "simplest solution" to get rid of the Poet-sirrah!

The abbot left the wall and crossed the courtyard toward the guesthouse. He moved by feel, for the buildings were monoliths of shadow under the stars, and only a few windows glowed with candlelight. The windows of the royal suite were dark; but the Poet kept odd hours and might well be in.

Inside the building, he groped for the right door, found it, and knocked. There was no immediate answer, but only a faint bleating sound which might or might not have issued from within the suite. He knocked again, then tried the door. It opened.

Faint red light from a charcoal burner softened the darkness; the room reeked of stale food.

"Poet?"

Again the faint bleating, but closer now. He went to the burner, raked up an incandescent coal, and lit a splinter of kindling. He glanced around and shuddered at the litter of the room. It was empty. He transferred the flame to an oil lamp and went to explore the rest of the suite. It would have to be thoroughly scrubbed and fumigated (also, perhaps, exorcised) before Thon Taddeo moved in. He hoped to make the Poet-sirrah! do the scrubbing, but knew the chance was remote.

In the second room, Dom Paulo suddenly felt as if someone were watching him. He paused and looked slowly around.

A single eyeball peered at him from a vase of water on the shelf. The abbot nodded at it familiarly and went on.

In the third room, he met the goat. It was their first meeting.

The goat was standing atop a tall cabinet, munching turnip greens. It looked like a small breed of mountain goat, but it had a bald head that appeared bright blue by lamplight. Undoubtedly a freak by birth.

"Poet?" he inquired, softly, looking straight at the goat and touching his pectoral cross.

"In *here*," came a sleepy voice from the fourth room.

Dom Paulo sighed with relief. The goat went on munching greens. Now *that* had been a hideous thought, indeed.

The Poet lay sprawled across the bed with a bottle of wine within easy reach; he blinked irritably at the light with his one good eye. "I was asleep," he complained, adjusting his black eyepatch and reaching for the bottle.

"Then wake up. You're moving out of here immediately. Tonight. Dump your possessions in the hall to let the suite air out. Sleep in the stable boy's cell downstairs if you must. Then come back in the morning and scrub this place out."

The Poet looked like a bruised lily for a moment, then made a grab for something under the blankets. He brought out a fist and stared at it thoughtfully. "Who used these quarters last?" he asked.

"Monsignor Longi. Why?"

"I wondered who brought the bedbugs." The Poet opened his fist, pinched something out of his palm, cracked it between his nails, and flipped it away. "Thon Taddeo can have them. I don't want them. I've been eaten up alive ever since I moved in. I was planning on leaving, but now that you've offered me my old cell back, I'll be happy—"

"I didn't mean—"

"—to accept your kind hospitality a little longer. Only until my book is finished, of course."

"*What* book? But never mind. Just get your things out of here."

"Now?"

"Now."

"Good. I don't think I could stand these bugs another night." The Poet rolled out of bed, but paused for a drink.

"Give me the wine," the abbot ordered.

"Sure. Have some. It's a pleasant vintage."

"Thank you, since you stole it from our cellars. It happens to be sacramental wine. Did that occur to you?"

"It hasn't been consecrated."

"I'm surprised you thought of that." Dom Paulo took the bottle.

"I didn't steal it anyway. I—"

"Never mind the wine. Where did you steal the goat?"

"I didn't *steal* it," the Poet complained.

"It just—materialized?"

"It was a gift, Reverendissime."

"From whom?"

"A dear friend, Domnissime."

"Whose dear friend?"

"Mine, Sire."

"Now there's a paradox. Where, now, did you—"

"Benjamin, Sire."

A flicker of surprise crossed Dom Paulo's face. "You stole it from old Benjamin?"

The Poet winced at the word. "Please, not stole."

"Then what?"

"Benjamin insisted that I take it as a gift after I had composed a sonnet in his honor."

"*The truth!*"

The Poet-sirrah! swallowed sheepishly. "I won it from him at mumbly-peg."

"I see."

"It's true! The old wretch nearly cleaned me out, and then refused to allow me credit. I had to stake my glass eye against the goat. But I won everything back."

"Get the goat out of the abbey."

"But it's a marvelous species of goat. The milk is of an unearthly odor and contains essences. In fact it's responsible for the Old Jew's longevity."

"How much of it?"

"All fifty-four hundred and eight years of it."

"I thought he was only thirty-two hundred and—" Dom Paulo broke off disdainfully. "What were you doing up on Last Resort?"

"Playing mumbly-peg with old Benjamin."

"I mean—" The abbot steeled himself. "Never mind. Just get yourself moved out. And tomorrow get the goat back to Benjamin."

"But I won it fairly."

"We'll not discuss it. Take the goat to the stable, then. I'll have it returned to him myself."

"Why?"

"We have no use for a goat. Neither have you."

"Ho, ho," the Poet said archly.

"What did that mean, pray?"

"Thon Taddeo is coming. There'll be need of a goat before it's finished. You can be sure of that." He chuckled smugly to himself.

The abbot turned away in irritation. "Just get out," he added superfluously, and then went to wrestle with contention in the basement, where the Memorabilia now reposed.

## 14

# T

he vaulted basement had been dug during the centuries of nomadic infiltration from the north, when the Bayring Horde had overrun most of the Plains and desert, looting and vandalizing all villages that lay in their path. The Memorabilia, the abbey's small patrimony of knowledge out of the past, had been walled up in underground vaults to protect the priceless writings from both nomads and *soi-disant* crusaders of the schismatic Orders, founded to fight the hordes, but turned to random pillaging and sectarian strife. Neither the nomads nor the Military Order of San Pancratz would have valued the abbey's books, but the nomads would have destroyed them for the joy of destruction and the military knights-friars would have burned many of them as "heretical" according to the theology of Vissarion, their Antipope.

Now a Dark Age seemed to be passing. For twelve centuries, a small flame of knowledge had been kept smoldering in the monasteries; only now were their minds ready to be kindled. Long ago, during the last age of reason, certain proud thinkers had claimed that valid knowledge was indestructible—that ideas were deathless and truth immortal. But that was true only in the subtlest sense, the abbot thought, and not superficially true at all. There was objective meaning in the world, to be sure: the nonmoral *logos* or design of the Creator; but such meanings were God's and not Man's, until they found an imperfect incarnation, a dark reflection, within the mind and speech and culture of a given human society, which might ascribe values to the meanings so that they became valid in a human sense within the culture. For Man was a culture-bearer as well as a soul-bearer, but his cultures were not immortal and they could die with a race or an age, and then human reflections of meaning and human portrayals of truth receded, and truth and meaning resided, unseen, only in the objective *logos* of Nature and the ineffable *Logos* of God. Truth could be crucified; but soon, perhaps, a resurrection.

The Memorabilia was full of ancient words, ancient formulae, ancient reflections of meaning, detached from minds that had died long ago, when a different sort of society had passed into oblivion. There was little of it that could still be understood. Certain papers seemed as meaningless as a Breviary would seem to a shaman of the nomad tribes. Others retained a certain ornamental beauty or an

orderliness that hinted of meaning, as a rosary might suggest a necklace to a nomad. The earliest brothers of the Leibowitzian Order had tried to press a sort of Veronica's Veil to the face of a crucified civilization; it had come away marked with an image of the face of ancient grandeur, but the image was faintly printed, incomplete, and hard to understand. The monks had preserved the image, and now it still survived for the world to inspect and try to interpret if the world wanted to do so. The Memorabilia could not, of itself, generate a revival of ancient science or high civilization, however, for cultures were begotten by the tribes of Man, not by musty tomes; but the books could help, Dom Paulo hoped—the books could point out directions and offer hints to a newly evolving science. It had happened once before, so the Venerable Boedullus had asserted in his *De Vestigiis Antecesserum Civitatum*.

And this time, thought Dom Paulo, we'll keep them reminded of who kept the spark burning while the world slept. He paused to look back; for a moment he had imagined that he had heard a frightened bleat from the Poet's goat.

The clamor from the basement soon blanketed his hearing as he descended the underground stairs toward the source of the turmoil. Someone was hammering steel pins into stone. Sweat mingled with the odor of old books. A feverish bustle of unscholarly activity filled the library. Novices hurried past with tools. Novices stood in groups and studied floor plans. Novices shifted desks and tables and heaved a makeshift machinery, rocking it into place. Confusion by lamplight. Brother Armbruster, the librarian and Rector of the Memorabilia, stood watching it from a remote alcove in the shelves, his arms tightly folded and his face grim. Dom Paulo avoided his accusing gaze.

Brother Kornhoer approached his ruler with a lingering grin of enthusiasms. "Well, Father Abbot, we'll soon have a light such as no man alive has ever seen."

"This is not without a certain vanity, Farther," Paulo replied.

"Vanity, Domne? To put to good use what we've learned?"

"I had in mind our haste to put it to use in time to impress a certain visiting scholar. But never mind. Let's see this engineer's wizardry."

They walked toward the makeshift machine. It reminded the abbot of nothing useful, unless one considered engines for torturing prisoners useful. An axle, serving as the shaft, was connected by pulleys and belts to a waist-high turnstile. Four wagon wheels were mounted on the axle a few inches apart. Their thick iron tires were scored with grooves, and the grooves supported countless birds'-nests of copper wire, drawn from coinage at the local smithy in Sanly Bowitts. The wheels were apparently free to spin in mid-air, Dom Paulo noticed, for their tires touched no surface. However, stationary blocks of iron faced the tires, like brakes, with out quite touching them. The blocks too had been wound with innumerable turns of wire—"field coils" as Kornhoer called them. Dom Paulo solemnly shook his head.

"It'll be the greatest physical improvement at the abbey since we got the printing press a hundred years ago," Kornhoer ventured proudly.

"Will it work?" Dom Paulo wondered.

"I'll stake a month's extra chores on it, m'Lord."

*You're staking more than that*, thought the priest, but suppressed utterance. "Where does the light come out?" he asked, peering at the odd contraption again.

The monk laughed. "Oh, we have a special lamp for that. What you see here is only the 'dynamo.' It produces the electrical essence which the lamp will burn."

Ruefully, Dom Paulo contemplated the amount of space the dynamo was occupying. "This essence," he murmured, "—can't it be extracted from mutton fat, perhaps?"

"No, no—The electrical essence is, well—Do you want me to explain?"

"Better not. Natural science is not my bent. I'll leave it to you younger heads." He stepped back quickly to avoid being brained by a timber carried past by a pair of hurrying carpenters. "Tell me," he said, "if by studying writings from the Leibowitzian age you can learn how to construct this thing, why do you suppose none of our predecessors saw fit to construct it?"

The monk was silent for a moment. "It's not easy to explain," he said at last. "Actually, in the writings that survive, there's no direct information about the construction of a dynamo. Rather, you might say that the information is implicit in a whole collections of fragmentary writings. *Partially* implicit. And it

has to be got out by deduction. But to get it, you also need some theories to work from—theoretical information our predecessors didn't have."

"But we do?"

"Well, yes—now that there have been a few men like—" his tone became deeply respectful and he paused before pronouncing the name "—like Thon Taddeo—"

"Was that a complete sentence?" the abbot asked rather sourly.

"Well, until recently, few philosophers have concerned themselves with new theories in physics. Actually, it was the work of, of Thon Taddeo—" the respectful tone again, Dom Paulo noted, "—that gave us the necessary working axioms. His work of the Mobility of Electrical Essences, for example, and his Conservation Theorem—"

"He should be pleased, then, to see his work applied. But where is the lamp itself, may I ask? I hope it's no larger than the dynamo."

"This is it, Domne," said the monk, picking up a small object from the table. It seemed to be only a bracket for holding a pair of black rods and a thumbscrew for adjusting their spacing. "These are carbons," Kornhoer explained.

"The ancients would have called it an 'arc lamp.' There was another kind, but we don't have the materials to make it."

"Amazing. Where does the light come from?"

"Here." The monk pointed to the gap between the carbons. "It must be a very tiny flame," said the abbot.

"Oh, but bright! Brighter, I expect, than a hundred candles."

"No!"

"You find that impressive?"

"I find it preposterous—" noticing Brother Kornhoer's sudden hurt expression, the abbot hastily added: "—to think how we've been limping along on beeswax and mutton fat."

"I have been wondering," the monk shyly confided, "if the ancients used them on their altars instead of candles."

"No," said the abbot. "Definitely, *no*. I can tell you that. Please dismiss that idea as quickly as possible, and don't even think of it again."

"Yes, Father Abbot."

"Now, where are you going to hang that thing?"

"Well—" Brother Kornhoer paused to stare speculatively around the gloomy basement. "I hadn't given it any thought. I suppose it should go over the desk where, Thon Taddeo—" (Why does he pause like that whenever he says it, Dom Paulo wondered irritably.) "—will be working."

"We'd better ask Brother Armbruster about that," the abbot decided, and then noticing the monk's sudden discomfort: "What's the matter? Have you and Brother Armbruster been—"

Kornhoer's face twisted apologetically. "Really, Father Abbot, I haven't lost my temper with him even once. Oh, we've had words, but—" He shrugged. "He doesn't want anything moved. He keeps mumbling about witchcraft and the like. It's not easy to reason with him. His eyes are half-blind now from reading by dim light—and yet he says it's Devil's work we're up to. I don't know what to say."

Dom Paulo frowned slightly as they crossed the room toward the alcove where Brother Armbruster still stood glowering upon the proceedings.

"Well, you've got your way now," the librarian said to Kornhoer as they approached. "When'll you be putting in a mechanical librarian, Brother?"

"We find hints, Brother, that once there were such things," the inventor growled. "In descriptions of the *Machina analytica*, you'll find references to—"

"Enough, enough," the abbot interposed; then to the librarian: "Thon Taddeo will need a place to work. What do you suggest?"

Armbruster jerked one thumb toward the Natural Science alcove. "Let him read at the lectern in there like anyone else."

"What about setting up a study for him here on the open floor, Father Abbot?" Kornhoer suggested

in hasty counter-proposal.

"Besides a desk, he'll need an abacus, a wall slate, and a drawing board. We could partition it off with temporary screens."

"I thought he was going to need our Leibowitzian references and earliest writings?" the librarian said suspiciously.

"He will."

"Then he'll have to walk back and forth a lot if you put him in the middle. The rare volumes are chained, and the chains won't reach that far."

"That's no problem," said the inventor. "Take off the chains. They look silly anyway. The schismatic cults have all died out or become regional. Nobody's heard of the Pancratzian Military Order in a hundred years."

Armbruster reddened angrily. "Oh no you don't," he snapped. "The chains stay on."

"But why?"

"It's not the book burners now. It's the villagers we have to worry about. The chains stay on."

Kornhoer turned to the abbot and spread his hands. "See, m'Lord?,"

"He's right," said Dom Paulo. "There's too much agitation in the village. The town council expropriated our school, don't forget. Now they've got a village library, and they want us to fill its shelves. Preferably with rare volumes, of course. Not only that, we had trouble with thieves last year. Brother Armbruster's right. The rare volumes stay chained."

"All right," Kornhoer sighed. "So he'll have to work in the alcove."

"Now, where do we hang your wondrous lamp?"

The monks glanced toward the cubicle. It was one of fourteen identical stalls, sectioned according to subject matter, which faced the central floor. Each alcove had its archway, and from an iron hook imbedded in the keystone of each arch hung a heavy crucifix.

"Well, if he's going to work in the alcove," said Kornhoer, "we'll just have to take the crucifix down and hang it there, temporarily. There's no other--"

"Heathen!" hissed the librarian. "Pagan! Desecrator!" Armbruster raised trembling hands heavenward. "God help me, lest I tear him apart with these hands! Where will he stop? Take him away, away!" He turned his back on them, his hands still trembling aloft.

Dom Paulo himself had winced slightly at the inventor's suggestion, but now he frowned sharply at the back of Brother Armbruster's habit. He had never expected him to feign a meekness that was alien to Armbruster's nature, but the aged monk's querulous disposition had grown definitely worse.

"Brother Armbruster, turn around, please."

The librarian turned.

"Now drop your hands, and speak more calmly when you--"

"But, Father Abbot, you heard what he--"

"Brother Armbruster, you will please get the shelf-ladder and remove that crucifix."

The color left the librarian's face. He stared speechless at Dom Paulo.

"This is not a church," said the abbot. "The placement of images is optional. For the present, you will please take down the crucifix. It's the only suitable place for the lamp, it seems. Later we may change it. Now I realize this whole thing has disturbed your library, and perhaps your digestion, but we hope it's in the interests of progress. If it isn't, then--"

"You'd make Our Lord move over to make room for prog--"

"Brother Armbruster!"

"Why don't you just hang the witch-light around His neck?"

The abbot's face went frigid. "I do not *force* your obedience, Brother. See me in my study after Compline."

The librarian wilted. "I'll get the ladder, Father Abbot," he whispered, and shuffled unsteadily away.

Dom Paulo glanced up at the Christ of the rood in the archway. Do You mind? he wondered.

There was a knot in his stomach. He knew the knot would exact its price of him later. He left the

basement before anyone could notice his discomfort. It was not good to let the community see how such trivial unpleasantness could overcome him these days.

The installation was completed the following day, but Dom Paulo remained in his study during the test. Twice he had been forced to warn Brother Armbruster privately, and then to rebuke him publicly during Chapter. And yet he felt more sympathy for the librarian's stand than he did for Kornhoer's. He sat slumped at his desk and waited for the news from the basement, feeling small concern for the test's success or failure. He kept one hand tucked into the front of his habit. He patted his stomach as though trying to calm a hysterical child.

Internal cramping again. It seemed to come whenever unpleasantness threatened, and sometimes went away again when unpleasantness exploded into the open where he could wrestle with it. But now it was not going away.

He was being warned, and he knew it. Whether the warning came from an angel, from a demon, or from his own conscience, it told him to beware of himself and of some reality not yet faced.

What now? he wondered, permitting himself a silent belch and a silent *Beg pardon* toward the statue of Saint Leibowitz in the shrinelike niche in the corner of his study.

A fly was crawling along Saint Leibowitz' nose. The eyes of the saint seemed to be looking crosseyed at the fly, urging the abbot to brush it away. The abbot had grown fond of the twenty-sixth century wood carving; its face wore a curious smile of a sort that made it rather unusual as a sacramental image. The smile was turned down at one corner; the eyebrows were pulled low in a faintly dubious frown, although there were laugh-wrinkles at the corners of the eyes. Because of the hangman's rope over one shoulder, the saint's expression often seemed puzzling. Possibly it resulted from slight irregularities in the grain of the wood, such irregularities dictating to the carver's hand as that hand sought to bring out finer details than were possible with such wood. Dom Paulo was not certain whether the image had been growth-sculptured as a living tree before carving or not; sometimes the patient master-carvers of that period had begun with an oak or cedar sapling, and—by spending tedious years at pruning, barking, twisting, and tying living branches into desired positions—had tormented the growing wood into a striking dryad shape, arms folded or raised aloft, before cutting the mature tree for curing and carving. The resulting statue was unusually resistant to splitting or breaking, since most of the lines of the work followed the natural grain.

Dom Paulo often marveled that the wooden Leibowitz had also proved resistant to several centuries of his predecessors—marveled, because of the saint's most peculiar smile. That little grin will ruin you someday, he warned the image...Surely, the saints must laugh in Heaven; the Psalmist says that God Himself shall chortle, but Abbot Malmeddy must have disapproved—God rest his soul. That solemn ass. How did you get by *him*, I wonder? You're not sanctimonious enough for some. That smile—Who do I know that grins that way? I like it, *but*...Someday, another grim dog will sit in this chair. *Cave canem*. He'll replace you with a plaster Leibowitz. Long-suffering. One who doesn't look crosseyed at flies. Then you'll be eaten by termites down in the storage room. To survive the Church's slow sifting of the arts, you have to have a surface that can please a righteous simpleton; and yet you need a depth beneath that surface to please a discerning sage. The sifting is slow, but it gets a turn of the sifter-handle now and then—when some new prelate inspects his episcopal chambers and mutters, "Some of this garbage has got to go." The sifter was usually full of dulcet pap. When the old pap was ground out, fresh pap was added. But what was *not* ground out was gold, and it lasted. If a church endured five centuries of priestly bad taste, occasional good taste had, by then, usually stripped away most of the transient tripe, had made it a place of majesty that overawed the would-be prettifiers.

The abbot fanned himself with a fan of buzzard feathers, but the breeze was not cooling. The air from the window was like an oven's breath off the scorched desert, adding to the discomfort caused him by whatever devil or ruthless angel was fiddling around with his belly. It was the kind of heat that hints of lurking danger from sun-crazed rattlers and brooding thunderstorms over the mountains, or rabid dogs and tempers made vicious by the scorch. It made the cramping worse.

"Please?" he murmured aloud to the saint, meaning a nonverbal prayer for cooler weather, sharper wits, and more insight into his vague sense of something wrong. Maybe it's that cheese that does it, he

thought. Gummy stuff this season, and green. *I could* dispense myself—and take a more digestible diet.

But no, there we go again. Face it, Paulo: it's not the food for the belly that does it; it's the food for the brain. Something up there is not digesting.

"But what?"

The wooden saint gave him no ready answer. Pap. Sifting out chaff. Sometimes his mind worked in snatches. It was better to let it work that way when the cramps came and the world weighed heavily upon him. What did the world weigh? It weighs, but is not weighed. Sometimes its scales are crooked. It weighs life and labor in the balance against silver and gold. That'll *never* balance. But fast and ruthless, it keeps on weighing. It spills a lot of life that way, and some times a little gold. And blindfolded, a king comes riding across the desert, with a set of crooked scales, a pair of loaded dice. And upon the flags emblazoned—*Vexilla regis* . . .

"No!" the abbot grunted, suppressing the vision.

*But of course!* the saint's wooden smile seemed to insist.

Dom Paulo averted his eyes from the image with a slight shudder. Sometimes he felt that the saint was laughing at him. Do they laugh at us in Heaven? he wondered. Saint Maisie of York herself—remember her, old man—she died of a laughing fit. That's different. She died laughing at herself.

No, that's at s not so different either. *Ulp!* The silent belch again. Tuesday's Saint Maisie's feast day, forsooth. Choir laughs reverently at the *Alleluia* of her Mass. "*Alleluia* ha ha! *Alleluia* ho ho!"

*"Sancta Maisie, interride pro me."*

And the king was coming to weigh books in the basement with his pair of crooked scales. How "crooked," Paulo? And what makes you think the Memorabilia is completely free of pap? Even the gifted and Venerable Boedullus once remarked scornfully that about half of it should be called the Inscrutabilia. Treasured fragments of a dead civilization there were indeed—but how much of it has been reduced to gibberish, embellished with olive leaves and cherubims, by forty generations of us monastic ignoramuses, children of dark centuries, many, entrusted by adults with an incomprehensible message, to be memorized and delivered to other adults.

I made him travel all the way from Texarkana through dangerous country, thought Paulo. Now I'm just worrying that what we've got may prove worthless to him, that's all.

But no, that wasn't all. He glanced at the smiling saint again. And again: *Vexilla regis inferni prodeunt*... Forth come the banners of the King of Hell, whispered a memory of that perverted line from an ancient *commedia*. It nagged like an unwanted tune in his thought.

The fist clenched tighter. He dropped the fan and breathed through his teeth. He avoided looking at the saint again. The ruthless angel ambushed him with a hot burst at his corporeal core. He leaned over the desk. That one had felt like a hot wire breaking. His hard breathing swept a clean spot in the film of desert dust on the desktop. The smell of the dust was choking. The room went pink, swarmed with black gnats. I don't dare belch, might shake something loose—but Holy Saint and Patron I've got to. Pain is. *Ergo sum*. Lord Christ God accept this token.

He belched, tasted salt, let his head fall onto the desk.

Does the chalice have to be now right this very minute Lord or can I wait awhile? But crucifixion is always now. Now ever since before Abraham even is always now. Before Pfardentrott even, now. Always for everybody anyhow is to get nailed on it and then to hang on it and if you drop off they beat you to death with a shovel so do it with dignity old man. If you can belch with dignity you may get to Heaven if you re sorry enough about messing up the rug...He felt very apologetic.

He waited a long time. Some of the gnats died and the room lost its blush but went hazy and gray.

*Well*, Paulo, are we going to hemorrhage now, or are we just going to fool around about it?

He probed the haze and found the face of the saint again. It was such a small grin—sad, understanding and, something else. Laughing at the hangman? No, laughing for the hangman. Laughing at the *Stultus Maximus*, at Satan himself. It was the first time he had seen it dearly. In the last chalice, there could be a chuckle of triumph. *Haec commixtio* . . .

He was suddenly very sleepy; the saint's face grayed over, but the abbot continued to grin weakly in response.

Prior Gault found him slumped over the desk shortly before None. Blood showed between his teeth. The young priest quickly felt for a pulse. Dom Paulo awakened at once, straightened in his chair, and, as if still in a dream, he pontificated imperiously: "I tell you, it's all supremely ridiculous. It's absolutely idiotic. Nothing could be more *absurd*,"

"What's absurd, Domne?"

The abbot shook his head, blinked several times. "*What?*"

"I'll get Brother Andrew at once."

"Oh? That's absurd. Come back here. What did you want?"

"Nothing, Father Abbot. I'll be back as soon as I get Brother—"

"Oh, bother the medic! You didn't come in here for nothing. My door was closed. Close it again, sit down, say what you wanted."

"The test was successful. Brother Kornhoer's lamp, I mean."

"All right, let's hear about it. Sit down, start talking, tell me all *!!!* about it." He straightened his habit and blotted his mouth with a bit of linen. He was still dizzy, but the fist in his belly had come unclenched. He could not have cared less about the prior's account of the test, but he tried his best to appear attentive. Got to keep him here until I'm awake enough to think. Can't let him go for the medic—not yet; the news would get out: *The old man is finished*. Got to decide whether it's a safe time to be finished or not.

# H

Hongan Os was essentially a just and kindly man. When he saw a party of his warriors making sport of the Laredan captives, he paused to watch; but when they tied three Laredans by their ankles between horses and whipped the horses into frenzied flight, Hongan Os decided to intervene. He ordered that the warriors be flogged on the spot, for Hongan Os—Mad Bear—was known to be a merciful chieftain. He had never mistreated a horse.

"Killing captives is woman's work," he growled scornfully at the whipped culprits. "Cleanse yourselves lest you be squawmarked, and withdraw from camp until the New Moon, for you are banished twelve days." And, answering their moans of protest: "Suppose the horses had dragged one of them through camp? The grass-eater chiefings are our guests, and it is known that they are easily frightened by blood. Especially the blood of their own kind. Take heed."

"But *these* are grass-eaters from the South," a warrior objected, gesturing toward the mutilated captives. "Our guests are grass-eaters from the East. Is there not a pact between us real people and the East to make war upon the South?"

"If you speak of it again, your tongue shall be cut out and fed to the dogs!" Mad Bear warned. "Forget that you heard such things."

"Will the herb-men be among us for many days, O Son of the Mighty?"

"Who can know what the farmer-things plan?" Mad Bear asked crossly. "Their thought is not as our thought. They say that some of their numbers will depart from here to pass on across the Dry Lands—to a place of the grass-eater priests, a place of the dark-robed ones. The others will stay here to talk—but that is not for your ears. Now go, and be ashamed twelve days."

He turned his back that they might slink away without feeling his gaze pour upon them. Discipline was becoming lax of late. The clans were restless. It had become known among the people of the Plains that he, Hongan Os, had clasped arms across a treaty-fire with a messenger from Texarkana, and that a

shaman had clipped hair and fingernails from each of them to make a good-faith doll as a defense against treachery by either party. It was known that an agreement had been made, and any agreement between people and grass-eaters was regarded by the tribes as a cause for shame. Mad Bear had felt the veiled scorn of the younger warriors, but there was no explaining to them until the right time came.

Mad Bear himself was willing to listen to good thought, even if it came from a dog. The thought of grass-eaters was seldom good, but he had been impressed by the messages of the grass-eater king in the east, who had expounded the value of secrecy and deplored the idle boast. If the Laredans learned that the tribes were being armed by Hannegan, the plan would surely fail. Mad Bear had brooded on this thought; it repelled him—for certainly it was more satisfying and more manly to tell an enemy what one intended to do to him before doing it; and yet, the more he brooded on it, the more he saw its wisdom. Either the grass-eater king was a craven coward, or else he was almost as wise as a man: Mad Bear had not decided which—but he judged the thought itself as wise. Secrecy was essential even if it seemed womanly for a time. If Mad Bear's own people knew that the arms which came to them were gifts from Hannegan, and not really the spoils of border raids, then there would arise the possibility of Laredo's learning of the scheme from captives caught on raids. It was therefore necessary to let the tribes grumble about the shame of talking peace with the farmers of the east.

But the talk was not of peace. The talk was good, and it promised loot.

A few weeks ago, Mad Bear himself had led a "war party" to the east and had returned with a hundred head of horses, four dozen long rifles, several kegs of black powder, ample shot, and one prisoner. But not even the warriors who had accompanied him knew that the cache of arms had been planted there for him by Hannegan's men, or that the prisoner was in reality a Texarkanan cavalry officer who would in the future advise Mad Bear about probable Laredan tactics during the fighting to come. All grass-eater thought was shameless, but the officer's thought could probe that of the grass-eaters to the south. It could not probe that of Hongan Os.

Mad Bear was justifiably proud of himself as a bargainer. He had pledged nothing but to refrain from making war upon Texarkana and to stop stealing cattle from the eastern borders, but only as long as Hannegan furnished him with arms and supplies. The agreement to war against Laredo was an unspoken pledge of the fire, but it fitted Mad Bear's natural inclinations and there was no need for a formal pact. Alliance with one of his enemies would permit him to deal with one foe at a time, and eventually he might regain the grazing lands that had been encroached upon and settled by the farmer-people during the previous century.

Night had fallen by the time the clans chief rode into camp, and a chill had come over the Plains. His guests from the east sat huddled in their blankets around the council fire with three of the old people while the usual ring of curious children gaped from surrounding shadows and peeped under tent skirts at the strangers. There were twelve strangers in all, but they separated themselves into two distinct parties which had traveled together but apparently cared little for each other's company. The leader of one party was obviously a madman. While Mad Bear did not object to insanity (indeed, it was prized by his shamans as the most intense of supernatural visitations), he had not known that the farmers likewise regarded madness as a virtue in a leader. But this one spent half of his time digging in the earth down by the dry riverbed and the other half jotting mysteriously in a small book. Obviously a witch, and probably not to be trusted.

Mad Bear stopped only long enough to don his ceremonial wolf robes and have a shaman paint the totem mark on his forehead before he joined the group at the fire.

"*Be afraid!*" an old warrior ceremonially wailed as the clans chief stepped into the firelight. "Be afraid, for the Mighty One walks among his children. Grovel, O clans, for his name is *Mad Bear*—a name well won, for as a youth he did overcome without weapons a bear run mad, with his naked hands did he strangle her, verily in the Northlands..."

Hongan Os ignored the eulogies and accepted a cup of blood from the old woman who served the council fire. It was fresh from a butchered steer and still warm. He drained it before turning to nod at the Easterners who watched the brief wassail with apparent disquiet..

"Aaaah!" said the clans chief.

"Aaaah!" replied the three old people, together with one grass-eater who dared to chime in. The people stared at the grass-eater for a moment in disgust.

The insane one tried to cover his companion's blunder.

"Tell me," said the madman when the chieftain was seated. "How is it that your people drink no water? Do your gods object?"

"Who knows what the gods drink?" rumbled Mad Bear. "It is said that water is for cattle and farmers, that milk is for children and blood for men. Should it be otherwise?"

The insane one was not insulted. He studied the chief for a moment with searching gray eyes, then nodded at one of his fellows. "That 'water for the cattle' explains it," he said. "The everlasting drought out here. A herdsman people would conserve what little water there is for the animals. I was wondering if they backed it by a religious taboo."

His companion grimaced and spoke in the Texarkanan tongue. "Water! Ye gods, why can't *we* drink water, Thon Taddeo? There's such a thing as too much conformity!" He spat dryly. "Blood! Blah! It sticks in the throat. Why can't we have one little sip of—"

"Not until we leave"

"But, Thon—"

"No," snapped the scholar; then, noticing that the clans people were glowering at them, he spoke to Mad Bear in tongue of the Plains again. "My comrade here was speaking of the manliness and health of your people," he said. "Perhaps your diet is responsible."

"Ha!" barked the chief, but then called almost cheerfully to the old woman: "Give that outlander a cup of red."

Thon Taddeo's companion shuddered, but made no protest.

"I have, O Chief, a request to make of your greatness," said the scholar. "Tomorrow we shall continue our journey to the west. If some of your warriors could accompany our party, we would be honored."

"Why?"

Thon Taddeo paused. "Why—as guides . . ." He stopped, and suddenly smiled. "No, I'll be quite truthful. Some of your people disapprove of our presence here. While your hospitality has been—"

Hongan Os threw back his head and roared with laughter. "They are afraid of the lesser clans," he said to the old ones. "They fear being ambushed as soon as they leave my tents. They eat grass and are afraid of a fight."

The scholar flushed slightly.

"Fear nothing, outlander!" chortled the clans chief. "Real men shall accompany you."

Thon Taddeo inclined his head in mock gratitude.

"Tell us," said Mad Bear, "what is it you go to seek in the western Dry Land? New places for planting fields? I can tell you there are none. Except near a few water holes, nothing grows that even cattle will eat."

"We seek no new land," the visitor answered. "We are not all of us farmers, you know. We are going to look for—" He paused. In the nomad speech, there was no way to explain the purpose of the journey to the Abbey of St. Leibowitz "—for the skills of an ancient sorcery."

One of the old ones, a shaman, seemed to prick up his ears. "An ancient sorcery in the west? I know of no magicians there. Unless you mean the dark-robed ones?"

"They are the ones."

"Ha! What magic do they have that's worth looking after? Their messengers can be captured so easily that it is no real sport—although they do endure torture well. What sorcery can you learn from them?"

"Well, for my part, I agree with you," said Thon Taddeo. "But it is said that writings, uh, *incantations* of great power are hoarded at one of their abodes. If it is true, then obviously the dark-robed ones don't know how to use them, but we hope to master them for ourselves."

"Will the dark-robos permit you to observe their secrets?"

Thon Taddeo smiled. "I think so. They don't dare hide them any longer. We could take them, if we

had to.”

“A brave saying,” scoffed Mad Bear. “Evidently the farmers are braver among their own kind—although they are meek enough among *real* people.”

The scholar, who had stomachached his fill of the nomad’s insults, chose to retire early.

The soldiers remained at the council fire to discuss with Hongan Os the war that was certain to come; but the war, after all, was none of Thon Taddeo’s affair. The political aspirations of his ignorant cousin were far from his own interest in a revival of learning in a dark world, except when that monarch’s patronage proved useful, as it already had upon several occasions.

## 16

T

he old hermit stood at the edge of the mesa and watched the approach of the dust speck across the desert. The hermit munched, muttered words and chuckled silently into the wind. His withered hide was burned the color of old leather by the sun, and his brushy beard was stained yellow about the chin. He wore a basket hat and a loincloth of rough homespun that resembled burlap—his only clothing except for sandals and a goat-skin water bag.

He watched the dust speck until it passed through the village of Sanly Bowitts and departed again by way of the road leading past the mesa.

“Ah!” snorted the hermit, his eyes beginning to burn.

“*His* empire shall be multiplied, and there shall be no end of his peace: *he* shall sit upon *his* kingdom.”

Suddenly he went down the arroyo like a cat with three legs, using his staff, bounding from stone to stone and sliding most of the way. The dust from his rapid descent plumed high on the wind and wandered away.

At the foot of the mesa he vanished into the mesquite and settled down to wait. Soon he heard the rider approaching at a lazy trot, and he began slinking toward the road to peer out through the brush. The pony appeared from around the bend, wrapped in a thin dust shroud. The hermit darted into the trail and threw up his arms.

“*Olla allay!*” he shouted; and as the rider halted, he darted forward to seize the reins and frown anxiously up at the man in the saddle.

His eyes blazed for a moment. “For a Child is born to us, and a Son is given us . . .” But then the anxious frown melted away into sadness. “It’s not *Him!*” he grumbled irritably at the sky.

The rider had thrown back his hood and was laughing. The hermit blinked angrily at him for a moment. Recognition dawned.

“Oh,” he grunted. “You! I thought you’d be dead by now. What are you doing out here?”

“I brought back your prodigal, Benjamin,” said Dom Paulo. He tugged at a leash and the blue-headed goat trotted up from behind the pony. It bleated and strained at the rope upon seeing the hermit. “And . . . I thought I’d pay you a visit.”

“The animal is the Poet’s,” the hermit grunted. “He won it *fairly* in a game of chance—although he *cheated* miserably. Take it back to him, and let me counsel you against meddling in worldly swindles that don’t concern you. Good day.” He turned toward the arroyo.

“Wait, Benjamin. Take your goat, or I’ll give it to a peasant. I won’t have it wandering around the abbey and bleating into the church.”

“It’s not a goat,” the hermit said crossly. “It’s the beast which your prophet saw, and it was made

for a woman to ride. I suggest you curse it and drive it into the desert. You notice, however, that it divideth the hoof and cheweth the cud.” He started away again.

The abbot’s smile faded. “Benjamin, are you really going back up that hill without even a ‘hello’ for an old friend?”

“Hello,” the Old Jew called back, and marched indignantly on. After a few steps he stopped to glance over his shoulder. “You needn’t look so hurt,” he said. “It’s been five years since you’ve troubled to come this way, ‘old friend.’ Hah!”

“So that’s it!” muttered the abbot. He dismounted and hurried after the Old Jew. “Benjamin, Benjamin, I would have come—I have not been free.”

The hermit stopped. “Well, Paulo, since you’re here . . .”

Suddenly they laughed and embraced.

“It’s good, you old grump,” said the hermit.

“I a grump?”

“Well, *I’m* getting cranky too, I guess. The last century has been a trying one for me.”

“I hear you’ve been throwing rocks at the novices who come hereabouts for their Lenten fast in the desert. Can this be true?” He eyed the hermit with mock reproof.

“Only pebbles.”

“Miserable old pretzel!”

“Now, now, Paulo. One of them once mistook me for a distant relative of mine—name of Leibowitz. He thought I had been sent to deliver him a message—or some of your other scalawags thought so. I don’t want it to happen again, so I throw pebbles at them sometimes. Hah! I’ll not be mistaken for that kinsman again, for he stopped being any kin of mine.”

The priest looked puzzled. “Mistook you for whom? Saint Leibowitz? Now, Benjamin! You’re going too far.”

Benjamin repeated it in a mocking singsong: “Mistook me for a distant relative of mine—name of Leibowitz, so I throw pebbles at them.”

Dom Paulo looked thoroughly perplexed. “Saint Leibowitz has been dead a dozen centuries. How could—” He broke off and peered warily at the old hermit. “Now, Benjamin, let’s don’t start that tale wagging again. You haven’t lived twelve cent—”

“Nonsense!” interrupted the Old Jew. “I didn’t say it happened twelve centuries ago. It was only six centuries ago. Long after your Saint was dead; that’s why it was so preposterous. Of course, your novices were more devout in those days, and more credulous. I think Francis was that one’s name. Poor fellow. I buried him later. Told them in New Rome where to dig for him. That’s how you got his carcass back.”

The abbot gaped at the old man as they walked through the mesquite toward the water hole, leading the horse and the goat. *Francis?* he wondered. Francis. That could be the Venerable Francis Gerard of Utah, perhaps?—to whom a pilgrim had once revealed the location of the old shelter in the village, so that story went—but that was before the village was there. And about six centuries ago, yes, and—now this old gaffer was claiming to have been that pilgrim? He sometimes wondered where Benjamin had picked up enough knowledge of the abbey’s history to invent such tales. From the Poet, perhaps.

“That was during my earlier career, of course,” the Old Jew went on, “and perhaps such a mistake was understandable.”

“Earlier career?”

“Wanderer.”

“How do you expect me to believe such nonsense?”

“Hmm-hnnn! The Poet believes me.”

“Undoubtedly! The Poet certainly would never believe that the Venerable Francis met a saint. *That* would be superstition. The Poet would rather believe he met *you*—six centuries ago. A purely natural explanation, eh?”

Benjamin chuckled wryly. Paulo watched him lower a leaky bark cup into the well, empty it into his

water skin, and lower it again for more. The water was cloudy and alive with creeping uncertainties as was the Old Jew's stream of memory. Or was his memory uncertain? Playing games with us all? wondered the priest. Except for his delusion of being older than Methuselah, old Benjamin Eleazar seemed sane enough, in his own wry way.

"Drink?" the hermit offered, extending the cup.

The abbot suppressed a shudder, but accepted the cup so as not to offend; he drained the murky liquid at a gulp.

"Not very particular, are you?" said Benjamin, watching him critically. "Wouldn't touch it myself." He patted the water skin. "For the animals."

The abbot gagged slightly.

"You've changed," said Benjamin, still watching him.

"You've grown pale as cheese and *wasted*."

"I've been ill."

"You *look* ill. Come up in my shack, if the climb won't tire you out."

"I'll be all right. I had a little trouble the other day, and our physician told me to rest. Fah! If an important guest weren't coming soon, I'd pay no attention. But he's coming, so I'm resting. It's quite tiresome."

Benjamin glanced back at him with a grin as they climbed the arroyo. He wagged his grizzly head. "Riding ten miles across the desert is resting?"

"For me it's rest. And, I've been wanting to see you, Benjamin."

"What will the villagers say?" the Old Jew asked mockingly.

"They'll think we've become reconciled, and that will spoil both our reputations."

"Our reputations never have amounted to much in the market place, have they?"

"True," he admitted but added cryptically: "for the present."

"Still waiting, Old Jew?"

"Certainly!" the hermit snapped.

The abbot found the climb tiring. Twice they stopped to rest. By the time they reached the tableland, he had become dizzy and was leaning on the spindly hermit for support. A dull fire burned in his chest, warning against further exertion, but there was none of the angry clenching that had come before.

A flock of the blue-headed goat-mutants scattered at the approach of a stranger and fled into straggly mesquite. Oddly, the mesa seemed more verdant than the surrounding desert, although there was no visible supply of moisture.

"This way, Paulo. To my mansion."

The Old Jew's hovel proved to be a single room, windowless and stone-walled, its rocks stacked loosely as a fence, with wide chinks through which the wind could blow. The roof was a flimsy patchwork of poles, most of them crooked, covered by a heap of brush, thatch, and goatskins. On a large flat rock, set on a short pillar beside the door, was a sign painted in Hebrew:

The size of the sign, and its apparent attempt to advertise, led Abbot Paulo to grin and ask: "What does it say, Benjamin? Does it attract much trade up here?"

"Hah—what should it say? It says: Tents Mended Here."

The priest snorted his disbelief.

"All right, doubt me. But if you don't believe what's written there, you can't be expected to believe what's written on the *other* side of the sign."

"Facing the wall?"

"Obviously facing the wall."

The pillar was set close to the threshold, so that only a few inches of clearance existed between the flat rock and the wall of the hovel. Paulo stooped low and squinted into the narrow space. It took him a while to make it out, but sure enough there was something written on the back of the rock, in smaller letters:

“Do you ever turn the rock around?”

“Turn it *around*? You think I’m *crazy*? In times like *these*?”

“What does it say back there?”

“Hmmm-hnnnn!” the hermit singsonged, refusing to answer. “But come on in, you who can’t read from the backside.”

“There’s a wall slightly in the way.”

“There always was, wasn’t there?”

The priest sighed. “All right, Benjamin, I know what it was that you were commanded to write “in the entry and on the door” of your house. But only *you* would think of turning it face down.”

“Face *inward*,” corrected *the* hermit. “As long as there are tents to be mended in Israel—but let’s not begin teasing each other until you’ve rested. I’ll get you some milk, and you tell me about this visitor that’s worrying you.

“There’s wine in my bag if you’d like some,” said the abbot, falling with relief onto a mound of skins. “But I’d rather not talk about Thon Taddeo.”

“Oh? *That* one.”

“You’ve heard of Thon Taddeo? Tell me, how is it you’ve always managed to know everything and everybody without stirring from this hill?”

“One hears, one sees,” the hermit said cryptically.

“Tell me, what do you think of him?”

“I haven’t see him. But I suppose he will be a pain. A birth-pain, perhaps, but a pain.”

“Birth-pain? You really believe we’re going to have a new Renaissance, as some say?”

“Hmmm-hnnnn.”

“Stop smirking mysteriously, Old Jew, and tell me your opinion. You’re bound to have one. You always do. Why is your confidence so hard to get? Aren’t we friends?”

“On some grounds, on some grounds. But we have our differences, you and I.”

“What have our differences got to do with Thon Taddeo and a Renaissance we’d both like to see? Thon Taddeo is a secular scholar, and rather remote from our differences.”

Benjamin shrugged eloquently. “Difference, secular scholars,” he echoed, tossing out the words like discarded apple pits. “I have been called a ‘secular scholar’ at various times by certain people, and sometimes I’ve been staked, stoned, and burned for it.”

“Why, you never—” The priest stopped, frowning sharply. That madness again. Benjamin was peering at him suspiciously, and his smile had gone cold. Now, thought the abbot, he’s looking at me as if I were one of Them—whatever formless “Them” it was that drove him here to solitude. Staked, stoned, and burned? Or did his “I” mean “We” as in “I, my people”?

“Benjamin—I am Paulo. Torquemada is dead. I was born seventy-odd years ago, and pretty soon I’ll die. I have loved you, old man, and when you look at me, I wish you would see Paulo of Pecos and no other.”

Benjamin wavered for a moment. His eyes became moist.

“I sometimes—forget—”

“And sometimes you forget that Benjamin is only Benjamin and not all of Israel.”

“Never!” snapped the hermit, eyes blazing again. “For thirty-two centuries, I—” He stopped and closed his mouth tightly.

“Why?” the abbot whispered almost in awe. “Why do you take the burden of a people and its past upon yourself alone?”

The hermit’s eyes flared a brief warning, but he swallowed a throaty sound and lowered his face into his hands. “You fish in dark waters.”

“Forgive me.”

“The burden—it was pressed upon me by others.” He looked up slowly. “Should I refuse to take it?”

The priest sucked in his breath. For a time there was no sound in the shanty but the sound of the wind. There was a touch of divinity in this madness! Dom Paulo thought. The Jewish community was thinly scattered in these times. Benjamin had perhaps outlived his children, or somehow become an outcast. Such an old Israelite might wander for years without encountering others of his people. Perhaps in his loneliness he had acquired the silent conviction that he was the last, the one, the only. And, being the last, he ceased to be Benjamin, becoming Israel. And upon his heart had settled the history of five thousand years, no longer remote, but become as the history of his own lifetime. His "I" was the converse of the imperial "We."

But I, too, am a member of a oneness, thought Dom Paulo, a part of a congregation and a continuity. Mine, too, have been despised by the world. Yet for me the distinction between self and nation is clear. For you, old friend, it has somehow become obscure. A burden pressed upon you by others? And you accepted it? What must it weigh? What would it weigh for me? He set his shoulders under it and tried to heave, testing the bulk of it: I am a Christian monk and priest, and I am, therefore, accountable before God for the actions and deeds of every monk and priest who has breathed and walked the earth since Christ, as well as for the acts of my own.

He shuddered and began shaking his head.

No, no. It crushed the spine, this burden. It was too much for any man to bear, save Christ alone. To be cursed for a faith was burden enough. To bear the curses was possible, but then—to accept the illogic behind the curses, the illogic which called one to task not only for himself but also for every member of his race or faith, for their actions as well as one's own? To accept that too?—as Benjamin was trying to do?

No, no.

And yet, Dom Paulo's own Faith told him that the burden was there, had been there since Adam's time—and the burden imposed by a fiend crying in mockery, "*Man!*" at man.

"*Man!*"—calling each to account for the deeds of all since the beginning; a burden impressed upon every generation before the opening of the womb, the burden of the guilt of original sin. Let the fool dispute it. The same fool with great delight accepted the *other* inheritance—the inheritance of ancestral glory, virtue, triumph, and dignity which rendered him "courageous and noble by reason of birthright," without protesting that he personally had done nothing to earn that inheritance beyond being born of the race of Man. The protest was reserved for the inherited burden which rendered him "guilty and outcast by reason of birthright," and against that verdict he strained to close his ears. The burden, indeed, was hard. His own Faith told him, too, that the burden had been lifted from him by the One whose image hung from a cross above the altars, although the burden's imprint still was there. The imprint was an easier yoke, compared to the full weight of the original curse. He could not bring himself to say it to the old man, since the old man already knew he believed it. Benjamin was looking for Another. And the last old Hebrew sat alone on a mountain and did penance for Israel and waited for a Messiah, and waited, and waited, and—

"God bless you for a brave fool. Even a wise fool."

"Hmmm-hnnn! Wise fool!" mimicked the hermit. "But you always did specialize in paradox and mystery, didn't you, Paulo? If a thing can't be in contradiction to itself, then it doesn't even interest you, does it? You have to find Threeness in Unity, life in death, wisdom in folly. Otherwise it might make too much common sense."

"To sense the responsibility is wisdom, Benjamin. To think you can carry it alone is folly."

"Not madness?"

"A little, perhaps. But a brave madness."

"Then I'll tell you a small secret. I've known all along that I can't carry it, ever since He called me forth again. But are we talking about the same thing?"

The priest shrugged. "You would call it the burden of being Chosen. I would call it the burden of Original Guilt. In either case, the implied responsibility is the same, although we might tell different versions of it, and disagree violently in words about what we mean *in* words by something that isn't really meant in words at all—since it's something that's meant in the dead silence of a heart."

Benjamin chuckled. "Well, I'm glad to hear you admit it, finally, even if all you say is that you've never really said anything."

"Stop cackling, you reprobate."

"But you've always used words so wordily in crafty defense of your Trinity, although He never needed such defense before you got Him from me as a Unity. Eh?"

The priest reddened but said nothing.

"*There!*" Benjamin yelled, bouncing up and down. "I made you want to argue for once. Ha! But never mind. I use quite a few words myself, but I'm never quite sure He and I mean the same thing either. I suppose you can't be blamed; it must be more confusing with Three than with One."

"Blasphemous old cactus! I really wanted your opinion of Thon Taddeo and whatever's brewing."

"Why seek the opinion of a poor old anchorite?"

"Because, Benjamin Eleazar bar Joshua, if all these years of waiting for One-Who-Isn't-Coming haven't taught you wisdom, at least they've made you shrewd."

The Old Jew closed his eyes, lifted his face ceilingward, and smiled cunningly. "Insult me," he said in mocking tones, "rail at me, bait me, persecute me—but do you know what I'll say?"

"You'll say, 'Hmmm-*hnnn!*' "

"No! I'll say He's already here. I caught a glimpse of Him once."

"What? Who are you talking about? Thon Taddeo?"

"*No!* Moreover, I do not care to prophesy, unless you tell me what's really bothering you, Paulo."

"Well, it all started with Brother Kornhoer's lamp."

"Lamp? Oh, yes, the Poet mentioned it. *He* prophesied it wouldn't work."

"The Poet was wrong, as usual. So they tell me. I didn't watch the trial."

"It worked then? Splendid. And that started what?"

"Me wondering. How close are we to the brink of something? Or how close to a shore? Electrical essences in the basement. Do you realize how much things have changed in the past two centuries?"

Soon, the priest spoke at length of his fears, while the hermit, mender of tents, listened patiently until the sun had begun to leak through the chinks in the west wall to paint glowing shafts in the dusty air.

"Since the death of the last civilization, the Memorabilia has been our special province, Benjamin. And we've kept it. But now? I sense the predicament of the shoemaker who tries to sell shoes in a village of shoemakers."

The hermit smiled. "It could be done, if he manufactures a special and superior type of shoe."

"I'm afraid the secular scholars are already beginning to lay claim to such a method."

"Then go out of the shoemaking business, before you are ruined."

"A possibility," the abbot admitted. "It's unpleasant to think of it however. For twelve centuries, we've been one little island in a very dark ocean. Keeping the Memorabilia has been a thankless task, but a hallowed one, we think. It's only our *worldly* job, but we've always been bookleggers and memorizers, and it's hard to think that the job's soon to be finished—soon to become unnecessary. I can't believe that somehow."

"So you try to best the other 'shoemakers' by building strange contraptions in your basement?"

"I must admit, it looks that way—"

"What will you do next to keep ahead of the seculars? Build a flying machine? Or revive the *Machina analytica*? Or perhaps step over their heads and resort to metaphysics?"

"You shame me, Old Jew. You know we are monks of Christ first, and such things are for others to do."

"I wasn't shaming you. I see nothing inconsistent in monks of Christ building a flying machine, although it would be more like them to build a praying machine."

"Wretch! I do my Order a disservice by sharing a confidence with you!"

Benjamin smirked. "I have no sympathy for you. The books you stored away may be hoary with age, but they were written by children of the world, and they'll be taken from you by children of the world, and you had no business meddling with them in the first place."

“Ah, *now* you care to prophesy!”

“Not at all. ‘Soon the sun will set’—is that prophecy? No, it’s merely an assertion of faith in the consistency of events. The children of the world are consistent too—so I say they will soak up everything you can offer, take your job away from you, and then denounce you as a decrepit wreck. Finally, they’ll ignore you entirely. It’s your own fault. The Book I gave you should have been enough for you. Now you’ll just have to take the consequences for your meddling.”

He had spoken flippantly, but his prediction seemed uncomfortably close to Dom Paulo’s fears. The priest’s countenance saddened.

“Pay me no mind,” said the hermit. “I’ll not venture to soothsay before I’ve seen this contraption of yours, or taken a look at this Thon Taddeo—who begins to interest me, by the way. Wait until I’ve examined the entrails of the new era in better detail, if you expect advice from me.”

“Well, you won’t see the lamp because you never come to the abbey.”

“It’s your abominable cooking I object to.”

“And you won’t see Thon Taddeo because he comes from the other direction. If you wait to examine the entrails of an era until after it’s born, it’s too late to prophesy its birth.”

“Nonsense. Probing the womb of the future is bad for the child. I shall wait—and then I shall prophesy that it was born and that it *wasn’t* what I’m waiting for.”

“What a cheerful outlook! So what *are* you looking for?”

“Someone who shouted at me once.”

“Shouted?”

“‘Come forth!’ “

“What rot!”

“Hmmm-*hnnn!* To tell you the truth, I don’t much expect Him to come, but I was told to wait, and—” he shrugged “—I wait.” After a moment his twinkling eyes narrowed to slits, and he leaned forward with sudden eagerness. “Paulo, bring this Thon Taddeo past the foot of the mesa.”

The abbot recoiled in mock horror. “Accoster of pilgrims! Molester of novices! I shall send you the Poet-sirrah!—and may he descend upon you and rest forever. Bring the thon past your lair! What an outrage.”

Benjamin shrugged again. “Very well. Forget that I asked it. But let’s hope this thon will be on our side, and not with the others this time.”

“Others, Benjamin?”

“Manasses, Cyrus, Nebuchadnezzar, Pharaoh, Caesar, Hannegan the Second—need I go on? Samuel warned us against them, then gave us one. When they have a few wise men shackled nearby to counsel them, they become more dangerous than ever. That’s all the advice I’ll give you.”

“Well, Benjamin, I’ve had enough of you now to last me another five years, so—”

“Insult me, rail at me, bait me—”

“Stop it. I’m leaving, old man. It’s late.”

“So? And how is the ecclesiastical belly fixed for the ride?”

“My stomach—?” Dom Paulo paused to explore, found himself more comfortable than at any time in recent weeks.

“It’s a mess, of course,” he complained. “How else would it be after listening to you?”

“True-*El Shaddai* is merciful, but He is also just.”

“Godspeed, old man. After Brother Kornhoer reinvents the flying machine, I’ll send up some novices to drop rocks on you.”

They embraced affectionately. The Old Jew led him to the edge of the mesa. Benjamin stood wrapped in a prayer shawl, its fine fabric contrasting oddly with the rough burlap of his loincloth, while the abbot climbed down to the trail and rode back toward the abbey. Dom Paulo could still see him standing there at sundown, his spindly figure silhouetted against the twilight sky as he bowed and munched a prayer over the desert.

“*Memento, Domine Gominum famulorum tuorum,*” the abbot whispered in response, adding: “And may he finally win the Poet’s eyeball at mumbly-peg. Amen.”

I

can tell you definitely: There *will* be war,” said the messenger from New Rome. “All Laredo’s forces are committed to the Plains. Mad Bear has broken camp. There’s a running cavalry battle, nomad style, all over the Plains. But the State of Chihuahua is threatening Laredo from the south. So Hannegan is getting ready to send Texarkana forces to the Rio Grande—to help ‘defend’ the frontier. With the Laredans’ full approval, of course.”

“King Goraldi is a doddering fool!” said Dom Paulo. “Wasn’t he warned against Hannegan’s treachery?”

The messenger smiled. “The Vatican diplomatic service always respects state secrets if we happen to learn them. Lest we be accused of espionage, we are always careful about—”

“Was he warned?” the abbot demanded again.

“Of course. Goraldi said the papal legate was lying to him; he accused the Church of fomenting dissension among the allies of the Holy Scourge, in an attempt to promote the Pope’s temporal power. The idiot even told Hannegan about the legate’s warning.”

Dom Paulo winced and whistled. “So Hannegan did what?”

The messenger hesitated. “I suppose I can tell you: Monsignor Apollo is under arrest. Hannegan ordered his diplomatic files seized. There’s talk in New Rome of placing the whole realm of Texarkana under interdict. Of course, Hannegan has already incurred *ipso facto* excommunication, but that doesn’t seem to bother many Texarkanans. As you surely know, the population is about eighty per cent cultist anyhow, and the Catholicism of the ruling class has always been a thin veneer.”

“So now Marcus,” the abbot murmured sadly. “And what of Thon Taddeo?”

“I don’t quite see how he expects to get across the Plains without picking up a few musket-ball holes just now. It seems clear why he hadn’t wanted to make the trip. But I know nothing about his progress, Father Abbot.”

Dom Paulo’s frown was pained. “If our refusal to send the material to his university leads to his being killed—”

“Don’t trouble your conscience about that, Father Abbot. Hannegan looks out for his own. I don’t know how, but I’m sure the Thon will get here.”

“The world could ill afford to lose him, I hear. Well—But tell me, why were you sent to report Hannegan’s plans to us? We’re in the empire of Denver, and I can’t see how this region is affected.”

“Ah, but I’ve told you only the beginning. Hannegan hopes to unite the continent eventually. After Laredo’s firmly leashed, he will have broken the encirclement that’s kept him in check. Then the next move will be against Denver.”

“But wouldn’t that involve supply lines across nomad country? It seems impossible.”

“It’s extremely difficult, and that’s what makes the next move certain. The Plains form a natural geographical barrier. If they were depopulated, Hannegan might regard his western frontier as secure as it stands. But the nomads have made it necessary for all states adjoining the Plains to tie up permanent military forces around the nomad territory for containment. The only way to subdue the Plains is to control both fertile strips, to the east and to the west.”

“But even so,” the abbot wondered, “the nomads—”

“Hannegan’s plan for them is devilish. Mad Bear’s warriors can easily cope with Laredo’s cavalry, but what they can’t cope with is a cattle plague. The Plains tribes don’t know it yet, but when Laredo set

out to punish the nomads for border raiding, the Laredans drove several hundred head of diseased cattle ahead to mingle with the nomads' herds. It was Hannegan's idea. The result will be famine, and then it will be easy to set tribe against tribe. We don't, of course, know all the details, but the goal is a nomad legion under a puppet chieftain, armed by Texarkana, loyal to Hannegan, ready to sweep west to the mountains. If it comes to pass, this region will get the first breakers."

"But *why*? Surely Hannegan doesn't expect the barbarians to be dependable troops, or capable of holding an empire once they finish mutilating it!"

"No, m'Lord. But the nomad tribes will be disrupted, Denver will be shattered. Then Hannegan can pick up the pieces,"

"To do what with them? It couldn't be a very rich empire."

"No, but secure on all flanks. He might then be in a better position to strike east or northeast. Of course, before it comes to that, his plans may collapse. But whether they collapse or not, this region may well be in danger of being overrun in the not-too-distant future. Steps should be taken to secure the abbey within the next few months. I have instructions to discuss with you the problem of keeping the Memorabilia safe."

Dom Paulo felt the blackness beginning to gather. After twelve centuries, a little hope had come into the world—and then came an illiterate prince to ride roughshod over it with a barbarian horde and . . .

His fist exploded onto the desktop. "We kept them outside our walls for a thousand years," he growled, "and we can keep them out for another thousand. This abbey was under siege three times during the Bayring influx, and once again during the Vissarionist schism. We'll keep the books safe. We've kept them that way for quite some time."

"But there is an added hazard these days, m'Lord."

"What may that be?"

"A bountiful supply of gunpowder and grapeshot."

The Feast of the Assumption had come and gone, but still there was no word of the party from Texarkana. Private votive masses for pilgrims and travelers were beginning to be offered by the abbey's priests. Dom Paulo had ceased taking even a light breakfast, and it was whispered that he was doing penance for having invited the scholar at all, in view of the present danger on the Plains.

The watchtowers remained constantly manned. The abbot himself frequently climbed the wall to peer eastward.

Shortly before Vespers on the Feast of Saint Bernard, a novice reported seeing a thin and distant dust trail, but darkness was coming on, and no one else had been able to make it out. Soon, *Compline* and the *Salve Regina* were sung, but still no one appeared at the gates.

"It might have been their advance scout," suggested Prior Gault.

"It might have been Brother Watchman's imagination," countered Dom Paulo.

"But if they've camped just ten miles or so down the way—"

"We'd see their fire from the tower. It's a clear night."

"Still, Domne, after the moon rises, we could send a rider—"

"Oh, no. That's a good way to get shot by mistake. If it's really them, they've probably kept their fingers on their triggers for the whole trip, especially at night. It can wait until dawn."

It was late the following morning when the expected party of horsemen appeared out of the east. From the top of the wall Dom Paulo blinked and squinted across the hot and dry terrain, trying to focus myopic eyes on the distance. Dust from the horses' hooves was drifting away to the north. The party had stopped for a parley.

"I seem to be seeing twenty or thirty of them," the abbot complained, rubbing his eyes in annoyance. "Are there really so many?"

"Approximately," said Gault.

"How will we ever take care of them all?"

"I don't think we'll be taking care of the ones with the wolfskins, m'Lord Abbot," the younger priest said stiffly.

“Wolfskins?”

“Nomads, m’Lord.”

“Man the walls! Close the gates! Let down the shield! Break out the—”

“Wait, they’re not all nomads, Domne.”

“Oh?” Dom Paulo turned to peer again.

The parley was being ended. Men waved; the group split in two. The larger party galloped back toward the east. The remaining horsemen watched briefly, then reined around and trotted toward the abbey.

“Six or seven of them—some in uniform,” the abbot murmured as they drew closer.

“The thon and his party, I’m sure.”

“But with nomads? It’s a good thing I didn’t let you send a rider out last night. What were they doing with nomads?”

“It appeared that they came as guides,” Father Gault said darkly.

“How neighborly of the lion to lie down with the lamb!”

The riders approached the gates. Dom Paulo swallowed dryness. “Well, we’d better go welcome them, Father,” he sighed.

By the time the priests had descended from the wall, the travelers had reined up just outside the courtyard. A horseman detached himself from the others, trotted forward, dismounted, and presented his papers.

“Dom Paulo of Pecos, Abbas?”

The abbot bowed. “*Tibi adsum*. Welcome in the name of Saint Leibowitz, Thon Taddeo. Welcome in the name of his abbey, in the name of forty generations who’ve waited for you to come. Be at home. We serve you.” The words were heart-felt; the words had been saved for many years while awaiting this moment. Hearing a muttered monosyllable in reply, Dom Paulo looked up slowly.

For a moment his glance locked with the scholar’s. He felt the warmth quickly fade. Those icy eyes-cold and searching gray. Skeptical, hungry, and proud. They studied him as one might study a lifeless curio.

That this moment might be as a bridge across a gulf of twelve centuries, Paulo had fervently prayed—prayed too that through him the last martyred scientist of that earlier age would clasp hands with tomorrow. There was indeed a gulf; that much was plain. The abbot felt suddenly that he belonged not to this age at all, that he had been left stranded somewhere on a sandbar in Time’s river, and that there wasn’t really ever a bridge at all.

“Come,” he said gently. “Brother Visclair will attend to your horses.”

When he had seen the guests installed in their lodgings and had retired to the privacy of his study, the smile on the face of the wooden saint reminded him unaccountably of the smirk of old Benjamin Eleazar, saying, “The children of this world are consistent too.”

## 18

““

N

ow even as in the time of Job,’ ” Brother Reader began from the refectory lectern:

“When the sons of God came to stand before the Lord, Satan also was present among them.

“And the Lord said to him: ‘Whence comest thou, Satan?’

“And Satan answering said, as of old: ‘I have gone round about the earth, and have walked through it.’

“And the Lord said to him: ‘Hast thou considered that simple and upright prince, my servant *Name*, hating evil and loving peace?’”

“And Satan answering said: ‘Doth *Name* fear God in vain?

For hast Thou not blessed his land with great wealth and made him mighty among nations? But stretch forth

Thy hand a little and decrease what he hath, and let his enemy be strengthened; then see if he blasphemeth Thee not to Thy face.'

"And the Lord said to Satan: "Behold what he hath, and lessen it. See thou to it.'

"And Satan went forth from the presence of God and returned into the world.

"Now the Prince *Name* was not as Holy Job, for when his land was afflicted with trouble and his people less rich than before, when he saw his enemy become mightier, he grew fearful and ceased to trust in God thinking unto himself: I must strike before the enemy overwhelmeth me without taking his sword in hand.

" 'And so it was in those days,' " said Brother Reader:

"that the princes of Earth had hardened their hearts against the Law of the Lord, and of their pride there was no end.

And each of them thought within himself that it was better for all to be destroyed than for the will of other princes to prevail over his. For the mighty of the Earth did contend among themselves for supreme power over all; by stealth, treachery, and deceit they did seek to rule, and of war they feared greatly and did tremble; for the Lord God had suffered the wise men of those times to learn the means by which the world itself might be destroyed, and into their hands was given the sword of the Archangel wherewith Lucifer had been cast down, that men and princes might fear God and humble themselves before the Most High. But they were not humbled.

"And Satan spoke unto a certain prince, saying: 'Fear not to use the sword, for the wise men have deceived you in saying that the world would be destroyed thereby. Listen not to the counsel of weaklings, for they fear you exceedingly, and they serve your enemies by staying your hand against them. Strike, and know that you shall be king over all.'

"And the prince did heed the word of Satan, and he summoned all of the wise men of that realm and called upon them to give him counsel as to the ways in which the enemy might be destroyed without bringing down the wrath upon his own kingdom. But most of the wise men said, 'Lord, it is not possible, for your enemies also have the sword which we have given you, and the fieriness of it is as the flame of Hell and as the fury of the sun-star from whence it was kindled.'

" 'Then thou shalt make me yet another which is yet seven times hotter than Hell itself,' commanded the prince, whose arrogance had come to surpass that of Pharaoh.

"And many of them said: 'Nay, Lord, ask not this thing of us; for even the smoke of such a fire, if we were to kindle it for thee, would cause many to perish.'

"Now the prince was angry because of their answer, and he suspected them of betraying him, and he sent his spies among them to tempt them and to challenge them; whereupon the wise men became afraid. Some among them changed their answers, that his wrath be not invoked against them. Three times he asked them, and three times they answered: 'Nay, Lord, even your own people will perish if you do this thing.' But one of the magi was like unto Judas Iscariot, and his testimony was crafty, and having betrayed his brothers, he lied to all the people, advising them not to fear the demon Fallout. The prince heeded this false wise man, whose name was Backeneth, and he caused spies to accuse many of the magi before the people. Being afraid, the less wise among the magi counseled the prince according to his pleasure, saying: 'The weapons may be used, only do not exceed such-and-such a limit, or all will surely perish.'

"And the prince smote the cities of his enemies with the new fire, and for three days and nights did his great catapults and metal birds rain wrath upon them. Over each city a sun appeared and was brighter than the sun of heaven, and immediately that city withered and melted as wax under the torch, and the people thereof did stop in the streets and their skins smoked and they became as fagots thrown on the coals. And when the fury of the sun had faded, the city was in flames; and a great thunder came out of the sky, like the great battering-ram *PIK-A-DON*, to crush it utterly. Poisonous fumes fell over all the land, and the land was aglow by night with the afterfire and the curse of the afterfire which caused a scurf on the skin and made the hair to fall and the blood to die in the veins.

"And a great stink went up from Earth even unto Heaven. Like unto Sodom and Gomorrah was the Earth and the ruins thereof, ever in the land of that certain prince, for his enemies did not withhold their vengeance, sending fire in turn to engulf his cities as their own. The stink of the carnage was exceedingly offensive to the Lord, Who spoke unto the prince, *Name*, saying: 'WHAT BURNT OFFERING IS THIS THAT YOU HAVE PREPARED BEFORE ME? WHAT IS THIS SAVOR THAT ARISES FROM THE PLACE OF HOLOCAUST? HAVE YOU MADE ME A HOLOCAUST OF SHEEP OR GOATS, OR OFFERED A CALF UNTO GOD?'

"But the prince answered him not, and God said: 'YOU HAVE MADE ME A HOLOCAUST OF MY SONS.'

"And the Lord slew him together with Blackeneth, the betrayer, and there was pestilence in the Earth, and madness was upon mankind, who stoned the wise together with the powerful, those who remained.

"But there was in that time a man whose name was Leibowitz, who, in his youth like the holy Augustine, had loved the wisdom of the world more than the wisdom of God. But now seeing that great knowledge, while good, had not saved the world, he turned in penance to the Lord, crying:"

The abbot rapped sharply on the table and the monk who had been reading the ancient account was immediately silent.

"And that is your only account of it?" asked Thon Taddeo, smiling tightly at the abbot across the

study.

“Oh, there are several versions. They differ in minor details. No one is certain which nation launched the first attack—not that it matters any more. The text Brother Reader was just reading was written a few decades after the death of Saint Leibowitz—probably one of the first accounts—after it became safe to write again. The author was a young monk who had not lived through the destruction himself; he got it second hand from Saint Leibowitz’ followers, the original memorizers and bookleggers, and he had a liking for scriptural mimicry. I doubt if a single *completely* accurate account of the Flame Deluge exists anywhere. Once it started, it was apparently too immense for any one person to see the whole picture.”

“In what land was this prince called Name, and this man Blackeneth?”

Abbot Paulo shook his head. “Not even the author of that account was certain. We’ve pieced enough together since that was written to know that even some of the *lesser* rulers of that time had got their hands on such weapons before the holocaust came. The situation he described prevailed in more than one nation. Name and Blackeneth were probably Legion.”

“Of course I’ve heard similar legends. It’s obvious that something rather hideous came to pass,” the *thon* stated; and then abruptly: “But when may I begin to examine—what do you call it?”

“The Memorabilia.”

“Of course.” He sighed and smiled absently at the image of the saint in the corner. “Would tomorrow be too soon?”

“You may begin at once, if you like,” said the abbot. “Feel free to come and go as you please.”

The vaults were dimly filled with candlelight, and only a few dark-robed scholar-monks moved about in the stalls. Brother Armbruster pored gloomily over his records in a puddle of lamplight in his cubbyhole at the foot of the stone stairway, and one lamp burned in the Moral Theology alcove where a robed figure huddled over ancient manuscript. It was after Prime, when most of the community labored at their duties about the abbey, in kitchen, classroom, garden, stable, and office, leaving the library nearly empty until late afternoon and time for *lectio divina*. This morning, however, the vaults were comparatively crowded.

Three monks stood lounging in the shadows behind the new machine. They kept their hands tucked in their sleeves and watched a fourth monk who stood at the foot of the stairs. The fourth monk gazed patiently up toward a fifth monk who stood on the landing and watched the entrance to the stairway.

Brother Kornhoer had brooded over his apparatus like an anxious parent, but when he could no longer find wires to wiggle and adjustments to make and remake, he retired to the Natural Theology alcove to read and wait. To speak a summary of last-minute instructions to his crew would be permissible, but he chose to maintain the hush, and if any thought of the coming moment as a personal climax crossed his mind as he waited, the monastic inventor’s expression gave no hint of it. Since the abbot himself had not bothered to watch a demonstration of the machine, Brother Kornhoer betrayed no symptoms of expecting applause from any quarter, and he had even overcome his tendency to glance reproachfully at Dom Paulo.

A low hiss from the stairway alerted the basement again, although there had been several earlier false alarms. Clearly no one had informed the illustrious *thon* that a marvelous invention awaited his inspection in the basement. Clearly, if it had been mentioned to him at all, its importance had been minimized. Obviously, Father Abbot was seeing to it that they all cooled their heels. These were the wordless significances exchanged by glances among them as they waited.

This time the warning hiss had not been in vain. The monk who watched from the head of the stairs turned solemnly and bowed toward the fifth monk on the landing below.

“*In principio Deus,*” he said softly.

The fifth monk turned and bowed toward the fourth monk at the foot of the stairs. “*Caelum et terram creavit,*” he murmured in turn.

The fourth monk turned toward the three who lounged behind the machine. “*Vacuuus autem erat mundus,*” he announced.

“*Cure tenebris in superficie profundorum,*” chorused the group.

"*Ortus est Dei Spiritus supra aquas,*" called Brother Forbore, returning his book to its shelf with a rattling of chains.

"*Gratias Creatori Spiritui,*" responded his entire team.

"*Dixitque Deus: 'FIAT LUX,'*" said the inventor in a tone of command.

The vigil on the stairs descended to take their posts. Four monks manned the treadmill. The fifth monk hovered over the dynamo. The sixth monk climbed the shelf-ladder and took his seat on the top rung, his head bumping the top of the archway. He pulled a mask of smoke-blackened oily parchment over his face to protect his eyes, then felt for the lamp fixture and its thumbscrew, while Brother Kornhoer watched him nervously from below.

"*Et lux ergo facta est,*" he said when he had found the screw.

"*Lucem esse bonam Deus vidit,*" the inventor called to the fifth monk.

The fifth monk bent over the dynamo with a candle for one last look at the brush contacts. "*Et secrevit lucem a tenebris,*" he said at last, continuing the lesson.

"*Lucem appellavit 'diem,'*" chorused the treadmill team, "*et tenebras 'noctes,'*" "Whereupon they set their shoulders to the turnstile beams.

Axles creaked and groaned. The wagon-wheel dynamo began to spin, its low whirl becoming a moan and then a whine as the monks strained and grunted at the drive-mill. The guardian of the dynamo watched anxiously as the spokes blurred with speed and became a film. "*Vespere occaso,*" he began, then paused to lick two fingers and touch them to the contacts. A spark snapped.

"*Lucifer!*" he yelped, leaping back, then finished lamely: "*ortus est et primo die.*"

"CONTACT!" said Brother Kornhoer, as Dom Paulo, Thon Taddeo and his clerk descended the stairs.

The monk on the ladder struck the arc. A sharp spffft!—and blinding light flooded the vaults with a brilliance that had not been seen in twelve centuries.

The group stopped on the stairs. Thon Taddeo gasped an oath in his native tongue. He retreated a step. The abbot, who had neither witnessed the testing of the device nor credited extravagant claims, blanched and stopped speech in mid-sentence. The clerk froze momentarily in panic and suddenly fled, screaming "Fire!"

The abbot made the sign of the cross. "I had not known!" he whispered.

The scholar, having survived the first shock of the flare, probed the basement with his gaze, noticing the drive-mill, the monks who strained at its beams. His eyes traveled along the wrapped wires, noticed the monk on the ladder, measured the meaning of the wagon-wheel dynamo and the monk who stood waiting, with downcast eyes, at the foot of the stairs.

"Incredible!" he breathed.

The monk at the foot of the stairs bowed in acknowledgment and depreciation. The blue-white glare cast knife-edge shadows in the room, and the candle flames became blurred wisps in the tide of light.

"Bright as a thousand torches," breathed the scholar. "It must be an ancient-but no! Unthinkable!"

He moved on down the stairs like a man in a trance. He stopped beside Brother Kornhoer and gazed at him curiously for a moment, then stepped onto the basement floor. Touching nothing, asking nothing, peering at everything, he wandered about the machinery, inspecting the dynamo, the wiring, the lamp itself.

"It just doesn't seem possible, but—"

The abbot recovered his senses and descended the stairs.

"You're dispensed from silence!" he whispered at Brother Kornhoer. "Talk to him. I'm—a little dazed."

The monk brightened. "You like it, m'Lord Abbot?"

"Ghastly," wheezed Dom Paulo.

The inventor's countenance sagged.

"It's a shocking way to treat a guest! It frightened the thon's assistant out of his wits. I'm mortified!"

"Well, it *is* rather bright."

"Hellish! Go talk to him while I think of a way to apologize."

But the scholar had apparently made a judgment on the basis of his observations, for he stalked toward them swiftly. His face seemed strained, and his manner crisp.

"A lamp of electricity," he said. "How have you managed to keep it hidden for all these centuries! After all these years of trying to arrive at a theory of—" He choked slightly, and seemed to be fighting for self-control, as if he had been the victim of a monstrous practical joke. "*Why* have you hidden it? Is there some religious significance—And what—" Complete confusion stopped him. He shook his head and looking around as if for an escape.

"You misunderstand," the abbot said weakly, catching at Bother Kornhoer's arm. "For the love of God, Brother, *explain!*"

But there was no balm to soothe an affront to professional pride—then or in any other age.

## 19

# A

fter the unfortunate incident in the basement, the abbot sought by every conceivable means to make amends for that unhappy moment. Thon Taddeo gave no outward sign of rancor, and even offered his hosts an apology for his spontaneous judgment of the incident, after the inventor of the device had given the scholar a detailed account of its recent design and manufacture. But the apology succeeded only in convincing the abbot further that the blunder had been serious. It put the thon in the position of a mountaineer who has scaled an "unconquered" height only to find a rival's initials carved in the summit rock—and the rival hadn't told him in advance. It must have been shattering for him, Dom Paulo thought, because of the way it was handled.

If the thon had not insisted (with a firmness perhaps born of embarrassment) that its light was of a superior quality, sufficiently bright even for close scrutiny of brittle and age-worn documents which tended to be indecipherable by candlelight, Dom Paulo would have removed the lamp from the basement immediately. But Thon Taddeo had insisted that he liked it—only to discover, then, that it was necessary to keep at least four novices or postulants continuously employed at cranking the dynamo and adjusting the arc-gap; thereupon, he begged that the lamp be removed—but then it was Paulo's turn to become insistent that it remain in place.

So it was that the scholar began his researches at the abbey, continuously aware of the three novices who toiled at the drive-mill and the fourth novice who invited glare-blindness atop the ladder to keep the lamp burning and adjusted—a situation which caused the Poet to versify mercilessly concerning the demon Embarrassment and the outrages he perpetrated in the name of penitence or appeasement.

For several days the thon and his assistant studied the library itself, the files, the monastery's records apart from the Memorabilia—as if by determining the validity of the oyster, they might establish the possibility of the pearl. Brother Kornhoer discovered the thon's assistant on his knees in the entrance of the refectory, and for a moment he entertained the impression that the fellow was performing some special devotion before the image of Mary above the door, but a rattle of tools put an end to the illusion. The assistant laid a carpenter's level across the entranceway and measured the concave depression worn in the floor stones by centuries of monastic sandals.

"We're looking for ways of determining dates," he told Kornhoer when questioned. "This seemed like a good place to establish a standard for rate of wear, since the traffic's easy to estimate. Three meals per man per day since the stones were laid."

Kornhoer could not help being impressed by their thoroughness; the activity mystified him. "The abbey's architectural records are complete," he said. "They can tell you exactly when each building and wing was added. Why not save your time?"

The man glanced up innocently. "My master has a saying: 'Nayol is without speech, and therefore never lies.' "

"Nayol?"

"One of the Nature gods of the Red River people. He means it figuratively, of course. Objective evidence is the ultimate authority. Records may lie, but Nature is incapable of it." He noticed the monk's expression and added hastily:

"No canard is implied. It is simply a doctrine of the thon's that everything must be cross-referenced to the objective."

"A fascinating notion," murmured Kornhoer, and bent down to examine the man's sketch of a cross-section of the floor's concavity. "Why, it's shaped like what Brother Majek calls a normal distribution curve. How strange."

"Not strange. The probability of a footstep deviating from the center-line would tend to follow the normal error function."

Kornhoer was enthralled. "I'll call Brother Majek," he said.

The abbot's interest in his guests' inspection of the premises was less esoteric. "Why," he demanded of Gault, "are they making detailed drawings of our fortifications?"

The prior looked surprised. "I hadn't heard of it. You mean Thon Taddeo—"

"No. The officers that came with him. They're going about it quite systematically."

"How did you find out?"

"The Poet told me."

"The Poet! Hah!"

"Unfortunately, he was telling the truth this time. He pick-pocketed one of their sketches."

"You have it?"

"No, I made him return it. But I don't like it. It's ominous."

"I suppose the Poet asked a price for the information?"

"Oddly enough, he didn't. He took an instant dislike to the thon. He's gone around muttering to himself ever since they came."

"The Poet has always muttered."

"But not in a serious vein."

"Why do you suppose they're making the drawings?"

Paulo made a grim month. "Unless we find out otherwise, we'll assume their interest is recondite and professional. As a walled citadel, the abbey has been a success. It's never been taken by siege or assault, and perhaps their professional admiration is aroused."

Father Gault gazed speculatively across the desert toward the east. "Come to think of it; if an army meant to strike west across the plains, they'd probably have to establish a garrison somewhere in this region before marching on Denver." He thought for a few moments and began to look alarmed. "And here they'd have a fortress ready-made!"

"I'm afraid that's occurred to them."

"You think they were sent as spies?"

"No, no! I doubt if Hannegan himself has ever heard of us. But they are here, and they are officers, and they can't help looking around and getting ideas. And now very likely Hannegan is *going* to hear about us."

"What do you intend doing?"

"I don't know yet."

"Why not talk to Thon Taddeo about it?"

"The officers aren't his servants. They were only sent as an escort to protect him. What can he do?"

"He's Hannegan's kinsman, and he has influence."

The abbot nodded. "I'll try to think of a way to approach him on the matter. We'll watch what's going on for a while first, though."

In the days that followed, Thon Taddeo completed his study of the oyster and, apparently satisfied that it was not a disguised clam, focused his attention on the pearl. The task was not simple.

Quantities of facsimile copy were scrutinized. Chains rattled and clanked as the more precious books came down from their shelves. In the case of partially damaged or deteriorated originals, it seemed unwise to trust the facsimile-maker's interpretation and eyesight. The actual manuscripts dating back to Leibowitzian times which had been sealed in airtight casks and locked in special storage vaults for indefinitely long preservation were then brought out.

The thon's assistant assembled several pounds of notes. After the fifth day of it, Thon Taddeo's pace quickened, and his manner reflected the eagerness of a hungry hound catching scent of tasty game.

"Magnificent!" He vacillated between jubilation and amused incredulity. "Fragments from a twentieth century physicist! The equations are even consistent."

Kornhoer peered over his shoulder. "I've seen that," he said breathlessly. "I could never make heads or tails of it. Is the subject matter important?"

"I'm not sure yet. The mathematics is beautiful, *beautiful!* Look here—this expression—notice the extremely contracted term. This thing under the radical sign—it looks like the product of two derivatives, but it really represents a whole set of derivatives."

"How?"

"The indices permute into an expanded expression; otherwise, it couldn't possibly represent a line integral, as the author says it is. It's lovely. And see here—this simple-looking expression. The simplicity is deceptive. It obviously represents not one, but a whole system of equations, in a very contracted form. It took me a couple of days to realize that the author was thinking of the relationships—not just of quantities to quantities—but of whole systems to other systems. I don't yet know all the physical quantities involved, but the sophistication of the mathematics is just—just quietly superb! If it's a hoax, it's inspired! If it's authentic, we may be in unbelievable luck. In either case, it's magnificent. I must see the earliest possible copy of it."

Brother Librarian groaned as yet another lead-sealed cask was rolled out of storage for unsealing. Armbruster was not impressed by the fact that the secular scholar, in two days, had unraveled a bit of a puzzle that had been lying around, a complete enigma, for a dozen centuries. To the custodian of the Memorabilia, each unsealing represented another decrease in the probable lifetime of the contents of the cask, and he made no attempt to conceal his disapproval of the entire proceeding. To Brother Librarian, whose task in life was the preservation of books, the principal reason for the existence of books was that they might be preserved perpetually. Usage was secondary, and to be avoided if it threatened longevity.

Thon Taddeo's enthusiasm for his task waxed stronger as the days passed, and the abbot breathed easier as he watched the thon's earlier skepticism melt away with each new perusal of some fragmentary pre-Deluge science text. The scholar had not made any clear assertions about the intended scope of his investigation; perhaps, at first, his aim had been vague, but now he went about his work with the crisp precision of a man following a plan. Sensing the dawn of something, Dom Paulo decided to offer the cock a perch for crowing, in case the bird felt an impulse to announce a coming daybreak.

"The community has been curious about your labors," he told the scholar. "We'd like to hear about it, if you don't mind discussing it. Of course we've all heard of your theoretical work at your own collegium, but it's too technical for most of us to understand. Would it be possible for you to tell us something about it in—oh, general terms that non-specialists might understand? The community has been grumping at me because I hadn't invited you to lecture; but I thought you might prefer to get the feel of the place first. Of course if you'd rather not—"

The thon's gaze seemed to clamp calipers on the abbot's cranium and measure it six ways. He smiled doubtfully.

"You'd like me to explain our work in the simplest possible language?"

"Something like that, if it's possible."

"That's just it." He laughed. "The untrained man reads a paper on natural science and thinks; 'Now why couldn't he explain this in simple language.' He can't seem to realize that what he tried to read was the simplest possible language—for that subject matter. In fact, a great deal of natural philosophy is simply a process of linguistic simplification—an effort to invent languages in which half a page of equations can express an idea which could not be stated in less than a thousand pages of so-called 'simple' language. Do I make myself clear?"

"I think so. Since you do make yourself clear, perhaps you could tell us about that aspect of it, then. Unless the suggestion is premature—as far as your work with the Memorabilia is concerned."

"Well, no. We now have a fairly clear idea of where we're going and what we have to work with here. It will still take considerable time to finish of course. The pieces have to be fitted together, and they don't all belong to the same puzzle. We can't yet predict what we *can* glean from it, but we're fairly sure of what we *can't*. I'm happy to say it looks hopeful. I have no objection to explaining the general scope, but—" He repeated the doubtful shrug.

"What bothers you?"

The thon seemed mildly embarrassed. "Only an uncertainty about my audience. I would not wish to offend anyone's religious beliefs."

"But how could you? Isn't it a matter of natural philosophy? Of physical science?"

"Of course. But many people's ideas about the world have become colored with religious—well, what I mean is—"

"But if your subject matter is the physical world, how could you possibly offend? Especially this community. We've been waiting for a long time to see the world start taking an interest in itself again. At the risk of seeming boastful, I might point out that we have a few rather clever amateurs in natural science right here in the monastery. There's Brother Majek, and there's Brother Kornhoer—"

"Kornhoer!" The thon glanced up warily at the arc lamp and looked away blinking. "I can't understand it!"

"The *lamp*? But surely you—"

"No, no, not the lamp. The lamp's simple enough, once you got over the shock of seeing it really work. It *should* work. It would work on paper, assuming various undeterminables and guessing at some unavailable data. But the clean impetuous leap from the vague hypothesis to a working model—" The thon coughed nervously. "It's Kornhoer himself I don't understand. That gadget—" he wagged a forefinger at the dynamo "—is a standing broad-jump across about twenty years of preliminary experimentation, starting with an understanding of the principles. Kornhoer just dispensed with the preliminaries. You believe in miraculous interventions? I don't, but there you have a *real* case of it. Wagon wheels!" He laughed. "What could he do if he had a machine shop? I can't understand what a man like that is doing cooped up in a monastery."

"Perhaps Brother Kornhoer should explain *that* to you," said Dom Paulo, laying to keep an edge of stiffness out of his tone.

"Yes, well—" Thon Taddeo's visual calipers began measuring the old priest again. "If you really feel that no one would take offense at hearing non-traditional ideas, I would be glad to discuss our work. But some of it may conflict with established preju—uh—established opinion."

"Good! Then it should be fascinating."

A time was agreed upon, and Dom Paulo felt relief. The esoteric gulf between Christian monk and secular investigator of Nature would surely be narrowed by a free exchange of ideas, he felt. Kornhoer had already narrowed it slightly, had he not? More communication, not less, was probably the best therapy for easing any tension. And the cloudy veil of doubt and mistrusting hesitancy would be parted, would it not? as soon as the thon saw that his hosts were not quite such unreasonable intellectual reactionaries as the scholar seemed to suspect. Paulo felt some shame for his earlier misgivings. Patience, Lord, with a well-meaning fool, he prayed.

"But you can't ignore the officers and their sketchbooks," Gault reminded him.

F

rom the lectern in the refectory, the reader was intoning the announcements. Candlelight blanched the faces of the robed, legions who stood motionless behind their stools and waited for the beginning of the evening meal. The reader's voice echoed hollowly in the high vaulted dining room whose ceiling was lost in brooding shadows above the pools of candle-glow that spotted the wooden tables.

"The Reverend Father Abbot has commanded me to announce," called the reader, "that the rule of abstinence for today is dispensed at tonight's meal. We shall have guests, as you may have heard. All religious may partake of tonight's banquet in honor of Thon Taddeo and his group; you may eat meat. Conversation—if you'll keep it quiet—will be permitted during the meal."

Suppressed vocal noises, not unlike strangled cheers, came from the ranks of the novices. The tables were set. Food had not yet made an appearance, but large dining trays replaced the usual mush bowls, kindling appetites with hints of a feast. The familiar milk mugs stayed in the pantry, their places taken for tonight by the best wine cups. Roses were scattered along the boards.

The abbot stopped in the corridor to wait for the reader to finish reading. He glanced at the table set for himself, Father Gault, the honored guest, and his party. Bad arithmetic again in the kitchen, he thought. Eight places had been set. Three officers, the thon and his assistant, and the two priests made seven—unless, in some unlikely case, Father Gault had asked Brother Kornhoer to sit with them. The reader concluded the announcements, and Dom Paulo entered the hall.

*"Flectamus genua,"* intoned the reader.

The robed legions genuflected with military precision as the abbot blessed his flock.

*"Levate."*

The legions arose. Dom Paulo took his place at the special table and glanced back toward the entrance. Gault should be bringing the others. Previously their meals had been served in the guesthouse rather than the refectory, to avoid subjecting them to the austerity of the monks' own frugal fare.

When the guests came, he looked around for Brother Kornhoer, but the monk was not with them.

"Why the eighth place setting?" he murmured to Father Gault when they had taken their places.

Gault looked blank and shrugged.

The scholar filled the place on the abbot's right and the others fell in toward the foot of the table, leaving the place on his left empty. He turned to beckon Kornhoer to join them, but the reader began intoning the preface before he could catch the monk's eye.

*"Oremus,"* answered the abbot, and the legions bowed.

During the blessing, someone sipped quietly into the seat on the abbot's left. The abbot frowned but did not look up to identify the culprit during the prayer.

•.. *et Spiritus Sancti, Amen.*

*"Sedete,"* called the reader, and the ranks began seating themselves.

The abbot glanced sharply at the figure on his left.

"Poet!"

The bruised lily bowed extravagantly and smiled. "Good evening, Sires, learned Thon, distinguished hosts," he orated.

"What are we having tonight? Roast fish and honeycombs in honor of the temporal resurrection that's upon us? Or have you, m'Lord Abbot, finally cooked the goose of the mayor of the village?"

"I would like to cook—"

"Ha!" quoth the Poet, and turned affably toward the scholar. "Such culinary excellence one enjoys

in this place, Thon Taddeo! You should join us more often. I suppose they are feeding you nothing but roast pheasant and unimaginative beef in the guesthouse. A shame! Here one fares better. I do hope Brother Chef has his usual gusto tonight, his inward flame, his enchanted touch. Ah . . .” The Poet rubbed his hands and smirked hungrily. “Perhaps we shall have his inspired Mock Pork with Maize a la Friar John, eh?”

“It sounds interesting,” said the scholar. “What is it?”

“Greasy armadillo with parched corn, boiled in donkey milk. A regular Sunday special.”

“Poet!” snapped the abbot; then to the thon: “I apologize for his presence. He wasn’t invited.”

The scholar surveyed the Poet with detached amusement.

“M’Lord Hannegan too, keeps several court fools,” he told Paulo. “I’m familiar with the species. You needn’t apologize for him.”

The Poet sprang up from his stool and bowed deeply before the thon. “Allow me instead to apologize for the abbot, Sire!” he cried with feeling.

He held the bow for a moment. They waited for him to finish his foolishness. Instead, he shrugged suddenly, sat down, and speared a smoking fowl from the platter deposited before them by a postulant. He tore off a leg and bit into it with gusto. They watched him with puzzlement.

“I suppose you’re right in not accepting my apology for him,” he said to the thon at last.

The scholar reddened slightly.

“Before I throw you out, worm,” said Gault, “let’s probe the depths of this iniquity.”

The Poet waggled his head and munched thoughtfully.

“It’s pretty deep, all right,” he admitted.

Someday Gault is going to strangle himself on that foot of his, thought Dom Paulo.

But the younger priest was visibly annoyed, and sought to draw the incident out *ad absurdum* in order to find grounds for quashing the fool. “Apologize at length for your host, Poet,” he commanded. “And explain yourself as you go.”

“Drop it, Father, drop it,” Paulo said hastily.

The Poet smiled graciously at the abbot. “That’s all right, m’Lord,” he said. “I don’t mind apologizing for you in the least. You apologize for me, I apologize for you, and isn’t that a fitting maneuver in charity and good will? Nobody need apologize for himself—which is always so humiliating. Using my system, however, everyone gets apologized for, and nobody has to do his own apologizing.”

Only the officers seemed to find the Poet’s remarks amusing. Apparently the expectation of humor was enough to produce the illusion of humor, and the comedian could elicit laughter with gesture and expression, regardless of what he said. Thon Taddeo wore a dry smirk, but it was the kind of look a man might give a clumsy performance by a trained animal.

“And so,” the Poet was continuing, “if you would but allow me to serve as your humble helper, m’Lord, you would never have to eat your own crow. As your Apologetic Advocate, for example, I might be delegated by you to offer contrition to important guests for the existence of bedbugs. And to bedbugs for the abrupt change of fare.”

The abbot glowered and resisted an impulse to grind the Poet’s bare toe with the heel of his sandal. He kicked the fellow’s ankle, but the fool persisted.

“I would assume all the blame for you, of course,” he said, noisily chewing white meat. “It’s a fine system, one which I was prepared to make available to you too, Most Eminent Scholar. I’m sure you would have found it convenient. I have been given to understand that systems of logic and methodology must be devised and perfected before science advances. And my system of negotiable and transferable apologetics would have been of particular value to you, Thon Taddeo.”

“Would have?”

“Yes. It’s a pity. Somebody stole my blue-headed goat.”

“Blue-headed goat?”

“He had a head as bald as Hannegan’s, Your Brilliance, and blue as the tip of Brother Armbruster’s nose. I meant to make you a present of the animal but some dastard filched him before you came”

The abbot clenched his teeth and held his heel poised over the Poet's toe. Thon Taddeo was frowning slightly, but he seemed determined to untangle the Poet's obscure skein of meaning.

"Do we need a blue-headed goat?" he asked his clerk.

"I can see no pressing urgency about it, sir," said the clerk.

"But the need is obvious!" said the Poet. "They say you are writing equations that will one day remake the world. They say a new light is dawning. If there's to be light, then somebody will have to be blamed for the darkness that's past."

"Ah, thence the goat." Thon Taddeo glanced at the abbot. "A sickly jest. Is it the best he can do?"

"You'll notice he's unemployed. But let us talk of something sensible—"

"No, no, no, *no!*" objected the poet. "You mistake my meaning, Your Brilliance. The goat is to be enshrined and honored, not blamed! Crown him with the crown Saint Leibowitz sent you, and thank him for the light that's rising. Then blame Leibowitz, and drive *him* into the desert. That way you won't have to wear the second crown. The one with thorns. Responsibility, it's called."

The Poet's hostility had broken out into the open, and he was no longer trying to seem humorous. The abbot gazed at him icily. The abbot's heel wavered again over the Poet's toe, and again had reluctant mercy on it.

"And when," said the Poet, "your patron's army comes to seize this abbey, the goat can be placed in the courtyard and taught to bleat "There's been nobody here but me, nobody here but me" whenever a stranger comes by."

One of the officers started up from his stool with an angry grunt, his hand reaching reflexively for his saber. He broke the hilt dear of the scabbard, and six inches of steel glistened a warning at the Poet. The abbot seized his wrist and tried to force the blade back in the sheath, but it was like tugging at the arm of a marble statue.

"Ah! A swordsman as well as a draftsman!" taunted the Poet, apparently unafraid of dying. "Your sketches of the abbey's defenses show such promise of artistic—"

The officer barked an oath and the blade leaped clean of the scabbard. His comrades seized him, however, before he could lunge. An astonished rumble came from the congregation as the startled monks came to their feet. The Poet was still smiling blandly.

"—artistic growth," he continued. "I predict that one day your drawing of the underwall tunnels will be hung in a museum of fine—"

A dull *chunk!* came from under the table. The Poet paused in mid-bite, lowered the wishbone from his mouth, and turned slowly white. He munched, swallowed, and continued to lose color. He gazed abstractly upward.

"You're grinding it off," he muttered out of the side of his mouth.

"Through talking?" the abbot asked, and continued to grind.

"I think I have a bone in my throat," the Poet admitted.

"You wish to be excused?"

"I am afraid I must."

"A pity. We shall miss you." Paulo gave the toe one last grind for good measure. "You may go then."

The Poet exhaled gustily, blotted his mouth, and arose. He drained his wine cup and inverted it in the center of the tray. Something in his manner compelled them to watch him. He pulled down his eyelid with one thumb, bent his head over his cupped palm and pressed. The eyeball popped out into his palm, bringing a choking sound from the Texarkans who were apparently unaware of the Poet's artificial orb.

"Watch him carefully," said the Poet to the glass eye, and then deposited it on the upturned base of his wine cup where it stared balefully at Thon Taddeo. "Good evening, m'Lords," he said cheerfully to the group, and marched away.

The angry officer muttered a curse and struggled to free himself from the grasp of his comrades.

"Take him back to his quarters and sit on him till he cools off," the abbot told them. "And better see that he doesn't get a chance at that lunatic."

"I'm mortified," he said to the abbot, when the livid guardsman was hauled away. "They aren't my

servants, and I can't give them orders. But I can promise you he will grovel for this. And if he refuses to apologize and leave immediately, he'll have to match that hasty sword against mine before noon tomorrow."

"No bloodshed!" begged the priest. "It was nothing. Let's all forget it." His hands were trembling, his countenance gray.

"He will make apology and go," Thon Taddeo insisted, "or I shall offer to kill him. Don't worry, he doesn't dare fight me because if he won, Hannegan would have him impaled on the public stake while they forced his wife to—but never mind that. He'll grovel and go. Just the same, I'm deeply ashamed that such a thing could have come about."

"I should have had the Poet thrown out as soon as he showed up. He provoked the whole thing, and I failed to stop it. The provocation was dear."

"Provocation? By the fanciful lie of a vagrant fool? Josard reacted as if the Poet's charges were true."

"Then you don't know that they *are* preparing a comprehensive report on the military value of our abbey as a fortress?"

The scholar's jaw fell. He stared from one priest to the other in apparent unbelief.

"Can this be true?" he asked after a long silence.

The abbot nodded.

"And you've permitted us to stay."

"We keep no secrets. Your companions are welcome to make such a study if they wish. I would not presume to ask *why* they want the information. The Poet's assumption, of course, was merest fantasy."

"Of course," the thon said weakly, not looking at his host.

"Surely your prince has no aggressive ambitions in this region, as the Poet hinted."

"Surely not."

"And even if he did, I'm sure he would have the wisdom at least the wise counselors to lead him—to understand that our abbey's value as a storehouse of ancient wisdom is many times greater than its value as a citadel."

The thon caught the note of pleading, the undercurrent of supplication for help, in the priest's voice, and he seemed to brood on it, picking lightly at his food and saying nothing for a time.

"We'll speak of this matter again before I return to the collegium," he promised quietly.

A pall had fallen on the banquet, but it began to lift during the group singing in the courtyard after the meal, and it vanished entirely when the time came for the scholar's lecture in the Great Hall. Embarrassment seemed at an end, and the group had resumed a surface cordiality.

Dom Paulo led the thon to the lectern; Gault and the don's clerk followed, joining them on the platform. Applause rang out heartily following the abbot's introduction of the thon; the hush that followed suggested the silence of a courtroom awaiting a verdict. The scholar was no gifted orator, but the verdict proved satisfying to the monastic throng.

"I have been amazed at what we've found here," he told them. "A few weeks ago I would not have believed, *did not* believe, that records such as you have in your Memorabilia could still be surviving from the fall of the last mighty civilization. It is still hard to believe, but evidence forces us to adopt the hypothesis that the documents are authentic. Their survival here is incredible enough; but even more fantastic, *to me*, is the fact that they have gone unnoticed during *this* century, until now. Lately there have been men capable of appreciating their potential value—and not only myself. What Thon Kaschler might have done with them while he was alive!—even seventy years ago."

The sea of monks' faces was alight with smiles upon hearing so favorable a reaction to the Memorabilia from one so gifted as the thon. Paulo wondered why they failed to sense the faint undercurrent of resentment—or was it suspicion?—in the speaker's tone. "Had I known of these sources ten years ago," he was saying, "much of my work in optics would have been unnecessary." *Ahha!* thought the abbot, *so that's* it. Or at least part of it. He's finding out that some of his discoveries are only rediscoveries, and it leaves a bitter taste. But surely he must know that never during his lifetime can he be

more than a recoverer of lost works; however brilliant, he can only do what others before him had done. And so it would be, inevitably, until the world became as highly developed as it had been before the Flame Deluge.

Nevertheless, it was apparent that Thon Taddeo was impressed.

"My time here is limited," he went on, "From what I have seen, I suspect that it will take twenty specialists several decades to finish milking the Memorabilia for understandable information. Physical science normally proceeds by inductive reasoning tested by experiment; but here the task is deductive. From a few broken bits of general principles, we must attempt to grasp particulars. In some cases, it may prove impossible. For example—" He paused for a moment to produce a packet of notes and thumbed through them briefly. "Here is a quotation which I found buried downstairs. It's from a four-page fragment of a book which may have been an advanced physics text. A few of you may have seen it."

"—and if the space terms predominate in the expression for the interval between event-points, the interval is said to be space-like, since it is then possible to select a co-ordinate system—belonging to an observer with an admissible velocity—in which the events appear simultaneous, and therefore separated only spatially. If, however, the interval is timelike the events cannot be simultaneous in any co-ordinate system, but there exists a co-ordinate system in which the space terms will vanish entirely, so that the separation between events will be purely temporal, *id est*, occurring at the same place, but at different times. Now upon examining the extremals of the real interval—" "

He looked up with a whimsical smile. "Has anyone here looked at that reference lately?"

The sea of faces remained blank.

"Anyone ever remember seeing it?"

Kornhoer and two others cautiously lifted their hands.

"Anyone know what it means?"

The hands quickly went down.

The thon chuckled. "It's followed by a page and a half of mathematics which I won't try to read, but it treats some of our fundamental concepts as if they weren't basic at all, but evanescent appearances that change according to one's point of view. It ends with the word '*therefore*' but the rest of the page is burned, and the conclusion with it. The reasoning is impeccable, however, and the mathematics quite elegant, so that I can write the conclusion myself. It seems the conclusion of a madman. It began with assumptions, however, which appeared equally mad. Is it a hoax? If it isn't, what is its place in the whole scheme of the science of the ancients? What precedes it as prerequisite to understanding? What follows, and how can it be tested? Questions I can't answer. This is only one example of the many enigmas posed by these papers you've kept so long. Reasoning which touches experiential reality nowhere is the business of angelologists and theologians, not of physical scientists. And yet such papers as these describe systems which touch our experience nowhere. Were they within the experimental reach of the ancients? Certain references tend to indicate it. One paper refers to elemental transmutation—which we just recently established as theoretically impossible—and then it says 'experiment proves.' But *how*?"

"It may take generations to evaluate and understand some of these things. It is unfortunate that they must remain here in this inaccessible place, for it will take a concentrated effort by numerous scholars to make meaning of them. I am sure you realize that your present facilities are inadequate—not to mention 'inaccessible' to the rest of the world."

Seated on the platform behind the speaker, the abbot began to glower, waiting for the worst. Thon Taddeo chose, however, to offer no proposals. But his remarks continued to make clear his feeling that such relics belonged in more competent hands than those of the monks of the Albertian Order of Saint Leibowitz, and that the situation as it prevailed was absurd. Perhaps sensing the growing uneasiness in the room, he soon turned to the subject of his immediate studies, which involved a more thorough investigation into the nature of light than had been made previously. Several of the abbey's treasures were proving to be of much help, and he hoped to devise soon an experimental means for testing his theories. After some discussion of the phenomenon of refraction, he paused, then said apologetically: "I hope none of this offends anybody's religious beliefs," and looked around quizzically. Seeing that their faces remained curious and bland, he continued for a time, then invited questions from the congregation.

"Do you mind a question from the platform?" asked the abbot.

"Not at all," said the scholar, looking a bit doubtful, as if thinking *et tu, Brute*.

"I was wondering what there is about the refrangible property of light that you thought might be offensive to religion?"

"Well—" The then paused uncomfortably. "Monsignor Apollo, whom you know, grew quite heated on the subject. He said that light could not possibly have been refrangible before the Flood, because the rainbow was supposedly—"

The room burst into roaring laughter, drowning the rest of the remark. By the time the abbot had waved them to silence, Thon Taddeo was beet red, and Dom Paulo had some difficulty in maintaining his own solemn visage.

"Monsignor Apollo is a good man, a good priest, but all men are apt to be incredible asses at times, especially outside their domains. I'm sorry I asked the question."

"The answer relieves me," said the scholar. "I seek no quarrels."

There were no further questions and the then proceeded to his second topic: the growth and the present activities of his collegium. The picture as he painted it seemed encouraging. The collegium was flooded with applicants who wanted to study at the institute. The collegium was assuming an educational function as well as an investigative one. Interest in natural philosophy and science was on the increase among the literate laity. The institute was being liberally endowed. Symptoms of revival and renaissance.

"I might mention a few of the current researches and investigations being conducted by our people," he went on.

"Following Bret's work on the behavior of gases, Thon Viche Mortoin is investigating the possibilities for the artificial production of ice. Thon Friider Halb is seeking a practical means for transmitting messages by electrical variations along a wire—" The list was long, and the monks appeared Impressed. Studios in many fields—medicine, astronomy, geology, mathematics, mechanics—were being undertaken. A few seemed impractical and ill-considered, but most seemed to promise rich rewards in knowledge and practical application. From Jejene's search for the Universal Nostrum to Bodalk's reckless assault on orthodox geometries, the collegium's activities exhibited a healthy hankering to pry open Nature's private files, locked since mankind had burned its institutional memories and condemned itself to cultural amnesia more than a millennium ago.

"In addition to these studies, Thon Maho Mahh is heading a project which seeks further information about the origin of the human species. Since this is primarily an archeological task, he asked me to search your library for any suggestive material on the subject, after I complete my own study here. However, perhaps I'd better not dwell on this at any length, since it's tending to cause controversy with the theologicans. But if there are any questions—"

A young monk who was studying for the priesthood stood up and was recognized by the then.

"Sir, I was wondering if you were acquainted with the suggestions of Saint Augustine on the subject?"

"I am not."

"A fourth century bishop and philosopher. He suggested that in the beginning, God created all things in their germinal causes, including the physiology of man, and that the germinal causes inseminate, as it were, the formless matter—which then gradually *evolved* into the more complex shapes, and eventually Man. Has this hypothesis been considered?"

The then's smile was condescending, although he did not openly brand the proposal childish. "I'm afraid it has not, but I shall look it up," he said, in a tone that indicated he would not.

"Thank you," said the monk, and sat down meekly.

"Perhaps the most daring research of all, however," continued the sage, "is being conducted by my friend Thon Esser Shon. It is an attempt to synthesize living matter. Then Esser hopes to create living protoplasm, using only six basic ingredients. This work could lead to—yes? You have a question?"

A monk in the third row had risen and was bowing toward the speaker. The abbot leaned forward to peer at him and recognized, with horror, that it was Brother Armbruster, the librarian.

"If you would do an old man the kindness," croaked the monk, dragging out his words in a plodding monotone. "This Thon Esser Shon—who limits himself to only six basic ingredients—is very interesting. I was wondering—are they permitting him to use both hands?"

"Why, I—" The then paused and frowned.

"And may I also inquire," Armbruster's dry voice dragged on, "whether this remarkable feat is to be performed from the sitting, standing, or prone position? Or perhaps on horseback while playing two trumpets?"

The novices snickered audibly. The abbot came quickly to his feet.

"Brother Armbruster, you have been warned. You are excommunicated from the common table until you make satisfaction. You may wait in the Lady Chapel."

The librarian bowed again and stole quietly out of the hall, his carriage humble, but his eyes triumphant. The abbot murmured apologetically to the scholar, but the thon's glance was suddenly chilly.

"In conclusion," he said, "a brief outline of what the world can expect, in my opinion, from the intellectual revolution that's just beginning." Eyes burning, he looked around at them, and his voice changed from casual to fervent rhythms.

"Ignorance has been our king. Since the death of empire, he sits unchallenged on the throne of Man. His dynasty is age-old. His right to rule is now considered legitimate. Past sages have affirmed it. They did nothing to unseat him.

"Tomorrow, a new prince shall rule. Men of understanding, men of science shall stand behind his throne, and the universe will come to know his might. His name is Truth. His empire shall encompass the Earth. And the mastery of Man over the Earth shall be renewed. A century from now, men will fly through the air in mechanical birds. Metal carriages will race along roads of man-made stone. There will be buildings of thirty stories, ships that go under the sea, machines to perform all works.

"And how will this come to pass?" He paused and lowered his voice. "In the same way all change comes to pass, I fear. And I am sorry it is so. It will come to pass by violence and upheaval, by flame and by fury, for no change comes calmly over the world."

He glanced around, for a soft murmur arose from the community.

"It will *be* so. We do not *will* it so.

"But *why*?"

"Ignorance is king. Many would not profit by his abdication. Many enrich themselves by means of his dark monarchy. They are his Court, and in his name they defraud and govern, enrich themselves and perpetuate their power. Even literacy they fear, for the written word is another channel of communication that might cause their enemies to become united. Their weapons are keen-honed, and they use them with skill. They will press the battle upon the world when their interests are threatened, and the violence which follows will last until the structure of society as it now exists is leveled to rubble, and a new society emerges. I am sorry: But that is how I see it."

The words brought a new pall over the room. Dom Paulo's hopes sank, for the prophecy gave form to the scholar's probable outlook. Thon Taddeo knew the military ambitions of his monarch. He had a choice: to approve of them, to disapprove of them, or to regard them as impersonal phenomena beyond his control like a flood, famine, or whirlwind.

Evidently, then, he accepted them as inevitable—to avoid having to make a moral judgment. *Let there be blood, iron and weeping...*

How could such a man thus evade his own conscience and disavow his responsibility—and so easily! the abbot stormed to himself.

But then the words came back to him. *For in those days, the Lord God had suffered the wise men to know the means by which the world itself might be destroyed...*

He also suffered them to know how it might be saved, and, as always, let them choose for themselves. And perhaps they had chosen as Thon Taddeo chooses. To wash their hands before the multitude. Look you to it. Lest they themselves be crucified.

And they had been crucified anyhow. Without dignity. Always for anybody anyhow is to get nailed on it and hang on it and if you drop off they beat...

There was sudden silence. The scholar had stopped talking.

The abbot blinked around the hall. Half the community was staring toward the entrance. At first his eyes could make out nothing.

“What is it?” he whispered to Gault.

“An old man with a beard and shawl,” hissed Gault. “It looks like—No, he wouldn’t—”

Dom Paulo arose and moved to the front of the dais to stare at the faintly defined shape in the shadows. Then he called out to it softly.

“Benjamin?”

The figure stirred. It drew its shawl tighter about spindly shoulders and hobbled slowly into the light. It stopped again, muttering to itself as it looked around the room; then its eyes found the scholar at the lectern.

Leaning on a crooked staff, the old apparition hobbled slowly toward the lectern, never taking its eyes from the man who stood behind it. Thon Taddeo looked humorously perplexed at first, but when no one stirred or spoke, he seemed to lose color as the decrepit vision came near him. The face of the bearded antiquity blazed with hopeful ferocity of some compelling passion that burned more furiously in him than the life principle long since due to depart.

He came close to the lectern, paused. His eyes twitched over the startled speaker. His mouth quivered. He smiled. He reached out one trembling hand toward the scholar. The thon drew back with a snort of revulsion.

The hermit was agile. He vaulted to the dais, dodged the lectern, and seized the scholar’s arm.

“What madness—”

Benjamin kneaded the arm while he stared hopefully into the scholar’s eyes.

His face clouded. The glow died. He dropped the arm. A great keening sigh came from the dry old lungs as hope vanished. The eternally knowing smirk of the Old Jew of the Mountain returned to his face. He turned to the community, spread his hands, shrugged eloquently.

“It’s still not Him,” he told them sourly, then hobbled away.

Afterwards, there was little formality.

## 21

# I

It was during the tenth week of Thon Taddeo’s visit that the messenger brought the black news. The head of the ruling dynasty of Laredo had demanded that Texarkanan troops be evacuated forthwith from the realm. The King died of poison that night, and a state of war was proclaimed between the states of Laredo and Texarkana. The war would be short-lived. It could with assurance be assumed that the war had ended the day after it had begun, and that Hannegan now controlled all lands and peoples from the Red River to the Rio Grande.

That much had been expected, but not the accompanying news.

Hannegan II, by Grace of God Mayor, Viceroy of Texarkana, Defender of the Faith, and Vaquero Supreme of the Plains, had, after finding Monsignor Marcus Apollo to be guilty of “treason” and espionage, caused the papal nuncio to be hanged, and then, while still alive to be cut down, drawn, quartered, and flayed, as an example to anyone else who might try to undermine the Mayor’s state. In pieces, the priest’s carcass had been thrown to the dogs.

The messenger hardly needed to add that Texarkana was under absolute interdict by a papal decree which contained certain vague but ominous allusions to *Regnans in Excelsis*, a sixteenth century bull ordering a monarch deposed. There was no news of Hannegan’s countermeasures, as yet.

On the Plains, the Laredan forces would now have to fight their way back home through the nomad tribes, only to lay down their arms at their own borders, for their nation and their kin were hostage.

"A tragic affair!" said Thon Taddeo, with an apparent degree of sincerity. "Because of my nationality, I offer to leave at once."

"Why?" Dom Paulo asked. "You don't approve of Hannegan's actions, do you?"

The scholar hesitated, then shook his head. He looked around to make certain no one overheard them. "Personally, I condemn them. But in public—" He shrugged. "There is the collegium to think of. If it were only a question of my *own* neck, well—"

"I understand."

"May I venture an opinion in confidence?"

"Of course."

"Then someone ought to warn New Rome against making idle threats. Hannegan's not above crucifying several dozen Marcus Apollos."

"Then some new martyrs will attain Heaven; New Rome doesn't make idle threats."

The thon sighed. "I supposed that you'd look at it that way, but I renew my offer to leave."

"Nonsense. Whatever your nationality, your common humanity makes you welcome."

But a rift had appeared. The scholar kept his own company afterward, seldom conversing with the monks. His relationship with Brother Kornhoer became noticeably formal, although the inventor spent an hour or two each day in servicing and inspecting the dynamo and the lamp, and keeping himself informed concerning the progress of the thon's work, which was now proceeding with unusual haste. The officers seldom ventured outside the guesthouse.

There were hints of an exodus from the region. Disturbing rumors kept coming from the Plains. In the village of Sanly Bowitts, people began discovering reasons to depart suddenly on pilgrimages or to visit in other lands. Even the beggars and vagrants were getting out of town. As always, the merchants and artisans were faced with the unpleasant choice of abandoning their property to burglars and looters or staying with it to see it looted.

A citizens' committee headed by the mayor of the village visited the abbey to request sanctuary for the townspeople in the event of invasion. "My final offer," said the abbot, after several hours of argument, "is this: we will take in all the women, children, invalids, and aged, without question. But as for men capable of bearing arms, we'll consider each case individually, and we may turn some of them away."

"Why?" the mayor demanded.

"What should be obvious, even to you!" Dom Paulo said sharply. "We may come under attack ourselves, but unless we're directly attacked, we're going to stay out of it. I'll not let this place be used by anybody as a garrison from which to launch a counterattack if the only attack is on the village itself. So in case of males able to bear arms, we'll have to insist on a pledge—to defend the abbey under our orders. And we'll decide in individual cases whether a pledge is trustworthy or not."

"It's unfair!" howled a committeeman. "You'll discriminate—"

"Only against those who can't be trusted. What's the matter? Were you hoping to hide a reserve force here? Well, it won't be allowed. You're not going to plant any part of a town militia out here. That's final."

Under the circumstances, the committee could not refuse any help offered. There was no further argument. Dom Paulo meant to take in anyone, when the time came, but for the present he meant to forestall plans by the village to involve the abbey in military planning. Later there would be officers from Denver with similar requests; they would be less interested in saving life than in saving their political regime. He intended to give them a similar answer. The abbey had been built as a fortress of faith and knowledge, and he meant to preserve it as such.

The desert began to crawl with wanderers out of the east. Traders, trappers, and herdsmen, in moving west, brought news from the Plains. The cattle plague was sweeping like wildfire among the herds of the nomads; famine seemed imminent. Laredo's forces had suffered a mutinous cleavage since the fall of the Laredan dynasty. Part of them were returning to their homeland as ordered, while the others set out under a grim vow to march on Texarkana and not stop until they took the head of Hannegan II or died in trying. Weakened by the split, the Laredans were being wiped out gradually by the hit-and-run assaults from Mad Bear's warriors who were thirsty for vengeance against those who had brought the

plague. It was rumored that Hannegan had generously offered to make Mad Bear's people his protected dependents, if they would swear fealty to "civilized" law, accept his officers into their councils, and embrace the Christian Faith. "Submit or starve" was the choice which fate and Hannegan offered the herdsman peoples. Many would choose to starve before giving allegiance to an agrarian-merchant state. Hongan Os was said to be roaring his defiance southward, eastward, and heavenward; he accomplished the latter by burning one shaman a day to punish the tribal gods for betraying him. He threatened to become a Christian if Christian gods would help slaughter his enemies.

It was during the brief visit of a party of shepherds that the Poet vanished from the abbey. Thon Taddeo was the first to notice the Poet's absence from the guesthouse and to inquire about the versifying vagrant.

Dom Paulo's face wrinkled in surprise. "Are you certain he's moved out?" he asked. "He often spends a few days in the village, or goes over to the mesa for an argument with Benjamin."

"His belongings are missing," said the thon "Everything's gone from his room."

The abbot made a wry mouth. "When the Poet leaves, that's a bad sign. By the way, of he's really missing, then I would advise you to take an immediate inventory of your own belongings."

The thon looked thoughtful "So that's where my boots—"

"No doubt."

"I set them out to be polished. They weren't returned. That was the same day he tried to batter down my door."

"Batter down—who the *Poet*?"

Thon Taddeo chuckled. "I'm afraid I've been having a little sport with him. I have his glass eye. You remember the night he left it on the refectory table?"

"Yes."

"I picked it up."

The thon opened his pouch, groped in it for a moment, then laid the Poet's eyeball on the abbot's desk. "He knew I had it, but I kept denying it. But we've had sport with him ever since, even to creating rumors that it was really the long-lost eyeball of the Bayring idol and ought to be returned to the museum. He became quite frantic after a time. Of course I had meant to return it before we go home. Do you suppose he'll return after we leave?"

"I doubt it," said the abbot, shuddering slightly as he glanced at the orb. "But I'll keep it for him, if you like. Although it's just as probable that he'd turn up in Texarkana looking for it there. He claims it's a potent talisman."

"How so?"

Dom Paulo smiled. "He says he can see much better when he's wearing it."

"What nonsense!" The thon paused; ever ready, apparently, to give any sort of outlandish premise at least a moment's consideration, he added: "Isn't it nonsense—unless filling the empty socket somehow affects the muscles of *both* sockets. Is that what he claims?"

"He just swears he can't see as well without it. He claims he has to have it for the perception of 'true meanings'—although it gives him blinding headaches when he wears it. But one never knows whether the Poet is speaking fact, fancy, or allegory. If fancy is clever enough, I doubt that the Poet would admit a difference between fancy and fact."

The thon smiled quizzically. "Outside my door the other day, he yelled that I needed it more than he did. That seems to suggest that he thinks of it as being, in itself, a potent fetish—good for anyone. I wonder why."

"He said you needed it? Oh ho!"

"What amuses you?"

"I'm sorry. He probably meant it as an insult. I'd better not try to explain the Poet's insult; it might make me seem a party to them."

"Not at all. I'm curious."

The abbot glanced at the image of Saint Leibowitz in the corner of the room. "The Poet used the eyeball as a running joke," he explained. "When he wanted to make a decision, or to think something

over, or to debate a point, he'd put the glass eye in the socket. He'd take it out again when he saw something that displeased him, when he was pretending to overlook something, or when he wanted to play stupid. When he wore it, his manner changed. The brothers began calling it 'the Poet's conscience,' and he went along with the joke. He gave little lectures and demonstrations on the advantages of a removable conscience. He'd pretend some frantic compulsion possessed him—something trivial, usually—like a compulsion aimed at a bottle of wine.

"Wearing his eye, he'd stroke the wine bottle, lick his lips, pant and moan, then jerk his hand away. Finally it would possess him again. He'd grab the bottle, pour about a thimbleful in a cup and gloat over it for a second. But then conscience would fight back, and he'd throw the cup across the room. Soon he'd be leering at the wine bottle again, and start to moan and slobber, but fighting the compulsion anyhow—" the abbot chuckled in spite of himself "—hideous to watch. Finally, when he became exhausted, he'd pluck out his glass eye. Once the eye was out, he'd suddenly relax. The compulsion stopped being compulsive. Cool and arrogant then, he'd pick up the bottle, look around and laugh. "I'm going to do it anyhow," he'd say. Then, while everyone was expecting him to drink it, he'd put on a beatific smile and pour the whole bottle over his own head. The advantage of a removable conscience, you see."

"So he thinks I need it more than he does."

Dom Paulo shrugged. "He's only the Poet-sirrah!"

The scholar puffed a breath of amusement. He prodded at the vitreous spheroid and rolled it across the table with his thumb. Suddenly he laughed. "I rather like that. I think I know who does need it more than the Poet. Perhaps I'll keep it after all." He picked it up, tossed it, caught it, and glanced doubtfully at the abbot.

Paulo merely shrugged again.

Thon Taddeo dropped the eye back in his pouch. "He can have it if he ever comes to claim it. But by the way, I meant to tell you: my work is nearly finished here. We'll be leaving in a very few days."

"Aren't you worried about the fighting on the Plains?"

Thon Taddeo frowned at the wall. "We're to camp at a butte, about a week's ride to the east from here. A group of, uh—Our escort will meet us there."

"I do hope," said the abbot, relishing the polite bit of savagery, "that your escort-group hasn't reversed its political allegiance since you made the arrangements. It's getting harder to tell foes from allies these days."

The thon reddened. "Especially if they come from Texarkana, you mean?"

"I didn't say that."

"Let's be frank with each other, Father. I can't fight the prince who makes my work possible—no matter what I think of his policies or his politics. I appear to support him, superficially, or at least to overlook him—for the sake of the collegium. If he extends his lands, the collegium may incidentally profit. If the collegium prospers, mankind will profit from our work."

"The ones who survive, perhaps."

"True—but that's always true in any event."

"No, no—Twelve centuries ago, not even the survivors profited. Must we start down that road again?"

Thon Taddeo shrugged. "What can I do about it?" he asked crossly. "Hannegan is prince, not I."

"But you promise to begin restoring Man's control over Nature. But who will govern the use of the power to control natural forces? Who will use it? To what end? How will you hold him in check? Such decisions can still be made. But if you and your group don't make them now, others will soon make them for you. Mankind will profit, you say. By whose sufferance? The sufferance of a prince who signs his letters X? Or do you really believe that your collegium can stay aloof from his ambitions when he begins to find out that you're valuable to him?"

Dom Paulo had not expected to convince him. But it was with a heavy heart that the abbot noticed the plodding patience with which the thon heard him through; it was the patience of a man listening to an argument which he had long ago refuted to his own satisfaction.

"What you really suggest," said the scholar, "is that we wait a little while. That we dissolve the

collegium, or move it to the desert, and somehow—with no gold and silver of our own—revive an experimental and theoretical science in some slow hard way, and tell nobody. That we save it all up for the day when Man is good and pure and holy and wise.”

“That is not what I meant—”

“That is not what you meant to say, but it is what your *saying* means. Keep science cloistered, don’t try to apply it, don’t try to do anything about it until men are holy. Well, it won’t work. You’ve been doing it here in this abbey for generations.”

“We haven’t withheld anything.”

“You haven’t withheld it; but you sat on it so quietly, nobody knew it was here, and you did nothing with it.”

Brief anger flared in the old priest’s eyes. “It’s time you met our founder, I think,” he growled, pointing to the wood-carving in the corner. “He was a scientist like yourself before the world went mad and he ran for sanctuary. He founded this Order to save what could be saved of the records of the last civilization. “Saved” from what, and for what? Look where he’s standing—see the kindling? the books? That’s how little the world wanted your science then, and for centuries afterward. So he died for our sake. When they drenched him with fuel oil, legend says he asked them for a cup of it. They thought he mistook it for water, so they laughed and gave him a cup. He blessed it and—some say the oil changed to wine when he blessed it—and then: “*Hic est enim calix Sanguinis Mei*,” and he drank it before they hung him and set him on fire. Shall I read you a list of our martyrs? Shall I name all the battles we have fought to keep these records intact? All the monks blinded in the copyroom? for your sake? Yet you say we did nothing with it, withheld it by silence.”

“Not intentionally,” the scholar said, “but in effect you did—and for the very motives you imply should be mine. If you try to save wisdom until the world is wise, Father, the world will never have it.”

“I can see the misunderstanding is basic!” the abbot said gruffly. “To serve God first, or to serve Hannegan first—that’s your choice.”

“I have little choice, then,” answered the thon. “Would you have me work for the Church?” The scorn in his voice was unmistakable.

## 22

# I

It was Thursday within the Octave of All Saints. In preparation for departure, the thon and his party sorted their notes and records in the basement. He had attracted a small monastic audience, and a spirit of friendliness prevailed as the time to leave drew near. Overhead, the arc lamp still sputtered and glared, filling the ancient library with blue-white harshness while the team of novices pumped wearily at the hand-powered dynamo. The inexperience of the novice who sat atop the ladder to keep the arc gap adjusted caused the light to flicker erratically; he had replaced the previous skilled operator who was at present confined to the infirmary with wet dressings over his eyes.

Thon Taddeo had been answering questions about his work with less reticence than usual, no longer worried, apparently, about such controversial subjects as the refrangible property of light, or the ambitious of Thon Esser Shon.

“Now unless this hypothesis is meaningless,” he was saying, “it must be possible to confirm it in some way by observation. I set up the hypothesis with the help of some new—or rather, some very old-mathematical forms suggested by our study of your Memorabilia. The hypothesis seems to offer a simpler explanation of optical phenomena, but frankly, I could think of no way to test it at first. That’s

where your Brother Kornhoer proved a help.” He nodded toward the inventor with a smile and displayed a sketch of a proposed testing device.

“What is it?” someone asked after a brief interval of mystification.

“Well—this is a pile of glass plates. A beam of sunlight striking the pile at this angle will be partially reflected, and partially transmitted. The reflected part will be polarized. Now we adjust the pile to reflect the beam through this thing, which is Brother Kornhoer’s idea, and let the light fall on this second pile of glass plates. The second pile is set at just the right angle to reflect almost all of the polarized beam, and transmit nearly none of it. Looking through the glass, we’d scarcely see the light. All this has been tried. But now if my hypothesis is correct, closing this switch on Brother Kornhoer’s field coil here should cause a sudden brightening of the transmitted light. If it doesn’t—” he shrugged “—then we threw out the hypothesis.”

“You might throw out the coil instead,” Brother Kornhoer suggested modestly. “I’m not sure it’ll produce a strong enough field.”

“I am. You have an instinct for these things. I find it much easier to develop an abstract theory than to construct a practical way to test it. But you have a remarkable gift for seeing everything in terms of screws, wires, and lenses, while I’m still thinking abstract symbols.”

“But the abstractions would never occur to me in the first place, Thon Taddeo.”

“We would make a good team, Brother. I wish you would join us at the collegium, at least for a while. Do you think your abbot would grant you leave?”

“I would not presume to guess,” the inventor murmured, suddenly uncomfortable.

Thon Taddeo turned to the others. “I’ve heard mention of ‘brothers on leave.’ Isn’t it true that some members of your community are employed elsewhere temporarily?”

“Only a very few, Thon Taddeo,” said a young priest.

“Formerly, the Order supplied clerks, scribes, and secretaries to the secular clergy, and to both royal and ecclesiastical courts. But that was during the times of most severe hardship and poverty here at the abbey. Brothers working on leave have kept the rest of us from starving at times. But that’s no longer necessary, and it’s seldom done. Of course, we have a few brothers studying in New Rome now, but—”

“That’s *it!*” said the thon with sudden enthusiasm. “A scholarship at the collegium for you, Brother. I was talking to your abbot, and—”

“Yes?” asked the young priest;

“Well, while we disagree on a few things, I can understand his point of view. I was thinking that an exchange of scholarships might improve relations. There would be a stipend, of course, and I’m sure your abbot could put that to good use.”

Brother Kornhoer inclined his head but said nothing.

“Come now!” The scholar laughed. “You don’t seem pleased by the invitation, Brother.”

“I am flattered, of course. But such matters are not for me to decide.”

“Well, I understand that, of course. But I wouldn’t dream of asking your abbot if the idea displeased you.”

Brother Kornhoer hesitated. “My vocation is to Religion,” he said at last, “that is—to a life of prayer. We think of our work as a kind of prayer too. But that—” he gestured toward his dynamo “—for me seems more like play. However, if Dom Paulo were to send me—”

“You’d reluctantly go,” the scholar finished sourly. “I’m sure I could get the collegium to send your abbot at least a hundred gold hannegans a year while you were with us, too. I—” He paused to look around at their expressions. “Pardon me, did I say something wrong?”

Halfway down the stairs, the abbot paused to survey the group in the basement. Several blank faces were turned toward him. After a few seconds Thon Taddeo noticed the abbot’s presence and nodded pleasantly.

“We were just speaking of you, Father,” he said. “If you heard, perhaps I should explain—”

Dom Paulo shook his head. “That’s not necessary.”

“But I *would* like to discuss—”

“Can it wait? I’m in a hurry this minute.”

“Certainly,” said the scholar.

“I’ll be back shortly.” He climbed the stairs again. Father Gault was waiting for him in the courtyard.

“Have they heard about it yet, Domne?” the prior asked grimly.

“I didn’t ask, but I’m sure they haven’t,” Dom Paulo answered. “They’re just making silly conversation down there. Something about taking Brother K back to Texarkana with them.”

“Then they haven’t heard, that’s certain.”

“Yes. Now where is he?”

“In the guesthouse, Domne. The medic’s with him. He’s delirious.”

“How many of the brothers know he’s here?”

“About four. We were singing None when he came in the gate.”

“Tell those four not to mention it to anyone. Then join our guests in the basement. Just be pleasant, and don’t let them know.”

“But shouldn’t they be told before they leave, Domne?”

“Of course. But let them get ready first. You know it won’t stop them from going back. So to minimize embarrassment, let’s wait until the last minute to tell them. Now, do you have it with you?”

“No, I left it with his papers in the guesthouse.”

“I’ll go see him. Now, warn the brothers, and join our guests.”

“Yes, Dome.”

The abbot hiked toward the guesthouse. As he entered, Brother Pharmacist was just leaving the fugitive’s room.

“Will he live, Brother?”

“I cannot know, Domne. Mistreatment, starvation, exposure, fever—if God wills it—” He shrugged.

“May I speak to him?”

“I’m sure it won’t matter. But he doesn’t make sense.”

The abbot entered the room and softly closed the door behind him.

“Brother Claret?”

“Not again,” gasped the man on the bed. “For the love of God, not again—I’ve told you all I know. I betrayed him. Now just let me—be.”

Dom Paulo looked down with pity on the secretary to late Marcus Apollo. He glanced at the scribe’s hands. There were only festering sores where the fingernails had been.

The abbot shuddered and turned to the small table near the bed. Out of a small collection of papers and personal effects, he quickly found the crudely printed document which the fugitive had brought with him from the east:

HANNEGAN THE MAYOR, by Grace of God: Sovereign of Texarkana, Emperor of Laredo, Defender of the Faith, Doctor of Laws, Clans Chief of the Nomads, and Vaquero Supreme of the Plains, to ALL BISHOPS, PRIESTS, AND PRELATES of the Church throughout Our Rightful Realm, Greetings & TAKE HEED, for it is the LAW, viz & to wit:

(1) Whereas a certain foreign prince, one Benedict XXII, Bishop of New Rome, presuming to assert an authority which is not rightly his over the clergy of this nation, has dared to attempt, first, to place the Texarkanan Church under a sentence of interdict, and, later, to suspend this sentence, thereby creating great confusion and spiritual neglect among all the faithful, We, the only legitimate ruler over the Church in this realm, acting in concord with a council of bishops and clergy, hereby declare to Our loyal people that the aforesaid prince and bishop, Benedict XXII, is a heretic, simoniac, murderer, sodomite, and atheist, unworthy of any recognition by Holy Church in lands of Our kingdom, empire, or protectorate. Who serves him serves not Us.

(2) Be it known, therefore, that both the decree of interdict and the decree suspending it are hereby QUASHED, ANNULLED, DECLARED VOID AND OF NO CONSEQUENCE, for they were of no original validity...

Dom Paulo glanced at the rest of it only briefly. There was no need to read further. The mayoral

*TAKE HEED* ordered the licensing of the Texarkanan clergy, made the administration of the Sacraments by unlicensed persons a crime under the law, and made an oath of supreme allegiance to the Mayoralty a condition for licensing and recognition. It was signed not only with the Mayor's mark, but also by several "bishops" whose names were unfamiliar to the abbot.

He tossed the document back on the table and sat down beside the bed. The fugitive's eyes were open, but he only stared at the ceiling and panted.

"Brother Claret?" he asked gently. "Brother..."

In the basement, the scholar's eyes had come alight with the brash exuberance of one specialist invading the field of another specialist for the sake of straightening out the whole region of confusion. "As a matter of fact, *yes!*" he said in response to a novice's question. "I *did* locate one source here that should, I think, be of interest to Thon Maho. Of course, I'm no historian, but--"

"Thon Maho? Is he the one who's, uh, trying to correct Genesis?" Father Gault asked wryly.

"Yes, that's--" the scholar broke off with a startled glance at Gault.

"That's all right," the priest said with a chuckle. "Many of us feel that Genesis is more or less allegorical. What have you found?"

"We located one pre-Diluvian fragment that suggests a very revolutionary concept, as I see it. If I interpret the fragment correctly, Man was not created until shortly before the fall of the last civilization."

"Wh-a-at? Then where did civilization come from?"

"Not from humanity. It was developed by a preceding race which became extinct during the Diluvium Ignis."

"But Holy Scripture goes back thousands of years before the Diluvium!"

Thon Taddeo remained meaningfully silent.

"You are proposing," said Gault, suddenly dismayed, "that *we* are not the descendants of Adam? not related to historical humanity?"

"Wait! I only offer the conjecture that the pre-Deluge race, which called itself Man, succeeded in creating life. Shortly before the fall of their civilization, they successfully created the ancestors of present humanity--'after their own image'--as a servant species."

"But even if you totally reject Revelation, that's a completely unnecessary complication under plain common sense!" Gault complained.

The abbot had come quietly down the stairs. He paused on the lower landing and listened incredulously.

"It might seem so," Thon Taddeo argued, "until you consider how many things it would account for. You know the legends of the Simplification. They all become more meaningful, it seems to me, if one looks at the Simplification as a rebellion by a created servant species against the original creator species, as the fragmentary reference suggests. It would also explain why present-day humanity seems so inferior to the ancients, why our ancestors lapsed into barbarism when their masters were extinct, why--"

"God have mercy on this house!" cried Dom Paulo, striding toward the alcove. "Spare us, Lord--we know not what we did."

"I should have known," the scholar muttered to the world at large.

The old priest advanced like a nemesis on his guest. "So we are but creatures of creatures, then, Sir Philosopher? Made by lesser gods than God, and therefore understandably less than perfect--through no fault of ours, of course."

"It is only conjecture but it would account for much," the then said stiffly, unwilling to retreat.

"And absolve of much, would it not? Man's rebellion against his makers was, no doubt, merely justifiable tyrannicide against the infinitely wicked sons of Adam, then."

"I didn't say--"

"Show me, Sir Philosopher, this amazing reference!"

Thon Taddeo hastily shuffled through his notes. The light kept flickering as the novices at the drive-mill strained to listen. The scholar's small audience had been in a state of shock until the abbot's stormy entrance shattered the numb dismay of the listeners. Monks whispered among themselves;

someone dared to laugh.

"Here it is," Thon Taddeo announced, passing several note pages to Dom Paulo.

The abbot gave him a brief glare and began reading. The silence was awkward. "You found this over in the 'Unclassified' section, I believe?" he asked after a few seconds.

"Yes, but—"

The abbot went on reading.

"Well, I suppose I should finish packing," muttered the scholar, and resumed his sorting of papers. Monks shifted restlessly, as if wishing to slink quietly away. Kornhoer brooded alone.

Satisfied after a few minutes of reading, Dom Paulo handed the notes abruptly to his prior. "*Lege!*" he commanded gruffly.

"But what—?"

"A fragment of a play, or a dialogue, it seems. I've seen it before. It's something about some people creating some artificial people as slaves. And the slaves revolt against their makers. If Thon Taddeo had read the Venerable Boedullus' *De Inanibus*, he would have found that one classified as 'probable fable or allegory.' But perhaps the thon would care little for the evaluations of the Venerable Boedullus, when he can make his own."

"But what sort of—"

"*Lege!*"

Gault moved aside with the notes. Paulo turned toward the scholar again and spoke politely, informatively, emphatically: "To the image of God He created them: male and female He created them."

"My remarks were only conjecture," said Thon Taddeo.

"Freedom to speculate is necessary—"

"And the Lord God took Man, and put him into the paradise of pleasure, to dress it, and to keep it. And—"

"—to the advancement of science. If you would have us hampered by blind adherence, unreasoned dogma, then you would prefer—"

"God commanded him, saying: Of every tree of paradise thou shalt eat; but of the tree of knowledge of good and evil, thou shalt—"

"—to leave the world in the same black ignorance and superstition that you say your Order has struggled—"

"—not eat For in what day soever thou shalt eat of it, thou shalt die the death."

"—against. Nor could we ever overcome famine, disease, or misbirth, or make the world one bit better than it has been for—"

"And the serpent said to the woman: God doth know that in what day soever you shall eat thereof, your eyes shall be opened, and you shall be as Gods, knowing good and evil."

"—twelve centuries, if every direction of speculation is to be closed off and every new thought denounced—"

"It never *was* any better, it never *will* be any better. It will only be richer or poorer, sadder but not wiser, until the very last day."

The scholar shrugged helplessly. "You see? I knew you would be offended, but you told me—Oh, What's the use? You have your account of it."

"The 'account' that I was quoting, Sir Philosopher, was not an account of the manner of creation, but an account of the manner of the temptation that led to the Fall. Did that escape you? "And the serpent said to the woman—"

"Yes, yes, but the freedom to speculate is essential—"

"No one has tried to deprive you of that. Nor is anyone offended. But to abuse the intellect for reasons of pride, vanity, or escape from responsibility, is the fruit of that same tree."

"You question the honor of my motives?" asked the thon, darkening.

"At times I question my own. I accuse you of nothing. But ask yourself this: Why do you take delight in leaping to such a wild conjecture from so fragile a springboard? Why do you wish to discredit

the past, even to dehumanizing the last civilization? So that you need not learn from their mistakes? Or can it be that you can't bear being only a 'rediscoverer,' and must feel that you are a "creator" as well?"

The thon hissed an oath. "These records should be placed in the hands of competent people," he said angrily. "What irony this is!"

The light sputtered and went out. The failure was not mechanical. The novices at the drive-mill had stopped work.

"Bring candles," called the abbot.

Candles were brought.

"Come down," Dom Paulo said to the novice atop the ladder. "And bring that thing with you. Brother Kornhoer? Brother Korn—"

"He stepped into the storeroom a moment ago, Domne."

"Well, call him." Dom Paulo turned to the scholar again, handing him the documents which had been found among Brother Claret's effects. "Read, if you can make it out by candlelight, Sir Philosopher!"

"A mayoral edict?"

"Read it and rejoice in your cherished freedom."

Brother Kornhoer slipped into the room again. He was carrying the heavy crucifix which had been displaced from the head of the archway to make room for the novel lamp. He handed the cross to Dom Paulo.

"How did you know I wanted this?"

"I just decided it was about time, Domne." He shrugged.

The old man climbed the ladder and replaced the rood on its iron hook. The corpus glittered with gold by candlelight. The abbot turned and called down to his monks.

"Who reads in this alcove henceforth, let him read *ad Lumina Christi!*"

When he descended the ladder, Thon Taddeo was already cramming the last of his papers into a large case for later sorting. He glanced warily at the priest but said nothing.

"You read the edict?"

The scholar nodded.

"If, by some unlikely chance, you would like political asylum here—"

The scholar shook his head.

"Then may I ask you to clarify your remark about placing our records in competent hands?"

Thon Taddeo lowered his gaze. "It was said in the heat of the moment, Father. I retract it."

"But you haven't stopped meaning it. You've meant it all along."

The thon did not deny it.

"Then it would be futile to repeat my plea for your intercession on our behalf—when your officers tell your cousin what a fine military garrison this abbey would make. But for his own sake, tell him that when our altars or the Memorabilia have been threatened, our predecessors did not hesitate to resist with the sword." He paused. "Will you be leaving today or tomorrow?"

"Today I think would be better," Thon Taddeo said softly.

"I'll order provisions made ready." The abbot turned to go, but paused to add gently: "But when you get back, deliver a message to your colleagues."

"Of course. Have you written it?"

"No. Just say that anyone who wishes to study here will be welcome, in spite of the poor lighting. Thon Maho, especially. Or Thon Esser Shon with his six ingredients. Men must fumble awhile with error to separate it from truth, I think—as long as they don't seize the error hungrily because it has a pleasanter taste. Tell them too, my son, that when the time comes, as it will surely come, that not only priests but philosophers are in need of sanctuary—tell them our walls are thick out here."

He nodded a dismissal to the novices, then, and trudged up the stairs to be alone in his study. For the Fury was twisting his insides again, and he knew that torture was coming.

*Nunc dimittis servum tuum, Domine... Quia viderunt oculi mei salutare...*

Maybe it will twist clean loose this time, he thought almost hopefully. He wanted to summon Father

Gault to hear his confession, but decided that it would be better to wait until the guests had gone. He stared at the edict again.

A knock at the door soon interrupted his agony.

"Can you come back later?"

"I'm afraid I won't be here later," answered a muffled voice from the corridor.

"Oh, Thon Taddeo—come in, then." Dom Paulo straightened; he took a firm grip on pain, not trying to dismiss it but only to control it as he would an unruly servant.

The scholar entered and placed a folder of papers on the abbot's desk. "I thought it only proper to leave you these," he said.

"What do we have here?"

"The sketches of your fortifications. The ones the officers made. I suggest you burn them immediately."

"Why have you done this?" Dom Paulo breathed. "After our words downstairs—"

"Don't misunderstand," Thon Taddeo interrupted. "I would have returned them in any event—as a matter of honor, not to let them take advantage of your hospitality for—but never mind. If I had returned the sketches any sooner, the officers would have had plenty of time and opportunity to draw up another set."

The abbot arose slowly and reached for the scholar's hand.

Thon Taddeo hesitated. "I promise no effort on your behalf—"

"I know."

"—because I think what you have here should be open to the world."

"It is, it was, it always will be."

They shook hands gingerly, but Dom Paulo knew that it was no token of any truce but only of mutual respect between foes. Perhaps it would never be more.

But why must it all be acted again?

The answer was near at hand; there was still the serpent whispering: For God doth know that in what day soever you shall eat thereof, your eyes shall be opened: and you shall be as Gods. The old father of lies was clever at telling half-truths: How shall you "know" good and evil, until you shall have sampled a little? Taste and be as Gods. But neither infinite power nor infinite wisdom could bestow godhood upon men. For that there would have to be infinite love as well.

Dom Paulo summoned the younger priest. It was very nearly time to go. And soon it would be a new year.

That was the year of the unprecedented torrent of rain on the desert, causing seed long dry to burst into bloom.

That was the year that a vestige of civilization came to the nomads of the Plains, and even the people of Laredo began to murmur that it was possibly all for the best. Rome did not agree.

In that year a temporary agreement was formalized and broken between the states of Denver and Texarkana. It was the year that the Old Jew returned to his former vocation of Physician and Wanderer, the year that the monks of the Albertian Order of Leibowitz buried an abbot and bowed to a new one. There were bright hopes for tomorrow.

It was the year a king came riding out of the east, to subdue the land and own it. It was a year of Men.

## 23

# I

It was unpleasantly hot beside the sunny that skirted the wooded hillside, and the heat had aggravated the Poet's thirst. After a long time he dizzily lifted his head from the ground and tried to look around. The

melee had ended; things were fairly quiet now, except for the cavalry officer. The buzzards were even gliding down to land.

There were several dead refugees, one dead horse, and the dying cavalry officer who was pinned under the horse. At intervals, the cavalryman awoke and faintly screamed. Now he screamed for Mother, and again he screamed for a priest. At times he awoke to scream for his horse. His screaming quieted the buzzards and further disgruntled the Poet, who was feeling peevish anyhow. He was a very dispirited Poet. He had never expected the world to act in a courteous, seemly, or even sensible manner, and the world had seldom done so; often he had taken heart in the consistency of its rudeness and stupidity. But never before had the world shot the Poet in the abdomen with a musket. This he found not heartening at all.

Even worse, he had not now the stupidity of the world to blame but only his own. The Poet himself had blundered. He had been minding his own business and bothering no one when he noticed the party of refugees galloping toward the hill from the east with a cavalry troop in close pursuit. To avoid the affray, he had hidden himself behind some scrub that grew from the lip of the embankment flanking the trail, a vantage point from which he could have seen the whole spectacle without being seen. It was not the Poet's fight. He cared nothing whatever for the political and religious tastes of either the refugees or the cavalry troop. If slaughter had been fated, fate could have found no less disinterested a witness than the Poet. Whence, then, the blind impulse?

The impulse had sent him leaping from the embankment to tackle the cavalry officer in the saddle and stab the fellow three times with his own belt-knife before the two of them toppled to the ground. He could not understand why he had done it. Nothing had been accomplished. The officer's men had shot him down before he ever climbed to his feet. The slaughter of refugees had continued. They had all ridden away then in pursuit of other fugitives, leaving the dead behind.

He could hear his abdomen growl. The futility, alas, of trying to digest a rifle ball. He had done the useless deed, he decided finally, because of the part with the dull saber. If the officer had merely hacked the woman out of the saddle with one clean stroke, and ridden on, the Poet would have overlooked the deed. But to keep hacking and hacking that way—

He refused to think about it again. He thought of water.

"O God—O God—" the officer kept complaining.

"Next time, sharpen your cutlery," the Poet wheezed.

But there would be no next time.

The Poet could not remember ever fearing death, but he had often suspected Providence of plotting the worst for him as to the manner of his dying when the time came to go. He had expected to rot away, Slowly and not very fragrantly. Some poetic insight had warned him that he would surely die a blubbing leprous lump, cravenly penitential but impenitent. Never had he anticipated anything so blunt and final as a bullet in the stomach, and with not even an audience at hand to hear his dying quips. The last thing they had heard him say when they shot him was: "*Oof!*"—his testament for posterity. *Ooof!*—a memorabile for you, Domnissime.

"Father? Father?" the officer moaned.

After a while the Poet mustered his strength and lifted his head again, blinked dirt out of his eye, and studied the officer for a few seconds. He was certain the officer was the same one he had tackled, even though the fellow by now had turned a chalky shade of green. His bleating for a priest that way began to annoy the Poet. At least three clergymen lay dead among the refugees, and yet the officer was not now being so particular about specifying his denominational persuasions. Maybe I'll do, the Poet thought.

He began dragging himself slowly toward the cavalryman. The officer saw him coming and groped for a pistol. The Poet paused; he had not expected to be recognized. He prepared to roll for cover. The pistol was wavering in his direction. He watched it waver for a moment, then decided to continue his advance. The officer pulled the trigger. The shot went wild by yards, worse luck.

The officer was trying to reload when the Poet took the gun away from him. He seemed delirious, and kept trying to cross himself.

“Go ahead,” the Poet grunted, finding the knife.

“Bless me, Father, for I have sinned—”

“*Ego te absolvo*, son,” said the Poet, and plunged the knife into his throat.

Afterward, he found the officer’s canteen and drank a little. The water was hot from the sun, but it seemed delicious. He lay with his head pillowed on the officer’s horse and waited for the shadow of the hill to creep over the road. Jesus, how it hurt! That last bit isn’t going to be as easy to explain, he thought; and me without my eyeball too. If there’s really anything to explain. He looked at the dead cavalryman.

“Hot as hell down there, isn’t it?” he whispered hoarsely.

The cavalrymen was not being informative. The Poet took another drink from the canteen, then another. Suddenly there was a very painful bowel movement. He was quite unhappy about it for a moment or two.

The buzzards strutted, preened, and quarreled over dinner; it was not yet properly cured. They waited a few days for the wolves. There was plenty for all. Finally they ate the Poet.

As always the wild black scavengers of the skies laid their eggs in season and lovingly fed their young. They soared high over prairies and mountains and plains, searching for the fulfillment of that share of life’s destiny which was theirs according to the plan of Nature. Their philosophers demonstrated by unaided reason alone that the Supreme *Cathartes aura regnans* had created the world especially for buzzards. They worshipped him with hearty appetites for many centuries.

Then, after the generations of the darkness came the generations of the light. And they called it the Year of Our Lord 3781—a year of His peace, they prayed.

T

here were spaceships again in that century, and the ships were manned by fuzzy impossibilities that walked on two legs and sprouted tufts of hair in unlikely anatomical regions. They were a garrulous kind. They belonged to a race quite capable of admiring its own image in a mirror, and equally capable of cutting its own throat before the altar of some tribal god, such as the deity of Daily Shaving. It was a species which often considered itself to be, basically, a race of divinely inspired toolmakers; any intelligent entity from Arcturus would instantly have perceived them to be, basically, a race of impassioned after-dinner speech-makers.

It was inevitable, it was manifest destiny, they felt (and not for the first time) that such a race go forth to conquer stars. To conquer them several times, if need be, and certainly to make speeches about the conquest. But, too, it was inevitable that the race succumb again to the old maladies on new worlds, even as on Earth before, in the litany of life and in the special liturgy of Man: Versicles by Adam., Rejoinders by the Crucified.

We are the centuries.

We are the chin-choppers and the golly-woppers,  
and soon we shall discuss the amputation of your head.

We are your singing garbage men, Sir and Madam,  
and we march in cadence behind you, chanting rhymes that some think odd.

Left!

*Wir*, as they say in the old country, *marschieren weiter wenn alles in Scherben faellt*.

We have your eoliths and your mesoliths and your neoliths. We have your Babylons and your Pompeiis, your Caesars and your chromium-plated (vital-ingredient-impregnated) artifacts.

We have your bloody hatchets and your Hiroshimas. We march in spite of Hell, we do—

Atrophy, Entropy, and *Proteus vulgaris*,

telling bawdy jokes about a farm girl name of Eve

and a traveling salesman called Lucifer.

We bury your dead and their reputations.

We bury you. We are the centuries.

Be born then, gasp wind, screech at the surgeon's slap, seek manhood, taste a little of godhood, feel pain, give birth, struggle a little while, succumb:

(Dying, leave quietly by the rear exit, please.)

Generation, regeneration, again, again, as in a ritual, with blood-stained vestments and nail-torn hands, children of Merlin, chasing a gleam. Children, too, of Eve, forever building Edens—and kicking them apart in berserk fury because somehow it isn't the same. (AGH! AGH! AGH!—an idiot screams his mindless anguish amid the rubble. But quickly! let it be inundated by the choir, chanting Alleluias at ninety decibels.)

Hear then, the last Cantic of the Brethren of the Order of Leibowitz, as sung by the century that swallowed its name:

V: Lucifer is fallen.

R: *Kyrie eleison*.

V: Lucifer is fallen.

R: *Christe eleison*.

V: Lucifer is fallen.

R: *Kyrie eleison, eleison imas!*

*LUCIFER IS FALLEN*; the code words, flashed electrically across the continent, were whispered in conference rooms, were circulated in the form of crisp memoranda stamped *SUPREME SECRETISSIMO*), were prudently withheld from the press. The words rose in a threatening tide behind a dike of official secrecy. There were several holes in the dike, but the holes were fearlessly plugged by bureaucratic Dutch boys whose forefingers became exceedingly swollen while they dodged verbal spitballs fired by the press.

FIRST REPORTER: What is Your Lordship's comment on Sir Rische Thon Berker's statement that the radiation count on the Northwest Coast is ten times the normal level?

DEFENSE MINISTER: I have not read the statement.

FIRST REPORTER: Assuming it to be true, what could be responsible for such an increase?

DEFENSE MINISTER: The question calls for conjecture. Perhaps Sir Rische discovered a rich uranium deposit. No, strike that out. I have no comment.

SECOND REPORTER: Does Your Lordship regard Sir Rische as a competent and responsible scientist?

DEFENSE MINISTER: He has never been employed by my department.

SECOND REPORTS: That is not a responsive answer.

DEFENSE MINISTER: It is quite responsive. Since he has never been employed by my department, I have no way of knowing his competence or responsibility. I am not a scientist.

LADY REPORTER: Is it true that a nuclear explosion occurred recently somewhere across the Pacific?

DEFENSE MINISTER: As Madam well knows, the testing of atomic weapons of any kind is a high crime and an act of war under present international law. We are not at war. Does that answer your question?

LADY REPORTER: No, Your Lordship, it does not. I did not ask if a test had occurred. I asked whether an explosion had occurred.

DEFENSE MINISTER: We set off no such explosion. If they set one off, does Madam suppose that this government would be informed of it by them?

( *Polite laughter.* )

LADY REPORTER: That does not answer my—

FIRST REPORTER: Your Lordship, Delegate Jerulian has charged the Asian Coalition with the assembly of hydrogen weapons in deep space, and he says our Executive Council knows it and does nothing about it. Is that true?

DEFENSE MINISTER: I believe it is true that the Opposition's Tribune made some such ridiculous charge, yes.

FIRST REPORTER: Why is the charge ridiculous? Because they are not making space-to-earth missiles in space? Or because we are doing something about it?

DEFENSE MINISTER: Ridiculous either way. I should like to point out, however, that the manufacture of nuclear weapons has been prohibited by treaty ever since they were redeveloped. Prohibited everywhere—in space or on Earth.

SECOND REPORTER: REPORTER: But there's no treaty to proscribe the orbiting of fissionable materials, is there?

DEFENSE MINISTER: Of course not. The space-to-space vehicles are all nuclear powered. They have to be fueled.

SECOND REPORTER: And there's no treaty to prohibit orbiting of other materials from which nuclear weapons might be manufactured?

DEFENSE MINISTER (*irritably*): To my knowledge, the existence of matter outside our atmosphere has not been outlawed by any treaty or act of parliament. It is my understanding that space is chock-full of things like the moon and the asteroids, which are *not* made of green cheese.

LADY REPORTER: Is Your Lordship suggesting that nuclear weapons could be manufactured without raw materials from Earth?

DEFENSE MINISTER: I was not suggesting that, no. Of course it's theoretically possible. I was saying that no treaty or law prohibits the orbiting of any special raw materials—only nuclear weapons.

LADY REPORTER: If there was a recent test shot in the Orient, which do you think more probable: a subterranean explosion that broke surface, or a space-to-earth missile with a defective warhead?

DEFENSE MINISTER: Madam, your question is so conjectural that you force me to say: "No comment."

LADY REPORTER: I was only echoing Sir Rische and Delegate Jerulian.

DEFENSE MINISTER: They are free to indulge in wild speculation. I am not.

SECOND REPORTER: At the risk of seeming wry—What is Your Lordship's opinion of the weather?

DEFENSE MINISTER: Rather warm in Texarkana, isn't it? I understand they're having some bad dust storms in the Southwest. We may catch some of it hereabouts.

LADY REPORTER: Are you in favor of Motherhood, Lord Ragelle?

DEFENSE MINISTER: I am sternly opposed to it, Madam. It exerts a malign influence on youth, particularly upon young recruits. The military services would have superior soldiers if our fighting men had

not been corrupted by Motherhood.

LADY REPORTER: May we quote you on that?

DEFENSE MINISTER: Certainly, Madam—but only in my obituary, not sooner.

LADY REPORTER: Thank you. I'll prepare it in advance.

Like other abbots before him, the Dom Jethrah Zerchi was by nature not an especially contemplative man, although as spiritual ruler of his community he was vowed to foster the development of certain aspects of the contemplative life in this flock, and, as a monk, to attempt the cultivation of a contemplative disposition in himself. Dom Zerchi was not very good at either of these. His nature impelled him toward action even in thought; his mind refused to sit still and contemplate. There was a quality of restlessness about him which had driven him to the leadership of the flock; it made him a bolder ruler, occasionally even a more successful ruler, than some of his predecessors, but that same restlessness could easily become a liability, or even a vice.

Zerchi was vaguely aware, most of the time, of his own inclination toward hasty or impulsive action when confronted by unslayable dragons. Just now, however, the awareness was not vague but acute. It operated in unfortunate retrospect. The dragon had already bitten St. George.

The dragon was an Abominable Autoscribe, and its malignant enormity, electronic by disposition, filled several cubical units of hollow wall space and a third of the volume of the abbot's desk. As usual, the contraption was on the blink. It miscapitalized, mispunctuated, and interchanged various words. Only a moment ago, it had committed electrical *lese majeste* on the person of the sovereign abbot, who, after calling a computer repairman and waiting three days for him to appear, had decided to repair the stenographic abomination himself. The floor of his study was littered with typed scraps of trial dictation. Typical among these was one which bore the information:

testing tesTing testing? TESTing testing? damNatioN?  
whY the craZY capiTALs# now Is the tiMe foR aLL gooD  
memoriZERS to Gum to tHe aChE of the bookLEGgerS?  
Drat; caN yOu do beTTer in LAtin# now traNsLaTe;  
nECCesse Est epistULam sacri coLLegio mIttendAm esse statim  
dictem? What's wrong WITH tHe blasTED THing#

Zerchi sat on the floor in the midst of the litter and tried to massage the involuntary tremor out of his forearm, which had been recently electrified while exploring the Autoscribe's intestinal regions. The muscular twitching reminded him of the galvanic response of a severed frog's leg. Since he had prudently remembered to disconnect the machine before tampering with it, he could only suppose that the fiend who invented the thing had provided it with facilities for electrocuting customers even without power. While tweaking and tugging at connections in a search for loose wires, he had been assaulted by a high voltage filter capacitor which had taken advantage of an opportunity to discharge itself to ground through the person of the Reverend Father Abbot when Reverend Father's elbow brushed against the chassis. But Zerchi had no way of knowing whether he had fallen victim to a law of Nature for filter capacitors or to a cunningly devised booby trap aimed at discouraging customer-tampering. Anyway, he had fallen. His posture on the floor had come about involuntarily. His only claim to competence at the repair of polylinguistic transcription devices lay in his proud record of once having extracted a dead mouse from the information storage circuitry, thereby correcting a mysterious tendency on the part of the machine to write double syllables (doudoubleble sylsyllablesles). Having discovered no dead mice this time, he could feel for loose wires and hope Heaven had granted him charismata as an electronic healer. But it was apparently not so.

"Brother Patrick!" he called toward the outer office, and climbed wearily to his feet.

"Hey, Brother Pat!" he shouted again.

Presently the door opened and his secretary waddled in, glanced at the open wall cabinets with their stupefying maze of computer circuitry, scanned the cluttered floor, then warily studied his spiritual ruler's expression. "Shall I call the repair service again, Father Abbot?"

"Why bother?" Zerchi grunted. "You've called them three times. They've made three promises. We've waited three days. I need a stenographer. Now! Preferably a Christian. *That* thing—" he waved irritably toward the Abominable Autoscribe—"is a damned infidel or worse. Get rid of it. I want it out of here."

"The APLAC?"

"The APLAC. Sell it to an atheist. No, that wouldn't be kind. Sell it as junk. I'm through with it. Why, for Heaven's sake, did Abbot Boumous—may his soul be blessed—ever buy the silly contraption?"

"Well, Domne, they say your predecessor was fond of gadgets, and it *is* convenient to be able to write letters in languages you yourself can't speak."

"It is? You mean it *would* be. That contraption—listen, Brother, they claim it thinks. I didn't believe it at first. Thought, implying rational principle, implying soul. Can the principle of a 'thinking machine'—man-made—be a rational soul? Bah! It seemed a thoroughly pagan notion at first. But do you know what?"

"Father?"

"Nothing could be that perverse without premeditation! It *must* think! It knows good and evil, I tell you, and it chose the latter. Stop that snickering, will you? It's not funny. The notion isn't even pagan. Man made the contraption, but he didn't make its principle. They speak of the vegetative principle as a soul, don't they? A vegetable soul? And the animal soul? Then the rational human soul, and that's all they list in the way of incarnate vivifying principles, angels being disembodied. But how do we know the list is comprehensive? Vegetative, animative, rational—and then what else? That's what else, right there. That thing. And it *fell*. Get it out of here—But first I've got to get a radiogram off to Rome."

"Shall I get my pad, Reverend Father?"

"Do you speak Alleghenian?"

"No, I don't."

"Neither do I, and Cardinal Hoffstraft doesn't speak SouthWest."

"Why not Latin, then?"

"Which Latin? The Vulgate or Modern? I don't trust my own Anglo-Latin, and if I did, *he'd* probably not trust his." He frowned at the bulk of the robotic stenographer. Brother Patrick frowned with him, then stepped over to the cabinets and began peering into the maze of subminiature circuit components.

"No mouse," the abbot assured him.

"What are all these little knobs?"

"*Don't touch!*" Abbot Zerchi yelped as his secretary curiously fingered one of several dozen sub-chassis dial settings. These sub-chassis controls were mounted in neat square array in a box, the cover of which the abbot had removed, bore the irresistible warning: FACTORY ADJUSTMENTS ONLY.

"You didn't move it, did you?" he demanded, going to Patrick's side.

"I might have wiggled it a little, but I think it's back where it was."

Zerchi showed him the warning on the box's cover. "Oh," said Pat, and both of them stared.

"It's the punctuation, mostly, isn't it, Reverend Father?"

"That and stray capitals, and a few confused words."

They contemplated the squiggles, quiggles, quids, thingumbobs, and doohickii in mystified silence.

"Did you ever hear of the Venerable Francis of Utah?" the abbot asked at last.

"I don't recall the name, Domne. Why?"

"I was just hoping he's in a position to pray for us right now, although I don't believe he was ever canonized. Here, let's try turning this whatsis up a bit."

"Brother Joshua used to be some kind of an engineer. I forget what. But he was in space. They have to know a lot about computers."

"I've already called him He's afraid to touch it. Here, maybe it needs—"

Patrick edged away. "If you would excuse me, m'Lord, I—"

Zerchi glanced up at his wincing scribe. "Oh, ye of little faith!" he said, correcting another

## FACTORY ADJUSTMENT.

"I thought I heard someone outside."

"Before the cock crows thrice—besides, you touched the first knob, didn't you?"

Patrick wilted. "But the cover was off, and . . ."

"*Hinc igitur effuge*. Out, out, before I decide it was your fault."

Alone again, Zerchi inserted the wall plug, sat at his desk, and, after muttering a brief prayer to Saint Leibowitz (who in recent centuries had come into wider popularity as the patron saint of electricians than he had ever won as the founder of the Albertian Order of Saint Leibowitz), flipped the switch. He listened for spitting and hissing noises, but none came. He heard only the faint clicking of delay relays and the familiar purr of timing motors as they came up to full speed. He sniffed. No smoke or ozone to be detected. Finally, he opened his eyes. Even the indicator lights of the desktop control panel were burning as usual. FACTORY ADJUSTMENTS ONLY, indeed!

Somewhat reassured, he switched the format selector to RADIOGRAM, turned the process selector to DICTATE-RECORD, the translator unit to SOUTHWEST IN and ALLEGHENIAN OUT, made certain the transcription switch was on OFF, keyed his microphone button and began dictating:

"Priority Urgent: To His Most Reverend Eminence, Sir Eric Cardinal Hoffstraff, Vicar Apostolic Designate, Provisional Vicariate Extraterrestris, Sacred Congregation of Propaganda, Vatican, New Rome...

"Most Eminent Lord: In view of the recent renewal of world tensions, hints of a new international crisis, and even reports of a clandestine nuclear armaments race, we should be greatly honored if Your Eminence deems it prudent to counsel us concerning the present status of certain plans held in abeyance. I have reference to matters outlined in the *Motu proprio* of Pope Celestine the Eighth, of happy memory, given on the Feast of the Divine Overshadowing of the Holy *Virgin*, Anno Domini 3735, and beginning with the words—" he paused to look through the papers on his desk—" "*Ab hac planeta nativitatis aliquos filios Ecclesiae usque ad planetas solium alienorum iam abisse et numquam redituros esse intelligimus*." Refer also to the confirming document of Anno Domini 3749, *Quo peregrinatur grex, pastor secure*, authorizing the purchase of an island, uh-certain vehicles. Lastly refer to *Cam belli nunc remote*, of the late Pope Paul, Anno Domini 3756, and the correspondence which followed between the Holy Father and my predecessor, culminating with an order transferring to us the task of holding the plan *Quo peregrinatur* in a state of, uh—suspended animation, but only so long as Your Eminence approves. Our state of readiness with respect to *Quo peregrinatur* has been maintained, and should it become desirable to execute the plan, we would need perhaps six weeks' notice..."

While the abbot dictated, the Abominable Autoscribe did no more than record his voice and translate it into a phoneme code on tape. After he had finished speaking he switched the process selector to ANALYZE and pressed a button marked TEXT PROCESSING. The ready-lamp winked off. The machine began processing.

Meanwhile, Zerchi studied the documents before him.

A chime sounded. The ready-lamp winked on. The machine was silent. With only one nervous glance at the FACTORY ADJUSTMENT ONLY box, the abbot dosed his eyes and pressed the WRITE button.

*Clatterty-chat-clatter-spatter-pip popperty-kak-fub-clotter*, the automatic writer chattered away at what he hoped would be the text of the radiogram. He listened hopefully to the rhythm of the keys. That first *clatterty-chat-clatter-spatter-pip* had sounded quite authoritative. He tried to hear the rhythms of Alleghenian speech in the sound of the typing, and after a time he decided that there was indeed a certain Allegheny lilt mixed into the rattle of the keys. He opened his eyes. Across the room, the

robotic stenographer was briskly at work. He left his desk and went to watch it work. With utmost neatness, the Abominable Autoscribe was writing the Alleghenian equivalent of:

“Hey, Brother Pat!”

He turned off the machine in disgust. Holy Leibowitz! Did we labor for this? He could not see that it was any improvement over a carefully trimmed goose-quill and a pot of mulberry ink.

*“Hey, Pat!”*

There was no immediate response from the outer office, but after a few seconds a monk with a red beard opened the door, and, after glancing at the open cabinets, the littered floor, and the abbot’s expression, he had the gall to smile.

“What’s the matter, Magister meus? Don’t you like our modern technology?”

“Not particularly, no!” Zerchi snapped. “Hey, *Pat!*”

“He’s out, m’Lord.”

“Brother Joshua, can’t you fix this thing? Really.”

“Really?—No, I can’t.”

“I’ve got to send a radiogram.”

“That’s too bad, Father Abbot. Can’t do that either. They just took our crystal and padlocked the shack.”

“They?”

“Zone Defense Interior. All private transmitters have been ordered off the air”

Zerchi wandered to his chair and sank into it. “A defense alert. Why?”

Joshua shrugged. “There’s talk about an ultimatum. That’s all I know, except what I hear from the radiation counters.”

“Still rising?”

“Still rising.”

“Call Spokane.”

By midafternoon the dusty wind had come. The wind came over the mesa and over the small city of Sanly Bowitts. It washed over the surrounding countryside, noisily through the tall corn in the irrigated fields, tearing streamers of blowing sand from the sterile ridges. It moaned about the stone walls of the ancient abbey and about the aluminum and glass walls of the modern additions to the abbey. It besmirched the reddening sun with the dirt of the land, and sent dust devils scurrying across the pavement of the six-lane highway that separated the ancient abbey from its modern additions,

On the side road which at one point flanked the highway and led from the monastery by way of a residential suburb into the city, an old beggar clad in burlap paused to listen to the wind. The wind brought the throb of practice rocketry explosively from the south. Ground-to-space interceptor missiles were being fired toward target orbits from a launching range far across the desert. The old man gazed at the faint red disk of the sun while he leaned on his staff and muttered to himself or to the sun, “Omens, omens—”

A group of children were playing in the weed-filled yard of a hovel just across the side road, their games proceeding under the mute but all-seeing auspices of a gnarled black woman who smoked a weed-filled pipe on the porch and offered an occasional word of solace or remonstrance to one or another tearful player who came as plaintiff before the grandmotherly court of her

hovel porch.

One of the children soon noticed the old tramp who stood across the roadway, and presently a shout went up: "Lookit, lookit! It's old Lazar! Auntie say, he be old Lazar, same one 'ut the Lor' Hesus raise up! Lookit! Lazar! Lazar!"

The children thronged to the broken fence. The old tramp regarded them grumpily for a moment, then wandered on along the road. A pebble skipped across the ground at his feet.

"Hey, Lazar...!"

"Auntie say, what the Lor' Hesus raise up, it stay up! Lookit him! Ya! Still huntin' for the Lor' 'ut raise him. Auntie say—"

Another rock skipped after the old man, but he did not look back. The old woman nodded sleepily. The children returned to their games. The dust storm thickened.

Across the highway from the ancient abbey, atop one of the new aluminum and glass buildings, a monk on the roof was sampling the wind. He sampled it with a suction device which ate the dusty air and blew the filtered wind to the intake of an air compressor on the floor below. The monk was no longer a youth, but not yet middle-aged. His short red beard seemed electrically charged, for it gathered pendant webs and streamers of dust; he scratched it irritably from time to time, and once he thrust his chin into the end of the suction hose; the result caused him to mutter explosively, then to cross himself.

The compressor's motor coughed and died. The monk switched off the suction device, disconnected the blower hose and pulled the device across the roof to the elevator and into the cage. Drifts of dust had settled in the corners. He closed the gate and pressed the Down button.

In the laboratory on the uppermost floor, he glanced at the compressor's gauge—it registered MAX NORM—he closed the door, removed his habit, shook the dust out of it, hung it on a peg, and went over it with the section device. Then, going to the deep sheet-steel sink at the end of the laboratory workbench; he turned on the cold water and let it rise to the 200 J. Thrusting his head into the water, he washed the mud from his beard and hair. The effect was pleasantly icy. Dripping and sputtering, he glanced at the door. The likelihood of visitors just now seemed small. He removed his underwear, climbed into the tank, and settled back with a shivery sigh.

UG mark.

Abruptly the door opened. Sister Helene came in with a tray of newly uncrated glassware. Startled, the monk leaped to his feet in the tub.

"Brother Joshua!" the sister shrieked. Half a dozen beakers shattered on the floor.

The monk sat down with a splash that sprayed the room. Sister Helene clucked, sputtered, squeaked, dumped the tray on the workbench, and fled. Joshua vaulted out of the sink and donned his habit without bothering to dry himself or put on his underwear. When he got to the door, Sister Helene was already out of the corridor—probably out of the building and halfway to the sister's chapel just down the side lane. Mortified, he hastened to complete his labors.

He emptied the suction device's contents and collected a sample of the dust in a phial. He took the phial to the workbench, plugged in a pair of headphones, and held the phial at a measured distance from the detector element of a radiation counter while he consulted his watch and listened.

The compressor had a built-in counter. He pressed a stud marked: R

ESET.

The whirling decimal register flipped back to zero and began counting again. He stopped it after one minute and wrote the count on the back of his hand. It was mostly plain air, filtered and compressed; but there was a whiff of something else.

He closed the lab for the afternoon. He went down to the office on the subjacent floor, wrote the count on a wall chart, eyed its perplexing upswing; then sat at his desk and flipped the viewphone switch. He dialed by feel, while gazing at the telltale wallchart. The screen flashed, the phone beeped, and the viewer fluttered into focus on the back of an empty desk chair. After a few seconds a man slid into the chair and peered into the viewer. "Abbot Zerchi here," the abbot grunted. "Oh, Brother Joshua. I was about to call you. Have you been taking a bath?"

"Yes, m'Lord Abbot."

"You might at least blush!"

"I am."

"Well, it doesn't show up on the viewer. Listen. On *this* side of the highway, there's a sign just outside our gates. You've noticed it, of course? It says, 'Women Beware. Enter Not Lest'—and so forth. You've noticed it?"

"Surely, m'Lord."

"Take your baths on *this* side of the sign."

"Certainly."

"Mortify yourself for offending Sister's modesty. I'm aware that you haven't got any. Listen, I suppose you can't even bring yourself to pass the reservoir without jumping in, baby-spanking bald, for a swim."

"Who told you that, m'Lord? I mean—I've only waded—"

"Ye-e-s-s? Well, never mind. Why did you call me?"

"You wanted me to call Spokane."

"Oh, yes. Did you?"

"Yes." The monk gnawed at a bit of dry skin at the corner of his wind-cracked lips and paused uneasily. "I talked to Father Leone. They've noticed it too."

"The increased radiation count?"

"That's not all." He hesitated again. He did not like saying it. To communicate a fact seemed always to lend it fuller existence.

"Well?"

"It's connected with that seismic disturbance a few days ago. It's carried by the upper winds from that direction. All things considered, it looks like fallout from a low altitude burst in the megaton range."

"Heu!" Zerchi sighed and covered his eyes with a hand. *dicis?*

*'Luciferum ruisse mihi*

"Yes, Domne, I'm afraid it was a weapon."

"Not possibly an industrial accident?"

"No."

"But if there were a war on, we'd know. An illicit test? but not that either. If they wanted to test one, they could test it on the far side of the moon, or better, Mars, and not be caught."

Joshua nodded.

"So what does that leave?" the abbot went on. "A display? A threat? A warning shot fired over the bow?"

"That's all I could think of.."

"So that explains the defense alert. Still, there's nothing in the news

except rumors and refusals to comment. And with dead silence from Asia.”

“But the shot *must* have been reported from some of the observation satellites. Unless—I don’t like to suggest this, but—unless somebody has discovered a way to shoot a space-to-earth missile past the satellites, without detection until it’s on the target.”

“Is that possible?”

“There’s been some talk about it, Father Abbot.”

“The government knows. The government *must* know. Several of them know. And yet we hear nothing. We are being protected from hysteria. Isn’t that what they call it? Maniacs! The world’s been in a *habitual* state of crisis for fifty years. *Fifty?*” What am I saying? It’s been in a habitual state of crisis since the beginning—but for half a century now, almost unbearable. And *why*, for the love of God? What is the fundamental irritant, the essence of the tension? Political philosophies? Economics? Population pressure? Disparity of culture and creed? Ask a dozen experts, get a dozen answers. Now Lucifer again. Is the species congenitally insane, Brother? If we’re born mad, where’s the hope of Heaven? Through Faith alone? Or isn’t there any? God forgive me, I don’t mean that. Listen, Joshua—”

“m’Lord?”

“As soon as you close up shop, come back over here...That radiogram—I had to send Brother Pat into town to get it translated and sent by regular wire. I want you around when the answer comes. Do you know what it’s about?”

Brother Joshua shook his head.

“*Quo peregrinatur grex.*”

The monk slowly lost color. “To go into effect, Domne?”

“I’m just trying to learn the status of the plan. Don’t mention it to anybody. Of course, you’ll be affected. See me here when you’re through.”

“Certainly.”

“*Chris’ tecum.*”

“*Cum spiri’ tuo.*”

The circuit opened, the screen faded. The room was warm, but Joshua shivered. He gazed out the window into a premature twilight murky with dust. He could see no farther than the storm fence next to the highway where a passing procession of truck headlights made traveling halos in the dust haze. After a while he became aware of someone standing near the gate where the driveway opened on to the turnpike approach. The figure was dimly visible in silhouette whenever the headlights’ aurorae flashed by in review. Joshua shivered again.

The silhouette was unmistakably that of Mrs. Grales. no one else would have been recognizable in such poor visibility, but the shape of the hooded bundle on her left shoulder; and the way her head tilted toward the right, made her outline uniquely that of Old Ma’am Grales. The monk pulled curtains across the window and turned on the light. He was not repelled by the old woman’s deformity; the world had grown blasé about such genetic mishaps and pranks of the genes. His own left hand still bore a tiny scar where a sixth finger had been removed during his infancy. But the heritage of the *Ignis* was something he preferred to forget for the moment, and Mrs. Grales was one of its more conspicuous heirs.

*Diluvium*

He fingered a globe of the world on his desk. He spun it so that the Pacific Ocean and East Asia drifted past. Where? Precisely where? He twirled the globe faster, slapping it lightly again and again so that the world spun

like a gaming wheel, faster and yet faster until the continents and oceans became a blur. Place your bets, Sir and Madam: Where? He braked the globe abruptly with his thumb. Bank: India pays off. Please collect, Madam. The divination was wild. He spun the globe again until the axial mountings rattled; “days” flitted by as briefest instants—In a reverse sense, he noticed suddenly. If Mother Gaia pirouetted in the same sense, the sun and other passing scenery would rise in the west and set in the east. Reversing time thereby? Said the namesake of my namesake: *Move not, O Sun, toward Gabaon, nor thou, O Moon, toward the valley—a neat trick, forsooth, and useful in these times too. Back up, O Sun, et tu, Luna, recedite in orbitas reversas...* He kept spinning the globe in reverse, as if hoping the simulacrum of Earth possessed the Chronos for unwinding time. A third of a million turns might unwind enough days to carry it back to the *Diluvium Ignis*. Better to use a motor and spin it back to the beginning of Man. He stopped it again with his thumb; once more the divination was wild.

Still he lingered in the office and dreaded going “home” again. “Home” was only across the highway, in the haunted halls of those ancient buildings whose walls still contained stones which had been the rubble concrete of a civilization that had died eighteen centuries ago. Crossing the highway to the old abbey was like crossing an eon. Here in the new aluminum and glass buildings, he was a technician at a workbench where events were only phenomena to be observed with regard for their *How*, not questioning their *Why*. On this side of the road, the falling of Lucifer was only an inference derived by cold arithmetic from the chatter of radiation counters, from the sudden swing of a seismograph pen. But in the old abbey, he ceased to be a technician; over there he was a monk of Christ, a booklegger and memorizer in the community of Leibowitz. Over there, the question would be: “Why, Lord, why?” But the question had already come, and the abbot had said: “See me.”

Joshua reached for his bindlestiff and went to obey the summons of his ruler. To avoid meeting Mrs. Grales, he used the pedestrian underpass; it was no time for pleasant conversations with the bicephalous old tomato woman.

## 25

T

he dike of secrecy had broken. Several dauntless Dutch boys were swept away by the raging tide; the tide swept them right out of Texarkana to their country estates where they became unavailable for comment. Others remained at their posts and staunchly tried to plug new leaks. But the fall of certain isotopes in the wind created a universal byword, spoken on street corners and screamed by banner headlines: *LUCIFER IS FALLEN*.

The Minister of Defense, his uniform immaculate, make-up unsmeared, and his equanimity unruffled, again faced the journalistic fraternity; this time the press conference was televised throughout the Christian Coalition.

LADY REPORTER: Your Lordship appears rather calm, in the face of the facts. Two violations of international law, both defined by treaty as warlike acts, have recently occurred. Doesn't that worry the War Ministry at all?

DEFENSE MINISTER: Madam, as you very well knew, we do not have a War

Ministry here; we have a *Defense* Ministry. And as far as I know, only one violation of international law has occurred. Would you mind acquainting me with the other?

LADY REPORTER: Which one are you *not* acquainted with—the disaster in Itu Wan, or the warning shot over the far South Pacific?

DEFENSE MINISTER(*suddenly stern.*): Surely Madam intends nothing seditious, but your question seems to give comfort, if not credence, to the utterly false Asian charges that the so-called Itu Wan disaster was the result of a weapon test by us and not by them!

LADY REPORTER: If it does, I invite you to throw me in jail. The question was based on a Near East neutralist account, which reported that the Itu Wan disaster was the result of an Asian weapon test, underground, which broke free. The same account said that the Itu Wan test was sighted from our satellites and immediately answered by a space-to-earth warning shot southeast Of New Zealand. But now that you suggest it, was the Itu Wan disaster also the result of a weapon test by us?

DEFENSE MINISTER(*with forced patience*): I recognize the journalistic requirement of objectivity. But to suggest that His Supremacy's government would deliberately violate—

LADY REPORTER: His Supremacy is an eleven-year-old boy, and to call it his government is not only archaic, but a highly dishonorable—even cheap!—attempt to shift the responsibility for a full denial from your own—

MODERATOR: Madam! Please restrain the tenor of your—

DEFENSE MINISTER: Overlook it, overlook it! Madam, you have my full denial if you must dignify the fantastic charges. The so-called Itu Wan disaster was not the result of a weapon test by us. Nor do I have any knowledge of any other recent nuclear detonation.

LADY REPORTER: Thank you.

MODERATOR: I believe the editor of the *Texarkana Star-Insight* has been trying to speak.

EDITOR: Thank you. I should like to ask, Your Lordship: What did happen in Itu Wan?

DEFENSE MINISTER: We have no nationals in that area; we have had no observers there since diplomatic relations were broken during the last world crisis. I can, therefore, only rely upon indirect evidence, and the somewhat conflicting neutralist accounts.

EDITOR: That is to be understood.

DEFENSE MINISTER: Very well, then, I gather there was a sub-surface nuclear detonation—in the megaton range—and it got out of hand. It was rather obviously a test of some sort. Whether it was a weapon or, as some Asia-fringe “neutrals” claim, an attempt to divert an underground river—it was dearly illegal, and adjoining countries are preparing a protest to the World Court.

EDITOR: Is there any risk of war?

DEFENSE MINISTER: I foresee none. But as you know, we have certain detachments of our armed forces which are subject to conscription by the World Court to enforce its decisions, if needed. I foresee no such need, but I cannot speak for the court.

FIRST REPORTER: But the Asian coalition has threatened an immediate all-out strike against our space installations if the court does not take action against us. What if the court is slow in acting?

DEFENSE MINISTER: No ultimatum has been delivered. The threat was for

Asian home consumption, as I see it; to cover their blunder in Itu Wan.

LADY REPORTER: How is your abiding faith in Motherhood today, Lord Ragelle?

DEFENSE MINISTER: I hope Motherhood has at least as much abiding faith in me as I have in Motherhood.

LADY REPORTER: You deserve at least that much, I'm sure.

The news conference, radiated from the relay satellite twenty-two thousand miles from Earth, bathed most of the Western Hemisphere with the flickering VHF signal which carried such intelligence to the panelescent wall screens of the multitudes. One among the multitudes, Abbot Dom Zerchi switched off the set.

He paced for a while, waiting for Joshua, trying not to think. But "not thinking" proved impossible.

Listen, are we helpless? Are we doomed to do it again and again and again? Have we no choice but to play the Phoenix in an unending sequence of rise and fall? Assyria, Babylon, Egypt, Greece, Carthage, Rome, the Empires of Charlemagne and the Turk: Ground to dust and plowed with salt. Spain, France, Britain, America—burned into the oblivion of the centuries. And again and again and again.

*Are we doomed to it, Lord, chained to the pendulum of our own mad clockwork, helpless to halt its swing?*

This time, it will swing us clean to oblivion, he thought.

The feeling of desperation passed abruptly when Brother Pat brought him the second telegram. The abbot ripped it open, read it at a glance and chuckled. "Brother Joshua here yet, Brother?"

"Waiting outside, Reverend Father."

"Send him in."

"Ho, Brother, shut the door and turn on the silencer. Then read this."

Joshua glanced at the first telegram. "An answer from New Rome?"

"It came this morning. But turn on that silencer first. We've got things to discuss."

Joshua closed the door and flipped a wall switch. Concealed loudspeakers squealed a brief protest. When the squealing stopped, the room's acoustic properties seemed suddenly changed.

Dom Zerchi waved him toward a chair, and he read the, first telegram in silence.

"... no action whatever to be taken by you in connection with  
*peregrinatur grex,*" he read aloud.

*Quo*

"You'll have to shout with that thing on," said the abbot, indicating the silencer. "What?"

"I was just reading. So the plan is canceled?"

"Don't look so relieved. That came this morning.

*This came this afternoon."*

The abbot tossed him the second telegram:

IGNORE EARLIER MESSAGE OF THIS DATE. "QUO PEREGRINATUR" TO BE REACTIVATED IMMEDIATELY BY BEQUEST OF HOLY FATHER. PREPARE CADRE TO LEAVE WITHIN THREE DAYS. WAIT FOR CONFIRMING WIRE BEFORE DEPARTURE. REPORT ANY VACANCIES IN CADRE ORGANIZATION. BEGIN CONDITIONAL IMPLEMENTATION

OF PLAN. ERIC CARDINAL HOFFSTRAFF, VICAR APOST.  
EXTRATERRPROVINCIAE.

The monk's face lost color. He replaced the telegram on the desk and sat back in his chair, lips tight together.

"You know what *Quo peregrinatur* is?"

"I know *what* it is, Domne, but not in detail."

"Well, it started as a plan to send a few priests along with a colony group heading for Alpha Centauri. But that didn't work out, because it takes bishops to ordain priests, and after the first generation of colonists, more priests would have to be sent, and so on. The question boiled down to an argument about whether the colonies would last, and if so, should provision be made to insure the apostolic succession on colony planets without recourse to Earth? You know what that would mean?"

"Sending at least three bishops, I imagine."

"Yes, and that seemed a little silly. The colony groups have all been rather small. But during the last world crisis, *Quo peregrinatur* became an emergency plan for perpetuating the Church on the colony planets if the worst came to pass on Earth. We have a ship."

"A *starship*?"

"No less. And we have a crew capable of managing it."

"Where?"

"We have the crew right here."

"Here at the abbey? But who—?" Joshua stopped. His face grew even grayer than before. "But, Domne my experience in space has been entirely in orbital vehicles, not in starships! Before Nancy died and I went to the Cisterc—"

"I know all about that. There are others with starship experience. You know who they are. There are even jokes about the number of ex-spacers that seem to feel a vocation to our Order. It's no accident, of course. And you remember when you were a postulant, how you were quizzed about your experience in space?"

Joshua nodded.

"You must also remember being asked about your willingness to go to space again, if the Order asked it of you."

"Yes."

"Then you were not wholly unaware that you were conditionally assigned to *Quo peregrinatur*, if it ever came to pass?"

"I—I guess I was afraid it was so, m'Lord."

"Afraid?"

"*Suspected*, rather. Afraid too, a little, because I've always hoped to spend the rest of my life in the Order."

"As a priest?"

"That—well, I haven't yet decided."

"*Quo peregrinatur* will not involve releasing you from your vows or mean abandoning the Order."

"The Order goes *too*?"

Zerchi smiled. "And the Memorabilia with it."

"The whole kit-and—Oh, you mean on microfilm. Where to?"

"The Centaurus Colony."

"How long would we be gone, Domne?"

"If you go, you'll never come back."

The monk breathed heavily and stared at the second telegram without seeming to see it. He scratched his beard and appeared bemused.

"Three questions," said the abbot. "Don't answer now, but start thinking about them, and think hard. First are you willing to go? Second, do you have a vocation to the priesthood? Third, are you willing to lead the group? And by *willing*, I don't mean 'willing under obedience'; I mean enthusiastic, or willing to get that way. Think it over; you have three days to think—maybe less."

Modern change had made but few incursions upon the buildings and the grounds of the ancient monastery. To protect the old buildings against the encroachment of a more impatient architecture, new additions had been made outside the walls and even across the highway—sometimes at the expense of convenience. The old refectory had been condemned because of a buckling roof, and it was necessary to cross the highway in order to reach the new refectory. The inconvenience was somewhat mitigated by the culvert walk under through which the brothers marched daily to meals.

Centuries old, but recently widened, the highway was the same road used by pagan armies, pilgrims, peasants, donkey carts, nomads, wild horsemen out of the East, artillery, tanks, and ten-ton trucks. Its traffic had gushed or trickled or dripped, according to the age and season. Once before, long ago, there had been six lanes and robot traffic. Then the traffic had stopped, the paving had cracked, and sparse grass grew in the cracks after an occasional rain. Dust had covered it. Desert dwellers had dug up its broken concrete for the building of hovels and barricades. Erosion made it a desert trail, crossing wilderness. But now there were six lanes and robot traffic, as before.

"Traffic's light tonight," the abbot observed as they left the old main gate. "Let's hike across. That tunnel can be suffocating after a dust storm. Or don't you feel like dodging buses?"

"Let's go," Brother Joshua agreed.

Low-slung trucks with feeble headlights (useful only for warning purposes) sped mindlessly past them with whining tires and moaning turbines. With dish antennae they watched the road, and with magnetic feelers they felt at the guiding strips of steel in the roadbed and were given guidance thereby, as they rushed along the pink, fluorescent river of oiled concrete. Economic corpuscles in an artery of Man, the behemoths charged heedlessly past the two monks who dodged them from lane to lane. To be felled by one of them was to be run over by truck after truck until a safety cruiser found the flattened imprint of a man on the pavement and stopped to clean it up. The autopilots' sensing mechanisms were better at detecting masses of metal than masses of flesh and bone.

"This was a mistake," Joshua said as they reached the center island and paused for breath. "Look who's standing over there."

The abbot peered for a moment, then clapped his forehead. "Mrs. Grales! I clean forgot: it's her night to prowl me down. She's sold her tomatoes to the sisters' refectory, and now she's after me again."

"After you? She was there last night, and the night before, too. I thought she was waiting for a ride. What does she want from you?"

"Oh, nothing really. She's finished gypping the sisters on the price of tomatoes, and now she'll donate the surplus profit to me for the poor box. It's a little ritual. I don't mind the ritual. It's what comes afterwards

that's bad. You'll see."

"Shall we go back?"

"And hurt her feelings? Nonsense. She's seen us by now. Come on."

They plunged into the thin stream of trucks again.

The two-headed woman and her six-legged dog waited with an empty vegetable basket by the new gate; the woman crooned softly to the dog. Four of the dog's legs were healthy legs, but an extra pair dangled uselessly at its sides. As for the woman, one head was as useless as the extra legs of the dog. It was a small head, a cherubic head, but it never opened its eyes. It gave no evidence of sharing in her breathing or her understanding. It lolled uselessly on one shoulder, blind, deaf, mute, and only vegetatively alive. Perhaps it lacked a brain, for it showed no sign of independent consciousness or personality. Her other face had aged, grown wrinkled, but the superfluous head retained the features of infancy, although it had been toughened by the gritty wind and darkened by the desert sun.

The old woman curtsied at their approach, and her dog drew back with a snarl. "Evenin', Father Zerchi," she drawled, "a most pleasant evenin' to yer--and to yer, Brother."

"Why, hello, Mrs. Grales--"

The dog barked, bristled, and began a frenzied dance, feinting toward the abbot's ankles with fangs bared for slashing. Mrs. Grales promptly struck her pet with the vegetable basket. The dog's teeth slashed the basket; the dog turned on its mistress. Mrs. Grales kept it away with the basket; and after receiving a few resounding whacks, the dog retired to sit growling in the gateway.

"What a fine mood Priscilla's in" Zerchi observed pleasantly. "Is she going to have pups?"

"Beg shriv'ness, yet honors," said Mrs. Grales, "but's not the pup's motherful condition as makes her so, devil fret her! but 'tis 'at man of mine. He's witched the piteous pup, he has--for love of witchin--and it makes her 'feared of all. I beg yet honors' shriv'ness for her naughties."

"It's all right. Well, good night, Mrs. Grales."

But escape proved not that easy. She caught at the abbot's sleeve and smiled her toothlessly irresistible smile.

"A minute, Father, only a minute for 'n old tumater woman, if ye have it to spare."

"Why, of course! I'd be glad--"

Joshua gave the abbot a sidelong grin and went over to negotiate with the dog concerning right of way. Priscilla eyed him with plain contempt.

"Here, Father, here," Mrs. Grales was saying. "Take a little something for yer box. Here--" Coins rattled while Zerchi protested. "No, here, take of it, take of it," she insisted. "Oh, I know as how ye always say, by fret! but I be not so poor's ye might think on me. And ye do good work. If ye don't take of it, that no-good man of mine'll have it from me, and do him the Devil's work. Here--I sold my tumaters, and I got my price, near, and I bought my feed for the week and even a play-pretty for Rachel. I want ye to have of it. Here."

"It's very kind . . ."

"Grr yumpf!" came an authoritative bark from the gateway. "Grryumpf! Rowf! rowf! RrrrrrOWWFF!"--followed by a rapid sequence of yaps, yelps, and Priscilla's howling in full retreat.

Joshua came wandering back with his hands in his sleeves.

"Are you wounded, man?"

"Grryumpf!" said the monk.

"What on earth did you do to her?"

"Grryumpf!" Brother Joshua repeated. "Rowf! Rowf! RrrrrOWWFF!"—then explained: "Priscilla believes in werewolves. The yelping was hers. We can get past the gate now."

The dog had vanished; but again Mrs. Grales caught at the abbot's sleeve. "Only a minute more of yer, Father, and I'll keep ye no longer. It's little Rachel I wanted to see yer about. There's the baptism and the christenin' to be thought of, and I wished to ask yer if ye'd do the honor of—"

"Mrs. Grales," he put in gently, "go see your own parish priest. He should handle these matters, not I. I have no parish—only the abbey. Talk to Father Selo at Saint Michael's. Our church doesn't even have a font. Women aren't permitted, except in the tribune—"

"The sister's chapel has a font, and women can—"

"It's for Father Selo, not for me. It has to be recorded in your own parish. Only as an emergency could I—"

"Ay, ay, that I know, but I saw Father Selo. I brought Rachel to his church and the fool of a man would not touch her."

"He refused to baptize Rachel?"

"That he did, the fool of a man."

"It's a priest you're talking of, Mrs. Grales, and no fool, for I know him well. He must have his reasons for refusing. If you don't agree with his reasons, then see someone else—but not a monastic priest. Talk to the pastor at Saint Maisie's perhaps."

"Ay, and that too have I done..." She launched into what promised to be a prolonged account of her skirmishings on behalf of the unbaptized Rachel. The monks listened patiently at first, but while Joshua was watching her, he seized the abbot's arm above the elbow; his fingers gradually dug into Zerchi's arm until the abbot winched in pain and tore the fingers away with his free hand.

"What *are* you doing?" he whispered, but then noticed the monk's expression. Joshua's eyes were fixed on the old woman as if she were a cockatrice. Zerchi followed his gaze, but saw nothing stranger than usual; her extra head was half concealed by a sort of veil, but Brother Joshua had certainly seen that often enough.

"I'm sorry, Mrs. Grales," Zerchi interrupted as soon as she fell short of breath. "I really must go now. I'll tell you what: I'll call Father Selo for you, but that's all I can do. We'll see you again, I'm sure."

"Thank yer kindly, and beg yer shriv'ness for keeping yer."

"Good night, Mrs. Grales."

They entered the gate and walked toward the refectory. Joshua thumped the heel of his hand against his temple several times as if to jar something back into place.

"Why were you staring at her like that?" the abbot demanded. "I thought it rude"

"Didn't you notice?"

"Notice what?"

"Then you *didn't* notice. Well . . . let it pass. But who is Rachel? Why won't they baptize the child? Is she the woman's daughter?"

The abbot smiled without humor. "That's what Mrs. Grales contends. But

there's some question as to whether Rachel is her daughter, her sister—or merely an excrescence growing out of her shoulder.”

“Rachel!—her other *head*?”

“Don’t shout so. She’ll hear you yet.”

“And she wants it baptized?”

“Rather urgently, wouldn’t you say? It seems to be an obsession.”

Joshua waved his arms. “How do they settle such things?”

“I don’t know, and I don’t want to know. I’m grateful to Heaven that it’s not up to me to figure it out. If it were a simple case of Siamese twins, it would be easy. But it isn’t. The old-timers say Rachel wasn’t there when Mrs. Grales was born.”

“A farmers’ fable!”

“Perhaps. But some are willing to tell it under oath. How many souls has an old lady with an extra head—a head that ‘just grew’? Things like that cause ulcers in high places, my son. Now, what was it you noticed? Why were you staring at her and trying to pinch my arm off like that?”

The monk was slow to answer. “It smiled at me,” he said at last.

“What smiled?”

“Her extra, uh—Rachel. She smiled. I thought she was going to wake up.”

The abbot stopped him in the refectory’s entranceway and peered at him curiously.

“She smiled,” the monk repeated very earnestly.

“You imagined it.”

“Yes, m’Lord.”

“Then *look* like you imagined it.”

Brother Joshua tried. “I can’t,” he admitted.

The abbot dropped the old woman’s coins in the poor box. “Let’s go on inside,” he said.

The new refectory was functional, chromium befixtured, acoustically tailored, and germicidally illuminated. Gone were the smoke-blackened stones, the tallow lamps, the wooden bowls and cellar-ripened cheeses. Except for the cruciform seating arrangement and a rank of images along one wall, the place resembled an industrial lunchroom. Its atmosphere had changed, as had the atmosphere of the entire abbey. After ages of striving to preserve remnants of culture from a civilization long dead, the monks had watched the rise of a new and mightier civilization. The old tasks had been completed; new ones were found. The past was venerated and exhibited in glass cases, but it was no longer the present. The Order conformed to the times, to an age of uranium and steel and flaring rocketry, amid the growl of heavy industry and the high thin whine of star drive converters. The Order conformed—at least in superficial ways.

“*Accedite ad eum*,” the Reader intoned.

The robed legions stood restlessly at their places during the reading. No food had yet appeared. The tables were bare of dishes. Supper had been deferred. The organism, the community whose cells were men, whose life had flowed through seventy generations, seemed tense tonight, seemed to sense a note amiss tonight, seemed aware, through the connaturality of its membership, of what had been told to only a few. The organism lived as a body, worshiped and worked as a body, and at times seemed dimly conscious as a mind that infused its members and whispered to itself and to Another in the *lingua prima*, baby tongue of the species. Perhaps the tension was increased as much

by faint snort-growl of practice rocketry from the distant anti-missile missile range as by the unexpected postponement of the meal. The abbot rapped for silence, then gestured his prior, Father Lehy toward the lectern. The prior looked pained for a moment before speaking.

"We all regret the necessity," he said at last, "of sometimes disturbing the quiet of contemplative life with news from the outside world. But we must remember too that we are here to pray for the world and its salvation, as for our own. Especially now, the world could use some praying for." He paused to glance at Zerchi.

The abbot nodded.

"Lucifer is fallen," said the priest, and stopped. He stood there looking down at the lectern as if suddenly struck dumb.

Zerchi arose. "That is Brother Joshua's inference, by the way," he interposed. "The Regency Council of the Atlantic Confederacy has said nothing to speak of. The dynasty has issued no statements. We know little more than we knew yesterday, except that The World Court is meeting in emergency session, and that the Defense Interior people are moving fast. There is a defense alert, and we'll be affected, but don't be disturbed. Father—?"

"Thank you, *Dome*," said the prior, seeming to regain his voice as Dom Zerchi was seated again. "Now, Reverend Father Abbot asked me to make the following announcements:

"First, for the next three days we shall sing the Little Office of Our Lady before Matins, asking her intercession for peace.

"Second, general instructions for civil defense in the event of a space-strike or missile-attack alert are available on the table by the entrance. Everybody take one. If you've read it, read it again.

"Third, in the event that an attack warning is sounded, the following brothers are to report immediately to Old Abbey courtyard for special instructions. If no attack warning comes, the same brothers will report there anyway day after tomorrow morning right after Matins and Lauds. Names—Brothers Joshua, Christopher, Augustin, James, Samuel—"

The monks listened with quiet tension, betraying no emotion. There were twenty-seven names in all, but no novices were among them. Some were eminent scholars, there were a janitor and a cook as well. At first hearing, one might assume that the names had been drawn from a box. By the time Father Lehy had finished the list, some of the brothers were eying each other curiously.

"And this same group will report to the dispensary for a complete physical examination tomorrow after Prime," the prior finished. He turned to look questioning at Dom Zerchi.

"Domne?"

"Yes, just one thing," said the abbot, approaching the lectern. "Brothers, let us not assume that there is going to be war. Let's remind ourselves that Lucifer has been with us—this time—for nearly two centuries. And was dropped only twice, in sizes smaller than megaton. We all know what *could* happen, if there's war. The genetic festering is still with us from the last time Man tried to eradicate himself. Back then, in the Saint Leibowitz' time, maybe they didn't know what would happen. Or perhaps they did know, but could not quite believe it until they tried it—like a child who knows what a loaded pistol is supposed to do, but who never pulled a trigger before. They had not yet seen a billion corpses. They had not seen the still-born, the monstrous, the dehumanized, the blind. They had not yet seen the madness and the murder

and the blotting out of reason. Then they did it, and then they saw it.

“Now—*now* the princes, the presidents, the praesidiums, now they know—with dead certainty. They can know it by the children they beget and send to asylums for the deformed; They know it, and they’ve kept the peace. Not Christ’s peace, certainly, but peace, until lately—with only two warlike incidents in as many centuries. Now they have the bitter certainty. My sons, they cannot do it again. Only a race of madmen could do it again—”

He stopped speaking. Someone was smiling,. It was only a small smile, but in the midst of a sea of grave faces it stood out like a dead fly in a bowl of cream. Dom Zerchi frowned. The old man kept on smiling wryly. He sat at the “beggar’s table” with three other transient tramps—an old fellow with a brushy beard, stained yellow about the chin. As a jacket, he wore a burlap bag with armholes. He continued to smile at Zerchi. He looked old as a rain-worn crag, and a suitable candidate for a Maundy lavage. Zerchi wondered if he were about to stand up and make an announcement to his hosts—or blow a ramshorn at them, perhaps?—but that was only an illusion generated by the smile. He quickly dismissed the feeling that he had seen the old man before, somewhere. He concluded his remarks.

On his way back to his place, he paused. The beggar nodded pleasantly at his host. Zerchi came nearer.

“Who are you, if I may ask. Have I seen you somewhere before?”

“What?”

“*Latzar shemi*, ” the beggar repeated.

“I don’t quite—”

“Call me Lazarus, then,” said the old one, and chuckled.

Dom Zerchi shook his head and moved on. *Lazarus?* There was, in the region, an old wives’ tale to the effect that—but what a shoddy sort of *myth* that was. Raised up by Christ but still not a Christian, they said. And yet he could not escape the feeling that he had seen the old man somewhere.

“Let the bread be brought for blessing,” he called, and the deferment of supper was at an end.

After the prayers, the abbot glanced toward the beggars’ table again. The old man was merely fanning his soup with a sort of basket hat. Zerchi dismissed it with a shrug, and the meal began in solemn silence.

Compline, the Church’s night prayer, seemed especially profound that night.

But Joshua slept badly afterwards. In a dream he met Mrs. Grales again. There was a surgeon who sharpened a knife, saying, “This deformity must be removed before it becomes malignant.” And the Rachel face opened its eyes and tried to speak to Joshua, but he could hear her only faintly, and understand her not at all.

“Accurate am I the exception,” she seemed to be saying, “I commensurate the deception. Am.”

He could make nothing of it, but he tried to reach through to save her. There seemed to be a rubbery wall of glass in the way. He paused and tried to read her lips. I am the, I am the—

“I am the Immaculate Conception,” came the dream whisper.

He tried to tear his way through the rubbery glass to save her from the knife, but it was too late, and there was a great deal of blood afterwards. He awoke from the blasphemous nightmare with a shudder and prayed for a time; but

as soon as he slept, there was Mrs. Grales again.

It was a troubled night, a night that belonged to Lucifer. It was the night of the Atlantic assault against the Asian space installations.

In swift retaliation, an ancient city died.

## 26

“

T

his is your Emergency Warning Network,” the announcer was saying when Joshua entered the abbot’s study after Matins of the following day, “bringing you the latest bulletin on the pattern of fallout from the enemy missile assault on Texarkana...”

“You sent for me, Domne?”

Zerchi waved him to silence and toward a seat. The priest’s face looked drawn and bloodless, a steel-gray mask of icy self-control. To Joshua, he seemed to have shrunk in size, to have aged since nightfall. They listened gloomily to the voice which waxed and waned at four-second intervals as the broadcasting stations were switched on and off the air as an impediment to enemy direction-finding equipment:

“...but first, an announcement just released by the Supreme Command. The royal family is safe. I repeat: the royal family is known to be safe. The Regency Council is said to have been absent from the city when the enemy struck. Outside of the disaster area, no civil disorders have been reported, and none is expected.

“A cease-fire order has been issued by the World Court of Nations, with a suspended proscription, involving the death sentence, against the responsible heads of government of both nations. Being suspended, the sentence becomes applicable only if the decree is disobeyed. Both governments cabled to the court their immediate acknowledgment of the order, and there is, therefore, a strong probability that the clash is at an end, a few hours after it began as a preventative assault against certain illegal space installations. In a surprise attack, the space forces of the Atlantic Confederacy last night struck at three concealed Asian missile sites located on the far side of the moon, and totally destroyed one enemy space station known to be involved in a guidance system for space-to-earth missiles. It was expected that the enemy would retaliate against our forces in space, but the barbarous assault on our capital city was an act of desperation which no one anticipated.

“*Special bulletin:* Our government has just announced its intention to honor the cease-fire for ten days if the enemy agrees to an immediate meeting of foreign ministers and military commanders on Guam. The enemy is expected to accept.”

“Ten days,” the abbot groaned. “It doesn’t give us enough time.”

“The Asian radio, however, is still insisting that the recent thermonuclear disaster in Itu Wan, causing some eighty thousand casualties, was the work of an errant Atlantic missile, and the destruction of the city of

Texarkana was therefore retaliation in kind..."

The abbot snapped off the set. "Where's the truth?" he asked quietly. "What's to be believed? Or does it matter at all? When mass murders been answered with mass murder, rape with rape, hate with hate, there's no longer much meaning in asking whose ax is the bloodier. Evil, on evil, piled on evil. Was there any justification in our "police action" in space? How can *we know?* Certainly there was no justification for what *they* did—or was there? We only know what that thing says, and that thing is a captive. The Asian radio has to say what will least displease its government; *ours* has to say what will least displease our fine patriotic opinionated rabble, which is what, coincidentally, the government wants it to say anyhow, so where's the difference? Dear God, there must be half a million dead, if they hit Texarkana with the real thing. I feel like saying words I've never even heard. Toad's dung. Hag pus. Gangrene of the soul. Immortal brain-rot. Do you understand me, Brother? And Christ breathed the same carrion air with us; how meek the Majesty of our Almighty God! What an Infinite Sense of Humor—for Him to become one of us!—King of the Universe, nailed on a cross as a Yiddish Schlemiel by the likes of us. They say Lucifer was cast down for refusing to adore the Incarnate Word; the Foul One must totally lack a sense of humor! God of Jacob, God even of *Cain!* Why do they do it all again?

"Forgive me, I'm raving," he added, less to Joshua than to the old woodcarving of Saint Leibowitz that stood in one corner of the study. He had paused in his pacing to glance up at the face of the image. The image was old, very old. Some earlier ruler of the abbey had sent it down to a basement storeroom to stand in dust and gloom while a dry-rot etched the wood, eating away the spring grain and leaving the summer grain so that the face seemed deeply lined. The saint wore a slightly satiric smile. Zerchi had rescued it from oblivion because of the smile.

"Did you see that old beggar in the refectory last night?" he asked irrelevantly, still peering curiously at the statue's smile.

"I didn't notice, Domne. Why?"

"Never mind, I guess I'm just imagining it." He fingered the mound of faggots where the wooden martyr stood. *That's where all of us are standing now*, he thought. On the fat kindling of past sins. And some of them are mine. Mine, Adam's, Herod's, Judas's, Hannegan's, mine. Everybody's. Always culminates in the colossus of the State, somehow, drawing about itself the mantle of godhood, being struck down by wrath of Heaven: Why? We shouted it loudly enough—God's to be obeyed by nations as by men. Caesar's to be God's policeman, not His plenipotentiary successor, nor His heir. To all ages, all peoples—"Whoever exalts a race or a State of a particular form of State or the depositories of power . . . whoever raises these notions above their standard value and divinizes them to an idolatrous level, distorts and perverts an order of the world planned and created by God..." Where had *that* come from? Eleventh Pius, he thought, without certainty—eighteen centuries ago. But when Caesar got the means to destroy the world, wasn't he already divinized? Only by the consent of the people—same rabble that shouted: *"Non habemus regem nisi caesarem,"* when confronted by Him—God Incarnate, mocked and spat upon. Same rabble that martyred Leibowitz...

"Caesar's divinity is showing again."

"Domne?"

"Let it pass. Are the brothers in the courtyard yet?"

“About half of them were when I passed. Shall I go see?”

“Do. Then come back here. I have something to say to you before we join them.”

Before Joshua returned, the abbot had got the *Quo peregrinatur* papers out of the wall safe.

“Read the precis,” he told the monk. “Look at the table of organization, read the procedural outline. You’ll have to study the rest in detail, but later.”

The communicator buzzed loudly while Joshua was reading.

“Reverend Father Jethrah Zerchi, Abbas, please,” droned the voice of a robot operator.

“Speaking.”

“Urgent priority wire from Sir Eric Cardinal Hoffstraff, New Rome. There is no courier service at this hour. Shall I read?”

“Yes, read the text of it. I’ll send someone down later to pick up a copy.”

“The text is as follows: *‘Grex peregrinus erit. Quam primum est factum suscipiendum vobis, jussu Sactae Sedis. Suscipite ergo operis partem ordini vestro propriam . . .’*”

“Can you read that back in Southwest translation?” the abbot asked.

The operator complied, but in neither did the message seem to contain anything unexpected. It was a confirmation of the plan and a request for speed.

“Receipt acknowledged,” he said at last.

“Will there be a reply?”

“Reply as follows: *Eminentissimo Domino Eric Cardinali Hoffstraff obsequitur Jethra Zerchius, A.O.L., Abbas. Ad has res disputandas iam coegi discessuros fratres ut hodie parati dimitti Roman prima aeris nave possint.* End of text.”

“I read back: *‘Eminentissimo . . .’*”

“All right, that’s all. Out.”

Joshua had finished reading the precis. He closed the portfolio and looked up slowly.

“Are you ready to get nailed on it?” Zerchi asked.

“I—I’m not sure I understand.” The monk’s face was pale.

“I asked you three questions yesterday. I need the answers now.”

“I’m willing to go.”

“That leaves two to be answered.”

“I’m not sure about the priesthood, Domne.”

“Look, you’ll have to decide. You have less experience with starships than any of the others. None of the others is ordained. Someone has to be partially released from technical duties for pastoral and administrative duties. I told you this will not mean abandoning the Order. It won’t, but your group will become an independent daughter house of the Order, under a modified rule. The Superior will be elected by secret ballot of the professed, of course—and you are the most obvious candidate, if you have a vocation to the priesthood as well. Have you, or haven’t you? There’s your inquisition, and the time’s now, and a brief now it is too.”

“But Reverend Father, I’m not through studying—”

“That doesn’t matter. Besides the twenty-seven-man crew—all our people—others are going too: six sisters and twenty children from the Saint Joseph school, a couple of scientists, and three bishops, two of them newly consecrated. They can ordain, and since one of the three is a delegate of the

Holy Father, they will even have the power to consecrate bishops. They can ordain you when they feel you're ready. You'll be in space for years, you know. But we want to know whether you have a vocation, and we want to know it now."

Brother Joshua stammered for a moment, then shook his head. "I don't know."

"Would you like half an hour? Would you like a glass of water? You go so gray. I tell you, son, if you're to lead the flock, you'll have to be able to decide things here-and-now. You need to now. Well, can you speak?"

"Domne, I'm not-certain--"

"You can croak anyhow, eh? Are you going to submit to the yoke, son? Or aren't you broken yet? You'll be asked to be the ass He rides into Jerusalem, but it's a heavy load, and it'll break your back, because He's carrying the sins of the world."

"I don't think I'm able."

"Croak and wheeze. But you can growl too, and that's well for the leader of the pack. Listen, none of us has been really able. But we've tried, and we've been tried. It tries you to destruction, but you're here for that. This Order has had abbots of gold, abbots of cold tough steel, abbots of corroded lead, and none of them was able, although some were abler than others, some saints even. The gold got battered, the steel got brittle and broke, and the corroded lead got stamped into ashes by Heaven. Me, I've been lucky enough to be quicksilver; I spatter, but I run back together somehow. I feel another spattering coming on, though, Brother, and I think it's for keeps this time. What are you made of, son? What's to be tried?"

"Puppy dog tails. I'm meat, and I'm scared, Reverend Father."

"Steel screams when it's forged, it gasps when it's quenched. It creaks when it goes under load. I think even steel is scared, son. Take half an hour to think? A drink of water? A drink of wind? Totter off awhile. If it makes you seasick, then prudently vomit. If it makes you terrified, scream. If it makes you anything, *pray*. But come into the church before Mass, and tell us what a monk is made of. The Order is fissioning, and the part of us that goes into space goes forever. Are you called to be its shepherd, or are you not? Go and decide."

"I guess there's no way out."

"Of *course* there is. You have only to say, 'I'm not called to it.' Then somebody else will be elected, that's all. But go, calm down, and then come to us in church with a yes or a no. That's where I'm going now." The abbot arose and nodded a dismissal.

The darkness in the courtyard was nearly total. Only a thin sliver of light leaked from under the church doors. The faint luminosity of starlight was blurred by a dust haze. No hint of dawn had appeared in the east. Brother Joshua wandered in silence. Finally he sat on a curbing that enclosed a bed of rose bushes. He put his chin in his hands and rolled a pebble around with his toe. The buildings of the abbey were dark and sleeping shadows. A faint slice of cantaloupe moon hung low in the south.

The murmur of chanting came from the church: *Excita, Domine, potentiam tuam, et veni, ut salvos*—Stir up thy might indeed, O Lord, and come to save us. That breath of prayer would go on and on, as long as there was breath to breathe it. Even if the brethren thought it futile . . .

But they couldn't know it to be futile. Or could they? If Rome had any hope, why send the starship? Why, if they believed that prayers for peace on earth would ever be answered? Was not the starship an act of despair? . . .

*Retrahe me, Satanus, et discede!* he thought. The starship is an act of hope. Hope for Man elsewhere, peace somewhere, if not here and now, then someplace: Alpha Centauri's planet maybe, Beta Hydri, or one of the sickly straggling colonies on that planet of What's-its-name in Scorpius. Hope, and not futility, is sending the ship, thou foul Seductor. It is a weary and dog-tired hope, maybe, a hope that says: Shake the dust off your sandals and go preach Sodom to Gomorrha. But it is hope, or it wouldn't say *go* at all. It isn't hope for Earth, but hope for the soul and substance of Man somewhere. With Lucifer hanging over, not sending the ship would be an act of presumption, as you, dirtiest one, tempted Our Lord: If thou be the Son of God, cast thyself down from the pinnacle. For angels will bear thee up.

Too much hope for Earth had led men to try to make it Eden, and of that they might well despair until the time toward the consumption of the world—

Someone had opened the abbey doors. Monks were leaving quietly for their cells. Only a dim glow spilled from the doorway into the courtyard. The light was dim in the church. Joshua could see only a few candles and the dim red eye of the sanctuary lamp. The twenty-six of his brethren were just visible where they knelt, waiting. Someone closed the doors again, but not quite for through a crack he could still see the red dot of the sanctuary lamp. Fire kindled in worship, burning in praise, burning gently in adoration there in its red receptacle. Fire, loveliest of the four elements of the world, and yet an element too in Hell. While it burned adoringly in the core of the Temple, it had also scorched the life from a city, this night, and spewed its venom over the land. How strange of God to speak from a burning bush, and of Man to make a symbol of Heaven into a symbol of Hell.

He peered up again at the dusty stars of morning. Well, there would be no Edens found out there, they said. Yet there were men out there now, men who looked up to strange suns in stranger skies, gasped strange air, tilled strange earth. On worlds of frozen equatorial tundra, worlds of steaming Arctic jungle, a little like Earth perhaps, enough like Earth so that Man might live somehow, by the same sweat of his brow. They were but a handful, these celestial colonists of *Homo loquax nonnumquam sapiens*, a few harassed colonies of humanity that had had small help from Earth thus far; and now they might expect no help at all, there in their new non-Edens, even less like Paradise than Earth had been. Fortunately for them, perhaps. The closer men came to perfecting for themselves a paradise, the more impatient they seemed to become with it, and with themselves as well. They made a garden of pleasure, and became progressively more miserable with it as it grew in richness and power and beauty; for then, perhaps, it was easier for them to see that something was missing in the garden, some tree or shrub that would not grow. When the world was in darkness and wretchedness, it could believe in perfection and yearn for it. But when the world became bright with reason and riches, it began to sense the narrowness of the needle's eye, and that rankled for a world no longer willing to believe or yearn. Well, they were going to destroy it again, were they—this garden Earth, civilized and knowing, to be torn apart again that Man might hope again in wretched darkness.

And yet the Memorabilia was to go with the ship! Was it a curse? . . .  
*Discede, Seductor informis!* It was no curse, this knowledge, unless perverted by Man, as fire had been, this night...

Why do I have to leave, Lord? he wondered. Must I go? And what am I trying to decide: to go, or to refuse to go? But that was already decided; there had

been a summons to that—long ago. *Egrediamur tellure*, then, for it was commanded by a vow I pledged. So I go. But to lay hands on me and call me a priest, to call me *abbas* even, to set me to watch over the souls of my brethren? Must Reverend Father insist on that? But he isn't insisting on that; he is only insisting on knowing whether God insists on that. But he is in such a terrible hurry. Is he really so sure of me as all that? To drop it on me this way, he must be more certain of me than I am of myself.

Speak up, destiny, speak up! Destiny always seems decades away, but suddenly it's not decades away; it's right *now*. But maybe destiny is always right now, right here, right this very instant, maybe.

Isn't it enough that *he's* sure of me? But no, that is not nearly enough. Got to be sure myself, somehow. In half an hour. Less than half, now. *Audi me, Domine—please*, Lord—It's only one of your vipers of this generation, begging for something, begging to know, begging a sign, a sign, a portent, an omen. I've not enough time to decide.

He started nervously. Something *—slithering?*

He heard it as a quiet rustling in the dry leaves under the rose bushes behind him. It stopped, rustled, and slithered again. Would a sign from Heaven slither? An omen or a portent might. The Psalmist's *negotium perambulans in tenebris* might. A sidewinder might.

A cricket, perhaps. It was only rustling. Brother Hegan had killed a sidewinder in the courtyard once, but...Now it slithered again!—a slow dragging in the leaves. Would it be an appropriate sign if it slithered out and stung him in the backside?

The sound of prayer came from the church again: *Reminiscentur et convertentur all Dominum universi fines terrae. Et adorabunt in conspectu universae familiae gentium. Quoniam Domini est regnum; et ipse dominabitur...* Strange words for tonight: All the ends of the Earth shall remember and turn unto the Lord...

The slithering stopped suddenly. Was it right behind him? Really, Lord, a sign isn't absolutely essential. Really, I...

Something nudged at his wrist. He shot upward with a yelp and leaped away from the rose bushes. He seized a loose rock and threw it into the bushes. The crash was louder than he had expected. He scratched at his beard and felt sheepish. He waited. Nothing emerged from the bushes. Nothing slithered. He tossed a pebble. It too rattled offensively in the darkness. He waited, but nothing stirred in the bushes. Ask for an omen, then stone it when it *comes—de essentia hominum*.

A pink tongue of dawn was beginning to lick the stars from the sky. Soon he would have to go tell the abbot. And tell him what?

Brother Joshua brushed gnats from his beard and started toward the church, because someone had just come to the door and looked out—looking for him?

*Unus panis, et unum corpus multi sumus*, came the murmur from the church, *omnes qui de uno . . .* One bread and one body, though many, are we, and of one bread and one chalice have partaken...

He paused in the doorway to look back toward the rose bushes. It was a trap, wasn't it? he thought. You'd send it, knowing I'd throw stones at it, wouldn't you?

A moment later, he slipped inside and went to kneel with the others. His voice joined theirs in the entreaty; for a time he ceased to think, amid the company of monastic spacegoers assembled there. *Annuntiabitur Domino generatio ventura . . .* And these shall be declared to the Lord a generation to come; and

the heavens shall show forth His justice. To a people that shall be born, which the Lord hath made...

When he became aware again, he saw the abbot motioning to him. Brother Joshua went to kneel next to him.

*"Hoc officium, Fili-tibine imponemus oneri?"* he whispered.

"If they want me," the monk answered softly, *"honorem accipiam."*

The abbot smiled. "You heard me badly. I said "burden," not 'honor.'"

*autem onus si audisti ut honorem, nihilo errasti auribus."*

"Accipiam," the monk repeated.

"You're certain?"

"If they choose me, I shall be certain."

"Well enough."

Thus it was settled. While the sun rose, a shepherd was elected to lead the flock.

Afterward, the conventual Mass was a Mass for Pilgrims and Travelers.

It had not been easy to charter a plane for the flight to New Rome. Even harder was the task of winning clearance for the flight after the plane had been chartered. All civil aircraft had come under the jurisdiction of the military for the duration of the emergency, and a military clearance was required. It had been refused by the local ZDI. If Abbot Zerchi had not been aware of the fact that a certain air marshal and a certain cardinal archbishop happened to be friends, the ostensible pilgrimage to New Rome by twenty-seven bookleggers with bindlestiffs might well have proceeded on shank's mare, for lack of permission to use rapid transport jet. By midafternoon, however, clearance had been granted. Abbot Zerchi boarded the plane briefly before takeoff—for last farewells.

"You are the continuity of the Order," he told them.

"With you goes the Memorabilia. With you also goes the apostolic succession, and, perhaps—the Chair of Peter.

"No, no," he added in response to the murmur of surprise from the monks. "Not His Holiness. I had not told you this before, but if the worst comes on Earth, the College of Cardinals—or what's left of it—will convene. The Centaurus Colony may then be declared a separate patriarchate, with full patriarchal jurisdiction going to the cardinal who will accompany you. If the scourge falls on us here, to him, then, will go the Patrimony of Peter. For though life on Earth may be destroyed—God forbid—as long as Man lives elsewhere, the office of Peter cannot be destroyed. There are many who think that if the curse falls on Earth, the papacy would pass to him by the principle of *Epikieia* if there were no survivors here. But that is not your direct concern, brothers, sons, although you will be subject to your patriarch under special vows as these which bind the Jesuits to the Pope.

"You will be years in space. The ship will be your monastery. After the patriarchal see is established at the Centaurus Colony, you will establish there a mother house of the Visitationist Friars of the Order of Saint Leibowitz of Tycho. But the ship will remain in your hands, and the Memorabilia. If civilization, or a vestige of it, can maintain itself on Centaurus, you will send missions to the other colony worlds, and perhaps eventually to the colonies of their colonies. Wherever Man goes, you and your successors will go. And with you, the records and remembrances of four thousand years and more. Some of you, or those to come after you, will be mendicants and wanderers, teaching the chronicles of Earth and the canticles

*Crucis*

of the Crucified to the peoples and the cultures that may grow out of the colony groups. For some may forget. Some may be lost for a time from the Faith. Teach them, and receive into the Order those among them who are called. Pass on to them the continuity. Be for Man the memory of Earth and Origin. Remember this Earth. Never forget her, but *—never come back.*” Zerchi’s voice went hoarse and low. “If you ever come back, you might meet the Archangel at the east end of Earth, guarding her passes with a sword of flame. I feel it. Space is your home hereafter. It’s a lonelier desert than ours. God bless you, and pray for us.”

He moved slowly down the aisle, pausing at each seat to bless and embrace before he left the plane. The plane taxied onto the runway and roared aloft, He watched until it disappeared from view in the evening sky. Afterward, he drove back to the abbey and to the remainder of his flock. While aboard the plane, he had spoken as if the destiny of Brother Joshua’s group were as clear-cut as the prayers prescribed for tomorrow’s Office; but both he and they knew that he had only been reading the palm of a plan, had been describing a hope and not a certainty. For Brother Joshua’s group had only begun the first short lap of a long and doubtful journey, a new Exodus from Egypt under the auspices of a God who must surely be very weary of the race of Man.

Those who stayed behind had the easier part. Theirs was but to wait for the end and pray that it would not come.

## 27

## “

# T

he area affected by local fallout remains relatively stationary,” said the announcer, “and the danger of further windspread has nearly vanished...”

“Well, at least nothing *worse* has happened yet,” remarked the abbot’s guest. “So far, we’ve been safe from it here. It looks like we’ll stay safe, unless the conference falls apart.”

“Will we now,” Zerchi grunted. “But listen a moment.”

“The latest death toll estimate,” the announcer continued, “on this ninth day after the destruction of the capital, gives two million, eight hundred thousand dead. More than half of this figure is from the population of the city proper. The rest is an estimate based on the percentage of the population in the fringe and fallout areas known to have received critical doses of radiation. Experts predict that the estimate will rise as more radiation cases are reported.

“This station is required by law to broadcast the following announcement twice daily for the duration of the emergency: ‘The provisions of Public Law 10-WR-3E in no way empower private citizens to administer euthanasia to victims of radiation poisoning. Victims who have been exposed, or who think they have been exposed, to radiation far in excess of the critical dosage must report to the nearest Green Star Relief Station, where a magistrate is empowered to issue a writ of *Mori Vult* to anyone properly certified as a hopeless

case, if the sufferer desires euthanasia. Any victim of radiation who takes his own life in any manner other than that prescribed by law will be considered a suicide, and will jeopardize the sight of his heirs and dependents to claim insurance and other radiation relief benefits under the law. Moreover, any citizen who assists such a suicide may be prosecuted for murder. The Radiation Disaster Act authorizes euthanasia *only after due process* of law. Serious cases of radiation sickness must report to a Green Star Relief--”

Abruptly, and with such force that he twisted the dial knob free of its shaft, Zerchi switched off the receiver. He swung himself out of his chair and went to stand at the window and look down on the courtyard where a crowd of refugees were milling around several hastily built wooden tables: The abbey, old and new, was overrun by people of all ages and stations whose homes had been in the blighted regions. The abbot had temporarily readjusted the “cloistered” areas of the abbey to give the refugees access to virtually everything except the monks’ sleeping quarters. The sign outside the old gate had been removed, for there were women and children to be fed, clothed, and given shelter.

He watched two novices carrying a steaming cauldron out of the emergence kitchen. They hoisted it onto a table and began ladling out soup.

The abbot’s visitor cleared his throat and stirred restlessly in his chair. The abbot turned.

“Due process, they call it,” he growled. “Due process of mass, state-sponsored suicide. With all of society’s blessings.”

“Well,” said the visitor, “it’s certainly better than letting them die horribly, by degrees.”

“Is it? Better for whom? The street cleaners? Better to have your living corpses walk to a central disposal station while they can still walk? Less public spectacle? Less horror lying around? Less disorder? A few million corpses lying around might start a rebellion against those responsible. That’s what you and the government mean by better, isn’t it?”

“I wouldn’t know about the government,” said the visitor, with only a trace of stiffness in his voice. “What I meant by better was ‘more merciful.’ I have no intention of arguing your moral theology with you. If you think you have a soul that God would send to Hell if you chose to die painlessly instead of horribly, then go ahead and think so. But you’re in a minority, you know. I disagree, but there’s nothing to argue about.”

“Forgive me,” said Abbot Zerchi. “I wasn’t getting ready to argue moral theology with you. I was speaking only of this spectacle of mass euthanasia in terms of human motivation. The very existence of the Radiation Disaster Act, and like laws in other countries, is the plainest possible evidence that governments were *fully* aware of the consequences of another war, but instead of trying to make the crime impossible, they tried to provide in advance for the consequences of the crime. Are the implications of that fact meaningless to you, Doctor?”

“Of course not, Father. Personally, I am a pacifist. But for the present we’re stuck with the world as it is. And if they couldn’t agree on a way to make an act of war impossible, then it is better to have *some* provisions for coping with the consequences than to have *no* provisions.”

“Yes and no. Yes, if it’s in anticipation of somebody else’s crime. No, if it’s in anticipation of one’s own. And especially no if the provision to

soften the consequences are criminal too.”

The visitor shrugged. “Like euthanasia? I’m sorry, Father, I feel that the laws of society are what makes something a crime or not a crime. I’m aware that you don’t agree. And there can be bad laws, ill-conceived, true. But in this case, I think we have a good law. If I thought I had such a thing as a soul, and that there was an angry God in Heaven, I might agree with you.”

Abbot Zerchi smiled thinly. “You don’t *have* a soul, Doctor. You *are* a soul. You *have* a body, temporarily.”

The visitor laughed politely. “A semantic confusion.”“

“True. But which of us is confused? Are you sure?”

“Let’s not quarrel Father. I’m not with the Mercy Cadre. I work on the Exposure Survey Team. We don’t kill anybody.”

Abbot Zerchi gazed at him in silence for a moment. The visitor was a short muscular man with a pleasant round face and a balding pate that was sunburned and freckled. He wore a green serge uniform, and a cap with the Green Star insignia lay in his lap.

Why quarrel, indeed? The man was a medical worker, not an executioner. Some of the Green Star’s relief work was admirable. Occasionally it was even heroic. That in some instances it wrought evil, according to Zerchi’s belief, was no reason to regard its *good* works as tainted. The bulk of society favored it, and its workers were in good faith. The doctor had tried to be friendly. His request had seemed simple enough. He had been neither demanding nor officious about it. Still, the abbot hesitated before saying yes.

“The work you want to do here—will it take long?”

The doctor shook his head. “Two days at most, I think. We have two mobile units. We can bring them into your courtyard, hitch the two trailers together, and start right to work. We’ll take the obvious radiation cases, and the wounded, first. We treat only the most urgent cases. Our job is clinical testing; The sick ones will get treatment at an emergency camp.

“And the sickest ones get something else at a mercy camp?”

The worker frowned. “Only if they want to go. Nobody makes them go.”

“But you write out the permit that lets them go.”

“I’ve given some red tickets, yes. I may have to this time. Here—” He fumbled in his jacket pocket and brought out a red cardboard form, something like a shipping label with a loop of wire for attaching it to a buttonhole or a belt loop. He tossed it on the desk. “A blank ‘crit-dose’ form. There it is. Read it. It tells the man he’s sick, very sick. And here—here’s a green ticket too. It tells him he’s well and has nothing to worry about. Look at the red one carefully! ‘Estimated exposure in radiation units.’ ‘Blood count.’ ‘Urinalysis,’ On one side, it’s just like the green one. On the other side, the green one’s blank, but look at the back of the red one. The fine print—it’s directly quoted from Public Law 10-WR-3E. It has to be there. The law requires it. It has to be read to him. He has to be told his rights. What he does about it is his own affair. Now, if you’d rather we parked the mobile units down the highway, we can—”

“You just read it to him, do you? Nothing else?”

The doctor paused. “It has to be explained to him, if he doesn’t understand it.” He paused again, gathering irritation. “Good Lord, Father, when you tell a man he’s a hopeless case, what are you going to say? Read him a few paragraphs of the law, show him the door, and say: ‘Next, please!’? ‘You’re going to die, so good day’? Of *course* you don’t read him that and

nothing else, not if you have any human feeling at all!”

“I understand that; What I want to know is something else. Do you, as a physician, advise hopeless cases to go to a mercy camp?”

“I—” The medic stopped and closed his eyes. He rested his forehead on his hand. He shuddered slightly. “Of course I do,” he said finally. “If you’d seen what I’ve seen, you would too. Of course I do.”

“You’ll not do it here.”

“Then we’ll—” The doctor quenched an angry outburst. He stood up, started to put on his cap, then paused. He tossed the cap on the chair and walked over to the window. He looked gloomily down at the courtyard, then out at the highway. He pointed. “There’s the roadside park. We can set up shop there. But it’s two miles. Most of them will have to walk.” He glanced at Abbot Zerchi, then looked broodingly down into the courtyard again. “Look at them. They’re sick, hurt, fractured, frightened. The children too. Tired, lame, and miserable. You’d let them be herded off down the highway to sit in the dust and the sun and—”

“I don’t want it to be that way,” said the abbot. “Look—you were just telling me how a man-made law made it mandatory for you to read and explain to a critical radiation case. I offered no objection to that in itself. Render unto Caesar to that extent, since the law demands it of you. Can you not, then, understand that I am subject to another law, and that it forbids me to allow you or anyone else on this property, under my rule, to counsel anyone to do what the Church calls evil?”

*this*

“Oh, I understand well enough.”

“Very well. You need only make me one promise and you may use the courtyard.”

“What promise?”

“Simply that you won’t advise anyone to go to a “mercy camp.” Limit yourself to diagnosis. If you find hopeless radiation cases, tell them what the law forces you to tell them, be as consoling as you wish, but don’t tell them to go kill themselves.”

The doctor hesitated. “I think it would be proper to make such a promise with respect to patients who belong to your Faith.”

Abbot Zerchi lowered his eyes. “I’m sorry,” he said finally, “but that’s not enough.”

“Why? Others are not bound by your principles. If a man is not of your religion, why should you refuse to allow—” He choked off angrily.

“Do you want an explanation?”

“Yes.”

“Because if a man is ignorant of the fact that something is wrong, and acts in ignorance, he incurs no guilt, provided natural reason was not enough to show him that it was wrong. But while ignorance may excuse the man, it does not excuse the act, which is wrong in itself. If I permitted the act simply because the man is ignorant that it is wrong, then I would incur guilt, because I do know it to be wrong. It is really that painfully simple.”

“Listen, Father. They sit there and they look at you. Some scream. Some cry. Some just sit there. All of them say, “Doctor, what can I do?” And what am I supposed to answer? Say nothing? Say, ‘You can die, that’s all.’ What would you say?”

“‘Pray.’”

“Yes, you would, wouldn’t you? Listen, pain is the only evil I know about.

It's the only one I can fight."

"Then God help you."

"Antibiotics help me more."

Abbot Zerchi groped for a sharp reply, found one, but swiftly swallowed it. He searched for a blank piece of paper and a pen and pushed them across the desk. "Just write: 'I will not recommend euthanasia to any patient while at this abbey,' and sign it. Then you can use the courtyard."

"And if I refuse?"

"Then I suppose they'll have to drag themselves two miles down the road."

"Of all the merciless—"

"On the contrary. I've offered you an opportunity to do your work as required by the law you recognize, without overstepping the law I recognize. Whether they go down the road or not is up to you."

The doctor stared at the blank page. "What is so magic about putting it in writing?"

"I prefer it that way."

He bent silently over the desk and wrote. He looked at what he had written, then slashed his signature under it and straightened. "All right, there's your promise. Do you think it's worth any more than my spoken word?"

"No. No indeed." The abbot folded the note and tucked it into his coat. "But it's here in my pocket, and you know it's here in my pocket, and I can look at it occasionally, that's all. Do you keep promises, by the way, Doctor Cors?"

The medic stared at him for a moment. "I'll keep it." He grunted, then turned on his heel and stalked out.

"Brother Pat!" Abbot Zerchi called weakly. "Brother Pat, are you there?"

His secretary came to stand in the doorway. "Yes, Reverend Father?"

"You heard?"

"I heard some of it. The door was open, and I couldn't help hearing. You didn't have the silencer —"

"You heard him say it? 'Pain's the only evil I know about.' You heard that?"

The monk nodded solemnly.

"And that society is the only thing which determines whether an act is wrong or not? That too?"

"Yes."

"Dearest God, how did those two heresies get back into the world after all this time? Hell has limited imaginations down there. 'The serpent deceived me, and I did eat.' Brother Pat, you'd better get out of here, or I'll start raving."

"Domne, I—"

"What's keeping you? What's that, a letter? All right, give it here."

The monk handed it to him and went out. Zerchi left it unopened and glanced at the doctor's pledge again. Worthless, perhaps. But still the man was sincere. And dedicated. He'd have to be dedicated to work for the kind of salary the Green Star paid. He had looked underslept and overworked. He'd probably been living on benzedrine and doughnuts since the shot that killed the city. Seeing misery everywhere and detesting it, and sincere in wanting to do something about it. Sincere—that was the hell of it. From a distance, one's adversaries seemed fiends, but with a closer view, one saw the sincerity and it was as great as one's own. Perhaps Satan was the sincerest of the lot.

He opened the letter and read it. The letter informed him that Brother Joshua and the others had departed from New Rome for an unspecified destination in the West. The letter also advised him that information about *pererinatur* had leaked to the ZDI, who had sent investigators to the Vatican to ask questions about the rumored launching of an unauthorized starship...Evidently the starship was not yet in space.

They'd learn soon enough about *Quo peregrinatur*, but with the help of Heaven, they'd find out too late. What then? he wondered.

The legal situation was tangled. The law forbade starship departures without commission approval. Approval was hard to get and slow in coming. Zerchi was certain that the ZDI and the commission would consider the Church was breaking the law. But a State-Church concordat had existed for a century and a half now; it clearly exempted the Church from licensing procedures, and it guaranteed to the Church the right to send missions to "whatever space installations and/or planetary outposts shall not have been declared by the aforesaid Commission to be ecologically critical or closed to unregulated enterprise." Every installation in the solar system was "ecologically critical" and "closed" at the time of the concordat, but the concordat further asserted the Church's right to "own space vessels and travel unrestricted to open installations or outposts." The concordat was very old. It had been signed in the days when the Berkstrun starship drive was only a dream in the wide imagination of some who thought that interstellar travel would open up the universe to an unrestricted, outflow of population.

Things had turned out otherwise. When the first starship was born as an engineering drawing, it became plain that no institution except government had the means or the funds to build them; that no profit was to be derived from transporting colonies to extrasolar planets for purposes of "interstellar mercantilism." Nevertheless, the Asian rulers had sent the first colony ship. Then in the West the cry was heard: "Are we to let the 'inferior' races inherit the stars?" There had been a brief flurry of starship launchings as colonies of black people, brown, white, and yellow people were hurled into the sky toward the Centaur, in the name of racism. Afterwards, geneticists had wryly demonstrated that—since each racial group was so small that unless their descendants intermarried, each would undergo deteriorative genetic drift due to inbreeding on the colony planet—the racists had made cross-breeding necessary to survival.

The only interest the Church had taken in space had been concern for the colonists who were sons of the Church, cut off from the flock by interstellar distances. And yet she had not taken advantage of that provision of the concordat which permitted the sending of missions. Certain contradictions existed between the concordat and the laws of the State which empowered the commission, at least as the latter law might in theory affect the sending of missions. The contradiction had never been adjudicated by the courts, since there had never been cause for litigation. But now, if the ZDI intercepted Brother Joshua's group in the act of launching a starship without a commission permit or charter, there would be cause. Zerchi prayed that the group would get away without a test in the courts, which might take weeks or months. Of course there would be a scandal afterwards. Many would charge not only that the Church had violated Commission rulings but charity too, by sending ecclesiastical dignitaries and a bunch of rascal monks, when she might have used the ship as refuge for poor colonists, hungry for land. The conflict of

Martha and Mary always recurred.

Abbot Zerchi suddenly realized that the tenor of his thinking had changed during the previous day or two. A few days ago, everyone had been waiting for the sky to burst asunder. But nine days had passed since Lucifer had prevailed in space and scorched a city out of existence. Despite the dead, the maimed, and the dying, there had been nine days of silence. Since the wrath had been stayed thus far, perhaps the worst could be averted. He had found himself thinking of things that might happen next week or next month, as if—after all—there might really *be* a next week or a next month. And why not? Examining conscience, he found that he had not altogether abandoned the virtue of hope.

A monk returned from an errand in the city that afternoon and reported that a camp for refugees was being set up at the park two miles down the highway. “I think it’s being sponsored by Green Star, Domne,” he added.

“Good!” the abbot said. “We’re overflowing here, and I’ve had to turn three truckloads of them away.”

The refugees were noisy in the courtyard, and the noise jangled overwrought nerves. The perpetual quiet of the old abbey was shattered by strange sounds: the boisterous laughter of men telling jokes, the cry of a child, the rattle of pots and pans, hysterical sobbing, a Green Star medic shouting: “Hey, Raff, go fetch an enema hose.” Several times the abbot suppressed an urge to go to the window and call to them for silence.

After bearing it as long as he could, he picked up a pair of binoculars, an old book, and a rosary, and went up to one of the old watchtowers where a thick stone wall cut off most of the sounds from the courtyard. The book was a slim volume of verse, really anonymous, but by legend ascribed to a mythical saint, whose “canonization” was accomplished only in fable and the folklore of the Plains, and not by any act of the Holy See. No one, indeed, had ever found evidence that such a person as Saint Poet of the Miraculous Eyeball had ever lived: the fable had probably arisen out of the story that one of the early Hannegans had been given a glass eyeball by a brilliant physical theorist who was his protégé—Zerchi could not remember whether the scientist had been Esser Shon or Pfardentrott—and who told the prince that it had belonged to a poet who had died for the Faith. He had not specified which faith the poet had died for—that of Peter or that of the Texarkanan schismatics—but evidently the Hannegan had valued it, for he had mounted the eyeball in the clutch of a small golden hand which was still worn upon certain state occasions by princes of the Harq- Hannegan dynasty. It was variously called the *Orbis judicans Conscientias* or the *Oculus Poetae Judicis*, and the remnants of the Texarkana Schism still revered it as a relic. Someone a few years back had proposed the rather silly hypothesis that Saint Poet was the same person as the “scurrilous versificator” once mentioned in the Journals of the Venerable Abbot Jerome, but the only substantiating “evidence” for this notion was that Pfardentrott—or was it Esser Shon?—had visited the abbey during the reign of Venerable Jerome at about the same date as the “scurrilous versificator” entry in the Journal, and that the gift of the eyeball to Hannegan had occurred at some date after that visit to the abbey. Zerchi suspected that the thin book of verse had been penned by one of the secular scientists who had visited the abbey to study the Memorabilia at about that time, and that one of them could probably be identified with the “scurrilous versificator” and possibly with the Saint Poet of folklore and fable. The anonymous verses were a bit too daring, Zerchi thought, to have been written by a monk of the Order.

The book was a satirical dialogue in verse between two agnostics who were attempting to establish by natural reason alone that the existence of God could not be established by natural reason alone. They managed only to demonstrate that the mathematical limit of an infinite “doubting the certainty with which something doubted is known to be unknowable when the ‘something doubted’ is still a preceding statement of ‘unknowability’ of something doubted,” that the limit of this process at infinity can only be equivalent to a statement of *absolute certainty*, even though phrased as an infinite series of negations of certainty. The text bore traces of St. Leslie’s theological calculus, and even as a poetic dialogue between an agnostic identified only as “Poet” and another only as “Thon,” it seemed to suggest a proof of the existence of God by an epistemological method, but the versifier had been a satirist; neither poet nor don relinquished his agnostic premises after the conclusion of absolute certainty had been reached, but concluded instead that: *Non cogitamus, ergo nihil sumus.*

Abbot Zerchi soon tired of trying to decide whether the book was high intellectual comedy or more epigrammatic buffoonery. From the tower, he could see the highway and the city as far as the mesa beyond. He focused the binoculars on the mesa end watched the radar installation for a time, but nothing unusual appeared to be happening there. He lowered the glasses slightly to watch the new Green Star encampment down at the roadside park. The area of the park had been roped off. Tents were being pitched. Utility crews worked at tapping the gas and power lines. Several men were engaged in hoisting a sign at the entrance to the park, but they held it edgewise to his gaze and he could not read it. Somehow the boiling activity reminded him of a nomad “carnival” coming to town. There was a big red engine of some sort. It seemed to have a firebox and something like a boiler, but he could not at first guess its purpose. Men in Green Star uniforms were erecting something that looked like a small carousel. At least a dozen trucks were parked on the side road. Some were loaded with lumber, others with tents and collapsible cots. One seemed to be hauling firebricks, and another was burdened with pottery and straw.

Pottery?

He studied the last truck’s cargo carefully. A slight frown gathered on his forehead. It was a load of urns or vases, all alike, and packed together with cushioning wads of straw. Somewhere, he had seen the like of them, but could not remember where.

Still another truck carried nothing but a great “stone” statue—probably made of reinforced plastic—and a square slab upon which the statue was evidently to be mounted. The statue lay on its back, supported by a wooden framework and a nest of packing material. He could see only its legs and one outstretched hand that thrust up through the packing straw. The statue was longer than the bed of the truck; its bare feet projected beyond tailgate. Someone had tied a red flag to one of its great toes. Zerchi puzzled over it. Why waste a truck on a statue, when there was probable need of another truckload of food?

He watched the men who were erecting the sign. At last one of them lowered his end of the board and climbed a ladder to perform some adjustment of the overhead brackets. With one end resting on the ground, the sign tilted, and Zerchi, by craning, managed to read its message:

*MERCY CAMP NUMBER 18  
GREEN STAR  
DISASTER CADRE PROJECT*

Hurriedly, he looked again at the trucks. The pottery!

Recognition came to him. Once he had driven past a crematorium and seen men unloading the same sort of urns from a truck with the same company markings. He swung the binoculars again, searching for the truck loaded with firebrick. The truck had moved. At last he located it, now parked inside the area. The bricks were being unloaded near the great red engine. He inspected the engine again. What had at first glance appeared to be a boiler, now suggested an oven or a furnace. “*Evenit diabolus!*” the abbot growled, and started for the wall stairs.

He found Doctor Cors in the mobile unit in the courtyard.

The doctor was wiring a yellow ticket to the lapel of an old man’s jacket, while telling him that he should go to a rest camp for a while and mind the nurses, but that he’d be all right if he took care of himself.

Zerchi stood with folded arms, munching at the edge of his lips and coldly watching the physician. When the old man was gone, Cors looked up warily.

“Yes?” His eyes took note of the binoculars and reexamined Zerchi’s face. “*Oh,*” he granted. “Well, I have nothing to do with that end of it, nothing at all.”

The abbot gazed at him for a few seconds, then turned and stalked out. He went to his office and had Brother Patrick call the highest Green Star official...

“I want it moved out of our vicinity.”

“I’m afraid the answer is emphatically no.”

“Brother Pat, call the workshop and get Brother Lufter up here.”

“He’s not there, *Domne.*”

“Then have them send me a carpenter and a painter. Anybody will do.”

Minutes later, two monks arrived.

“I want five lightweight signs made at once,” he told them. “I want them with good long handles. They’re to be big enough to be read from a block away, but light enough for a man to carry for several hours without getting dog-tired. Can you do that?”

“Surely, milord. What do you want them to say?”

Abbot Zerchi wrote it for them. “Make it big and make it bright,” he told them. “Make it scream at the eye. That’s all.”

When they were gone, he called Brother Patrick again.

“Brother Pat, go find me five good, young, healthy novices, preferably with martyr complexes. Tell them they may get what Saint Stephen got.”

And I may get even worse, he thought, when New Rome hears about it..

ompline had been sung, but the abbot stayed on in the church, kneeling alone in the gloom of evening.

*Domine, mundorum omnium Factor, parsurus esto imprimis eis filiis aviantibus ad sideria caeli quorum victus difficilior . . .*

He prayed for Brother Joshua’s group—for the men who had gone to take a starship and climb the heavens into a vaster uncertainty than any uncertainty faced by Man on Earth. They’d want much praying for; none was more susceptible

than the wanderer to the ills that afflict the spirit to torture faith and nag a belief, harrowing the mind with doubts. At home, on Earth, conscience had its overseers and its exterior taskmasters, but abroad the conscience was alone, torn between Lord and Foe. Let them be incorruptible, he prayed, let them hold true to the way of the Order.

Doctor Cors found him in the church at midnight and beckoned him quietly outside. The physician looked haggard and wholly unnerved.

"I just broke my promise!" he stated challengingly.

The abbot was silent. "Proud of it?" he asked at last.

"Not especially."

They walked toward the mobile unit and stopped in the bath of bluish light that spilled out its entrance. The medic's lab-jacket was soaked with sweat, and he dried his forehead on his sleeve. Zerchi watched him with that pity one might feel for the lost.

"We'll leave at once, of course," said Cors. "I thought I'd tell you." He turned to enter the mobile unit.

"Wait a minute," the priest said. "You'll tell me the rest."

"Will I?" The challenging tone once again. "Why? So you can go threaten hell-fire? She's sick enough now, and so's the child. I'll tell you nothing."

"You already have. I know who you mean. The child, too, I suppose?"

Cors hesitated. "Radiation sickness. Flash burns. The woman has a broken hip. The father's dead. The fillings in the woman's teeth are radioactive. The child almost glows in the dark. Vomiting shortly after the blast. Nausea, anemia, rotten follicles. Blind in one eye. The child cries constantly because of the burns. How they survived the shock wave is hard to understand. I can't do anything for them except the Eucrem team."

"I've seen them."

"Then you know why I broke the promise. I have to *live* with myself afterwards, man! I don't want to live as the torturer of that woman and that child."

"Pleasanter to live as their murderer instead?"

"You're beyond reasonable argument."

"What did you tell her?"

"If you love your child, spare her the agony. Go to sleep mercifully as quick as you can.' That's all. We'll leave immediately. We've finished with the radiation eases and the worst of the others. It won't hurt the rest of them to walk a couple of miles. There aren't any more critical-dosage cases.

Zerchi stalked away, then stopped and called back. "Finish," he croaked. "Finish and then get out. If I see you again—I'm afraid of what I'll do."

Cors spat. "I don't like being here any better than you like having me. We'll go now, thanks."

He found the woman lying on a cot with the child in the corridor of the overcrowded guesthouse. They huddled together under a blanket and both were crying. The building smelled of death and antiseptic. She looked up at his vague silhouette against the light.

"Father?" Her voice was frightened.

"Yes."

"We're done for. See? See what they gave me?"

He could see nothing, but he heard her fingers pick at the edge of paper. The red ticket. He could find no voice to speak to her. He came to stand over the cot. He fished in his pocket and brought out a rosary. She heard the

rattle of the beads and groped for it.

"You know what it is?"

"Certainly, Father.

"Then keep it. Use it."

"Thank you."

"Bear it and pray."

"I know what I have to do."

"Don't be an accomplice. For the love of God, child, don't--"

"The doctor said--"

She broke off. He waited for her to finish; she kept silent.

"Don't be an accomplice."

She still said nothing. He blessed them and left as quickly as possible.

The woman had handled the beads with fingers that knew them; there was nothing he could say to her that she didn't already know.

"The conference of foreign ministers on Guam has just ended. No joint policy statement has yet been issued; the ministers are returning to their capitals. The importance of this conference, and the suspense with which the world awaits the results, cause this commentator to believe that the conference is not yet ended, but only recessed so that the foreign ministers may confer with their governments for a few days. An earlier report which alleged that the conference was breaking up amid bitter invective has been denied by the ministries. First Minister Rekol had only one statement for the press: "I'm going back to talk to the Regency Council. But the weather's been pleasant here; I may come back later to fish."

"The ten-day waiting period ends today, but it is generally held that the cease-fire agreement will continue to be observed. Mutual annihilation is the alternative. Two cities have died, but it is to be remembered that neither side answered with a saturation attack. The Asian rulers contend that an eye was taken for an eye. Our government insists that the explosion in Itu Wan was not an Atlantic missile. But for the most part, there is a weird and brooding silence from both capitals. There has been little waving of the bloody shirt, few cries for wholesale vengeance. A kind of dumb fury, because murder has been done, because lunacy reigns, prevails, but neither side wants total war. Defense remains at battle alert. The General Staff has issued an announcement, almost an appeal, to the effect that we will not use the worst if Asia likewise refrains. But the announcement says further: 'If they use dirty fallout, we shall reply in kind, and in such force that no creature will live in Asia for a thousand years.'"

"Strangely, the least hopeful note of all comes not from Guam but from the Vatican at New Rome. After the Guam conference ended, it was reported that Pope Gregory ceased to pray for peace in the world. Two special Masses were sung in the basilica: the *Exsurge quare obdormis*, Mass against the Heathen, and the *Reminiscere*, Mass in Time of War; then, the report says His Holiness retired to the mountains to meditate and pray for justice.

"And now a word from--"

"Turn it off!" Zerchi groaned.

The young priest who was with him snapped off the set and stared wide-eyed at the abbot. "I don't believe it!"

"What? About the Pope? I didn't either. But I heard it earlier, and New Rome has had time to deny it. They haven't said a word."

“What does it mean?”

“Isn’t that obvious? The Vatican diplomatic service is on the job. Evidently they sent in a report on the Guam conference. Evidently it horrified the Holy Father.”

“What a warning! What a gesture!”

“It was more than a gesture, Father. His Holiness isn’t chanting Battle Masses for dramatic effect. Besides, most people will think he means ‘against the heathen’ on the other side of the ocean, and ‘justice’ for our side. Or if they know better, they’ll still mean that themselves.” He buried his face in his hands and rubbed them up and down. “Sleep. What’s sleep, Father Lehy? Do you remember? I haven’t seen a human face in ten days that didn’t have black circles under its eye. I could hardly doze last night for somebody screaming over in the guesthouse.”

“Lucifer’s no sandman, that’s true.”

“What are you staring at out that window?” Zerchi demanded sharply. “That’s another thing. Everybody keeps looking at the sky, staring up and wondering. If it’s coming, you won’t have time to see it until the flash, and then you’d better not be looking. Stop it. It’s unhealthy.”

Father Lehy turned away from the window. “Yes, Reverend Father. I wasn’t watching for that though. I was watching the buzzards.” ..

“Buzzards?”

“There’ve been lots of them, all day. Dozens of buzzards—just circling.”

“Where?”

“Over. the Green Star camp down the highway.”

“That’s no omen, then. That’s just healthy vulture appetite. Agh! I’m going out for some air.”

In the courtyard he met Mrs. Grales. She carried a basket of tomatoes which she lowered to the ground at his approach.

“I brought ye somewhat, Father Zerchi,” she told him.

“I saw yer sign being down, and some poor girl inside the gate, so I reckoned ye’d not mind a visit by yer old tumater woman. I brought ye some tumaters, see?”

“Thank you, Mrs. Grales. The sign’s down because of the refugees, but that’s all right. You’ll have to see Brother Elton about the tomatoes, though. He does the buying for our kitchen.”

“Oh, not for buying, Father. He-he! I brought ‘em to yer for free. Ye’ve got lots to feed, with all the poor things yer putting up. So they’re for free. Where’ll I put ‘em?”

“The emergency kitchen’s in the—but no, leave them there. I’ll get someone to carry them to the guesthouse.”

“Port ‘em myself. I ported them this far.” She hoisted the basket again.

“Thank you, Mrs. Grales.” He turned to go.

“Father, wait!” she called. A minute, yer honor, just a minute of your time—

The abbot suppressed a groan. “I’m sorry, Mrs. Grales, but it’s as I told you—” He stopped, stared at the face of Rachel. For a moment, he had imagined—Had Brother Joshua been right about it? But surely, no. “It ‘s—it’s a matter for your parish and diocese, and there’s nothing I can—”

“No, Father, not that!” she said. “It be somewhat else I wanted to ask of ye.” (There! It *had* smiled! He was certain of it!) “Would ye hear my

confession, Father? Beg shriv'ness for bothering ye, but I'm sad for my naughties, and I would it were you as shrives me."

Zerchi hesitated. "Why not Father Selo?"

"I tell ye truthful, yer honor, it's that the man is an occasion of sin for me. I go meanin' well for the man, but I look once on his face and forget myself. God love him, but I can't."

"If he's offended you, you'll have to forgive him."

"Forgive, that I do, that I do. But at a goodly distance. He's an occasion of sin for me, I'll tell, for I go losing my temper with him on sight."

Zerchi chuckled. "All right, Mrs. Grales I'll hear your confession, but I've got something I have to do first. Meet me in the Lady Chapel in about half an hour. The first booth. Will that be all right?"

"Ay, and bless ye, Father!" She nodded profusely. Abbot Zerchi could have sworn that the Rachel head mirrored the nods, ever so slightly.

He dismissed the thought and walked over to the garage. A postulant brought out the car for him. He climbed in, dialed his destination, and sank back wearily into the cushions while the automatic controls engaged the gears and nosed the car toward the gate. In passing the gate, the abbot saw the girl standing at the roadside. The child was with her. Zerchi jabbed at the CANCEL button. The car stopped. "Waiting," said the robot controls.

The girl wore a cast that enclosed her hips from the waist to left knee. She was leaning on a pair of crutches and panting at the ground. Somehow she had got out of the guesthouse and through the gate, but she was obviously unable to go any farther. The child was holding on to one of her crutches and staring at the traffic on the highway.

Zerchi opened the ear door and climbed out slowly. She looked up at him, but turned her glance quickly away.

"What are you doing out of bed, child?" he breathed. "You're not supposed to be up, not with that hip. Just where did you think you were going?"

She shifted her weight, and her face twisted with pain.

"To town," she said. "I've got to go. It's urgent."

"Not so urgent that somebody couldn't go do it for you. I'll get Brother—"

"No, Father, no! Nobody else can do it for me. I've got to go to town."

She was lying. He felt certain she was lying. "All right, then," he said. "I'll take you to town. I'm driving in anyway."

"No! I'll walk! I'm—" She took a step and gasped. He caught her before she fell.

"Not even with Saint Christopher holding your crutches could you walk to town, child. Come on, now, let's get you back to bed."

"I've got to get to town, I tell you!" she shrieked angrily.

The child, frightenend by its mother's anger, began crying monotonously. She tried to calm its fright, but then wilted: "All right, Father. Will you drive me to town?"

"You shouldn't be going at all."

"I tell you, I've got to go!"

"All right, then. Let's help you in...the baby . . . now you."

The child screamed hysterically when the priest lifted it into the car beside the mother. It clung to her tightly and resumed the monotonous sobbing. Because of the loose moist dressings and the singed hair, the child's sex was difficult to determine at a glance, but Abbot Zerchi guessed it to be a girl.

He dialed again. The car waited for a break in the traffic, then swerved onto the highway and into the mid-speed lane. Two minutes later, as they approached the Green Star encampment, he dialed for the slowest lane.

Five monks paraded in front of the tent area, in a solemn hooded picket line. They walked to and fro in procession beneath the Mercy Camp sign, but they were careful to stay on the public right-of-way. Their freshly painted signs read:

*ABANDON EVERY HOPE  
YE  
WHO ENTER HERE*

Zerchi had intended to stop to talk to them, but with the girl in the car he contented himself with watching as they drifted past. With their habits and their hoods and their slow funereal procession, the novices were indeed creating the desired effect. Whether the Green Star would be sufficiently embarrassed to move the camp away from the monastery was doubtful, especially since a small crowd of hecklers, as it had been reported to the abbey, had appeared earlier in the day to shout insults and throw pebbles at the signs carried by the pickets. There were two police cars parked at the side of the highway, and several officers stood nearby to watch with expressionless faces. Since the crowd of hecklers had appeared quite suddenly, and since the police cars had appeared immediately afterwards, and just in time to witness a heckler trying to seize a picket's sign, and since a Green Star official had thereupon gone huffing off to get a court order, the abbot suspected that the heckling had been as carefully staged as the picketing, to enable the Green Star officer to get his writ. It would probably be granted, but until it was served, Abbot Zerchi meant to leave the novices where they were.

He glanced at the statue which the camp workers had erected near the gate. It caused a wince. He recognized it as one of the composite human images derived from mass psychological testing in which subjects were given sketches and photographs of unknown people and asked such questions as: "Which would you most like to meet?" and "Which do you think would make the best parent?" or "Which would you want to avoid?" Or "Which do you think is the criminal?" From the photographs selected as the "most" or the "least" in terms of the questions, a series of "average faces," each to evoke a first-glance personality judgment had been constructed by computer from the mass test results.

This statue, Zerchi was dismayed to notice, bore a marked similarity to some of the most effeminate images by which mediocre, or worse than mediocre, artists had traditionally misrepresented the personality of Christ. The sweet-sick face, blank eyes, simpering lips, and arms spread wide in a gesture of embrace. The hips were broad as a woman's, and the chest hinted at breasts-unless those were only folds in the cloak. Dear Lord of Golgotha, Abbot Zerchi breathed, is that all the rabble imagine You to be? He could with effort imagine the statue saying: "Suffer the little children to come unto me," but he could not imagine it saying: "Depart from me into everlasting fire, accursed ones," or flogging the money-changers out of the Temple. What question, he wondered, had they asked their subjects that conjured in the rabble-mind this composite face? It was only anonymously a

*christus*. The legend

on the pedestal said: *COMFORT*. But surely the Green Star must have seen the resemblance to the traditional pretty *christus* of poor artists. But they stuck it in the back of a truck with a red flag tied to its great toe, and the intended resemblance would be hard to prove.

The girl had one hand on the door handle; she was eying the car's controls. Zerchi swiftly dialed FAST LANE. The car shot ahead again. She took her hand from the door.

"Lots of buzzards today," he said quietly, glancing at the sky out the window.

The girl sat expressionless. He studied her face for a moment. "Are you in pain, daughter?"

"It doesn't matter."

"Offer it to Heaven, child."

She looked at him coldly. "You think it would please God?"

"If you offer it, yes."

"I cannot understand a God who is pleased by my baby's hurting!"

The priest winced. "No, no! It is not the pain that is pleasing to God, child. It is the soul's endurance in faith and hope and love *in spite of* bodily afflictions that pleases Heaven. Pain is like negative temptation. God is not pleased by temptations that afflict the flesh; He is pleased when the soul rises above the temptation and says, 'Go, Satan.' It's the same with pain, which is often a temptation to despair, anger, loss of faith—"

"Save your breath, Father. I'm not complaining. The baby is. But the baby doesn't understand your sermon. She can hurt, though. She can hurt, but she can't understand."

*What can I say to that?* the priest wondered numbly. Tell her again that Man was given preternatural impassibility once, but threw it away in Eden? That the child was a cell of Adam, and therefore— It was true, but she had a sick baby, and she was sick herself, and she wouldn't listen.

"Don't do it, daughter. Just don't do it."

"I'll think about it," she said coldly.

"I had a cat once, when I was a boy," the abbot murmured slowly. "He was a big gray tomcat with shoulders like a small bulldog and a head and neck to match, and that sort of slouchy insolence that makes some of them look like the Devil's own. He was pure cat. Do you know cats?"

"A little."

"Cat lovers don't know cats. You can't love *all* cats if you know cats, and the ones you can love if you know them are the ones the cat lovers don't even like. Zeke was that kind of cat."

"This has a moral, of course?" She was watching him suspiciously.

"Only that I killed him."

"Stop. Whatever you're about to say, stop."

"A truck hit him, crushed his back legs. He dragged himself under the house. Once in a while he'd make a noise like a cat fight and thrash around a little, but mostly he just lay quietly and waited. 'He ought to be destroyed,' they kept telling me. After a few hours he dragged himself from under the house. Crying for help. 'He ought to be destroyed,' they said. I wouldn't let them do it. They said it was cruel to let him live. So finally I said I'd do it myself, if it had to be done. I got a gun and a shovel and took him out to the edge of the woods. I stretched him out on the ground while I dug a hole. Then I shot him through the head. It was a small-bore rifle. Zeke thrashed a

couple of times, then got up and started dragging himself toward some bushes. I shot him again. It knocked him flat, so I thought he was dead, and put him in the hole. After a couple of shovels of dirt, Zeke got up and pulled himself out of the hole and started for the bushes again. I was crying louder than the cat. I had to kill him with the shovel. I had to put him back in the hole and use the blade of the shovel like a cleaver, and while I was chopping with it, Zeke was still thrashing around. They told me later it was just spinal reflex, but I didn't believe it. I knew that cat. He wanted to get to those bushes and just lie there and wait. I wished to God that I had only let him get to those bushes, and die the way a cat would if you just let it alone—with never felt right about it. Zeke was only a cat, but—”

*dignity. I*

“Shut up!” she whispered.

“—but even the ancient pagans noticed that Nature imposes nothing on you that Nature doesn't prepare you to bear. If that is true even of a cat, then is it not more perfectly true of a creature with rational intellect and will—whatever you may believe of Heaven?”

“Shut up, damn you shut up!” she hissed.

“If I am being a little brutal,” said the priest, “then it is to you, not to the baby. The baby, as you say, can't understand. And you, as you say, are not complaining. Therefore—”

“Therefore you're asking me to let her die slowly and—”

“No! I'm not asking you. As a priest of Christ I am *commanding* you by the authority of Almighty God not to lay hands on your child, not to offer her life in sacrifice to a false god of expedient mercy. I do not advise you, I adjure and command you in the name of Christ the King. Is that clear?”

Dom Zerchi had never spoken with such a voice before, and the ease with which the words came to his lips surprised even the priest. As he continued to look at her, her eyes fell. For an instant he had feared that the girl would laugh in his face. When Holy Church occasionally hinted that she still considered her authority to be supreme over all nations and superior to the authority of states, men in these times tended to snicker. And yet the authenticity of the command could still be sensed by a bitter girl with a dying child. It had been brutal to try to reason with her, and he regretted it. A simple direct command might accomplish what persuasion could not. She needed the voice of authority now, more than she needed persuasion. He could see it by the way she had wilted, although he had spoken the command as gently as his voice could manage.

They drove into the city. Zerchi stopped to post a letter, stopped at Saint Michael's to speak for a few minutes with Father Selo about the refugee problem, stopped again at ZDI for a copy of the latest civil delouse directive. Each time he returned to the car, he half expected the girl to be gone, but she sat quietly holding the baby and absently stared toward infinity.

“Are you going to tell me where you wanted to go, child?” he asked at last.

“Nowhere. I've changed my mind.”

He smiled. “But you were so urgent about getting to town.”

“Forget it, Father. I've changed my mind.”

“Good. Then we'll go back home. Why don't you let the sisters take care of your daughter for a few days?”

“I'll think about it.”

The car sped back along the highway toward the abbey. As they approached the Green Star camp, he could see that something was wrong. The pickets were no longer marching their tour. They had gathered in a group and were talking, or listening, to the officers and a third man that Zerchi could not identify. He switched the car over to the slow lane. One of the novices saw the car, recognized it, and began waving his sign. Dom Zerchi had no intention of stopping while the girl was in the car, but one of the officers stepped out into the slow lane just ahead of them and pointed his traffic baton at the vehicle's obstruction detectors; the autopilot reacted automatically and brought the car to a stop. The officer waved the car off the road. Zerchi could not disobey. The two police officers approached, paused to note license numbers and demand papers. One of them glanced in curiously at the girl and the child, took note of the red tickets. The other waved toward the now-stationary picket line.

"So you're the bejeezis behind all this, are you?" He grunted at the abbot. "Well, the gentleman in the brown tunic over there has a little news for you. I think you'd better listen." He jerked his head toward a chubby courtroom type who came pompously toward them.

The child was crying again. The mother stirred restlessly.

"Officers, this girl and baby aren't well. I'll accept the process, but please let us drive on back to the abbey now. Then I'll come back alone."

The officer looked at the girl again. "Ma'am?"

She stared toward the camp and looked up at the statue towering over the entrance. "I'm getting out here," she told them tonelessly.

"You'll be better off, ma'am," said the officer, eying the red tickets again.

"No!" Dom Zerchi caught her arm. "Child, I forbid you—"

The officer's hand shot out to seize the priest's wrist.

"Let go!" he snapped, then softly: "Ma'am, are you his ward or something?"

"No."

"Where do you get off forbidding the lady to get out?" the officer demanded. "We're just a little impatient with you, *mister*, and it had better be—"

Zerchi ignored him and spoke rapidly to the girl. She shook her head.

"The baby, then. Let me take the baby back to the sisters. I insist—"

"Ma'am, is that your child?" the officer asked. The girl was already out of the car, but Zerchi was holding the child.

The girl nodded. "She's mine."

"Has he been holding you prisoner or something?"

"No."

"What do you want to do, ma'am?"

She paused.

"Get back in the car," Dom Zerchi told her.

"*You cut that tone of voice, mister!*" the officer barked.

"Lady, what about the kid?"

"We're both getting out here," she said.

Zerchi slammed the door and tried to start the car, but the officer's hand flashed in through the window, hit the CANCEL button, and removed the key.

"Attempted kidnapping?" one officer grunted to the other.

"Maybe," said the other, and opened the door. "Now let go of the woman's baby!"

"To let it be murdered here?" the abbot asked. "You'll have to use force."

"Go around to the other side of the car, Fal."

"No!"

"Now, just a little baton under the armpit. That's it, lady—there's your kid. No, I guess you can't, not with those crutches Where's Cors? Hey, Doc!" *pull! All right, Cors?*

Abbot Zerchi caught a glimpse of a familiar face coining through the crowd.

"Lift the kid out while we hold this nut, will you?"

Doctor and priest exchanged a silent glance, and then the baby was lifted from the car. The officers released the abbot's wrists. One of them turned and found himself hemmed in by novices with upraised signs. He interpreted the signs as potential weapons, and his hand dropped to his gun.

"Back up!" he snapped.

Bewildered, the novices moved back.

"Get out."

The abbot climbed out of the car. He found himself facing the chubby court official. The latter tapped him on the arm with a folded paper. "You have just been served with a restraining order, which I am required by the court to read and explain to you. Here is your copy. The officers are witnesses that you have been confronted with it, so you cannot resist service—"

"Oh, give it here."

"That's the right attitude. Now you are directed by the court as follows: 'Whereas the plaintiff alleges that a great public nuisance has been—' "

"Throw the signs in the ash barrel over there," Zerchi instructed his novices, "unless somebody objects. Then climb in the car and wait." He paid no attention to the reading of the order, but approached the officers while the process server trailed behind, reading in monotonous staccato. "Am I under arrest?"

"We're thinking about it."

"—and to appear before this court on the aforesaid date to show cause why an injunction—"

"Any particular charge?"

"We could make four or five charges stick, if you want it that way."

Cors came back through the gate. The woman and her child had been escorted into the camp area. The doctor's expression was grave, if not guilty.

"Listen, Father," he said, "I know how you feel about all this, but—"

Abbot Zerchi's fist shot out at the doctor's face in a straight right jab. It caught Cors off balance, and he sat down hard in the driveway. He looked bewildered. He snuffled a few times. Suddenly his nose leaked blood. The police had the priest's arms pinned behind him.

"—and herein fail not," the process server jabbered on, "'lest a decree pro confesso—"

"Take him over to the car," said one of the officers.

The car toward which the abbot was led was not his own but the police cruiser. "The judge will be a little disappointed in you," the officer told him sourly. "Now stand still right there and be quiet. One move and you go in the locks."

The abbot and the officer waited by the cruiser while the process server, the doctor, and the other officer conferred in the driveway. Cors was pressing a handkerchief to his nose.

They talked for five minutes. Thoroughly ashamed, Zerchi pressed his forehead against the metal of the car and tried to pray. It mattered little to him at the moment what they might decide to do. He could think only of the girl and the child. He was certain she had been ready to change her mind, had needed only the command, *I, a priest of God, adjure thee*, and the grace to hear it—if only they had not forced him to stop where she could witness "God's priest" summarily overruled by "Caesar's traffic cop." Never to him had Christ's Kingship seemed more distant.

"All right, mister. You're a lucky nut, I'll say that."

Zerchi looked up. "What?"

"Doctor Cors refuses to file a complaint. He says he had one coming. Why did you hit him?"

“Ask him.”

“We did. I’m just trying to decide whether we take you in or just give you the summons. The court officer says you’re well known hereabouts. What do you do?”

Zerchi reddened. “Doesn’t this mean anything to you?” He touched his pectoral cross.

“Not when the guy wearing it punches somebody in the nose. What do you do?”

Zerchi swallowed the last trace of his pride. “I am the abbot of the Brothers of Saint Leibowitz at the abbey you see down the road.”

“That gives you a license to commit assault?”

“I’m sorry. If Doctor Cors will hear me, I’ll apologize. If you give me a summons, I promise to appear.”

“Fal?”

“The jail’s full of D.P.s.”

“Listen, if we just forget the whole thing, will you stay away from this place, and keep your gang out there where they belong?”

“Yes.”

“All right. Get moving. But if you so much as drive past here and spit, that’ll be it.”

“Thank you.”

A calliope was playing somewhere in the park as they drove away; and looking back, Zerchi saw that the carousel was turning. One officer mopped his face, clapped the process server on the back, and they all went to their cars and drove away. Even with five novices in the car, Zerchi was alone with his shame.

## 29

## “

# I

believe you’ve been warned about that temper before?” Father Lehy demanded of the penitent.

“Yes, Father.”

“You realize that the intent was relatively murderous?”

“There was no intent to kill.”

“Are you trying to excuse yourself?” the confessor demanded.

“No, Father. The intent was to hurt. I accuse myself of violating the spirit of the Fifth Commandment in thought and deed, and of sinning against charity and justice. And bringing disgrace and scandal upon my office.”

“You realize that you have broken a promise never to resort to violence?”

“Yes, Father. I deeply regret it.”

“And the only mitigating circumstance is that you just saw red and swung. Do you often let yourself abandon reason like that?”

The inquisition continued, with the ruler of the Abbey on his knees, and the prior fitting in judgment over his master.

“All right,” Father Lehy said at last, “now for your penance, promise to say—”

Zerchi was an hour and a half late getting to the chapel, but Mrs. Grales was still waiting. She was kneeling in a pew near the confessional, and she seemed half asleep. Embarrassed within himself, the abbot had hoped that she would not be there. He had his own penance to say before he could hear her. He knelt near the altar and spent twenty minutes finishing the prayers Father Lehy had assigned him as penance for that day, but when he moved back toward the confessional, Mrs. Grales was still there. He

spoke to her twice before she heard him, and when she rose, she stumbled a little. She paused to feel at the Rachel face, exploring its eyelids and lips with withered fingers.

"Is something wrong, daughter?" he asked.

She looked up at the high windows. Her eyes wandered about the vaulted ceiling. "Ay, Father," she whispered. "I feel the Dread One about, I do. The Dread One's close, very close about us here. I feel need of shriv'ness Father—and something else as well."

"Something else, Mrs. Grales?"

She leaned close to whisper behind her hand. "I need be giving shriv'ness to Him, as well."

The priest recoiled slightly. "To whom? I don't understand."

"Shriv'ness—to Him who made me as I am," she whimpered. But then a slow smile spread her mouth. "I—I never forgave Him for it."

"Forgive God? How can you—? He is just. He is Justice, He is Love. How can you say—?"

Her eyes pleaded with him. "Mayn't an old tumater woman forgive Him just a little for His Justice? Afor I be asking His shriv'ness on me?"

Dom Zerchi swallowed a dry place. He glanced down at her bicephalous shadow on the floor. It hinted at a terrible Justice—this shadow shape. He could not bring himself to reprove her for choosing the word *forgive*. In her simple world, it was conceivable to forgive justice as well as to forgive injustice, for Man to pardon God as well as for God in pardon Man. So be it, then, and bear with her, Lord, he thought, adjusting his stole.

She genuflected toward the altar before they entered the confessional, and the priest noticed that when she crossed herself, her hand touched Rachel's forehead as well as her own. He brushed back the heavy curtain, slipped into his half of the booth, and whispered through the grille, "What do you seek, daughter?"

"Blessings, Father, for I have sinned—"

She spoke haltingly. He could not see her through the mesh that covered the grille. There was only the low and rhythmic whimper of a voice of Eve. The same, the same, everlastingly the same, and even a woman with two heads could not contrive new ways of courting evil, but could only pursue a mindless mimicry of the Original. Still feeling the shame of his own behavior with the girl and the officers and Cors, he found it hard to concentrate. Still, his hands shook as he listened. The rhythm of the words came dull and muffled through the grille, like the rhythm of distant hammering. Spikes driven through palms, piercing timber. As *alter Christus* he sensed the weight of each burden for a moment before it passed on to the One who bore them all. There was the business about her mate. There were the murky and secret things, things to be wrapped in dirty newspaper and buried by night. That he could only make sense of a little of it, seemed to make the horror worse.

"If you are trying to say that you are guilty of abortion," he whispered, "I must tell you that the absolution is reserved to the bishop and I can't—"

He paused. There was a distant roaring, and the faint snort-growl of missiles being fired from the range.

"The Dread One! The Dread One!" whined the old woman.

His scalp prickled: a sudden chill of unreasonable alarm.

"Quickly! An act of contrition!" he muttered. "Ten Aves, ten Pater Nosters for your penance. You'll have to repeat the confession again later, but now an Act of Contrition."

He heard her murmuring from the other side of the grille. Swiftly he breathed an absolution: "*Te absolvat Dominus Jesus Christus; ego autem eius auctoritate te absolvo ab omni vinculo...Denique, si absolvi potes, ex peccatis tuis ego te absolve in Nomine Patris . . .*"

Before he had finished, a light was shining through the thick curtain of the confessional door. The light grew brighter and brighter until the booth was full of bright noon. The curtain began to smoke.

"Wait, wait!" he hissed. "Wait till it dies."

"wait wait wait till it dies," echoed a strange soft voice from beyond the grille. It was not the voice of Mrs. Grales.

"Mrs. Grales? Mrs. Grales?"

She answered him in a thick-tongued, sleepy murmur.

"I never meant to . . . I never meant to . . . never love . . . Love . . ." It trailed away. It was not the same voice that had answered him a moment ago.

"Now, quickly, *run!*"

Not waiting to see that she heeded him, he bounded out of the confessional and ran down the aisle toward the altar of reservation. The light had dimmed, but it still roasted the skin with noon sun glare.

*How many seconds remained?* The church was full of smoke.

He vaulted into the sanctuary, stumbled over the first step, called it a genuflection, and went to the altar. With frantic hands, he removed the Christ-filled ciborium from the tabernacle, genuflected again before the Presence, grabbed up the Body of his God and ran for it.

The building fell in on him.

When he awoke, there was nothing but dust. He was pinned to the ground at the waist. He lay on his belly in the dirt and tried to move. One arm was free, but the other was caught under the weight that held him down. His free hand still clutched the ciborium, but he had tipped it in falling, and the top had come off, spilling several of the small Hosts.

The blast had swept him clean out of the church, he decided. He lay in sand, and saw the remains of a rose bush caught in a rockfall. A rose remained attached to a branch of it—one of the Salmon Armenians, he noticed. The petals were singed.

There was a great roaring of engines in the sky, and blue lights kept winking through the dust. He felt no pain at first. He tried to crane his neck so as to get a look at the behemoth that sat on him, but then things started hurting. His eyes filmed. He cried out softly. He would not look back again. Five tons of rock had tucked him in. It held whatever remained of him below the waist.

He began recovering the little Hosts. He moved his free arm gingerly. Cautiously he picked each of them out of the sand. The wind threatened to send the small flakes of Christ wandering. Anyway, Lord, I tried, he thought. Anyone needing the last rites? Viaticum? They'll have to drag themselves to me, if they do. Or is anybody left?

He could hear no voices above the terrible roaring.

A trickle of blood kept seeping into his eyes. He wiped at it with his forearm so as to avoid staining the wafers with gory fingers. Wrong blood, Lord, mine, not Yours. *Dealba me.*

He returned most of the scattered Victim to the vessel, but a few fugitive flakes eluded his reach. He stretched for them, but blacked out again.

"*Jesus Mary Joseph! Help!*"

Faintly he heard an answer, distant and scarcely audible under the howling sky. It was the soft strange voice he had heard in the confessional, and again it echoed his words:

"jesus mary joseph help"

"What?" he cried.

He called out several times, but no further answer came. The dust had begun sprinkling down. He replaced the lid of the ciborium to keep the dust from mingling with the Wafers. He lay still for a time with his eyes closed.

The trouble with being a priest was that you eventually had to take the advice you gave to others. *Nature imposes nothing that Nature hasn't prepared you to bear.* That's what I get for telling her what the Stoic said before I told her what God said, he thought.

There was little pain, but only a ferocious itching that came from the captive part of him. He tried to scratch; his fingers encountered only bare rock. He clawed at it for a moment, shuddered, and took his hand away. The itch was maddening. Bruised nerves flashed foolish demands for scratching. He felt very undignified.

Well, Doctor Cors, how do you know that the itch is not the more basic evil than the pain?

He laughed a little at that one. The laugh caused a sudden blackout. He clawed his way out of the blackness to the accompaniment of someone screaming. Suddenly the priest knew that the screaming was his own. Zerchi was suddenly afraid. The itch had been transmuted into agony, but the screams had been those of raw terror, not of pain. There was agony now even in breathing. The agony persisted, but

he could bear that. The dread had arisen from that last taste of inky blackness. The blackness seemed to brood over him, covet him, await him hungrily—a big black appetite with a yen for souls. Pain he could bear, but not that Awful Dark. Either there was something in it that should not be there, or there was something here that remained to be done. Once he surrendered to that darkness, there would be nothing he could do or undo.

Ashamed of his fright, he tried to pray, but the prayers seemed somehow unprayerful—like apologies, but not petitions—as if the last prayer had already been said, the last canticle already sung. The fear persisted. *Why?* He tried to reason with it. You’ve seen people die, Jeth. Seen many people die. It looks easy. They taper off, and then there’s a little spasm, and it’s over. That inky Dark—gulf between *aham* and *Asti*—blackest Styx, abyss between Lord and Man. Listen, Jeth, you really believe there’s Something on the other side of it, don’t you? Then why are you shaking so?

A verse from the *Dies Irae* drifted into mind, and it nagged at him:

*Quid sum miser tunc dicturus?  
Quem patronum rogaturus,  
Cum vix justus sit securus?*

“What am I, who am wretched, then to say? Whom shall I ask to be my protector, since even the *just* man is scarcely safe?” *Vix securus?* Why “scarcely safe”? Surely He would not damn the just? Then why are you shaking so?

Really, Doctor Cors, the evil to which even you should have referred was not suffering, but the unreasoning fear of suffering. *Metus doloris*. Take it together with its positive equivalent, the craving for worldly security, for Eden, and you might have your “root of evil,” Doctor Cors. To minimize suffering and to maximize security were natural and proper ends of society and Caesar. But then they became the only ends, somehow, and the only basis of law—a perversion. Inevitably, then, in seeking only them, we found only their opposites: maximum suffering and minimum security.

The trouble with the world is me. Try that on yourself, my dear Cors. Thee me Adam Man we. No “worldly evil” except that which is introduced into the world by Man—me thee Adam us—with a little help from the father of lies. Blame anything, blame God even, but oh don’t blame me. Doctor Cors? The only evil in the world now, Doctor, is the fact that the world no longer is. What pain hath wrought?

He laughed weakly again, and it brought the ink.

“Me us Adam, but Christ, Man me; Me us Adam, but Christ, Man me,” he said aloud. “You know what, Pat?—they’d . . . together . . . rather get nailed on it, but not alone . . . when they bleed . . . want company. Because . . . Because why it is. Because why it is the same as Satan wants Man full of Hell. I mean the same as Satan wants Hell full of Man. Because Adam . . . And yet Christ . . . But still me...Listen, Pat—”

This time it took longer to drive the inky Dark away, but he had to make it dear to Pat before he went into it all the way. “Listen, Pat, because . . . why it is I told her the baby had to . . . is why I. I mean. I mean Jesus never asked a man to do a damn thing that Jesus didn’t do. Same as why I. Why I can’t let go. Pat?”

He blinked several times. Pat vanished. The world congealed again and the blackness was gone. Somehow he had discovered what he was afraid of. There was something he had yet to fulfill before that Dark closed over him forever. *Dear God, let me live long enough to fulfill it.* He was afraid to die before he had accepted as much suffering as that which came to the child who could not comprehend it, the child he had tried to save for further suffering—no, not [or it, but in spite of it. He had commanded the mother in the name of Christ. He had not been wrong. But now he was afraid to slide away into that blackness before he had endured as much as God might help him endure.

*Quem patronum rogaturus,  
Cum vix justus sit securus?*

Let it be for the child and her mother, then. What I impose, I must accept. *Fas est*.

The decision seemed to diminish the pain. He lay quietly for a time, then cautiously looked back at the rock heap again. *More* than five tons back there. Eighteen centuries back there. The blast had broken open the crypts, for he noticed a few bones caught between the rocks. He groped with his free hand, encountered something smooth, and finally worked it free. He dropped it in the sand beside the ciborium. The jawbone was missing, but the cranium was intact except for a hole in the forehead from which a sliver of dry and half-rotten wood protruded. It looked like the remains of an arrow. The skull seemed very old.

"Brother," he whispered, for none but a monk of the Order would have been buried in those crypts.

What did you do for them, Bone? Teach them to read and write? Help them rebuild, give them Christ, help restore a culture? Did you remember to warn them that it could never be Eden? Of course you did. Bless you, Bone, he thought, and traced a cross on its forehead with his thumb. For all your pains, they paid you with an arrow between the eyes. Because there's more than five tons and eighteen centuries of rock back there. I suppose there's about two million years of it back there—since the first of *Homo inspiratus*.

He heard the voice again—the soft echo-voice that had answered him a little while ago. This time it came in a kind of childish singsong: "la la la, la-la-la—"

Although it seemed to be the same voice he had heard in the confessional, surely it could not be Mrs. Grales. Mrs. Grales would have forgiven God and run for home, if she had got out of the chapel in time—and please forgive the reversal, Lord. But he was not even sure that it was a reversal. Listen, Old Bone, should I have told that to Cors?

Listen, my dear Cors, why don't you forgive God for allowing pain? If He didn't allow it, human courage, bravery, nobility, and self-sacrifice would all be meaningless things. Besides, you'd be out of a job, Cors.

Maybe that's what we forgot to mention, Bone. Bombs and tantrums, when the world grew bitter because the world fell somehow short of half-remembered Eden. The bitterness was essentially against God. Listen, Man, you have to give up the bitterness—"be granting shriv'ness to God," as she'd say—before anything; before love.

But bombs and tantrums. They didn't forgive.

He slept awhile. It was natural sleep and not that ugly mind-seizing nothingness of the Dark. A rain came, clearing the dust. When he awoke, he was not alone. He lifted his cheek out of the mud and looked at them crossly. Three of them sat on the rubble heap and eyed him with funereal solemnity. He moved. They spread black wings and hissed nervously. He flipped a bit of stone at them. Two of them took wing and climbed to circle, but the third sat there doing a little shuffle-dance and peering at him gravely. A dark and ugly bird, but not like that Other Dark. This one coveted only the body.

"Dinner's not quite ready, brother bird," he told it irritably. "You'll have to wait."

It would not have many meals to look forward to, he noticed, before the bird itself became a meal for another. Its feathers were singed from the flash, and it kept one eye closed. The bird was soggy with rain, and the abbot guessed that the rain itself was full of death.

"la la la, la-la-la wait wait wait till it dies la . . ."

The voice came again. Zerchi had feared that it might have been a hallucination. But the bird was hearing it too. It kept peering at something out of Zerchi's range of vision. At last it hissed raucously and took wing.

"Help!" he shouted weakly.

"help," parroted the strange voice.

And the two-headed woman wandered into sight around a heap of rubble. She stopped and looked down at Zerchi.

"Thank God! Mrs. Grales! See if you can find Father Lehy—"

"thank god mrs. grales see if you can . . ."

He blinked away a film of blood, and studied her closely.

“Rachel,” he breathed.

“rachel,” the creature answered.

She knelt there in front of him and settled back on her heels. She watched him with cool green eyes and smiled innocently. The eyes were alert with wonder, curiosity, and—perhaps something else—but she could apparently not see that he was in pain. There was something about her eyes that caused him to notice nothing else for several seconds. But then he noticed that the head of Mrs. Grales slept soundly on the other shoulder while Rachel smiled. It seemed a young shy smile that hoped for friendship. He tried again.

“Listen, is anyone else alive? Get—”

Melodious and solemn came her answer: “listen is anyone else alive—” She savored the words. She enunciated them distinctly. She smiled over them. Her lips reframed them when her voice was done with them. It was more than reflexive imitation, he decided. She was trying to communicate something. By the repetition, she was trying to convey the idea: *I am somehow like you.*

But she had only just now been born.

*And you’re somehow different, too,* Zerchi noticed with a trace of awe. He remembered that Mrs. Grales had arthritis in both knees, but the body which had belonged to her was now kneeling there and sitting back on its heels in that limber posture of youth. Moreover, the old woman’s wrinkled skin seemed less wrinkled than before, and it seemed to glow a little, as if horny old tissue were being revived. Suddenly he noticed her arm.

“You’re hurt!”

“you’re hurt.”

Zerchi pointed at her arm. Instead of looking where he pointed, she imitated his gesture, looking at his finger and extending her own to touch it—using the wounded arm. There was very little blood, but there were at least a dozen cuts and one looked deep. He tugged at her finger to bring her arm closer. He plucked out five slivers of broken glass. Either she had thrust her arm through a window, or, more likely, had been in the path of an exploding windowpane when the blast had come. Only once when he removed an inch-long lance of glass did a trace of blood appear. When he pulled the others free, they left tiny blue marks, with no bleeding. The effect reminded him of a demonstration of hypnosis he had once witnessed, of something he had dismissed as a hoax. When he looked up at her face again, his awe increased. She was still smiling at him, as if the removal of the glass splinters had caused her no discomfort.

He glanced again at the face of Mrs. Grales. It had grown gray with the impersonal mask of coma. The lips seemed bloodless. Somehow he felt certain it was dying. He could imagine it withering and eventually falling away like a scab or an umbilical cord. Who, then, was Rachel? And what?

There was still a little moisture on the rain-wet rocks. He moistened one fingertip and beckoned for her to lean closer. Whatever she was, she had probably received too much radiation to live very long. He began tracing a cross on her forehead with the moist fingertip.

*“Nisi baptizata es et nisi baptizari nonquis, te baptizo...”*

He got no farther than that. She leaned quickly away from him. Her smile froze and vanished. *No!* her whole countenance seemed to shout. She turned away from him. She wiped the trace of moisture from her forehead, closed her eyes, and let her hands lie limply in her lap. An expression of complete passivity came over her face. With her head bowed that way, her whole attitude seemed suggestive of prayer. Gradually, out of the passivity, a smile was reborn. It grew. When she opened her eyes and looked at him again, it was with the same open warmth as before. But she glanced around as if searching for something.

Her eyes fell on the ciborium. Before he could stop her, she picked it up. “*No!*” he coughed hoarsely, and made a grab for it. She was too quick for him, and the effort cost him a blackout. As he drifted back to consciousness and lifted his head again, he could see only through a blur. She was still kneeling there facing him. Finally he could make out that she was holding the golden cup in her left hand, and in her right, delicately between thumb and forefinger, a single Host. She was offering it to *him*, or was he only imagining it, as he had imagined awhile ago that he was talking to Brother Pat?

He waited for the blur to clear. This time it wasn't going to clear, not completely. "*Domine, non sum dignus . . .*" he whispered, "*sed tantum die verbo . . .*,"

He received the Wafer from her hand. She replaced the lid of the ciborium and set the vessel in a more protected spot under a jutting rock. She used no conventional gestures, but the reverence with which she had handled it convinced him of one thing: *she sensed the Presence under the veils*. She who could not yet use words nor understand them, had done what she had as if by *direct instruction*, in response to his attempt at conditional baptism.

He tried to refocus his eyes to get another look at the face of this being, who by gestures alone had said to him: I do not need your *first* Sacrament, Man, but I am worthy to convey to you *this* Sacrament of Life. Now he knew what she was, and he sobbed faintly when he could not again force his eyes to focus on those cool, green, and untroubled eyes of one born free.

"*Magnificat anima mea Dominum,*" he whispered. "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour; for He hath regarded the lowliness of His handmaid..." He wanted to teach her these words as his last act, for he was certain that she shared something with the Maiden who first had spoken them.

"*Magnificat anima mea Dominum et exultavit spiritus meus in Deo, salutari meo, quia respexit humilitatem . . .*,"

He ran out of breath before he had finished. His vision went foggy; he could no longer see her form. But cool fingertips touched his forehead, and he heard her say one word:

"Live."

Then she was gone. He could hear her voice trailing away in the new ruins. "la la la, la-la-la . . ."

The image of those cool green eyes lingered with him as long as life. He did not ask *why* God would choose to raise up a creature of primal innocence from the shoulder of Mrs. Grales, or why God gave to it the preternatural gifts of Eden—these gifts which Man had been trying to seize by brute force again from Heaven since first he lost them. He had seen primal innocence in those eyes, and a promise of resurrection. One glimpse had been a bounty, and he wept in gratitude. Afterwards he lay with his face in the wet dirt and waited.

Nothing else ever came—nothing that he saw, or felt, or heard.

# T

hey sang as they lifted the children into the ship. They sang old space chanteys and helped the children up the ladder one at a time and into the hands of the sisters. They sang heartily to dispel the fright of the little ones. When the horizon erupted, the singing stopped. They passed the last child into the ship.

The horizon came alive with flashes as the monks mounted the ladder. The horizons became a red glow. A distant cloudbank was born where no cloud had been. The monks on the ladder looked away from the flashes. When the flashes were gone, they looked back.

The visage of Lucifer mushroomed into hideousness above the cloudbank, rising slowly like some titan climbing to its feet after ages of imprisonment in the Earth.

Someone barked an order. The monks began climbing again. Soon they were all inside the ship.

The last monk, upon entering, paused in the lock. He stood in the open hatchway and took off his sandals. "*Sic transit mundus,*" he murmured, looking back at the glow. He slapped the soles of his sandals together, beating the dirt out of them. The glow was engulfing a third of the heavens. He scratched his beard, took one last look at the ocean, then stepped back and closed the hatch.

There came a blur, a glare of light, a high thin whining sound, and the starship thrust itself heavenward.

The breakers beat monotonously at the shores, casting up driftwood. An abandoned seaplane floated beyond the breakers. After a while the breakers caught the seaplane and threw it on the shore with the driftwood. It tilted and fractured a wing. There were shrimp carousing in the breakers, and the whiting that fed on the shrimp, and the shark that munched the whiting and found them admirable, in the sportive brutality of the sea.

A wind came across the ocean, sweeping with it a pall of fine white ash. The ash fell into the sea and into the breakers. The breakers washed dead shrimp ashore with the driftwood. Then they washed up the whiting. The shark swam out to his deepest waters and brooded in the cold clean currents. He was very hungry that season.

***Freedom from their conquerors lay in the Martians' grasp if Rolph could show them that the gods they worshipped were guns.!***

THE TRIAL was secret, and the prisoner was held incommunicado. Menshrie, of the *Martian Messenger*, printed the Commission's press releases verbatim. Rewording them would have been in the spirit of *lese majeste*, and Menshrie was a cautious man. His disapproval, if any, of the lurid colors the press officer used to paint a portrait of Captain Jason Kenlan, was not evident in Menshrie's editorial comments. A segment of the population naturally agreed with the reports and therefore hated Kenlan with a bright white hate, which burned fiercely enough to include Jason's sons in its reflected glare. The sons quietly slipped away to the other side of the city and stayed out of sight. One grew a moustache as a hindrance to recognition. Their father was beyond their aid. It was their considered opinion that their mother was lucky to be five years dead.

They hanged Captain Kenlan in the late afternoon. Publicly. Thousands of citizens jammed the Marsville city park, and several hawkers wandered through the crowd selling nuts and candied quoe. There was little ceremony to the execution. The guards led Kenlan past a platoon of space marines who turned their backs on the officer. They dragged him up on the platform where the colonel ripped off his insignia. They gave him no opportunity to speak, but as the executioner fixed the noose in place, Jason cried out, "They *are* human, I tell you!" The lever was tripped before he could say more. The drop was too shallow for the light Martian gravity, and he strangled beneath a bat-flecked violet sky.

There was an atmosphere of festivity in Marsville on the night after the hanging. The city of eighty thousand had reaffirmed its faith in human dignity by executing a man who wanted to share "humanity" with a species of Martian wild life. By eight o'clock, a barfly minstrel had built a ballad around the hanging. The tune was old, but the words were new. Its mournful strains floated out into the night air in front of a space port saloon near the city's outer gate, where two shabbily dressed men loitered against the wall and listened.

*"Kenlan was the son of the colonel;  
Kenlan was the fourth planet's pride.  
Kenlan got lost in the mountains,  
And brought back a hairy brown bride.  
Now the gallows were high and windy;  
The steps were seven and six.*

*Yes, it's thirteen steps to heaven,  
If you're in love with a..."*

"Think it'll make the hit parade, Rolf?" drawled one of the shabby men as he brushed ice crystals out of a bristling brown moustache.

Rolf Kenlan eyed his brother briefly, then glanced back at The gate. A staff car had just pulled away, carrying the old guard, while two fresh sentries entered the hut to spend their four-hour shift. Beyond the gate lay five miles of frigid tundra, and then the foothills, immersed in darkness.

Rolf waited for the guards to get inside, then spoke softly: "Okay, Lennie, let's go. Make like you're drunk."

ARM IN arm, they shuffled along the wall to the gate. Then they sat down in front of the shack and began tipping from a bottle of kwoyo and arguing noisily. When they heard a guard's footsteps on the floor of the hut, Lennie bent forward and made retching noises. The door opened and a gust of warm air fanned Rolf's neck.

"Hey! Not in front of the shack!" the guard bellowed. "You there! Get him away from here." He nudged Rolf's back with the toe of his boot.

"Yeh, yeh, sure," Rolf grunted. He staggered to his feet and began tugging at Lennie's arm. He lost his grip and sat down hard.

The guard came out cursing. "Blind lead blind," he growled as he jerked Lennie roughly erect and dragged him toward the shadows. Lennie was still belching sickeningly.

Rolf dragged himself up and stood swaying dizzily. He glanced through the glass door of the shack at the other guard who was pressing his face against a window to see where his companion had gone.

There was a dull *thuk* from the shadows, then the sound of a body falling. Lennie reappeared with a gun in one hand and a short length of pipe in the other. He tossed the gun to Rolf, who darted up the steps and burst inside, just as the guard turned away from the window with a bewildered expression.

"Turn around," Rolf growled.

The guard glanced at the gun, lifted his hands, and turned. "Y-you're the son of—"

Rolf clubbed him with the gun butt before he finished. The guard slumped across a table and rolled to the floor. Lennie came in dragging the other man.

"Anybody see us?" Rolf grunted. "Couple walked past. Didn't even look around."

"Good! Bust the locker open and get into a night suit. Then get the fur horses out of the stable. I'll pack up whatever we can take with us."

Lennie smashed the lock of a wooden chest with his pipe joint. "Ammo's in here," he grunted as he struggled into a heavy all-covering night suit and pulled the wind mask over his face. Then he went outside.

Rolf broke open a first-aid packet and gave each guard a shot of morphine to insure a lengthy sleep. Then he ripped a blanket from the cot, dumped it full of ammunition, chocolate and vitamin tablets. He rolled it into a pack, donned a night suit, and went outside to join his brother in the darkness.

Lennie was waiting in the shadows with a pair of mutant fur horses, saddled and shod with asbestos-packed shoes. Rolf tied the bundle behind his idle, then mounted the nervous steed. A last glance at the street told Lem that they were still unobserved.

"Let's don't forget that this was your idea," growled Lennie as they trotted through the gate and onto the frozen tundra.

"Go back if you want to," Rolf responded. "Nobody's making you come."

LENNIE grunted resignedly and fell silent for a time. The sky was misted by its usual thin cloud of ice crystals which dulled the ghost light of the twin moons to the faintest glimmer. Faintly, they could see the shadows of the foothills in the distance ahead, while behind them the lights of Marsville made an aura in the dusty sift of falling pin-head sleet. The lights were a threat, and the gathering darkness was a comforting cloak that drew slowly about them. This was the first time that either man had ventured

beyond the walls of the city where they were born. The law confined the populace to Earth's only city on Mars, and it also kept Mars-creatures from entering.

"When'll they find the guards?" asked Lennie, who was younger and needed a certain amount of reassurance.

"Whenever the O. D. makes his tour, if he makes one. If he doesn't, we've got until they mount the next guard." Rolf spoke irritably, and tightened the straps of his wind mask against the icy air.

It was still cold on Mars, but warmer than it had been when man first came. Five centuries had passed since Dawson and Heide had set off the deuterium-helium fusion-cycle in the heavy water icecap, thereby furnishing the fourth planet with a denser atmosphere of oxygen and helium—a breathable atmosphere, and one which could hold heat.

"Lordy, Rolf!" Lennie muttered nervously. "It's hard to believe we're not ever coming back! I don't mind saying I'm scared. Y'reckon we'll ever find that place Dad was talking about—before they arrested him?"

"If we don't, we won't live long. Just shut up and watch over your shoulder. And let's ride a hundred yards apart in case they throw a searchlight out here."

Lennie reined his horse aside obediently. But the mount stumbled, and the rider cursed. He stopped to peer down at the ground. "Wait, Rolf!" he snapped. "Look! A fresh grave!"

Rolf hesitated in the dim moonlight, staring back at the newly frozen mound of earth. "That's what I thought," he grunted bitterly. "You guess whose it is?"

"Yeah," Lennie breathed. "Yeah. The androon gal Dad brought back from the mountains. The dirty so-and-so's said they let her go."

Rolf muttered a quoted phrase from one of the trial's news releases. "In accordance with the Commission's policy of mercy toward alien life forms, the androon female was set free..." He snorted a scornful curse and spurred his mount onward.

In a way, Rolf thought, the androon woman was their foster mother, although they'd never seen her. Jason had taken her to wife in a ceremony before an androon priest, while he was lost for a year in the mountains. He'd brought her back claiming that he'd found proof that her species was really human. So they hanged him under the bio-laws.

THE TWO riders trotted westward among the giant lichen patches. They kept abreast, but separated by shouting distance. Rolf hoped to reach the fringes of the quoie orchards before someone discovered the guards.

If they were caught, there was only one possible penalty: death. Only officers of the patrol could venture beyond the walls. And even patrolmen needed special orders—such as the reconnaissance mission which had first sent Jason into the hills. The only reason the Commission gave for such a harsh quarantine was a single word: "security".

Mars was still nearly unexplored except from the air. Marsville was a ten-mile square, and it was the entire world to its natives, who were five generations removed from Earth. It was an industrial city, mining its own ore, making its own steel. It had become nearly self-sufficient and, as soon as its economic independence was assured, it was to become the toolmaker to a Martian civilization which would expand outward from the Marsville nucleus. It was to become the hub of an empire. But until that time, its attentions were to remain focussed upon its own growth. Rolf's and Lennie's knowledge of the rest of the planet was purely academic. The hills ahead were only a mystery.

"Reckon we'll meet any androons?" Lennie called from the darkness.

"Shut up!" Rolf barked. "They might hear you."

Sound travelled far in the icy air across the frozen flatlands. Rolf stole a glance back at the city, but it was still drowsing peacefully in its glow-aura.

When they were a thousand yards from the quoie orchards, Lennie called out again—this time with fear in his voice: "Rolf! Look! A light! On the wall!"

Rolf reined up and stared back at the city. The pencil beam of a searchlight was stabbing out into the night. Slowly, it swept the area to the north of them, then darted southward. Rolf dismounted with a

curse. "Get your horse down!" he shouted.

Then he tugged his own mount behind a waist-high clump of lichen and tried to force the animal's forelegs into a kneel. The mare remained stubbornly erect. The light was sweeping closer.

Despairingly, Rolf drew the stolen pistol and shot her between the eyes. He stepped back as she crumpled behind the lichen patch, then threw himself down out of sight as the searchlight swept over him.

LENNIE shouted something about his horse, then screamed as a burst of machine-gun fire chattered from the city. Rolf glanced up to see the beam rigidly stationary, attached to the spot where Lennie had dismounted. There was another burst of fire, and bright tracers arced across the tundra. Rolf heard the bullets whipping the earth a hundred to the south, and occasionally spanging off a rock in a whining ricochet. There was no sound from his brother.

"Lennie? You okay?"

There was no answer. The firing ceased, and the light began slowly sweeping the tundra again. Keeping behind the lichen clusters, Rolf crawled southward. Several times the light passed over him, and he flung himself full length on the turf. Then the light stopped once more near Lennie, and Rolf saw the prostrate fur horse with Lennie's legs pinned beneath it.

"Len! Are you all right?"

He heard a faint groan, and crawled closer. Hoofbeats were echoing in the distance. He paused to call again from just beyond the splash of brightness. "Lennie! Are you alive?"

This time he heard a weak answer: "Go on ...before they come....Belly shot. I can't go. Hurry... Rolf."

Rolf hesitated. Without a horse, he couldn't carry Lennie along. And the riders were coming out of the city. Even if he had a horse, he couldn't take care of an abdominal wound with a first-aid kit. Grimly, he realized Lennie would have to be left behind.

"So long, kid!" he called; then, crouching low, he began running toward the orchard, angling away from the road of brightness which the beam carved, leading the patrol riders toward the downed fugitive.

Rolf raced against fear, expecting the searchlight at any moment to shift half a degree and catch him in its beam. But, evidently, the patrolmen were not yet aware that there had been two riders. Soon they would find the extra horse, however, or notice that two were gone from the stables. And from that moment onward, Rolf's life would become an endless flight. The city was a prison and escapees were hunted down by air. The guards had the right to kill them summarily.

Rolf reached the orchard just as the clatter of hooves stopped beside his fallen brother. He darted among the furry-barked quioie trunks, then stopped to look back. The silhouettes of three horsemen were gathered around the wounded man in the searchlight's splash. One of the men pointed at the ground. Rolf strained his eyes for a better look. A gunshot came to his ears faintly, and the rider stopped pointing.

ROLF STIFFENED with horror. There was no question in his mind about Lennie's fate. Slowly he took out the pistol, braced it against the tree-trunk, then realized that there was no hope of hitting the man at such a distance. He pocketed the weapon and stood staring at the scene in frozen hate. Someday he would come back, he swore. Someday that man would die.

Then, as the riders began circling about in the area, he turned and drove deeper into the orchard's blackness. Tomorrow the chase would begin in earnest, and he hoped to be in the foothills before morning.

The first feeble rays of dawn, however, found him still in the orchard. In despair, he realized he had wandered onto a side path and had been plodding south instead of west. Soon the aircraft would rise from the city to begin their search. How could he escape them on foot?

Wearily he sat down on a dry stump to consider his plight and to gnaw at a bit of frozen chocolate from the pack. His stirring about roused a giant wool-bat which had spent the night roosting in one of the parabolic cups which constituted the foliage of the quioie trees. The creature came awake with a flutter, peered over the side of the cup, bared its needle-like fangs at the human, and departed with a series of shrill eee's and a whipping of gigantic wings. Rolf started up in fright, then settled back with a disgusted

grunt to finish his breakfast.

The bats were harmless unless attacked. The sharp teeth were used to tear through the leathery insulating hide that covered the fruit of the quoie trees, and bats were normally vegetarians. The androons used them for food, and rode them for sport. The winged beasts were untrainable and useless for directed transportation, but they could provide a wild sky ride that ended only when the bat became exhausted and settled to earth. Rolf had seen them soaring above the mountains, looping and twisting in an attempt to unseat their androon passengers.

Directed transportation?

Rolf came to his feet suddenly and stared up at the semi-translucent quoie cups, frost-covered in the dawn. The early sun's rays colored them a dull orange, and here and there a dark hulk lay huddled in the heart of a cup. Other bats had nested for the night, but they were beginning to stir as the light grew brighter. What need did he have of a *directed* ride? One thing was certain: no bat would fly back to the city.

Quickly he gathered up the rope that had bound the pack, spotted a tree that contained a bat, and began shinnying up the furry trunk. The tree shook with his weight. The bat grinned at him from over the side, then took wing noisily, arousing several others. Rolf dropped to the ground with a curse. Snaring the creatures would be a job.

He stared blankly at the tree and waited for inspiration. It came. He stretched the rope out in a straight line on the ground, made a noose at one end, then unzipped his suit and removed the canteen from its warm nest next to his ribs. He began soaking a twelve-foot length of the rope, just aft of the noose. The water froze almost immediately. He built up a strong sheath of ice about it, then carried it to the nearest tree which contained a late sleeper. He tied one end about the trunk, then stood on tiptoe to rattle the noose against the lip of the nest. The ice made a stiff rod.

With a startled squeak, the bat awoke with a jerk that rocked the tree. It caught the rope in its teeth with an angry snap. Rolf threw his weight against the frozen pole, and it became suddenly flexible as the ice shattered. With a shriek to awaken the dead, the bat burst skyward and fought frenziedly at the end of the tether. But the loop was securely locked about its lower jaw, and the sharp teeth nailed it in place.

FOR A MOMENT, Rolf thought the beast would either break the rope or uproot the swaying quoie. The beating wings set up a wind that fanned his face and rocked the neighboring trees. Quickly, he began guiding the creature's struggles so that it wrapped the rope several additional times around the trunk. Then he loosened the knot and tied a loop about his waist. He had meant to transfer the snare to the bat's legs, as the androons did, but the monster's furious struggle made it impossible. He would have to chance the jaw sling.

With some misgivings, he began walking about the trunk to unwind the rope. After two turns, he was being dragged around it. Then he found himself spinning upward, crashing against tree trunks, and tearing through tough quoie foliage. He closed his eyes, clung to the rope, and tried to pull himself higher upon it. Then he was rocking and swaying in the icy wind. The bat swooped, soared and looped over the orchard as it tried to shed its unwanted cargo. Suddenly it climbed high, jerked its neck and folded its wings, tossing Rolf upward like a ball on a string.

He caught a glimpse of the bat's taloned feet slashing toward him, and he caught at them with his hands to protect his face. The claws knifed through the heavy padding of his night-suit, and he felt them dig into the muscles of his forearms. Howling with pain, he clutched the hairy ankles and held on. The jaw rope went slack. With horror, he watched the jaw noose loosen as the beast snapped at it, uttering shrill *skreees* of rage. The talons kept clawing at his forearms, but the thickness of the padded sleeves lessened their effect.

They were fluttering a hundred feet above the orchard when the noose fell free, and the rope dangled from Rolf's waist. In mid-air, the bat tried to bend double and slash the man with its fangs, but its jaw

seemed to have come unhinged. As Rolf threw his boots up to kick, the bloody slaver's mouth only beat against them weakly. But the battle was causing them to plummet earthward again.

A deafening *thwoomp* suddenly shocked Rolf's eardrums, and a dark pall of smoke opened up above them. The bat shrieked in wild terror as a fragment of shrapnel ripped a small hole in a membranous wing. The city had a pair of anti-aircraft guns, and the guards had evidently spotted the wild fight above the orchard.

Then Rolf was no longer holding on. The bat's talons tightened instinctively about his wrists as the creature dived like a fighter-rocket for lower altitude. Another burst of flak flared like a black umbrella with a heart of fire. A metallic fragment slashed the fabric of Rolf's suit. The bat pulled out of the dive and began skimming along the tree-tops, darting a zig-zag course for the hills and screaming rage against the black threats that bloomed from nowhere with the stink of cordite. Its talons flared open and shut, trying to rid itself of the unwanted weight, but Rolf had recovered his grip on the ankles.

HE DOUBLED his body into a ball, lest he be dashed to death in the treetops. With his knees, he pulled up enough of the trailing rope to catch it in his mouth. Letting go with one hand, he managed to loop it about one of the bat's ankles, and by shifting his grip, about the other. After a moment, his own fate was securely tied to the bat's.

And the bat was fluttering a hysterical course for the hills. The gunners were finding it difficult to cope with the sudden changes in direction. Rolf breathed premature relief as the beast swooped into a gully and turned out of the city's sight behind a ridge, winging low over the rocks and lichen patches. But the gunners could still lob them over the hill, and they did—but with less accuracy.

He stole a glance backward and saw what he expected to see—aircraft. Three pinpoints in the sky were streaking westward—the city's only jet-planes. Because of their altitude, and their slight off-target heading, he knew they hadn't spotted him yet, but it would certainly be only a matter of minutes. The bat's rust-colored fur offered some camouflage, but they would see the black shadow darting up the hillsides, and dive in for the kill.

The bat drove deeper into the hills, taking a winding course through the valleys and keeping up a *skree skree* that seemed to become weaker by the moment. Rolf noticed that the sleeves of his suit were blood-drenched, and that some of the sticky fluid was not his own. A bit of shrapnel had found a home.

The planes were circling almost directly overhead, and losing altitude. Rolf noticed that his bat was heading for a low cliff of white rock where the mouths of three caverns yawned toward the sun. Several other of the beasts were sunning themselves on a ledge before the caves. Their nests?

One of the jets suddenly wagged its wings and dropped out of formation. It dived toward the other end of the valley, then banked sharply in a 180-degree turn. Rolf knew it had spotted him, and was coming in for a strafing run. The weakened and wounded bat was flapping its wings wearily, and barely managing to keep aloft as it struggled to reach the cliff caves which it apparently regarded as home. Rolf spurred it on with a couple of pistol shots near its breast. It *skreeed* weakly and summoned a last effort.

Like a shrieking arrow, the first jet streaked past, and Rolf pulled himself as close as possible against the bat's belly. A crash of machine-gun fire ripped a hundred-yard-long swath across the ground, and ricocheting tracers darted skyward. The pilot had overshot. But another jet was streaking up the valley.

THE BAT reached the ledge just as the first blast ploughed the earth, and the sound was answered by a growing chorus of shrill *skrees* from the cave. Rolf threw himself flat on the ledge as the caverns began belching forth a flood of frightened bodies with membranous wings. An army of bats streaked out like a herd of stampeding bison. The second jet pulled up sharply to avoid collision. The bats filled the air in a swirling, scurrying, bleating black cloud of confusion. The beast that had carried the fugitive lay dying on the ledge beside him. Rolf cut the rope and waited for the last startled creature to emerge. Then he slid into the mouth of a cave.

The strafing chatter continued intermittently. Evidently they had lost sight of him during the bat stampede. Rolf lay panting in the darkness, completely exhausted from the night of fleeing, emotionally drained by the sight of his brother's and father's death at the hands of the city which had been home.

Home? It had been the world.

Why had they hung Jason Kenlan? Because he had committed miscegenation? Rolf remembered the bewilderment on his father's face when they treated him like the worst sort of criminal, remembered his cry, "But they're human, I tell you!"

Before the commission had closed Jason's cell off from the world and held him incommunicado, Rolf had spent half an hour listening to a disjointed account of his father's year of wandering in the Martian wilderness. But the conversation had been punctuated with anxious expressions of worry about the androon woman, and with irrelevant anecdotes concerning life in the androon caverns, or "mines", as Jason had called them.

Nevertheless, Rolf had managed to hear some of the officer's ideas before the guards chased him away. Jason claimed to have discovered evidence that Mars had once been a satellite of Jupiter, that it had been peopled by a now-extinct race of intelligent non-humans, and that the androons had come from Earth while Cro-Magnon man still prowled the forests of Europe.

And that the androons were, in fact, descended from the Cro-Magnon tribes. He claimed that the "Bolsewi" had raided Earth in prehistoric times, captured a dozen pairs of humans, and rocketed them back to Mars for breeding purposes, using the offspring as slave labor.

Rolf and Lennie had quickly decided that their father was executed to close his mouth, rather than to punish him for violating the bio-laws, which would be void if the androons were proved human. Impulsively, and driven by bitterness, they had decided to escape the city and go in search of proof which would posthumously absolve Jason Kenlan of guilt. Jason claimed to have brought such proof, but he had presented it to the Commission in secret session, rather than announcing it directly to the people of Marsville who now would never see it.

OTHER scientists had proposed that Mars had once been the outer moon of Jupiter, while the king planet was still in a molten, fiery state. According to the theory, Mars had received more light and heat from the mother planet than it got from the sun. It had cooled more rapidly than the giant, and had developed the first life in the solar system. But after the fashion of all moons which revolve about fluid-surfaced planets, it drifted farther and farther away from the waning, cooling king. Some of its orbital energy was lost in the daily work of raising and lowering the Jovian tides. When the tides fell back with the moon's passing, the spring-tension of the mutual attraction diminished by a tiny amount, and Mars slipped another inch away from its master. When it reached the point where Sol's gravity met and exactly opposed that of Jove, Mars wavered, drifted free, then accelerated sunward. Keeping some of Jupiter's orbital velocity, it spiraled inward, dashing through the asteroids to gather up Phobos and Deimos. By missing the sun, of course, it was doomed to wheel forever in its own new orbit.

The scientists who held for such a theory pointed to the eccentricity of Mars' orbit and to the peculiar behavior of her moons, and to the known fact that Earth's own moon was gradually slipping away due to tidal influences. But such scientists were held in political disfavor.

Rolf, having heard what his father had to say, now suspected a political reason for this disfavor. If Mars life had indeed evolved while Mars was a satellite of Jupiter, then Mars' sudden change of orbit would be a disaster of the first magnitude to whatever beings originally inhabited it. The sudden shift in climate might drive them underground, wreck their civilization, and devastate their non-intelligent life-forms and food supply. Such a civilization, after painful rebuilding, might go searching for organisms who could better withstand the changed conditions. And what more likely place to look than upon Mars' new neighbor—Earth? The kidnapped life-forms could be taught to handle the heavier labor, while the natives kept themselves sheltered from the fiercer climate.

If the lost-satellite theory were shown to be true, it might lead to a belief that the androons were human.

But then, Rolf asked himself, why should the Commission care whether the creatures were originally born of Earth or of Mars? The city's tyrannical quarantine had set a barrier about it anyway. Rolf knew no possible answer. Yet he believed that the Commission had killed his father to keep intact the assumption of the androons' inhumanity. And, in a sense, the Commission had killed his mother—by the ruling that

women with children must spend thirty hours a week in factory labor, as well as caring for the family. Overwork had destroyed her health, taken her life. Of the family he had known since birth, Rolf alone remained—Rolf, and hatred.

HE THOUGHT of these things in a hazy way as he lay resting in the mouth of the cave. The jets had stopped strafing the area, but he could still hear their rushing hiss as they circled overhead. Sooner or later, Rolf knew, they would send helicopters to land and search the area for him. Unquestionably, they would search the caves. He must move on—somehow. There could be no rest until he was either safe or dead.

He turned around in the narrow passage-way, then stiffened. For an instant he thought that a bat had breathed in his face, but then, removing his mask, he felt a gentle draft that was warmer than the outer airs. The blackness was impenetrable. Fumbling, he found his flashlight and shone it back into the cave, but the tunnel made a turning fifty feet ahead, and he could not see beyond it.

Toward the bend the tunnel widened, and a pair of young bats blinked at him from a ledge. They slowly folded and unfolded their wings, which were still too feeble to bear them aloft. He crawled past them quickly, let the female return and object to his presence. The little beasts eyed him solemnly with little peep's of curiosity. He grinned and paused to scratch the silky neck of one of them. The bat nuzzled his hand affectionately.

"Your old lady oughta warn you against strangers," he told it. "I might be hungry."

The bat *eeeked* several times, and maneuvered its neck against Rolf's hand again. He chuckled, scratched it lightly, and moved on around the turn in the tunnel. The cavern widened still more and, by stooping slightly, he found that he could stand. But the passageway took a winding downward course that prevented his seeing what lay ahead. He thought grimly that he might be walking into doom; but it was better, at least, than what lay outside.

Instead of being smooth and waterworn, as were the caverns of Earth, the walls about him were rough, yet glazed over, as though the surface film had once been fused by a sudden and intense heat. Their appearance plus the strange relative warmth of the air troubled him with a vague uneasiness. He was perhaps the first human to tread the winding, sloping corridor, for the bulk of Mars was as yet unexplored. The Commission seemingly didn't want it explored. They wanted Marsville to be built up quickly as the central fortress of future empire. The difficulty of space transportation, its present limitations, meant that Marsville must grow without transfusions of men and tools from Earth. Time, equipment and manpower were scarce commodities which could not be wasted upon satisfying Marsological curiosity. Curiosity would have to wait for production.

SO SAID the Commission. But Rolf wondered if perhaps the Commission didn't know more about Mars than it admitted to the city's citizens, who, although being nominally free within its walls, were born within the Commission's jurisdiction, attended Commission-regulated schools, and read whatever news the Commission saw fit to release. News of Earth? Rolf knew vaguely that some sort of major political upheaval was in violent progress on the mother planet, but he knew little of its nature. The Commission kept reminding the citizens of Marsville that they were too far from Earth to bother worrying about it.

As he drove deeper into the cave, he began unzipping the bulky suit. It seemed to be growing steadily warmer, although the temperature was probably still below freezing.

Suddenly he stopped, stood rigidly in his tracks, and listened. A sound from behind him? At first he thought that he'd been mistaken. Then he heard it again—a faint rustling sound, as of someone brushing against the rocks. He doused the flashlight, traded it for his pistol, and pressed himself back against the icy wall, holding his breath and waiting. The sound stopped, then continued, drawing nearer.

It could only be an enemy, he thought. There were no androons this close to the city; at least, none had been observed. Quietly, he knelt in the darkness, meaning to shoot upward in case the prowler tripped over him. Then the rustling noise hurried toward him. His finger tightened on the trigger.

*Eeeek eeeek eeeek .*

A warm little mouth nuzzled his hand in the darkness, and a small wing brushed his leg. He cursed

disgustedly and switched on the light. The bat-pup had followed him, dragging its wings along the floor. Its tiny talons caught in his suit and clung. It squeaked with tired pleasure as it sagged against his chest drowsily.

But it seemed interested in his hands, which were still dirty with dried blood. "Little vampire!" he grunted at it. But it seemed interested only in sniffing the scent. He remembered that some of it was bat blood then, and wondered if the creature which bore him to the caves was the pup's mother.

"Whoever she is, she'll have to come after you, doc," he murmured as he resumed the journey. He pried the pup's talons loose from his clothing, and lifted the furry bundle to his shoulder. It squeaked once, folded its wings, and promptly fell asleep.

It was peculiar, he thought, that they couldn't be domesticated. The young were friendly enough. So was a tiger kitten, however. But who said they couldn't be domesticated? The Commission said so, via the schools. And Rolf was prepared to place his complete mistrust in the Commission. The androons obviously hadn't domesticated the bats, but the androons were still in a stone age. He decided to keep the pup for a while, unless it grew hungry for a morsel of his arm.

Glancing at his watch, he estimated that he had gone at least a mile. But the cave showed no signs of tapering off or ending. Where were his pursuers? Surely they would guess his whereabouts and follow—or else seal the mouth of the cave with rocks. He shuddered as he thought of it, even though he hadn't intended to return. The steady air movement seemed to insist that there was another exit.

AN HOUR later he came to a wide place, and sat down upon a low rock to rest and to gnaw at a brick of bitter chocolate. He crumbled some of the bar and gave it to the pup, telling himself that it was an investment toward the day when he would be hungry enough to eat a bat. The pup seemed suspicious of the food, but devoured it nevertheless.

Rolf rubbed it between the ears. "Mighty big bead you got, doc," he murmured drowsily. "Either a lot of bone or a lot of brain." In ratio of skull-size to body-size, the bat was brainier than most monkeys. Rolf hadn't noticed it before because the creature's wings added to the apparent body size. Maybe, he thought, if Mars had a future, bats would be the up-and-coming species.

The chocolate was making him sleepy. He sat on the rock, willing himself to arise but remaining seated. The cave was soundless, save for the steady whisper of the air drift. He reminded himself that he'd had no sleep in forty hours. If they were coming, they would surely have caught him by this time—at the weary pace he'd been setting. Perhaps, he thought unhappily, they might really know what lay in the caverns and have decided to leave him with it.

He arose and placed his flashlight on a projecting corner of rock, aiming its beam back along the tunnel in the direction whence he had come. If a guard came around the corner and saw the light, Rolf hoped he'd shoot at it before realizing it wasn't in the fugitive's hand. Thus he would be awakened before he was seen. Then he stretched out in the blackest shadows for a nap. The rocks were rough, and the pup refused to be used for a pillow, but sleep demanded possession of him and cared little for comfort.

Sometime later, Doc's squeaking penetrated the sleep shroud and brought him half awake. He grumbled incoherently and tried to close his ears. Then the squeaks choked off. Rolf sighed contentedly.

A stick of dynamite suddenly exploded inside his skull. Bright tracers arced up out of a bright red fireball. Pain was an intermittent blip dancing on the sweep-line of consciousness. He sat up howling and clawing at his head. He caught a glimpse of a hand holding a large jagged rock.

The hand moved up, then down. A second jolt ended the pain.

There was flickering torchlight bathing the rough, moist ground. His head hung four feet high, face down, but there was no body beneath it. His chin was buried in a hairy, heavy-muscled back. Then he realized he was draped over someone's shoulder. The ground jogged up and down, and a pair of legs flashed in and out of view. The thighs were human, but from ankle to knee a thick shaggy pelt, enveloped them. The small horny feet were wrapped in bat-skin sandals.

An androon was carrying him. He heard voices and knew that there were three of them. He watched the ground moving beneath him. A red dot appeared, then receded behind them. Another appeared. Then another. He was fascinated by the rhythm of the red dots. But he soon discovered that his head

was their source.

The blood filled him with slow anger, but he was too weak to fight. His legs were numb, and the bony shoulder shut off circulation in his thighs. With his head hung low, his skull was exploding with pressure.

In petulant rage, he caught a mouthful of the androon's back, sank his teeth in it, and tore. The man-thing set up a slow wailing yell that rose in volume. The androon was afraid to drop him, lest the drop cause Rolf to tear out a patch of his back. He bent his knees, held on gingerly, and howled for help. Rolf bit deeper.

A pair of knuckles jabbed into his cheeks, one on either side. They drilled into his jaws and ground against something tender. He opened his mouth reflexively. The androon put him down. His legs buckled beneath him, and he sat on the hard stone floor.

Someone saved him from being kicked in the face by the androon he had bitten.

THE THREE of them stood over him, murmuring among themselves. Rolf glanced around weakly. They had been carrying him deeper into the cave, for there was some moisture on the rocks. He looked up at his captors—two bushy-bearded males and a girl. The males were lean, furry, and barrel-chested with rose-tinted hides and large pale eyes. The girl was slender and well-shaped with peach-fuzz skin. But below the knees she was as furry as the males. Her boot-pelt was parted down the center of the shin and combed back neatly into a cowlick behind her calves. All three of the creatures were dressed in short bat-skin skirts and jackets. They carried short clubs of hatchet-shaped bone.

One of the warriors nudged him with his toe and grunted, "*Hauka d'lag Saralesara, Erdmad!*"

Rolf glared up at him angrily and told them where to go.

The warriors glanced at each other, then growled a word at the girl. She shook her head doubtfully, paused to summon her thoughts, and spoke to him haltingly.

"Wye you...keel girl Saralesara, Erdman?"

Startled, Rolf made her repeat it. It was Earthtongue, all right, but where had she learned it? There was only one possible answer—his father!

"Who's Saralesara?" he growled. "I didn't kill anybody."

"She go you city. We see Erd-warr'ors take her out walls. Shoot t'roo head wid Erd-weapod. You Erdman, yes?"

Rolf explained that he had had no part in the killing of his father's androon mate, told them of Jason's execution, and related the events involved in his flight from the city. After he'd told it three times, the girl finally seemed to understand what had happened, but she failed to grasp any reason for it.

"Wye they kill for get marry?" she demanded angrily.

Rolf's pain-dazed mind balked at furnishing any lengthy explanations. His throbbing undermind popped a quotation from Kipling at him. "There are nine and sixty ways of constructing tribal lays, fur-legs."

The girl's eyebrows arched high with surprise. "An avery zeengle wan uv tham is right, huh? You son uv Yason Kanlan, hokay! He usta say that!"

Rolf remembered vaguely that his father had been sold on Kipling, and quoted the old balladeer frequently.

The girl turned to the others and began speaking rapidly in the guttural but pleasantly rhythmic androon tongue. Rolf took advantage of the interruption to study them more completely. He had seen androons only in textbook pictures and through binoculars when staring toward the mountains.

They were not more hairy than the Japanese Ainu tribes—above the knee, it least. And they were remarkably well developed for having evolved in Martian gravity—if they had in fact done so. They were tight-muscled and long-limbed, with high foreheads and thin features. With a generous application of the razor, they might easily pass for a polyracial mixture of Scandinavian, American Indian, and Hawaiian.

ONE OF the warriors was holding Doc by the feet. The bat-pup's wings were dragging the ground limply, and its small frightened eyes were darting about in weary terror. The warrior carried the pup like a chicken on its way to the chopping block, and Rolf suspected that the little beast was headed for a cook-pot. He pushed himself toward the warrior and tried to wrest the bat from him. The warrior snatched it back and moved aside with a surly growl. Doc revived enough to squeak plaintively.

Rolf struggled to his feet and demanded the bat. The warrior held it behind his back, and brandished his club at the Earthman. It was a mistake. Doc sank his needle-teeth into the most available portion of androon anatomy. The warrior yelped and released him. Doc fluttered to Rolf's feet, climbed up his clothing, and perched on his shoulder to shriek invective at his former persecutor.

The androons muttered among themselves in surprise. The girl looked at him respectfully. "You blessed by Menbana, god of bat. Is not many who can do this thing."

Rolf nodded solemnly and neglected to mention the bat-blood on his sleeves. "You go," said the girl, pointing a slender arm deeper into the cavern. "We take you to council."

Rolf took a few steps, then leaned against the wall, his head spinning sickeningly. A warrior stepped on either side of him, caught his arms, and helped him along the tunnel. "What's the council?" he muttered to the girl who walked a few paces ahead, carrying a sputtering torch.

She glanced back at him coolly. "Is three priests of Phanton, Erdman. They say somebody got to die for life of Saralesara. They decide if somebody should be you."

Rolf gasped, then raged at her for a time, telling her about how he had traded a life among his own people to come and find the androon tribes. "Why don't you kill your enemies instead of your friends?" he growled.

She shrugged. "You already here. It nice and convenient. But I dunno—if you blessed by Menbana, maybe they pick somebody else."

Rolf resolved to treat Doc with all the affection he could muster.

AS THEY moved ever deeper into the cave, Rolf's dazed senses began to warn him that there was something unusual here, something of which he should take note. After a time, they stopped to let him lean against a steel supporting column to rest. He tried to think about it, but the wounded bulge on his head kept firing volleys of pain through his reasoning organ.

They led him on again, dodging the heavy steel columns that gleamed rustlessly in the torchlight. Stainless steel columns?

"What the hell!" he gasped.

The girl looked back curiously. "You pain, Son of Kenlan?"

He stared at the columns in disbelief. They supported the ceiling under the crushing tons of rock overhead. "Who dug these tunnels?" he barked.

The girl laughed, then spoke to the warriors, who also laughed. Rolf repeated the question.

"Gods build tunnels," she told him promptly. "Our fathers served gods here, but gods go away."

Rolf stumbled on for a moment in silence. So it was true—there had been an earlier race of intelligent beings on Mars.

"Where did your people come from?" he asked.

"Gods make us." She laughed again. "You father, he say we come from Erd. Make priests mad, but we don't believe anyway. Gods make us."

They passed a sudden turn in the tunnel, and the girl whipped the torch against the wall, extinguishing it. Rolf stared ahead in amazement. The ceiling was aglow with pale green light, apparently fluorescing from gamma-radiation originating in troughs that ran high along the walls. The corridor was no longer jagged rock, but had been finished and polished to a high lustre. Doorways led off the main hall, and several androons appeared in them to stare at the captive. A hundred yards ahead, he could see a huge, brightly lighted room with a fountain in the center. A steamy pool surrounded the fountain, and an androon woman came out to dip water.

It reminded Rolf of a million-dollar hen house built by a chicken-fancier with money to burn. Certainly no androons had built it. They apparently lived in it without thinking twice about the wonder of

it. He could hear the distant hum of machinery—wholly automatic, undoubtedly, and running for thousands of years, untended by its users. Certainly they couldn't understand it—or they wouldn't still be carrying clubs and wearing skins. He glanced at his captors in scorn. They had probably lived here for milleniums without wondering what processes gave them light, heat, and water.

BUT THEN his scorn faded. How long had man lived in the forests without understanding what process made a tree bloom in Spring to hand him an apple in the Fall? Without knowing why the rain came to give him water, and the sun to give him warmth? He spoke to the girl again.

"Where does the light come from?"

She watched him with a faint frown. "You are ignorant as you father, Erdman. He too think light God have only one eye. Has one big-eye in sky, many little ones here."

He shrugged and looked around again. There was some lead shielding around the wall troughs. They undoubtedly contained a good gamma-emitter which would last for many ages, while the ceiling was coated with a thick phosphor.

They entered the mighty room and he saw that it was as large as a giant space-freighter hangar. He looked around and instantly knew the nature of the builders. Fiery phosphorescent murals depicted scenes of an ancient Mars. And he also saw the place of the bats in the biology of the fourth planet.

For the builders—the "Bolsewi", as his father had called them—were cousins to the bats. The first joints of their wings ended in short arms with tong, delicate fingers. Their bodies were spindly, and their heads oversized. Their wings were much smaller than those of the bats. But, as he looked at the murals, he knew that Man was to the apes as the Bolsewi were to the bats—cousins out of a common "Father Abraham". He looked around at his captors questioningly.

"Bolsewi," the girl told him, "The gods who made us."

Androons were congregating in the central room to stare. Rolf was being led toward a flight of steps that led to a second-story balcony. It was hard to believe that they were several thousand feet beneath the surface. But then, the fainter gravity would make deeper excavations possible on Mars. The crushing weight of rock would not be so great.

He looked at the murals again. Some of them involved ships of curious design, obviously meant for flight into space. His heart leapt at one of them—a ship lancing toward a blue-green planet with a single moon. Earth! The Bolsewi *had* been to Earth, possibly while Man was little above the ape.

So they had killed his father for telling the truth!

The warriors led him up the steps and made him sit upon a low, wide pedestal facing the deep balcony where three stone *cathedrae* were set against the wall. They were unoccupied. Above the *cathedrae* hung a pair of long, thin objects that reminded Rolf of weapons, although he had seen nothing like them before. They appeared to be a pair of bagpipes with a flame thrower in place of the chanter. He questioned the girl.

"They are the sacred symbols of Manton," she told him. Then she went away, leaving him alone on the platform with the two warrior guards and Doc, who was asleep again on his shoulder.

ROLF WONDERED if he had escaped from the Mars-Commission guards only to be killed in the name of superstition by the guards of the people he had meant to befriend. Toward the rear of the balcony a door opened and three ancient androons shuffled out, followed by the girl. The old men took their places upon the *cathedrae* with appropriate rustling of robes and stroking of beards. Then they bent forward to peer officiously at the prisoner. Their bat-skin togas draped them from shoulder to top, and each wore a metal pendant about his throat. Upon closer examination, Rolf decided that the pendants were stainless steel wing-nuts borrowed from some Bolsewi machine. He snickered. One man's toy was another man's god.

A priest barked a question, and the girl translated: "Why you laugh, Erdman?"

Rolf removed his smile and replied acidly, "I was surprised to see such intelligent-looking gentlemen."

She translated tonelessly and the priests appeared neither pleased nor insulted. They were eyeing the

bat-pup while they spoke to the girl.

"The elders ask—you blessed by Menbana, Erdman? They ask also you name. And why you people kill Saralesara, who is daughter of elder?"

Rolf glanced at them quickly and decided that the elder with the fiery demanding eyes was the father of Jason's bride. He assured them that he had always been chummy with Menbana, told them his story again, and insisted that the angry-eyed elder was his grandfather-in-law. The priests appeared baffled as the girl translated. They went into a huddle and argued noisily among themselves. The girl turned frequently to ask questions about his father, questions apparently designed to confirm the contention that he was Jason's son. Rolf began to get the impression that Jason had won their respect and friendship.

The priests broke off their argument suddenly to gaze at him. Rolf felt the chilly nervousness of a prisoner awaiting judgement. Then the father of Saralesara spoke to him directly, without the girl's translating.

"Jason Kenlan was a guest in my house," he said in slow but well-managed Earthtongue. "We accepted him as one of us, and he took my daughter in marriage. But his heart went back to his own people. He spoke dreamily of a day when Earthmen would be our brothers. He said that they now wish to conquer us and make us slaves as soon as their city has grown enough. But he said that he would tell them that we are also men, and that then they would welcome us. Is it for this cause that they killed him?"

Rolf nodded, then frowned. "He never was able to tell the people. He told the rulers. That was a mistake. The rulers didn't tell the people. They killed him to keep him quiet. If the people knew, then they would want to leave the city—to make homes in the hills—homes where they could be free as they were once free on Earth...."

The priest leaned forward suddenly. "Your father said that the gods did not make us. He said that our patriarchs came from Earth. Do you believe this also?"

ROLF NOTICED the challenging expression on the oldster's face. He saw the eyes flicker toward the murals—and he paused. It was clear that the old man believed the tribal legend. The caverns had obviously been made by the "gods". The caverns were the androons' world. The world was the Bolsewi's and the fulness thereof—including the inhabitants. Why should the priest believe some far-fetched tale of a foreigner? Rolf weighed his words carefully.

"I believe," he said, "that your tribe and my tribe have a common ancestor. Perhaps the Bolsewi planted some men upon this world and left others upon Earth. If you think the Bolsewi created you, don't you suppose that they could have left some of your kin on another world?"

The old man looked startled. He stared at Rolf thoughtfully, then spoke to the others in the androon tongue. The girl was watching him with a faint smile. Then she winked. He started slightly, having no doubt as to where she had learned to wink. Jason, he thought, must have looked over the crop before he picked Saralesara. At fifty, he had certainly not been ready for the rocking chair and flannel muffler. Rolf wondered if the androons were polygamous, and if Jason had brought home only one of his wives. He ignored the wink and watched the old high-priest, who had finished his discussion with the others.

"You are indeed blessed by Menbana, who *is* god of wisdom," the priest said. "We think your explanation is possible. The Bolsewi created our patriarchs and carried some of them to your world."

Rolf saw no reason to contend upon which planet man had originated. If the priest wanted to believe that Earthmen were an offshoot of Martian stock, then he would let them believe it. He was at least one notch righter than before. Rolf kept his mouth tightly shut and thanked the elder with a nod.

"You are an outcast now?" the priest asked.

"As long as the present rulers are in power."

"You wish to live among us?"

"That was my intention."

"Then you may do so upon certain conditions." He gestured toward the ones who had captured Rolf. "These were sent out to capture a victim for sacrifice—in reparation for the death of Saralesara. You must see that we find some Earthman to replace yourself."

"And if I don't?"

"Then you will be hung by the heels and skinned alive," said the priest with a faint smile.

Rolf swallowed a dry place in his throat and thought of the man who had shot his brother. "How much time will you give me?" he grunted.

The priest hesitated. "There is no set time for the sacrifice. But do not wait for Phantom to become impatient. He is *a* thirsty god. You may have time for your head to heal, and a reasonable time to learn our ways."

Rolf nodded, seeing no way to escape the injunction.

"You must also take up some duty—some responsibility—if you wish to join our people. You might bear arms, or take some housekeeping chores, ..." He paused, eyeing the sleeping bat-pup. "It is a high responsibility for an outsider, but ...if you have been blessed by the bat-god..."

ROLF NOTICED that the girl cast a startled glance from one to the other of them. She seemed to shake her head slightly, and her eyes warned him.

"You might join the bat-hunters," said the elder. "But that would also oblige you to become an acolyte of Menbana, and serve his priestesses in the temple. Do you object to this?"

Rolf hesitated thoughtfully. For some reason, the girl was frowning at him and saying "no" with her eyes. But he thought of the possibility of domesticating the bats; if they could be trained from puphood, they should make good mounts, and intelligent. And, as an acolyte in the temple, he might have access to a wealth of information. It was obvious that the androons had attached sacredness to the artifacts of the Bolsewi civilization, and through the minor priesthood he might gain access to some of them.

"Make your choice, Rolf Kenlan," the high-priest told him. "Let me tell you that an acolyte of Menbana must endure a humiliating initiation, and he *is* but a lackey to his priestess. But that is somewhat mitigated by his hunting activities, although few acolytes are really able to enjoy hunting after their initiation."

Rolf was irritated by the girl's warning glances. Did she think he couldn't take a little entrance exam? He had been shot at, exposed to the Martian night, nearly dashed to death by a giant bat, strafed by a Marsville jet, and clubbed in the head with a rock—all in the space of a day. What more could he expect from an initiation? A flogging? Dancing on live coals?

He snorted at the girl and spoke to the priest: "It would please me to serve Menbana," he said.

The girl's glance turned to scorn, but the elder smiled and stood up, indicating that the interview was at an end. The three old men started from the balcony, but the girl called out in the androon tongue, addressing the old one as H'nrin. H'nrin turned to frown, and glanced from the girl to the Earthman.

He answered in Earthtongue, but addressed the girl: "I don't know, Krasala. You seem too new to the Sacred Order to make such a request. Your sisters would resent it."

She reddened, apparently because Rolf was being admitted to the conversation via his own language. But she replied in kind: "What is better, High Sir: He son of Yason. I best maid of you daughter, before she keel. I lead warriors who capture him. Is fair...."

"But it was only five passages of Phobos since you were admitted to the order of Menbana."

"An I got no acolyte yet."

The priest sighed. "Very well, I'll speak to your superior. But you'll have to perform his initiation service. Are you prepared for it?"

The girl bowed slightly. "I have study under Na'Riga."

"All right, Krasala, you may have him. Take these two guards to assist you until the initiation." He paused, then spoke briefly to the warriors in the native tongue. They murmured assent.

THE THREE priests departed from the balcony. Rolf glanced at Krasala in irritation, thinking that she might prove to be a haughty little minx of an overseer. But at least she had known his father, as Saralesara's maid, and she might be more kindly disposed toward him than some other female. And, despite the natural boots of silky brown fur, she was a nice-looking morsel of androon.

They returned by the way they had come—across the massive room with a fountain and toward the

corridor of polished stone. He watched Krasala striding on ahead and he decided petulantly that she wasn't his type. He had always favored the short, pleasingly plump and jolly. While Krasala walked with the too-easy grace of a Commissioner's wife. Her waist was pinched, and her back was straight. She was full-hipped and ample-breasted, but there was nothing softly feminine about her. Or at least nothing *soft*. She was feminine like a female panther, he thought. And he began to feel some misgivings. Maybe he should have volunteered for the soldiery and carried a bone club.

They moved halfway down the corridor, turned left and walked a hundred paces down another. Rolf decided that there must be a network of tunnels beneath the mountains, possibly connecting a group of "community centers" like this one.

Krasala stopped before a large door, unbolted it, and gestured for him to enter. He stepped into a small windowless cell lighted only by a single splotch of phosphor on the ceiling. Its only furnishings were a hammock, a large block of stone for a table, and a small one for a chair. He shook Doc awake and set him on the floor. The bat squeaked resentfully.

"You stay here till 'nishiatiion," she told him curtly.

Rolf stretched out gratefully in the hammock and gingerly felt his scalp wound. Krasala was still watching him from the doorway.

"You wait," she said. "I get water to wash and bring food."

"Thanks," he grunted. "Bring something for my pet, will you."

She nodded and went away. A few minutes later she returned with a bowl of meat, a bottle of water, and a dripping slab of pickled quoe. The bat shared the meat with relish, although Rolf guessed the little beast was eating his own kind. He sat at the table hungrily wolfing the food while Kragala bathed the blood out of his hair.

"Is shame you sucha beeg fool," she told him scornfully.

"What do you mean?"

"Is better you should have been soldier-warrior. You don't like 'nishiatiion."

"I guess I can take it as well as the next guy. What is it, anyway?"

He felt her shrug indifferently. "Is to make you acolyte of Menbana. Is much pain. Oh well, after it over you won't care anymore. You won't care bout mucha anything."

Rolf stiffened uneasily. "What constitutes the initiation?"

"Hah?"

"What're you going to do to me?"

"Is simple. Guards tie you up to wall." She gestured toward a steel ring imbedded in the stone near the ceiling. "Guards go away. Is not permitted to see. I bring little altar, build fire, heat iron to red glow. I say prayer, concentrate you to Menbana. Is simple."

"Consecrate. What do you do with the hot iron?"

"Consecrate you wid it. Menbana don't like his acolytes should fall love wid his priestesses. I fix it so you don't. You don't love anybody after—"

THE HAIR on Rolf's neck turned to wire. He choked on a mouthful of batmeat, spat it across the room and bounded to his feet. "*You do like hell fix it!*" he bellowed six inches from her ear. He grabbed for her with violent intent, but she bounded away like a startled bat. She sailed through the door on overdrive, slammed it in his face and bolted it.

Then she peered back through the peep-hole, white-faced and panting. "Was you idea," she reminded him. He beat against the door and cursed eloquently. Her eyes were wide with bewilderment.

"You want change your mind?"

"You're damned right I do! Why didn't somebody tell me!"

"Is not correct high priest should speak such things. I shake my head, but you don't pay tenshun. You want me to speak to H'nrin for you?"

He choked out an affirmative and a gasping insult.

"I speak, but H'nrin not like." She scurried away as he tried to get at her through the peep-hole.

Rolf paced his cell in rage, and the bat-pup retreated to a far corner, sensing his anger. He cursed

himself for not guessing the nature of the initiation. Primitive religions were full of eunuch-acolytes. And the high priest had dropped a hint of sorts.

He searched through the pockets of his torn clothing. His pistol was either lost or taken from him, but he still had his pocket knife and fifty rounds of ammunition. His captors had not worked out the folding feature of the blade, and the cartridges would be meaningless to them, unrecognizable as weapons. He could never hope to escape alive, but at least they'd have to kill him before perpetrating such an initiation.

Glowering within himself, he waited for Krasala to return. Surely she could make H'nrin realize that he hadn't known what awaited him in the service of the bat-god. This was worse than being sacrificed in vengeance for Saralesara's murder at the hands of the Commission's guards. This was an assault against his dignity as a man. Raw savagery! He stalked about the cell with growing resolve to kill as many as possible before they clubbed him down.

Agas later, Krasala peered at him through the peephole again. They stared at each other in silence for a moment.

"Well?"

"He say he already speak to high priestess. She enter you name. He say you get use to it afta while."

"You'll have to kill me first," Rolf roared. "You're a damn bunch of barbarous beasts. Savages! Whatever made me think you're human!"

She watched him calmly, feeling the safety of the door between them. "Savage? Like you father say, 'Are nine-an-sixty ways uv construction tribal laws, an—"

She bolted away from the door as he reached for the peep-hole with a snarl. Then he heard her footsteps padding away in the corridor.

AFTER MORE floor-pacing, he sat down to damn himself thoroughly. His anger had cost him his only hope. He thought of it belatedly. He might have gotten out of it by making love to the young priestess, much as he disliked the idea. But now his rage had ruined any possibility along those lines. Surely she wouldn't come back—until she brought the small altar and a hot poker.

He sat at the table and began prying slugs out of the cartridges and emptying the powder into the metal-foil wrapper from a candy bar. When he finished, he had what seemed to be half a pound of high explosive. Then he tried to decide the most effective way to use it.

The hinges were on the other side of the door and there was no keyhole. He might try wedging it under the sill, but he was uncertain that the amount of explosive was enough to blast it off. And also uncertain that it was not too much. He could wait until they came and touch it off in their midst, but he needed a tight-walled container to get a decent explosion out of it. And the cell was small enough to insure his own death if he managed to detonate the others. He laid it aside and pushed the problem to the back of his mental stove to simmer while he made a thorough examination of his cell.

There was a ring in the floor directly below the one in the wall. He could feel himself dangling there, lashed by hands and feet while Krasala did hot tricks with the poker. He shuddered and turned away. There were a few sifts of ashes on the floor where the altar had been placed previously. How many men had entered the cell, to leave it again as something less than men? He wondered if Krasala had already participated in any such savageries. But H'nrin had said she hadn't been a priestess for long. And she had tried to warn him. Maybe she was a nice kid—within the limitations of her society.

Surprisingly, she brought his next meal. She entered warily behind a pair of burly guards, deposited the food on the table and tossed a cloth bundle in his hammock. "You ceremony robe. Pud it on," she told him.

He fashioned a curse, but left it unspoken. She started out of the cell.

"Wait a minute," he muttered, fingering the knife in his pocket. "Tell me about this thing. What happens."

"I tell you awready. Pretty soon I show you."

He saw with amazement that she was pouting. Primitive psychology, he grunted to himself. The executioner gets his feelings hurt because the condemned man says an unkind word. The executioner

calls him an ingrate for squirming when the axe falls.

Rolf forced a sweet smile. "Don't go away yet. There's nobody else I can talk to. Can't we discuss this thing logically?"

"Ha!" she snorted. "You think you grab me. Choke me, mebbe. Like you try to do before. Hah-uh!"

SHE SHOOK her head knowingly and her eyes were wary. She glanced at the guards to make certain they were alert by her side.

"I won't touch you," he assured her. "I lost my temper a while ago. But I know you can't help what you have to do. Just sit down and talk a while."

She stood her ground. "What you wanna talk about?"

He winked at her solemnly, remembering that she had done it in the council meeting. "Who knows? I may never enjoy the company of a pretty girl again."

Primitive minds flattered easily, he noticed. She reddened, let a smile flicker, then erased it and looked unhappy. She immediately perched on the corner of the table and said, "We talk."

Conceited little savage, he thought angrily, but kept a wistful smile in place. "The guards," he murmured miserably. "Do they have to stand there staring that way?"

She stiffened suspiciously, watched his bland gaze for a moment, then began to relax. "You promise?"

"I promise."

She snapped an order at the guards, and they moved out into the corridor. "They come kill you if you don't behave," she told him calmly.

He put on a wounded expression which she noted with another smile. She sat dangling furry shins over the edge of the stone table and watching him curiously. He guessed her age at eighteen, an age which could be both cruel and sentimental. He let his eyes wander over her young figure in a casual but interested way.

"The last time," he muttered dolefully. "I guess I won't forget."

He could see her wince, but he knew very well that if he had been looking at some other wench she would have treated the self-pitying statement with merciless sarcasm or icy indifference.

"Tell me," he said, "can you ever marry while in the service of Menbana?"

"Of course not. Menbana is a jealous god."

"It's a pity, but I'm glad. If I'm to be your acolyte, then at least I'll be satisfied that someone else can't... well ...can't have you..."

He paused to let it take a set before he continued. She sniffed unconvincingly and tossed her head, but she appeared disturbed. He felt himself treading the borderline of ridiculousness. Was he laying it on too thick? But it had to be a swift frontal assault before she got her wind.

He continued in a bitter voice: "...but I guess it won't matter, will it? I won't be able to care. You'll just be a piece of furniture, like this table. It's like H'nrin said, the acolytes aren't able to enjoy much of anything...not even looking at such a one as you."

She whirled to stare at him. He weighed her expression and decided that it was born of complete confusion. If he didn't act quickly, she might defend herself against the confusion by waxing suddenly derisive. He leaned forward slowly, keeping his eyes on hers, and making no sudden moves to startle her. Gradually he came to his feet and touched her bare arm with his fingertips. Absorbed in his unexpected display, she swayed lightly against the hand. But he knew that in a moment she would react strongly against her brief weakness. He inched nearer, murmuring half-incomprehensible things to her eyes. In his other hand was the pocketknife. Soon, his face was a breath away from hers, and she was still watching the slow whisper of his lips. He slipped his arms around behind her, aiming the knife for her ribs.

SUDDENLY SHE kissed him, to his surprise and dismay. She stood up, wound her arms around his neck, and did it again. He toyed for an instant with the idea of switching back to a former plan, but decided he couldn't trust her. He'd have to go on with what he had intended.

"Send the guards away," he whispered.

"They can't see inside," she breathed, fawning his mouth with her lips.

He pressed the point of the knife against her back. "Send the guards away," he repeated.

She caught a small breath of surprise and became rigid as a board, staring at him but saying nothing.

"I'm sorry, kid," he whispered again. "You're probably a nice sort, in your own way. But damned if I'll let you butcher me, even if your tribe tells you that it's really all the rage this season, and your gods approve it. Now, send the guards away. I won't hurt you if you behave. If you don't, I'll kill you."

She was still staring at him in bewilderment. He caught her shoulder and moved around behind her. He sat on the table and pulled her back against him with the knife against her kidney. "Tell the guards to take a walk," he hissed, giving her a light jab.

She hesitated, then called out in a calm voice in the androon tongue. There was an unhurried shuffling of feet in the hallway. Then, to Rolf's dismay, the bolt snapped and the guards entered. They stopped in the doorway, staring at the close positioning of the priestess and the prisoner. One of them asked a quick question. She shook her head and answered with a monosyllable. Obviously they were unaware that he had a knife against her back. She began to pull away from him. Rolf saw despairingly that he must either kill her or let her go.

Suddenly she wrenched free, and he concealed the knife quickly. The guards started forward, but she waved them back with a scornful snort. She turned in the doorway, and glanced back coolly.

"Are more than nine and sixty," she said. "Put on the ceremony cloak. I be back soon. You eat now."

They left his cell and the bolt clicked in place. He stared after her for a moment. Why hadn't he killed the treacherous wench? But then, he was no match for two burly guards. He might as well concentrate on working an effective explosive out of the gunpowder. He sat down at the table and unrolled the package.

*Why had she left him the knife?* Why hadn't she warned the guards of what was happening?

He shrugged. What difference did it make? He spread the metal foil out smoothly, then covered it with a thick layer of powder and rolled it into a cylinder. He crimped one end tightly, and twisted the other out into a fuse. A thick yellow suet was congealing atop his cooling dish of meat. He covered the foil cylinder with the grease, then rolled it in a scrap of paper from his pocket. He sliced half a dozen of the soft lead slugs into thin slivers, and stuck them to the cylinder with more suet. After another wrapping of paper, he laid the crude grenade aside to set while he ate some of the meat. It had a peculiar taste, he thought, but blamed it on his nervousness.

WHEN THEY entered the cell, he intended to light the grenade and toss it, then make a dash during the confusion. He wondered if the clumsy contraption would explode at all, and he doubted seriously that it would inflict any grave injuries. But if it even made a bright flare and a hiss, it might divert the guards' attention for an instant.

He yawned suddenly and stretched. It was a helluva time to get sleepy. He stood up and walked around the table, lurching against it slightly. The metallic after-taste of the meat still lingered in his mouth. He was staggering a little as he sat down again.

Drugs! The meat...they were insuring his peaceful behaviour. He fumbled in his pockets, searching for a match. A match...to light the powder. Weren't there footsteps in the hallway...and voices? The pockets were hard to find among all the folds of cloth. He pawed at them, then decided he'd lost his matches. He wobbled dangerously.

They were just outside the door, and the bolt snapped suddenly. What to do with the grenade? They'd have him in the silly ceremonial robe in a few minutes. Pockets were no good. Where?

He crammed the eggsized object in his mouth as they entered, then collapsed across the stone table, thinking, "Maybe she'll light it for me with her poker."

He was hanging by his wrists, and he couldn't let go. He tried to open his eyes, but they wandered and fogged. At last he managed it, but he saw through a mist of sleep. The girl—Krasala—she was standing before a tongue of blue flame that arose from a gleaming brazier. Her arms were outstretched,

and she chanted a polytonal litany to the fire wherein lay a blunt knife of reddening steel.

The pain in his shoulders kept him half awake and he resented it. Why the hell was he dressed in the silly blue nightshirt? Something in his mouth—oh, the grenade! He was supposed to spit it in the brazier. He worked it to between his front teeth, and tried to keep his head straight. The brazier was large enough, and close enough, but he was so unsteady.

The girl lifted the hot iron and turned. She saw his eyes were open, and gazed at him steadily. He summoned energy to spit the explosive, but she spoke to him, stepping closer.

"Scream, Rolf Kenlan," she whispered. "Scream convincingly."

How could he scream with the grenade in his mouth? No, he wouldn't scream. He'd spit death in the pot.

"Scream!" she commanded irritably, and touched his thigh with the hot iron. It sizzled and fried for an instant, and Rolf screamed fervently. The grenade shot toward the altar, missed the brazier, and rolled aside.

"Keep screaming," she told him, folding her arms and stepping back a pace.

He howled with real artistry. He eyed the hot iron and shrieked for mercy. She winked at him and nodded.

"We gotta get the right smell, too," she said, and prodded the iron into what was left of the dish of meat. The cell filled with the odor of burned flesh.

"Hokay, you faint now."

She chanted again briefly, then burned the thongs that bound him to the steel rings. He crumpled weakly to the floor. She tugged at his arm and helped him into the hammock.

"You sleep."

THE CELL door opened. An elderly hag entered with a pair of guards, looked around, and nodded. She spoke briefly to Krasala and seemed satisfied by the answer. They cleaned up the mess, and just before they left, Rolf saw the hag pick up the grenade, look at it curiously, and toss it in the brazier. They started down the corridor.

"Krasala! Wait!" he muttered.

She paused in the doorway while the others moved on ahead.

"Yes? Whatchoo want?"

There was a muffled roar from the hallway, followed by several shrieks.

"Nothing," he murmured. "Never mind."

He rolled over and went to sleep peacefully, after making certain that he was still anatomically intact.

When he awoke, the girl was sitting in his cell watching him with a placid green-eyed gaze.

"You sleep two days," she told him. He rolled over and sat up, shaking the fuzz from his mind.

She narrowed her eyes and gazed at him accusingly. "Firepot blow up and blast off high priestess' hands. Burn off all her hair. She might die. Whatchoo know about?"

He shrugged innocently. "It's too bad. What should I know about it?"

"I dunno. Never happen before. I think you magic."

"Anybody else think so?"

"High priestess does. Council don't believe."

"The will of Menbana," he told her. "Thanks for leaving me in one piece."

She snorted angrily. "You beeg fool. Why you think I ask H'nrin for you in first place? He might give you to somebody who really do it."

Rolf began to see the light. "Do most of them do it or not?"

"Is supposed to. Old ugly ones do. Others don't." She walked to the door and swung it open. "You free to go now, when you feel like. But you supposed to be sick a few days."

Rolf nodded and decided to be properly sick. He wanted no repetition of the initiating procedure.

He lay in his cell for a time, making plans for the future. His father's goal had been to convince the people of Marsville that the androons were human and not unfriendly, that there were no threats lurking in the mountains to prevent a free expansion and colonization. Contrary beliefs held the people imprisoned in the city and under the thumb of the Commission.

Rolf now thought he knew why the Commission imposed the rigid segregation and insisted upon the androons' inhumanity. The colonization of Mars was to be a controlled colonization, not a free one. The people of Marsville, if given their liberty to roam forth, would shed the shackles of the tightly integrated city, and build homes for themselves in the hills and valleys where they would be free to live as their ancestors had done on the last frontiers of Earth. Growing room always gave men freedom, but it also denied the hope for a closely knit industrial civilization, which was Earth's hope for Mars. A man would not work in a crowded factory if he could own a thousand acres of land, rule his family clan, and be free of outside interference. He turned to the specialized bee-hive society of industrial civilization only when the population-density became so high as to void the hope of living free on the land.

ANOTHER FACTOR might be the fact that there were thousands of androons on Mars for every Earthman. Earth culture could easily be swallowed up by sheer weight of numbers, by intermingling and intermarriage—if such intermingling ever occurred. Rolf doubted that it would. The androons stuck close to their caverns, their traditional home. Even since the Dawson-Heide Operation Icecap had made the surface conditions endurable, the androons had kept to their underground habitation, because the caverns had always been their world. Probably, after many more generations, they would gradually seep forth to live upon the surface, but it would be a slow process. And when the Earthlings settled, they would settle on the surface. There would be some intermingling, but not enough to destroy the cultural traditions of the settlers.

Rolf envisioned the consequences of the Commission's probable plan. They would allow Marsville to expand very slowly, keeping the tight industrial organization and the concentrated population, with its consequent regimentation of the citizenry. The smoking industrial monster would spread gradually across the plain until it became the manufacturing belt of a nation, still dependent upon its hydroponic tanks for food, and upon the factories for all of its needs. The Commission, which was Earth-appointed and subject to recall, meant to keep close supervision of the industrial production, the culture, and the very lives of the people, to insure that they remained loyal and useful vassals of Earth.

Rolf asked himself how a Martian civilization could be useful to the mother planet, when space freighting was so difficult that the Commission could not afford to replenish Marsville with the fruits of Earth industry. Marsville had to take care of itself. But then it struck him that space freighting would not be so difficult in reverse. A ship needed less fuel to escape Martian gravity with full load. And the twin moons made good stockpiling points for cargo. Even combustion rockets could run ferry service between Mars and her satellites, where nuclear-powered ships could await conjunction of the planets. A good healthy boot kick would be nearly enough to get a ship off Phobos or Deimos, and even the sun's gravity would aid the flight of the freighter bearing Martian steel earthward. On the return trip, the freighter would be empty—or loaded with chewing gum, maybe.

Was the Commission aiming to make a slave planet out of Mars? A working planet that labored while Earth played?

And how would the androons figure in such a plan? There was only one possible answer. An industrial feudalism in which the androons were at the bottom rung of the ladder. Empires had always kept their colonial slaves happy by letting the slaves have lesser slaves to serve them. Even now there was grumbling talk in the city: "Why don't we go out and round up a bunch of andies to do some of this dirty work?"

And the Commission did nothing to discourage such talk, although they politely refused. Their attitude was, "Wait awhile. Not yet." But some day they would graciously assent. That day would be when Earth started bleeding Mars of her resources.

IN A FEW more generations, the Commission would succeed in culturally conditioning the Marsville

citizenry to such an extent that they would regard themselves as rulers by divine right over Mars, the androons as their natural slaves, and Earth as their rightful king. Then there would be no hope for a free society on Mars. Hope for such had passed on Earth long ago. It passed when the population exceeded three billion or thereabouts. Freedom was inversely proportional to man-density per square mile.

Rolf was not thinking of these things for the first time. Snatches of such ideas had come to him before and, indeed, he had discussed them casually and quietly with other citizens of the city. Such talk was considered unpatriotic, but it was something like griping about dirty politics or congressional stupidity. Nobody bothered to do anything about it.

But now that the Commission had killed his father and his brother, Rolf felt differently toward it. The Commission was his personal enemy now, and he saw Jason and Lennie as sacrifices to its ambitions for empire.. The city was the mother that had nursed him from birth, and he loved the city. But the Commission ruled her cruelly, and he could never see her again unless the Commission's power were destroyed.

So? What could he do about it? He would have a hard time getting much effective aid from the superstitious androons.

On the third day after his initiation, H'nrin and the other two council members came to Rolf's quarters. The oldsters' faces were grim with solemn anger, and they wasted little time for ceremony.

"Perhaps you can tell us," H'nrin said acidly, "why a party from your city entered our caves, killed three bat-hunters, captured four warriors and two women, and carried them away in mechanical bats. Phantom is becoming very thirsty indeed."

Rolf gasped. "When did this happen?"

"This very morning."

"How close did they come to the living quarters here?"

"A thousand paces, perhaps. What difference does it make?"

"A lot, maybe. The city's rulers know you live underground, but they've never explored these places. They probably don't really know what's down here. It might be dangerous for you if they did know."

"Why?"

"There seems to be some valuable machinery here. They might decide to take it off your hands."

H'nrin stiffened visibly. "The creations of the Bolsewi are holy. Some of them are even gods. We will guard them with our lives." He paused, then relaxed slightly. "But surely the captives won't tell."

"They will when the Commission police get through with them. Dad probably told them anyway, come to think of it." He hesitated. "Maybe that's it. Maybe they're afraid I'll teach you how to use the Bolsewi machinery."

H'nrin recoiled at the thought of such sacrilege. "We must not touch the articles of the gods."

"Yeah? Well, they don't know that. I can guess what their plans are if you'll show me everything that Dad saw while he was down here. I want to know how much they learned from him."

H'NRIN DEMURRED at first, then submitted reluctantly when Rolf hinted direly of things that the Commission might do.

"You should see first the temple of Menbana, where you will serve as acolyte. I will have your priestess conduct you there." He paused, eyeing Rolf suspiciously. "I've heard rumors about your initiation ...certain irregularities. And now I think I'm inclined to believe them. You don't seem to be grieving particularly for your lost manhood."

Rolf paled. "I am, I assure you!"

"Baloney—as your father used to say. However, it's not my business. You're now the property of the Order of Menbana, which is autonomous in such matters. If they choose to wink at their own code, I shan't interfere."

"Thank you," said Rolf.

"One thing, however. If the high priestess manages to convince me that you were responsible for the fire-pot's behavior, I'll have you flayed."

Rolf thanked him again. He was sorry that the old hag had gotten her just deserts, but he didn't feel

responsible. The initiation was a crime against sanity and human reason, and if she got her hand blown off while supervising its perpetration, then it was probably the will of some god or other—maybe even Menbana.

Krasala brought him another nightshirt—a white one this time—and briefed him on temple ritual. He was to enter the temple with a dragging pace, just behind Krasala, and his only duty was to keep the tips of her artificial bat-wings from dragging the floor. They would advance to kiss the great toe of the high priestess who sat upon the wing of Menbana.

"The same high priestess?" he asked anxiously.

"No. She's still fighting the devil that entered her arm. They say she'll retire. There's a new one now."

"Good," he grunted as they went out into the corridor. "Say, your Earthtongue is improving."

"It's come back. Long time since I talk it with Saralesara. Now you get in back of me. Is not right for acolyte to walk beside priestess."

They passed across the fountain room and entered one of the many corridors which led away from it. The temple lay at its end, but a draped doorway hid it from view. Krasala left him in the corridor and stepped into an anteroom to vest.

When she came out, smiling faintly and self consciously, he closed his eyes and shook his head. Now he knew why the acolytes were eunuchs. Her vestments consisted of a pair of batwings and a gauze kerchief. His confusion brought back her pout. She tossed her head and flicked the kerchief under his nose. "Follow me, acolyte. Lift my wings."

AT LEAST there was a certain amount of modesty in her noble walk, he thought as he followed her into the House of Menbana, holding the tips of the wings delicately as he had been instructed to do.

The temple was gloomy, pierced by the flickering tongues of yellow fat-burners and hazed by their smoke. The room was gigantic and appeared ceilingless. Rolf peered about him hurriedly trying to digest all that he saw—the stately processions of bat-winged priestesses, followed by their submissive acolytes, the side-altars along the walls. He noticed that many of the acolytes were plump and dull-eyed creatures, while others followed their mistresses with a not-so-humble stride that suggested the continued influence of testosterone. Rolf grinned to himself; there seemed to be a certain correlation between the shapeliness of the priestess and the masculinity of her acolyte.

"Stop crowding me!" Krasala hissed. "Sorry."

For the first time, he searched the room for the focus of activity. It lay directly ahead. The high priestess, a middle-aged but not unshapely androon, sat between a pair of sputtering fat-burners. She wore a bat's head as well as wings. Rolf strained his eyes in the gloomy light. Then he stopped in stunned unbelief, dropping Krasala's wingtips.

Menbana, bat-deity, and god of knowledge, was an ancient, mouldering, stub-winged rocket craft, obviously meant for transatmospheric service. The androons had lovingly given it a bat-skin hide, stitched over it like a jacket, but the landing gear and the jet tubes were still in evidence. He guessed by its design that it had not been used for interplanetary rocketing, but rather perhaps for moon flight.

Krasala was shaking his arm in rage and muttering about blasphemy. Rolf resumed his duty in awed silence. Such grandiose stupidity was awe-inspiring. The man who suggested the experiment with the monkeys in a roomful of typewriters probably hadn't considered the possibility that the anthropoids might start worshipping the machines.

They advanced toward the ship, where the high priestess perched on a wingtip. Krasala knelt to kiss the superior's horny toe, and Rolf felt himself being inspected by the eyes that lay behind the unblinking bat's head. The seeress was bulgy in spots, with a middle-age sag, but she might have been a beauty in her day. She said nothing and they moved to take their place in line but, glancing over his shoulder, Rolf saw the bat's head turn to stare after them.

The lesser priestesses formed a long line facing Menbana, while their acolytes stood silently behind them. They began a monotonous chant, while the high priestess slipped down from her wing tip to begin the sacrifice. She accepted a thurible from a burly acolyte, then leaned close to whisper something to him. His eyes swept along the rank of priestesses; then he hurried away. The high priestess incensed Menbana

with the .thurible. A portable altar was brought forward, and she began a ritual offering of food.

ROLF FELT someone nudging his elbow. He glanced around and saw the burly acolyte who had whispered with the high priestess. The man touched his fingers to his lips for silence. He was accompanied by a short pudgy eunuch who wheezed and looked frightened. The burly man took Krasala's wingtips away from Rolf and gave them to the eunuch. Rolf was pushed roughly aside.

"What's the idea?"

"Shhhh!"

The burly acolyte took his arm and tugged him quickly away. Krasala seemed unaware of the change in her escort. Rolf judged the size of the acolyte and decided to follow peacefully. He was led to a small phosphor-lighted anteroom behind a row of columns.

"You wait. Lalyahe come," grunted the acolyte.

"Who's Lalyahe?"

The acolyte nodded gravely. "You wait. Lalyahe come."

"Your mother was a mangy bat," said Rolf.

The acolyte nodded gravely again. "You wait. Lalyahe come," he repeated, proving the extent of his vocabulary. He left the room, leaving the door ajar.

Rolf sat on a stone pedestal and listened to the chanting in the temple. He was certain that Lalyahe was the high priestess, but the open door suggested that her intentions were not unfriendly.

The temple had evidently been some sort of hangar at one time, and the lack of a visible ceiling suggested that it had opened to the surface in ages past. Or perhaps, far up in the darkness, there were swinging hatchways that opened it to the sky.

He glanced around the anteroom curiously. There was a table altar at one wall, and above the altar were a pair of small doors. He tugged them open and found an array of small tools hung on steel pegs in the cabinet. Some of them were recognizable—a drill with a self-contained power unit of some sort, a group of oddly shaped wrenches, a device that had the appearance of a spray gun. They were fashioned of some rustless metal that gleamed dully in the dim light. He toyed with some of them, but the moving parts were frozen from lack of lubricant.

Glancing around the room again he saw other cabinets set in the walls. Making a complete inspection of them, he found parts bins, racks of bottles, and one of the bagpipe affairs that hung over the *cathedrae* of the council. He examined the last carefully. It consisted of a collapsible plastimetal tank, a long tube or barrel, a hand crank with a vernier slide geared to it, and a heavy steel breech that suggested high pressures. A pair of tiny rings atop the tube and at either end of it suggested gun-sights. He tried to turn the crank but the mechanism was frozen.

SEARCHING among the bottles he found several that still contained fluid. The one that opened most easily was a jellied lubricant. He used it to loosen the caps on some of the others. One liquid smelled vaguely like kerosene. He poured some of it in with the lubricant and stepped back. Nothing terrifying happened. He shook the bottle and the lubricant dissolved to make a thin oil. He used it to soak the breach and movable parts of the "bagpipe" until the crank came unfrozen. He worked at it until it turned freely.

Shaking the mechanism, he heard a sloshing sound in the collapsible tank. It was half full of liquid. He gave the crank a few turns and noticed that the tank began to expand. He kept twisting it until a pair of heavy lines met and became one on the vernier. The tank had grown plump and hard, the size of a basketball. He found a button on the breach, pointed the tube toward the wall, and fingered the button thoughtfully.

Then, as an afterthought, he found a length of heavy wire in a cabinet and prodded it into the barrel. It brought out gobs of fibrous dust. He soaked the barrel in oil and scraped out choking dust wads with the wire. When he had it clear, he again fingered the stud nervously.

Suddenly he was aware that the chanting had ceased in the temple. He glanced up just in time to see the door swing open and the high priestess appear in the entranceway. She froze at the sight, caught at the door jambs for support, and stared down at the blasphemy on the floor.

Rolf sat spraddlelegged in his "night-shirt" ceremonial robe amid a litter of bottles and tools. He returned her stare apprehensively. She ripped off the bat's head, letting a frowsy mop of gray-brown hair burst forth. She turned and shrieked a word into the temple. It could only have been a summons for the guards.

Rolf dived forward, caught her ankle and dragged her inside, kicking and clawing. The bolt was on the inside of the door. He slammed and locked it as a group of acolytes faced toward the anteroom. Then he tried to hold off the snarling fury of the high priestess. She raked at his arms with fingernails while he seized her throat and held her away. He pushed her roughly into a corner, tripped her, then pinned her against the wall with his foot when she fell.

"Be good, baby, or I'll kick you to sleep," he growled.

Gradually she subsided, panting and glaring at him.

"Now, send your flunkies away!" he told her, jerking his thumb at the door where the guards were battering against the bolt. He increased the pressure of his foot to speed her reaction.

She moaned and called out: "*W'nu poyit ya!*"

The battering ceased.

"Okay, what did you want to see me about?" he asked acidly. "Or do you speak Earthtongue?"

"Your father taught it to all our leaders," she replied, staring at the bag-pipe on the floor.

He picked it up. "You know what this is?"

"Holy symbol of Phanton, god of light, king of the gods. It is not to be touched by such as you—under penalty of death."

"Nobody but you has seen me with it. What did you call me here for?"

SHE WAS silent for a time, her eyes narrowed thoughtfully. She moistened her lips nervously, and kept glancing toward the door. She had a small sensual face, touched lightly by age and pleasurable living.

"You have much magic, don't you, Earthman?"

Rolf neglected to disagree with her.

"I called you here because your magic disposed of my rival. I wished to make you my acolyte." Her voice was slow and musing, and she glanced from Rolf to the bagpipe with a calculating expression. "Perhaps none of the others did *see* you with it, at that."

He grinned at her. "That's right. But what do you want with me as an acolyte? And if there's another induction ceremony involved, the answer's no."

She stiffened proudly. "It's not for you to refuse," she snapped. Then snorted scornfully: "You have already been consecrated to Menbana. That is enough. Tell me, are you a eunuch?"

"Why, of course!" he answered nervously.

"You lie! Ha! I have heard how this young wench Krasala is mooning over you. Would she fall in love with a eunuch? Let me tell you. There are two factions among us. One faction believes that it is enough if the acolytes are merely celibates—which is to say, eunuchs in spirit."

"Which party do you belong to?" She gave him a speculative head-to-toe glance which suggested that there might be a third faction which favored an altogether different course.

"Let it suffice to say that you will not need to endure reconsecration. I might manage to forget your blasphemy, if you will serve as my acolyte and teach me your magic."

They watched each other for a moment. Rolf was still fingering the Phanton gun. "Useful Magic will involve blasphemy," he told her. "You'll become a party to it."

She frowned haughtily. "As high priestess, I define what is blasphemy, in the temple of Menbana, at least."

He nodded. This could possibly be a useful alliance, although he suspected Lalyahe of some rather

high and shady ambitions. "Very well," he told her, "I'll serve as your acolyte. But we'll make a trade on this magic business."

"I make no bargains."

"I make no magic."

Her eyes flared haughtily for a moment, but she asked, "What do you want of me?"

"Your help in a rather hopeless cause—that of unseating the rulers of the surface city and breaking down the barriers that surround it."

SHE CAUGHT her breath, then smiled wickedly at him, sat down on the table altar and leaned her elbows on her knees to grin. "Ah! You wish to rule your city; I wish to rule mine. We should work well together, son of Kenlan. You are not the gentle man your father was. Tell me, would you like to be my lover as well as my acolyte?"

Rolf suppressed a shudder and stammered apologetically. She sighed and shrugged. "I thought not. Krasala has caught your eye. Well, your bare shins are rather repulsive anyway. But enough of that. Shall we work together for our purposes?"

"Maybe. I suggest we make some plans." He paused, listening to the mutter of voices beyond the door. "Send that rabble away and then we'll talk."

She hesitated, then nodded. "Get the holy articles out of sight. I'll open the door to reassure them. The sacrifice is over; it's time to clear the temple anyway."

Rolf quickly gathered up the scattered relics and returned them to their cabinets. But he propped the bagpipe in a corner, and stood in front of it for concealment. Lalyahe watched with mingled curiosity and superstitious nervousness. Then she unbolted the door and swung it ajar. The mutter arose to a babble. She barked several curt words, and the babble ceased. Rolf caught a glimpse of Krasala peering over the high priestess' shoulder, and he shivered at the murderous expression on her pretty face. Lalyahe spoke again, and the crowd began dispersing.

She closed the door, leaned against it, and smiled nastily at him. "I think I shall have your Krasala flogged. Did you see the way she glared at me?"

"You do and the deal's off."

"Don't you threaten me, acolyte!" she snapped, advancing to snap her fingers in his face.

Rolf grinned mockingly, but said nothing. He decided that it would be a bad day for the androon tribe if Lalythe ever got the power she desired. "She glared at his grin for a moment, then said, "Well! The priestesses have gone. Show me a demonstration of your magic."

Silently, he recovered the bagpipe and stepped to the door. The temple was empty, save for a pair of guards that flanked the entrance. "Send them away," he told her.

SHE PUSHED her way past him and shouted across the great room in a piercing voice that sent echoes reverberating from high above them. The guards departed silently. Rolf moved outside, carrying the bagpipe and the stiff wire. He removed a fat-burner from its tripod, dragged the tripod near a massive column that supported a balcony, and rested the bagpipe against it, aiming the muzzle toward the vault of darkness overhead. "Keep out of the way," he told her, as he stepped behind the column and straightened the wire into a prod.

"What will happen?" she asked nervously.

"I'm not sure," he grunted uneasily. Then he leaned around the column and pressed the button with the wire.

There was a brief high-pitched shriek and a burst of light. It was followed by a distant ping, a bright violet light that flooded the temple, and a continuous sizzle from above. The gun had fallen from the tripod. Rolf stepped out to recover it, and darted back just in time to escape a white-hot shower of sparks that danced downward and rolled about the main floor. Lalyahe was whimpering insanely. She crouched in the foetal position and hid her head in her arms.

Rolf glanced upward around the edge of the balcony and saw a ball of violet incandescence clinging to the underside of a metal ceiling a thousand feet above them. It burned out suddenly, but the immediate

vicinity lingered at white heat, dripping bits of liquid hell. By its light, he could see that the ceiling was braced with heavy struts that slanted down to the side-walls, where they appeared heavily anchored.

The racket had aroused the androoms in the caverns beyond, and he heard them racing toward the entrance. He kicked Lalyahe lightly in the hams and dragged her to her feet. She was still whimpering and glancing around with wild frightened eyes. He shook her.

"Brace up!" he growled. "It's over. All but the shouting. Now, get this straight. Your crowd is coming back. Tell them that Menbana has spoken, or something." He shook her again. "Listen to me!"

She nodded weakly. "I'm listening. But why should I tell them that?" "You want prestige, don't you? Tell them Menbana has spoken to you personally. And that you'll reveal his prophecy later."

Androoms were pouring into the temple and stopping to stare up at the distant ceiling, which had subsided to cherry red heat. Rolf pushed the high priestess out into the open, then darted back to the anteroom to conceal the weapon. Suddenly Lalyahe's fog-horn contralto was ringing out dramatically in the temple, and Rolf grinned to himself. The grasping witch was shivering in her fur boots, but she did a good job of rabble-rousing. The mob fell silent. She cried out several words of a ritual chant, and after a moment the crowd sang a brief responsory. She was quieting them with in impromptu service honoring Menbana, whose bat-fur jacket was smoldering impressively from the shower of sparks.

WHEN THE chanting was done, she spoke a few sonorous sentences, which were followed by the shuffling of many feet. Lalyahe returned to the anteroom. Some of her arrogant calm had returned, but she gazed at him in a new and fearful light.

"Was that sufficient magic for you?"

She nodded grudgingly. "A few more demonstrations like that and I shall be able to unseat the council, I think. But be careful you don't go too far." She glanced at the weapon in the corner. "This is not your magic. This is the magic of the Bolsewi."

"True. But I control it. Have any of you done that before?"

"No. It's not good to do so. When the Bolsewi went away, they instructed our ancestors to guard their possessions and worship them until the gods returned. It's not good to tamper this way."

Rolf decided her ambitions needed further whetting. "Baloney!" he snapped. "How many other tribes are there besides this one?"

She shook her head. "They are countless. It is said that there is no end to these caverns."

"All right! By controlling this magic, you can rule all the tribes. Why think of stopping with this one?"

She gnawed at her lower lip and stared speculatively at the bagpipe. "Why should you suggest this to me, son of Kenlan?"

"Because you can't do it without my help, and I want you to buy that help by helping me."

"I don't trust you."

"I don't trust you either, but it might be a good idea to start."

"What do you expect from me?" she asked suspiciously.

"Twenty-five bat-hunters who aren't eunuchs: Able-bodied men who will obey orders. And I want access to all the so-called holy articles in your jurisdiction."

"Why? Why do you want the men?"

"We'll need a small fighting force," he explained impatiently. "And twenty-five are few enough to attract little attention."

"Don't worry about that, Kenlan," she said. "Only priestesses and their acolytes may enter Menbana's temple. You won't be observed."

"Will you provide the men? And I'll need a translator, too."

She nodded. "I'll give you the men, but the translator ... none of the acolytes speaks Earthtongue. Krasala night..."

"No!" he snapped, remembering her furious expression outside the anteroom.

"Krasala might prove treacherous," Lalyahe finished haughtily.

"Think of anyone else?"

"My successor... But she couldn't be trusted either."

"Then you'll have to do until I learn your language."

Lalyahe's smile told him that it was exactly what she wanted. Rolf promised himself that he would pick up a working knowledge of the androon tongue as quickly as possible, for until then the high priestess would be in a favorable position for treachery.

"One more thing," he muttered. "I want living quarters in one of these temple anterooms. It might be better if I stay away from the council's jurisdiction as much as possible. They might get wind of something."

"Certainly. As my acolyte, you would arouse no suspicion by living in a special..." She paused and cocked one eyebrow. "You will share my quarters, in fact. That is permissible for eunuchs." She smirked nastily.

"The hell I will!"

"Then you may return to your former cell."

Rolf said nothing but decided to sleep on the floor in the main temple. He had a brief vision of Krasala wielding a bone club in the direction of his skull.

HOURS LATER, he met Lalyahe again in a larger room off the main floor. In compliance with his request, she had chosen the specified number of bat-hunters, and had assembled them outside. He gave her brief instructions before the hunters entered.

"Tell them that Menbana expressed his will at today's manifestation. Tell them he gave you special instructions which must be obeyed."

She eyed him curiously and with faint amusement, seeming to enjoy the intrigue. "What are the instructions that Menbana has given me?"

"That live bats are to be captured for his temple. Two or three dozen of them. Large ones, but not too old. Say Menbana will teach you how to tame them."

She frowned sharply. "Why, Kenlan? What good—"

"Never mind!" He smirked. "And tell them your new acolyte has been chosen to lead them. But swear them to complete secrecy. It'll be both our necks if the council hears of it. Now call the men in and make your speech."

Lalyahe's resentful glance told him that she was unaccustomed to taking orders. But she donned her bat's head, marched to the door, and barked a command. Twenty-five toughs filed silently in and sat spraddle-legged in a ring about the walls. Rolf had seen some of them during the sacrifice service, but now they were wearing bat-skin skirts and jackets in place of the robes, and they carried hunter's snares looped across their shoulders. He noticed with satisfaction that they were heavily muscled men, and fiercely bearded.

Lalyahe began speaking crisply, turning slowly to eye each man, and punctuating her speech with much posturing and arm-waving. While she spoke, Rolf noticed that one man was glaring directly at him and hardly listening to the priestess. The man looked familiar. After a time, he placed the fellow. It was the acolyte who had whispered with Lalyahe during the service, the one who had nudged Rolf out of line and brought the fat eunuch to replace him.

Rolf was startled by the realization that the man must have been Lalythe's acolyte before he had acquired the job. Someone certainly must have been fired to make room for him. Rolf was disturbed; the man might try to make trouble.

When the priestess finished speaking, Rolf murmured a question about the angry-looking hunter. She nodded. "He was my acolyte. Why?"

"We'd better make him an honorary something-or-other. He's got fire in his eye. Tell him Menbana designated him to lead the bat-snaring party. Tell him Menbana has promised him special rewards later. Tell him anything, but make him happy."

LALYAHE called the man aside and spoke to him in low tones. The man stood breathing heavily, swelled with self-righteous indignation, and firing angry glances at the interloper. But suddenly he broke into a wide grin and bowed humbly before Lalythe. When he returned to his place, he was still grinning

vacuously and licking his chops.

"What did you tell him?" Rolf asked suspiciously.

The priestess chuckled. "I told him Menbana had given him a special dispensation to have a mate. To have young Krasala, in fact."

Rolf felt himself going white. He turned away to keep from striking her. It was a deliberate cruelty, an act of sadism. But it could not be easily undone. He fumed in silence until Lalythe dismissed the men for the hunt. Then he turned on her in fury.

"Why did you do that?" he roared.

She inched away, but smiled mockingly. "To assure myself that you have no ambitions here among my tribe."

"It's a damn poor excuse and a lie!" he raged.

"What are you going to do about it?"

He sagged onto a pedestal and kicked angrily at the floor. There was nothing he could do about it. The ex-acolyte would reveal his good fortune to the others. And a god dare not go back on his word. He cursed the high priestess fervently.

"It's what you deserve for refusing to be my lover," she told him blandly.

Rolf vowed to himself that the burly huntsman-acolyte would meet with a serious accident if he tried to claim Krasala. But the settling of such accounts would have to wait. Rolf was uneasy since the Marsville guards raided the outer tunnels and kidnapped the party of androons. Something was afoot.

There was ample evidence here that what his father maintained was true. The tools and weapons of the Bolsewi were part of the evidence, and Rolf was certain that Jason had told the Commission about them. The Commission might have been willing to bide their time, but since they knew that he was taking refuge in the caverns, they would fear the weapons. Androon hands might learn to use them.

He realized gloomily that such fears were for the most part without foundation. There were probably not a dozen men in the whole tribe who were brave enough to touch one of the "symbols of Phantom". Bolsewi equipment among the androons was as mystifying as an electronic calculator would be to a tribe of Australian aborigines. They would need a grasp of basic principles, and an end to magical thinking. That would take generations. The best he could hope for would be to find a few neurotics among the acolytes of Menbana who would take a perverse delight in profaning the sacred.

WHILE THE hunting party was gone toward the cave entrances, he spent his time searching the temple's anterooms for more of the bagpipe guns. Those that appeared serviceable, he cleaned and oiled. But testing them would be disastrous to both the temple and the morale of the tribe. He hoped fervently that they would never be used.

Lalythe brought word that the council was demanding his presence. "Why?" he grunted.

"They didn't witness the Bolsewi magic you released. They don't believe the god has made himself known. They accuse you of trickery."

"Well, stop smirking about it," he snapped. "You're in it too. If they make trouble, you're as hot as I am! I can't see them. You'll have to worm out of it somehow. Think up a good ceremonial reason why I can't leave the temple for a few days."

"I suppose you could be fasting for five days. But if they insist, and I don't release you to them, they'll make trouble."

"What kind of trouble? They can't come in here, can they?"

"No unconsecrated male may enter, but they can send women."

"Stall them the best you can," he told her.

Some of the hunting party began returning with live bats. With their wings, feet, and jaws bound, and with their eyes tightly bandaged, the beasts scarcely struggled. Rolf had them stacked like a cord of wood in a dark corner of the temple.

The huntsmen brought word that a group of men from the city was camped a thousand paces from the mouths of the bat caves, and they reported a larger party was making its way across the plain. Rolf was disturbed. The Commission was striking sooner than he had expected.

He reasoned that the raiding party would consist entirely of officers from the Commission's elite guard—men who could be trusted to remain silent about what they found in the caves. Very probably the Commission would promise them a transfer to Earth when the job was done. Their immediate goals would be to capture him, to inspect the Bolsewi artifacts, and report the findings to the Commission. He had no doubt that the Commission would follow it up with a forced evacuation of the androoms from all caverns on the city-side of the mountains, and a permanent occupation of the caverns by Commission police, for the purpose of studying the Bolsewi civilization in the light of the Commission's master-plan for Mars.

Lalyahe came with more news of the council's suspicions. "They want to know why we collect the live bats. They're tired of hearing about 'the will of Menbana'. They don't believe it, and they say if you don't come out before three more eating times, they'll send in a party to arrest you."

Rolf hesitated. "If it comes to that, I'll parley with them just outside the temple." He grinned. "Accompanied by our two dozen bully-boys. By the way, are they all back from the hunt yet?"

She smiled knowingly. "All but one. P'yan, my former acolyte, lingers with his new mistress. It might interest you to know that she made no protest when I told her. In fact, I think she rather liked the idea. She called you some unpleasant names. Shall I list them for you?"

ROLF CONTROLLED an impulse to kick her, and kept his face expressionless. "Get P'yan in here with the others. We've got to hurry."

"Why? Suppose you explain what all this has to do with overthrowing the council, with making the temple of Menbana the center of authority. I trust you less and less, Kenlan. I'm thinking of letting the council have you."

"Fool!" he growled. "If those Earthmen get in here, there won't be any council to overthrow. They want to drive you out of here. They want your holy articles before you learn to use their magic."

She gathered a slow frown, then left him. He wondered if her tribal loyalty was stronger than her personal ambition. Probably, but he could not be certain.

Another factor bothered him. When the Commission police made their first move, the council would undoubtedly want to solve the problem by releasing him to them. The Commission would certainly demand his extradition before making a show of force. And H'nrin would offer him in the hope of appeasement.

After a brief inspection of the bound bats, Rolf sent a dozen acolytes to gather enough rawhide to make harnesses. He directed Lalyahe to assign several priestesses to the task of sewing weight-bags full of rocks, specifying that each should weigh as much as a heavy man. He put two acolytes to work trimming the tips off the bats' talons. Then, with the help of another, he dragged one quivering beast out of the heap and began fashioning a pair of rawhide leggings to fit tightly about the bat's wooly ankles. With loops laced through the leggings, he bound a two-foot length of bone between the bat's ankles, so that it could stand spraddle-legged but not walk. He slung another just below it for a seat, so that a man could sit on the lower rung and cling to the higher one for support.

His assistant, regarding the whole affair as purposeless sport, chuckled gleefully and chattered incomprehensible jokes in his own tongue. When they were finished with the seat, Rolf began a harness, using a whole bat-hide, with its natural holes for the wings. He laced it tightly under the beast's belly, and sewed a pair of rein-guide rings near the shoulders. Next came a hackamore with an extra loop beneath the lower jaw. Then he instructed the men to outfit the other bats similarly.

While they began work, Rolf tied a sack of rocks to the first bat's feet, tethered it at the end of a hundred-foot braided hide rope, and unbound its jaws and wings. With a shriek, it beat its way upward, reached the end of its tether, and began a mid-air battle with its cargo. The temple, half-full of working, idling, or praying androoms, paused to watch and murmur curiously. "

WHILE THE bat flailed angrily at the air, Rolf went to search the anterooms. He needed a number of light metal rods for use as chin-poles to guide the bat's heads vertically. But as he stepped into a gloomy corridor that paralleled one side of the temple, he saw a shadowy figure flit behind a column. He started

to pass on, then, thinking that H'nrin had perhaps sent an observer to watch the temple, he reached around the column, caught a slender arm, and dragged.

Krasala came lurching against him and snarling. She wore the secular bat-skins, not the wings of the temple. Nor was she carrying the ceremonial kerchief. He frowned at her suspiciously.

"Why are you hiding here?"

"I saw you coming!" she hissed contemptuously.

"Why aren't you in the temple?"

"Your love-one tell *me* to stay out. She say to keep house for P'yan. She say I no good as priestess. Is okay with me. I take P'yan, you take what P'yan leave. Is she old enough for you?"

Rolf shook her roughly. "You're crazy!" he snapped. "There isn't a damn thing between us except politics. Good Lord! And to think I wanted you myself for awhile! Well, I hope you enjoy married life with your P'yan. Me, I'll take an Earthgirl any day!"

He turned to stalk away, then paused. "I still want to know why you're hanging around here!" he growled.

"I woman. Is my right come in temple."

He grunted an oath, then moved on down the corridor and turned in at the first anteroom. After searching through most of the cabinets, shelves, and bins, he found a dozen aluminum tripods, half corroded but still useful. He removed their legs and began drilling holes in both ends of the rods.

A gasp from the doorway startled him. He glanced around to see Krasala again.

"You blasphemy!" she breathed.

He groaned disgustedly and waved her away. He'd heard enough of the word to last for the duration. "Then run get the guards and have them brain me," he growled.

She subsided gradually and watched him work. "Is true what you say?"

"About what?"

"About you and Lalyahe."

"It's true that it's not true. Now beat it. Go find your P'yan and play footsie or something."

"Then why Lalyahe say you her lover?"

"Because she's an evil old hag!" he roared. "Now beat it!"

She stared at the floor and dragged her toe in the dust. "Okay, I go, soon's I tell you why I hide."

"Do tell me," he sighed wearily.

"I hide from P'yan. He not find me yet."

He stiffened reflexively, dropped the rod, and almost grinned.

"I been to see council," she added.

His grin disappeared and he stood up to frown at her. "The council! Why?"

"Protest Lalyahe kick me out of temple. But they ask me questions about you. Say I should watch what goes on, and tell them."

He advanced menacingly. "What have you told them?"

She eyed him anxiously, but stood her ground. "I tell them you boss acolytes around, but they already know that. I don't tell them anything else."

HE PAUSED a moment to think. Lalyahe had cautioned the priestesses and their acolytes to silence, but H'nrin could easily slip some of his aides into their ranks. Nor could H'nrin be blamed for his caution and his suspicion. The old man wanted only to preserve the status quo in his realm, and he suspected that Rolf was disturbing it. The reports of the encampment of Earthmen by the cave's mouth probably helped to increase his anxiety.

"Listen," he said to Krasala. "When you go back to the council, tell them that I'm violating the temple, poking into the holy relics. Tell them that a group of priestesses are plotting to kill me. Will you do that?"

"Why? Is probably true."

"That they're plotting to kill me?" She nodded solemnly.

"Well, tell the council just that and nothing more."

"Why?"

"Because if they think a priestess group is after me, they might keep hands off and hope the job gets done without their help."

She said nothing, and resumed dragging her toe in the dust. He watched her for a moment, then returned to his drilling.

"You like Lalyahe a little maybe?" she asked without transition. "Maybe you learn to like."

He glanced up at her downcast face. Her dark brows were dragging low over her green eyes, and there was a hint of petulance about her mouth. Heavy locks of hair dangled about her cheeks as she toed the floor.

"How many times do I have to tell you?" he grumbled in a not unkindly tone.

She met his eyes suddenly, and after a moment exchanged sheepish grins. "Maybe we get away from here," she suggested. "Maybe we get to cave of another tribe."

"Who's we?" he asked in bewilderment.

"You me. Mebbe you don't want me to be you woman?"

Rolf thoughtfully drilled the last two holes. Then he nodded solemnly. "Sure. I want you. Yeah. I was sort of figuring on it before ...oh, well. Sure, I want you."

She beamed at him, then glanced up and down the corridor. "Then why we wait? Let's go!"

He gathered up the rods in his arms and moved to the door beside her. He couldn't possibly explain the full scope of what lay ahead. He looked down at her for a moment. "I've got a lot of things to do first, baby. It'd take as long to tell you about them as it would to make them happen. Can you just keep quiet and wait?"

"And watch you politix with Lalyahe?"

"Yeah, but not for long."

She wrestled with herself for a moment. "Okay, I trust."

He pushed her out into the corridor. "Go talk to the council now, kid. I'll see you later. And stay away from P'yan."

"You be careful," she warned as he moved away. "Is some would like to kill you all right."

THE BAT had settled to the floor, and crouched panting in exhaustion when he reentered the great room of the temple. Its eyes had remained bandaged during the ordeal. He left the bandage in place, but loosened the tether and prodded the beast's flank with a rod. It squeaked in fright and took wing again wearily, bearing its load of rocks. He watched it ascend in slow circles, avoiding the walls by some extra sense, possibly reflected sound. Soon it disappeared into the overhead darkness, no longer fighting its cargo.

He left it to fly freely while he carried the rods to the circle of workmen who were laboring over the harnesses. Lalyahe met him and frowned at the rods.

"The usual explanation?" she asked.

"Yeah." He glanced around at the harness makers. "They probably won't know where they came from. How many outfits are finished?"

"Three. But it's going faster now. I found some experienced garment-makers."

"Good. Have them rig out the bats and tether them until they're tired, as I did the first one."

He stacked the rods against the wall, sat down amid the scraps of leather to fashion a pair of toe-stirrups. When they were finished, he lashed them to one end of a rod and fitted them with thongs to be bow-knotted about the rider's ankles for easy loosening. The other end of the rod would be tied to the loop under the bat's lower jaw. He showed it to the harness makers and set some of them to work duplicating it.

The first bat was down again, crouched with folded wings and drooping head. Occasionally it shuffled about irritably, trying to clear its feet of the strange rigging. Rolf pitied the animal, but there was no time to waste in either gentle training or comfortable harnessing. He hoped simply that the beasts could be ridden without dashing the huntsmen against the rocks.

While the bat was resting, he slipped the loop about its jaws and had a helper wrestle with the creature's head while he bound the chin-pole to the hackamore. Eight men gripped its struggling wings

while he fitted the reins in place. They eased it up until its feet were off the floor, and another huntsman came in to grasp the legs while Rolf slipped beneath the furry belly and sat on the underslung swing. He pressed his toes into the stirrups while a hunter tied the ankle-thongs.

BUT THE perch was too precarious. He had a strip of belting brought forward and fastened in a loose loop between the bat's ankles, passing it behind his back as a safety-rest. He grinned nervously at the men who gripped the wings. All he needed now, he thought, was a twentieth-century ten-gallon hat. And an embalmer, maybe, if the blind-folded creature became panicky and flew into a wall. It seemed safer with the blind-fold, however; the bat might be less willful about resisting the tug of the reins.

"*Hyo!*" he barked, and waved the holders back. They released the struggling wings and ducked to safety.

Instead of bolting, the bat spread his wings high and sat down, pinning Rolf's legs beneath the feet-spreading bar. Mercifully the leggings were loose enough to prevent slippage, and the fracture of the rider's legs. The base of his spine ached from the jolt, and he cursed fluently as the beast's weight doubled him over. The huntsmen, who had ridden for sport with no gear other than wrist-straps, howled with glee.

Angrily, Rolf caught a double handful of bat-fur and jerked. With a squeak of dismay, the bat crouched lower, then sprang aloft. It immediately began swooping low over the heads of the assembly and fighting at the chin-stick. Rolf let his feet ride free with the beast's head at first, letting it resign itself to the new and unwanted object. Despite the blindfold, the bat banked sharply as it approached each wall, swinging its rider wide, then soaring back across the temple.

Still fighting the stick, it suddenly leaned back on its wings for a landing stall, perhaps meaning to fight it out with the stick on the ground. Rolf lurched dangerously forward. Clutching at the cross-piece, he stiffened his legs and jerked the bat's head down with the chin-stick. The bat shrieked and beat at the air with its giant wings, darting higher to escape the steady downward tug. Rolf kept some of his weight on the stick, and the bat circled higher. The lake of light around the temple receded beneath him.

When the beast flew toward a wall, Rolf kicked upward lightly on the stick and swung its head aside with the reins, thus anticipating its behaviour by a fraction of a second. He encountered a flurry of rage when the relative merits of right and left were in dispute, but after a dozen passes, the bat began to agree more frequently with the reins. The stick, however, remained a center of contention. A downward tug would produce a fight for altitude. An upward kick would bring a stall, but if the stick continued to press upward, the bat winged over, dived shallowly, and soared high again as soon as the sharp maneuver caused Rolf to lose the upward pressure.

After a few tries, he found that a gentle upward pressure, though insufficient to cause the bat to apply brakes, would bring a slow descent.

He was at least five hundred feet above the floor of the temple now, and the vertical shaft was widening considerably. Its shape and its method of bracing were engineering masterpieces, protecting the bottom against cave-ins. Evidently it had once served as a lift-way for huge ships—from the surface to the caverns of the Bolsewi.

SOARING HIGHER, he passed a ledge, visible only as a black up-shadow, encircling the walls. He guided the bat closer to it, and made a slow circle, peering into the gloom. He saw cave entrance, and looped back. No ...not a cave...a large entranceway, like an opening onto a freightdock. Perhaps it was, he thought. A rocket, Lowered into the shaft, would need a clear length of tunnel beneath it for blast-off.

Feeling the draft, or hearing the tunnel's echo-response, the weary bat settled toward it. Rolf started to wrench its head away, then decided to chance it. The entrance was wide enough to keep him from being dashed against the floor. He tugged the bat's head down to keep it from alighting on the ledge. Then, as it soared into the entranceway, he kicked up for a stall. The bat dropped quickly. As he struggled out from under its belly, he promised himself a padded seat for the future.

He caught the reins near the hackamore, then felt around for something to tie them to. After his eyes adjusted, a faint ceiling glow became apparent, a metal door handle ended his search, and he tethered the

winged animal securely. It folded its wings and stretched out on its belly with a blubbering squeak of relief.

Rolf waited, squinting and straining to accustom his eyes to the faint glow.

He was in what had apparently been a warehouse at one time. It was a huge empty vault, or nearly empty. He spied a motionless, shadowy hulk across the floor, and he moved cautiously toward it. It proved to be a heap of lightweight metallic boxes, shipping crates perhaps. He pried one of them open and found that it contained instruments, wrapped in thin plastic and packed in fibrous insulating material.

Another contained similarly protected machine-parts of strange design. He examined them briefly. The production methods that had fashioned them were obviously superior to anything that Marsville could manage. Machined surfaces in the form of hyperbolic paraboloids. A Moebius band whose uni-hedral side still bore faint marks of a cutting tool. Cutting a Moebius band on an earth-lathe would be an impossible feat, as far as Rolf knew.

He opened a third box that lay aside from the others, then drew back with a shudder. A white skull stared at him vacuously from atop a heap of ashes. Its needle-fangs were still intact in the slender jaw. Its tiny face was bat-like, but the braincase was larger than a man's. The remains of a Bolsewi! He sifted the ashes through his fingers. Evidently they cremated their dead, but left the head intact for religious reasons.

The boxes perhaps were part of a shipment which had never been made. But where had the Bolsewi gone? To another sun-system perhaps? Or had they become extinct, contrary to the androon legends?

But he had no time for idle speculations. A fluttering of bat's wings, and the excited shouts of other riders brought him back to the present. Other huntsmen were wrestling with their mounts in the vertical shaft. He moved back to the entrance and watched the darting shadows for a moment. The riders still regarded it as sport. He wondered how they would react when the Earth guards fired upon them.

THE BAT was still dozing by the entrance. He quietly slipped a loop over its body to bind its wings against a premature take-off. Then he struggled under the belly, released the loop, jerked a handful of fur, and burst forth into the shaft once more. He guided the beast downward.

Lalyahe met him as he alighted. Most of the harnesses were finished, and the acolytes had taken the bats aloft. "I have a plan," she said. "Let's lure the council's she-guards into the temple. Then you can swoop down to capture them from above."

"It's a good plan," he murmured diplomatically. "But perhaps we can frighten the council into submission without using force. Go tell them that the temple of Menbana will soon open its mouth to the sky. And clear everyone out of the temple."

She caught her breath and glanced up toward the darkness. "How can—"

"There's no time to explain. If you want to be the ruler of the tribe, you'd better hurry."

She nodded, and moved away. Rolf noticed a eunuch who had been standing near a column watching them impassively. When Lalyahe was gone, the eunuch approached him. He tossed his head toward the shadows beyond the columns and grunted. "Ea Krasala."

"Krasala? Is something wrong?" Rolf asked.

But the eunuch spoke no Earth-tongue. He gestured toward the shadows again and gave Rolf a slight push in that direction. Rolf obeyed nervously.

She was waiting for him behind a column, and her face was tense with worry. "The council! They are in session with the men who returned from your city!"

"You mean with some of my people?"

"No! With the ones your people kidnapped! Your people turn them loose. They bring a message for the council."

"A demand to turn me over to them?" he growled.

She nodded. "They say if you don't come out, they pour something in the caves that make everybody die that smell it."

"Gas! What did the council say?"

"They say you—" Her voice choked off as she stared across his shoulder. "P'yan!" she hissed, and

began backing away.

Rolf pivoted quickly. The thick-limbed bearded huntsman was standing a few feet away with folded arms, glaring at them suspiciously. He grunted, twirled his bone club for effect, and advanced on Krasala with a surly side-glance at Rolf. He growled at her in the androon tongue with a demanding note in his voice. She retreated with a snarl.

ROLF LET the burly acolyte step past him. Then he threw a hard fist to the base of P'yan's skull. The punch numbed his hand and sent thrills of pain up his forearm. The blow should have felled the huskiest rocket-tender. But P'yan only lurched forward slightly. He turned with a growl that arose to an enraged roar.

Rolf ducked as the huge club fanned air past his head. Then he darted in to inflict the greatest possible injury upon the most convenient and unethical regions of the giant's anatomy. His fists battered against hardwood and hairy granite. P'yan scorned defense. He caught the Earthman's shoulder in one hand and threw him sprawling to the floor. He pinned Rolf down with a heavy foot and lifted the club like an axe.

Krasala threw herself into the fray with the fury of a lynx, raking at the giant's eyes with her nails. Before P'yan shook her off, Rolf managed to get out his pocket knife. He sank the blade in P'yan's leg, and ripped a twelve-inch gash down the thigh. The huntsman howled, and sent the club downward in a wild blow. It shattered on the stone floor as Rolf rolled aside. Krasala huddled by a column, holding her face and moaning. P'yan had struck her with a furious back-hand.

In a rage, Rolf darted forward with the knife. But hands suddenly gripped his arms. A sea of shouting women engulfed the fighters; pressing them apart, and seizing Rolf with many hands. He was borne off his feet and rushed out into the temple proper. Squirming frantically, he tried to break free, but a chopping blow to his temple dazed him. They were carrying him toward the entranceway. A delegation sent by the council to capture him!

He cried out to Krasala: "The symbol of Phantom! Get it! Point it at the wall and press the stud!"

A hand was clapped over his mouth. He bit it savagely, and another blow struck his head. Through the tight crowd of bodies, he caught a glimpse of Krasala darting to the anteroom where the bagpipes lay in storage. He prayed that the urgency of the moment would help her overcome superstitious fear. P'yan was pursuing her at a limping trot, but his leg wound left a trail of red across the floor.

A few huntsmen-acolytes who had returned from their bat-flights bore down on the party of fighting women. Lalyahe shrieked orders for counterattack, but the eunuchs and priestesses only parted ranks before the tight phalanx of knife-and-club-armed raiding party. The huntsmen closed in with flailing clubs beating down several of the council's guard {uncertain text begins},.ept a - . {uncertain text ends} ring about their prisoner, and chopped their way steadily toward the entrance. They left a trail of bodies—dead, wounded, or unconscious—behind them, but they drove on without pause, occasionally battering down one of the small party of defenders.

Rolf saw himself being turned over to the Mars Commission guards and summarily shot. He pleaded with his captors. "They'll kill you or drive you out anyway!" he shouted above the roar. "You can't buy them off! Don't you understand? If it would save your hides, I'd give myself up! But it won't—"

The side of a fist bashed his face, and a squat, ugly she-guard growled for silence. He realized that they couldn't understand him.

A weird shriek filled the temple. It was followed by a rising tide of violet light. The raiding party paused a dozen yards from the entrance, muttering fearfully. Struggling to peer through the sea of heads, arms and shoulders, Rolf saw the growing orb of violet incandescence clinging to the stone wall a few feet above the floor toward the rear of the temple.

A WILD cry of fright went up from the crowd. There was a sudden surge toward the entrance. Rolf was released, but felt himself being carried along in the tide of escape. He let himself be borne to the entranceway where the stream of bodies narrowed. Then he tore free and began running along the wall, battering his way through the converging crowd. The fiery orb was blazing with sun-brilliance and spitting

bits of molten slag that rolled like gleaming marbles across the smooth floor. In a few moments, the entire herd of priestesses, acolytes, and raiders were surging in a tight sea about the doorway, leaving the rest of the temple barren, except for several tethered bats, P'yan, Krasala, and Lalyahe.

Glancing up, he saw the bat-riders who were still aloft. Their frightened mounts had retreated upward toward the top of the shaft, and without a doubt their riders were letting them have their way.

He hurried toward Krasala. She lay in a dead faint near the anteroom entrance. The bagpipe gun had fallen beside her. He dragged her to safety from the rolling bits of slag, then called out to Lalyahe, who crouched behind a column. She answered weakly, but refused to move. He caught up the bagpipe, twisted the crank, and aimed a shot at the wall just above the entranceway. The first inferno had burned itself out. But a new one blossomed with a shriek over the entrance. It would keep the raiders from reentering, although he doubted that they needed the warning. It would also keep the bat-flyers aloft, for he feared that if they descended they would flee the temple.

P'yan was moaning on the floor and holding his leg. An occasional bit of slag rolled through the puddle of blood that surrounded him. It hissed, sent up a cloud of steam, and lay darkened. Rolf approached the huntsman warily. The knife had severed an artery, and the giant was bleeding to death.

Rolf motioned for him to lie down. P'yan growled defiance and gestured threateningly. He tapped his chest arrogantly and grunted, "Moe Krasala!" Rolf knelt at a safe distance and indicated by sign that he wanted to apply a tourniquet to the leg.

"Moe Krasala!"

Rolf shook his head vehemently. Then he stabbed a finger at the giant, winked, and grunted, "Lalyahe. You can have Lalyahe. Do you understand? You ...toi...Lalyahe."

The effect was immediate. P'yan's eyes widened thoughtfully. He scratched his beard and glanced toward the pillar where the high priestess now stood watching them, but beyond earshot. Then he grinned and nodded. As a celibate acolyte, he wasn't particular. He just wanted a woman. Rolf crawled forward and fitted a rawhide tourniquet in place. Then he bound the wound with his undershirt. If crude androon medicine had saved the ex-priestess with the blown-off hand, it should be able to mend P'yan's leg, he reasoned.

P'yan butted heads with him in gesture of friendship, then staggered weakly to his feet, and without further ado shuffled determinedly toward Lalyahe, who simply frowned and looked bewildered. Rolf left the giant to his wooing and hurried back to Krasala, who had roused herself to wakefulness and sat shivering in fright caused by her own boldness toward the Bolsewi weapon. He tugged her to her feet, embraced her, and kissed her gratefully. But she was too frightened to respond to the unfamiliar expression of affection.

THERE WAS a sudden howl of anger from the high priestess. Rolf glanced around quickly to see her struggling with the amorous P'yan. Suddenly the frustrated giant raised his hammy hand and brought it down atop her head with what seemed to be only a gentle tap. Lalyahe crumpled limply. The hardy huntsman caught her up, threw her across his shoulder, and staggered toward the entrance. He grinned back at Rolf defiantly.

Rolf fumed impotently. There was no stopping P'yan from lugging off his prize. But he needed the high priestess as a translator. P'yan's libido wouldn't wait. He cautiously approached the entrance where the inferno had subsided to a red glow. Rolf thought of halting him with another shot, but then he would encounter trouble from the giant, unless he killed the man. While he debated with himself, P'yan slipped through the entrance and disappeared. Krasala, watching them go, giggled with perhaps a trace of hysteria.

Rolf took her arm gently. "I need your help now," he told her. "None of the huntsmen speak Earthtongue. Will you come with us?"

She hesitated, frowning.

"Some of us may be killed," he said quietly. "You can leave if you want to. Maybe I can get along with sign language."

She snorted angrily, and stamped her foot. "Of course I come! Is just I don't see how we get out of

here. The council's guards wait for you. Is only one entrance. How..."

"Never mind!" he said, looking up toward a flutter of wings. "Tell those riders to go back up, or another sun will bloom down here."

She faced the center of the temple and called out in a quavering voice. A rider who was stalling his bat for a landing jerked the beast's chin down and shot quickly upward again. Rolf glanced around at the tethered mounts whose riders had run away with the crowd. There were five of them, crouched low and squeaking with fright.

"Collect all the weapons from the storeroom," he told Krasala. "I'll get the bats ready."

"Weapons?" She looked puzzled. Rolf held up the bagpipe. "These things. You shot this one. You shouldn't be afraid of them now." Her face went chalk-white and she moistened her lips.

"Listen, kid," he said impatiently. "If you can't get over your silly fright, you might as well stay here. And if we don't *use* the Bolsewi weapons, we'll probably all die."

She set her jaw defiantly, turned, and marched angrily toward the storeroom. Rolf grinned, gathered up a coil of rawhide rope, and tied four bats together in an aerial mule-train, leaving the fifth for Krasala. He weighted the riderless ones with rock-sacks to prevent an overly frisky flight, and made certain that all blindfolds were adjusted as insurance against willfulness. When he was finished, he began carrying away the few wounded guards who remained, and depositing them in the corridor just outside the temple's entrance. At the other end of the corridor, the crowds stared at him from the huge council room. Someone threw a club which skidded off a wall and missed him by a wide margin.

He started to turn away, then paused. A loud and metallic voice was echoing from the distance, making itself heard above the grumbling voice of the crowd. "We'll give you half an hour to produce Kenlan. Do you understand? Half an hour. Then we turn on the gas. Do you understand 'gas'? You stupid beasts, you understand 'death', don't you? 'Gas' is 'death'. Send Kenlan to us, or we'll..." The voice hesitated, then went conversational: "Hey, Peterson! Somebody's coming up the tunnel. Looks like the chief."

ROLF QUICKLY guessed what was happening. The Commission guards had dragged a public address system halfway down the bat-cave. H'nrin was evidently going to meet them for a parley. But the name 'Peterson' left him startled. Could it be the same Peterson who was a member of the Commission? If so, then the public address announcer must also be a Commissionman; for no one else would dare to call the official by his last name without using the title "Commissioner". It seemed unlikely—yet the rulers might submit themselves to personal danger rather than let too many others see the caverns and understand their significance.

Rolf returned quickly to the temple. Half an hour made a dangerously close deadline. And if his plan failed, several thousand androons would die unpleasantly. He wondered how they planned to force the gas into the caverns when the natural drafts flowed in the opposite direction along the tunnel. They must mean to close off the mouth of the bat-cave as soon as the delegation came out. Or perhaps they had already walled it up, leaving a small escapeway.

Krasala had stacked half a dozen of the Bolsewi bagpipes near the tethered bats, and she stood back from them nervously, her expression shifting from awe to pride to anxiety. He grinned and applauded her bravery. She replied with a cocky smile and a sniff, but her hands were trembling. "The flyers try to come down again," she said. "I send them back up."

"Good girl. Think you can ride one of these flying ponies?"

She eyed the beasts doubtfully, but snapped, "Certainly!"

Rolf packed the Bolsewi weapons beneath a bat, but kept one to strap on his back. He helped Krasala under her mount, released the beast's tether, and slipped off the loop that bound its wings, whose sudden beating sent him sprawling. Krasala yelped as it sprang aloft.

"Jerk its head down!" he bellowed after her.

After a few wild passes across the temple, the bat began ascending. Rolf kept his own mount bound and tethered while he released the others in the four-bat train. They fluttered up to the end of the lead-rope and began tugging against one another amid furious beating of wings. Leading them would not

be simple. He slipped quickly into his seat and set his own bat free.

At first it added its bit to the general chaos, and Rolf clutched the crosspiece fearfully as he felt himself being flung about like a rock at the end of a string. But he managed to exert some control; and since the vector-sum of the forces exerted by the riderless bats was frequently zero, his steady guidance urged the unwilling train steadily upward.

He peered about in the deepening gloom for the other huntsmen, but saw no one. Apparently they had already discovered the high-level storeroom. Once Krasala swooped down past him, howling angrily at her mount. But then she regained control and climbed again.

"Can you handle him yet?" he shouted, causing his own bat to squeak and dart erratically.

"I—I think so!" she called nervously.

"Go up till you see a ledge. There's a big door. Fly inside and wait."

SHE CALLED acknowledgement and soared on above him. Suddenly a riderless bat fluttered past and descended toward the floor far below. Rolf cursed to himself. Whoever had let the beast escape would be marooned in the storeroom. He unstrapped the Bolsewi bagpipe, cranked it, and aimed between his legs at the patch of light beneath him. The weapon's shriek sent the bat bolting upward with an acceleration that nearly unseated him.

A minute later, they were flurrying madly at the top of the shaft, darting dangerously close to the steel-struts that supported the cavern's lid, while the violet light blazed far below them. While he fought to regain control, he caught a glimpse of the stray bat streaking for safety within the storeroom. But he was more interested in keeping the train away from the struts. If they fouled the lead-rope and became entangled, he would be marooned a thousand feet above the floor, with no way to get down.

He jerked savagely on the reins and kicked his bat's chin high as the last beast tried to encircle a strut. There was a flutter of wings against steel, then a series of enraged squeaks. The train tugged at its rope. With a yelp of fright he glanced back. The bat was clinging to the strut with its feet. One of its wingtips dangled, broken from beating against a sharp metal edge. Rolf jabbed his mount with the weapon's muzzle.

The last bat tore free. The train sagged at the end, as the crippled creature fought to stay aloft. But its limping efforts helped to tug them slowly downward. Suddenly his bat saw—or "heard"—the storeroom entrance and began fighting toward it valiantly. A moment later, the train was inside, alighting in the midst of the others.

He climbed wearily to his feet and noticed irritably that none of the mounts was tied. They remained in the storeroom as a sanctuary from the outrages that had been perpetrated upon them in the shaft. But what he was about to do would send them into a panic, and they would have to be properly bound.

He looked around for the riders, and at last saw them huddled as a shadowy patch of collective fright in a far corner.

"Krasala!" he called into the gloom. "Where are you?"

Her slender figure detached itself from the shadow of a bat, and approached him slowly. When she drew near, he could see she was smiling weakly, although she appeared sick from the wild ride.

"Is always be like this, when I your woman?" she muttered wearily.

He chuckled and gave her a rough little hug. "Go tell the men to come tether the bats securely."

SHE NODDED and moved toward the murmuring huddle of frightened huntsmen. He listened as she relayed the order. A voice replied from the group, a protesting voice. She spoke again in a louder tone. The voice grunted a monosyllable. She raged at it in a furious snarl. Several voices answered sulkily. She turned on her heel and marched back to Rolf.

"They won't do anything," she told him. "They say they wait for Menbana to punish you."

"Tell them," he said stiffly, "that if they don't obey, the whole tribe will be killed by the Earthmen from the city. Tell them we're trying to save their people. And...tell them I'll toss any man who disobeys off the ledge."

She went to relay the order, while he stood regretting the latter threat. There was not a man among

them who did not outweigh him by at least twenty pounds. He waited, listening to their heated conversation with Krasala. At last two men arose and advanced toward him. He cranked the sun-weapon and waited tensely. Krasala was hurrying behind them, chattering rapidly.

"Stop!" he barked when they were within five paces. He lifted the gun menacingly. The pair stopped and looked bewildered.

"No, they came to help you!" Krasala explained.

"What about the others?"

She shrugged. "I ask if anybody isn't coward. These two is all that come."

"Have them tie the bats, then. We don't have much time."

Rolf stacked the weapon against the wall, and went to drag the boxes of the Bolsewi shipment toward the entrance. There were six of them—the coffin, the instrument case, the machine-parts, a case of plastic scrolls that might have been books, a box whose contents had been reduced to mouldy dust, and a fat device that looked like a replacement unit for some electronic rig.

When the huntsmen had tied the bats in the pack-train, Rolf unhitched the rock-bags and emptied them. He slipped the electronic unit into one bag, the coffin into another, then began stuffing the third with samples from all the other cases. Krasala was watching him curiously.

"Where you take these god-creatures?" she asked.

He paused thoughtfully, then looked "Tell me, do you believe the gods lie or not?"

She shook her head quickly. "Gods don't die. They go to live above the world."

"In soul, body, or both?"

Her mystified expression told him that she had no concept of soul, at Least not as far as the gods were concerned.

"Another thing: would you recognize a Bolsewi if you saw one?"

"Certainly. The pictures in the council room—"

"That's all I want to know, baby." Quickly he unpacked the coffin and took out the skull. "Come with me," he grunted, and moved toward the group of idle huntsmen.

She walked beside him, staring curiously at the white object in his hands, but evidently not recognizing it. The batsmen were sitting in a tight motionless group, watching him resentfully as he approached. Suddenly he wished that he had brought the weapon. They might react violently to his words. He stopped before them and held up the skull, turning it slowly in the dim light.

"Is this the skull of a bat?" he asked rhetorically.

"*Ce vanina kr'nale subolsewa?*" Krasala translated.

THERE WAS a long silence. Then a man in the center of the group raised his voice to utter a few words. "He says 'no'," Krasala told him. "He says the top part is too big, and jaw too little."

"Is it the skull of a man?" Rolf asked again.

The same huntsman snorted derisively. "What man has needles for teeth and ears on top of his head?" he replied through the translator. Then his expression changed, became startled. A hushed murmur arose from the group. Krasala caught her breath and stared up at the pale and ancient bone.

"I found it here—in this room," Rolf said in a conversational tone. "Since the top of the shaft is closed, it must have come up from below. Have any of you seen something like this wandering through the temple?"

Krasala translated in a weak, halting voice. This time the man replied, with only an uneasy head-shake.

"It was in a box," Rolf continued. "Somebody must have put it in the box, a long time ago. It's very dry and brittle. Would any of you like to handle it?"

An uneasy mutter was the only answer to Krasala's translation. She had backed away from him several steps, and she was swaying weakly. Rolf turned the thing over in his hands and put on a puzzled expression.

"Now, what do you suppose has teeth, jaw, and ears like a bat, but a head that's bigger than a man's?"

He opened the jaw to peer at the teeth—and made a new discovery. "It even has two metal teeth."

"Translate, please," he murmured when Krasala lagged.

She managed to get it said before she started to faint. He leaped toward her, gave her an arm for support, and shook her slightly. She moaned and shied away from the skull. He led her gently back toward the tethered bats while a babble of voices began to grow behind him. He let her sit by the wall to recover while he silently returned the skull to the coffin and the coffin to the bag.

Then he spoke to her again: "Go tell the men that they are about to see that Bolsewi magic can be used by men, without harm to them. Tell them that the temple of Menbana will soon open its mouth to the sky, with much thunder. Tell them to watch closely while I use Bolsewi magic again."

Wordlessly; she went to do his bidding, and he heard the heated argument die when she began to speak. He hurried toward the entrance, hoping that the bagpipes were powerful enough to make good his promise. He sat in the center of the opening and fired a shrieking bolt at the ceiling of the shaft. The violet globe stung the metal, and by its light he inspected the damage wrought by the first shot which had gained him Lalyahe's respect. There was a fused crater in the metal, but the center of the crater had bulged downward, as if pressed by weight from above.

He felt certain that the ceiling was several feet in thickness, and covered with a heavy layer of earth. Burning through it would take too long, and already the half-hour deadline was approaching. He hoped, however, that H'nrin's pleas would manage to stall the Commission for a time.

INSPECTING the roof, he wondered if its sudden collapse would bring a landslide and perhaps cause the store-room to cave in. But he had to chance it. He glanced down over the lip of the ledge to assure himself that none of the tribesmen was brave enough to enter the haunted temple. Then he began firing at a group of struts which supported a section of ceiling on the opposite side of the shaft, hoping thereby to limit the overall effect and confine any rock-slide to the one side. The globes of bright fury attached themselves to the struts and bit angrily into the metal. He ducked back behind the wall to avoid a shower of sparks and to protect his eyes from the sun-glare of four globes burning at once.

A deep-throated grumble began to pervade the shaft. He stole a glance around the corner and saw one of the struts begin to buckle at the point where the charge had heated it to white incandescence. The ceiling section seemed to sag slightly. But the fire-globes had died, and the struts were subsiding to a red heat. The grumble began to die.

Quickly, in the failing light, he fired three more bursts at the same struts. When the sun-orbs bloomed again, the heated shafts crawled rapidly to white luminescence. Rolf backed away from the entrance. Two of the shafts were slipping and twisting like fat lead bars pressed lengthwise in a vise.

The grumble returned, became a rumble, became a growling roar that shivered the solid walls of the storeroom and tore at the eardrums with bursts of sound. He ran twenty paces into the storeroom, then turned and ran toward a far corner where Krasala huddled in fright. Somewhere outside, the piercing cry of shearing steel blended with the monstrous growl of tumbling rock. A hail of stones rained on the ledge, bouncing through the entranceway. A small boulder came with the debris, tearing out a bite of rock from the side of the door. It hurtled through the storeroom like a juggernaut, struck the rear wall, and narrowly missed crushing a bat before it came to rest.

The room became choked with dust as the barrage continued. Faintly, above the uproar, he heard the outcries of the huntsmen. "What are they saying?" he shouted at Krasala, who was clinging to his arm and biting her lip to keep silent.

"They are praying," she called in reply.

"Not a bad idea," he said as he watched the wall toward the shaft begin to crack. The crack grew longer, as though an invisible hand were tracing it in black ink upon the polished stone. The same crack was moving more slowly across the ceiling. In grim fascination, Rolf watched it until it finally crept to a halt.

Then the rumble was coming from far below as the cave-in piled itself upon the floor of the temple. The rain of rocks in the entranceway had stopped. But there was darkness in the shaft. With a cry of dismay he ran toward the entrance. Only blackness above and below, blackness and choking dust. Had

the collapse only sheared off a layer of rock above the metal, leaving the higher stratum hanging by its bootstraps? If so, they would all die rather slowly and unpleasantly—of starvation. For he was certain enough rock had fallen to bury the tops of the temple's doorways, thereby sealing off the merciful death of the Commission's threatened gas attack.

HE SEIZED a bagpipe and fired it upward in the shaft, then waited anxiously for the bloom of brilliance. It failed to come. He laughed with hysterical relief. The lack of daylight was simple. It was nighttime on the surface. In the dayless, nightless caverns, he had lost track of time, having eaten and slept whenever the need arose.

He turned to call the news to Krasala, and was startled to see three burly shadows standing behind him. He lifted the weapon and edged toward the side of the entrance to guard himself against a sudden push. The three figures sidled with him.

"What do you want?" he barked.

One of the men stepped forward and knelt. Then the other two followed suit. A tongue of cold air licked down his back from the open maw of the shaft above. "Krasala," he called weakly. "Come find out what's wrong with these jerks!"

"I'm right here," she said from somewhere in the dusty shadows. Then her shape appeared, and she questioned the men quietly. The one in the center answered without looking up.

Rolf listened to the conversation impatiently. At first it occurred to him that they had taken him for a god, but he dismissed the notion with the thought that primitive peoples often failed to differentiate sharply between powerful natural and supernatural forces. A force could be slightly a god, partially a god, or wholly a god. And he had seen them kneel to their leaders.

"What is it?" he asked impatiently.

"They beg you pardon," she replied. "They want you to be high priest, and teach them."

"Do they speak for all the men?" he grunted.

She repeated the question, and replied, "All but a few. A few too frightened to say."

Rolf breathed relief. "Okay, tell them to get their bats ready and start chasing out of here. Straight up. We'll assemble again on the surface, around the mouth of the shaft. There's no time to waste."

One by one the bats began fluttering out of the opening and soaring up into dusty blackness. Rolf gave the train to another huntsman, to leave himself free for reconnaissance. Eight men refused to go; they remained in their corner, sulking and shivering. He decided to leave them. When the others had gone, he told Krasala to keep them assembled near the mouth of the shaft. Then they mounted their bats, and burst out into the shaft, climbing toward the invisible escapeway. A patch of stars came dimly into view as the dust thinned. Then they were out in the frigid night.

Rolf stalled his mount briefly over the mouth of the shaft, and by the light of the moons he could see that at least eight feet of rock and soil had been deposited over the metal roof. Since the walls of the shaft sloped inward, there would be perhaps twelve feet of debris covering the temple floor, blocking all entrances. The cult of Menbana was doomed.

A FEW RIDERS were still aloft, fighting their bats, who sensed freedom in the open night. But most had landed and tethered their mounts to small boulders. The shaft's entrance lay in a pass between two mountains.

He called a repetition of his order to remain in a group, then let the bat climb high. The lights of Marsville arose above a hilltop. He reined toward it and spurred the beast to angry speed by pulling hairs out of its shaggy belly. The half hour had certainly elapsed, but H'nrin's pleading together with the commotion caused by the cave-in had probably delayed the gassing of the caves.

He kept the bat high until he located the ravine where the bat-caves stared from their low bluff. It was not hard to find; a dim aura of light arose from the encampment of guards. Then, lest they catch a glimpse of him in the moonlight, he swooped low, and darted east at fifty feet altitude. The camp lay about six miles down the slopes from the mountain pass. The icy wind numbed his face and froze his breath about his lips as he goaded the bat to furious speed.

As he drew nearer, he nosed his mount north, away from the moons, so that he would not be silhouetted as he circled at a radius of a thousand yards. From the number of portable huts erected about a monstrous bonfire, he estimated that there were at least a hundred men in the ravine. Bright lights gleamed about the cave entrances, and a group of men were working about the ledge. They had drilled into the rock, and had set a metal door over the mouth of the tunnel leading to the caverns. He murmured thankfully; the door was still open, and two men were peering into the cave. Evidently the delegation was still inside.

A tanker truck had been rolled up near the entrance, and dimly he could see a heavy hose coiled on the ground. The gas equipment. He reasoned that the gas would not be a lingering one, such as lewisite or the more deadly radioactive alphazene, for the Commission would want to reenter the caverns. Chlorine, perhaps, or a radioactive gas with a very short half-life.

Hovering at a distance of five hundred yards, he heard the sputter of an internal combustion engine. Briefly, he wondered why they hadn't brought a portable reactor instead, but then realized that there was no cooling water available in the ravine. He looked for the engine and spotted it on the bed of an open lorry. Undoubtedly driving the generator that furnished light for the encampment.

He twisted the crank of the Bolsewi bagpipe and eased the bat in closer. He could not afford to miss either target. At a hundred and fifty yards, he heard a shout. Someone had spotted him.

He set the bat in a gradual stall and calmly aimed for the generator. A searchlight stabbed out, probing toward him. He ignored it and pressed the stud. Its shriek sent the bat into a hysterical climbing turn. A machine gun chattered, and tracers drew white lines across the landscape beneath him. The ravine became illuminated with bluish light as the orb fired its way into steel. The engine's sputter died. The lights grew dim, then failed. Bullets ploughed upward in his general direction, but the guards had looked toward the sun-glare of the bag-pipe charge, and their aim was poor.

The bat was fighting its way higher and tugging doggedly toward the mountains, while Rolf tried to tug it back and keep it satisfied with a vertical ascent. But soon he was circling a thousand feet above the camp. The smoke of the bonfire seemed to hide him from view, for the barking of small arms ceased, except for an occasional wild shot toward some other bat whose sleep had been disturbed by the commotion.

WHEN HE had control of his mount again, Rolf skidded aside out of the thin smoke-pall and aimed another shot at the tank of gas. It fell wide by several yards and burned its way into the rocky ground. The bat bolted again, but this time he regained control more easily. The animal was weary of fighting.

The guards saw his intentions, and began scurrying wildly about in the area. Some were running toward the huts, while others darted into the mouth of the cave. He gave them a little time to reach cover before he fired again. A few of them appeared wearing gas masks, while those who apparently had no such protection sought refuge in the cave and closed the steel hatch behind them. A hail of bullets began streaking upward as the masked guards resumed their fire. There was a snapping sound as a slug bit through the bat's wing-membrane. The bat squeaked angrily, but evidently there were no somesthetic nerve-endings in the membrane. It seemed to be in no pain.

He aimed carefully and fired again. This time the sun-orb flared on the tank's hull. The small-arms barrage ceased as the guards raced for safety. Rolf gave the bat its head and let it streak toward the mountains. He counted the seconds ... three, four ... the tank was strong.

Then came an ear-numbing *thwang* as a bubble of white-hot steel swelled and burst. It was followed by a gushing roar that ended sharply and echoed off the mountains. He flew onward.

Looking back from a mile's safety, he saw that the bonfire had gone green as the gas swirled about it. Even the lights of Marsville were tinted with an emerald glow as the cloud billowed upward as a tenuous mist. It behaved as a heavy fog, spreading out from the explosion, covering the camp, and rolling slowly downward to fill the ravine. How long before it would disperse and blend with the atmosphere as free gas? The coldness of the windless night should help preserve it for a time as a low-hanging vapor shroud. He needed that time badly.

The sound of a helicopter engine startled him. He looked back to see its shadow flit up from the

camp past the lights of the city. It arose above the vapor and hovered for a moment, the moons glinting on its fusilage. With its landing lights, it probed the night about the camp. Then, having reassured itself that the threat had passed, it darted cityward. Another copter arose to follow it.

Rolf prodded the bat to higher speed. The pilots would bring help from the city. And if the gas was tymbogen, as he suspected, it could be quickly dispersed by jets spraying the ravine with powdered graphite. The gas was his ally, keeping the men trapped in the tunnel.

The huntsmen had built a roaring fire from dry lichen, and they were huddled about it for warmth. It guided him back to the shaft, but upon landing the flaming lichen into the shaft, lest it be spotted by aircraft taking off from the city. Krasala relayed the order as she ran toward him, grinning and scolding. He nestled her small body in his arms for a moment, then pushed her away.

"Find me five men brave enough to carry the Bolsewi weapons," he told her.

She shook her head doubtfully but followed him toward the group of men who were beating out the fire and kicking the flaming lichen into the shaft. She waited until they had finished, then spoke to the huntsmen sharply. Rolf watched the men halt in their tracks and turn to stare uneasily at the leader. No one volunteered.

"Ask them if they have decided about the skull I showed them in the storeroom. Ask them if they think it was man, bat, or Bolsewi."

"I already hear them talk about it," she said. "A few think it was Bolsewi."

"Which ones?"

She spoke sharply to a thin, saturnine batsman who stood nearby. He nodded and grunted. "Bolsewi". Then he stared nervously at his fellows and rubbed his beard contemplatively. Three others echoed the word, but a murmur of dissent arose among the group.

"Tell those four to step forward," he said.

WHEN THEY had approached sheepishly to within a few paces, he began asking Socratic questions about death, gods, immortality, and magic. They answered respectfully but briefly. But when the questioning reached the crucial stage—"Why not touch the weapons, if the Bolsewi were mortals?"—the men fell silent and inched away.

"Tell them that those who are cowards may leave," he barked in despair.

*"Ga yaihi foebolsewi sundra k'raj!"* she snapped scornfully.

One of the men backed away a few paces, then turned and bolted. Two others seemed ready to follow. The saturnine huntsman's shoulders stiffened proudly, however. He tapped his chest, grunted a monosyllable, and caught up a stone from the ground. He spun around and hurled it after the timid runner. There came a frightened yelp from the shadows, and a clatter of loose gravel as the man sprawled to the ground and darted behind a boulder. The thrower turned and grinned smugly at Rolf. His action seemed to deter the others from fleeing. They stood uneasily waiting.

"Get the weapons," he told Krasala.

She nodded and moved silently toward the tethered bat-train. Even the saturnine misfit's grin disappeared as she returned with them.

"Remind them that nothing horrible's happening to you," he told her. "And stop shivering. They'll notice it."

She placed the guns on the ground and translated. There was only a slight quaver in her voice, but she kept her hands clasped behind her shapely back. The men were staring down at the weapons with dismay. They seemed intellectually convinced that the Bolsewi were mortal. They had seen both Rolf and Krasala handle the bagpipes without misfortune. Yet they were afraid. Some kinds of fear were not quite reasonable, he reminded himself.

"Tell the thin one to take a gun," he growled.

Krasala lifted one of the weapons and extended it toward the batsman, calling him S'rij. But S'rij moistened his lips and let his hands dangle by his sides. His face reflected anguish. Suddenly he looked at Rolf and asked a pleading question.

"He wants to know if you will perform a spell to protect him," Krasala told him.

"What kind of a spell?" he asked in dismay.

She shrugged. "He regards you as a priest. Is business of priest to say what kind of spell."

He paused a moment, then shrugged resignedly and took the weapon from her. If they wanted spells, then they would get spells. He turned the bagpipe over in his hands, made gestures at it, blew a jug-note on its muzzle, mumbled gibberish over it, and held it up to the sky like an offering. He grinned at Krasala. "Tell the guy I'm giving it instructions."

THE BATSMAN nodded gravely as she translated. Rolf stepped forward, pressed the fellow's nose with his forefinger, and placed his hand forcefully across the breach of the weapon. "I now pronounce you man and wife," he said solemnly: then, thinking the foolishness was perhaps a good idea, he spoke to Krasala. "Tell him he's now married to the gun, and that if he leaves it or mistreats it, it'll give him a bad time."

No one laughed when she spoke. The hunter stared in awe at the thing in his hands. He turned it over slowly, inspecting its details with cautious interest. Then he nodded slowly at Rolf, and spoke in a low tone.

"He says he will guard it properly, but that he hope for a woman wife."

"Tell him its only a marriage of convenience," Rolf said, suppressing a smile. "He can have a divorce when we're finished. He can trade it in on a priestess."

The huntsman-acolyte had undoubtedly been trudging along behind his strutting bewinged female for too many years as an unthanked lackey. He broke into a beaming grin, nudged his comrades, and promptly fell in love with the bagpipe. Rolf felt his own shoulders relax and his stomach return to its proper position. "Whhh!" he breathed to Krasala. "Now to marry the others. Let's make it a double ceremony."

Having watched their comrade accept the weapon, the other two men agreed nervously but without protest. When he was finished, he asked for more volunteers and got another man. But there were still two extra weapons, not including his own.

"I'll carry it, but I won't marry it," said Krasala, who seemed to be becoming a godless heathen in imitation of her sacrilegious beloved.

"Okay, we'll leave the other. Now, get these guys over to the shaft for instructions."

The four armed batsmen followed him to the gaping mouth of the opening, and watched while he cranked and fired the weapon into the abyss. Its burst gleamed feebly up through the lingering dust from the floor of the wrecked temple far below. Then, he gave each of them individual instructions in aiming, cranking, firing, and had them fire several practice bursts into the shaft, where they could not be observed from the city or from aircraft. He feared that the operation might leave them unnerved, but after a few shots, the batsmen seemed to take heart and grow calmer.

Then he called the entire party to their bats. While he was giving them instructions, the moonlight seemed to grow brighter, bathing the ground in increasing brilliance. The men were puttering among themselves and staring past him toward the plains.

"A star grows brighter!" Krasala gasped beside him.

He looked around, and saw that the light was coming, not from the twin moons, but from a magnesium flare hovering over the ravine to the east. He bellowed for silence and listened to the night. The distant growl of a jet engine came to his ears. They were spraying the ravine to clear it of gas. 'Let's go!' he shouted to the men. "Single file, weapon-men in the lead. Head for the valley, but stay clear of the light!"

SHRILLING his orders to the others, Krasala followed close on his Leek. Soon the weird procession was airborne, winging down the slopes toward the glow of the city. He saw the lash of a jet's wings dart past the dare, and a smoky cloud of fine powder trail out behind it to sift slowly downward. The vaporous tendrils of tymbogen were thinning in the ravine. As the dusty cloud drifted through them, they came alive with a faint green light of their own. When the luminescence faded, the tendril was gone, and the vapor lost its droplet form and blended with the air like vanishing steam. Nevertheless, its

potency would linger in the area for a short time, depending on the faint upcurrents of air along the slopes.

Rolf led the wavering column of bats a mile south of the ravine. A jet thundered past a hundred feet above them, causing the train to break up into a flurrying whirlpool of terrified moths. He bellowed for order, and shouted frantic explanations, but six batsmen bolted for the hills and refused to heed his angry threats. At last he let them go, and shouted at the others to fly toward the orchard and land in a group at its eastern fringes. He accompanied the flight, to assure himself of obedience.

The foliage cups of the quioie orchards gleamed like a long ribbon of buttercups beneath them in the moonlight. It lay a half mile wide between the plain and the foothills. He guided his makeshift warriors to a landing at the edge of the tree line, then called to Krasala without climbing out from under his bat.

"Tell S'rij and one other weapon-man to stay here with the others and wait for us to get back. Tell S'rij to brain any man who tries to slip away. Have them tie the bats under the trees and keep themselves out of sight if a...mechanical bat comes snooping. You and the other weapon-men come with me."

When S'rij proudly assured him that any deserter would be chopped in bits and fed to his bat, Rolf led the four-man task force aloft. Keeping low, they made their way back toward the ravine. He sniffed the night air for the sickening bouquet of tymbogen, the maker of tombs. He smelled nothing, but nervously led the party higher when they approached within a thousand yards. "Get as much altitude as you can," he called. "We'll watch from above."

The dusting-planes had dropped another flare, and by its light Rolf could see several tiny figures moving about beneath the mouth of the cavern. They were still wearing masks, and apparently testing for lingering whiffs of gas. One of the jets had gone back to the city, but the other still circled far overhead.

"No closer!" Rolf warned the others. "If the plane spots us, scatter in all directions and regroup with the others."

They hovered in a slow circle, watching the party of men in the ravine. Rolf reflected that there was little chance of being spotted by the jet from above; the riders were hidden beneath the bodies of their mounts, and enough other disturbed bats were flitting about in the area to make them inconspicuous. The ground-men's eyes were adjusted to the brightness beneath the flare, and although they cast frequent nervous glances skyward, Rolf doubted if they could see much beyond their immediate vicinity.

ONE OF the men suddenly detached himself from the group, hauled a portable radio from the back of a truck, and spoke into the mike. After a brief exchange of words, the sound of the jet took on a different note.

"Watch it!" Rolf warned sharply. "We may be spotted!"

But a moment later, the purring engine receded. Between wing flaps of his mount, he caught a glimpse of its luminous blue tail streaking toward the northeast.

"It's coming back!" Krasala cried suddenly.

"Not so loud! And don't worry, it's making another dusting run."

They watched and fought the reins, while the aircraft roared back up the ravine, scattering another haze of black powder from a greater altitude. It sifted over a wider area, and Rolf felt a few particles striking his skin. Krasala sneezed vigorously. He watched the ground as the dust drifted down, but there were no further signs of luminosity. The gas seemed to be gone.

But he waited until the cloud completely cleared. The masked guard was using the radio again when the haze thinned enough to allow visibility. He spoke for a short time, then replaced the mike and went to join his fellows. Rolf heard the jet turn off and recede toward the city. Its task was done.

He heard Krasala gasp suddenly from behind him. "Lights!" she warned. "Coming out of the city."

Rolf glanced back to see four pairs of headlights file out of the west gate and begin crawling across the plain. Trucks, bringing back the guards who had fled when the tank exploded. Evidently the Commission had cleared a road across the plain since the last time he had seen it. He smiled to himself. If things went right, the road might have a lot of future traffic—peaceful traffic. The trucks failed to worry him. He should be finished before they arrived.

"Move in closer to the caves," he told the others. "But keep silent."

HE LED them lower as they swooped toward the ravine. The flare had fallen and was burning itself out on the ground. One of the men was heaping dry lichens on the dying embers of the bonfire, and stirring them up to a light-giving blaze. There seemed to be only six men in the party. Rolf watched one of them shaking a bottle of liquid, then holding it up to the light—apparently testing for lingering gas. He seemed satisfied, and laid the bottle aside. He cracked his mask slightly, then tore it off, and shouted to the others.

"Okay, men! It's safe! Get that hatch open before the Commissioner has kittens!"

"Wait here!" Rolf hissed to Krasala. "Cover me! Don't fire unless they shoot first."

He goaded his bat to a burst of speed and ducked in close to the ground. The men had stacked their rifles against the bluff. They clambered upon the ledge and began making their way higher toward the cave entrance. He stuck a flaming orb to the ledge just ahead of them. The party bolted back toward safety. He stuck another orb to the ledge, cutting off their retreat. One man leaped off the ledge, but underestimated the drop and the hardness of the ground. He rolled over and sat up howling, with one leg twisted at a crazy angle. The others remained on the ledge, pinned between the two glaring globes.

Three of them produced side-arms and began firing at the flitting shadow of the frightened bat. Rolf retreated a hundred feet, gained altitude, and bellowed down at them: "Pitch your guns over the edge! And be quick, or I'll build a fire right between the other two!"

After a moment's hesitation, the men complied. "You'll get yours, Kenlan," major roared angrily.

Rolf ignored him and called to the others to advance. "Watch that man on the ground!" he warned. "If he lets go of his leg, blast him!" Then he landed in the ravine while the others remained aloft. He tied his bat to the tailgate of a truck, then stood guard while the others brought their harried mounts to the ground. The sun-orbs flickered out, leaving white patches of softened rock.

"You'll get yours, all right," the major repeated.

"Yeah," Rolf growled. "But in the meantime, jump over that hot-spot and come down off the ledge. All of you! Then line up at the base of the cliff, facing it."

The five guards trooped sullenly down and obediently filed along the bottom of the bluff. The major kept glancing back curiously. Finally his professional curiosity got the better of his wrath. "Where did you get those weapons, Kenlan?" he grunted.

"Watch them while I look for rope," Rolf told Krasala.

THE OFFICER was not accustomed to being ignored. He repeated the question irritably.

"Plenty of them in the caverns!" Rolf called as he leaped into the back of the first truck, and began rooting among the boards, tarpaulins, and such for a piece of rope.

"Who made them?" the major asked. "You mean these androons—"

"No, not these humans. They were made by an ancient civilization that borrowed a few pairs of our ancestors from earth."

The major sputtered contemptuously. "What do you take me for, Kenlan?"

"A fool!" Rolf replied calmly as he moved on to the second truck. In it, he found no rope, but stumbled across the assembly of a hydrogen welder which had evidently been used to mount the steel hatch over the cave entrance. He slit the oxygen hose with his pocket knife, tossed the end of it off the truck, and turned the cylinder valve full on. The hose writhed and hissed as the cylinder pressure needle crept slowly down the scale. When he got through with the hatch, they would need a cutting torch to open it; and he preferred that none be immediately available. While the oxygen spewed itself out, he moved on to the third truck.

But before he climbed inside, a loudspeaker voice called from the portable radio: "Major Mulvern, this is Longly, over."

"Better let me answer it, Kenlan," the major called.

Rolf cursed and darted toward the radio. He stuffed a handkerchief over the microphone to simulate the muffling effect of a talkie gas-mask, and grunted, "Go ahead, Longly."

"We've reached the orchard, sir. Shall we come on up the ravine? Uh ...are you still in your mask,

sir?"

"Hold it where you are," Rolf barked. "There's still a little gas in here. Should be clear soon. Half hour, maybe."

Longly called an acknowledgement, but another station interrupted on the frequency. The voice was charged with impatience and carried the crisp ring of authority. "I thought you said the gas was clear, Mulvern. What's going on over there?"

"No trouble, sir. A little gas still lingering in the crevices."

"I'll send more jets, then."

"That won't be necessary, sir."

"Since when do you tell a Commissioner what's necessary!" the voice roared.

Rolf caught his breath. So some of the rulers had remained in the city after all. "Sorry, sir," he said meekly. "It's just that the vapor's already broken up. And the jets can't chase the fumes away."

THE COMMISSIONER broke off the conversation with a growl. Rolf replaced the mike and hurried back to the tracks. Someone was beating on the hatch from the inside of the tunnel, and shouting for news and assistance. He felt certain that the hatch could not be opened from within, since it was meant to imprison the cavern's inhabitants.

There was no rope, but he found a two-foot roll of copper wire, heavy enough for the purpose. He kicked it out of the truck, and carried it to the captives. "You've got seniority here," he told the major. "Lie down on your belly. Get away from the others."

Grumbling insults and threats, the major stretched out on the rocky ground. Rolf trussed him up like an unborn foetus, then turned to the others. "You're next, Captain," he barked.

Soon the prisoners were safely bound and propped in a circle around the bright embers of the bonfire. "You won't freeze," he told them, after glancing at the major's watch. "It'll be dawn in a couple of hours."

Longly was on the radio again, seething with polite impatience. "I've got a dozen men with masks, sir," he called. "Can they take one truck and come on up?"

"No need to," Rolf grunted into the muffled mike. "You can all come in about ten minutes. By the way, do you have a welder with you?"

"Uh, no sir! Why? There's one in truck 35-A. Isn't there?"

Rolf glanced at the truck with the hose dangling over its tail-gate. "35-A" was stencilled on its rear. "Oh, sure. Oxygen pressure's a little low, however. Never mind, it'll hold out."

Longly murmured acknowledgement and signed off.

"I want those men out of that cave in fifteen minutes, Mulvern!" barked the Commissioner's voice.

Rolf laughed into the microphone, and left the set to sputter pompously. "Get your bats aloft," he told Krasala. "Stay high and look for the trucks. They should be down the ravine and just across the quioie orchard. Circle the area, but don't let them see you. Wait until they start through the trees. When they're about halfway through, start firing at the forest behind them. Don't shoot at the trucks, but keep your shots directed at the trees along the road. Don't stop until you've got a fire big enough to cut off retreat. Then fly back and join the others. Set fires as you go. We want to block off this whole area for a while. Got that straight?"

She nodded, and chattered the information to the others. They moved silently to their bats, and he watched them spring aloft.

"Like father, like son, eh, Kenlan?" growled the major, who had been staring at the girl.

"Exactly," he grunted as he stalked to the low end of the ledge, mounted it, and made his way toward the mouth of the caves.

"Not bad looking, even if she is non-human," the major said acidly.

Rolf turned slowly. "You people killed my father when he came to you in good faith, trying to tell the truth. I watched your men shoot my brother while he lay pinned under his horse with a bullet through his middle. After all that, do you think I'd mind kicking your kidneys to a pulp and leaving you here to die?"

THE MAJOR began maintaining a rigid silence. Rolf went to inspect the hatch. It proved to be a door taken from some sort of safety vault, and its frame was set in the face of the cliff with heavy expansion-bolts. A circular hole just large enough to admit the hose had been cut through the door, and the hole was stuffed with rags that had been prodded into it from the inside. Rolf jabbed them out with the muzzle of the bagpipe, and observed that the steel was about four inches thick—probably not so thin as to melt completely through from a bagpipe blast. He turned to leave the ledge, but a muffled voice called through the hole: "Mulvern, this is Commissioner Peterson. Never mind the rags, just open the damned door."

"My name's Kenlan, Peterson!" he growled. "And don't hold your breath till I let you out."

No answer. They stalked along the ledge to the lower end, then moved back up the ravine to stand facing the door. He cranked the bagpipe, then placed three careful shots along each edge of the heavy plate of steel. He waited until the orbs died, making certain that the door was welded fast to the frame. Then he went to get the portable radio.

"Longly, this is Mulvern. You can start in now."

The junior officer responded eagerly. "Immediately, sir. Be with you in a few minutes."

"Take your time, take your time. And watch for signs of gas."

"Yes, sir."

Rolf sighed and sat on the ground to await signs of activity along the edge of the orchard, where Krasala and the two huntsmen should be ready to set the fires. The heart-pulp of the quioie was very moist, but the cup-shaped foliage and the felt covering of the trunks were dry enough to burn nicely, with a little encouragement.

A few seconds later, he heard a distant squeak. It could only be the sound of the Bolsewi weapons. Several others followed it, then a burst of small arms fire, evidently from the trucks. Longly was babbling on the radio. "Sir, we're being attacked! They're starting fires!"

"Well, stop that shooting!" Rolf roared, "and get the trucks on through the orchard, you fool! They'll have you trapped in there!"

A moment later the firing ceased. He saw a tongue of flame lick up above a low hill that hid most of the orchard from view.

"Did you hit any of your attackers?" Rolf asked nervously.

"I think we winged one, sir," the officer said. "But it's like shooting ghosts in a cellar. We don't have a spot-light."

Rolf cursed, to himself. If Krasala ...

"Where are you now?" he asked.

"We're out of the orchard, sir. Starting up the ravine. You should see our headlights in a few moments. By the way, sir—you seem to still be wearing your gas mask. May I ask—"

"Just a minute," Rolf grunted. "Pull the trucks up and park. Just a minute."

THE OFFICER reluctantly acknowledged the order, and reported compliance. Rolf carried the radio to the major, who was shivering in his bonds by the now-blackened campfire. The only light in the ravine came from a few red embers in the ashes.

Rolf took the muffler off the microphone and held it close to Mulvern's mouth. "You can tell the world what your present situation is. Tell Longly to keep his trunks or men where they are, or a few hostages will be executed. Including Peterson, if he's standing close to the cave door."

"Come on up the ravine, Lieutenant!" Mulvern roared into the dead pickup.

Rolf booted him unmercifully in the shins, pushed him over, and rolled him toward the smouldering remains of the fire. He was grateful for the major's scream when it came.

"Now, let's try it with the mike-button on," he barked.

The sweating officer eyed him with hate, then panted into the microphone. "Longly, this is Mulvern. You were talking to Kenlan. He's got us trussed up here. You better stay where you are. He threatens to kill Commissioners Peterson and White."

Rolf took the mike away and listened to the ensuing babble of two stations trying to speak at once.

He carried the leather-encased instrument to his bat, and strapped it between the animal's legs. Then he slipped beneath the belly, tugged the tether free, and burst aloft. He flew up the ravine, away from Longly's men, then cut plainsward toward the meeting place at the edge of the orchard. A dozen fires pierced the darkness. Soon the entire orchard would be in flames, and communication or transportation between the city and the ravine could be accomplished only by helicopter. And he doubted if a copter could make the haul with heavy welding equipment.

He spoke into the mike again. "Marsville control, this is Kenlan. Get that Commissioner on the air again."

There was a long silence, during which he could hear a mic-button being keyed nervously. Then the curt voice barked, "All right, Kenlan., This is Commissioner Rathwich. Speak your piece."

"All right. Undoubtedly you've got a direction-finder on this transmission, and a searchlight waiting to pick me up. I advise you not to do it, nor to make any other hostile move. We have a lot of your hostages over here. Over."

There was another pause, then: "You're clear, Kenlan. No d-f. What do you want? Not that you'll get it."

"I want a parley. I want to bring a party of my men to the city, under guarantee of safe conduct. Such guarantee, of course, being backed up by our possessing the persons of two Commissioners—and something like a hundred lesser beings, if they count for anything. Do you agree to that?"

"Just a minute."

There was an ominous silence while Rathwich took counsel with others or made some plans of his own. Rolf didn't like it.

"Make up your mind!" he barked. "Okay, Kenlan. Meet us at the west gate of the city."

"Un-huh! I'll pick the spot myself." "Where then?"

"I'll tell you after we get there, Rathwich. And listen! Keep the planes grounded and the searchlights off the sky. If we're not back in two hours, my men go to work on the prisoners. You understand?"

"Agreed," Rathwich snapped after a moment's hesitation.

"See you shortly!" Rolf called in signing off. He replaced the mike and reined the bat toward the spot where the others waited.

IN TWO hours it would be dawn, and Rathwich undoubtedly suspected that time was on his side and that, if he could stall until daylight, he would be able to strike quickly and effectively. Rolf shivered at the realization that his success depended upon the Commissioner's assumption that he was backed by a small army—instead of only a dozen frightened men and a girl. The party came out of the trees to meet him when he landed. Several batsmen were kneeling around a prone figure in the shadows, and for a moment he thought it was Krasala. But the girl slipped out of the orchard and trotted toward him. "They fire at us," she panted. "Grandson of H'nrin wounded."

"Badly?"

"His arm. It's shattered."

"Leave two men to take care of him. Get the rest on their bats. We're going into the city."

She caught her breath. "They'll kill us! They have always killed—"

"Not this time, I think. Let's get on our way."

She summoned the huntsmen, and together they arose above the plain. "Fly as high as the bats will go!" he ordered. "Keep well above the lights." They circled higher until the city was a warm square of brightness on the plain. Then he led the party eastward.

Somewhere in that patch of light, he knew that telephones were ringing, gate-guards were peering up into the darkness, and machine-gun crews along the walls were being alerted. Near the space-port ramp, the small ack-ack installation would be buzzing with activity, and searchlights were waiting to probe the sky. Rathwich's guarantee of safe passage meant nothing, although Rolf knew that he would observe it as long as it seemed to his advantage to do so.

Rolf, being at a disadvantage, didn't intend to bind himself by any rules of honesty. He meant to play the game the way Rathwich played it, and to use whatever opportunities arose. His only long-range

weapon was public opinion.

THE COMMISSION, realizing that a police state would eventually fall, ruled by careful planning rather than by force. Marsville was an isolated society, a city-state that was an independent entity. It had achieved its own form of cultural integration after several generations of living apart from Earth. It had a sense of its own destiny as a nucleus of a Martian future. Its spirit was mildly messianic and, in the mind of its citizen, Mars was an evil wasteland which could only be made into a paradise by the "chosen people", at an "acceptable time", and under the semi-divine leadership of the Commission, whose members were Earthborn and therefore symbols of that almost legendary Paradise which was Earth.

But the time for Martian ascendancy was always "not yet", and there was no frontier spirit among the people. Such attitudes had been carefully preserved and encouraged by the Commission, under the guidance of Earth-state, who wanted to keep the sapling carefully pruned and controlled, and Martian civilization tightly integrated and restricted as to pattern, thereby insuring that it would be exploitable at the "acceptable time". That time would come when Mars' industrial capacity outweighed its potentialities as a mushrooming agrarian nation. Earth-state knew very well that a frontier society would quickly get out of hand, explode outward toward individual freedom, and lose its unity as a colony of Earth. When it reached the stage of reintegration, it would have lost its Earth flavor, and would be a new and hearty nation declaring its independence. Since space-flight was limited by fuel-supply, Mars could never be brought to heel by force. Not at the present level of technical development.

There were certain inherent disadvantages in Earth's scheme of control. It had set itself up as the great green mother, the benevolent symbol of good things and of righteousness. The word "Earth" brought the same feelings to the colonists as "Democracy" or "Liberty" had brought to the ancients. Rolf, who had always been intellectually atypical, foresaw a day in the distant future when "all good colonials would go to Earth when they died". The disadvantage in Earth's scheme lay in its appeal to a mystical emotion.

A MESSIANIC spirit could always be aroused to some extent by the cry: "Now is the acceptable hour! The day of consummation is at hand!" Men who lived for a promise had always been stirred by sudden hosannas in favor of immediate fulfillment. Christianity, Bolshevism, Islam, the surge of the American frontier—history was full of examples. And Rolf had seen local political prophets arise in Marsville to proclaim that the time had come for spatial expansion. Such men had attracted sizable followings, but the Commission had always put them down with ridicule and scornful propaganda. When the hubbub died, the prophet faded from sight and finally disappeared completely.

But if proof could be furnished to show the lichen plains and quioie forests of Mars could be colonized with only the present industry to furnish the necessary tools, and if at the same time the Commission could be discredited, then there would be no restraining a gradual outpouring of emigrants without the use of force. And the Commission did not have the police power to hold down a sizable revolt.

As the small party of bat-riders crossed high above the city's walls, Rolf swept through the frequency bands of the receiver, listening for calls. The police station was busily deploying units to probable landing points. He heard the spaceport, the public square, and the administrative building mentioned, and he learned that his party would be shot "at the slightest hint of hostility". The dispatcher was warning the units that the bat-riding savages were armed with non-human weapons of unpredictable effectiveness.

"If the traitor's behavior seems suspicious," the operator continued, "you are to shoot first, and shoot to kill. Be especially alert if the party lands near a vital public facility, such as the hydrogardens, the pumping station, central heating reactors, power plant, and so forth. A threat to the public facilities is expected, if only as a bargaining point."

Rolf grinned to himself. They were guessing close, but missing. They reasoned that his only chance would be to strike at the city's power, then follow it up with a raid by androons waiting for a signal from beyond the quioie orchards which were now blazing spectacularly. They saw the fires, and heard of the hundred captives, and promptly became guilty of a fallacy—"Big effect, ergo, big cause"—and assumed

that he had an army.

Rolf led his small party toward a sprawling, windowless structure of insulated concrete near the north gate. It was the city's hospital—most certainly a public facility, but hardly what the police would suspect. He reasoned that one of its third-floor offices would make a safe meeting place, since the Commission's guards would scarcely dare to stage a gun-battle amid the sick and convalescent occupants. Rolf himself had no intention of starting one.

He pointed out the building to Krasala. "Think you could find it again if you made a circle over half the city?"

"Sure! Is easy to see. Where you going?"

"Down! Listen, fly a wide circle over the city, but keep that building in sight. Fly low over it every time you circle. When you see someone on the roof, land. If no one comes by dawn, then go back to the hills and lead as many of the tribe as you can across the mountains."

HE HEARD her start to protest, but he goaded the bat and darted away from the others in the darkness. The moons had sunk below the horizon, and the predawn blackness was complete, save for the glow that arose from a few streetlights and from the headlights of prowling-cycles that sputtered about the city, watching the sky. Rolf kept the bat at a safely invisible height and flew toward the Public Information Building, which housed the city's newspaper as well as its popular "radio" station. It was not radio at all, since the city was confined to a limited area, and since there was only one channel in operation. News and entertainment programs were piped to the homes via telephone cables. Marsville had no time to waste on the production and installation of luxuries. Its industry was aimed at future empire.

Rolf skirted the gloomy cubical shadow of the building at a high altitude, then circled slowly downward. A streetlight glimmered on the corner, and he could see a few lights in the basement where printers were no doubt at work, but the rest of it was plunged in blackness. There would probably be a night watchman prowling on the first floor, hovering near the entranceway, and waiting for daylight and relief. As he soared lower, he saw the dim outline of a roof exit, perched like a box atop the structure. He began jockeying for a landing stall.

Never had the *whooshing* of his mount's wings seemed so loud as the bat glided in toward the roof. He held his breath as the beast stalled and settled, but the only sound was a dull thump as he sat painfully on tarred concrete. The roof was flat, and a yard-high guard fence gave him some protection. He sat frozen for a moment as a squad of motorcycles growled past, but soon their sound receded.

He waited until he was certain that he had not been observed or heard, then tied the bat to a steel drain vent, hobbled its wings, and went to examine the roof exit. The sheet-metal door was tightly locked, and there was no window. He worked at the lock with a scrap of wire; but it was hopeless. He stood cursing impotently for a moment. Why should the janitor lock the roof entrance?

He unshouldered the Bolsewi weapon, gave the crank a fraction of a turn, and hopefully aimed it skyward. If it shrieked, he would have to flee. He pressed the stud; a faint hiss was the only result. He berated himself again for not discovering that its intensity was adjustable. A second later, a faint star-glow appeared atop an adjoining building. It disappeared quickly.

He turned the weapon on the door and unleashed another modest burst. The startling brightness faded quickly, leaving a patch of distorted metal, but not a hole. He tried holding the stud down while he slowly eased the crank around and played the muzzle in a six-inch circle. The weapon burred a steady *zzzzz* and left a blue-white trail behind it.

"Swords and ploughshares!" he growled to himself. The thing was probably meant to be a portable welder, and not a weapon at all. He meekly recalled his irritation with the androons for misinterpreting it in another way. "Slaves of our cultures," he grumbled apologetically to any Bolsewi ghosts who might be hovering in the Martian night.

THE CIRCLE of hot metal fell inward, and made a sizzling sound on the stairway matting. He waited for the door to cool from cherry red, then reached through to trip the night latch. He paused briefly after

entering, to extinguish the smoking mat, then tiptoed quietly down the stairway. The broadcasting rooms were dark and empty. A faint light gleamed up from the first floor. He swung the door softly closed and bolted it.

Then he turned to inspect the modulators, after switching on a rectifier unit to provide a faint light. A timing mechanism always switched on the equipment at five o'clock, and automatically broadcast two hours of recorded music before any of the station's personnel arrived after dawn. He found the clock, and assured himself that it had not been changed.

There were three input channels for the amplifiers. One was fed by the station's own microphones, and it was the one most frequently used. Another input was connected by wire to the administrative telephone circuits, so that the Chairman of the Commission could speak to the entire city over the entertainment system without leaving his office. A third input came from a radio frequency pickup which could be tuned to the space-port channel, or any of the special frequencies. The occasional landing of an Earth-ship was an important event to the people, and they were allowed to listen on their home amplifiers to radio-exchange between ship and ground-control.

Rolf found the selector and switched off the preset recordings. Then he turned the radio pickup into the modulator's input, and tuned it to the frequency of his portable unit. In fifteen minutes, the timer would cut on the modulators and begin transmitting whatever was picked up on the radio to the families who switched on their amplifiers while they ate, dressed, and prepared to man the city's industries at dawn.

On his way toward the stairs, he noticed a lavatory and went inside. He glanced at himself in the mirror, shuddered, and dug a handful of depilatory out of the dispenser. He smeared the pungent paste over his cheeks, then washed off two weeks' growth of beard. As he turned to go, he saw a pair of worn coveralls hung on the peg by the door. Apparently belonged to the janitor. He slipped them on quickly over his ragged and dirty clothing, and borrowed the slightly greasy janitor's cap. The apparel was ill-fitting but believable.

THE IDEA of welding the door closed occurred to him briefly, but he feared that someone on the lower floor might hear the bagpipe's buzz and come up to investigate. He left it bolted and quietly returned to the roof.

A few minutes later he was hovering over the hospital, watching for the other riders. When he heard the flapping of their wings, he stalled in for a landing on the roof, and began unfastening the portable transmitter. The others swooped low, circled, and settled about him on the flat deck.

"Have the men unpack the bags from the extra bats," he told Krasala. "Keep reasonably quiet, and wait on the roof. I'll be back in a minute."

He carried the radio to the roof exit and found the door unlocked. He descended quickly to the dimly lit third-floor corridor, and tiptoed past the sleeping rooms toward the desk where a night nurse sat cleaning her nails and studying a paper. She glanced up wearily as he approached, returned to the paper, then gave him a second look and an irritable frown.

"Are you an orderly? What are you doing up here?" she muttered. "Say ...you're not an orderly...what...?"

"Never mind!" he snapped. "Where's your telephone? It's business."

"It better be. Who are you, any way?"

"Rolf Kenlan," he murmured as he reached for the phone. The name had no effect. She watched him suspiciously as he dialed.

After two rings, a curt voice barked, "Headquarters, Colonel Luling."

"Luling, this is Rolf Kenlan. I'm at the City Hospital. If the Commissioners are still interested, tell them to come over."

There was a brief silence while Luling breathed surprise into the mouthpiece. Then he grated, "Very clever, Kenlan. What part of the hospital?"

Rolf glanced at the nurse. Her face had gone white, and she was backing away from him. "Where's an empty room?" he snapped.

"Th-three oh seven," she breathed weakly.

"Three oh seven, Luling. How soon can you get here?"

"Three to five minutes. Let me warn you, Kenlan—"

"Yeah! We'll be waiting on the roof. If you bring more than one squad of guards, you'll have a fight on your hands, and you couldn't win it without hitting at us from the air. I don't think people would like having the hospital strafed. If you don't get tricky, things will be peaceable. Keep aircraft away from the building. We can burn a copter down."

HE HUNG up without waiting for an answer, then dialed the editor of the *Martian Messenger*. A plump-throated, sleepy voice grunted a disgusted "Go ahead".

"Listen quickly, Menshrie! This is Rolf Kenlan. Does the name mean anything to you? If not, you should remember my father, Jason. You gave him quite a build-up."

The phone sputtered confusion as Menshrie came fully awake. "Kenlan! What—"

"Don't ask questions. Just turn on your amplifier, and call somebody from your office staff to take notes. You're going to hear a conference involving myself and the Commissioners. Will you print it straight?"

Menshrie stuttered for a moment. "Why, yes—if the Commission okays it. You don't just print anything—"

"Fool! It's going to be broadcast. Why should they disallow it? And if the people hear one thing, and then you run something else, they'll see you for the toady you really are. The people still believe the fiction that they're running things around here, and the fiction might soon be a fact. They can run you out. The Commission can't get you for printing what thousands of people have already heard!"

"I'll have to check with the Commission. Why are you calling, anyway?"

"You can't. They're on their way here now. That's why I'm calling."

Menshrie hesitated. "If I violate security, I get canned. Then they put a man in who'll respect security. But if an event is observed by enough witnesses, the Commission naturally can't hold it back. I'll get a steno on it, and see what develops. Don't get me wrong, Kenlan. I'm no bootlicker, but they've got me where—"

Rolf dropped the phone in its cradle and hurried toward Room 307. It proved to be a small office, windowless, but with a door in the outer wall. He swung open the door and found a balcony overlooking the grounds. A good place to leave the set. While it was warming up, a car's headlights swung around the corner and came to a halt in front of the building. Five men climbed out into the street and stood beyond the car with drawn weapons. They stared up toward the rooftop.

WORKING in darkness, Rolf adjusted the set, wedged the miccord under the door, and retreated into the room. He found gummed tape on the desk and fastened the microphone button down. It was impossible to conceal the pickup effectively without diminishing its sensitivity, even though the instrument had a conference-dictate adjustment. He switched it to conference, left it in the corner, and dropped a sheet of crumpled paper over it. Then he raced out into the corridor and bounded up the stairs to the roof, where Krasala and the others stood watching the party in the street.

The sky was growing gray with dawn. Another car had drawn up behind the first, and a dozen men were holding a pow-wow behind the vehicles.

"Leave two men on the roof," he said quietly. "Have the others bring those three sacks and come with me."

She nodded and relayed the order. Rolf stepped to the rail and cupped his hands about his mouth. "Hey, Rathwich!" he shouted. "Are you down there?"

Colonel Luling's voice called back: "How many men have you got with you, Kenlan?"

"Come up and find out! Room 307."

Without further discussion he led the batsmen downstairs, after brief instructions to the roof guards. A morning-shift nurse squeaked and bolted for the elevator at the sight of the bearded and furry-legged squad trooping grimly down the corridor. He stationed a guard at either end of the hall, and the rest around the entrance of 307.

When the erect and long-limbed Colonel Luling appeared with drawn revolver beyond the doorway, Rolf was sitting at the desk with the contents of the bags arranged neatly before him. Krasala stood quietly in the corner with the bagpipe cradled easily in her arms. She lifted it suspiciously as the graying colonel strode into the room. He glanced around, then nodded. "I'll bring up eight men to match yours, Kenlan."

"Agreed. Where are the Commissioners? How many came?"

"Rathwich and Poele. Let me warn you against treachery. You won't get out of here alive, if you try it."

"Same rules apply in reverse. Get the wafflebottoms up here."

The colonel nodded curtly and departed. Rolf left the chair and darted to the microphone. "People of Marsville," he said quietly. "You are about to hear Commissioners Rathwich and Poele's reaction to a suggestion for a sensible end to the quarantine that binds us to the walls of the city. Let us listen carefully, reminding ourselves that the Commission's duty is to represent our interests as well as those of Earth—"

HE BROKE it off and returned to the chair as he heard footsteps in the corridor. Luling reappeared, flanked by two guards with sub-machine guns. Rathwich and Poele followed cautiously, while two more guards brought up the rear.

"I suggest we leave our regiments in the hallway," Rolf barked. "One guard on each side should be enough."

Luling nodded curtly and stepped aside to let the Commissioners enter. The plump and panting Poele glanced up to protest, but Rathwich, his hard face twisted into a faint smile, strode into the room and dragged a chair toward the desk. He appeared prepared to enjoy himself as he thrust out a formal hand toward Rolf and nodded wordlessly.

Rolf touched the hand briefly, while Poele sat aside and looked frightened. Luling closed the door and leaned back against it, his arms folded across his chest, his eyes on Krasala, and a revolver in his hand for safety's sake.

"It's your show for the time being Kenlan," grunted Rathwich. "Speak up. What do you want."

"What every native citizen of Marsville wants, Rathwich—freedom to use the resources of this planet for some purpose other than the present one, which is insuring our own perpetual servitude. Freedom to get out of the city and make homes where there's room to move. You and your predecessors have kept the city choked down with the myth that a man can't live out there without all the gadgets you promise to produce tomorrow. What you're really trying to do is insure that Mars will jump from nothing into the middle of complex civilization of specialists, without any intermediate stage."

Rathwich's smile tightened. "Go on. Make your suggestions."

"Fine! Do you see these articles here on the desk? Instruments, machine parts—tell me, Rathwich—did these come from the city's factories?"

The Commissioner glanced over them briefly and shook his head. "No, of course not."

"From Earth, then?"

"Obviously not."

"Then suppose you explain their existence, if the picture your people paint of the planet is a true one."

Rathwich shrugged without interest. "You're going to say, as your father did, that they're relics of an ancient civilization, eh? A pre-androon culture."

"Exactly! You admit that my father told you about it? That you withheld it from the people?"

"I'm not here to admit or deny anything, Kenlan. Get on with what you have to say."

FOR THE benefit of the microphone, Rolf reviewed briefly the events since his flight from the city, inventing a few extras to cover the existence of the imaginary army. He covered the murals in the cavern's

council hall, stressing the significance of the Bolsewi spaceship with Earth in the background.

"The androons are human," he insisted. "And that's why you killed my father's wife, isn't it? She was with child."

"How did you know—"

The Commissioner caught himself, and jerked his head as if to glance at the colonel; then he replaced his faint smile and watched Rolf coolly. He was playing for time. Rolf saw Luling staring uneasily at the back of Rathwich's head. Suddenly he glanced absently at the pistol in his hand, and returned it to his holster. He leaned back to resume his thoughtful gaze at the Commissioner.

"Naturally, you've been appealing to 'race'," Rolf continued. "You've used it as an excuse to keep the androons away from the city, and to keep our people away from the hills. You used it as an excuse to hang Dad. How long have you known about the Bolsewi civilization?"

Rathwich, who kept glancing at his watch, was beginning to look bored. "Ever since I came to Mars and read the reports of my predecessors," he admitted.

Rolf nodded. "And you kept it from the people for just one reason: power." He patted the breach of the bagpipe that lay across the desk. "Power in small units. Tell me, Rathwich, what would happen if every human being could have—for instance—an unlimited supply of power in his own back yard, his own reactor, his own weapons? What would happen if every man could be self-sufficient?"

"Chaos."

"Freedom," Rolf corrected. "Recall your history? On the Great Plains they used to call a six-gun an equalizer, because it made the small man the equal of the large. Rathwich, small power-packs like these are going to be the equalizers of Mars, because they can make men independent of the city's industry. A man can take his family and go out on the plains to live as a city unto himself. Bat-ranching, raising quois, trading with the androons—all possibilities.

"With the artifacts of the Bolsewi civilization, and a knowledge of how to produce more of them, the people can have Mars now. There's no need to wait for the modern equivalents of barbed wire, windmills, and six-guns. The androons have them, and don't know how to use them. With some persuasion, they'll trade them for simpler tools—knives, rope, bat-saddles, small-calibre firearms, clothing—things they need that our industry can readily produce."

"That's enough, Kenlan," the Commissioner grunted. "I've been watching you carefully. Your two hours is up, and you've given no indication that you realized it. Evidently you're either in no position to make good a threat against the hostages, or else your savages have already slaughtered them. Our aircraft are at this moment going out to the hills. I imagine the men have already controlled the quois fires enough so that they can take a ground rescue party through. Your show's finished."

AN URGENT fist began beating at the door in the hall. Luling started away. Rathwich growled, "See about it."

The door burst open and a pair of officers came in panting. "With your permission, Commissioner," said one, as they began dragging furniture aside, and searching shelves and drawers.

Rolf heard a metallic *krrrk* as Krasala cranked the bagpipe. "Hold it, kid," he told her.

"If you're looking for the transmitter, it's out on the balcony."

"What is all this?" barked Rathwich as the searchers bounded toward the outer door.

"The telecircuits, sir. You've been picked up. Half the town's been listening. We've got some men cutting the door down to get into the station. Bolted from the inside."

Rathwich lost his color as the men brought in the transmitter and ripped the tape off the mic-button. "Why wasn't this discovered sooner?" he bellowed.

The officer flushed. "Well, we heard it, sir, but we thought it must be an authorized broadcast. Finally we called administration, and—"

"Fool! Get the station back on the program. Squelch the newspaper before it prints anything. Call every guard on duty. Round up the administration staff for a meeting. Get moving!"

"One thing, sir. There's a big crowd outside. Around the hospital."

"What? How did they know we were here?"

"The hospital staff, sir. They spread the word."

"Are they disorderly?"

"Uh ...no sir. It's not a mob. They're just curious. Bewildered."

"Disperse them. Have a helicopter pick us up."

"I've instructed my men to fire on any copters that come in range," Rolf interrupted.

"Then you'll rescind the order," Rathwich snapped. "You're in a hornet's nest here, Kenlan. You can't get out. We can sit here all day, if necessary. You have a stalemate here, of course. But you can't get out of the hospital. You might as well submit."

"Eventually, I will," Rolf agreed. "At the moment, however, we're going to sit and wait. Krasala, if either of those men starts to leave, burn his legs off."

A hand darted for a holster. Rolf swung the bagpipe around and pressed the stud. He missed the man's hand, but the bright violet flare blossomed on the concrete wall a few inches away. The officer shrieked and began beating the flames out of his clothing. Poele slumped to the floor with a faint moan. Rathwich sat calmly but grew pale.

"Anybody else?"

No one spoke or moved as the orb filled the room with blinding light. When it died, all eyes watched the red spot flake away as powdered silica and fused slag.

Then Luling spoke: "May I make a suggestion, Commissioner?"

"Go ahead."

LULING glanced at Rolf and the girl. His hard cool face was impassive. "I suggest that we escort these people safely out of the city and allow them freedom, provided they agree to go beyond the mountains and stay there."

Rathwich shook his head. "We couldn't trust them to stay. I make no bargains with them. They're criminals, and they'll be properly punished." "

Luling frowned. "I'm afraid there'd be some strong opposition to hanging them, sir. Captain Jason Kenlan was charged on several counts—miscegenation, desertion, quarantine-violation. You can charge this young man with treason and quarantine-violation, but you can't make the treason stick unless you can show that he meant to forcibly overthrow the administration. And the people won't stand for another secret trial, since they've heard some of his story. I can't see how you can try him without making a public investigation of his claims. It's true he broke quarantine, but unless the necessity of quarantine can be reestablished, a trial will cause a lot of trouble. Unless, of course, the hostages have been harmed."

"There are no hostages," Rolf interrupted. "The men sealed themselves in the cavern. The androons aren't adequately armed. If there's been any bloodshed, it's been the fault of the guards who entered the caves. My only support I have here with me."

Rathwich showed irritation and surprise, but maintained a calm attitude. Luling smiled faintly, but erased it when the Commissioner turned.

"When is the next Earth-ship due? We might send them to Earth for trial."

"Not for nearly a year, sir. Earth's on the other side of Sol. I'm afraid it's too long to wait. I suggest you get these people away from here as quickly as possible."

Rathwich drummed his fingers on the arm of his chair and stared at Rolf distastefully. "Will you agree to permanent exile, with the understanding that you'll be shot on sight if you try to return?"

Rolf hesitated. His real mission had been accomplished. The people had heard the truth, and the Commission could probably no longer maintain its enforced containment of the people in the city. The outflowing would be slow, a matter of years, but it would be certain. At first a few misfits and petty criminals would steal away at night, to rob the caverns of the androons, to escape justice, or just to get away from a frustrating existence. There would be trouble with the androon tribes, but new nations always had growing pains, and they were normally built by misfits.

Rolf himself was a misfit, and so was his father before him. Jason had always chafed in the fetters of the tightly integrated little society, and had tagged around after first one prophet and then another who called for immediate agrarian outgrowth.

He glanced at Krasala, who stood alertly eyeing the Earthmen and thoughtfully fingering the stud of the bagpipe. Her batskin clothing contrasted sharply with the impeccable uniforms of the others. And the warm shin-fur that her race had developed since its exodus from Earth marked her as different, as a distinct branch of humanity. Sweaters and woolen slacks were standard feminine apparel in Marsville, and wearing them she could pass for an Earthwoman, despite the ruddy-rosy skin which always reminded him of a painful sunburn. But why should she ape Earthwomen?

In the ancient days, pioneers had often taken Indian women to wife, but they seldom brought them back to Boston or New Amsterdam.

THE FUTURE of Mars lay out on the plains and in the mountains, where men could go out to carve their own private empires. A nation would grow the way nations always grew— through strife, violence, and explosive expansion. When, after several hundred years, the frontiers were gone, the nation would begin to integrate. It would be an independent nation, not a chattel of Earth. Marsville would still be an important center, no doubt—for any immediate outgrowth would begin with a timid trickle, and its industry would remain important. But Rolf had no desire to remain within it.

"Well, Kenlan?"

"I'm willing, Rathwich, provided we can work out a scheme to insure that we won't be shot as soon as we're beyond the eyes and ears of the city."

"If you'll permit me, sir," said Luling. "I think I can arrange a plan of escort that will meet Kenlan's approval."

Rathwich looked around so that Rolf could not see his face. "All right, colonel," he said incisively. "I'll let you handle the details. I think you know what's expected of you."

There was another knock at the door. Luling opened it to admit a courier. The man saluted and spoke hurriedly.

"The other Commissioners request your presence if it's possible, sir. There's a lot of excitement, and people off work. The newspapers—"

"Any rebelliousness?" Rathwich growled.

"No, sir, not exactly. It's just excitement. People along the walls watching the guards come back from the hills. And the report on Commissioner Peterson—"

"What report?"

"Well, the way it's told sir... there was some fighting in the caverns. There wasn't any light in the tunnel, and the androons infiltrated our men. Firearms weren't good in the darkness, with everybody all mixed up that way. Commissioner Peterson kept yelling for help, and somebody clubbed him. He's dead, sir. Commissioner White's gone, too. Disappeared. Major Mulvern took charge, once they got the door off the cave. He led a party back into the caverns to look for White, but they couldn't find him. The androons pretended ignorance. White had a talk with their chief priest, and now Mulvern's behaving peculiarly. He ordered everyone back to the city."

"Where are they now?"

"They're about halfway across the plain, but they've cut around by the cemetery."

"Cemetery!"

"Yes sir. There're some androons with them. The androons are exhuming the body of the woman Captain Kenlan married. They want to take her back for tribal burial. Mulvern's men are standing guard. The major hints that White might be released if we let them have the body."

"Then let them!" Rathwich roared. "But get Mulvern's crew away before they see it! The news'll be all over town that the woman was pregnant!"

"Yes, sir!"

Luling looked at the ceiling and quoted from the bio-laws: "The generation of normal offspring by the union of a couple, one of whose partners is positively identified as human, shall constitute a criterion of humanity for the other partner, unless it be shown that the second partner is biologically inadmissible under Sections One and—"

"That's enough, Colonel!" Rathwich warned.

"Sections One and Three," Rolf continued with a wry smile, "which state minimum requirements for intelligence, physical appearance, and social adaptability—all of which the androons can pass."

"Get Mulvern's men away."

"I'm afraid it's too late, sir," said the courier. "They started digging some time ago."

RATHWICH ran his hands nervously through his hair and moistened his lips. "Colonel, get these people out of here. Keep them away from the crowds. Get them out of the city. And Kenlan, stay away—far away." He looked at the courier. "Drive me to the Administration Building at once."

When the officials had departed, Luling nodded at Rolf. "Are you ready?" he asked, smiling.

Rolf watched him suspiciously. "If I were in your boots, I might take the unwanted group out to an open plain, let them go, then send a flight out to strafe them."

"That," said Luling, "is exactly what the Commissioner expects me to do. Let's go to the roof so you can rescind the order against copters." He lifted the telephone, listened, then replaced it. "No operator on the building switchboard, I guess."

Rolf grinned and held up a pair of cut wires from beneath the desk. "I clipped them while we were talking. That's why they sent messengers."

When they moved out into the corridor, nervous orderlies and nurses were hurrying about their duties, giving a wide berth to the bearded tribesmen who stood silently against the wall, eyeing their surroundings with bewildered awe. Rolf beckoned them toward the stairway, while Luling stopped at the desk to call for a group of helicopters.

"There'll be a transport plane waiting for us at the port," he said to Rolf as they climbed to the roof and stepped out into the morning sunlight. "We'll take you as far as you want to go."

"I'm still waiting for some arrangement whereby we can be certain that we won't be hunted down afterwards," Rolf grunted.

"You'll get it. Just be patient."

The Commissioner's car was nosing its way through the dense crowd in front of the hospital. The crowd was silent, moody. Occasionally someone shouted, "When're you going to tear the walls down, Commish?" and, "Since when is Mars a jail?" But no rocks were thrown, nor was the car molested. The crowd was sullen, waiting for answers.

Rolf watched it for a time, until someone shouted, "There's Kenlan, on the roof." The crowd turned to look, silently. He grinned and waved and turned away. The crowd could possibly become a mob, if they didn't get the right answers.

"I don't think you'll be exiled for long, Kenlan," Luling murmured as the copters appeared. "The Commission can be impeached by a nine-tenths majority on a popular referendum. Earth stuck the provision into the charter to make it look good, assuming you can't get a nine-tenths majority on anything. But I think it can be done."

"I don't plan on coming back anyway, until..."

"Yes?"

He grinned at Krasala. "Prefer a j. p. or an androon priest?"

She wrinkled her forehead and looked bewildered.

"I guess we won't be coming back," he said to Luling.

"Confidentially, I won't either," murmured Luling.

HALF AN HOUR later, a twin-engine jet transport was winging westward over the gray-capped peaks. Four former batsmen had elected to accompany their leader, while the others chose to return to their own tribe. The Martian tundra lay red, gray, and dusty green behind them, while beyond the mountains lay hilly country, with quioie growing in the sheltered valleys and bats swooping low over the landscape. The colonel left the ship on autopilot and stepped back to sit with the passengers.

"You really intend to come with us?" Rolf asked.

Luling nodded. "Frontier fever, maybe. As a kid, I used to sit on the walls and look out at the mountains and wish. I never stopped wishing. Lots of people feel that way, Kenlan, but there's been no

precedent—until your father started it. Now there won't be any stopping it. When the transport doesn't come back, they'll send out searchers. Some of the searchers won't come back. By that time, the Commission will have to either get out, be impeached, or follow the popular will."

He hesitated, glancing toward the cargo compartment. "There are bailout kits with the parachutes—rifles, food, and so forth. You pick your spot, and I'll circle while you heave it out. Then I'll set the autopilot to hold a westerly course, and we'll all bail out.

They'll find the ship a hundred miles or so away; not much chance of our being caught."

"I don't agree," Rolf murmured absently as he stared out at the terrain.

"Eh? You think we'll be caught? By whom?"

"Oh—prospectors, bat-trappers, traders, fugitives...in a few years."

Lulipg chuckled and went back to the cockpit. Rolf watched Krasala carefully preening her shins in a swept-back hairdo, lending the impression of winged feet. He had brought a jar of depilatory but, upon second thought, he decided to leave it aboard ship. Parachute silk should make fine hair-ribbons.

THE END

For David, and all those who sailed against the Apocalypse

The estate of Walter M. Miller, Jr., would like to thank Terry Bisson for his editorial contribution to *Saint Leibowitz and the Wild Horse Woman*.

## NOTE

The fictional Rule of Saint Leibowitz is an adaptation of the Benedictine Rule to life in the Southwest Desert after the collapse of the Great Civilization, but it is true that the fictional monks of Leibowitz Abbey do not always conform to it as perfectly as did the monks of St. Benedict.

Permission was kindly given by the Liturgical Press, Collegeville Minnesota, to quote from the Leonard J. Doyle translation of *St. Benedict's Rule for Monasteries*, Copyright 1948, by The Order of Saint Benedict.

## CHAPTER 1

"Listen, my son, to your master's precepts, and incline the ear of your heart."—The First Sentence of

### *The Rule.*

"Whoever you are, therefore, who are hastening to the heavenly homeland, fulfill with the help of Christ this minimum Rule which we have written for beginners; and then at length under God's protection, you will attain to the loftier heights of doctrine and virtue which we have mentioned above."—The Last Sentence of *The Rule*.

Between these two lines, written about 529 A.D. in a dark age, is Saint Benedict's      homely prescription for a way of monastic life that has prevailed even in the shadow of the *Magna Civitas*.

HE SAT SHIVERING IN THE GLOOMY CORRIDOR outside the meeting hall and waited for the tribunal to finish deciding his punishment, Brother Blacktooth St. George, A.O.L., remembered the time his boss uncle had taken him to see the Wild Horse Woman at a Plains Nomad tribal ceremony, and how Deacon ("Half-Breed") Brownpony, who was on a diplomatic mission to the Plains at the time, had tried to exorcise her priests with holy water and drive her spirit from the council lodge. There had been a riot, and an assault on the person of the young deacon, not yet a cardinal, whose shaman ("witch doctor") attackers had been summarily executed by the newly baptized Nomad shaf. Blacktooth was seven at the time, and had not seen the Woman then, but his boss uncle insisted that she had been there in the smoke of the fire until the trouble began. He believed his boss uncle, as he might not have believed his father. Later, before he ran away from home, he had seen her twice, once by day riding bareback and naked along the crest of a ridge, and once by dim firelight when she prowled as the Night Hag through the darkness outside the settlement enclosure. He definitely remembered seeing her. Now his ties to Christianity de-manded that he remember them as childish hallucinations. One of the less plausible accusations against him was that he had confused her with the Mother of God.

The tribunal was taking its time. There was no clock in the hall, but at least an hour had passed since Blacktooth had testified in his own defense and been excused from the meeting hall, which was really the abbey's refectory. He tried not to speculate about the cause of the delay, or the meaning of the fact that pure chance had cast that dea-con, now Cardinal ("Red Deacon") Brownpony, in the role of *amicus curiae* at the hearing. The cardinal had come to the monastery from the Holy See only a week ago, and it was well known, but most cer-tainly not announced, that his purpose in being here was to discuss with the Abbot Cardinal Jarad the papal election (the third in four years) which would be called soon after the present Pope finished dying.

Blacktooth could not decide whether the eminent Half-Breed's participation in the trial was favorable or unfavorable to his cause. As he remembered the night of the exorcism, he also remembered that in those days Brownpony had not been friendly to the Plains Nomads, either the wild or the tamed. The cardinal had been raised by sisters in the territory conquered by Texark. It had been told to him that his mother, a Nomad, had been raped by a Texark cavalryman, then had abandoned her baby to the sisters. But in recent years, the cardinal had learned to speak the Nomad tongue, and spent much time and effort forging an alliance between the wild people of the Plains and the exiled papacy in its Rocky Mountain refuge at Valana. Blacktooth himself was of pure Nomad blood, although his late parents had been displaced to the farming settlements. His mother owned no mares, and thus he had no status whatever among the wild tribes. His ethnic background had been no handicap during his life as a monk; the brethren were tolerant to a fault, except in matters of faith. But in the so-called civilized world outside, being a Nomad would be hazardous unless he lived on the Plains.

He heard raised voices from the refectory, but could not make out words. One way or another, it was all over for him but the final break, and that was proving to be the hardest thing of all.

A few paces from the bench where he was supposed to wait was a shallow alcove in the corridor wall, and within it stood a statue of Saint Leibowitz. Brother Blacktooth left the bench and went there to

pray, thus disobeying the last command given to him: Sit there, stay there. Breaking his vow of obedience was getting to be a habit. Even a dog will sit and stay, his devil reminded him.

*Sancte Isaac Eduarde, ora pro me!*

The kneeling rail was too close to the image for him to look up at the saint's face, so he prayed to the saint's bare feet, which stood on a pile of fagots. Anyway, by now he knew the wrinkled old countenance by heart.

He remembered when he first came to the abbey, the abbot of that time, Dom Gido Graneden, had already ordered the statue removed from his office, its traditional place of repose, to the corridor here where it now stood. Graneden's predecessor had committed the sacrilege of having the fine old wood carving painted in "living color," and Graneden, who loved it in its original condition, could neither bear to look at it, with its painted simper and impossibly upturned irises, nor put up with the smell and noise of having its restoration done in situ. Blacktooth had never seen the full paint job, for upon his arrival the head and shoulders of a man of wood emerged from what appeared to be the chest of a plaster saint. A small area at a time was being treated with a phosphate compound concocted by Brothers Pharmacist and Janitor. As soon as the paint began to blister, they painstakingly scraped it clean, trying to avoid any abrasion of the wood. The process was very slow, and he had lived a year at the abbey before the restoration was complete; by that time, a filing cabinet occupied its space in the abbot's office, so here it still stood.

The restoration was less than complete even now, at least in the sight of those who remembered its original condition. Occasionally Brother Carpenter stopped to frown disapprovingly at it, then to work on the creases around the eyes with a dental pick, or caress between the fingers with fine sandpaper. He worried about what the paint remover might have done to the wood, so he frequently rubbed it with oil and lovingly polished it. The carving had been done nearly six centuries ago by a sculptor named Fingo, to whom the Beatus Leibowitz — not yet canonized — had appeared in a vision. A close resemblance between the statue and a death mask which Fingo had never seen was used as an argument for his canonization, because it seemed to confirm the reality of Fingo's vision.

Saint Leibowitz was Blacktooth's favorite saint, after the Holy Virgin, but now it was time to go. He crossed himself, arose, and returned doglike to the bench to "sit and stay." No one had seen him at prayer except his devil, who called him a hypocrite.

Blacktooth remembered clearly the first time he had asked to be released from his final vows as a monk of the Order of Saint Leibowitz. Many things had happened that year. It was the year the news came that his mother had died. It was also the year that the Abbot Jarad had received the red hat from the Pope in Valana, and the year Filpeo Harq had been crowned as the seventh Hannegan of Texark by his uncle Urion, the archbishop of that imperial city. More to the point, perhaps, it was the third year of Blacktooth's work (assigned to him by Dom Jarad himself) of translating all seven volumes of the Venerable Boedullus's *Liber Originum*, that scholarly but highly speculative attempt to reconstruct from the evidence of later events a plausible history of the darkest of all centuries, the twenty-first—of translating it from the old monastic author's quaint Neo-Latin into the most improbable of languages, Brother Blacktooth's own native tongue, the Grasshopper dialect of Plains Nomadic, for which not even a suitable phonetic alphabet existed prior to the conquests (3174 and 3175 A.D.) of Hannegan II in what had once been called Texas.

Several times Blacktooth had asked to be relieved of this task before he asked what he really dreaded, to be released from his vows, but Dom Jarad found his attitude peculiarly stubborn, obtuse, and ungrateful. The abbot had conceived of a small Nomadic library he wanted created as a donation of high culture from the monastic Memorabilia of Christian civilization to the benighted tribes still wandering the northern Plains, migrant herdsmen who would one day be persuaded into literacy by formerly edible missionaries, already busy among them and no longer considered edible under the Treaty of the Sacred Mare between the hordes and the adjacent agrarian states. As the literacy rate among the free tribes of the Grasshopper and Wild-dog Hordes who ranged with their long-haired cattle north of the Nady Ann River was still less than five percent, the usefulness of such a library was a thing only dimly foreseen, even by the Lord Abbot, until Brother Blacktooth, in his initial eagerness to please his master before the work

began, explained to Dom Jarad that the three major dialects of Nomadic differed less to the reader than to the listener, and that by means of a hybrid orthography and the avoidance of special tribal idioms, the translation could be made understandable even to a literate ex-Nomad subject of Hannegan VI in the South, where the Jackrabbit dialect was still spoken in the shanties, the fields, and the stables, while the Ol'zark tongue of the ruling class was spoken in the mansions, the law courts, and the police barracks. There the literacy rate for the malnourished new generation of the conquered had risen to one in four, and when Dom Jarad imagined such moppets receiving enlightenment from the likes of the great Boedullus and other notables of the Order, there was no talking him out of the project.

That the project was vain and futile was an opinion Brother Blacktooth dared not express, so for three years he protested the inadequacy of the talent he was applying to the task, and he assailed the intellectual poverty of his own work. He supposed the abbot had no way to test this claim, for, besides himself, only Brothers Wren St. Mary and Singing Cow St. Martha, his old companions, understood Nomadic well enough to read it, and he knew Dom Jarad would not ask them to. But Jarad had him make an extra copy of one chapter of the work, and he sent it to a friend in Valana, a member of the Sacred College who happened to speak excellent Jackrabbit. The friend was delighted, and he expressed a wish to read all seven volumes when the work was done. The friend was none other than the Red Deacon, Cardinal Brownpony. The abbot called the translator to his office and quoted from this letter of praise.

"And Cardinal Deacon Brownpony has been personally involved in the conversion of several prominent Nomad families to Christianity. And so, you see—" He paused as the translator began to cry. "Blacktooth, my son, I just don't understand. You're an educated man now, a scholar. Of course that's incidental to your vocation as a monk, but I didn't know you cared so little for what you've learned here."

Blacktooth dried his eyes on the sleeve of his robe and tried to protest his gratitude, but Dom Jarad went on.

"Remember what you were when you came here, son. All three of you, going on fifteen and you couldn't speak a civilized word. You couldn't write your name. You never heard of God, although you seemed to know enough about goblins and night hags. You thought the edge of the world was just south of here, didn't you?"

"Yes, Domne."

"All right, now think of the hundreds, think of the thousands, of wild young fellows just like you were then. Your relatives, your friends. Now, I want to know: what could possibly be more fulfilling to you, more satisfying, than to pass along to your people some of the religion, the civilization, the culture, that you've found for yourself here at San Leibowitz Abbey?"

"Perhaps Father Abbot forgets," said the monk, who had become a bony, sad-faced fellow of thirty years, and whose ferocious ancestry was in no way suggested by his mild appearance and self-conscious ways. "I was not born free, or wild. My parents were not born free or wild. My family hasn't owned horses since the time of my great-grandmothers. We spoke Nomadic, but we were farm workers, ex-Nomads. Real Nomads would call us grass-eaters and spit on us."

"That's not the story you told when you came here!" Jarad said accusingly. "Abbot Graneden thought you were wild Nomads."

Blacktooth lowered his gaze. Dom Graneden would have sent them home if he had known.

"So real Nomads would spit on you, would they?" Dom Jarad resumed thoughtfully. "Is that the reason? You'd rather not cast our pearls before such swine?"

Brother Blacktooth opened his mouth and closed it. He turned red, stiffened, crossed his arms, crossed his legs, uncrossed them rather deliberately, closed his eyes, began to frown, took a deep breath, and began to growl through his teeth. "Not pearls—"

Abbot Jarad cut him off to prevent an explosion. "You're pessimistic about the resettled tribes. You think they have no future anyway. Well, I think they do, and the work is going to be done, and you're the only one to do it. Remember obedience? Forget the purpose *of* the work, if you can't believe in that, and find your purpose *in* the work. You know the saying: 'Work is prayer.' Think of Saint Leibowitz, think of Saint Benedict. Think of your calling."

Blacktooth regained control of himself. "Yes, my calling," he said bitterly. "I once thought I was called to the work of prayer—contemplative prayer. Or so I was told, Father Abbot."

"Well, who told you contemplative monks don't work, eh?"

"Nobody. I didn't say—"

"Then you must think scholarship is the wrong kind of work for a contemplative, is that it? You think that scrubbing stone floors or shoveling shit from the privies would put you closer to God than translating the Venerable Boedullus? Listen, my son, if scholarship is incompatible with the contemplative way, what was the life of Saint Leibowitz all about? What have we been doing in the Southwest desert for twelve and a half centuries? What of the monks who have risen to sanctity in the very scriptorium where you're working now?"

"But it's not the same."

Blacktooth gave up. He was in the abbot's trap, and to get out of the abbot's trap, he would have to force Jarad to acknowledge a distinction he knew Jarad was deliberately avoiding. There was a kind of "scholarship" which had come to be a form of contemplative religious practice peculiar to the Order, but it was not the head-scratching work of translating the venerable historians. Jarad, he knew, was referring to the original labor, still practiced as ritual, of preserving the Leibowitzian Memorabilia, the fragmentary and rarely comprehensible records of the *Magna Civitas*, the Great Civilization, records saved from the bonfires of the Simplification by the earliest followers of Isaac Edward Leibowitz, Blacktooth's favorite saint after the Virgin. Leibowitz's later followers, children of a time of darkness, had taken up the selfless and relatively mindless task of copying and recopying, memorizing and even chanting in choir, these mysterious records. Such tedious work demanded a total and unthinking attention, lest the imagination add something which would make meaningful to the copyist a meaningless jungle of lines in a twentieth-century diagram of a lost idea. It demanded an immersion of the self in the work which was the prayer. When the man and the prayer were entirely merged, a sound, or a word, or the ringing of the monastery bell, might cause the man to look up in astonishment from the copy table to find that the everyday world around him was mysteriously transformed, and aglow with the divine immanence. Perhaps thousands of weary copyists had tiptoed into paradise through that illuminated sheepskin gate, but such work was not at all like the brain-racking business of bringing Boedullus to the Nomads. But Blacktooth decided not to argue.

"I want to go back to the world, Domne," he announced firmly.

Dead silence was his answer. The abbot's eyes became glittering slits. Blacktooth blinked and looked aside. A buzzing insect flew through the open window, circled the room twice, and alighted on Jarad's neck; it crawled there briefly, took wing again, and flew buzzing out by the same window.

Through the closed door of the adjoining room, the faint voice of a novice or postulant reciting his assigned Memorabilium penetrated the silence without really diminishing it:

"—and the curl of the magnetic field intensity vector equals the time-rate-of-change of the electric flux density vector, added to four pi times the current density vector. But the third law states the divergence of the electric flux density vector to be—" The voice was soft, almost feminine, and fast as a monk reciting rosary, his mind pondering one of the Mysteries. The voice was familiar, but Blacktooth could not quite place its owner.

Dom Jarad sighed at last and spoke. "No, Brother Blacktooth, you won't disown your vows. You're thirty years old, but outside these walls, what are you still? A fourteen-year-old runaway with nowhere to go. Pfft! The good simpletons of the world would pluck you like a chicken. Your parents are dead, yes? And the land they tilled was not their own, yes?"

"How can I be released, Father Abbot?"

"Stubborn, stubborn. What have you got against Boedullus?"

"Well, for one thing, he's contemptuous of the very Nomads—" Blacktooth stopped; he was in another trap. He had nothing against Boedullus. He liked Boedullus. For a dark-age saint, Boedullus was rational, inquisitive, inventive—and intolerant. It was the intolerance of the civilized for the barbarian, of the plantation owner for the migrant driver of herds, of Cain, indeed, for Abel. It was the same intolerance as Jarad's. But Boedullus's mild contempt for the Nomads was beside the point. Blacktooth

hated the whole project. But there across the desk from him sat the project's originator, giving him pained looks. Dom Jarad was as always Blacktooth's monastic superior, but now he was more than that. Besides the abbot's ring, now, he wore the red skullcap. As the Most Eminent Lord Jarad Cardinal Kendemin, a prince of the Church, he might as well be titled "Winner of All Arguments."

"Is there some way I can get out, m'Lord," he asked again.

Jarad winced. "No! Take three weeks off to clear your head, if you want to. But don't ask that again. Don't try to blackmail me with hints like that."

"No hints, no blackmail."

"Oh, no? If I don't reassign you, you'll go over the wall, right?"

"I didn't say that."

"Good! Then listen, my son. By your vow of obedience, you sacrifice your personal will. You promised to obey, and not just when you feel like obeying. Your work is a cross to you, is it? Then thank God and carry it. Offer it up, offer it up!"

Blacktooth sagged, looked at the floor, and slowly shook his head. Dom Jarad sensed victory and went on.

"Now, I don't want to hear anything about this again, not before you've finished all seven volumes." He stood up. Blacktooth stood up. The abbot shooed the copyist out of his office then, laughing as if it had been all in fun.

Brother Blacktooth passed Brother Singing Cow in the corridor on his way to Vespers. The rule of silence was in force, and neither spoke. Singing Cow grinned. Blacktooth scowled. Both of his fellow runaways from the wheat plantations knew why he had gone to see Dom Jarad, and both lacked sympathy. Both thought his job a cushy one. Singing Cow worked in the new printing shop. Wren worked in the kitchen as Brother Second Cook.

He saw Wren that night in the refectory. The second cook stood on the serving line, apportioning mush to the platters with a large wooden spoon. Each man in passing murmured, "*Deo gratias*," and Wren nodded back as if to say, "You're welcome."

As Blacktooth approached, Wren already held a huge gob of mush on the spoon. Blacktooth held his platter to his chest and signaled too *much* with his fingers, but Wren turned to speak "necessary" instructions to a busboy. When Blacktooth relaxed his platter, Wren piled it on.

"Half back!" Blacktooth whispered, breaking silence. "Headache!" Wren raised his forefinger to his lips, shook his head, pointed to a sign—SANITARY RULES—behind the serving line, then pointed toward the sign at the exit, where a garbage monitor checked for waste.

Blacktooth laid the platter on the serving kettle. With his right hand he scooped up the heap of mush, with his left hand he seized the front of Wren's robe. He pushed the mush in Wren's face and massaged it until Wren bit his thumb.

The prior brought word directly to Blacktooth's cell: Dom Jarad had relieved him of his job in the scriptorium for three weeks, in order that he might pray the stone-floor-scrubbing prayer for the cooks in the kitchen and dining area. And so for twenty-one days Blacktooth endured Wren's smiling forgiveness while knee-skating on soapy stones. More than a year passed before he again raised the standing question of his work, his vocation, and his vows.

During this year, Blacktooth felt that the rest of the community had begun to watch him rather closely, and he sensed a change. Whether the change was really in the attitudes of others, or entirely within himself, its effect was loneliness. Occasionally he felt estranged. In choir, he choked on the words "One bread and one body, though many, are we." His unity with the congregation seemed no longer taken for granted. He had spoken the words "I want out," perhaps before he really meant them; but not only had he uttered such a thing to the abbot, he had allowed his friends to learn of the incident. Among the professed, among those who by solemn vows had committed themselves irrevocably to God and the Way of the Order, a monk with regrets was an anomaly, a source of uneasiness, a portent, a thing in need of pity. Some avoided him. Some looked at him strangely. Others were all too kind.

He found new friends among the younger members of the community, novices and postulants not yet fully committed to the Way. One of these was Torrildo, a youth of elfish charm whose first year at the

abbey had already been marked many times by trouble. When Blacktooth was sent to the cooks for three weeks of floor-scrubbing penance, he found Torrildo already scrubbing there as punishment for some unannounced infraction, and he soon learned that Torrildo's had been the muffled voice reciting a Memorabilium in the room adjacent to Dom Jarad's during the professed monk's unhappy interview. They differed widely in their interests, origin, character, and age, but their common penance pushed them together long enough for a bond to form.

Torrildo was glad to find an older monk who was not impeccable. Blacktooth, while not quite admitting that he envied the postulant's relative freedom to leave, began imagining himself in Torrildo's sandals, with Torrildo's problems, Torrildo's charm, and Torrildo's talents (which evaded the notice of many). He found himself giving advice, and was flattered when Singing Cow told him sourly that Torrildo was copying his mannerisms and becoming his talk-alike. It became a brief case of father and son, but it further estranged him from the ranks of the professed, who seemed to frown on the relationship.

He was beginning to find it hard to distinguish the frown of the community from the frown of his conscience. One night he dreamed he knelt for communion in the chapel. "May the Body of Jesus Christ lead you to eternal life," the priest repeated to each communicant; but as he came closer, Blacktooth saw that it was Torrildo, who, as he placed the wafer on Blacktooth's tongue, leaned close and whispered, "One who eats bread with me here shall betray me."

Blacktooth awoke choking and gagging. He was trying to spit out a living toad.

## CHAPTER 2

The first degree of humility is obedience without delay. This is the virtue of those who hold nothing dearer to them than Christ; who, because of the holy service they have professed, and the fear of hell, and the glory of life everlasting, as soon as anything has been ordered by the Superior, receive it as a divine command and cannot suffer any delay in executing it.

—*Saint Benedict's Rule*, Chapter 5

URING THE TIME OF BROTHER BLACKTOOTH'S translation of the eleventh chapter of the seventh and final volume of Boedullus, and while he was working feverishly toward the end, a special messenger from Valana in the Denver Freestate arrived at the abbey with tragic news. Pope Linus VI, shrewdest if not the saintliest of recent popes, and the man most responsible for healing the postconquest schism, had fallen dead of heart failure while he stood shin deep in an icy trout stream and shook his fishing rod at a delegation from the Curia on shore. He was protesting to them that the Lord had never told Peter to stop fishing for fish when he commissioned him to fish for men. Pope Peter had indeed taken five apostles boating with him right after the Resurrection, Linus correctly pointed out. Then he paused, turned white, dropped the rod, and clutched at his chest; almost defiantly he gasped, "I go a-fishing," and collapsed into the frigid water. It was later noticed that these last words were from John 21:3.

As soon as the message came, the Most Eminent Lord Cardinal Abbot began packing his fine regalia. He notified the Papal Way Station in Sanly Bowitts that he would need armed escorts for the trip, and he arranged with Brother Liveryman to make ready the fastest pair of horses and the lightest carriage, as if he planned a quick trip. He mixed his tears with a nervous sweat, as he alternated between

bursts of grief and flurries of excitement in making ready for the journey. It was the dead Pope who had made him a cardinal. It was going to be his first papal election. The community understood his mixed feelings and stayed out of the way.

After he had eulogized Linus and offered a Mass for the dead, he spoke to the assembled monks in the refectory after supper on the night before his departure.

"Prior Olshuen will carry out my duties as abbot while I am away. Will you promise to render him the same obedience in Christ which you give to me?"

There was a murmur of assent from the congregation.

"Does anyone withhold this promise?"

There was silence, but Blacktooth felt people looking at him.

"My dear sons, it does not behoove us in this monastery to discuss the business of the Sacred College, or the politics of Church and State." He paused, looking around at the small lake of faces by lamplight. "Nevertheless, you are entitled to know why my absence may be extended. You all know that one result of the schism was the appointment by two rival claimants to the papacy of an unprecedented number of cardinals. And that one of the terms of the settlement that ended the schism was that the new Pope, now of holy memory, would ratify the elevation of all these cardinals, no matter which claimant had made the appointments. This was done, and there are now six hundred eighteen cardinals on the continent, some of them not even bishops, a few not even priests. Since these are about equally divided between East and West, it may be very hard to arrive at the two-thirds-plus-one majority required to elect a pope. The conclave may last for some time. I hope not more than a few months, but there is no way I can predict.

"I fear you will hear gossip from time to time as travelers come and go. As long as the papal exile from New Rome continues, surrounded as it is by Texark forces, the enemies of the Valana papacy hope for a renewal of schism, and they keep all possible gossip alive. Listen to none of it, I beg of you.

"The force of the State has abated. The seventh Hannegan is not the same tyrant as the second Hannegan, who, as you know from history, used treachery and cattle plague to capture an empire from the Nomads, driving sick farm animals among the woolly Nomad herds. He sent his infantry as far west as the Bay Ghost, and his cavalry chased stragglers right past our gates. He killed the Pope's representative, and when Pope Benedict laid Texarkana under interdict, Hannegan seized all the Churches and courts and schools. He occupied the lands adjacent to New Rome, forcing His Holiness to flee to asylum in the crumbling Denver Empire. He collected enough bishops from the east to elect an anti—or, I should say, a *rival* pope to sit in New Rome. And so we had sixty-five years of schism.

"But Filpeo Harq is the seventh Hannegan now. Indeed he is heir to the conqueror, but there is a difference. His predecessor was a cunning, illiterate semi-barbarian. The present ruler was raised and educated for power, and some of his teachers were educated by us. So have hope, my sons, and pray.

"If the right Hannegan sits down with the right pope, with God's help, surely they can come to terms and end the exile. Pray that the pope we elect may return to a New Rome free of Texark hegemony. Everywhere, people have strong feelings about the occupation, but it will do no good for us to argue within the Sacred College whether the Texark troops must be withdrawn before the Pope goes home. That will be a decision for the Pope himself, when he is elected.

"Pray for the election, but not for any candidacy. Pray for the Holy Spirit to guide our choice. The Church now needs a wise and saintly pope, not an eastern pope or a western pope, but a pope worthy of that old title 'Servant of the servants of God.' " In a lowered voice, Dom Jarad added, "Pray for me too, my brothers. What am I but an old country monk, to whom Pope Linus, in a weak moment perhaps, gave a red hat? If anybody in the College has a lower rank than I, it must be the woman—er, Her Eminence the Abbess of N'Ork, or else my young friend Deacon Brownpony, who's still a layman. Let your prayers help keep me from folly. Not that I'm going among wolves, eh?"

Barely audible snorts and giggles caused Jarad to frown.

"As a way of showing that I am not an enemy of the Empire, I shall cross the Bay Ghost and take the route through the Province. But I'm going to reschedule tomorrow's Mass. It's a ferial day anyway, so we'll sing the old Mass for the Removal of Schism before I go."

He spread his arms as if to embrace the throng, traced a great cross in the air over them, came down from the lectern, and left the hall.

Blacktooth became wildly anxious. He sought permission to speak to Dom Jarad before the abbot's departure, but permission was denied. In near panic, he found Prior Olshuen before dawn in the cloister on his way to Matins, and he plucked at the sleeve of the prior's robe.

"Who is it?" Olshuen asked irritably. "We're already late." He stopped between the shadows cast from the columns by a single torch. "Oh, Brother Blacktooth, it's you. Speak up then, what is it?"

"Dom Jarad said he'd hear me when I finish Boedullus. I'm almost finished, but now he's leaving."

"He said he'd hear you? If you don't lower your voice, he'll hear you now. Hear you about what?"

"About changing jobs. Or about leaving the Order. And now he'll be gone for months and months."

"You don't know that. Anyway, what can I do about it? And what do you mean, leave the Order?"

"Before he goes, would you remind him about me?"

"Remind him of what about you?"

"I can't go on this way."

"I won't even ask. 'What way?' We're late." He began walking toward the Church with Blacktooth tagging at his side. "If Dom Jarad has a free moment this morning, and if I mention your obvious agitation, will he know what it's all about?"

"Oh, I'm sure he will, I'm sure!"

"Now what was that about leaving the Order? Never mind, we're holding up Matins. Come by my office in a day or two, if you like. Or I'll send for you. Now calm down. He won't be gone for long."

Abbot Jarad, after he offered the Mass for the Removal of Schism, announced from the pulpit his wish that they sing a votive Mass for the election of a pope on the day appointed for the opening of the conclave, and another such Mass on the first day after any news came to the abbey from Valana, unless that news proclaimed a new pope. Afterward, he departed toward the Bay Ghost.

Two dozen or more monks, including Blacktooth and Torrildo, lined the parapet of the eastern wall and watched the plume of dust until it dwindled on the eastern horizon.

"To prove he's no enemy of the Empire, he's taking the way through the Province," Blacktooth sourly echoed his master's words. "But he takes armed guards. Why armed guards?"

"That makes you bitter?" asked Torrildo, who usually concerned himself with Blacktooth's feelings, rarely with his thoughts.

"If he *were* an enemy of the Empire, things might be different for me, Torrildo."

"How?"

"Things might be different for everybody, if nobody here had ever compromised. And he dared talk to me about pearls before swine."

"I don't understand you, Brother."

"I don't expect you would. If my own cousins Wren and Singing Cow don't understand, how could you?" He placed his hand reassuringly over Torrildo's where it lay on the parapet. "It's enough that you care."

"I care, I really do." The postulant was looking at him with those gray-green eyes that so reminded him of his mother's soft and searching gaze. There was something feminine about it. Embarrassed by the intensity of the moment, Blacktooth removed his hand.

"Of course you do. Let's forget it. How is it with you and that difficult Memorabilium?"

"Maxwell's equations, they're called. I can say them forward and backward, but I don't know what they are or what they mean."

"Neither do I, but you're not supposed to know. I can tell you this, though: their meaning has been penetrated during the past century. They're supposed to be among the notes Thon Taddeo Pfardentrott took back to Texark with him about seventy years ago. Maxwell's equations are among the very great Memorabilia, so I've heard."

"Pfardentrott? Didn't he invent the telegraph? And dynamite?"

"I think so."

"Well, if the meaning has already been penetrated, why do I have to keep it memorized?"

"Tradition, I guess. No, it's more than that. Just keep running the words through your mind, as a prayer. Keep it up long enough, and God will enlighten you, so the old-timers say."

"If somebody's penetrated the meaning, maybe I could find out."

"That might spoil it for you, Brother. But you can try, if you want to. You can read what Brother Kornhoer wrote about the subject after Pfardentrott left, but I don't think you'll understand him."

"Brother who?"

"Kornhoer. He invented that old electricity machine down in the vaults."

"Which doesn't work."

"Oh, it worked when he built it, but it wasn't very practical here; and for some reason, his abbot would never let him teach anyone to fix it. Have you ever seen an electric light?"

"No."

"Neither have I, but the Palace of the Hannegans in Texark is full of them. And they've got some at the university there. Brother Kornhoer and Pfardentrott became friends, as I recall, but the Abbot Jerome didn't approve. Say, why don't you read that placard that hangs over Kornhoer's machine?"

"I've seen it, but I never read it. The machine is a nuisance to keep clean. So many cracks and crannies for dust." Torrildo was an underground janitor and warehouse clerk. "You never told me about your Memorabilium, Blacktooth."

"Well, it's a religious one. I don't think it has any secret scientific value. They call it 'Saint Leibowitz's Grocery List.' " He tried to suppress the flush of pride he felt at being given the Founder's Memorabilium, but Torrildo did not notice.

"Does anything special happen when you say it?"

"I wouldn't say yes, I wouldn't say no. Maybe I never worked at it hard enough. As Saint Leibowitz himself used to say, 'What you see is what you get, Wysiwyg.' "

"Where is that saying recorded? What does it mean?"

Blacktooth, who loved the cryptic "Sayings of Saint Leibowitz," was spared answering as the bell rang the hour of Sext, marking the resumption of the rule of silence, which the abbot had suspended for the morning of his departure. The monks on the parapet wall began to leave.

"Come see me in the basement, if you get a chance," Torrildo whispered in violation of the rule.

Blacktooth's Nomadic ancestors had always placed a high value on ecstatic magical or religious experience, and this heritage, while pagan, was not incongruent with the traditional mystical quest which he had found so attractive and natural in the life of the monastery. But as his feeling of unity with his professed brethren gradually waned, he found himself less captivated by the formal worship of the community. Processions and the chanting of psalms no longer elevated his spirits and sent them soaring. Even the reception of the Eucharist during Mass failed to entrance his heart. He felt this as a distinct loss, in spite of his doubts about his vocation to the Order. He tried to recover by his solitary devotional practice what he was losing in the public worship.

A monk's time alone in his cell was limited to seven hours a night, of which at least an hour and a half was to be spent in meditative, affective, or contemplative prayer. Some of this prayer time was devoted to the reading of those parts of the divine office which his daily work at the abbey prevented him from singing in choir at the regular hours, but Blacktooth rarely needed more than twenty minutes to finish his breviary, and the rest of the time he gave to Jesus and Mary. In his sleep, however, his dreams were often colored by the myths of his childhood and of the Wild Horse Woman whom he had seen.

His confessor and spiritual adviser had sharply warned him, more than once, against taking seriously any seemingly supernatural manifestation that came to him during the contemplative work, such as a vision or a voice, for such things were usually either the work of the Devil or simply the spurious side effects of the intense concentration demanded by meditative or contemplative prayer. When the visions began coming to him one night in his cell, he attributed them to fever, for he had fallen ill the previous day, and was excused from the scriptorium.

He knelt on a thinly padded block of wood beside his cot and gazed unwaveringly at a small picture

of the Immaculate Heart that hung on the wall. When his mind strayed, or a thought arose, he brought his attention back to the picture. The painting was undistinguished, lacking in detail, and hardly more than a symbol. The prayer was a wordless, thoughtless fixation of the mind on the image and the heart of the Virgin. He was a bit dizzy from fever, and a numbness came over him as he knelt there. Occasionally his field of vision darkened. The heart began to pulsate, and then expand. He could no longer focus his eyes on it. His mind seemed to be plunging into a dark corridor toward emptiness.

And then, there it was: a living heart suspended before him in the blackness of space, beating in cadence with his own pulse. It was complete in every detail. A puncture of the left ventricle leaked small spurts of blood. For a time he felt neither fear nor surprise, but continued to gaze in complete absorption. He knew, beyond words, that it was not the heart of Mary, but not until later reflection did this puzzle or perplex him. He simply accepted what came to him, at the time it happened.

A rap at the door dissolved the trance. His skin crawled at the sharp change in his consciousness.

*"Benedicamus domino,"* he answered after a moment.

*"Deo gratias,"* came a muffled voice from the corridor. It was Brother Jonan, arousing everyone for Matins. The footsteps receded.

He arose and made himself ready for his usual routine, but he carried the spell cast over him by the vision all that day and the next. It was very puzzling, even after his fever passed.

When Prior Olshuen had not summoned him by the third day of Dom Jarad's absence, Blacktooth sought him out. Olshuen was an old friend; he had been Blacktooth's teacher and confessor in the days before he was made prior, but just now the appearance of his old student at his office doorway evoked no smile of welcome.

"Oh, well, I did tell you to come see me, didn't I?" said Olshuen. "You might as well sit down." He returned to his chair, put his elbows on the desktop, pressed his fingertips together, and at last smiled thinly at Blacktooth. He waited.

Blacktooth sat on the edge of his chair, eyebrows raised. He also waited. The prior began flipping opposed fingertips apart, a pair at a time, and flipping them back together. Blacktooth always found this habit fascinating. His coordination was perfect.

"I came to ask—"

"Dom Jarad told me to throw you out if you came to ask for anything more than a blessing, unless you're through with Boedullus, and I know you're not. I don't throw you out, because I had already invited you." He punctuated each phrase with a pause and a flip of the fingertips. He did this only when nervous. "So what do you want, my son?"

"A blessing."

Easily disarmed, the gentle Olshuen lowered his hands, leaned forward, and laughed his relief.

"On my petition to be released from my vows."

The smile vanished. He leaned back, pressed fingertips together again, and said in a mild tone, "Blacktooth, my son. What a dirty rotten little Nomad kid you are!"

"You've obviously spoken to Dom Jarad about me, Father Prior." Blacktooth risked a rueful grin.

"He said nothing you'd want to hear, and he said a few things you're better off not hearing. He spent at least half a minute on the subject, talking fast. Then he told me to throw you out, and he left."

Blacktooth stood up. "Before I get thrown, would you mind telling me how I can find out about the procedure?"

"The procedure for what, to abandon your vows?" Olshuen waited for Blacktooth's nod, then went on: "Well, you turn right when you go out the door. You walk down the hall to the stairway, and then you take it down to the cloister. You go around to the main entrance, and on out into the courtyard. Across the courtyard is the main gate, and outside that, you go to the road. From there, you're on your own. The way to your new future lies open before you." He found it unnecessary to add that Blacktooth would be under excommunication, ineligible for employment in many places, deprived of all right to petition in ecclesiastical courts, cut off from the sacraments, shunned by the clergy and the pious among the laity, and readily victimized by anyone who realized that he was unable to sue in the courts.

"I meant to get out legally, of course."

"There are books on canon law in the library."

"Thank you, Father Prior." Blacktooth started to leave.

"Wait," said the prior, relenting. "Tell me, son—if, after you've finished Boedullus—this is hypothetical, understand?—if, then, you're given a choice of jobs, how would you feel about the other thing?"

The monk hesitated. "I would probably think about the other thing all over again."

"How close are you to being finished?"

"Ten chapters to go."

Olshuen sighed and said, "Sit down again." He rummaged through papers on his desk until he found a sealed envelope. Blacktooth could see his own name on it, written in Dom Jarad's hand. The prior slit it open, unfolded the enclosed note, read it slowly, and looked at Blacktooth. He put his fingertips together again and began tapping them by pairs as before.

"A choice of jobs?"

"Yes—he left you a choice. When you finish *The Book of Origins*, you can do the same author's *Footprints of Earlier Civilizations*. Unless you're sick and tired of the Venerable Boedullus."

"I'm sick and tired of the venerable one."

"Then you will be assigned to translate Yogen Duren's *Perennial Ideas of Regional Sects*."

"Into Nomadic?"

"Of course."

"Thank you, Father Prior."

Blacktooth went down the hall to the stairway, descended to the cloister, left it by the main entrance, crossed the courtyard, and walked out to the road through the main gate. There he stood for a while, gazing uncertainly at the arid landscape. Down the trail lay the village of Sanly Bowitts, and several miles beyond the village arose the flat-topped hill called the Mesa of Last Resort. There were mountains in the distance, with a few hills in the foreground. The land was lightly covered by cactus and yucca, with sparse grass and mesquite growing in the low places. There were distant antelope, and he could see Brother Shepherd leading his flock through the pass, his dog snarling at the heels of a straggler.

A wagon drawn by a swayback mule pulled to a stop, engulfing Blacktooth in a thin cloud of dust. "Going to town, Brother?" asked its grizzled driver from his perch atop a pile of feed sacks.

Blacktooth was tempted to go past the village and climb Last Resort. It was said to be haunted, a place monks sometimes went alone (with permission) for a kind of spiritual ordeal in the wilderness. But after a brief pause he shook his head. "Many thanks, good simpleton."

He walked back through the main gate and headed for the basement vaults. When Saint Leibowitz had founded the Order, tradition said that there had been nothing here except an ancient military bunker or temporary ammunition dump, which he and his helpers had managed to disguise so that one might pass a stone's throw away and never notice its existence. It was in this place that the earliest Memorabilia were preserved. According to Boedullus, no living quarters were constructed on the site until the middle of the twenty-first century. The monks had lived in scattered hermitages and came here only to deposit books and records until the fury of the Simplification had abated and the danger to the precious documents from skinheads and simplifiers had waned. Here, still underground, the ancient Memorabilia and the latter-day Commentaries awaited a destiny which had, perhaps, already come and was swiftly receding.

## CHAPTER 3

Let the monks sleep clothed and girded with belts or cords—but not with their knives at their sides lest they cut themselves in their sleep. . . . The younger brethren shall not have beds next to one another, but among those of the older ones.

—*Saint Benedict's Rule*, Chapter 22

N OIL LAMP TOO DIM FOR READING HUNG IN each alcove where books were stored. A light held by hand was needed to locate a title on the shelves. Ordinarily one then carried the book up to the clerestory reading room, but Blacktooth scanned the abstract of Duren's *De Perennibus Sententiis Sectarum Rurum*, his next assigned project, by the light of a candle held close to the pages. He soon returned the book to the shelf and went to join Brother Torrildo, who was leaning against Kornhoer's old generator of electrical essence, a rusting hulk in an alcove where no light burned.

"Let's sit back here where nobody'll catch us," Torrildo muttered, and stepped into the deep shadows behind the machine. Brother Obohl's gone out, but I'm not sure where."

Blacktooth hesitated. "I don't need to hide. I have reason for being here, even if I didn't ask permission."

"Shhh! You don't have to whisper, but keep it down. I'm only allowed to come in here to clean. Not that it matters much now."

"What's that door?" Blacktooth nodded toward the rear of the dark alcove.

"Just a closet full of junk. Parts of the machine, I think. Come on."

The monk hesitated. The machine somehow gave him the creeps. It reminded him of the special chair in the chapel, which was really a holy relic.

With the faster travel and communication made possible by the conquests of Hannegan II, invention had become contagious in a world that was beginning to recover twelve centuries after the *Magna Civitas* perished in the Flame Deluge. Most inventions, of course, were reinventions, suggested by the few surviving records of that great civilization, but new devices were nonetheless cunning and needed. What was needed at Hannegan City was an efficient and humane method of capital punishment. Thus, the building of a generator of electrical essences at the Abbey of Saint Leibowitz in 3175 A.D. was followed in a few years by the building of a chair of electrical essences at Hannegan City in the Empire of Texark. The first offender to be executed by the new method was a Leibowitzian monk whose crime was carrying a cardinal abbot's offer of sanctuary to a son of the late Thon Taddeo Pfardentrott, an enemy of the Texark state, whose work at Leibowitz Abbey had, nevertheless, made possible many new inventions that benefited the Empire, including the chair of electrical essences.

It was the first and only time the chair was used. Hannegan III had placed it on a platform in the public square, and while two teams of mules drove the electrical generator, the Mayor himself cut the ribbon that allowed a spring to close the switch. To the crowd's delight, the voltage was low and the monk died slowly and noisily. The method was abandoned until a better generator was built. Steam power came, but the chair was never brought out of storage, because a more recent Hannegan found the best executioner on this continent in the person of Wooshin, whose ancestors came from a different continent, and who used a hatchet with such artistry and ease that a whole afternoon of severing heads left him untired and tranquil, able to sit in deep meditation for two hours before dinner.

The chair of electrical essence was eventually disassembled and smuggled across the southern Plains, then out of the Empire at the Bay Ghost frontier. It reappeared at Leibowitz Abbey, where it was placed in the Church over the crypt that contained the bones of the monk who died in it, and regularly on the day of his death, the chair was incensed, sprinkled with holy water, and venerated in his memory. Leibowitz Abbey became the only monastery on the continent with its own electric chair. Some thirty years later, the abbey inherited the now elderly executioner, Wooshin, who staggered out of a sandstorm asking for

water and sanctuary. That was only three years ago.

"Are you going to stand out there until they catch me?" Torrildo asked impatiently.

Blacktooth sighed and squeezed into the dark cranny beside him. Someone had piled a number of worn sleeping pads, torn and stinking of mildew, in the shadows behind the machine. They sat in comfort.

"I never knew about this," said Blacktooth, amused.

"Blacktooth, are you going to run away?"

The older monk was silent for a time, considering. Earlier he just wanted to run as far as Last Resort, to make a decision, and then maybe come back. Torrildo felt his thigh, as if groping for an answer. He brushed the hand away and sighed. "I just read the abstract on the Duren book. It's a history of local cults and heresies that keep popping up and coming back in different places. God knows why Dom Jarad wants something like that translated into Nomadic. I can't even begin to guess, until I read the whole book."

"You aren't going to run away?"

"How can I? I took solemn vows."

Torrildo released a choking sob in the darkness. "I'm going to run away."

"That's silly. All you need to leave in good standing is Dom Jarad's permission, and for a postulant that's just formality."

"But Dom Jarad is gone. I have to leave now!" His sobbing intensified. Blacktooth put a comforting arm around his shoulders. Torrildo leaned against him and cried quietly into the hollow of his neck.

"Now, what is the matter with you?" asked the older monk.

Torrildo lifted his head and put his face close to Blacktooth's. All Blacktooth could see was an oval shadow with Torrildo's beautiful eyes peering out of it.

"Do you really like me, Blacktooth?"

"Of course I do, Torri. What a question!"

"You're the only reason I've been staying here these past months."

"I don't understand."

"Oh, you say you don't, but you do. Now I just can't stay here any longer. I'd just get you into trouble anyway. I'm impure. I haven't been faithful to you."

"What are you talking about? Faithful how?" Blacktooth shifted restlessly on the moldy mattresses.

"Oh, you're so smart, but you're so naive." He took Blacktooth's face in his soft thin hands. "I'm going. Will you kiss me goodbye?" He felt Blacktooth wince, and dropped his hands. "You won't, then."

"Well, sure I will, Torri." Carefully Blacktooth offered him the kiss of peace, first a peck on the right cheek, then—

"Ohhhh," the youth sighed, and caught him in a fierce embrace.

Blacktooth felt lips pressing his own and a tongue trying to work its way between his teeth. He tossed his head aside and leaned back, gagging. Torri fell on top of him and groped under the hem of his robe, both hands sliding up his legs. Blacktooth was first frightened, then horrified by his own erection, which the inflamed Torrildo discovered with delight.

"Torri, no!"

"You know I was meant to be a girl. . . ."

The door of the closet burst open. A skinny arm thrust out a lantern above them. In the sudden light, Blacktooth caught a glimpse of four naked legs and two erect penes.

"Sodomites!" yelled the senior librarian, Brother Obohl. "I caught you at it. I finally caught you, you scum. Up to the prior's office with you!" He aimed a kick at Torrildo's bare rump, but missed. Obohl was nearsighted. Once he had owned the only pair of spectacles at the abbey, ground for him in Texark, but had given them up for religious reasons. Now he grabbed Torrildo's arm, and yelled at Blacktooth, who was scrambling over the machine.

"Elwen! Brother Elwen! Come back here, you filthy bugger!"

Blacktooth heard a scuffle behind him as he sprinted up the stairway. He paused on the landing to compose himself, then strode quietly through the reading room into the courtyard. Outside he paused in the blinding sunlight, dazed and confused. The myopic old man had mistaken him for Brother Elwen, a

novice who worked for the groundskeeper. Blacktooth had seen Torrildo and Elwen together on several occasions, but thought nothing of it. Now he seemed caught in a trap the librarian had set for another. The mistake would not endure. Across the courtyard, in plain sight, Elwen was on his hands and knees, working manure into the soil under the rosebushes. There was no honorable escape. He started to report back to the copy room, but things might become embarrassing there, when the prior sent for him. He started again toward his cell, but the sound of running footsteps made him look around. It was Torrildo, sprinting toward the main gate. Blacktooth stood waiting for a commotion to follow, but nothing happened.

He waited a full minute. After a brief prayer to Saint Leibowitz, he made up his mind to return to the basement. At the bottom of the stairs, he met only silence in the dim light. He found the candle he had used earlier and looked behind the machine. The old librarian lay on his back. He clutched his head and rolled it side to side. There was blood on his forehead. Blacktooth bent over him.

"Who's there?" he rasped.

"Blacktooth St. George."

"God be praised, Brother. I need a little help."

Blacktooth picked the old man up, edged his way around the machine, and staggered with him toward the stairs.

"Put me down. I'm too heavy for you. I'll be all right in a moment."

They rested briefly against the wall. Then Blacktooth draped the librarian's arm around his neck and helped him up the stairs. Obohl was croaking and wheezing.

"It was Elwen and Torrildo. Those buggers. I knew. What they were up to back there. Just couldn't catch them. Until today. You know, so much semen. Gets spilled. Behind that machine. They call it the seminary. Now. Now. Where did they go?" Still wheezing, he blinked around at his blurred world.

Blacktooth set him carefully on the end of a table in the reading room and made him lie down on it. Monks at the reading desks got up and quickly gathered around. One brought a drinking jug and wiped the librarian's face. Another examined the cut on his scalp. Another asked, "What happened to you, Brother?"

"I caught them. I finally caught them. Brother Torrildo and Brother Elwen again, going at it behind the electric idol. Torrildo hit me—with something."

"Torrildo hit you all right," said Blacktooth. "But Elwen wasn't there. It was me, Blacktooth St. George."

He turned and walked away, not hurrying, and continued to his cell. He lay on his back and stared up at the picture of the Immaculate Heart of the Virgin until they came to get him.

Were it not for the fact that shoveling compost was defined as public punishment, Blacktooth might have preferred it as a career to the job of translating a monk's-eye view of history for Nomads too proud to read. Taking the raw shit out of the privies and transporting it by wheelbarrow to the first composting bin was the smelliest part of the task. There he mixed it with thrice its volume of garden weeds, corn husks, chopped cactus, and plate scrapings from the kitchen. Each day he shoveled the stinking mixture from one bin to the next in line, allowing air to penetrate and hasten the decay. When the mixture reached the final bin, it was crumbling and had lost most of its odor. From there, he loaded it into a clean wheelbarrow and moved it out to the great pile near the garden, where it awaited the pleasure of the cultivators.

On the third day, after an interview with the prior, Brother Elwen went over the wall. Blacktooth expected relief. None came. For three weeks in full he prayed the compost-shoveling prayer, offering up each stinking shovelful on behalf of the soul of poor, poor Torrildo. That he fry in hell—is not my wish, O Lord, he managed to pray.

No one snubbed or shunned him (after he bathed), but the shame of public penance made him isolate himself. In his loneliness, in his cell by night, he sought ever more fervently the indescribable emptying of himself that seemed to occur in a kind of union with the heart of the Virgin: a heart not filled with sorrow, but made empty by sorrow, made open by sorrow, made selfless by sorrow, a heart which was a pit of loving darkness, wherein, sometimes, he glimpsed fleetingly another wounded but still beating heart.

"The Devil too has his contemplatives, they say" was his confessor's harsh judgment upon the vision and upon Blacktooth's private devotional practice. "The focus of contemplation must be Our Lord. Devotion to Our Lady is splendid, but too many monks turn to her only when their vows fit too tight, when obedience is hard. They call her 'Refuge of Sinners,' and so she is!—but there are two ways of looking at this: the Lord's way, and the sinner's way. Pay attention in choir, my son, and stop chasing visions at night."

Thus Blacktooth learned not to mention the vision. He saw his confessor was made angry by it, for how could a professed monk who regretted his vows be granted any grace except that of contrition and repentance? He observed a similar attitude in Prior Olshuen, who, at the end of his three-week penance, sent him back to his regular work, but also ordered him to spend an hour a week with Brother Reconciliator for special counseling, to Blacktooth's utmost chagrin.

Brother Reconciliator, a monk named Levion, was part-time assistant to Brother Surgeon as well as a Keeper of Memorabilia from certain ancient healing arts. He handled cases of senility, fits, depression, delusion, and—contumacy. He had also been ordained an exorcist. Olshuen, without doubting Blacktooth's account of the incident in the basement, saw it as a manifestation of rebellious discontent, and saw the discontent as sin or madness.

Blacktooth's devotion to the Virgin, however, continued and grew in the face of this disapproval. His old hero, Saint Leibowitz, was at least temporarily pushed aside to make more room for the Virgin. He had chosen Duren's *Perennial Ideas of Regional Sects* for his next project, in preference to more Boedullus, partly because so many of Duren's country religions were special cults of Mary, or of some local goddess who had borrowed Mary's identity and carried Mary's Babe on her arm. Duren even mentioned the Nomadic Day Maiden. It was a choice he would quickly regret, because of the extreme difficulty of translating theological ideas into Nomadic, but at first he was captivated by one section ("Apud Oregonenses") which dealt with remnants of what had been called the Northwest Heresy a few centuries before. The description of the cult's beliefs seemed to cast light on his own mystical vision.

"The Oregonians," wrote Duren, "considered the Mother of God to be the original uterine Silence into which the Word was spoken at the creation. She was the dark Void made pregnant with light and matter when God roared '*Fiat!*' Word and Silence were coeval, they said, and each contained the other."

This reminded Blacktooth of the image of the darkening heart that became a pit of blackness containing another living heart. He was deeply moved.

"Thus it was impossible," Duren wrote in a later paragraph, "for the cultist to evade the Inquisitor's accusation that they made of the Virgin a fourth divine person, an incarnation of God's female wisdom."

Since no one at the abbey could read Nomadic except Wren and Singing Cow, Blacktooth felt safe in taking a few liberties with a work so resistant to understandable expression in that primitive tongue. In translating the word *eculeum* ("colt"), he could choose any of eleven Nomadic words that meant a young horse, and none of them were synonymous. But any one-word translation of the Latin "eternity" or "transubstantial" would only bewilder the reader. Theological terms, therefore, he left as Latin words in the Nomadic text, and tried to define them by lengthy footnotes of his own composition. But whenever he imagined himself trying to explain such matters to his late father or boss uncle, these footnotes became flavored with a facetiousness which he knew he would have to remove from the final version. Levity made the task less hateful, but strengthened his conviction that it was useless.

After an absence of two months, Abbot Jarad wrote to the prior from Valana and requested, among other things, that a votive Mass be offered weekly for the election of a pope, for he saw no quick end to a difficult election. Without a government, the Church was in confusion and turmoil. The city of Valana was too small to be a gracious host to hundreds of cardinals with their secretaries, servants, and alternates. Some were living in barns.

He wrote little about the conclave itself, except to note with obvious disgust that more than one cardinal had already gone home, leaving behind a special conclavist to cast his ballot. The practice was made possible by a canon which had been enacted for the convenience of foreign, not domestic, cardinals, but the latter took advantage of it during long periods of interregnum. The special conclavist in

such cases must, if possible, be a member of the clergy of the cardinal's titular New Roman (or Valanan) Church, and he was entitled to vote his own convictions under the guidance of the Holy Spirit, but such a proxy was always chosen for loyalty, and rarely deviated from his cardinal's wishes until an election became obvious and he switched his vote to back a winner. The practice made compromise more difficult, as the servant was always less flexible than the master. Jarad would make no prediction as to the date of his return. The messenger who brought the letter, however, got mildly drunk in Sanly Bowitts and expressed his own opinion of the affair: either the cardinals would all appoint conclavists and go home for the winter, leaving a hopeless deadlock, or would elect an ill old man who could be expected to die before settling any real problems.

Other news and gossip trickled to the abbey from Valana by way of travelers, guardians of the papal roads, and messengers who spent the night on their way to other destinations. Abbot Jarad Cardinal Kendemin was said to have received two votes on the thirty-eighth ballot—a dubious rumor which caused a flurry of excitement and joy at the abbey and a surge of panic in the heart of Blacktooth, who needed a pope's assent to be released from his vows, under the laws then in effect.

"You're not making sense," Brother Reconciliator told him at their weekly session after he listened to five minutes of Blacktooth's nervous chatter. "You think Dom Jarad has his foot on your neck. You think he'll never change his mind. If he comes home still the abbot, you can appeal to the Pope. But if he's the Pope, he'll have nothing better to do than keep his foot on your neck, eh? You'll spend your whole life translating the Memorabilia into Nomadic. Why do you suppose Dom Jarad hates you so much?"

"I didn't say he hated me. You're putting words in my mouth."

"Excuse me. He has his foot on your neck. Your father also had his foot on your neck, you said. I forgot. It was your father who hated you, yes?"

"No! I didn't say that either, exactly."

Levion shuffled through his notes. They were sitting in his cell, which served as his office; his role as a special counselor was not a full-time one.

"Three weeks ago, you said exactly: 'My father hated me.' I wrote it down."

Blacktooth sat slouched on Levion's cot, leaning back against the wall. Suddenly he leaned forward, rested his elbows on his knees, and began wringing his hands. He spoke to the floor. "If I said it, I meant when he hated me, he was drunk. He hated the responsibility. Raising me was supposed to be my boss uncle's job. Also, he was angry because my mother was teaching me to read a little." Blacktooth put his hand over his mouth, betrayed by this thoughtless revelation.

"Here are two things I don't understand, Brother St. George. First, you came here illiterate, did you not? Second, why should your uncle be responsible for you instead of your father?"

"That's the way it is on the Plains. The mother's brothers take responsibility for her children."

Blacktooth was increasingly restless. He eyed the door.

"Oh yes, Nomads are matriarchal. Is that right?"

"Wrong! Inheritance is matrilineal. That's not the same."

"Well, whatever. So your father felt put-upon, because your mother had no brother?"

"Wrong again. She had four brothers. My boss uncle was the oldest. He taught me dances and songs, took me to tribal councils, and that's about all. I could not become a warrior. Mother owned no breeding pit, no broodmares, and we were outcasts."

"Broodmares? What have broodmares got to do with—" He left the question unfinished, waved his hand in the air as if trying to dispel echoes. "Never mind. Nomad customs. I'll never untangle that ball of worms. Let's get back to the problem. You felt your father's foot on your neck. You say your mother was teaching you to read? But you said you came here illiterate. Did you lie?"

Blacktooth rested his chin on his hands and stared at his feet; he wiggled his toes and said nothing.

"Whatever you tell me stays right here in this room, Brother."

The patient paused, then blurted, "I couldn't read very well, or speak Rockymount very well. Wren and Singing Cow couldn't read at all. I kept quiet because everyone thought we were real Nomads. If Abbot Graneden found out we came from the settlements, he would have sent us back."

"I see. So that's why you learned faster than Wren and Singing Cow. Your mother had already taught

you. Where was she educated?"

"She learned what little she knew from a mission priest."

Levion was silent for a time as he studied his occasional disciple. "Whose idea was it to run away to join the wild Nomads?"

"Singing Cow's."

"And when the Nomads turned you away, whose idea was it to come here?"

"Mine."

"Tell me again. When did your mother die?"

"Year before last."

"When did you first tell Dom Jarad you wanted to quit the Order?"

Blacktooth said nothing.

"It was right after your mother died, wasn't it?"

"That had nothing to do with it," he growled.

"Didn't it? As a runaway, how did you feel when you got the news your mother had died?"

The bell rang. Blacktooth stood up with a sudden smile, unable to hide his relief.

"Well?"

"I felt very sorry, of course. Now I've got to go to work, Brother."

"Of course. Next week then, we'll talk more about this."

Blacktooth liked these sessions less and less. He had no wish to be reconciled by Brother Reconciliator, who seemed to treat his wish to depart as a symptom of illness, if not madness. As he hurried back to the copy room, he resolved to tell Levion no more about his parents or his childhood.

Because of the man's ignorance of Nomad life, his interviews with Brother Levion, instead of reconciling him with his calling, served instead to increase his nostalgia for that life which he had never quite inherited. He remembered his mother turning Christian, and his father, who sometimes tried to exercise an uncle's authority over him, insisting that he prepare himself for a manhood rite which he knew at the time would never be celebrated. The Church forbade the rite which turned adolescents into fully licensed mankillers of a war cult. But he had undergone training and understood something of the spirit of the Nomad warrior and his battle frenzy. It was hard to say anything true in answer to the question: What is Nomad religion like? Everything the wild Nomad did was religiously or magically hedged. It was hard to say what his religion was not. One might add up a list of ingredients for a religion: his ceremonies, his customs, his laws, his magic, his medicine, his oracles, his dances, his occasional ritual killing, his Empty Sky and his Wild Horse Woman, and call the list his religion, but this list would omit too much of daily living. There was even a ritual for defecation.

Bending over his worktable, he read again his favorite passage from Duren's *Perennial Ideas*, paused to think about his vision, and then penned a footnote to his translation of the paragraph:

This conception of the Virgin as the uterine silence wherein the Word is uttered and heard seems to accord with the mystical experience of contemplatives who have encountered the living heart of Jesus within the dark and empty heart of Mary.

He hesitated over it, neglected to add the word *Translator*, and thought of tearing up the page. But Brother Copymaster was standing nearby, and whenever Blacktooth tore up a page, the copymaster remarked on the cost of paper. I'll come back to it later, he thought, for it was growing dark in the copy room, and he was not allowed more than one candle. Suppressing a sense of mortal sin, he cleaned up his table, and left the problem for tomorrow.

## CHAPTER 4

And let him be punished likewise who would presume to leave the enclosure of the monastery and go anywhere or do anything, however small, without an order from the Abbot.

EARLY A YEAR AFTER THE HEART OF POPE LINUS VI failed him in the cold trout stream, a stormy conclave elected Olavlano Cardinal Fortos, an octogenarian from south of the Brave River, who was a stargazer, a scholar learned in the subject of witch detection, and a man believed to be neutral in the perennial East-West power struggle. He chose the name Pope Alabaster II and lived long enough to issue a bull ("for a perpetual memorial of the matter") which ordered Earth's prime meridian from which all longitudes are measured moved from its ancient (and until recently inaccessible) location. The line of zero longitude thereafter would pass through the center of the high altar of Saint Peter's Basilica in New Rome, and would perpetually remain there, free from the influence of what Alabaster called the Green Witch. Many representatives to the Curia from both coastlines of the continent had opposed the decree, because in this century of rapid development, great wooden ships had begun again to sail the seas; Alabaster's bull would not only confuse navigation, but would hasten the time (previously expected to come in the fortieth century) when it would be necessary to drop a day from the calendar to keep it in step with the heavens. Both East and West suspected political motives behind the bull, somehow connecting it with the occupation of territory around New Rome by the armies of the Hannegan, and so Alabaster died of poison a few months after his election.

The subsequent interregnum lasted 211 days while hundreds of cardinals bickered, and the people of Valana threw stones at the carriages of the cardinals' servants. Divine Providence at last moved the conclave to elect Rupez Cardinal de Lonzor, also from south of the Brave River, and the oldest, sickest man in the Sacred College. He took the name of his predecessor of holy memory, becoming Alabaster III, but immediately repealed his predecessor's decree by a bull (also *ad perpetuam rei memoriam*) which restored the prime meridian to its ancient location, for scholars of the Order of Leibowitz had assured him that "Green Witch" had not been the habitation of a sorceress, but only the name of an ancient village on a distant island which had been depopulated by the Flame Deluge. Again political motives were suspected. Westerners opposed the change, and the old man died in his sleep after eating a dish of hare cooked in wine and vinegar, flavored with sauteed onions and laurel leaves.

Weary cardinals came again to Valana. This time the name of Abbot Jarad Cardinal Kendemin was placed in nomination very early in the conclave, and he, quite unwillingly, gathered the support of nearly fifteen percent of the electors before word was spread that Dom Jarad, if chosen, would utter the "*Non accepto!*" which had not been heard for nearly two thousand years, when Saint Petrus Murro Pope Celestin V futilely spoke them from his hermit's cave, only to be dragged to the throne by a desperate College.

The conclave sought this time in vain for one of its own members with no suspected loyalty either to the Empire or to the Valana bureaucracy and its western allies. The name of Elia Brownpony was proposed, for the Red Deacon was professionally a lawyer and diplomat, skilled in negotiation, but his relative youth, his reputation for being manipulative, and the fact that he would have to be ordained a priest and then anointed bishop before he could accept the papacy, all weighed against him. Only Dom Jarad, never a great judge of character, offered to support his friend, but Brownpony would not accept.

The only telegraph line on the continent stretched from Hannegan City in Texark to the very southeast corner of the Denver Republic. In order to obtain metal for its construction, the previous Hannegan had confiscated all copper coinage in the Empire, all copper pots, and many Church bells. The line helped make the area of conquest in the south safer from incursion by the free Nomads of the north, but now it was being used to keep Filpeo Harq informed about the conclave, to send instructions from the capital to Archbishop Benefez and his allies in the Sacred College. Almost every day, a messenger from Benefez rode south to the terminal station to pick up the mail, while another messenger was taking mail in the other direction. No other cardinal bishop could stay in touch so easily with his home diocese.

The temper of the people of Valana grew ugly again. The Church was Valana's only industry, and the burghers themselves were dependent on the papal exile for their livelihood. Prayers against schism were fervent within the conclave, but unpopular in the local Churches. Workers daily scrubbed the Cathedral Palace walls to remove graffiti of the previous night, painted there by the workers' kinsmen.

There were demonstrations. The people of the city and surrounding villages assembled to propose their own candidates to the inaccessible and unyielding cardinals. The name of one holy man of some local repute as a healer and rainmaker, one Amen Specklebird, was frequently heard in the streets. He was a retired priest of the Order of Our Lady of the Desert, and not unknown to the Bishop of Denver, who had forced him to choose between retirement and a heresy trial.

But driven by the Holy Spirit, a holy fear of the mob, and the onset of a bitter winter, the conclave at last elected the Bishop of Denver himself, the Most Reverend Mariono Scullite, not a member of the College, but a man who could be counted on to make matters no worse than they were. He took the name Linus VII, which suggested that he would return to the policies of the pope who had managed to terminate open schism before he went a-fishing.

But now Linus VII too was slowly dying of a wasting illness which could not be attributed to poison (unless his sisters and nephews who acted as tasters of the pontifical diet were part of the plot). After consulting the Pope's physician, Elia Cardinal Brownpony rented a private carriage without ecclesiastical insignia, hired a Nomad driver who apparently spoke no Rockymount ("I need to practice my Wild-dog dialect," he explained to an aide), and quietly departed for the southwest desert to confer with Abbot Jarad Cardinal Kendemin. Actually, the Nomad driver was fluent in several languages, and they had much to talk about.

• • •

Brother Blacktooth had run away from the monastery again. He knew he would have to go back, but sometimes the wildness of his Nomad heritage took possession of him, and he abandoned his vows and his sanity for a few days, and he ran. He ran not from the bad food and the hard bed and the long tedious hours, but from an all-knowing, all-seeing, pride-consuming authority of his superiors. This time he had stolen coins from the prior's desk, bought bread and a wineskin in the village. The skin he filled with water, and went wandering northward. The first day he had moved across open country, just to avoid travelers on the road; but because of the wolves he had returned to the highway at sundown to spend the night in a monk pen. It was a roofless stone enclosure three paces square and just taller than a frenzied wolf could jump. Among the graffiti, a sign in Latin welcomed all visitors and bade them defecate *extra muros*. Monks of his own order had built such shelters along the way, but nobody kept them clean. A trickle of water from a spring on the mountainside ran across the floor. He built a small fire and boiled some of the water in his cup, adding some roasted mesquite beans for flavor. He ate some of his biscuits and a bit of dried mutton before the stars came out. In a few days, he would begin starving. He slept shivering in a corner, but before daylight revived his fire.

Traveling parallel—as he fallibly judged by the sun—to the direction of the highway from which he had fled at dawn after sighting a party of horsemen with long rifles, he had come to the canyon and there was no way in sight to cross it. It was already late afternoon and he had nowhere to spend the night. On the highway, there was the monk pen, where he could be safe, at least, from predators of the four-legged kind. But they would look for him there. It was soon after he doused the remains of his fire at dawn that he heard the horsemen coming beyond the hill, and he scrambled up a cut from the winding road and hid in the rocks until they came into view. They were soldiers. Papal guardsmen, or Texark? He could not be sure at that distance. He huddled lower in sudden fright. As a small boy, Brother Blacktooth had been raped by soldiers, and horror of it still haunted him.

The two-legged traffic on the highway was very light, and if a man was on foot he was either a monk or a frustrated horse thief. Today there were thieves. He had seen them from afar. It was a good hour and a half before twilight, but there was no sign of a way across the abyss below him. It was already a pit of darkness in the earth. He would have to walk. There was no law in this territory but the distant law of

the Church. Turning back from the canyon, he decided to climb the Mesa of Last Resort.

It was from the Mesa that Blacktooth, missing from the abbey four days, had witnessed the Red Deacon's arrival without realizing that the passenger in the private carriage that emerged from the rooster tail of dust out of the north and hurried on through the village of Sanly Bowitts to the Abbey of Saint Leibowitz was the man who had shaped his unhappy past by admiring his translation of Boedullus and who would even more strongly influence his future.

When his water ran low, he searched Last Resort, looking for the mythical spring and the shanty once inhabited by an eremitic old Jew who had departed from the region at the time of the Texark conquest. He found the shanty in ruins, but no spring or other source of water, which could hardly have existed so far above the surrounding desert. Another myth said that the old Jew had been a rainmaker, and needed no such spring. It was a truth, he observed, that the Mesa was greener than the land below. There was a mystery here, but he sought no solution. For most of the time, until his waterskin ran dry, he prayed to the Virgin, or simply sat in the dry wind and seethed in his own evil under the sun. It was early spring, and by night he nearly froze. Having caught a terrible cold and run out of water, he knew at last that he would have to go back and plead insanity.

Now, three days after the passage of the carriage through the village, he sat shivering with a dripping nose in the gloomy hall and awaited judgment. Occasionally a monk or a novice walked quietly past, on his way to the library or workshop, but Blacktooth sat hunched over with his elbows on his knees and his face in his hands, knowing that no one would acknowledge his existence even by a nod. There was an exception. Someone strode quickly past him, then stopped at the door to the meeting room. Feeling himself being watched, Blacktooth looked up to see his former therapist, Levion the Reconciliator, gazing down at him. As their eyes met, Blacktooth inwardly cringed, but there was neither contempt nor pity in the monk's gaze. After a slight shake of his head, he entered the meeting hall, evidently summoned as a witness. What had passed between them in Levion's cell was supposed to be as confidential as a confession, but Blacktooth trusted no one.

Cardinal Brownpony had learned almost immediately of Blacktooth's unsanctioned absence, for soon after his arrival he asked to see the work of the young monk who had been translating Boedullus into Nomadic, and Jarad had been forced to give an account of the copyist's growing rebellion. Worse, while admiring the Nomadic version of Boedullus, Brownpony read aloud to his Nomad driver, whose Nomad name meant Holy (Little Bear) Madness, and to his secretary, a white-bearded old priest named e'Laiden who fluently spoke Wild-doe Nomadic, read to them some of Blacktooth's translation of Duren, and the three of them became openly contemptuous of it. "These theological ideas are completely alien to the Nomad mind," Brownpony explained to Jarad, thus lending unwitting support to the opinion of the copyist himself, against Jarad's view. Worse, while they were perusing the work, Dom Jarad's attention was called to the footnote in *Perennial Ideas*, which Blacktooth had neither deleted nor signed as his own: "This conception of the Virgin as the uterine silence wherein the Word is uttered and heard seems to accord with the mystical experience of contemplatives . . ."

Brownpony translated it back into Latin for him. No witness to the scene could remember a more furious Abbot Jarad.

Outside the refectory door, Blacktooth's fear became irrational terror when the old postulant named Wooshin came and sat quietly beside him on the bench. The man mumbled what might have been a greeting in Churchspeak with his thick Texark accent (although he refused actually to speak Texark, an Ol'zark dialect), and then he rolled a cigarette, an act requiring a special dispensation from the abbot or prior. But Wooshin was a very unusual man, one who made no claim to a religious vocation of any kind, but whose status as a political refugee from Texark, and whose consummate skill as a smithy, had made him welcome at the monastery, in spite of his gruesome past. He attended Mass and conformed to ritual, but never received the Eucharist, and nobody was sure that he was even Christian. He came originally from the west coast, and his skin was yellow, quite wrinkled now, the shape of his eyes strangely different. Behind his back, those who feared and disliked him called him Brother Axe. For six years he

had been a headsman for the present Hannegan, and some years before that for the Hannegan's predecessor, before he fell from imperial favor and fled for his life to the West.

He had lost weight and seemed to age rapidly during his three years at the abbey, but his presence on the bench outside the judgment hall aroused irrational panic in the culprit who cringed beside him. Until that moment, Blacktooth's worst fear was excommunication, with all its civil penalties and disabilities. Now he thought of the superbly sharp cutlery for the kitchen, and the axes and scythes that Wooshin made for the gardeners. Why, why, was this professional killer summoned to my trial? It was obvious to Blacktooth that Wooshin had been called by the tribunal, but not as a witness. I barely know the man! He had always wondered if the severed head retained a moment of confused consciousness as it fell into the basket.

Wooshin touched his arm. Blacktooth started up with a gasp, but the man was only offering him a large handful of clean, cottonlike waste from his shop.

"Leak the nose."

It took Blacktooth a moment to realize that the man was offering him a mop to wipe away the liquid snot that was running down to his chin.

"Horrid night cold on Mesa," said Brother Axe, betraying his knowledge of the runaway's whereabouts during the absence. So everybody knew.

Blacktooth hesitantly took the mop and used it, then formally nodded his thanks to the donor, as if he were actually observing a religious silence which, in present circumstances, seemed a bit hypocritical even to himself.

Wooshin smiled. Emboldened, Blacktooth asked, "Are you here because of me?"

"I not sure, but not probably. I think I leave here with Cardinal."

Mildly relieved, Blacktooth resumed his former posture. It seemed strange to him that the Axe, who could speak very good Ol'zark, refused to communicate in that tongue, which his accent in Churchspeak betrayed that he spoke. It was one of several languages, besides Churchspeak, which were used with some regularity at the abbey, but when Brother Axe heard it, he usually walked away. What use, he wondered, did Elia Cardinal Brownpony or the Curia have for an executioner who hated his former employer? Was the Church departing from its ancient refusal to shed the blood of its enemies?

An hour late, the bell rang for supper. The meeting hall became a refectory again, and the tribunal adjourned for the meal. As the stream of monks filed silently down the corridor, Wooshin got up to join them. "You not eat?" he asked the defendant.

Blacktooth shook his head and remained seated.

Before the meal was finished, Levion came to the door and spoke to him: "Brother Medic says you should eat."

"No. Too sick."

"Stupid," said Levion. "Stupid and lucky," he added, more to himself than Blacktooth, as he turned back into the refectory. *Lucky?*

The word lingered in his mind, but he could not find an application for it.

There was a faintly audible reading by the lector; then supper ended. Except for the members of the tribunal, the monks filed silently out of the refectory. This time Blacktooth made bold to watch them go, but nobody, not even Wren or Singing Cow, looked down at him in passing. The last man out closed the door. The proceedings resumed.

Soon the door opened again. Someone stepped outside and stood there. Blacktooth looked up, saw a freckled face, graying red hair, and a splash of scarlet. Blue-green eyes were staring at him. Blacktooth arose with a gasp and tried to genuflect with a leg that had gone to sleep. Elia Cardinal Brownpony caught his arm as he stumbled.

"Your Eminence!" he croaked, and tried again to bow.

"Sit down. You're not well yet. I want to talk to you for a moment."

"Certainly, m'Lord."

Blacktooth remained standing, so the cardinal himself sat on the bench and tugged at the monk's

sleeve until he sank beside him.

"I understand you have trouble with obedience."

"That has been true, m'Lord."

"Has it always been thus?"

"I—I'm not sure. I suppose so, yes."

"You *did* begin by running away from home."

"I was thinking of that, m'Lord. But when I came here, I tried to obey. At first."

"But you tired of your assigned work."

"Yes. That is no excuse, but yes."

The cardinal shifted into Grasshopper dialect, with a Jackrabbit accent. "You speak and write well in several languages, I'm told."

"I seem to get along fairly well, Your Eminence, except I'm weak in ancient English," he answered in the same tongue.

"Well, you know, most of our present dialects are at least half old English," said the cardinal, lapsing into Rockymount. "It's just that the pronunciation has changed, and melted in with Spanish, and some think a bit of Mongolian, especially in Nomadic. Although I have my doubts about the myth of a Bayring Horde."

Silence fell while the cardinal seemed to muse. Do you suppose you could serve obediently as someone's interpreter? It would not involve hunching over a copy table for hours at a time, but you would have to translate on paper as well as interpret the spoken word."

Blacktooth mopped his face again with Wooshin's waste and began crying. The cardinal allowed him to sob quietly until he regained control. Was this what Levion meant by "lucky"?

"Do you think you could obey me, for example?"

Blacktooth choked, "What good is a promise of mine? I broke all my vows but one."

"Which one is that, if you don't mind saying?"

"I have never had a woman, or a man. When I was a boy, I was had, though." Torrildo's accusing face came to mind as he said it, but he rejected the self-accusation.

The Red Deacon laughed. "What about solitary unchastity?" Seeing Blacktooth's face change, he hastily added, "Forgive the joke. I'm asking you seriously whether you want to leave this place forever."

"Forever?"

"Well, at least for a very long time, with no reason to expect the Order would take you back even if you wanted to come."

"I have nowhere to go, m'Lord. That's why I came back from the Mesa."

"Your abbot will release you to come to Valana with me, but you must promise to obey, and I must believe your promise. You cannot be laicized yet. You will be my servant."

Once more, the copyist was overwhelmed by tears.

"Well, it's now or never," said the cardinal.

"I promise," he choked, "to do my best to obey you, m'Lord."

Brownpony stood up. "I'm sorry. What is 'your best'? You can't be allowed to decide that for yourself. That makes it a crippled promise. No, it won't do." He started toward the refectory door. Blacktooth fell to the floor, crawled after him, and clutched the hem of his cassock. "I swear before God," he gasped. "May the Holy Mother abandon me, may the saints all curse me, if I fail. I promise to obey you, m'Lord. I promise!"

The cardinal studied him contemptuously for a moment.

"All right, get up then, and come with me, Brother Groveler. Here, this way, give me your arm. Come on through the doorway. Face them, Blacktooth. Now."

Feverish and dizzy, Blacktooth stepped into the refectory, walked a few steps toward the abbot's table, looked at their faces, and fainted.

He was awakened by a voice saying, "Give him this when he comes to, Father." It was Brother Surgeon.

"All right, go see your other patient," said Prior Olshuen.

"I'm awake," said Blacktooth, and sat up by candlelight as the only occupant of the three-bed infirmary. Brother Surgeon came back to his bedside, felt his forehead, and handed him a glass of milky green liquid.

"What is it?"

"Willow bark, tincture of hemp leaves, poppy juice, alcohol. You're not very sick. You can go back to your cell tomorrow if you want to."

"No," said the prior. "You've got to have him well enough to leave in three days. Otherwise, we'll be stuck with him until the next stage to Valana." He turned to Blacktooth, his voice turning cold. "You are confined. Your meals will be brought to you. You will not speak to anyone not in authority over you. If a sick brother needs one of the other beds here, then you will return to your cell. When you leave us, you will take your breviary, your beads, your toilet articles, sandals, and a blanket, but you will exchange your habit for that of a novice. You will remain indefinitely in the custody of your benefactor, Cardinal Brownpony, without whose intercession you would be under interdict and shunned. Is that clear?"

Blacktooth looked at the man who had been his teacher and protector in his youth, and nodded.

"Do you have anything else to say to us?"

"I would like to confess."

The prior frowned, almost shook his head, then said, "Wait until the medicine wears off. I'll ask Dom Jarad about it."

In a very weak voice: "May I have your blessing, then?"

Olshuen stood a moment in angry indecision, then whispered, "*Benedicat te, omnipotens Deus, Pater et Filius et Spiritus Sanctus,*" traced a tiny cross in the air, and departed.

## CHAPTER 5

But if he is not healed even in this way, then let the Abbot use the knife of amputation, according to the Apostle's words, "pel the evil one from your midst ... let him depart," lest one diseased sheep contaminate the whole flock.

—*Saint Benedict's Rule*, Chapter 28

UNDER THE WITHERING GAZE OF HIS FORMER brethren, Blacktooth at last left his cell with his small bundle and made his way into the sunlit courtyard where the Red Deacon's coach was made ready for departure. While he was helping the driver lash his meager belongings to the top of the carriage, he overheard the voice of Singing Cow, just out of sight, talking to a newly arrived postulant who worked in the library.

"He tried persuasion at first, I'll grant that," his former comrade explained. "And when persuasion didn't get him out, he tried violence. And when violence didn't get him out, he tried sodomy. I heard *that* from a witness. But sodomy didn't get him out either, or stealing, or running away. So he inserted a gloss into a copy of the Venerable Boedullus."

"Without attribution?" gasped the assistant librarian.

"Despicable, isn't it," said Singing Cow.

"It wasn't Boedullus!" Blacktooth howled. "It was only Duren!"

Blacktooth rode with the driver as they bumped along the north road toward the mountain passes. He never once looked back at the abbey. The Axe was with them, sometimes driving when Holy Madness rode the cardinal's horse, sometimes riding inside the coach when the cardinal chose to be in the saddle. Both Wooshin and the Nomad treated the disgraced monk with courtesy, but he had as little

intercourse as possible with Brownpony or his clerical companion.

One morning when they had been three days on the road, Wooshin said to him, "You hide from Cardinal. Why you shun? You know he saved you neck back there. Abbot wring like a chicken, except Cardinal save you. Why you afraid him?"

Blacktooth began to deny it, but heard an inner cock's crow. Wooshin was right. To him, Brownpony represented the authority of the Church, previously wielded by Dom Jarad, and he was tired of the obedience which he had been forced to swear again to save himself. But it was necessary to separate the office from the man. After Wooshin's remarks, he stopped shrinking from his rescuer, and exchanged polite greetings in the mornings. But the cardinal, sensing his discomfort, for the most part ignored his presence during much of the journey.

Sometimes Wooshin and the Nomad wrestled or fought for sport with staves. The Nomad called him Axe, which no one at the abbey had dared to do, and Wooshin seemed not to object to the nickname, as long as it was not prefixed by "Brother." In spite of his age and apparent frailty, the Axe was the inevitable winner of these bouts by firelight, and made the Nomad appear so clumsy that Blacktooth once accepted an offer to try fencing the driver with staves. The driver not-so-clumsily whacked him six times and left him sitting in hot ashes while Wooshin and the cardinal laughed.

Let Wooshin teach you," said Brownpony. "In Valana, you may need to defend yourself. You've lived in a cloister, and you're soft. In turn, you help him work on his Rockymount accent."

Blacktooth protested politely, but the cardinal was insistent. So the fencing and language lessons began. "You ready die now?" the Brother Axe asked cheerfully at the beginning of each session, as if he had always asked it of his customers. Afterward, they talked a lot in Rockymount.

But it was with Holy (Little Bear) Madness, the driver, that Blacktooth felt most comfortable, reckoning him to be a servant of no rank or status, and the two struck up an acquaintance. His name in Nomadic was Chür (Ösle) Høngan, and he called Blacktooth "Nimmy," which in Nomadic approximated the word "kid," meaning one who had not yet endured the rites of passage into manhood, Blacktooth was scarcely younger than Holy Madness, but he did not take offense. It's true, he thought; I am a thirty-five-year-old teenager. So the abbot had reminded him. As far as experience in the world was concerned, he might as well have been in prison since childhood. But frightened of an unknowable future, he was already homesick for that prison.

Life at the monastery had not really been equal parts prayer, hard labor, and groveling, as he had told himself. He had done things there he loved to do. He loved the formal prayer of the Church. He sang well, and while he tried to merge his voice in that of the choir, his was the clear tenor that defined itself by its absence when the choir divided into two groups singing the ancient psalms in a dialogue of verse and response. The group without Blacktooth missed him. And on three occasions when there were important guests at the abbey, Blacktooth, at the abbot's request, had sung alone for everyone—once in the Church and twice at supper. In the refectory, he had sung Nomad songs with his own embellishments affiliated to childhood memories. He refused to take pride in this, but his Satan took it anyway. While at the abbey, he had made a stringed instrument much like the one his father had given him. He hedged its Nomad origin by naming it after King David's *chitara*, but pronouncing it "g'tara." It was among the few belongings he had brought with him, and he strummed it a little during the trip, when Brownpony was away on his horse. He was averse to doing anything which might make him seem ridiculous to Brownpony, and he wondered about this aversion.

Some of the territory claimed by right of conquest as part of the Texark Province was not well defined, and the ill-defined area between the sources of the Bay Ghost and Nady Ann Rivers and the mountains to the west was a kind of no-man's-land, where low-intensity warfare persisted at times among poor fugitive tribes of the Grasshopper who had refused to take up farming, Nomadic outlaws, also mostly Grasshopper refugees, and Texark cavalry sometimes joined by Wilddog war parties in pursuit of raiders. The cardinal's party carefully skirted the western edge of this area, for Brownpony claimed without much explanation that the mountains, especially the moist and fertile Suckamint Range were well defended by exiles from the east, of non-Nomadic origin. It was also true that Nomads were

superstitious about mountains and stayed away from their heights. The trail led through the foothills, and the nights were cold. But there was much more life here than on the surrounding desert. From occasional horse-apple trees and scrub oak, the flora began proliferating and growing taller. Devoid of foliage at present, cottonwood, willow, and catalpa-bean trees flourished adjacent to creekbeds, while high upon the snowy mountainsides one could make out the trunks of mighty snow-clad conifers. There were a number of streams to ford, some flowing eastward, trickles of water edged by ice, and some were mere dry washes that would flow only during a flash flood in the foothills. The spring thaw had barely begun. All but the largest creeks would evaporate in the dry land to the east, where a small child could wade through a year's rainfall without wetting its knees.

As they gained altitude on their northward journey, it began to snow lightly. The Nomad took the stallion and began exploring side trails. Before evening, he returned with news of some abandoned buildings less than an hour from the main road. So they turned off the papal highway and drove a few miles along a rough trail until they came to a rickety village. Several spotted children and a dog with two tails fled to their homes. Brownpony looked questions at Chür Høngan, who said, "There was nobody here when I was here a while ago."

"They were hiding from an obvious Nomad," the Red Deacon said, smiling.

But then a woman with one large blue eye and one small red eye came out of a hut to meet them with a pike and bared teeth. A hunchback with a musket limped rapidly after her. Blacktooth knew that the cardinal had a pistol well hidden in the upholstery, but he let it alone. He looked around at half a dozen sickly-looking people.

*Gennies!*" gasped Father e'Laiden, who had just awakened from a snooze in the carriage. There was no contempt in his voice, but it was the wrong word to utter at the moment.

This was obviously a small colony of genetically handicapped, fugitives from the overpopulated Valley of the Misborn, which was now called the Watchitah Nation since its boundaries were fixed by treaty. There were pockets of such fugitives throughout the land, and they were usually at defensive war with all strangers. The hunchback lifted his musket and aimed first at Chür Høngan, who was driving, then at Blacktooth.

"Both of you get down. And the others inside, get out!" The woman's voice dog-whined the Valley version of the Ol'zark dialect, confirming their origins. She was as dangerous as a whipped cur, Blacktooth sensed. He could smell the fear.

Everyone obeyed except the Axe, who was freshly missing. The executioner had been riding Brownpony's horse only moments before. At the woman's call, a blond young girl came and searched them for weapons. She was lovely and golden, with no apparent defects, and Blacktooth blushed as her soft hands patted his body. She noticed his blush, grinned in his face, pushed close, seized and squeezed his member, then darted away with his rosary. The woman angrily called her back, but the girl was gone long enough to have hidden his beads. Blacktooth was almost certain the girl was a spook, that is, a Valley-born genny who passes for normal.

He remembered stories he had heard of ogres, perverts, homicidal maniacs among the gennies. Some of the stories were filthy jokes, and most of them were told by bigots. But, having heard the stories, he could feel the shame from them, but not forget in the face of these menacing figures that one or another of the stories came true from time to time. Anything was possible.

Brownpony stirred at last, stepped down from the carriage, and with some majesty put on his red cap. He said to them, "We are Churchmen from Valana, my children. We have no weapons. We seek refuge from the weather, and we shall pay you well for shelter and a cooking fire."

The old woman seemed not to hear him. "Get all their belongings, from inside and on top," the woman told the girl in the same tone.

The cardinal turned to the girl. "You know who I am, and I know who you are," he said to her. "I am Elia Brownpony of the Secretariat."

She shook her head.

"You never met me, but you do know of me."

"I don't believe you," she said.

"Move!" said the old woman.

The girl climbed inside and began throwing out clothing and other belongings, including Blacktooth's *chitara*, then thrust out her head and asked, "Books?"

"Those too."

Brownpony's concealed pistol would be next, Blacktooth thought, as he wondered why Brownpony insisted that he was known to the girl. He was not self-important, not an egoist who expected to be recognized everywhere. For now the cardinal shrugged and stopped protesting. Apparently, the girl never found the pistol.

Suddenly a muffled cry came from the direction of the largest hut in the cluster. The deformed woman looked around. An old man with mottled skin and white hair appeared in the doorway. Behind him stood Wooshin with his forearm against the old man's throat. The Axe could almost make himself invisible. Having circled the village and approached from the rear, he held up his short sword for their edification. Evidently this was the chief of the village, for the woman and the hunchback immediately dropped their weapons.

"You must not rob them, Linura," the old man scolded. "It's one thing to take their weapons, but—" He broke off as Wooshin shook him and brandished the sword.

The woman fell to her knees. The girl ran. She came back with a pitchfork, darted behind Brownpony, and pressed the tines against his back. "My father for your priest," she yelled to the headsman.

"Put your knife away, Wooshin," Brownpony called, and turned to face the girl. She jabbed him lightly in the stomach and bared her gritted teeth in warning.

"Are you not the Pope's children?" asked the cardinal, using the ancient euphemism for the misborn. He turned about, his arms spread wide, facing each of them. "Would you harm the servants of Christ and your Pope?"

"For shame, Linura, for shame, Ædrea!" hooted the old man. "You will get us all killed or driven back to the Watchitah by acting this way." Then to the girl: "Ædrea, put that away. Also take care of their horses, then fetch us some beer. Now!"

The older woman lowered her head. "I only meant to search their baggage for arms."

"Put your knife away, 'Shin," the cardinal said again.

"I want my rosary and my g'tara back," said Blacktooth to the girl, who ignored him.

The old man advanced to kiss the Red Deacon's ring, found none, and kissed his hand instead. "I am called Shard. That is our family's name. You will be welcome to stay in my house until the snow stops. We have not much to eat just now, after the winter, but Ædrea can perhaps kill a deer." He turned to the old woman with his arm raised as if to cuff her. She gave the musket to the girl and hurried away.

"We carry corn, beans, and monks' cheese," said Brownpony. "We'll share with you. Tomorrow is Ash Wednesday, so we'll need no meat. Two of us can sleep in the carriage. We have tarpaulins to protect it from the cold wind. We thank you, and pray the weather lets us leave soon."

Please forgive the rude welcome," said the mottled man. "We

are often visited by a small bands of Nomads, drunks or outlaws. Most of them are superstitious, and fear the flag." He pointed to the yellow and green banner that flew from the gable of his home. It bore the papal keys, and a ring of seven hands. As a warning of papal protection, it had become the flag of the Watchitah Nation. "Even those who don't fear it soon see we have nothing of value, except a girl, and leave us in peace, but my sister trusts no one. But three days ago, we were visited by Texark agents posing as priests. We knew they were sent to spy on us, so we have been very suspicious."

"What happened?"

"They wanted to know how many of us lived in these hills. I told them just one other family a quarter-hour walk up the trail. I advised them not to go back there, that the bear boy was dangerous, but they insisted. Only two of them came back an hour later, and they were in a hurry to leave."

"Do you really think the Hannegan would chase Valley runaways this far outside the Empire?"

"We know it. Others have been killed closer to the Province. Filpeo Harq exploits people's hatred for gennies, and calls us criminals because we fought our way out of the Valley. Some of his guards were

killed."

While they were unhitching the horses, Blacktooth noticed two cows with shaggy coats in a pen next to the barn. They were not ordinary farm animals, and appeared to be Nomad cattle. But Nomad cows would have kicked and butted their way out through the boards of the fence by now, so he decided they must be hybrids. Or genny animals, like their genny owners. For that matter, the Nomad cattle probably descended from a few successful freaks. Sometimes, rarely, an apparent monster, whether man or beast, proved to have superior survival value.

The gennies' hospitality improved sharply after the bad beginning. Apparently not of Shard's family, the hunchback had disappeared. Soon Ædrea had killed a fawn; she brought a cup of its blood into the house and presented it to Chür Høngan, who looked at it in frozen silence.

The cardinal was turning red as he choked back laughter. When the Nomad looked at him, Brownpony hid his mouth. Høngan snorted at him and took the deer blood from the girl. Growling at her, he frowned mightily and downed it at a gulp. The girl stepped back as if in awe. The Red Deacon's laughter exploded, and after a moment they were all laughing except Ædrea.

"Well, Nomads drink blood, don't they?" she demanded. Blushing at the laughter, she went to dress the fawn.

"Some do," said Holy Madness. "On ceremonial occasions."

After an evening meal of veal-tender venison, black bread, peas, and mugs of cloudy home brew, they talked again, crowding around the fire in Shard's house. Only the Nomad was missing; pretending to speak little Ol'zark, he had taken his blanket roll and gone to bed early in the carriage after losing a drawing of lots for a place in the house. The other loser was Blacktooth, who was glad to sleep away from a headsman, a cardinal, a crazy priest, and several portents, including a pretty female tease.

The common language among them was Ol'zark, but when Shard asked the Oriental a question, Wooshin replied in broken Churchspeak. After this had happened three times, Brownpony turned to him and said, "Wooshin, speak the language of our hosts. That language is Ol'zark Valleyspeak of the Watchitah Nation."

The Axe bristled and stared at Brownpony, who gazed at him evenly. "Valleyspeak is the language of our hosts," he repeated.

Wooshin looked down at the floor. The room was dead silent. He looked up, then, and said in flawless Texark, "Good simpleton, the answer to your question is that by profession I was a seaman and a warrior. But in my later years I cut off heads for the Mayor of Texark."

"And how did you sink to that, Ser?" asked a thin voice from Ædrea.

Wooshin looked at her without anger.

"Not sink, not rise," he said in bad Churchspeak, then returning to her tongue: "Death is the way of the warrior, girl. There is no honor in it, nor any dishonor, if one is just being oneself."

"But to do it for the Hannegan?"

Wooshin's normal expression was relaxed, alert, about-to-smile, wrinkled about the eyes, humorous, scrutinizing. But now it was as frozen as a corpse. Facing Ædrea, he arose slowly and bowed to her. Blacktooth felt his scalp crawl.

Then the Axe looked at the Red Deacon as if to say "See what you made me do!" and went to take a walk in the night. It was the last time the old manslayer ever resisted speaking Ol'zark, but Blacktooth noticed that when he did so, he always imitated Shard's accent, and he called it Valleyspeak. He treated Ædrea with extreme courtesy during their stay. There was no mistaking the bitterness of his regret, but regret for what? Blacktooth was unsure.

After two days of intermittent light snow, they stayed at Arch Hollow, as the Shards called it, for six days, while Chür Høngan spent most his time riding out to investigate the conditions along the trail. Wooshin too was gone most of the time, but made no account of his activities, unless to the cardinal in secret. It seemed best to wait until other passing traffic began to shovel its way along in the near vicinity.

On the second night they sat around the fire in the center of Shard's lodge. Brownpony tried to elicit the family's story without asking too many questions. His skill in conversation soon led Shard into

recounting his family's adventures since the famine and the exodus. There had been a mass escape attempt ten years ago. At least two hundred were hunted down and killed by Texark troops as they fled through forests and up streambeds across the crest of the ridge. At least twice as many escaped the troops that were there both to protect the Watchitah people against intruders and to prevent the escape of the gennies. The Valley was more than a valley; it was a small nation which had kept the name of its place of origin until the conquest. No one had counted the population, but Shard called it a quarter of a million, causing Brownpony to raise an eyebrow. Fifty thousand was closer to popular consensus.

"The approaches to the Watchitah are well guarded by the Hannegan, but the patrols could not catch so many at one time," said Shard. "Probably half of the dead were killed by Texark troops and the others lynched by farmers. Ædrea, of course, could have escaped by passing for normal, becoming a 'spook.' My daughter is very brave to remain with us. The spooks among us are the ones most hated and feared. They can marry unsuspecting normals and pass on the curse, give birth to monsters."

"How safe are you here from the natives?" Brownpony wondered. "I think of this as outlaw country."

"It was, and is, to some extent. The nearest town is two days away. They know we're here. The priest visits us every month, except in winter. He and the baron govern the town. There has been no trouble. Only Ædrea goes to town. Of course she wears the green headband. We're south of the Denver Republic, but the Church is respected here more than in the Empire. The papal highway is patrolled, of course. Still, there are occasional outlaws, but they are looking for traveling merchants. We have nothing here to invite robbery."

"Are there more of you living near here?"

"You saw the hunchback, Cortus. His family lives next door. But the only family behind us is the one with the bear boy."

"Shard, I am the Secretary for Extraordinary Ecclesiastical Concerns."

The old man looked at him with suspicion. "If you really are, then you don't need to ask such a question."

The monk could feel a tension bordering on hostility in the room but it passed in silence. It seemed clear Shard was lying about the presence of other gennies in the region.

After the dishes had been washed outside in the snow, Linura entered and sat beside, but a little behind, her brother. Then Ædrea came in and dropped cross-legged on the floor beside Blacktooth, who stirred restlessly and almost stopped listening. He wanted his rosary back. Her girl-smell teased his nostrils. Her knees were shiny by firelight. When she noticed his gaze, she pulled a blanket over her lap, but smiled briefly into his eyes before attending the conversation again. Remembering that this coy creature had grabbed his penis at their first encounter, he nudged her.

"Rosary back!" he whispered fiercely.

She giggled and nudged back, hard.

"I've often wondered about life in the Valley," the Red Deacon was saying.

"There is more death than life there, m'Lord Cardinal," Shard answered. "Few who live there want to risk giving birth. A normal birth is rare. Most die. Others are too feeble to want life. If it were not for the influx, the Watchitah would soon be empty."

"Influx? From where?"

"You must know, m'Lord."

Brownpony nodded. Many people in families of registered pedigree nonetheless had accursed offspring. Lest they lose their registration with the keepers of such records, families without fear of the Church killed their malformed babies. But often there were children whose deformities could be concealed for a time, and these were sent to the Valley at a later age by the pious. Monks and nuns often brought them. People who lived near the Watchitah hated and feared the inhabitants, especially the near-normal among them. Blacktooth noticed that everyone was glancing at Ædrea.

"Forgive me, daughter," Brownpony murmured when she met his eyes.

"I don't like admitting it," Shard was saying, "but the patrols who guard the passes were as much our protectors as our jailers. But they did nothing to help us when famine came."

And the Church?" said the Red Deacon. "Too busy with its own schism to be of much help to anyone."

"Well, of course we were cut off from papal protection, but the Archbishop of Texark did send in some supplies. I think he is not a cruel man, perhaps only powerless."

"You cannot imagine how powerless is Cardinal Archbishop Benefez," Father e'Laiden sighed.

Blacktooth glanced quickly at the priest, certain that he was being sardonic and meant the opposite of what he said. Benefez had behind him the power of the Hannegans. And e'Laiden spoke Texark like a native, which he probably was, although his command of Wild-dog Nomadic meant he had lived long on the High Plains.

"My rosary!" Blacktooth whispered angrily.

She winked at him and grinned. "I hid it in the barn. You can have it tomorrow."

The way she looked at him brought on an eruption of horniness, and he felt his face turning red. Blacktooth feared her. Many deformities recurred, and many were genetically connected. Various writers had made lists. There was one mutation in which great physical beauty was coupled with a defect in the brain, the most notable symptom of which was the onset of criminal insanity a few years after puberty. He stole a glance at her, but she caught him at it, and flicked her tongue and smirked. She might not be crazy, but she was a she-devil. He wanted to go to the carriage and to bed, but he was ashamed to stand up at the moment. At last he prayed his erection away and mumbled good night to the others. Ædrea followed him outside, but he fled into the latrine, then climbed out the back window. He was immediately seized by the hunchback and another creature and dragged away toward another house with a lighted doorway. Nearly fainting with fright, he heard the hunchback whisper hoarsely that someone needed absolution.

"But I am not a priest!" he protested. In vain. They dragged him into the house of Shard's neighbor.

The hunchback and his companion released Blacktooth after pushing him inside, and they stood blocking the door. The monk could only sit down on a stool pointed out to him, and from there await developments. There was firelight and a lantern. There was a wrinkled old man with a scraggly beard in the room, who said his name was Tempus. He pointed out the others. There was his wife. Irene, whose face was a permanent scar. There were Ululata, and Pustria, females both of portentous mein. The hunchback was called Cortus, and his companion Barlo. They were all siblings or cousins or half-siblings. Barlo had a terrible itch, especially in the genital area. Tempus shouted at him to stop masturbating, but the words had no effect on the creature.

God in His wisdom had given Ululata a deformed foot, although He had in all other ways given her the proportions of the divine image in His mind of God in mercy. But the foot was not something you would want to walk with. "God is thus," said the father.

The father had given her crutches. To him, God had given seven fingers, which he displayed to the monk, a third useless eye, and four testicles with two healthy penes, all of which he exhibited. Pustria was Ululata's half-sister, according to their faithful mother's best memory of their conceptions under the weight of the same sire. Pustria was deformed only by blindness, and Mother Irene was partial to Pustria because Pustria could not see her mother's face, a mask of scab of which Mother Irene was not proud. "God is thus, since the deluge of fire and ice," said the father.

Barlo was in need of absolution, Tempus explained, in order to make him stop masturbating. Blacktooth explained that he could not absolve anybody, and that absolution would not have the effect that Tempus desired. Tempus was adamant. Blacktooth would not be allowed to leave until he performed.

"Will you let me go then, immediately?" he demanded.

Tempus nodded gravely and crossed his heart. Nimmy closed his eyes for a moment and tried to summon a little Latin.

"*Labores semper tecum,*" he said in the softest voice he could muster. "*Igni etiam aqua interdictus tu. Semper super capitem tuum feces descendant avium.*"

"Amen," Tempus said in echo to this malediction.

Nimmy got up and left. At the moment, he was not particularly ashamed of wishing eternal suffering

on the man, of pronouncing a dire sentence of exile, and calling down upon the head of Barlo a perpetual rain of birdshit; the glep who was still scratching his crotch followed him at a distance.

Chür Høngan was already asleep. Blacktooth had drawn lots with Wooshin and lost the third place indoors. He was relieved things had turned out so, especially after his escape from the clutches of the hunchback's family. If he must sleep in the cold carriage, he preferred to sleep with the Nomad. Although, during his waking hours, he had lost his fear of the killer of hundreds, the Brother Axe still haunted his dreams. Sometimes he dreamed he himself was the executioner, chopping heads for Hannegan with a mighty sword, but that night in the carriage, he dreamed he was Pontius Pilate, and Wooshin the headsman stood beside him as Marcus the Centurion, confronted by a pretender to the Kingdom of God among the Nomads.

Kings of the Nomads were common in those days. He crucified not one but four of them during his lucrative career in south Texas-Judea. The first case was the hardest for him, and sad; Blacktooth-Pilate was like a boy killing his first deer. Because the pretender was harmless, the case was jinxed by the scruples of his wife. He had wanted to set the first one free. It was easier to kill the ones that followed, and certainly necessary to show that kings were made by Texark and not by tribal gods. He always asked them the same question. The first one could not or would not answer, and merely stood looking at him. The second to be crucified was more talkative.

"What is truth?" asked Blacktooth.

"Truth is the essence of all true statements," said the second King of the Nomads. "Falsehood is the essence of all false statements. Without saying anything, there is neither true nor false. I offer Your Majesty my silence."

"Crucify him," said Pilate, "with prejudice. And get it right this time. Wrap his arms and legs around the cross. That's the way it shows in the Texark Procurators' Handbook. Of course, that's not enough for you new recruits these days. You have to know why. Well, I'll tell you why.

"Nailing the hands to the back of the cross is sound engineering principle and sound governmental policy because when you nail the hands in front the weight of the body hangs on the nails, they tear, unless you also nail the forearm; but when you wrap the arms across the top of the cross and nail them from behind, the weight of the body hangs from the arm on the crossbar, and the nail does nothing but keep the arm in place. That way, you can smash his bones better when it's time to go home from work. Do it the Texark way, men; the Texark way is the eternal way. Let's carry out the sentence with some snap this time."

"Hail to the Hannegan!" said Marcus the Axe.

"Hail Texark! Next case."

Pontius felt better after that. Half-awake by now, he knew he was dreaming, but let the dream go on. The fellow's silly explanation of truth probably had nothing to do with the silence of the first King of the Nomads, but it noisily invoked silence as policy and thus took some of the sting out of Pilate's remembrance of the first one's half-smiling gaze, which had seemed to say to him at the time nothing philosophical at all but had expressed an utterly intimate, infinite regress of "I who look at you who look at me who look at you . . ." His wife Ædrea had been frightened by the same look. It was perhaps sexy, and for that very reason insulting to those whose duty it was to see such scum as loathsome.

"What is truth?" said Pilate to the third King of the Nomads.

"Root for pearls, Texark pig!"

Blacktooth-Pilate had no qualms at all with that one.

He woke up thinking about Ædrea instead—and their coming assignation in a hayloft. A prank. Drowsily, he remembered hearing Brother Gimpus argue that a detachment from sexual passion was the essence of chastity, and that detachment was possible without abstinence. Brother Gimpus was caught naked with an ugly widow in the village who claimed she paid him every Wednesday for the eighth sacrament. "Rest in peace," Blacktooth whispered against the pillow.

## CHAPTER 6

Nevertheless, keeping in view the needs of weaker brethren, we believe that a hemina of wine a day is sufficient for each.

—*Saint Benedict's Rule*, Chapter 40

HÜR HØNGAN WAS STILL ASLEEP WHEN Blacktooth started up, fully awakened by hoofbeats, which stopped near the carriage. Then he heard voices speaking softly in Grasshopper. They were talking about Shard's cows in the pen next to the barn, until something excited them and there was another burst of hoof-beats, followed by the screams of Ædrea. The monk pulled at the edge of the tarp and peered outside. A few flakes of snow were still falling in the faint morning light. There were three horsemen, obviously Nomads. Two of them held the kicking girl suspended by her arms between them. Shard began yelling protests from afar, and the hunchback ran out with his musket. Blacktooth turned to awaken Høngan, but he was already up and moving, putting on his wolfskins and the leather helmet with small horns and a metal ornament. He usually wore the hat only when mounted. Blacktooth thrust his hand deep into the upholstery and felt the Red Deacon's handgun. The girl had missed it.

Chür Høngan climbed out the other door and came into their view from behind the coach, yelling at the renegades in the Wilddog of the High Plains.

"In the name of the Wilddog sharf and his mother, put her down! I command you, motherless ones! Dismount!"

Blacktooth raised the cardinal's weapon, but his hand was shaking badly. The Nomad not involved with the girl lifted his musket, looked closely at Holy Madness, then dropped the weapon to the ground. The others eased the girl onto her feet, and she promptly ran away. The riders slowly dismounted, and the apparent leader fell to his knees before the advancing Høngan.

He spoke now in Høngan's dialect. "O Little Bear's kin, Sire of the Day Maiden, we meant her no harm. We saw those cows over there and thought they were ours. We were only teasing the girl."

"Only a teasing little rape, perhaps? Apologize and leave here at once. You know those tame cows are not yours. You are motherless. You ride unbranded horses. I heard you speaking Grasshopper, so you don't belong anywhere near here. Never bother these people; they are children of the Pope, with whom the free hordes have treaties."

The visitors complied immediately and were gone. The incident had lasted not more than five minutes, but Blacktooth was astounded. He climbed out of the carriage. Chür Ösle Høngan leaned against the coach and gazed absently after them as they rode away toward the main trail through a sprinkle of snow.

"They're Grasshopper outlaws, but they knew you! Who *are* you?" Blacktooth asked in awe.

The Nomad smiled at him. "You know my name."

"What was that they called you?"

"'Sire of the Day Maiden'? Have you never heard that before?"

"Of course. It's what one calls one's sharf."

"Or even one's own uncle, on some occasions."

"But motherless ones recognized you? Last night I dreamed of a king of the Nomads."

Hongan laughed. "I'm no king, Nimmy. Not yet. It's not me they recognized. *Just this*. He touched the metal ornament on the front of his helmet. "The clan of my mother." He smiled at Blacktooth. Nimmy,

my name is 'Holy Madness,' of the Little Bear motherline. Pronounce it in Jackrabbit."

"Cheer Honnyugan. But in Jackrabbit, it means Magic Madman.

"Just the last name. What does it sound like?"

"Honnyugan? *Hannegan*?"

"Just so. We're cousins," archly said the Nomad. "Don't tell anybody, and don't ever pronounce it in Jackrabbit again."

Cardinal Brownpony was approaching from the direction of Shard's house, and Chür Høngan went to meet him with a report of the incident. Blacktooth wondered if the Nomad was entirely teasing him. He had heard claims of the dynasty's ultimate Nomadic origin, but since Boedullus made no mention of it, that origin must have been in recent centuries. At least he knew now that Høngan was of a powerful motherline. His own family, displaced to the farms, had no insignia, and he had never studied the heraldry of the Plains. Something else that piqued his curiosity about the Nomad was his apparent close friendship with Father e'Laiden, who called him Bearcub. The priest had often ridden beside the Nomad when he was driving, and their talks were plainly personal but private. They had known each other well on the Plains. From fragments overheard, he decided that e'Laiden was formerly the Nomad's teacher, but no longer dared to play that role unasked, lest a grown-up and somewhat wicked student laugh in his face.

Blacktooth went to look for his rosary and g'tara in the barn, which was half buried in the side of a hill. Ædrea was not visible, but he could hear the muffled sound of strings being plucked. The floor was swept stone, and a small stream of spring water ran in a channel from beneath a closed door in the rear and out to the cattle pen outside the wall. Above the door was a hayloft. He opened the door and found himself in a root cellar, with a number of nearly empty bins containing some withered turnips, a pumpkin, and a few sprouting potatoes: the remains of last year's crops. And there were jars of preserved fruits—where could they have grown?—on the shelves. There were three barrels, some farm implements, and a pile of straw for layering vegetables. There was no one here. He turned to go, but Ædrea slipped down from the hayloft and confronted him as he started to leave. Nimmy looked at her and backed away. In spite of the weather, she was wearing nothing but a short leather skirt, a bright grin, and his rosary as a necklace.

He backed away. "Wh-where's the g'tara?"

"In the loft. It's more comfortable up there. You can snuggle down in the hay. Come on."

"The air's warmer in here than outside."

"All right." She came in and closed the door behind her, leaving them in pitch darkness.

"Haven't you a lamp or candle?"

She laughed, and he felt her hands exploring him. "Can't you see in the dark? I can."

"No. Please. How can you?"

Her hands withdrew. "How can I what?"

"See in the dark."

"I'm a genny, you know. Some of us can do that. It's not really seeing, though. I just know where I am. But I can see the halo around you. You're one of us."

"Us who?"

"You're a genny with a halo."

"I'm not—" He broke off, hearing her rustling skirt in the darkness, then the scratch of flint on steel and a spark. After several sparks, she managed to kindle a bit of tinder and used it to light a tallow taper. Nimmy relaxed slightly. She took down two clay cups from a shelf and turned the spigot on one of the barrels.

"Let's drink a glass of berry wine."

"I'm not really thirsty."

"It's not for thirst, silly. It's for getting drunk."

"I'm not supposed to do that."

She handed him the cup and sat down in the straw.

My g'tara—

"Oh, all right. Wait here. I'll get it."

He nervously gulped the wine while she was gone. It was strong, sweet, tasted of resin, and was immediately relaxing. She came back in with his g'tara, but held it away when he reached for it.

"You have to play it for me."

He sighed. "All right. Just once. What shall I play?"

" 'Pour Me Another Before We Do It Brother.' "

Nimmy poured another cup of wine and handed it to her.

"That's the name of the song, silly."

"I don't know it."

"Well, play anything." She flopped down in the straw. Her skirt came up. By candlelight he could see under it. She wasn't wearing anything there. But something was unusual. He hadn't seen a girl that way since he was a child, but it wasn't the way he remembered. He looked at her, the g'tara, the cup of wine in his hand, and the candle. he gulped the wine, and poured another.

"Play a love song."

He gulped again, set the cup aside, and began plucking the strings. He didn't know any love songs, so he began singing the opening lines of Vergil's fourth eclogue to music he had composed himself.

When he got to the words *jam redit et Virgo*, she made a little puff of wind with her lips and blew out the candle from six feet away. He stopped in fright.

"Pour another cup of wine and come here."

Nimmy heard the liquid splashing into the cup, then realized he was doing it himself.

"You drink it," she said.

"How do I get out of here?"

"Well, you have to find the keyhole. It's not very big."

He fumbled in the area of the door.

"It's over here."

He felt her tugging at his sleeve, gulped the wine before he spilled it, and sprawled beside her in the darkness. "Where's the key?"

"Right here." She grabbed what she had grabbed when first they met. He didn't feel like resisting. They came together, but after a lot of fumbling, he said, "It won't fit!"

"I know. The surgeon fixed me so it won't, but it's fun anyway, isn't it?"

"Not much."

She sobbed. "You don't like me!"

"Yes I do, but it won't fit."

"That's all right," she sniffled, sliding lower in the straw. "Just come here."

He had not been so surprised since Torrildo's advances in the basement. Drunkenly, he feared at any moment Cardinal Brownpony would burst out of the broom closet and yell, "Aha! Caught you!" But nothing like that happened.

When he stumbled out of the barn with his virginity diminished, a smiling *Ædrea (semper virgo)* sat twirling his rosary, watched him from the hayloft until he crawled into the carriage and pulled down the tarp behind him. The term "against nature" insinuated itself into his tipsy consciousness. He had never been so drunk.

"Damn that witch!" he whispered when he awoke, but recoiled from the words at once. *I am my own witch!* quickly replaced them. Help me, Saint Isaac Edward Leibowitz. My Patron, I looked forward to entering that barn—pray for me. I was glad she stole my things. It gave me the excuse I needed to pursue her in pretended anger. The things she stole, I should have given her. I know this now. Why couldn't I have known it then? I wonder if I knew what I was doing with Torrildo too. I, or the devil in me. O Saint Leibowitz, intercede for me.

Blacktooth had fallen angrily in love. His sexuality had always been a mystery to him. He had wondered about his once deep affection for Torrildo, among others who once had been his friends at the abbey. His erotic dreams had more often involved enormous buttocks than enormous breasts, but now

he was suddenly smitten by a girl there was no doubt at all in his mind that it was the most powerful love he had ever felt except his love for the heart of the Virgin, a blasphemous comparison, but true. Or was that lust too?

In spite of their tryst in the root cellar, during the days that followed Ædrea responded to his enamored gaze with a self-satisfied smirk and a shake of her pretty head. He knew what she meant. She, as a bearer of the curse, was forbidden to fornicate with anyone outside the Valley. The penalty was mutilation or death. She had taken an awful chance in seducing him. But what they had done in the barn was only passionate play, not against the basic folklaw. Against his fractured vows, surely. She knew that. At the end, she teased him about how easily she overcame his vows. He knew he was still bound by the vows, and straying once was no excuse for straying again. But without more surgery, Ædrea was physically incapable of normal coitus. Her father had it done to her when she was a child, probably afraid that someone like Cortus or Barlo would rape her. O Holy Mother, pity us.

No one had seen them in the barn, but the pulsation of sexuality that happened whenever the girl and the monk came together did not escape the cardinal's attention. The Red Deacon caught him alone while Blacktooth was behind the coach lashing bundles in preparation for departure.

"It's time we talk, Nimmy. Excuse me, Blacktooth. I hear Høngan calling you Nimmy, and it seems to fit. How do you want to be called?"

Blacktooth shrugged. "I'm leaving an old life behind. I might as well leave my name behind. I don't mind."

"All right, Brother Nimmy. Just don't leave behind your promise of obedience. I remind you that Ædrea is a genny. Watch your step very closely here. I'll tell you, Shard's was not the first exodus here from the Valley. It's been happening for years. This place is more than it seems, and Ædrea is more than she seems."

"I had begun to suspect, m'Lord."

"You are not to intentionally see her again. If you ever see her again in Valana, avoid her." He commanded Blacktooth with his eyes.

"This has nothing to do with your vow of chastity, but let this help you keep it. They are hiding a large genny colony back there in the higher hills, but don't let them know that you know. They're frightened enough of us to be dangerous."

"Yes."

"And there's something else, Nimmy. Chür Ösle Høngan is an important man among his people, as you found out from those outlaws, but you were not supposed to know, and it is not known in Valana. Now I have to ask for your silence. There is a need for secrecy. He is an envoy to me from the Plains, but you must not tell that to anyone. He is just a driver I hired."

"I understand, m'Lord."

"Father e'Laiden is another matter. I had no need to read your mind to see your curiosity about him. About him, you must also say nothing. He grew his beard for this trip, to avoid recognition. I picked him up forty miles south of Valana, and will let him off at the same place, which will make you even more curious. Not even my friend Dom Jarad knows who he is. I've told travelers he's just a passenger to whom I gave a ride. You know I introduced him to Dom Jarad as my temporary secretary. No more of that. You will not mention him to anyone. If you meet him in Valana later without his beard, do not allow yourself to recognize him. His name is not e'Laiden, anyway. About these two men, you will be absolutely silent."

"I have had much practice at being silent, m'Lord."

"Yes, well, I took a big chance with you, Blacktooth. Nimmy. For now, your job is just to keep your mouth shut. I may find other uses for you in Valana."

"That would please me, m'Lord. I have felt useless for years."

Brownpony turned to look at him closely. "I am surprised to hear it. Your abbot told me you are quite religious, and seemed called to contemplation. Do you think that useless?"

"Not at all, but it's my turn to be surprised the abbot said I was called to it. He was very angry with me."

"Well, of course he was angry, partly at himself. Nimmy, he's sorry he made you do that silly Duren translation. He thought it would be useful."

"I told him otherwise."

"I know. He thought you were ducking hard work. Now he blames himself for your revolt. He's a good man, and he's really sorry the Order lost you. I know how humiliating it was for you at the end, but forgive him if you can."

"I do, but he didn't forgive me. I wasn't even allowed to confess."

"Not allowed by whom, Dom Jarad?"

"The prior said he would ask the abbot. I suppose he did."

"Nobody shrived you, eh? Well, Father e'Laiden can confess you if you can't wait until we get to Valana. I can imagine you need it by now."

Blacktooth blushed, wondering if the remark implied a reference to Ædrea. Of course it did!

He approached the old whitebeard priest later that day, but the cleric shook his head. "His Eminence forgets something. I'm not even supposed to say Mass. You have seen me do it, but I don't give the Eucharist, and I don't do confessions. Saying a private Mass is my own sin if it is one — not involving others."

A wild and sorrowful look came over the old man's face, as if he were at war within himself. Blacktooth had seen the look before and shivered. Father e'Laiden was just a little crazy.

Strange traveling companions, he thought. A priest under interdict, a seaman-headsman-warrior, a wild but aristocratic Nomad, a disgraced monk, and a cardinal who was not more than a deacon. Brownpony, Blacktooth, and Høngan were all of Nomadic extraction, and e'Laiden obviously had lived among Nomads. Holy Madness, whose mother's family was called Little Bear, and e'Laiden seemed old friends, and often talked of Nomad families known to both of them. Only the executioner was unrelated to the people of the Plains. Blacktooth was more puzzled than ever about the Red Deacon's intentions. The cardinal, he had learned, was head of the Secretariat of Extraordinary Ecclesiastical Concerns, an obscure and minor office of the Curia which he had heard someone call "the bureau of trivial intrigues."

After two days of light snow the skies cleared. There was bright sun and a breeze from the south. Three days later, the thaw was well under way. Chür Høngan was gone for half a day, then returned with an opinion that the highway was not impassable, although they might have to shovel slushy snow in a few places. Brownpony paid Shard a fair sum in coins from the papal mint, and the travelers took their leave of the village. Only the children, Shard, and Tempus watched them go. The monk's eyes searched in vain for Ædrea. He was sure she was angry because of his mixed feelings and his avoidance of her. He wanted to let her know he blamed only himself, but there was no way.

She was gone for good.

They were still closer to Leibowitz Abbey than to Valana when they left Arch Hollow, but progress was faster as the road improved. Several days later, everyone's breathing became labored as they approached the high passes. Something had happened to Earth's atmosphere since the catastrophic demise of the *Magna Civitas*. One could only gaze upward at, not climb to, ruins of ancient buildings on mountainsides far above the present tree line. Once the air had been more breathable. And of course Earth herself had changed, sickened by the wars that long ago brought the end of a world. A new world was rising, but it could not grow as fast as the old. Rich pockets of resources had been plundered and dispersed. Now ancient cities were mined for iron. Petroleum was always going to be scarce. Hannegan had needed to plunder his people for copper. Living creatures had become extinct or changed. The wolves of the desert and plains were known to be different breeds, even by those Nomads who wore "wolfskins" but called their nation "the Wilddog Horde." There was less forest and more grass in the world than before, but not even in the records of Leibowitz Abbey could one learn much about biology before the Flame Deluge and the great freeze that followed. The curse pronounced by God in Genesis had been renewed; Earth and Man were doubly fallen.

On the twentieth evening of their journey, Holy Madness saw *Nunshân*, the Night Hag. They made camp early, and Høngan had ridden ahead in the late afternoon to check the condition of the passes, and he came back ashen and babbling after sundown.

"I looked up, and there she was standing on a crag against the early stars. Ugly! I have never seen a woman so huge and ugly. There was a kind of black light around her, and I could see stars through it. The sun was behind a mountain, but the sky was still light. Then she cried out to me—a great sobbing sound, wild as a cougar."

"Maybe it was a cougar," said Brownpony. "This thin air can make you dizzy."

"Cougar? No, no, a horse! She was there, and then she was a black horse and galloped away, into the very sky, it seemed!"

Brownpony was silent, busying himself with a plate of beans. Blacktooth studied Chür Høngan's expression and found it excited but sincere. He had learned that the Nomad was at least nominally a Christian, but Nomad myths were not dispelled by baptism.

It was Father e'Laiden at last who spoke. "If you saw the Night Hag, who is dying?"

"The Pope is dying," said the Red Deacon.

"Does the *Nunshân* appear for popes, m'Lord?" asked Blacktooth, almost amused.

"It could be my father dying," the Nomad said quietly.

"God forbid," said the cardinal. "Granduncle Brokenfoot must be elected Lord of the Three Hordes, and become the successor of the War Sharf Høngan Ös." He looked quickly at Blacktooth. "This is something else you must forget you heard, Nimmy."

"I shall obey, m'Lord."

For Blacktooth, things were falling into place. There had been no Lord of the Three Hordes since the War Sharf Høngan Ös had led his neople to defeat against Hannegan the Conqueror seven decades ago, and been sacrificed by his own shamans. The Jackrabbit Horde had been completely subdued, as well as a few tribes, including Blacktooth's, of the Grasshopper Horde, and the descendants of these either lived within the Empire as small ranchers, or on the Denver Freestate farmlands. Without the participation of electors from the Jackrabbit Horde, the military and priestly office of the kingship could not be filled. The Hannegans had prevented this from happening. Blacktooth thought of his crazy dream in which he had been Pilate crucifying would-be kings of the Nomads. He believed in the meaningfulness of dreams; such was his Nomad heritage.

Now there were stirrings of rebellion from the conquered peoples, for whom the free Nomads had in Blacktooth's childhood years displayed only contempt. Chür Ösle Høngan, then, was a relative of Høngan Ös, and his motherline was qualified for the high kingship. Brownpony was involved (meddling?) in Nomad politics, which was the same as Nomad religion, for only the shaman class could be electors. The thought came to him now that the cardinal, the elderly priest, and the Nomad with royal family connections in the Wilddog Horde might have stopped to confer with Jackrabbit shamans before they visited Leibowitz Abbey. Several half-overheard conversations during the journey supported the idea.

He was ordered to silence, and he meant to obey. But to regard it as a matter of no concern to him would be to turn his back on his late parents and their heritage. He was grateful for Chür Høngan's kindness toward him. One day it might be possible to become proud of his heritage, if pride were not one of the deadly sins his faith warned him against. If the two northern Hordes, the Wilddog and the unvanquished tribes of the Grasshopper, stopped showing contempt for the conquered tribes, Jackrabbit and Grasshopper, he might be able to hold his head up in the world. But he knew the Jackrabbit Horde and his own exiled people must again assert themselves before that could happen. He knew he would be glad to help if he could.

Blacktooth saw her the following morning. She was a young girl, much like Ædrea but beyond Ædrea in beauty. Naked, she stood under a ledge washing herself and dancing in a little waterfall made of new-melted ice. A stone's throw away, she looked once at Blacktooth, who stopped and stood frozen, his scalp crawling. Her eyes left him to follow Holy Madness, himself unseeing, who rode the cardinal's stallion. They followed him until a big wad of loose wet snow fell over the ledge and made her dart back out of sight. Seconds later a delicate white mare galloped out from under the ledge and disappeared into

a thicket of snow-dripping spruce. Blacktooth shook his head. The altitude made one quite dizzy.

Later, when the Nomad stopped and waited for all to catch up, Blacktooth walked past him and said, "I saw her this morning myself. As *Fujæ Go*, the Day Maiden."

"Was she young?" Chür Høngan asked.

"Very young, and beautiful."

"Whoever he was yesterday, today he's dead," said the warrior. "She wants a new husband."

"She was looking at you. Or the cardinal's horse."

Høngan frowned, shook his head, and laughed. "The horse. They say she copulates with stallions when there is no Lord of the Hordes. It's this thin air, Nimmy. Works on both of us."

Blacktooth continued to walk while the carriage caught up with the waiting Nomad. There was a trade-off somewhere behind him, and the same horse came back with a different rider.

"Why don't you ride beside the Axe?" asked the cardinal, for the first time referring to Wooshin by that name.

"Because I have a boil on my behind, Your Eminence, but also because I need to walk." Blacktooth had smoked some of the strong medicinal stuff the Nomad had brought down from Nebraska, and he was feeling more loquacious and less self-conscious than was his wont. Also, he had lost his fear of Brownpony, and begun to like the man.

"What's this I hear about you and the Wild Horse Woman, Nimmy? Do you change religions often?"

"I hope, m'Lord, that my religion of today is always just a little improved over my religion of yesterday, and a vision of a maiden in an icy waterfall does wonders for my religion of today, although tomorrow I might question the vision's reality. But did I say she was the *Høngin Fujæ Vurn*?"

Brownpony laughed. "You feel, then, that reality and religion might or might not have something to do with each other at this altitude?"

"At this altitude, yes and no, m'Lord."

"Keep me informed if she turns up again," Brownpony said lightly, and trotted on ahead.

It was a time of visions. Blacktooth had heard of miracles in the mountains, magic on the plains, and chariots in the sky. The Virgin was appearing simultaneously to small groups of her elect in three different locations on the continent. Furthermore, what her apparition said in the west, her voice in the east put to a severe test. It was almost as if she was arguing with herself. This, perhaps, was the best proof of her divinity, for in divinity opposites are always reconciled. *Nunshân* and *Fujæ Go*, Night Hag and Day Maiden, aspects of the *Høngin Fujæ Vurn*. There was a third aspect; at appropriate times, she became the War Buzzard, presiding over the field of battle, the feeding ground.

It's just the thin air, Blacktooth told himself. But why not a Wild Horse Woman? He had seen her on horseback when he was a child. He had seen her this morning under the waterfall, and she was the same young woman. The women of the Hordes own the breeding mares, and pass them to their daughters. Nomad women are wonderful breeders of horses. And no warrior rides a mare into battle. To ride a mare is to advertise one's unreadiness to fight. So Cardinal Brownpony's stallion is both a mount and a statement. Wild horses are forbidden, except to her betrothed, because they are hers. She is a natural projection of Nomad culture onto the Nomad consensual world, but to admit this is not to say she is wholly unreal. Christians make similar projections; so many apparitions of the Virgin! And she is an arbiter of power on the Plains; by choosing a husband, she chooses a king. It amused him to imagine her choosing a pope.

Blacktooth's departure from the abbey had not gained him a freedom to think for himself—he had always had that. But now he didn't have to feel guilty about it. His own religious practice was necessarily suffering because of the journey, and because of his sins, but he tried as often as he could to spend an hour silently reciting Saint Leibowitz's Grocery List while he rode or lay awake at night: *Can kraut, six bagels, bring home for Emma. Amen.* Short and sweet, it kept the mind from wandering toward *Ædrea*. He greatly preferred it to the Maxwell's Laws Memorabilium that had so confused Torrildo, and perhaps contributed to his delinquency.

But his anger at himself about *Ædrea* and his feelings kept seeking an outlet. When they camped that evening, the Axe as always asked, "You ready die now?" Blacktooth, without a negative comment,

immediately kicked at the Axe's crotch. The headsman dodged, but the blow glanced off his hip; he laughed with delight. "You very mean man tonight," he said, and allowed Blacktooth to attack thrice more before he threw him on his face in the melting snow. It was the first time the student had ever touched the teacher, and Wooshin embraced him after helping him to his feet.

This time you ready die, yes?"

That was the second night. They were gathering speed as they rode northward and downward. On the fourth night, a messenger with a lantern and a bodyguard trotting along behind delivered the news to Elia Cardinal Brownpony: the Pope was dead. He and the soldier stopped for refreshments with them, then continued southward with a summons for Abbot Jarad and other cardinals across the Brave River. More such messengers would be fanning out from Valana by all roads with the same summons for all cardinal bishops, cardinal priests, cardinal deacons, cardinal abbots and cardinal abbess (1), cardinal nephews and cronies across the continent, while the city of Valana prepared for another conclave.

That night the cardinal huddled in conference with the Nomad and the chaplain, while Blacktooth and the Axe sparred farther away from the fires. On the morrow, they availed themselves of the public baths in Pobla, the first real town they had visited. Father e'Laiden shaved his beard and was seen no more with the rest of them, although Blacktooth caught sight of him later in the company of a fair-haired man in Nomad clothing and with Nomad weapons but with manners that did not come from the Plains. Out of Pobla, Holy Madness rode eastward toward the Plains. Hence too, half an hour later, his Chaplain e'Laiden followed him, accompanied by the blond, urbane young warrior.

Brownpony hired a local driver and proceeded toward Valana with his new servants, a regular headsman and an irregular monk.

Blacktooth had been nursing an unasked question for a long time. Guilt from his encounter with Ædrea made him hesitate, but now he asked it. "M'Lord, back at Arch Hollow, when they were about to rob us, why did you expect the girl to recognize you?"

Brownpony frowned for a moment, then answered easily: "Oh, my office has had some dealings with a group of armed gennies in that general area. I assumed they were a member of the group. Apparently, I was wrong."

Blacktooth remained curious. Wooshin and Høngan had done quite a bit of exploring in the area, but had spoken only to the cardinal about what they found. He resolved to question Brother Axe.

By early afternoon, they were passing along muddy lanes full of dogs and children through brick and stone villages with log roofs with chimneys belching smoke. There was the sound of the smithy's forge and women's voices haggling with vendors over the price of potatoes and goat meat. These villages were now precincts of Valana, surrounding it, having grown up during the schism and the exile, brought by and bringing new commerce and industry to the foot of the mountains whose peaks Blacktooth had seen from the distance in his youth.

But they were too close now to see the peaks, and there was only the hulking presence of the massif to the west. It was all new and dirty, and bewildering to the monk who, although he had spent the first fifteen years of his life within a few days' ride of this place, had never been inside a city. And the city began to loom up around them as the cardinal's coach moved deeper into the more heavily populated area, where most of the buildings were, like the abbey, two and even three stories high. And all of it was dominated by the central fortified hill, looming ahead, the hill whose walls enclosed the Holy See, and from which rose the spires of the Cathedral of Saint John-in-Exile, where the vicar of Christ on Earth offered Mass to the Father. Blacktooth was in a daze and barely heard the cardinal, who turned to address him.

"Pardon, m'Lord?"

"Did you know that the plaza in front of Saint John's is paved with cobblestones brought here all the way across the Plains from New Rome?"

"I had been told, m'Lord, that the area around the Cathedral is New Roman territory. But all of the stones?"

"Well, not all, but Saint John-in-Exile stands on New Roman soil. Imported. That's why the natives

here contend there is no need to go back. In fact, they remind everyone that New Rome itself was built on imported soil."

"From across the sea?"

"So the story goes."

"The Venerable Boedullus thought otherwise."

"Yes, I know. The theory of a schism at the time of the catastrophe. Who knows? How did it happen that Latin came back into use after it was abandoned?"

"That, m'Lord, was during the Simplification, according to Boedullus. The book burners did not destroy religious works. One way of saving precious material from the simpletons was to translate it into Latin and decorate it like a Bible, even if it was a textbook. It was also useful as a secret language. . . ."

"Now, that building ahead of us is the Secretariat," the cardinal interrupted. "That is where you and perhaps Wooshin will work from time to time. But first, we must find quarters for both of you."

He leaned forward and spoke to the driver. Moments later, they <sup>ur</sup>ned off the stone-paved thoroughfare and onto another muddy side reet overarched by branches that were beginning to bud. It was not long until Holy Week, and time to begin choosing a pope.

## CHAPTER 7

Now the sacred number of seven will be fulfilled by us if we perform the Offices of our service at the time of the Morning Office, of Prime, of Terce, of Sext, of None, of Vespers and of Compline, since it was of these day Hours that he said, "Seven times in the day I have rendered praise to You " For as to the Night Office the same Prophet says, "In the middle of the night I arose to glorify you " Let us therefore bring our tribute of praise to our Creator "for the judgments of His lustice" at these times and in the night let us arise to glorify Him.

—Saint *Benedict's* Rule, Chapter 16

HE WARM CHINOOK FROM THE MOUNTAINS HAD breathed on the snow, and the snow vanished. Chür Høngan skirted the poor farming communities along the bed of the Kensau River as he rode toward the northeast. In Pobla, he had armed himself with a heavy shortbow and quiver of arrows. The cardinal had given him his double-barreled handgun and bought him an unshod stallion from a Nomad trader, but he wanted to avoid trouble with Blacktooth's people, who in season tilled the irrigated plots of potatoes, corn, wheat, and sunflowers, and who dwelled in fortified lodges of stone and sod and worked the land for its owners, among whom was the Bishop of Denver. They might mistake him for a Nomad outlaw like the ones who had visited Arch Hollow. The soil was poor here, but careful farming had enriched it. Now it was almost planting time and there were men and mules in the fields, so he avoided the rutted roads and kept to the high ground, while leaving a trail that Father Ombroz e'Laiden and the Texark turncoat could easily follow.

There were always Texark agents traveling back and forth from the telegraph terminal southeast of Pobla, so Høngan rode alone until he was well into the short grass of Wilddog cattle country before he stopped to wait for the others. He waited in a draw, concealing his horse and himself some distance from the trail he had left until he heard them passing to the north. Still, he waited. When their voices died away, he left his horse, climbed out of the draw, and listened carefully to the wind from the southwest. He put his ear to the ground briefly, then arose and crept into the space between two boulders where he could not be seen except from the trail directly below. There were distant voices.

"Three horses have come this way, obviously."

"But not necessarily together. Only one horse is shod."

"That would be Captain Loyte's."

"Hereafter, do not call the renegade 'Captain'! He sold his rank and honor for the cunt of a Nomad spy."

The voices were Ol'zark. Høngan nocked an arrow and drew his bow. The first rider appeared, and fell from his horse with the arrow through his throat. Høngan leaped forth and shot the second rider while he was lifting his musket. With the second barrel, he exchanged shots with the third rider, but both men missed. The survivor turned and fled. This war between Nomad and Empire was more than seventy years old, but such battles were few and fought only when the imperial forces invaded the lands of the Mare.

Holy Madness reloaded the pistol and finished the job of killing the wounded, then went for his own mount and captured the other two horses. After searching the saddlebags and finding the proof he needed that the riders were agents, he released the animals and came back to search the bodies for more papers. He stared angrily at the tracks of the turncoat's horse. Knowing the destination, he had previously not noticed the hoofprints because he had not been tracking.

Mounting again, he rode on with a warm wind still at his back in pursuit of the priest and his guest. His own war with Texark had begun long ago and would never end. This he had sworn in the name of his ancestor, Mad Bear, calling to witness Empty Sky and the Holy Virgin. He followed the tracks through the afternoon and afterward by twilight. There would be no moon until morning. He ate a little jerky, and without building a fire prepared to spend the night listening to the howls and barks of the wilddogs which simpletons called wolves and greatly feared. After he had staked his horse and unfurled his bedroll, Høngan slowly walked a protective circle around the area at a distance of five or six paces and marked his sleeping territory with a trickle of his own urine every few steps. With his sleeping area thus protected, the animals would not usually molest a human sleeper unless they smelled blood or sickness about him. Only once during the night did he sense prowlers. Bursting from his blankets, he leaped to his feet and let out a roar of mock rage. There was a chorus of yelps, and several dark shapes fled by starlight from the downwind border of his realm. Having bellowed the sleep out of his head, he lay with sad thoughts about the corpses he had made that day.

Chür Høngan had killed his first man at twelve, a Texark border patrolman. Ombroz had absolved the boy at the time as he would have absolved any soldier in war, because the trooper had been on the wrong side of the river, in military uniform, and without a traveler's flag as required by the Treaty of the Sacred Mare. As far as the Wild-dog was concerned—and the priest honored the sense of the horde—no treaty later than Sacred Mare had ever been signed with any secular powers including Texark, and the war against Texark had never become peace, it just had slowed down until it mostly stopped happening; it almost stopped because the only frontier across which the Wilddog faced the Empire was the Nady Ann River to the south, beyond which lay the occupied Jackrabbit country. There might be a time to fight there, but not until the Jackrabbit fought too. To the east, in the tall-grass country, the Grasshopper engaged the enemy when it saw fit, but it asked no help from the Wilddog while there was no Lord of the Three Hordes.

Ombroz had easily absolved him of that early killing, but gave him pure hell for honoring ancient custom as well. The boy had cut off the cavalryman's earlobe and ate it as an honor to the slain enemy, as his Bear Spirit uncle had explained was proper. The priest called it something else. He made the boy meditate for an hour a day on the meaning of the Eucharist, and put him through parts of catechism again before he would give him communion. Høngan remembered it in the night with a grin. He never told the priest that while he was eating the earlobe he was crying for his victim. About the men he had just killed today, he could not see what Wooshin had tried to teach him to see. Something about emptiness. The Axe tried and failed to relate it to the Nomad's Empty Sky. Something about emptiness becoming man. Or was that Christianity mixing in? There were too many ways of looking at things. A century ago, for his great-grand uncles, there had been only the one way. Høngan thought that old way might be a little like Wooshin's way, but with more feeling and vision. The right way, his own way, was not clear to Høngan, not quite yet.

Before dawn he shook the frost from his blankets and rode on by the faint light of an old crescent moon in the east. Knowing the route the priest would take, he did not need to see their tracks to follow,

and within two hours he had found them. Ombroz had rekindled their dung fire and they were drinking hot tea and eating jerky at sunrise. The chaplain hailed him, and the turncoat to whom he had not yet been introduced arose expectantly, but the Nomad went straight to their hobbled horses. He petted one of them, spoke to it gently, then cut the hobbling cord and lifted a front hoof to inspect it. Then he turned to confront them.

"Father, you've brought a spy among us!"

"What are you talking about, my son? This is Captain Esitt Loyte, the one Cardinal Brownpony suggested. He is married to a granddaughter of Wetok Enar, your own kin."

"I don't care if he married the granddaughter of the devil's clan. He's riding a shod horse to let them know he's here."

The priest frowned at the former trooper, then arose to stare toward the west.

"Don't worry, Father. I killed two of them, and the other fled. Here are the papers." He faced Loyte and drew his gun. The stranger spat in the fire, and said, "You might look at both sides of the horse. But thank you, if you killed my assassins."

Høngan aimed at his abdomen. "Your assassin is right here."

"Wait, Bearcub," barked the priest. "Do as he says. Look at the brand."

Reluctantly, he lowered the pistol and inspected the stranger's mount again. "One of Grandmother Wetok's horses," he said in surprise. "And you had it shod in Pobra? You damn fool!"

"If they were out to kill me, why should I leave tracks for them?" Esitt Loyte began to explain, but Høngan ignored him, took tools from his bag, and began prying a shoe from a forehoof. "Give me a hand here," he said to Ombroz.

Soon the nails were pulled and the task was done. He put the horseshoes in his saddlebag. "We'll have to show them to your mother-in-law," he said to the stranger.

"I meant no . . ."

"Bearcub, he's an expert in Texark cavalry tactics, and he knows their war plans. They came to kill him."

"But now he's useless to us, because they know he's here."

"From the tracks of one shod horse? It might be anybody. It might be a Churchman. It might be a trader."

"Traitor, you mean. Before they died, they spoke his name."

"Well, it's done now, and the trail ends here. Loyte is right. They came to kill him. At least *they* must think he's useful to us, even if you don't." He turned to the young former officer. "Why did you have the pony shod?"

"Before I rode into the mountains, I talked to the liveryman in Pobra and he recommended it. And I have always ridden a shod horse. It's cavalry—"

"The trail ends here," the priest repeated. "Bearcub, there's nothing to worry about."

"Mount up," said the Nomad, and pointed toward the horizon. "Look at the dust. There's a migration trail just to the east of us. The herds are moving north. We'll wait there until drovers come. Then we'll ride ahead of their cattle for a few hours, and our tracks will vanish."

"If we do that," Loyte protested, "we won't be home before dark."

"Home?" snorted Høngan.

"The hogans of his wife and her grandmother," Ombroz said firmly. "But I agree, we'd better do as you say."

It was midafternoon before Holy Madness was satisfied that the woolly Nomad cattle that were following them in the distant cloud of dust would erase their tracks. They changed direction then, left the cattle trail, and resumed a northeastward course.

Ombroz was still trying to make peace. "If the cardinal's plan succeeds," he said, "the Hannegan will have to stop these incursions into Wilddog and Grasshopper lands, at least for many years. The hordes by then will be stronger under a single king."

Høngan was silent for a time. They both knew that the Grasshopper lands, the tall-grass prairie lands,

lying to the east, would bear the brunt of any invasion. Those of Blacktooth's people who had remained herdsmen there had become the most warlike of the hordes, because they had to be. They faced Hannegan's armies, and the slow encroachment of farmers onto the more arable eastern fringe. And yet the Wilddog was closest to the Church in Valana, and to possible allies beyond the mountains. There was friction between the hordes, made worse by Nomadic outlaws who had departed from the matrilineal system and attracted young runaways from the conquered Jackrabbit south of the Nady Ann.

"There is the more immediate problem of paying for the goods," Høngan said to the priest at last.

"Don't worry about that," put in the trooper. "His Eminence controls considerable wealth."

"Yes, the Half-Breed owns many cattle," said Høngan acidly.

"There are other forms of wealth than cattle," said Captain Loyte, "and how dare you call him 'Half-Breed,' anyway? Aren't you a Christian, after all?"

The priest laughed. "Go easy, Loyte, my son. The Bearcub is just practicing his tribal accent, so to speak. After all, how would The Most Eminent Lord Elia Cardinal Brownpony, Deacon of Saint Masie's sound in the mouth of the son of Granduncle Brokenfoot, Lord of the Three Hordes."

"My father is lord of nothing, yet," Chür Høngan grumbled, his sour mood persisting.

"See how churlish he turns as he gets closer to home?" said Ombroz.

"Not only is he lord of nothing," Holy Madness went on, "I'm only his son, not his nephew."

"You know that makes no difference," said the priest. "In no way can that old office be inherited, in the motherline or otherwise. The old women have their eye on you, Holy Madness. When the old women look for the *Qaesach dri Vørdar*, they look for a magical leader, not a somebody's nephew or son."

"I don't like this talk, teacher," said Høngan. "I love and respect my father. Talk of inheritance is talk of death. And there hasn't been a *Qaesach Vørdar* since Mad Bear. After seventy years, who knows how these modern women will think."

Ombroz chuckled at the word "modern."

"Granduncle Brokenfoot is going to live a long time," said the former Texark officer. "I saw him only three months ago when he came to visit my brothers-in-law."

"The turncoat has a degree in medicine too," said the Nomad.

The officer shot him a resentful look. "Wasn't it Magic Madman here who claimed he saw the Night Hag, Father?"

"Damn it, old priest! Did you have to tell him that?"

Father Ombroz glanced quickly at both of them. "Stop spoiling for a quarrel, you two. Or else give me your weapons, and get off your horses and fight. Right here, right now."

"Trial by combat?" Høngan snickered. "Yes, Blacktooth told me the Church used to do that. Why didn't you teach me that, Father? You neglected the part of the catechism about the Lord of Armies, but here you are now inviting us to submit to the judgment of God in a fistfight? And I was not looking for one. I just wanted to know, of our Texark adviser here, what other kind of wealth does the Half-Breed have besides cattle? If the turncoat says there is such a thing."

"God damn your mouth!" said the officer, and shifted his weight hard to the left stirrup, causing his horse to stop.

Chür Høngan looked at him for a moment, shrugged, and dismounted. Ombroz spoke quickly. "I have to warn you, Captain, Holy Madness has been practicing combat with an expert—a former headsmen to the Hannegan. You may know of him."

"Do you mean that yellow-skinned genny? Woo Shin? Listen, if you fear traitors, fear him. I wouldn't wonder if Filpeo Harq didn't send him to kill the cardinal. He has a cadre of hired assassins, you know. They are all clever infiltrators."

"The Axe is not a genny, you citizen," said the Nomad, using the word "citizen" as an insult. "Where he comes from, *you* look like a genny. And he hates Filpeo Harq almost as much as I hate him, city boy."

"Bearcub, why do you do that? Captain Loyte's on our side. He knows his business. Try not to be an asshole, my son."

"All right, tell the bastard to stop patronizing me." Høngan turned to remount. Loyte was not appeased, and struck him across the back with his riding whip.

Høngan whirled, grabbed the wrist that came toward him with the whip a second time, and kicked the captain in the stomach with his pointed boot.

For some minutes of semi-consciousness, it appeared that the blow might be fatal. But the priest at last revived him, and insisted that they spend the night on the spot to let Loyte recover. Ombroz prayed at them lengthily and angrily, praising God's mercy for allowing them an undeserved time to repent. Høngan groaned at him sleepily. Loyte whimpered and swore. On the following day, Chür Høngan pulled the officer out of his blanket by the front of his jacket and dragged him to his feet. "Now listen well, pigfucker. If you're a captain in our army, I'm your colonel. You say 'sir' and salute."

He pushed the former trooper down on his rump; the jolt brought forth a yelp of pain as Loyte grabbed his stomach again.

"No, you listen to me!" Ombroz grabbed his bearclub by the arm and pulled him quickly out of earshot. "I've never seen you this brutal! Why? Establishing your seniority is one thing, but you may have ruptured his gut. You've made an enemy for life out of pure bad temper."

"No, I haven't. He's already everybody's enemy. A criminal to his own tribe is no friend to *any* man. He is what he is, and he must know his place."

"You don't mean that. His place is the same as yours, before God."

"Before God, of course. But his place in the ranks of a fighting force under a war sharf is what concerns me, and he has to know that his rank is low. He cannot be trusted."

"You know this because of your great insight into character," Ombroz said ironically. "Greater insight than that of the cardinal, who recommended him to us in the first place. I believe him when he says the agents that followed were sent not just to track him, but to kill him. And in any case, he would be living with the Wetok clan, whether he rode with us or not. They have accepted him. He wintered with them."

"Have you seen me quarrel with anybody else lately?"

"No, Holy Madness. And I hope you're wrong about this man. He knows too much about us for you to drive him away."

"No danger. He has nowhere to go. We leave him with his wife's people, no matter what the eminent cardinal said. I still want to know how he knows that Brownpony can find his part of the price of the weapons which he promised. And where do the weapons come from?"

"Elia worked hard for Pope Linus, Bearclub, and Pope Linus rewarded him well. I know that Elia owns estates on the west coast, and up in the Oregon country, but he may not need to use his own wealth. Trust him. If you pay the traders six hundred cattle, the cardinal will arrange for somebody to pay the other two-thirds of the price. As the most powerful state on the continent, Texark has many enemies and few allies. Many of those enemies would be glad to help arm the hordes. You are being ungrateful."

"Not at all. I like Brownpony. I know it's his influence more than his wealth that matters. And I trust his best intentions. That doesn't mean I trust the outcome of his intentions. If he's wealthy, fine. But how does Loyte know?"

"He probably doesn't. He *was* patronizing you. Nomad or citizen, each feels superior to the other. *Nomas et civis*—it's a story old as Genesis. But as for the money, there are states west of the divide which would like to see the Hannegans' empire stop where it is, or be driven back eastward. There is too much talk in Texark about uniting the continent, and their embassies report this talk home. One or more of them may be giving you the weapons for nothing."

"Six hundred cattle are not nothing."

"They are next to nothing. Cardinal Brownpony told me the real price of the merchandise. It's more like six thousand cattle."

"If we get the weapons at all. If the traders don't deliver defective junk."

"What puts you in this awful mood, Holy Madness? I half-expected you to call Loyte a grass-eater."

Høngan laughed. "In my mother's house, that word is still used. So at home, I might use it on him."

"You know, you have a certain political ugliness about you, Holy Madness, that you did not learn from me."

"Oh, but I did!"

"No, you didn't!"

"Are you going to try to whip me too, O Teacher?"

"I *have done* that."

"When I was ten and you were younger. You taught me not to hit clergy, but you're not—" The Nomad stopped. He saw the change in Ombroz's face, shook his head, *sorry*, and walked back to his horse.

By the time they had made camp for a second night under the stars, they met a messenger from the Wilddog Horde's royal tribe. He was riding south with bad news. Granduncle Brokenfoot had suffered a stroke, had lost the use of his left leg, and was composing his death song. It was therefore deemed wise for the grandmothers and shamans to begin considering other candidates for the ancient office of the one *Qæsach dri Vørdar*.

The following day, they arrived at the hogans of Grandmother Wetok Enar's clan. The old woman was weak and ailing, so it was Loyte's wife Potear Wetok who, unaccompanied by her grandmother, bade them welcome. Her husband dismounted and went to embrace her, but she pushed him away; his "learning about our horses," the Nomad euphemism for the breaking in of a new groom by the mothers of his new family, was not yet finished. She bowed to Father Ombroz and Chür Høngan, and invited them into the hogan of her grandmother. Out of politeness, they followed her, although both were in haste to return to Høngan's family.

"Chür, have you heard the bad news?" asked the lovely granddaughter. "I hope I'm not the one who has to tell you."

"We met a messenger. I know about my father." He handed her a leather pouch containing the horseshoes. "Your husband will explain these, but later." She looked at the pouch curiously, but left it inside the door-flap unopened as she ushered them into the hogan.

The old woman sat in a leather slingchair hung between two posts sunk in the hard dirt floor. She tried to rise, but Høngan waved her back. Nevertheless, she signed her respect for Høngan and Ombroz by making the *kokai*, striking her forehead with her knuckles, and bowing her head while placing her hand against her scalp palm outward toward each of them. This politeness seemed excessive, and she did not repeat it toward Esitt Loyte. Her son-in-law she ignored; whether this was normal groom-hazing ("teaching him about our horses") or real contempt was hard to say.

"What the Night Hag has foolishly done to your father grieves me greatly, Høngan Ösle Chür." The utterance was fraught with portent. Ombroz noticed that Høngan was actually fidgeting before her. To attribute Brokenfoot's illness to the Night Hag and call it foolish meant that he had been this Weejus woman's choice for *Qæsach Vørdar*, and her reversal of Chür's name, with the matronymic placed last, meant that the rank of Brokenfoot's son had risen in her eyes, for whatever reason. But *Høngan Ösle* was a diminutive for the historical Høngan Os, who lost a war and half of his people to Hannegan II.

"Will you drink blood with us tonight?" the old woman asked. "We celebrate the birth of twin colts by Potear's best mare. And they are healthy, too—a rare and wonderful event."

"Toast the Virgin for us, Grandmother," said Father Ombroz. "My apologies for the haste, but Granduncle Brokenfoot needs us."

"Yes, he will want to see his son, and from you he will want last anointing. Go then with Christ and the Lady."

The two of them rode on, leaving Esitt Loyte behind with his bride and in-laws.

"The captain still has much to learn about the Wetok horses," Ombroz said wryly when they were out of earshot.

Høngan laughed. "He will learn quite a bit in a hurry when Potear shows that old Weejus the horseshoes."

The mountains had all but disappeared in a dust haze to the west when Holy Madness suddenly announced that Brokenfoot had become irascible in his illness, and that his old wife had found it necessary to appoint another as temporary head of the family.

"How do you know this?" the priest scoffed. "A vision?"

"That vision." Høngan pointed toward the east. Carefully he raised himself in the saddle, and soon

was standing on the back of his horse.

"My old eyes can't see anything but emptiness. What is it?"

"There is someone there, I think my uncle. It's miles away, still!

He moves its arms and dances a message. They see our dust."

"Ah, the Nomad semaphore language. I should have learned it when I was younger. It always amazes me."

"It gives us an advantage over their Texark warriors."

• • •

When the hogans of the Little Bear clan hove into view on the horizon, a small cloud of dust appeared and soon a rider approached them. It was Brokenfoot's wife's brother, Red Buzzard, who was the nominal leader of the clan, who nevertheless deferred to his sister's husband because she willed it so. Now during the husband's illness, the brother resumed his rightful role. He was a thin, serious man, nearly sixty, with livid patches of skin which might have marked him as a genny except among the Nomads, where the cosmetic defect was highly regarded as a mark of Empty Sky. He spoke seriously to Holy Madness about Brokenfoot's condition, which was disabling but apparently not getting worse at the moment.

"Some of our drovers are already back from the south," Red Buzzard said to Ombroz, "including our Bear Spirit men. They are with him now, Father. But of course he wants to see you."

Ombroz started to tell him about the Pope, but Red Buzzard already knew. Even in Cardinal Brownpony's absence from Valana, his Secretariat was constantly sending and receiving messengers from the people of the Plains. When they came to the Little Bear village, the children and younger women came out to greet and be hugged by Høngan and their priest.

"Will you stay with us after you see your father?" asked his mother. "Or must you ride on to Grasshopper country?"

Holy Madness hesitated. He had not told her before. "I think Kuhaly has divorced me." He glanced at Ombroz, who had married them, but the priest was looking away. "She said she would send for me if she wants me. Even if she does, I may not go."

His mother's face melted. "They blame you for having no daughters?"

"Perhaps. Also for being away too much of the time. Her brothers complain. I've done too little for the family. They say I am too attached to you. You know the word for that."

"I was afraid it would be so when you married Grasshopper. Our drovers told us they had to fight Grasshopper drovers again this winter, to get pasturage."

"Anyone killed?"

"Among ours, only wounded. Among theirs, I don't know. It was an exchange of shots and arrows. Now, come and see your father."

The Little Bear family shamans left the hogan while Father Ombroz administered the last anointing to his oldest convert. The priest knew they were embarrassed that some of their practices could not be reconciled with the religion he taught, and that they had accepted baptism themselves because Brokenfoot wished it so. When the old man died, their embarrassment (and envy?) might turn into hostility.

But the whole family knew that when he, Ombroz, had been forced to choose between them and his Order, when a new superior general of that Order, nominated by Archbishop Benefez, and therefore by Filpeo Harq, had called him back to New Rome, he had refused to go. He had been expelled and placed under interdict—measures which he ignored. Still, the punishment hurt him more than he cared to admit. He knew the Weejus women would be his allies in any quarrel with the Bear Spirit shamans, but he wanted to avoid the quarrel, and so far, so did they. Under his teaching, most of this Nomad family had become Christians, while he himself over the years had become a Nomad.

Ombroz was not the first teacher of the Order of Saint Ignatz to watch a favorite student whom he had taught to think for himself begin thinking otherwise than the priest had foreseen. That night he sighed

heavily as he watched Chür Høngan dance the dance of the dying with the shamans in the dim and smoky light of the dung fire in front of Brokenfoot's hogan.

The drums seemed to say: "Gruesome go, gruesome go, gruesome Mama go. . . ."

The dance was to placate Black Wind, Empty Sky's frightful counterpart, and to fend off the Night Hag. For a time he went wandering through the village, visiting similar fires and speaking to old "parishioners." A minority were really Christian, but most he had baptized, and most accepted him as belonging to the shaman class. Among the unbaptized, his wisdom voice was still deemed worth hearing, when he sang in council.

Before the conquest, such villages had not existed. But more and more the Plains were dotted with hogans of stone and sod resembling those of the farmers, and located beside intermittent creeks and waterholes. Here the children and the elderly stayed for the winter, while the drovers moved their woolly cattle according to the seasons or best grazing and for protection from the worst of the howling blizzards which in the dead of winter swept down the Plains from the Arctic over the lands of the Great Mare and on into the conquered province which had belonged to the Jackrabbit Horde. Long ago the Jackrabbit had held the lightly forested land with deciduous trees to the southeast, land now claimed by the Texark Imperium. The Jackrabbit had rented pasturage there, partially sheltered from the icy blasts, to the Grasshopper and the Wilddog in the winter months, and they were well paid for this in cattle and horses. As a consequence, the the Jackrabbit people were the least migratory of the hordes even before the war; and only a minority fled from the south after the conquest to form the Jackrabbit diaspora in the poor farming regions, neighbors to some of the impoverished ex-Grasshopper families who like Blacktooth's had fled toward the mountains across the short-grass country of the Wilddog.

He could not get away from the drums. Now they seemed to say, "Freedom come, freedom come, freedom maiden come. . . ."

After visiting nearly every dwelling, Father Ombroz went back to Brokenfoot's hogan. He stood near the fire watching the dance for a time; then, after a pause to catch the beat, he laughed aloud and joined the dance himself, bringing an amused cheer from his Bearcub.

## CHAPTER 8

The fifth degree of humility is that he hide from his Abbot none of the evil thoughts that enter his heart or the sins committed in secret, but that he humbly confess them. —

*Saint Benedict's Rule, Chapter 7*

THE SECRETARIAT OF EXTRAORDINARY Ecclesiastical Concerns was located in one of the few remaining buildings near the center of the city which had been there before the Pope came west. A two-story building of stone with a basement, it had once been a military barracks for a few dozen sentries, and it stood alone amid spruce trees on an acre of land fifteen minutes' walk from Saint John-in-Exile.

Although the monk and the old warrior spent the first night shivering in their blankets on cots in the Secretariat basement, within a day they were lodged with three seminary students named Aberlott, Jæsis, and Crumily in a small house Brownpony found for them near the western limit of the city. He had won the at-first-grudging consent of the students by paying half the rent on behalf of his servants, and by promising that they would share the housework and exercise no seniority over the much younger students, one of whom—Jæsis—was ill. Aberlott was a chubby, good-natured clown from the northwest, whom Blacktooth immediately liked. Crumily was a long-faced Easterner, who seemed morose at first, but who proved to have a wry wit that usually twisted the tail of Aberlott's jokes. The

character of Jæsis was difficult to fathom because of his illness, but Aberlott called him a bit of a fanatic as a student for the priesthood, but did not dislike the boy, although he came from Hannegan City.

The house itself was adjacent to a brewery. A creek ran through the brewery and out behind the house. It came down the hill as pure mountain spring water in summer, but was now swollen by melted snow. Their outhouse and others in the vicinity were well above the level of the creek and probably drained into it during hard rains. Blacktooth had seen children drinking from the stream down at the ford, and he wondered about the illness of Jæsis, who, when he was not in bed, could be heard moaning in the outhouse. Blacktooth and Wooshin were to share a room in back, and come and go through a rear entrance, although they might use a common kitchen and share a space for study. So it was agreed. The newcomers had several days to inspect the city before going to work at the Secretariat.

They found the city itself rather filthy, except in local enclaves of power and wealth where street sweepers stayed busy and water arrived by aqueduct. Valana had grown up rapidly around an ancient hilltop fortress which had in earlier centuries been a bastion of defense by the mountain people against the more savage Nomads of an earlier age. Except for the ancient hilltop fortress itself, which now enclosed the center of a newer New Vatican, overshadowed in the afternoons by the spires and bell towers of the Cathedral of Saint John-in-Exile, the city was without walls. Before the exiled papacy had moved here, the city had become a sort of middle kingdom among the contiguous communities of the populated region, where merchants traded with miners for silver and pelts, with Nomads for hides and meat, and with farmers for wheat and corn. There had been two blacksmiths, a silversmith, two arrowsmiths, a fletcher, a miller, three merchants, one doctor of medicine, and one gunsmith, when the Pope had fled here from New Rome. Since then, the number of businesses had quadrupled, and there were now doctors, lawyers, and bankers. Half a dozen city governments in the region competed with Valana proper and each other for new business. It had been a growing economy, but with the coming of the head of the Church, the growth became explosive. Only one building in five was older than the beginning of the exile. Among them was the Secretariat building among the spruce trees, almost invisible from the road.

Blacktooth went to work almost immediately at the Secretaria - replacing a volunteer lay translator who spoke Nomadic better than Rockymount and who happened to be a Christian Wilddog cousin of Chür Høngan and was glad to be relieved of the job and returned to his family on the Plains. There were seventeen employees at the agency, counting a janitor, but not counting the messengers that kept coming and going between Brownpony and his many correspondents around the continent, some secret, some official. There were five translator-secretaries including Blacktooth, three copyists, three security-guard receptionists, and five men who worked in a part of the building sealed off from everyone else and accessible from the outside only through a locked iron gate and from the inside only by way of a corridor to the cardinal's own office. Blacktooth was quick to realize that no one but the cardinal knew all the Secretariat's purposes, and employees were isolated from each other as much as possible.

Blacktooth inherited the office space of his Nomad predecessor, which was adjacent to Brownpony's office because the man had needed more careful supervision than others. However secretive the cardinal might be with his own employees, he was forced to confide in a nun named Sister Julian from the Secretariat of State, who was there to keep a close eye on those "extraordinary concerns" which also might affect the official diplomatic relations of the Valanan papacy. She seemed to have a certain nay-saying power, and she treated Blacktooth and Brownpony's other people with suspicion and an attitude of superiority, although she seemed to be on good enough terms with the master. She was, however, apparently not entitled to know what went on in the sealed-off part of the building, and was denied entry there.

There was a confluence of cardinals now, continually arriving for the impending conclave. As soon as they found quarters, they changed their garments from red to the purple of mourning for the dead Pope. Anyway, purple was the color of penance, appropriate for Lent, now drawing to a close. After the period of mourning was finished, the color would change to saffron. They would not again wear cardinal red until the election of a pope.

One of the first cardinals to arrive in the city came from the most remote diocese of all Christendom,

one who had, in fact, set out by sea to attend not this but the previous conclave which had elected the Bishop of Denver, now deceased. His name was Cardinal Ri, Archbishop of Hong, and he had sailed across the Pacific with a wife and two lovely younger women said by some to be his concubines. These were looked upon with horror by the local Society of Purity, but the police were warned by the Cardinal High Chamberlain and former Secretary of State, Hilan Bleze, to keep such people from harassing the strange foreign archbishop, the existence of whose diocese had been unknown for centuries, until just three decades ago when a voyage of discovery had found Christian communities in islands far to the west. Pope Linus had been so delighted to learn there were still Oriental Christians that he made Bishop Ri a cardinal before fully investigating the traditions of his Church. The Axe now too was delighted to learn of Cardinal Ri, for other reasons, and set out immediately to meet some of his staff. He returned to relate that it was possible for him to communicate with them, barely, in his native tongue, so similar were the two dialects of an ancient language. He was also impressed by the advanced weaponry of Ri's guards; when the Axe told Brownpony about the arms, the cardinal paid Ri a visit. He apparently asked that these weapons be kept out of sight, for the guards thereafter carried conventional cavalry pistols.

Wooshin made haste to explain to Blacktooth that the apparent concubines were nominal wives, extrasacramental, and that Ri kept them because it was expected of a man of the archbishop's rank in the society of his home island. Nevertheless, they apparently all bedded down together at times, according to the staff. While they were indeed looked upon with horror by the cardinals of the Society, there was hardly any conclavist who was not looked upon with horror by somebody. Cardinal Ri was very rich, but of course he had brought no more wealth with him than six soldiers could guard with their lives during the voyage, and he needed credit to keep his family and retinue living in comfort. Most merchants in Valana extended him credit, since Brownpony vouched for him orally (but declined to cosign his notes).

Sorley Cardinal Nauwhat from Oregon, himself a candidate, greeted the Oriental prelate most warmly, and Emmery Cardinal Buldyrk, the Abbess of N'Ork, immediately befriended Ri's extrasacramental wives and offered them the hospitality of her rented suite. This Ri reluctantly permitted, after he was told of the city's attitude toward his extra women. He was somewhat ill anyway—his personal physician spoke of dragon's breath from the mountains—and probably felt no need of his ladies. There were other married cardinals, of course, but most of them were laymen or deacons, and most left the wives at home.

Strangely, the most powerful prelate on the continent, Uno Cardinal Benefez, Archbishop of Texark, was late to come to the conclave, sending word by wire that he wished to celebrate Easter Mass in his own cathedral with his own people and his Hannegan.

• • •

Brownpony and his new servants had been in Valana for a week when Blacktooth decided to go to confession. The cardinal, always charitably helpful to the little monk in such personal matters in this strange city had gotten him an appointment with a priest whom he wanted Nimmy to meet.

The Reverend Amen Specklebird, O.D.D. (*Ordo Dominae Desertarum*), lived alone in what had once been a cave in the side of a hill. But somebody with rock-cutting tools had shaped the outer cavern, squared the tunnel, deepened it, filled the hole behind the living quarters with rubble and mortar, and added short walls of stone that protruded from the hill. Father Specklebird had partially reopened the hole where the cave narrowed. (It let the mountain spirits come and go through his kitchen, he explained.) A vaulted roof, also of stone, topped the walls that protruded from the hill so that the visible part of the dwelling reminded Blacktooth of the front of a Nomad hogan that had been half-swallowed by a mountain. Blacktooth learned that the wealthy owner of an ecclesiastical tailor shop had owned it a decade or more ago, and had used it as a root cellar until Cardinal Brownpony had bought it for Father Specklebird when the Bishop of Denver had forced the old priest's retirement. Strangely, after Bishop Scullite had become Linus VII of recent memory, he had summoned Father Specklebird to his private quarters on several occasions. If rumors were true, Blacktooth might be about to confess to a confessor of the late Pope. Another rumor, which had been traced to a papal chambermaid, had it that Linus VII,

on the brink of death, had named the old man cardinal *in pectore*, pending the next consistory, but no one could substantiate the servant's tale.

The monk stood in the shadows under the trees, steeling himself to cross the trail and knock on the heavy pine door. A wisp of smoke arose from a chimney. Except for the light from fire that caused the smoke, it must be rather dark inside, for there were only two small windows, set high in the thick wall. Nimmy had been in a proper frame of mind and heart when he left the cottage, ready to make a good confession. But now that he was here, a kind of dread came over him.

He had left Leibowitz Abbey unshrived and stinking of guilt; moreover, on the trip to Valana from the desert he had done unspeakable deeds, and now he quaked at the prospect of confessing to a stranger, thing he had never before done. The sacrament of penance had always been administered to him by a priest of the Order, and usually once a week. There was only so much mischief a monk could accomplish in a week, even an unruly monk such as Blacktooth St. George. Usually, it was a matter of whispering his self-accusations to his regular confessor, and hearing himself sentenced to, say, a few decades of the rosary, or at worst to make a public apology to a brother, or to flagellate himself three or five lashes with a not very painful piece of rope for solitary sins of impurity, resentful thoughts, and failures of charity or courage. Such penances always left him feeling cleansed and ready to receive the Holy Eucharist at Mass.

But now he had been sinning rather copiously for weeks on end, often neglecting his prayers, breaking his vows, and secretly disobeying his benefactor, the cardinal. It was to the cardinal, in fact, that he had mentioned his fear of confessing to a stranger; when the cardinal had suggested e'Laiden, and e'Laiden had declined, it was the cardinal again who had arranged for him to confess in Valana to a reputed holy man, none other than Amen Specklebird himself, whose name had been once or twice brought before a previous conclave as a candidate for the papacy! Blacktooth now wished he had never mentioned his problem to Brownpony. He would much rather confess anonymously to a faceless priest behind a grille at the seminary chapel than do it in the presence of a holy man, and he thought of sneaking away to do just that before the time came for his arranged interview. But Father Specklebird would ask how long since his last confession, as was customary, and would then realize that Blacktooth had circumvented him. Furthermore, he imagined, a seminary priest might be so horrified by what he heard that he would refuse to absolve him, and then he would have to tell Specklebird about that too. Even outside the abbey, being a Catholic was a very complicated business for a simple ex-Nomad recluse with little knowledge of the external world.

Suddenly the pine door was flung open, and an old black man with a cloud of white hair and great white eyebrows came out and walked straight toward him. His beard was white too, but close-cropped, as if he shaved it once a month or kept it trimmed with scissors. He wore a clean but ragged gray cassock, and sandals that appeared to be made of straw. He was gaunt, almost a skeleton with tight muscles strung along the bones, and hollow cheeks and hollow abdomen that hinted at much fasting. He walked with a lively limp, using a short cane heavy enough to be an effective club. When he came out the door, he was looking straight at Blacktooth in the shadows, and he came right toward him, wearing a thin smile and running his luminous gray-blue eyes over the small and timid figure before him.

"Deacon Brownpony has told me something about you, son. May I call you 'Nimmy'? You have left the monastery for good, is that so? Why?"

"Well, I began to feel I was wearing cangue and chains, Father. But in the end, they threw me out."

Amen Specklebird took his arm and led him across the trail toward his hermitage.

"And now you have lost your cangue and chains, yes?" They entered a room which with its bare stone walls reminded the monk of Leibowitz Abbey. There was a fire at one end and a private altar at the other.

Blacktooth thought about the priest's question. "No. If anything, they fit tighter than ever, Father."

"Who tightened them? Who chained you in the first place? Was it the abbot? Was it your brothers? Was it the Holy Church?"

"Of course not, Father! I know that I did it to myself."

"Ahh." He sat quietly. "And now you want to know how to free yourself?"

"Ye shall know the truth and . . ." He shrugged. "One must know the truth to be free."

"So. And what is the truth that you already know?"

"The truth was made flesh, and dwelt among us. We must cling to him alone."

"*Cling* to him? Nimmy, Jesus came to be sacrificed for our sins. We offer him, immolated, on the altar. And still, you want to *cling* to him?" He laughed, and produced a stole. "Are you ready to confess now?"

Blacktooth delayed. "Could we talk awhile first?"

"Of course, but what would you talk about?"

He groped for a subject. Anything to postpone the moment. "Well, I don't understand what you mean about the sacrifice."

"To sacrifice Jesus is to give him up, of course."

The monk started. "But I gave up everything *for* Jesus!"

"Oh, did you! Except Jesus, perhaps, good simpleton?"

"If I give up Jesus, I will have nothing at all!"

"Well, that might be perfect poverty, but for one thing: that *nothing*—you should get rid of that too, Nimmy."

Blacktooth became bewildered. "How is it possible for a priest of Christ to talk like this?"

Specklebird pointed to his mouth and worked his jaw mockingly in silence. Then, without anger, he lightly slapped the monk's face. Wake up!" he said.

"Blacktooth sat down on a hard bench. He had been reciting formulas, trying to say the right thing for the old man, who was now laughing.

"You are a rich fellow," said Specklebird. "Your riches are your cangue and chains."

"I have nothing but the robe on my back; the g'tara which I made for myself was stolen," the monk protested with some irritation. "I don't even have a rosary, now. Also stolen. I eat other people's food, and sleep in other people's quarters. I don't even piss in my own pot. I promised to be poor for Christ. If I've broken that vow, I don't know how. I broke the others."

"Are you proud of this unbroken vow?"

"Yes! I mean no! Oh, I see, I'm rich in pride, is that it?" Amen Specklebird sat down across from him. They watched each other in the dim light. The old man's gaze was like that of a child, curious, open, pleasant, expectant. He snapped his fingers, unexpectedly loud. Blacktooth did not jump at the snap, but his gaze in turn was wary, and he looked away to the left. Specklebird continued to watch him in silence.

Still delaying, Blacktooth began to talk rapidly, about life at Leibowitz Abbey, not about his sins as sins, but about his frustrations, his loves and friendships, his devotion to the founder of his order and to the Mother of God, his vocation and how he lost it, and his homesickness for the very place he had tried so hard to escape. He kept pausing, hoping the hermit listening to his story would offer advice, but the old ordinary of Our Lady of the Desert only nodded his understanding from time to time. Blacktooth became embarrassed by his own self-pity and stopped talking. A long silence passed between them.

After a while, Specklebird began to speak softly.

"Nimmy, the only hard thing about following Christ is that you must throw away all values, even the value you place on following Christ. And to throw them away doesn't mean sell them, or sell them out. To be truly poor in spirit, discard your loves and your hates, your good and bad taste, your preferences. Your wish to be, or not be, a monk of Christ. Get rid of it. You can't even see the path, if you care where it goes. Free from values, you can see it plain as day. But if you have even one little wish, a wish to be sinless, or a wish to change your dirty clothes, the path vanishes. Did you ever think that maybe the cangue and chains you wear are your own precious values, Nimmy? Your vocation or lack of it? Good and evil? Ugliness and beauty? Pain and pleasure? These are values, and these are heavy weights. They make you stop and consider, and that's when you lose the way of the Lord."

Blacktooth listened patiently, fascinated at first, but drawing himself up, becoming distraught. He felt the old man was trying to undermine everything he knew and felt about religion. Was this kind of talk the reason the bishop had forced Amen Specklebird to retire?

"The Devil!" the monk said softly.

If Specklebird heard it as an accusation, he ignored it. "Him? Throw him away, dump him in the slit trench with the excrement, throw quicklime on him."

"Jesus!"

"Him too, oh yes, into the trench with that fucker! If he makes you rich."

Blacktooth gasped. "Jesus? Whom do I follow? Then why follow? It's blasphemy, what you say."

"You know, it's all right to pick up Christ's cross and carry it, Nimmy, but if you think you get anything special because of it, you're selling the cross, and you're a rich man. The path is without reason. Just follow."

"Without wanting to?"

"*Sine cupidine.*"

"Then why?"

"Your wish for a *why* is the cangue and chains."

"I just don't understand."

"Good. Remember it, Nimmy, but don't understand it. That spoils you."

Blacktooth felt dizzy. Was the old man quite sane?

Amen Specklebird laughed gently. "Now for your confession, if you still want me to hear it."

After confession, which he wanted to forget as quickly as possible, Blacktooth went home first, but the air was foul with recent vomit. Someone had washed the floor near Jæsis' bed, where the student lay moaning. He had lost a lot of weight. Once he opened his eyes and glared wildly at the monk, who asked if he wanted a Doctor to come. "Here this morning," Jæsis croaked. "It does no good."

Blacktooth brought a cold wet towel for his head, then went back to the Secretariat, where he spent the afternoon and much of the evening translating the cardinal's mail to and from the Plains. He was very quickly learning about Nomad politics and the important personages among the hordes. He learned that Chür Høngan had now returned to the hogans and herds of his Little Bear grandmother, that Uncle Brokenfoot had been struck down by sudden illness, that an anti-Christian faction among the Bear Spirit men and the Weejus women of the Grasshopper Horde, some of whom feared Høngan's candidacy, had suddenly rallied to the name of one Hultor Bråm, a mankiller of undoubted prowess, as the most fit war sharf to reunite the Three Hordes. Bråm interested Blacktooth exactly (and only) because he was Grasshopper, and might even be a distant relative. His partisans translated his name as Kindly Light, but in Jackrabbit *hultor bråm* meant a bad sunburn. He also learned that his master was not entirely displeased by this development, for Bråm was possessed by a savagery that made Høngan's temperament seem mild in comparison, and the cardinal, although alarmed by the illness of Høngan's father, believed the majority of the grandmothers would never propose for the highest office and bridegroom of the *Fujæ Go* a hothead after the pattern of Mad Bear, whose reckless chieftainship had lost the Jackrabbit territory in the south to Hannegan II, and cost the Grasshopper dearly in men and cattle. The Wilddog on the High Plains had suffered the least from that old conquest.

Brownpony always left notes to help the monk avoid political pitfalls in his translations, when the wrong wording might offend certain groups, or compromise his plans if his correspondence fell into the wrong hands. The cardinal received more and longer letters than he wrote, and Blacktooth was surprised to learn that he had so many literate allies on the Plains. He knew, or had been told, that Nomad literacy was about five percent. The writers mostly belonged, he realized now, to the Christian minorities within the hordes, and most of them from powerful families. Brownpony was obviously trying to keep these three minorities in close contact with each other. With the help of certain Weejus women, he was even playing marriage broker to forge alliances between Wilddog, Grasshopper, and Jackrabbit families.

Blacktooth came to suspect that an unfortunate marriage of Chür Høngan to a Grasshopper girl was one result of such efforts. He had been doing this since the days of Pope Linus VI, with the blessing of subsequent pontiffs. While examining these files, he inadvertently encountered material from the Weejus women that related to the cardinal personally. For years his friends had been searching among the Wilddog people for some trace of the family of Brownpony's mother or for anyone who remembered

her. The information from the Weeju was transmitted by e'Laiden Ombroz: "With the help of the Bearcub's family, I have come to the end of the search. I can only conclude, Your Eminence, that there is not, and never was, a Wilddog motherline using the name 'Brown Pony.' If your mother's people are among us, that is not their name. The sisters who told you the story must have been misinformed. Perhaps it is a Grasshopper or Jackrabbit name, or perhaps it was an assumed name. I regret that I have been of no help to you."

Embarrassed, the monk returned the file to its place without reading the rest of it, and never mentioned it to Brownpony.

Blacktooth was humbly grateful that his master trusted him enough to let him learn about these matters, even by accident, but he also knew that a few messages to and from the Plains were in code, and these were attended to by Brownpony personally. Something dangerous to Brownpony himself, or to the reputation of the Secretariat, was going on, but he found no clue in the nonsecret correspondence as to the nature of the intrigue. He was not allowed to see the cardinal's correspondence with Oregon and the west coast, but that, of course, was not written in Nomadic. A technical civilization rivaling that of Texark had been developing in the far west for nearly a century, although distance and the mountains kept them apart and not competitive.

The monk had been watching his master pore over his correspondence, wondering why the cardinal himself was rarely mentioned as a candidate for the papacy, when Brownpony whirled suddenly to confront him.

"Nimmy, I am weary of being the target of the corner of your eye, of being the addressee of all your unasked questions. What is it you want to know about me?"

"Nothing, my Lord! It is unseemly . . ."

"It is unseemly to lie to your patron. Ask me a question, an impertinent question, of course."

After a silence, Blacktooth found a small voice: "How is it that you are not a priest, m'Lord?"

"Yes, that would be first question. Explain yourself to the sometime monk, Elia Brownpony. Tell him how you were married once, and now Pope Linus was going to make you a priest before he made you cardinal, but you refused, saying that Seruna might still be alive, although you knew she was dead. She was kidnapped by outlaw Nomads like those at Arch Hollow. They don't keep kidnapped women alive long. Well, Blacktooth, there you have the waves. Do you want the Ocean as well?"

"I'm ashamed that I presumed to ask."

"Don't grovel. I was called to be a lawyer, not a priest, and that's it. There are many priests who should have been lawyers instead, and a few lawyers who should have been priests. I say I have been called to practice law and settle disputes. I'm not so sure where calls come from. Practicing law and negotiating disputes, this is what I do well. Plus politics and controversy. I would not be a good priest, regular or secular. I have neither the charity nor the piety for it. I can serve the Church best as the shepherd's dog, fighting for the flock, or snapping at the heels of the flock to keep the sheep together. There is no chance that Seruna is alive. I loved her in my way, but she was not happy. And if she were alive still, she would not come back to me. But I can't prove she's dead."

"You had no children?"

"I have a son in Saint Maisie's Seminary in New Rome."

"And you are the Cardinal Deacon of—" Blacktooth stopped and put his hand over his mouth.

Brownpony laughed. "Deacon of Saint Maisie's Church in New Rome, yes. Nepotism? Pope Linus made the appointment. Without asking me? Of course he asked me. Now what else do you want to know?"

"I'm sorry I pried."

"You didn't. Looking at me curiously behind my back is not prying. You are a good fellow, Nimmy. You know your place, and you work hard. I raise your salary by half."

"Fifty percent of—" Blacktooth stopped.

"—of nothing is nothing. All right, you may increase your living expenses by that much, and I'll tell Jaron to pay them. Now get on with these letters to the east. I'm so busy trying to keep track of who's here for the conclave and guess at their votes, I've no time for my proper affairs."

When he was not working, the monk fell into moods close to despair. It was not that the sin itself with Ædrea was so terrible, but that he was out of control. His life was reconsecrated to God every day, but if he had kept God in his heart, he would never have climbed into the hay with her. It did not matter to him that what they did together would not make a baby. That it might not even be a sin, if he were not promised to God, but to love her was to love God less, was it not? It was not the act that he despised, but the flaw in his character that permitted it.

Did I go to a monastery to make myself morally perfect?

No, not at all.

What, then?

The monk's ultimate goal is direct union with the Godhead, But to aim at that goal is to miss it altogether. His task is to rid himse of ego so that consciousness, once its usual discordant mental content dumped out of it through ritual prayer and meditation, may experience nonself as a living formlessness and emptiness into which God may come, if it please Him to come. So Eckhart had spoken of it two thousand years ago: "God gives birth to His Son in the soul." Only in self-emptiness may it happen one day that Christ awaken within the monk, as I-to-I. But there was someone else awake there now, for Blacktooth, and he was very lonely, very lonely for her.

## CHAPTER 9

The third degree of humility is that a person for the love of God submits himself to his Superior in all obedience, imitating the Lord, of whom the Apostle says, "He became obedient even unto death."

—Saint *Benedict's Rule*, Chapter 7

LEASED BY THE INCREASE IN HIS LIVING allowance, Blacktooth planned to change his residence as soon as the crowd left town after the election, but for the time being he was forced to continue living with the students. Wooshin would be leaving in a few days at the cardinal's bidding.

When he came home from work on the afternoon of Holy Tuesday, the student named Aberlott called "Catch!" and tossed something to him as soon as he came through the door. Blacktooth grabbed for it, missed, and turned to pick it up when it bounced off the wall. Looking down at the object, he froze in a half-crouch.

"What's wrong?" the student asked. "Isn't it yours? She said it belonged to you."

Blacktooth picked it up and turned to stare at Aberlott. "She? he gasped.

"The nun. My God, what is the matter? You're white as snow."

"Nun?"

"Sure. One of the stricter orders, I believe. Brown habit, white coif. Barefoot. Isn't that your rosary? She said you left it in the cardinal's coach."

"Was she a genny?"

"A genny? Not that I could tell. She didn't wear the headband. Of course, celibate religious don't have to. You can't see much of a nun except her face and hands and feet. She *was* rather pretty for a nun though. She didn't look like a genny to me. You were expecting a genny?"

Blacktooth sat down on his bed and stared at the beads and the cross. The silver had been carefully cleaned of tarnish, and the beads seemed brighter than he remembered, well polished now.

"Did she say anything else?"

"No, not that I recall. We talked a little about the conclave. I was trying to flirt, I guess. She was kind, but she was distant. Oh, she did ask where you were, in an offhand way. That's all."

"What did you tell her?"

"I said you were usually at the Secretariat this time of day. I don't think she was actually looking for you though. She went off in the opposite direction. Just wanted to return the rosary, I think. I wondered what she was doing in the cardinal's carriage."

"Looting it," he whispered.

"What did you say?"

Blacktooth lay back on the bench and closed his eyes. After a long time, he said, "Thank you, Aberlott."

"Don't mention it." The student resumed his reading. Perhaps the nun was really a nun. Ædrea had given the rosary to a nun, that's all. It was all right for a genny to be a nun and not wear the green headband, but for a genny to impersonate a religious in order to conceal ancestry was a crime under the laws of the Denver Republic, as everywhere. Persecution of the genetically diseased was nearly universal. They were protected only by the law of the Church, but not to the extent of allowing the impersonation of religious. And while the Church might protest against discriminatory legislation by the secular authority, she had never taken a firm stand against eugenic laws designed to prevent intermarriage between the healthy and the children of the Pope. Nor had she resisted laws defining the marriageability of citizens in terms of degrees of kinship to known freaks. The baptismal records of Churches were used as evidence in secular courts, and priests were required to note the pedigrees of parents on certificates of baptism. Before any couple were given a license to marry by the secular arm, both had to undress and be tested by the medical inspectors of a civil magistrate. The Nomads, of course, had their own rules, but there was no tolerance among them for deformity, hereditary or otherwise. They simply killed the deformed at birth.

He fingered the beads of his rosary and decided that Ædrea must have given it to a nun in a party of religious traveling up the papal highway. He felt shame for the fear and hope that surged within him when he turned to pick it up. Surely, it must have been a nun. What the police would do to a genny impersonating a citizen was nothing compared to what a mob would do. And surely, Ædrea herself would not have polished the beads and cleaned the crucifix so. If she had sent it back sooner, he would have escaped that horrid moment in confession about bartering it for sex, as Specklebird construed it. But why had she returned it at all, even indirectly?

"What color was her hair?" he called to the student, who was immersed in a textbook.

"Whose hair?"

"The nun."

"Which—? Oh! Her coif hid it." He paused. "Probably blond. She was very fair."

Blacktooth stirred uneasily. Blondes were not plentiful, but there were probably dozens of them in Valana. The mixed ancestry of the continent's population produced skin colors in varying shades of brown, but fair skin and black skin were both rare, as were red and blond hair.

He arose from the bench and went outside. There was nobody in the street but an old man and two children. The rotten smell from the creek behind the house was particularly strong this afternoon. Several neighbors had become ill lately, probably from the creek or its vapors. He decided to take a walk up the hill, in the direction away from the Secretariat.

He walked for an hour. There were fewer and fewer houses as he moved along. At last he came to a guard post at the fenced limits of the city. Beyond it lay only forest and a few hermitages, including the home of Amen Specklebird. He stopped to speak to the sentry.

"How long have you been on duty, corporal?"

The young officer looked toward the sun, hanging low in the west. "About four hours, I guess. Why?"

"Did a young nun pass this way? Brown robe, white coif ..."

The sentry immediately looked toward the woods, studied Blacktooth for a moment, and began to leer. "Oh, *ho!* I wondered why she was going out there alone."

Angered by the leer, the monk turned and hiked back down the road for home. The anger turned to

fear again. He knew it was fear for Ædrea, but she was probably safe at home in Arch Hollow. The nun was just a nun. And yet if nuns had a small convent farther up the hillside, would the sentry have wondered about her destination?

He dreamed that night that he was wearing a green headband and fleeing from a mob who wanted to castrate him for lying with Torrildo, who had breasts as large as Ædrea's, or was it Ædrea with a penis as large as Torrildo's? He was trapped in Shard's barn, which now housed Brother Kornhoer's old generator and the chair of electricity from the chapel. Someone was screaming. Rough hands were strapping him into the chair when somebody shook him awake. The rough hands belonged to Wooshin.

"Stop howling," said the Axe. "You'll wake up the whole neighborhood."

"He already has," Aberlott grumbled sleepily from the next room. Crumily was swearing and pounding his pillow. Jæsis had never stopped snoring and moaning.

When the others had subsided into sleep again, Blacktooth felt under his hard pillow for the rosary. He fingered the crucifix and began whispering the creed, but stopped. Cleaned and polished or not, it felt desecrated. In confession, he had tried to blame Ædrea for stealing it, but Father Specklebird had forced him to admit that he had not taxed her again for the beads after a bout of pleasant but certainly sinful sex in the hay.

"Don't mince words. You traded your rosary for a blow job," the old man had said sourly, "and broke your vow of chastity. Now go on. What else have you done?"

Blacktooth was still doing the penance which Father Specklebird had assigned him. ("You shall make a list, an inventory of all your wealth, my son.") At first he thought it a trivial penance, and that the list would be quite short. But the more he worked at it the more clearly he recognized that his riches were coextensive with, and not different from, his sins. There was more (or less) to spiritual poverty than owning nothing.

The city had not been well since the visitors had come. Down from the mountains perhaps, a fetid chinook or chill miasma had breathed upon it, sickening many of the young, the old, the frail. Food was scarce. Wheat especially was in short supply, and rye of poor quality was imported at high prices. The inns were full to bulging, and inadequate sewers overflowed to the streets in lower elevations. A quorum of cardinals had not yet arrived, but among those already in town, several had fallen sick. The water was blamed at first. It happens every time, the visitors said; none but the locals could safely drink it. But this time was worse than before. There was sickness among the local population as well. The symptoms were various, and not always the same. There was vomiting and fever, as in the case of the student Jæsis. Others experienced dizziness, headache, depression, mania, delirium, or panic. One physician claimed there were two diseases at work and spreading. Only wealthy Valanans seemed immune, but the immunity was not due to wealth itself; visiting cardinals were not notably poor, but a number of them showed symptoms. There was an urgency to get the conclave started, and if possible, done with. Local people blamed the sickness on crowded conditions caused by visitors. Others cited the wrath of God, which would be appeased only by a swift election.

Because of the sickness and of impatience at lengthy conclaves, there were demonstrations and unrest in Valana that month. On Palm Sunday, what seemed to be a religious procession had moved toward the former fortress hilltop from the college of Saint Ston's. As it neared Saint John-in-Exile, its character changed. New banners were unfurled, and the procession became a political parade, whose half-serious purpose was to proclaim popular support of the students of Saint Ston's Seminary for Amen Specklebird as a candidate for the triple crown and the throne of Peter. Hearing about it, Father Specklebird did not wait to be summoned by the current Bishop of Denver, but came limping hastily into town to denounce the enterprise and scold the students. Leaders of the movement were arrested by the secular police—an action which Specklebird felt forced to condemn.

On the following day, students from the secular college staged a parody of the incident by demonstrating in favor of the candidacy of the trigamous Cardinal Ri of Hong, much to the delight of the Axe, who had made friends with Ri's six-man bodyguard, and had learned as much as he could from them about life beyond the western ocean. Again, leaders were arrested, but the jail was already full of drunken farmers, Nomads, and pickpockets who had come to exploit the presence of the growing

crowds of petitioners and lobbyists who always converged on conclaves. The student leaders were lightly flogged, the others given probation. There were also ecclesiastical penalties for attempting to influence the election.

On Tuesday of Holy Week, the Dean of the Sacred College appeared on the balcony of Saint John-in-Exile and promised a turbulent mob of jeering people that the conclave would begin as soon as 398 cardinals were present. "Probably within ten days," he added. Since the death of Pope Linus VI, twenty-two cardinals had followed him to the grave, and the three subsequent popes had observed a moratorium on the bestowal of red hats; but still under present law two-thirds plus one of all eligible electors, excluding those who were certifiably infirm, were necessary to elect. And when no more than the necessary 398 had arrived, they would have to vote unanimously in order to elect a pope, so the Dean's promise was an empty one and the crowd knew it. No serious voting could begin until all but the senile, the sick, and the lame had arrived in Valana.

Votes were being counted in advance, and the bookmakers of Valana were already taking bets, an excommunicating offense. There was no odds-on favorite, but one might bet two alabasters on Golopez Cardinal Onyo from Old Mexico in hopes of winning three, while fans of Urion Benefez could bet one to win three. There were somewhat similar odds on Urion's talk-alike, Otto Cardinal e'Notto from the Great River Delta, and Chuntar Hadala, a greatly respected missionary bishop to the Valley of the Misborn, now the Watchitah Nation. Sorely Nauwhat from Oregon was given at ten-to-one, because of the persistent doctrinal problems in his territory. Abbot Jarad Kendemin was rated fifteen-to-one, because of his reluctance. Only by betting on such improbables as Elia Cardinal Brownpony or Amen Specklebird could a poor porter or housewife hope to become rich.

Holy Week was celebrated with all the pomp possible in the absence of a reigning pontiff. Masses were concelebrated with all able cardinals present, and many of the religious processions were real. But the pageantry was not a distraction to a single-minded population who wanted a pope, a western pope, and wanted him soon. Much anger was directed at the absent Cardinal Archbishop of Texark for his deliberate delay, but his advance party of legists, servants, and conclavists were already busy preparing for what would no doubt be his grand entrance upon the scene at the appropriate moment.

A preliminary meeting of electors, their assistants and conclavists, legists, other prelates, diplomats, leaders of religious orders, and eminent scholars, among them theologians, historians, and political theorists, was scheduled for the afternoon of Maundy Thursday. The announced topic was to be the changing relationship between the Church and the Secular Power in the first half of the thirty-third century. The informal and nonsacred nature of this convention was emphasized by holding it in the Great Hall of Saint Ston at the seminary, and by admitting certain categories of nonparticipants as observers.

"Are you going to this fistfight, Blacktooth?" asked Aberlott, who had put on his student's uniform.

"Who's doing the fighting?" asked the monk.

"Well, it's Benefez against any challenger. Who knows, your own master might pick up the gauntlet for the west."

Jæsis rolled over on his cot and groaned.

"Cardinal Brownpony doesn't get into fights, and the Archbishop of Texark isn't even in town yet."

"Oh, but his whole staff is here. And thirteen cardinals from the Imperium. He's going to make his move, all right."

Jæsis yelped in his sleep, and muttered profanity.

"Mention Benefez, and Jæsis gets mad." Aberlott nodded toward the feverish sleeper. "Or maybe it's the Hannegan he hates."

"You think there'll be a squabble?"

"I know it. Father General Corvany of the Order of Saint Ignatz will be there, for one." This woke Jæsis up, and he began swearing more coherently.

Blacktooth reached for his robe. "I know a priest of Corvany's Order who defied him once."

"And he's still a priest?"

"... 'forever, after the order of Melchisedech,' as they say. But he's under interdict. He wouldn't hear my confession."

"What's his name?"

Blacktooth hesitated, then shook his head, regretting that he had mentioned the Ignatzian. He had learned from his work as translator at the Secretariat that Father e'Laiden, with whom he had traveled to Pobra, and Father Ombroz, the tutor and chaplain of the Little Bear clan, were the one and the same man. "I get the name mixed up with somebody else," he said. "I must have forgotten."

"Well, are you coming?"

"As soon as I finish dressing."

The auditorium at Saint Ston's had seating for two thousand. A quarter of the seats near the front had been roped off for the cardinals, but was still half empty when the campus bell tolled three. Another fourth of the seats were reserved for the cardinals' first servants, and these were filled to capacity with priests and scribes who were obviously here to take notes and be bored. The other half of the seating was open to lesser prelates, faculty, priests, monks, and students, in that order of preference. The supply was greater than the demand. Blacktooth and Aberlott, who came early, took seats behind the cardinal's servants, and were not asked to move to the rear. A few people drifted onto the stage. He recognized the head of the seminary, then a man in a white tunic and scapular with black cappa who had to be a prominent Dominican, probably the head of the Order from the west coast. Blacktooth suddenly slid lower in his seat. The Lord Abbot Jarad Cardinal Kendemin had come from the wings and took a seat beside the Dominican. They beamed at each other, exchanged the kiss of peace, and began a lively whispered conversation over the empty seat between them.

"What's wrong?" asked Aberlott, looking down at Blacktooth. "Would you rather lie on the floor?"

When the clock somewhere above them dinged the quarter hour, Aberlott stood up with a straight face and said, "Here comes the judge." Several others in the vicinity climbed to their feet.

Blacktooth grabbed his sleeve. "Sit down, you clown!"

The man who had come to the podium was the president of the seminary. He spoke brief words of welcome, then invited cardinals who wished their servants to sit beside them to call them forward, and the rest of the audience to move forward to fill empty spaces. Aberlott hitched his corpulent self one seat to the left, told an interloper that the seat between them was taken, and when the audience was quiet again, he turned to beckon Wooshin, standing in the rear, to join them, but the Axe shook his head. His presence meant that Cardinal Brownpony was nearby. The warrior had become the Red Deacon's personal bodyguard, and expected to move soon into the servants' quarters at the cardinal's home.

The first speaker was the Dominican, introduced as Dom Fredain e'Gonian, Abbot of Gomar, Director General of the Order of Preachers in Oregon. "*Tu es Petrus*," he predictably began, and preached a sermon which began with a stirring summons to unity, but soon became a scathing denunciation of those partisans of exile or of return whose motives were economic. He would be seen later in the day with his robe spattered with slops dumped from second-story windows in the merchant section of the city.

The president of the seminary next introduced Father General Corvany of the Order of Saint Ignatz in New Rome, a man obviously in his seventies but still handsome and trim. His graceful carriage and sympathetic persona reminded Blacktooth, to his surprise, of his employer. Like Brownpony, Corvany's normal expression was a natural smile; when the smile disappeared, the effect was startling. He spoke only a few words of greeting to Their Eminences, then lost his smile. "Surely, there has been a mistake here," he said. "Please bear with me for a moment." He left the lectern then, descended the steps into the audience, and audaciously took the hand of Her Eminence, Cardinal Buldyrk, Abbess of N'Ork. "Please," he said to her. "You have a chair on the podium."

Her mouth agape, Buldyrk permitted herself to be escorted to the stage. There was a mutter of astonishment from the cardinals, and even a few muffled cries of outrage, for Corvany was not even a member of the Sacred College, and the expression on the face of the president of the seminary was one of complete surprise.

"See? What did I tell you," Aberlott whispered to the monk. "I'll bet a copper that seat was for Cardinal Ri."

The abbess was seated between Jarad and the Dominican, to the delight of neither, and Corvany thus

established himself as the most liberal and gallant of all the prelates. He resumed his beaming smile and introduced to the audience a learned member of his own Order of Saint Ignatz to speak in his stead. This was Urik Thon Yordin, S.I., who was a clergyman but also a professor of history at the secular university at Texark. He was a lean, gray, bespectacled man in his fifties, and apparently another member of Archbishop Benefez's advance party. His manner of address was that of the lecture hall rather than the pulpit.

"What has not been well understood about the frequent condition of schism in the Church," he said, "is that it reflects a natural schism in the continent. There have always been two Churches, if I may say so, Eminent Lords: one Church in the East, the other in the West. While that pope inhabited New Rome near the Great River, he was living as far from this region and the far west as if New Rome were on the Atlantic. Since the papacy has come here to the foot of the mountains, there has been a great healing of the Church in the West, whose problems are now better understood. This has been made plain to us by events in the Oregon area."

Blacktooth saw two Western bishops leaning together to whisper. It was strange to hear one of Urion Benefez's men begin by admitting the truth of an argument some Westerners used in favor of continuing the Valanan papacy. The approach seemed conciliatory at first.

"And to understand the cause of the Western problem," Thon Yordin went on, "we have only to consider the route which messengers used to take before the establishment of peace in the Province. At the beginning of this millennium, a man foolish enough to travel alone from New Rome to the far West might take a route such as this: south through forest trails, skirting the Valley of the Misborn, then to the Gulf, and, paralleling the coast, on to the Brave River. Crossing the river, he would find the royal road leading west across the desert protected by soldiers of a king; arriving in the far West, he moved north again. A lone traveler coming eastward might make a similar detour. Why?"

He held up a sheaf of papers. "I have here a copy, dated one century and forty-eight years ago last month, of the military regulations for the Papal Guard in escorting the Pope's legates and other ambassadors directly across the High Plains by the most direct routes at that time. Do not be alarmed. I shall not read them to you, although anyone who wishes to examine them may do so. These rules call for forty heavily armed cavalymen under the command of a captain, and a party of twenty archers in light armor with swords, and halberds to be packed with them and carried by mule. The regulations specify certain permissible routes, all riverbeds, and regularly scheduled crossings are forbidden. When a party was ready to leave, its departure was delayed until one man, the captain of the guard, decided to go. Can you guess why?"

"Now, there were occasionally men in those days foolhardy enough to make such a trip alone, or in smaller armed groups. But this was like going to sea in a rowboat. Even if no one at all had lived on that great ocean of grass—tall grass at first, as one moves west, then short grass, then desert grass in the south until one reaches the mountains—if no one at all lived there, the journey would be dangerous enough. This continent itself exists in a natural state of schism, Eminent Lords. It is divided by nature. The open plain is a place of horrid winds and torrid or frigid weather, even today. There is nothing out there but earth, sky, grass, and wind. There is nowhere to hide. Everywhere he looks, a man is surrounded by a far horizon. The grass billows in the wind. That is the great grass ocean.

"In earlier days, there dwelt there upon that grassland those cruel, piratical herdsmen with their woolly wild cattle, and they took delight in torture, and they flayed messengers alive and ate their organ meats, or made them slaves. Some of you who have just crossed the Plains in coming here, in relative safety, I might add—although I sympathize with the hardships you still endured—you have seen the descendants of those cannibals. And unless you encountered an outlaw band, you were not molested. But the forebears of these people were the reason for these extraordinary regulations I hold in my hand.

"Wild they are still, these herdsmen, and cruel, but they let you pass now without harassment. While the Church in the West has, we all admit, rendered fealty to the one true vicar of Christ who traditionally resides east of the Plains, it has always gone its independent way in matters of faith, morals, and doctrine, as we learn from the history of the Oregonians. I refer you to the works of Duren, if you have any doubts about this."

Blacktooth looked suddenly at Abbot Jarad and regretted it immediately. His former ruler was watching him with a faint triumphant smile. Some cardinals in the abbot's vicinity were also murmuring among themselves.

Aberlott noticed Blacktooth's restlessness and turned toward him to whisper. "Nimmy, did you know the Oregonians used leavened bread at Easter Mass?"

"No, I didn't," Blacktooth whispered back. "Neither did Duren. Now hush."

"Oh, yes. Instead of 'Behold the Lamb of God,' when the priest held up the bread, he would say, 'Behold He is risen.' "

Blacktooth kicked his anklebone. His lips shaped an *ooo*.

"Transportation was simply too hard between the East and the West for the Pope to be in constant communication with all his flock and their bishops in those days," the professor continued. "But now we have relative peace on the High Plains and the Prairie, except for outlaw bands. And in the South, for most of your venerable lifetimes it has been possible for a man to travel alone, or in a small unarmed party as some of you from the Southeast have just done, to come from east of the Great River here to mountains with no more danger than you might encounter on the roads in your home diocese. Why? Because the southern horde has been pacified, and the Province is well governed, and those north of the Province are, if not pacified, then at least aware that robbery, rape, and murder of us 'grass-eaters' will bring swift retribution. Thus with travel and communication restored, the imagined advantages to the west of a papacy here in exile are no longer real."

Abbot Jarad had risen to his feet, but the speaker seemed not to notice at first.

"I am not a military man," the professor continued, "but—" He stopped because the audience was looking to his right, and he glanced around to see Jarad standing. "Yes? Your Eminence?—"

"Perhaps the advantages of exile are imaginary, as you say. I pray for a return to New Rome, under the right conditions, for the exile is a scandal and an abomination. But I would remind the learned speaker that the Treaty of the Sacred Mare predates the conquest, that the military regulations which the learned speaker quotes predated that treaty, and that the treaty was negotiated peacefully with the Church as mediator, and that while crossing the High Plains is never without danger, Church messengers have been doing it for at least a century, with no help from the Texark military." Jarad sat down, his face bright red, looking around for a murmur of approval. None came.

"Thank you. As I was saying, I am not a military man, but it has been explained to me that the mission of Texark troops which just happen to be in the vicinity of New Rome has nothing to do with New Rome or the papacy. They were sent there without any thought whatever of provoking or intimidating the Pope. The Hannegan of that time was as astonished by the Pope's flight to Valana, as was the rest of the country. The troops were sent not to outflank the Holy City, but to protect the farmers settling in the timberlands between the Great River and the treeless prairie. The farms were threatened from the west and the north by the eastern horde, the one they call Grasshopper. The troops are there as a peacekeeping force only, as most inhabitants of New Rome now recognize. The herdsmen were penetrating the farmlands, stealing the stock, and kidnapping little boys.

"Nomads give birth to more girls than boys, you know. Something hereditary, I'm told. Anyway, the return of the papacy to New Rome would be protected, not threatened, by the troops in the—"

"Just a minute." Cardinal Brownpony's voice came over the room loud and clear. Blacktooth looked around, as did many others, but no one on the floor was standing. "Just a minute, if I may."

Eyes followed the voice upward and to the rear. Brownpony was standing in the choir loft, with the Axe seated on one side and the Reverend Amen Specklebird, O.D.D., on the other. Blacktooth and Aberlott had been refused admittance to the gallery, but the guards had evidently opened it to latecomers to avoid people wandering down the main aisle after the meeting began.

"I am a descendant of these cannibals, as you call them. My mother, I was told by the sisters who raised me, bore the family name of 'the Brown Pony.' I never met her, but the family was Wilddog, the sisters said, and she was the young widow of a Jackrabbit husband who had escaped a Texark jail, but was killed by Texark bullets. She was raped by one of your Texark peacekeepers when she went south to visit her dead husband's people. I am the child of that violent union. The sisters who raised me in your

province let me keep the name she gave them."

Blacktooth looked up at Wooshin with wide eyes, and his surprise was reflected by the warrior's. Neither of them ever mentioned Brownpony's origins to others, judging it a taboo subject. Now the Red Deacon was announcing his mysterious bastardy to the world, which already knew of it in whispers. And yet he himself knew little or nothing of it, according to the file the monk had seen at the Secretariat.

"And there is my secretary," said Brownpony, looking down at Blacktooth. "His ancestors were Grasshopper refugees from your Texark pacification. They lost all their cattle to Hannegan's diseased animals. His parents died without horses, farming another's land. From him, I know something of the Grasshopper people and their history. For centuries they have pastured their animals on the land of which you speak, among their other lands. That region was called 'Towa' on the ancient maps, I believe, but it is nearly treeless, and yet fertile enough for the farmers to covet it. And the Grasshopper has always gathered wood for poles, stakes, arrows, and spears from the thinly forested lands north and south of that area. If the farmers are there now, they've settled there since Hannegan's slaughter. You paint the Texark forces as protectors. You want the Pope back in New Rome, in the midst of his protectors. I too want the Pope back in New Rome, in spite of his protectors, in the midst of his enemies, among whom you have just counted yourself. You have been sent here to draw fire away from your master. Now the Cardinal Archbishop of Texark, who we all know has sent you, must either underwrite your views, or denounce your slander against the people of the Plains."

There was an astonished silence, followed by brief applause and cheering from two Westerners. Father General Corvany ominously lost his smile again, and came to his feet. The applause quickly subsided. Brownpony sat down smiling. Cardinals were looking over their shoulders at him. On the stage, Jarad's jaw dropped. Brownpony was known as a diplomat, always courteous, a peacemaker who rarely took sides. His tone had been calm, but he had just declared war, and it had to be premeditated.

Before Corvany could speak, a sputtering archbishop from the delta of the Great River, now part of the Texark Empire, arose in a huff to defend the speaker's thesis concerning the protective role of past Hannegans in the Midwest, and to deplore the interruptions. He pointed a finger toward the balcony and began to say something about Brownpony, but the Dean of the Sacred College arose and roared, "God's peace! God's peace!"

The seminar was about to become a verbal melee, and few in the audience noticed the student who wandered down the center aisle. He was staggering slightly. Aberlott suddenly clutched Blacktooth's arm and pointed. The man in the aisle was Jæsis, uncombed and un-shaved, his face livid but with red blotches. He stopped in the middle of the cardinals' section and pulled something out of his half-buttoned cassock. He croaked Yordin's name and a curse. There was an explosion and a burst of smoke. Thon Yordin put his hand to his chest, looked down, but there was no blood. Instead, one of the men seated behind the podium fell from his chair. It was the Father General of the Order of Saint Ignatz himself who lay bleeding. The assailant in the aisle waved a Texark cavalry pistol aloft, yelled again at Thon Yordin, fired the other barrel toward the ceiling, and collapsed in the aisle. The audience was on its feet and roaring.

"Assassin! Texark assassin! Hannegan's agents!"

Blacktooth looked around for the source of this irrational voice, but saw only a fist waving in the surging crowd.

Men swarmed over the fallen student, and from the platform came cries for a physician. Blacktooth and Aberlott were seized by police as they hurried out of the building.

There followed eight hours of questioning at the Valana police barracks, but Cardinal Brownpony quickly appeared on their behalf. There had been no brutality. The police learned from the college that Jæsis was from Texark, had attended Thon Yordin's classes at the university there, had failed his tests and then transferred to Saint Ston's. A physician stated that even now he was delirious with fever. The police released Blacktooth and Aberlott just past midnight; they walked home by the light of the Pascal moon. Jæsis died that night in custody.

While the city slept, the Reverend Urik Thon Yordin sent a rider galloping toward the telegraph terminal at the final outpost on the road to the Province. The message he carried was addressed to Union Cardinal Benefez and, with a copy to the Emperor, would reach Hannegan City by Good Friday's sunrise:

FATHER CORVANY WAS KILLED TODAY BY A STUDENT ROOMMATE OF BROWNPONY'S NOMAD SECRETARY. THE SECRETARY WAS QUESTIONED BUT RELEASED AFTER BROWNPONY INTERVENED. KILLER DIED IN POLICE CUSTODY. DETAILS FOLLOW. I AWAIT FURTHER INSTRUCTIONS.  
YOUR OBEDIENT SERVANT IN CHRIST,  
YORDIN.

## CHAPTER 10

Let a man consider that God is always looking at him from heaven, that his actions are everywhere visible to the divine eyes and are constantly being reported to God by the Angels.

—*Saint Benedict's Rule*, Chapter 7

IN VALANA ON SUNDAY THE 17TH OF APRIL 3244, Blacktooth arose before dawn and watched the moon, now past full, settle behind the mountains, then washed his teeth with ashes and boiled water, relieved himself in the outhouse, got dressed, and then spent in prayer the short time it took for the sun to come up. Without eating anything prior to receiving the Eucharist, he left the house. On the way to Mass in the early-morning chill, he sensed someone following him. Turning, he saw only a man talking to an open window a stone's throw away, and someone wandering in the other direction. The window's occupant, if any, was not visible. The man talking to the window was the same man Blacktooth had seen begging on the same street the day before Jæsis shot Corvany. Probably a denizen of the neighborhood. The feeling of being followed was an illusion caused by shame, the monk decided. He kept walking toward the Cathedral of Saint John-in-Exile. It was Easter morning.

With hundreds of cardinals participating, the Mass of the Resurrection was spectacular in the Pope's own Church, even without a pope. Blacktooth had come early enough to be assigned a spot to stand with room enough to kneel, but most latecomers waited in crowds outside the nave and outside the cathedral itself. Getting out of the building after Mass was worse than getting in, because many of those pouring outside paused to talk to acquaintances and blocked the way. It was a perfect situation for murder. Blacktooth felt the dagger pierce his side as the arm holding it darted between two other worshipers, who immediately fell back in dismay. Blacktooth clutched his side and faced his attacker. It was the man who talked to empty windows, the beggar. Feeling people moving back, he looked around. There were three of them, dirty and shabbily dressed, two with knives, one with a chain. They fought there on the great ascent of cathedral steps which had no landings, and two of them were thrown sprawling to the bottom by a victim with unexpected skills. Someone was screaming for the constable, others for the Papal Guard. The original attacker, the beggar, now cut the monk's face and might have gone on to kill him, but the blast of a constable's horn sent the three of them fleeing.

His wounds were cleaned and dressed at the police station, and he was interrogated by an irritable lieutenant who insisted on believing that he, Jæsis, Aberlott, and Crumily were conspirators in some larger scheme. Blacktooth's relationship with the cardinal provided him with a secure identity in which he dared feel immune to intimidation in the face of anything short of violence. He told the lieutenant what he needed to know and tried to ignore what he wanted to know, based on a wrong assumption.

"No common hoodlums would try to rob a poor monk."

"They weren't out to rob me, just kill me."

"Exactly! and why? They must have some reason to hate you."

"Well, they seemed to be common hoodlums, they had no reason to hate me, so they must have been hired."

"By whom, do you think?" asked the officer.

"By some fool who thinks Jæsis planned on killing Father Corvany, and that I was involved."

The lieutenant, who apparently thought the same thing, glowered at him and left the room for several minutes. Blacktooth prayed to Saint Leibowitz. When the lieutenant came back, his manner had changed.

"You will have to be on guard against another attempt. Stay with people you know. Stay home at night. Stay away from crowds like this morning's. Come outside my office and sit on the bench here. Your employer will be here soon."

"His Eminence? For me?"

"For himself. There was an attempt on his life too. Here, his own man can tell you."

Wooshin had emerged from another interrogation room. He sat beside Blacktooth and briefly described the attack on Brownpony by two strangers armed with handguns. Brownpony was unharmed, and the attackers were dead. The police found one beheaded corpse on the scene, and a severed arm with a gun still in hand. The armless assassin had been found bleeding to death in an alley. If he said anything before he died to the constable who found him, the police were keeping it to themselves. There was no need to ask how they died. Soon an officer brought Wooshin his swords. They had been wiped, but were not quite clean of dried blood. The Axe frowned but sheathed them without complaint. Soon Brownpony emerged, and after an inquiry about Blacktooth's wounds, they all walked together back to the Secretariat with two armed men following at a respectful distance.

"You have thought about what this means, Nimmy?"

"It means somebody made a mistake, connected me with Jæsis, for one thing. And you, m'Lord?"

"Same mistake. It is politically important to the Hannegan that gennies, Nomads, and citizens should live in mutual loathing and fear, that they might be more easily governed in their disunity. Did you know, Nimmy, did you know—Jæsis was a spook?"

"A hidden genny? Oh no, m'Lord! That's hard to believe. I've seen him undressed."

"There was an autopsy, and they found the signs. They've not made the fact public. There hasn't been a pogrom in decades, and we don't want one to start. Move your things immediately. Until the crowd leaves the city, you will live in the Secretariat's basement. In case they try again. We may never know who hired these men, but they were amateurs."

"Locally recruited," the monk added. "I saw one of them before."

"Yes, but the telegraph makes us a suburb of Texark, and words now travel faster than the sun moves over the earth. Fortunately, the conclave should begin by midweek. When Benefez, or even Corvany's replacement, gets here, he'll take command of their people. I don't think Cardinal Benefez hires assassins."

"His nephew does," grunted the monk.

"Professionals only, Nimmy, not amateurs," Wooshin said.

When they came to the Secretariat, a large but low building set well back among trees, Blacktooth found three basement rooms already furnished for use by occasional messengers or political fugitives, one of them now occupied by Axe. Blacktooth chose the room closer to the privy's exit, but Axe immediately warned him: "At night, use a slop jar. Never go out that door in the dark unless I go with you."

But no further attacks had occurred by the time the requisite number of cardinals had assembled on Wednesday of Easter week, and while people afflicted with Jæsis' disease ran amok in the streets, stripped naked in public, or just lay in bed and howled, the attempt at a conclave began. First the cardinals assembled in the great Cathedral to offer Mass together, then left the building in procession to cross the square and enter the palace where the election was to occur. An altar was set up at one end of the great throne room, and the palace was temporarily consecrated.

Cardinal Brownpony had chosen as his conclavists Brother Blacktooth St. George and Sister Julian

of the Assumption; the rule that his conclavists be clergy from Saint Maisie's applied only in his absence, and he would not be absent. Nimmy recognized his master's choice of the sister as an exquisitely diplomatic one, but his own selection jolted him into surprise, until he noticed that Brownpony was having frequent conversations with Jarad, and that Jarad had brought with him as one of his conclavists Brother Singing Cow. Nimmy became vaguely uneasy. Perhaps Nomad politics were to be considered by the Holy Ghost in the choice of a pope. Well, why not? But he dreaded meeting with Singing Cow or the abbot face-to-face.

No sooner had the conclave convened, however, than a cardinal from Utah fell deathly ill and had to be excused, thus forcing an adjournment for lack of a quorum. Blacktooth returned to his new basement home. Police watched the building, but there was no further attack.

During the three days the Cardinal President of the Conclave allowed the adjournment to continue, seven more electors arrived from a far northeastern province. Word came from the telegraph terminal that the Archbishop of Texark would arrive within ten days. As soon as the conclave reconvened, Cardinal Brownpony, joined by one of Benefez's conclavists to show nonpartisanship, proposed a rule empowering the sergeant-at-arms to arrest any cardinal elector attempting to leave the city or even the building without permission from the conclave. A heated protest was made by cardinals fearing the epidemic, but Brownpony in his reply pointed grimly to the anger of the people in the streets, and what might happen to the cardinal electors if they failed to sustain the quorum. The rule was passed by a large majority, and was sent on to the Valana city government with a request for help in enforcement. The request was approved, and it became a crime for a cardinal to flee Valana. And so began the process of finding a candidate agreeable to the Holy Ghost and various earthly powers, began even before that most eminent of earthly powers, Lord Cardinal Archbishop Urion Benefez, had arrived.

The city continued to sicken.

The ancient custom of burning ballots with or without moist straw as a signal to lend white or dark color to the smoke from the chimney was observed, but the laws governing the election of a pope had changed according to the requirements of the age. In theory, the Bishop of Rome was elected by the clergy of Rome, locked in a closed building (*con clave*) until two-thirds reached agreement. For thousands of years, each new cardinal, wherever he might live, was assigned a Roman Church whose upkeep was his responsibility, and whose name was part of his title: Elia Cardinal Brownpony, Deacon of Saint Maisie's in New Rome. Now there were more cardinals than there were Churches in New Rome and Valana combined.

From time to time a protest group would march across the city to gather in Saint John's square and chant slogans before the palace. By the fifth day of the conclave, people were throwing occasional stones at the doors, and the Papal Guard, in mourning for the dead Pope, were sent out to keep order. Unwilling to shed blood, they were soon disarmed by the populace. The civil police were unable to control the crowd, short of using firearms. The crowds gathered and dispersed as they pleased. In fear, the cardinals voted for three days. When there was voting, the crowds drifted away, although there were always people who watched for white smoke.

An occasional cardinal, usually ill, tried to leave the city, was caught, and was hauled bodily back to the palace, where a room adjoining the great hall of the conclave was staffed as an infirmary. An elector in bed could vote, his ballot carried up to the altar by a conclavist helper who held it aloft so that everyone could see that no switching was done before he placed it in the chalice. While the early and indecisive balloting continued, however, citizens from outside the palace were sealing the great, bronze double doors by building wooden scaffolding against them. A blacksmith anchored the scaffolding by hammering long spikes into lead anchors set in holes drilled into the granite walls. Other men boarded up windows.

On the sixth day of confinement, a man climbed to the roof with a sledge and a crowbar and broke away clay tiles while another man, with an axe, chopped a hole in the roof deck beneath the tiles. Buckets of slops were drawn up to the roof, and a citizen cheerfully poured them through the hole. The ladies of the Valana Altar Society were prevented from bringing emergency food, since the kitchen had been closed by rioters. The water to the palace was shut off.

The cardinal with the loudest voice climbed to a broken window and yelled anathemas at the crowd, excommunicating everybody who remained in the plaza after five minutes. The crowd cheered and applauded as if he had been heard to announce good news. Actually, he was not heard at all above the din.

By late afternoon, a cardinal with diarrhea wailed that the privies were full to overflowing, for the Sanjoanini who worked outside were being prevented from emptying them. All requests from within for candles and lamp oil were refused. The palace began to smell like the local jail, with incense. The *conclave* was now indeed "with key." Also with nails and timbers. There were cots enough for the cardinals, but their conclavists slept on the floor.

Blacktooth sat against the wall, alert lest his master beckon, and watched and listened and smelled and tried not to be afraid. He had gained much self-confidence in Brownpony's employ. Also, that he could fight off attackers was a relaxing bit of knowledge to have with him in any situation. Blacktooth knew that he had not been changing, but unfolding in new dimensions. But he felt he was becoming worldly as he did so.

Brownpony waved him forward. "Talk to as many of the cardinals' conclavists as you can. Sound them out on Cardinal Nauwhat and Abbot Jarad, especially Nauwhat."

"Yes, m'Lord." He looked around at a particularly loud crash of a window breaking.

"I've been to four conclaves and never seen anything like this," Brownpony told him as he sent him on the vote-counting mission. "The sickness must be causing madness."

Blacktooth began moving from cardinal to cardinal, not approaching the electors directly, but consulting the prelates' assistants. But he came finally to Abbot Jarad. The self-confidence that had helped him with the police suddenly vanished. Brother Singing Cow was there as the abbot's conclavist, but Blacktooth fell to his knees and kissed the abbot's ring. Jarad pulled him gently to his feet and smiled but did not embrace him, and called him by name without calling him Brother. "You wanted to see me, my son?"

"Domne, my master asked me to solicit advice as to the possible nomination of Sorely Cardinal Nauwhat."

"From me, or everyone?"

"From everyone, Domne."

"Tell him that if the Holy Ghost is not against it, I'm for it." He smiled at Blacktooth and turned away again.

"What of the nomination of Jarad Cardinal Kendemin?"

"The Holy Ghost and I are both against it. Is that all?"

"Not quite."

"I was afraid not."

"I would like to ask the abbot's blessing on my release from the Order."

Jarad looked at him remotely. "I was the minister who conferred on you the sacrament of Holy Orders, remember?"

"Of course."

Jarad pressed his palms together, eyed the darkness above, and said to God, "Have you ever been known to take back Holy Orders?"

"Never," said Cardinal Brownpony, joining them. "What do we have, a problem here?"

"None whatever," exclaimed Jarad, clamping an arm around his shoulder.

"No problem with you, Nimmy?"

"Yes, a problem. When and how am I going to be laicized?"

"Well, that's partly up to the abbot here."

"And without his permission, it's up to the Pope?" Blacktooth shifted his gaze toward Jarad, noticed the anger, noticed the controlling of anger, and saw Jarad's lips move slightly in prayer while he breathed deeply and listened to Brownpony.

"Oh, it's up to the Pope in the end anyway, but his permission is almost automatic if the abbot has given his." Brownpony looked questioningly at Jarad. Jarad let go of his shoulder.

"And almost automatically refused if the abbot refuses?" Blacktooth also looked at Jarad.

"No," said the Red Deacon, "probably the Pope would want to talk to you personally. In your case, I'm sure he would."

Jarad faced Blacktooth squarely. "I suppose I owe you a hearing. Do you want to talk to me about it? Come to my quarters when all this is over."

"I thank you, Domne!"

When he turned away, Brownpony fell in step with him. "Do you want to be laicized, or do you just want to make the whole thing a quarrel with the abbot? He'll let you go, if you don't make him any madder than he is now. Let it alone, Nimmy. He's not happy with you. Don't make it worse."

The monk left the vicinity, his self-confidence drained. He missed the abbey. He yearned for Jarad's blessing, or at least some evidence of forgiveness. He continued canvassing, although he knew that all Brownpony really wanted was to spread the knowledge that he was considering Sorely Nauwhat. A deception, Nimmy thought. Or maybe not. The Northwest had probably been happier when the papacy was located across the Plains. There had been less interference in the Northwest Church's affairs from New Rome than from Valana. Nauwhat was leaning toward an immediate return, in spite of the hostility of Cardinal Benefez toward the Northwest's independence in matters of liturgy and of Catholic teaching. Brownpony was dragging in a red herring to lead the hounds away from politics toward theology, if Blacktooth correctly understood his master's hints. But on the other hand, Sorely Nauwhat would perhaps be a good man for the highest office.

From outside came the repeated roar: "Elect the Pope! Elect the Pope!" Occasionally, it became, "Elect the Amen! Elect the Amen!" Rumor came in from outside that Father Specklebird had left his cave and gone up the mountain, and a committee of citizens searched for his trail. Blacktooth prayed to Saint Leibowitz, and tried to keep up with his breviary, but could not pray well in the midst of havoc, as Abbot Jarad seemed able to do.

He was becoming very hungry.

Cardinal High Chamberlain Hilan Bleze tried to lead the frightened prelates in a *Veni Creator Spiritus*, but the hymn could scarcely be heard above the racket on the roof, the hammering of doors and windows, the splash of slop on the floor, and the babble of frightened conversation among the hundreds of electors and their conclavists.

Two hours later, perhaps in response to the invocation of the Holy Ghost, someone tossed a living bird down through the hole in the roof and covered the hole to prevent its escape. Not a dove but a vulture flapped around the Cathedral in terror and finally alighted atop the giant crucifix which hung suspended in midair by chains from a roof beam between the nave and the altar. Several cardinals were screaming about an omen, a warning from God.

Brownpony climbed up on the temporary altar itself and roared, 'Silence! In the name of God, silence!'

Only the desecration of the altar could have caught their attention, and silence did at last prevail.

"What you see and hear is indeed the judgment of God on us! Now this congregation must invite Father Amen to address us. He should be one of us. We shall hear him, and hear him now. How say you?"

"Get down from there, Elia!" Abbot Jarad shouted.

"Not until you vote!"

There were dissenting murmurs among the cardinals, and a few cries of outrage, but after some muffled shouting outside the walls, the crowd fell suddenly silent. The crowd had posted reporters to listen at some of the broken windows.

"Quiet! Let the nays vote first," Brownpony called. "They'll be easier to count. Those who refuse to hear Father Amen, raise your hands."

Pointing here and there, counting aloud, Brownpony said, "Seventeen!" and stopped. "Amen Specklebird shall speak to us." He nodded and climbed down.

A face was looking in through a broken window above the choir loft. It was a Valana policeman. Brownpony and the Cardinal High Chamberlain disappeared through a doorway and soon were in the

balcony talking to the officer. He shouted their words to the crowd. The hole in the roof was uncovered to allow the buzzard to escape, but the frightened bird took no notice and remained perched on the upright above the INRI sign. A roar of enthusiasm went up from the mob outside.

Soon some of the windows were uncovered, but nothing was done about the doors. Within two hours, shit was being shoveled from the privies. Baskets of sour rye bread with the black specks were lowered through the roof hole, and the water pumps began working again. Screaming reerupted, however, when the buzzard suddenly descended from the cross to the floor, attracted by a smelly lump of garbage on the tiles. Three Sanjoanini were finally allowed entrance through a loft window to shoo away the bird and clean up the slops from the floor.

Chaos subsided, order returned, and the only sound in the palace was the murmur of hiccups, moans, sighs, groans from the ill, a murmur which occluded any whispered conversations drifting past and echoing in the great and temporarily sacred cavern. The light was low, near sunset. Servants were beginning to light the candles, but only a few of the cardinals were up and about. The rye bread had been consumed, and most of the water, but hunger, thirst, and fear presided over the night.

Blacktooth overheard a Texark conclavist talking to one of the abbess's assistants:

"Everybody knows Cardinal Brownpony has taken off his gloves. Brownpony went to Leibowitz Abbey and hired himself a secretary and a bodyguard this spring. And who is this new bodyguard? A Texark runaway criminal, the former executioner Wooshin, now under a sentence of death for treason. And who is this secretary? A Texark-hating refugee from the Grasshopper Horde, brought up to despise imperial civilization but educated at the abbey, who was a friend of Corvany's assassin. The cardinal deacon stood up and denounced our learned Thon Yordin and at the same time slandered Cardinal Benefez and all but declared war on the Texark Church. Now he wants a mountain-dwelling hermit, who barely speaks Latin and would be frightened to death by New Rome, to become the next Bishop of New Rome, in absentia again. Permanently in absentia, as Cardinal Brownpony would probably have it. However my master might otherwise have voted with respect to Amen Specklebird, Cardinal Brownpony's support of him will cause him to abstain, of that I am certain."

The necessary twenty votes were quietly gathered, however, and Amen Specklebird became a candidate for pope even before he appeared to speak.

## CHAPTER 11

Therefore, since the spirit of silence is so important, permission to speak should rarely be granted even to perfect disciples, even though it be for good, holy, edifying conversation.

—*Saint Benedict's Rule*, Chapter 6

MEN SPECKLEBIRD WAS NOT STRONG ENOUGH to resist the crowd that dragged him reluctant to the Papal Palace by midmorning. And so at last, to pacify the people and the conclave, the black, old hermit priest agreed to address the cardinals. For this purpose, the dying Cardinal Ri consented to appoint the old man as his special conclavist, for Specklebird's status as a cardinal *in pectore* of his former persecutor was doubted by most. He was passed in through the broken window in the balcony, and more baskets of bad bread and flagons of water were lowered through the hole in the roof.

There were scribes who were appointed to record all speeches during the conclave, subject to later editing or deletion by the speaker, but some of the few who actually listened to the old hermit throughout

his seemingly interminable homily later swore that some of the scribes had been asleep, and none had accurately recorded the full speech. But at first, the electors listened with intense curiosity.

Strange stories were told of Amen Specklebird by the old people of the countryside. Some said he walked silently on the mountain paths by moonlight and spoke to the antelope, the mountain spirits, and the risen Christ. Some had seen him flying above the treetops at morning twilight, and in the hole in the back of his cave he kept serpents, the mummy of an old Jew, or a wonder-working genny girl. Sometimes he visited the farms of the settlers and made it rain for them. He was a man of subtle power. He had placed a spell on Pope Linus VII, the story went, who as the Bishop of Denver had forced his retirement, and the spell made Linus call him to the Papal Palace several times during his long illness, either to have the spell removed or to treat the sickness whose cause eluded the physicians. (Blacktooth had seen him change into a cat and back, but Blacktooth would be the first to admit that his distance vision could be sharpened by spectacles, but his reason for avoiding it was not so much poverty as the fear that sharpness would ruin the clarity of his occasional hallucinatory insights into people and things.)

Heretics and holy men made pilgrimages to Amen's cave. Children of irreligious parents threw stones at his door and called him a buggery man, and yet it was a fact that the Lord Cardinal Brownpony often came to see him, and he was confessor to prominent sinners from the city. Pregnant women came to have their bellies blessed by him, and for a small donation he would consult the mountain spirits, who controlled the weather even on the western Plains, and whom he addressed by saints' names, about the best time for sowing or reaping or breeding sheep.

But now this dark old man with the frizzy white cloud of hair began speaking to the cardinals in conclave, and his style of address was none other than Blacktooth himself had experienced as his penitent. He was an elderly confessor most tactfully admonishing sinners and less tactfully testing their minds with paradoxes, and sometimes tortured syntax.

He embraced the audience with his long bony arms. "Fathers of the Church, Eminent Lords, there is a simpleton among us who has no rank at all and sits in the midst of us as a spy in an enemy camp. It is to him this sermon is addressed."

The Archbishop of Appalotcha stood up and called out, "Point him out, Father. Call the sergeant-at-arms!"

"He is here without authorization, it's true," said Specklebird, waving the ushers back. "But please sit down, he was here among us from the beginning, and he always will be. He's here to spy for Jesus anyway. And this conclave is the enemy camp."

There was a murmur of righteous protest about the Holy Ghost and the apostolic succession, but it quickly died.

"The simpleton who sits in the midst of us as a spy is conscience. A conscience has no rank and no position. A conscience cannot be a cardinal's conscience or a beggar's conscience. It adheres to the naked man, wholly exposed. And to the naked woman." The Abbess of N'Ork flinched, but Specklebird avoided looking at her. "In him or her, the Father gives birth to His Son.

"To this naked simpleton I speak, regardless of his office. The offices have fought each other. Rank has quarreled with rank. Regional origin argues with regional origin. Does the simpleton want a one and only pope, an everybody's pope? Then let him put off his rank, his office, his regional origin and beg God's grace to vote as a simpleton, a pure man." From this rational opening, he began to wander.

At first he spoke mostly about the return of the papacy to New Rome, because he knew that this was the foremost issue, not the closest to his heart. And he made it clear from the beginning, to the complete astonishment of his Valana supporters, the mob outside, that he favored an unconditional restoration of the New Roman Papacy in its ancient See. Brownpony, his friend, even looked shocked by this disclosure.

Only cardinals from the Denver Republic were in favor of making the exile permanent, and they too were truly shocked. They had refrained from calling the exile Exile, and proposed to change the name of Valana to "Rome." Their motives were well rationalized, but they agreed with the rabble in the streets that the end of exile would be the end of Valana. But the Valana faction was a tiny minority in the conclave. Everyone else wanted the papacy returned to New Rome. The sharp division of opinion concerned the

circumstances of that return, and the demand for a demilitarization of the surrounding terrain by the Empire.

The conclave had dragged to a standstill.

In a general way, the far East and the West were aligned against the middle. The middle was Texark and its vassal states along the Great River. There were also single-issue electors for whom the Valanan exile was not of major importance. Emmery Cardinal Buldyrk was one example. From the far northeast, she had voted with the West in two previous conclaves, but was now apparently leaning toward Benefez because of a possible softening of his position against the ordination of women. Benefez, however, was not present to confirm the inclinations of his conclavists, so the lady's vote was not secure. Cardinal Brownpony was doing his charming best to reconvert her, and she her charming best to seduce his feminine side.

Blacktooth himself took notes occasionally, but the old man rambled on and on. He misquoted Scripture. He belched. He improved on Scripture. He broke wind. He apologized for his frailties. He talked about his boyhood in the Northwest. He talked about barnyard matters. He talked about the wisdom of a mindless God. One passage which was faithfully recorded, and later used against him, was this:

"All this talk about the Church, the State, and the causes of schism reminds me of a story. When the priests asked Jesus whether they should pay taxes to the Hannegan of that time, Jesus borrowed a coin from them, asked them whose head was on it. 'Hannegan's, they said. So he told them, 'Render unto Hannegan what is Hannegan's, and to God what is God's.' Then he put the coin in his pocket and smiled. When the priest wanted his coin back, Jesus asked, 'Who do you think Hannegan belongs to?' When there was no answer, he reminded them, 'The Earth is the Father's and the fullness thereof, the world and they that dwell therein.' Of course that's just another way of saying, 'The foxes have their dens, but the Son of Man has nowhere to lay his head.'

"So he gave the priest his coin back and slept under one of Hannegan's bridges that night, along with Peter and Judas. The priest went home and paid his taxes and drew up an indictment."

Here, Specklebird began to wander wide of his topic of New Rome and Valana.

"Why, you may ask, did Judas and Peter and Jesus sleep under a bridge," he said, pursuing a tangent. "Judas had a good reason, you see: someone had stolen his horse, and he was too tired to walk to the inn. Peter also had a good reason: he had no money to stay at the inn. Jesus had no reason, no reason at all. Jesus was *free* to sleep under a bridge. Such is freedom. Such is reason. Such is rumination."

Another tormentation of Scripture that was later bound to be used against him was this:

" 'What does it profit a man if he gains the whole world but loses his own soul?' I spoke earlier about this world, and him to whom it belongs, but what, one might ask, is one's own soul, which can be lost? The soul, insofar as it exists or not-exists, is the seat of suffering, when Jesus was born, he looked around at the world and said to his mother, 'From the outermost to the innermost I alone am the suffering one.' Cardinal Ri, whose conclavist I am, told me that. And this is the first fact of religion: *I am* means 'I hurt.' Why is it that I hurt? Is it God's revenge on a son? No, I hurt because I, my soul, keep grasping at the world to gain it, and the world has sharp teeth. And thorns.

That is the second fact of religion. The world is slippery too, and it wiggles. Just when I think I have a grip on it, it stings me, and slips away, or part of it dies on me, and I am overcome with grief and a sense of loss—the consequence of sin. But there is a way to stop grasping at this slithery world, a way to stop hurting and hungering. That is the third fact of religion. That third fact, Venerable Fathers, can be called the 'way of the Cross.' It leads to Golgotha. For *you* among you who will be Pope, it leads to New Rome."

His return to the topic came with brutal abruptness.

"These are elemental things. The fourth elemental fact of religion is called the 'Stations of the Way of the Cross.' " He waved toward the paintings on the Cathedral walls.

"This, Venerable Lords, is what I say of New Rome: that the way of the Cross ends there. The last station. The Pope must go back to New Rome as to Golgotha, and be crucified. The Hannegan will have his coin of tribute, which belongs to God if you correctly understand the Lord's irony, and Peter will have his crucifixion. When Benedict fled from New Rome in the last century, Jesus appeared to him and asked 'Quo Vadis,' but Benedict mistook him for a Nomad, and said 'Ad Valanam' and did not turn around. This I heard from one of you." He smiled at the conclavists from Texark, whose expressions had changed throughout the speech from initial hostility, to astonishment, through outrage, to suspicious approval, for, although the premises by which he arrived at his conclusions were not flattering to their monarch, and his theology was outrageous, the conclusions were the same as their own. The papacy should go home without any concession of power from the Imperial Mayor of Texark.

Usually so silent, this bewildering man was now talking through the afternoon, and when the lamps were lit in the evening, he talked on by lamplight. Once, when Blacktooth himself nodded off, he reawakened to see a cougar in a ragged cassock change to a dark brown old man with wild white hair again.

Amen Specklebird made a speech that was to become famous in the history of the Church, as written by its severest critics. Such are the quotations and misquotations as written down by the scribes.

Amen on the Fall and its aftermath: "The fruit of the tree, Eminent Lords, was rumination. Out of rumination came good and evil. The devil is a cud-chewing animal with cloven hooves. The serpent Satan ate souls and chewed the cud, and he taught rumination to the female, who taught it to the male. Whatever you do, do not ruminate. The anointed one never ruminates. He marches straight on to Hell from the tomb—and ascends to Heaven if it befall him.

"But if you should ruminate, and thus sin through fornication or rage or greed, never be ashamed of your guilt. Shame is none other than pride, pride is none other than shame. Your pride is your shame, your shame is your pride. They look in opposite directions, shame and pride, because when pride looks directly into the eye of shame and shame looks directly into the eye of pride, both instantly die. They die to the accompaniment of laughter, the laughter of the man who has foolishly kept them in his heart and kept them apart. When he feels his shame as pride and his pride as shame, he is free of them, free forever from the sin of both. Guilt, however, is not a feeling.

"When you see that you have sinned, and you repent the sin, *do not* wish you had not sinned. Wish instead that God in His mysterious way will turn your sin to a good end, for your sin is now already a part of the history of His ongoing creation of the world. To wish it away is to resist His will."

Amen on truth: "The truth is God's subtle, abominable word, Eminent Lords, *subtile et enfandum* is His word."

Amen, repeating himself, on man's place in God's world: "Don't you know that Jesus Christ is alone and friendless in the universe? Don't you know that the Earth is the Creator's, and the fullness thereof? What does *that* mean, Eminent Lords, except that the foxes have their dens, but the Son of Man has nowhere to lay His head? He often sleeps under bridges.

"What is God that thou art mindful of Him, and the Son of God that thou shouldst visit Him?"

"He who is close to God is in danger. It's possible to be so enlightened that blindness follows. The light was too bright for your eyes and you never see God again."

Amen on man, woman, and the Trinity, going on in a kind of rapture: "God lives at the center of the Son. Or Daughter." He nodded toward the Cardinal Abbess. "His throne—it's hotter than Hell there, you know. Even the Devil couldn't sit down in that throne. But you can. I can. We're in His lap, and we know what the Godhead's like—from inside. God-at-the-center-of-the-sun-I am bigger than I am. Jesus too, am. Saint Spirit also, am. And, oh my yes, the Virgin, am. One should be embarrassed to speak of God in the third person."

He went on openly to embrace what Blacktooth recognized as a tenet of the old Northwest Heresy, so called, although many in the audience seemed too sleepy to detect it.

"Whence came the Trinity and the Virgin? The unspeakable Godhead yawns and they emerge. The Virgin is the hymnal silence into which the Word is sung by the Father through the Holy Breath and begotten and made flesh within her flesh from the beginning. 'Before the creation, God is not God.' But

behind this fearsome four-fold God yawns the undifferentiated Godhead. To say so is false, however, Eminent Lords. To mention it at all is to lie. Godhead? To presume to name it or even allude to it is to miss it entirely while immersed in it. And yet it is to a union with this ultimate Godhead that we dare aspire. In such a union the soul is like a glass of water when poured into the great ocean. Its identity as a certain glass of water is diffused into its identity as the ocean. It loses nothing. Nor does it gain. It is home again.

"And the wages of death am sin," he added. It seemed an afterthought.

Brother Blacktooth realized early that the audience was briefly captured by his pious enthusiasm and stopped listening carefully to words. The man had a way about him. He could just be himself in front of a crowd and the strength of his spirit prevailed upon them. But after hours of it, the cardinals began to turn to one another and even to get up and slip quietly about the throne room to whisper.

It was well into the following morning when he blessed his inattentive audience and sat down. He had talked all night. That was the first of the next Pope's miracles. He talked seventeen hours without a glass of water and without becoming hoarse. He had talked them into weariness. Only his friend Cardinal Brownpony voiced an "Amen," as the morning sunlight broke through the eastern windows, but that was because only a few had been listening toward the end, but among these a handful had listened intently. Many were asleep. Others were reading their breviaries, some were pairing off politically—actually wandering from throne to throne—and seated bishops whispered and giggled with neighbors, as innocent as girls in the early morning. When Brownpony said "Amen" to the speech, Specklebird stood up again and answered "Yes?"—and then, as if by a breath of the Holy Spirit, the few intent listeners started erect and answered "Amen" with such deep feeling that others were caught by it, and then there was a chorus of guilty *amens* from the bewildered.

And that is really all there was to it. The speech was not famous then. Like many of the great orations of human history, Specklebird's speech seemed rather confusing to the conclave, which, in desperation, finally elected him in spite of the strange homily. Only much later would his words come alive, when men thoughtfully read the transcriptions and random notes, and either damned it as foulest heresy, or praised it as divinely inspired, a new revelation. But to Brownpony and all who knew him well, Amen Specklebird's talk was like the twitter of birds who say in every language such things as "Bob White," or "To Easter," or "Whip-poor-Will." The meaning is in the ear of the listener.

They elected him that morning, the old man, before the crowd started throwing stones at the door. Cardinal Ri lay dead on his cot. Old Otto e'Notto had gone crazy as a loon. The corridors of the palace were places of vomit and shit. More than twenty-five cardinals were in the throes of the illness, and five were with difficulty restrained by their conclavists from becoming violent. They elected him without debate before noon.

To the surprise of many, including Blacktooth, the old man actually said, "*Accepto*," and called himself by his own name, Pope Amen, to the disapproval of many. It was a break with a most ancient tradition.

There were feeble protests preceding the election, of course.

"He said the anointed one marches straight into Hell!" a cardinal from the Southeast complained to the abbot.

"'From the tomb' he descended into Hell," added Jarad. "And on the third day he arose again from the dead and ascended into Heaven. That's orthodox enough."

"If it befall him! And he called God's word abominable."

"A slip of the tongue," said Brownpony. "He meant admirable."

"'Subtle and abominable' is what he said. Attributes of the Devil. The serpent was the subtlest of beasts. God's word is Satan?"

"Come, come!" said the abbot. "I think you misheard him. *Verbum subtile atque infandum*. It means finely woven but unutterable. Even elegant but unutterable. Truth so subtle it evades speech. The silence of Christ. And he was waving his arms around at the universe when he said it."

At the end, the conclave unanimously agreed on one thing. If any man could return to New Rome as the head of the Church and play Peter to the Mayor's Caesar without any compromise of fear, it was indeed this Amen (cardinal *in pectore* of Linus VII, as many were now willing to concede) Specklebird. But it was in compromise and fear that the conclave at last elected him, even permitting the conclavists of Archbishop Benefez to vote in his absence, which was not legal since he had not been present to instruct them. To their later chagrin, they voted for the gaunt and wild-eyed hermit.

*"Gaudium magnum do vobis. Habemus Papam. Sancte Spiritu volente, Amen Cardinal Specklebird ..."*

The roar of the crowd drowned the rest of it, and the conclave turned within itself again as each cardinal came before the new Pope to kiss his slipper and be embraced by the new heir to Saint Peter's keys, and heir as well—if Brownpony the lawyer was correct—to both of Saint Peter's swords, meaning both the spiritual and the temporal power, the latter subordinate to the former. Brownpony the lawyer who knew more about the history of canon law and the papacy than anyone outside of Leibowitz Abbey had talked freely during the conclave about the ancient Theory of the Two Swords, to the dismay of conclavists of the absent Archbishop of Texark. He quoted from an ancient bull: "*Porro subesse Romano Pontifici . . . de necessitate salutis ...*" "And so to be eligible for salvation everybody must be subject to the Roman Pontiff." According to Brownpony, this never-popular decree had been aimed especially at monarchs, whether civil or Nomadic, and the Hannegans and Caesars as well, but it passed the test for infallibility defining a matter of faith and by backing it with a stated penalty, the loss of salvation, for rejecting it. Perhaps what the electors sympathetic to Texark feared most, Brownpony as Pope, was now replaced by fear of Brownpony as gray eminence. That the cardinal had been the hermit's patron and cultivated his friendship and managed to get him restored to favor with Linus VII was well known to everyone. It had seemed a harmless relationship between a rich and lordly Churchman and a humble holy man. If one lacked a conscience, one could always pay to support one, was the cynical view. But Brownpony and Specklebird, though poles apart, had always seemed genuinely fond of each other. There was that friendship to worry about now.

There was jubilation in the streets at first, but then the people heard with outrage that their hero had reversed his initial position, which was thought to have been that the real Rome was wherever the Pope decided to settle down. A further rebuff to the city was the sentence of interdict which Pope Amen laid upon Valana until the instigators of the violence against the conclave should be brought into his presence. For three days, the population seethed. Under the interdict, Masses were forbidden to be said or confessions heard, and only the last sacraments could be offered to the dying. The city was sick, and the city knew that the punisher behind the interdict was Cardinal Brownpony. But on the fourth day, the terrorists were brought bound before the Pope. He ordered them untied, heard their common confession, and granted them absolution on condition that they repair all damage to the building under the supervision of the Cardinal Penitentiary and satisfy any other claims against them before an arbitrator. Having thus subdued the city, the Pope-elect again called together the conclave and had himself reelected in the absence of mob violence. This too was attributed to Brownpony's influence. A vote against the Pope was a vote against an early departure from Valana; there were no such votes, and only two abstentions.

It was true that Specklebird had once said that Rome was wherever the Pope settled down, but saying that the Pope was Pope wherever he lived was not the same as saying he should live in Valana. Specklebird had never said he should, for he was Pope only by virtue of being Bishop of New Rome. The public ministry which informed and influenced popular opinion published an analysis of Specklebird's views, and it was posted on the doors or walls of every Church in the city. Valanans, this essay concluded, had nothing to fear from Amen Specklebird's return to New Rome, for this was his home, and while he left as spiritual conqueror, he could be expected to return every summer to Valana for the rest of his life, and permanently to establish here many institutions of the Church which were now in New Rome, such as the Ignatzian Order, in order to free them from imperial influence. Nevertheless, the angry burghers seemed intent upon preventing Pope Amen from leaving Valana until Urion Cardinal Benefez had arrived and paid homage to His Holiness.

By this time the attendant electors, cardinals of the College, had knelt before, kissed the ring of, and

been embraced by His Holiness Pope Amen. Only a handful refused to do so, claiming that the election was held under duress and therefore invalid. These few had obvious Texark affiliations and their attitude was not unexpected.

It was about noon on the fateful election day that the coach bearing the Most Eminent Lord Urion Cardinal Benefez, Archbishop of Texark, arrived in the sickened city with a party of cavalry. Blacktooth caught a glimpse of the fury on the portly archbishop's face when he learned of the forced election, and heard him rain abuse on his own conclavists for their votes, but the meaning of the fury and its portent faded almost instantly from his mind. Across the plaza from the palace stood a barefoot girl in a brown nun's habit. It was Ædrea, looking at him in apparent shock.

He took a step toward her; then Brownpony's voice echoed in his mind: *You are not to intentionally see her again. If you ever see her in Valana, avoid her.* He stopped. But she had already turned away and disappeared into the crowd.

## CHAPTER 12

Idleness is the enemy of the soul. Therefore the brethren should be occupied at certain times in manual labor, and again at fixed hours in sacred reading.

— *Saint Benedict's Rule*, Chapter 12

SOON AS ELIA BROWNPONY HEARD THAT HIS old friend-enemy Urion Benefez was in town, he began looking for an opportunity to escape from such ceremonies as the vesting of the new Pontiff. When he found the right moment, he insisted that Blacktooth accompany him to see the Archbishop of the Imperial City, but for what purpose the monk could not quite imagine. As they hurried to the address where Benefez had reserved a residence, Blacktooth confessed that he had seen Ædrea. There was a quaver in his voice, and the cardinal stopped smiling and looked at him sharply.

"I told you to avoid her!"

"I did not disobey you, m'Lord"—yet, his internal demon added silently.

Brownpony's smile dimly returned. "I know. She avoided you. I talked to her myself."

"Where?"

"At the office, while you were out. I had asked Security to send her to me the next time she brought silver from the colony. When we stopped in Arch Hollow, I told you about the group of gennies in the Suckamint Mountains. They call it New Jerusalem. There's an old silver mine they work. She comes to town about once a month to the, uh, other wing of the building to exchange silver for currency. Their contacts are strictly with the covert wing, which keeps me informed. That's why she didn't know me before, although I was very surprised. We keep their secrets. They fear for their silver mine, among other things. You saw the papal flag over Shard's house.

"I'll tell you how our visit looked from their viewpoint, Nimmy. They're on the edge of lawless country. The last party of Churchmen who stopped at Arch Hollow turned out to be Texark agents, and they were very suspicious of Shard's family. One of them penetrated behind their place to the cliff trail, and he saw too much, so the guards killed him quietly and dragged him away. When the other two realized he was missing, they wanted to go looking for him. Shard said there was danger of bear attacks. The guards would have killed them both. Ædrea went to search on their behalf, and brought back a piece of an arm with teeth and claw marks on it. So they prayed over it, buried it, and went back south the way they had come. But before they left, they let Shard know they were on Texark's side, and that all gennies should go back to the Watchitah Nation.

"Then, right after these false Texark priests left, there came a cardinal with no bishop's ring, a monk who plays a guitar, a Nomad in a magic hat, and a swordsman who admits he had worked for the Hannegan. Furthermore, if the cardinal was who he said he was, he should know all about them, but he didn't seem to."

"All they're hiding is a silver mine?"

"Not quite. The gennies in New Jerusalem are about ninety percent spooks, able to pass, relatively normal, like Ædrea. They began fleeing to those mountains generations ago. They put the gleps up front and call it Scarecrow Alley.

"Now, as for Ædrea—" He broke off and looked at the monk. "She sends her regrets."

"For what?"

"Probably for avoiding you in the square. For teasing you too, I suppose, back at her home. How do you feel about her?"

Nimmy groped for words, but none came.

"I see. The Secretariat can have no visible contact with anyone from New Jerusalem. Do you understand that?"

"No, m'Lord."

"Their aims are controversial. So are some of ours. They are refugees, and stand accused of killing Texark guards when they escaped the Watchitah Nation. They fear a raid from imperial forces from the Province. Stay away from the subject, and from her. She's trouble."

Don't I know! he thought miserably.

"She will no longer be accepted by us as their agent," the cardinal added sharply. "That should be the end of it."

The coaches from Texark were still loaded with baggage and both military and civilian personnel standing around as if waiting for orders. A monsignor politely blocked the cardinal's path and asked his name and business.

"Just tell him the Red Deacon is here."

"May I state the purpose—"

"Tell him I came to find out why he tried to have me and my secretary assassinated."

Shaking his head, the monsignor went through a door with the message. Half a minute later, the lecturer Urik Thon Yordin emerged, white as a sheet, looked in terror at both of them, and fled the room. The cardinal looked at Blacktooth and smiled. Nimmy now understood why he was here.

Brownpony was called inside. Blacktooth sat by the door, which was not quite shut. The Archbishop of Texark had not yet changed out of his traveling clothes. The Hannegan's uncle was pacing in fury.

"Elia, how dare you accuse me, even jokingly, in front of my servants and visitors?" he raged.

"I was not aware you had a visitor," the monk heard his master lie. "The fool seemed very upset. I apologize, Urion."

"Well, yes, Yordin is a fool. When he notified us about Corvany's killer, he associated the thing with you and one of your men. I'm sorry someone tried to kill you, but I resent your insinuation, Elia. As you no doubt resented Yordin's."

"I apologize again, Your Eminence. I do wonder if Yordin himself wasn't behind it. But we'll let this wound heal. And now, Urion, will you also heal the Church by paying homage to His Holiness? I know how you must feel, and while the election was very irregular, it's plainly valid. Be generous! The new Pope wants to go home to New Rome, unconditionally, where the Empire wants him, without demands. You have gotten what you wanted." There was such a stoppage of Brownpony's breath with the word "wanted" that Blacktooth could almost hear the *except the tiara* which did not follow. "He makes no demand for a withdrawal of Texark troops, Urion."

There was a long silence. "I shall consult with many other cardinals, Elia. Thank you for your advice," the big man said at last. "I don't like what I'm hearing, but let's not be enemies."

"What have you been hearing?"

"That you stirred up the city, that your agents caused the riots. Or that the, uh, hermit himself did."

"You have been lied to. The people had to drag that 'hermit' to the conclave. Talk to Jarad. Talk to Bleze. Then talk to His Holiness, that hermit, for love of the Church. A love we share."

"Oh, yes, Elia! I know you love the Church. It's what else you may love that I wonder about. We'll

see, we'll see."

On his way out, Brownpony found that Blacktooth had been joined in the outer office by three frustrated electors who had come to Valana as Texark allies. One of them, however, had already knelt at the feet of Pope Amen and been embraced by His Holiness. Brownpony exchanged weather opinions with them and hurried on.

"Why did you want me to go with you there, m'Lord?" Blacktooth asked innocently.

"Because I knew Yordin was there, of course. I wanted him to fear we were going to accuse him. And frankly, I wanted to get him in trouble with the archbishop."

"You think he hired the men?"

"If not, he knows who did, but he knows it was a mistake. I think we'll be safe now. It just proves they're dangerous. Now we all need a rest after the worst conclave I've ever seen. Take two or three days off."

As Blacktooth was leaving the Secretariat, the receptionist guard at the entrance handed him two letters. One was a note from Ædrea. He glanced at the guard, who was watching him with an expression that made Blacktooth ask:

"Did the sender give this to you personally?"

"It was handed me by a young sister in a brown habit, Brother St. George. May it not displease Your Reverence that I did not ask her name, for she was silent herself and I did not wish to spoil it."

"Spoil what?"

"Her silence."

Nimmy studied him in surprise. He was a beefy man of mature years, and looked like a retired soldier. His name was Elkin. "You've been to a monastery, haven't you?"

"I was at your own abbey for three years in my youth, Brother, at the same time as the cardinal. Of course, he wasn't a cardinal then, or even a deacon. And I wasn't yet a soldier. But we left at the same time. He had been there to study, but I was there to—" He shrugged.

"Find a calling or not," Nimmy finished, and resolved to be amazed later by this information. "About the silent sister. Does she come here often?"

The guard's expression blurted a *yes* before he caught himself and said, "You should question His Eminence about things like that, Brother St. George."

"Of course, thank you." He turned to go. The other letter was a note from Abbot Jarad apologizing for being unable to meet with him as promised. *I am writing to His Holiness on your behalf, my son, and you may be sure I shall write only what will be favorable to your good intentions.*

Whatever that means.

The note from Ædrea said: *I shall leave your chitara in the crack in the ledge below the waterfall up the hill from the Pope's old place.* Blacktooth began walking in that direction. He wondered why she hadn't left his g'tara with the guard instead of the note. It was a five-mile hike to the falls, and the climb made him dizzy. When he arrived, a white horse was drinking at the pool under the falls, and he froze for a moment; but then he saw that it was a gelding rather than a mare, and wearing a bridle but no saddle; it snorted at the sight of him and trotted out of sight around a curve in the trail. The waterfall was hardly more than a shower, and it fluttered in the wind, producing an occasional flash of rainbow. He walked around the pool, fearing and half hoping to find her behind the falls. The g'tara was there as promised. It was slightly damp from the mist of the falls, causing him to grunt irritably and wipe it against his robe. Why had she made him walk so far?

He glanced at the hoofprints in the sand as he walked around the pool again. Then he stopped. The hoofprints of the horse crossed and partly overlaid a set of human footprints, smaller than his own. Both led in the same direction away from the pool. He wrestled with himself for a moment, then followed the trail.

Her footprints led him into a wooded ravine, then under a low ledge which overhung the sandy bank of the swollen creek. He had to duck low to walk, then dropped to his knees and crawled. Then he found her. He had heard of this place, but never seen it. The small cavern under the ledge was said to

have been the home of Amen Specklebird before Cardinal Brownpony bought him the remodeled cavern closer to town.

Slanting sunlight filtered through the foliage and made delicate patterns on the stones and the bare thighs of Ædrea, who was no longer wearing the nun's robe but the leather skirt and a halter above her waist. She sat with bare flesh on bare sand. He had been following her trail on his hands and knees, and at the sight of her bare legs he paused to look. She laughed at him, and put away a handgun she had been holding in her lap.

"You might as well admire the rest of me." She pulled up her skirt and spread her legs to let the dappled light shine on her crotch, then closed her thighs quickly. He had seen it before, dimly, in a barn. Her vagina was small as a nail hole because of the stitches, but her clitoris was as big as Nimmy's thumb, and maybe because he loved her he could see nothing repulsive about her crotch, however embarrassing, and she could see that he was not repelled but sad and curious, and embarrassed. She smiled wickedly and patted his arm.

He sat in the soft sand beside her. "Why do you tease me?" he asked wistfully.

"Now or back home?"

"Then and now."

"I'm sorry. There was a runaway monk from your Order who stopped at our place once. He didn't like me, not at all. He was in love with another monk. I wondered if you were like him. And your gap was showing."

"Gap?"

"The gap between what you are and what you try to let show. I'm a genny, remember. I see gaps. Some call me a witch, even my own father when he's angry."

"So what did you see in this gap?"

"I knew you weren't just a runaway like the other, but something was wrong. You were some kind of fake. I wondered if you weren't the cardinal's prisoner."

Nimmy's laugh was remote. "Something like that. I was in disgrace."

"Are you still in disgrace?"

"As soon as the cardinal finds out I've seen you, I will be."

"I know. He ordered me out of town. That's why I didn't stay by the falls, so that you could go back the way you came."

"You left me a trail."

"You didn't have to follow it."

"Yes, I did." He eyed her accusingly.

"Come back here where we can't be seen." She rolled over and crawled back into the cavern entrance, taking the gun with her. Nimmy followed. The rock overhead was less than ceiling height, and he could not stand up, but in the dim light from the door he could see a mattress on the floor, a saddle, a low table with a candle on it, and several wooden boxes.

"You've been living here!"

"Only for three days. Your employer told the sisters to turn me out. I've made my last trip to Valana. I'm not welcome at the Secretariat anymore. Our people will have to get somebody else. I'm going back home alone. That's my horse you saw outside."

"But why? His Eminence told me you trade silver for scrip, but—"

"Scrip?" She laughed. "Yes, that's truth. Not the whole truth, but true. He doesn't want me to handle it anymore because of you and me, and because of Jæsis. Jæsis was one of ours. And now your cardinal thinks we have a spy among us. He may be right, but it's not me."

"Where did you get the gun?"

"I swiped it from one of the crates in our shipment."

"Shipment?"

"From the Secretariat to New Jerusalem, of course."

Nimmy was incredulous. "We are giving you guns?"

"Not giving. Selling us some, depending on us to store some for the Secretary's own arsenal. Didn't

you know? We're bigger than you think, a nation almost. The mountains are easy to defend."

"I don't think I should have come here," he said in alarm.

She caught his arm as he backed toward the door. "We won't talk about it anymore. I thought you knew." Her hand moved up his arm under the sleeve of his robe, caressing. "You're nice and furry."

He sat down again. The gun was lying on one of the packing crates. He picked it up.

"Be careful, it's loaded. I was afraid, staying here alone. That's the smallest model, but it shoots five times. Here, I'll show you." She took the weapon from him, manipulated it, and five brass objects fell one at a time out of the gun into her lap.

"If those are the bullets, where is the powder?"

She handed one of them to him. "The lead part is the bullet. The brass part contains the powder. Now watch this." She cocked it and part of the gun rotated through a small angle. She pulled the trigger, and cocked it again, causing another rotation. "See? It shoots five times. And it's this easy to reload." She turned the cylinder one click at a time and dropped the cartridges back into their chambers.

"But how do you reload the cartridges?"

"You don't, in the field. You carry a lot of cartridges with you. There's a loading press back at your base, if you don't lose the casings."

"I've never seen anything like it."

"Neither has the Texark cavalry. The guns come from the west coast. I think the design came from Cardinal Ri's country, but it was probably copied from the ancients." She put the gun away, and embraced him suddenly. "I'm not going to see you again. Let's make love—any way we can."

Resigned to what he had started, he did what he could to please her. They lay on the mattress, rubbing bodies and kissing. God, she is beautiful, he noticed in the faint light from the entrance. Spirit in the primordial ooze fucked the Earth, and the Earth gave birth to her, golden-haired as the new corn and laughing in the wind. O Day Maiden, thy name is Ædrea, and I love you.

*"Fujæ Go!"*

"What?" she whispered, squirming under him and grinning at her own pleasure.

*"Fujæ Go, It is one of the names of—"*

"What?"

He remained silent, watching her violet eyes search his own.

"Unspeakable?" she guessed.

"You, are, almost, awake," he groaned in sudden orgasm.

"Oh, let me take it. Like before!" She reached down with her hand and caught his discharge.

Spent, he nevertheless started up in total surprise. She was rubbing it into herself, into that tiny orifice no larger than a buzzard-quill pen. "What are you doing?" Nimmy gasped.

Still grinning, she said, "Getting pregnant. Like last time. I'm way late for my period since we did it."

Stunned, he sat up. It had been black as pitch in Shard's root cellar, and he had been too drunk to be certain what happened, and he could feel it but not see it, in spite of what he said in confession to an old onetime hermit.

"Nimmy, you're white as a sheet!"

*"Why?"*

"Shard had me stitched up by a surgeon, and he won't have it undone, and he's my father, and I love him, and I won't defy him, but this way I can let a baby tear it open, if he won't let a surgeon cut me."

"Oh, my God!" He rolled over with his face in his hands.

"Nimmy, please don't cry." She held his shoulders and tried to keep him from shaking so. "Oh, please!—I didn't mean to make you unhappy. I just picked you to have a baby with. You!"

Nimmy felt dizzy and sick. There seemed to be only a moment of blackness, but when he awoke and went outside, Ædrea and the white gelding were gone. He was alone in front of the tiny cavern. She had written in the sand: *Goodbye, Nimmy. You really are a monk.*

He saw her in town again, however, on his way home from the hills. Walking down the street, he looked over his shoulder at the sound of a horse and saw Ædrea slowly overtaking him. She shook her

head quickly, but barely looked at him. He nodded understanding and kept going. She had stopped somewhere along the way, but had to come through town to go back home by the main road. Blacktooth, who was wearing his Leibowitzian novice's robe, turned a corner and just avoided running into another man, who was skipping rope. He wore a wood and leather harness which held a harmonica up to his mouth. He played a rapid but recognizable *Salve Regina* while he jumped the rope; a cup on the ground at his side asked for, and had collected, a few coins. Blacktooth suppressed a sharp gasp and tried to pass behind him as quietly as possible. For there wearing a Leibowitzian postulant's robe in the road was Torrildo playing the fool for coins. Blacktooth had gone about six paces when the music and the slapping of the rope suddenly stopped, so that he could hear the tread of hooves of his love's mount as she too passed the excommunicated musical mendicant.

"Hey, Blacktooth. *Darling!*" Torri called.

Blacktooth broke into a fast trot. Behind him, he could hear them. Ædrea stopped to exchange pleasantries with Torrildo, whom she had apparently met before.

"Oh, so he was the one!" he heard her say as he fled.

The sound came from the chapel, a *whishing* slap followed by a moan. It was repeated every two or three seconds. His Eminence Cardinal Brownpony stopped to listen, then walked inside. After three days of absence without leave, his secretary for Nomad affairs was found at last. Blacktooth was kneeling before the altar of the Virgin in the Secretariat's private chapel; he was flagellating himself with a scourge of thongs.

"Stop it," the cardinal said quietly, but the sound went on. *Whish*, slap, moan. Pause. *Whish*, slap, moan. Pause.

The head of SEEC cleared his throat loudly. "Nimmy, stop it!"

Finding himself ignored, he turned toward his office, the Axe at his elbow. "Come see me as soon as you can," he called over his shoulder as the flogging continued. "We have an audience with His Holiness early tomorrow. It's about your petition."

• • •

The audience went badly. As they walked to the Papal Palace, Blacktooth, his back sore and his guilt making him sick, said nothing to his master and his master said nothing to him. There was an alienation between them that he had never felt before. Brownpony obviously knew he had disobeyed and seen Ædrea, but he could not know, or perhaps only suspected, that she had told Blacktooth about the smuggling of guns. If they had spoken as they walked, mutual accusation might arise, and Nimmy was grateful for the strained silence.

The Pope, still looking uncomfortable in his white cassock, greeted them warmly and without formality. As Blacktooth knelt to kiss his ring, Amen nodded to the cardinal, who then disappeared, leaving the surprised monk alone with the Supreme Pontiff.

"Please get up, Nimmy. Come let us sit over here."

Blacktooth moved as if in a dream. As he sat down, he felt as if he were resuming his role as a penitent in Specklebird's home cavern. Out of the corner of his eye, he saw Specklebird become a cougar.

"There seems to be a divine being among us," said the cougar, smiling a thin smile.

"The divine being should shut up," Nimmy heard himself say, and heard with pleasure the cougar's laugh. The being was playful.

"You are going to continue in Cardinal Brownpony's employ for some time, unless you object," said the cougar, dissolving into an old black man with a cloud of white hair and white skullcap.

"I am surprised he still wants me." (Nimmy again hearing himself.)

"Why do you think he chose you among his translators as a personal secretary?"

"I have wondered that myself, Holy Father. I can only think that he has become attached to the people of his unknown mother, through his frequent contacts with them. I am of the same blood."

"It's just ethnic nepotism? Do you really think so?"

"The alternative is to suppose that he thinks I have some particular quality or talent that he appraises rationally, and so chooses me, in spite of my disobedience, but I cannot, Holy Father, imagine what that could be. Whatever it is, it must be imaginary on his part."

"In other words, you're just a poor sinner who deeply loves God, but hasn't got much to offer in the way of talent."

Sarcasm? Blacktooth withered. He had unconsciously spoken through a mask of humility, and the cougar as Specklebird-Peter ruthlessly held up a mirror to the mask he was looking through.

Recovering after a moment, he said, reflecting the sarcasm, "All right, let's admit that I'm a genius in Nomadic languages, having invented the new alphabet myself, which even Saint Ston's uses, I'm told. Not only that, I've learned to defend myself, understand most of my master's affairs with the Nomads, and that's where we're going. So perhaps his choosing me is rational. Also, I've been taught how to kill a man."

"You are to abstain from deadly violence, my son," said the old mountain cat.

"Neither am I to covet my neighbor's ox, Holy Father."

The Pope laughed heartily. "You're awake sometimes, Nimmy. I do believe it: you are called to contemplation."

Blacktooth sighed and lowered his head. "I could be laicized and still work for the cardinal, Holy Father. And I don't have to be a monk to contemplate."

Specklebird returned to his subject: "In your case, I think you do. Cardinal Brownpony chose you because you *are* a monk, Nimmy, a real monk, and a contemplative. Why do you think he, a rich and powerful man, formed a friendship with me, a hermit and beggar, a bedraggled and much-reprimanded priest with no parish, denied access for several years to the altars of Valanan Churches? Your master wants to learn more about people like us, Nimmy. There is hope for him, just because he perceives we are different, and the perception leads him to curiosity rather than contempt. If you were not truly a man of religion, why would he choose you?—who know less about the Secretariat's business than at least three of the others. I know him. He wonders what it is like to know God."

"If you are being infallible, I surrender. If not, I say he made a mistake, because I am, or was, a very bad monk."

"You bring in a load of donkey shit. That's yours to confess if you think so, but it's not yours to judge on the last day."

"I'm in love with a spook, a genny girl, Holy Father."

"Is that why you want to be laicized?"

"Not at first." He sighed. "Maybe that's part of it now."

"Maybe?"

"Because she too says I'm a monk. Everybody says I'm a monk but me."

"Smart girl. When you feel love for her, see God in her. Do not let this love lessen your love of the Lord. Passion is the other side of compassion, not its negation. You should be able to see and love God through any of His works, including a forbidden girl. But remember that you are a monk of Saint Leibowitz. Love is not a sin."

"But consummation is."

"For you. You yourself chose it to be so."

"As a runaway at age fifteen."

"Your solemn vows were taken much later, Brother St. George!"

"But I was still ignorant of the world I was undertaking to shun by my vows, from which only you can absolve me, Holy Father."

"You have learned so much about the world lately?"

"I am in love."

Pope Amen laughed. "Loving God through His creatures is admirable, if you know what you are doing. Now let me remind you of something. I have spoken to Abbot Jarad, and he reminded me. The Order of Saint Leibowitz was originally an order of hermits. It is possible for you to remain in the Order,

but live apart from the monastery. You would live by the ancient rules of Saint Leibowitz, as he originally established them. This would be after your present employer releases you, of course. I ask you to consider the possibility, and postpone your request to be laicized until you decide."

Blacktooth sighed deeply. He looked at the old black man; the cougar was gone. He lowered his head in submission, but a question remained: *What if she is really pregnant?* he thought, walking away empty from the audience. Well, not quite empty: a poor monk had talked back to a Pope. Riches, riches.

Other employees of SEEC briefed him on events during his five-day absence. Valana was still in turmoil. The external violence and internal cowardice that tainted the Conclave of 3244 were acknowledged even by the new Pope, who had astonished everyone by placing the sickened city of Valana under a sentence of interdict. The security guard Elkin recited for Blacktooth the names of the leaders of the violence, who were brought forth to undertake to repair damages to the palace. "These seventeen thugs knelt there before Pope Amen, their hero. He got from them a promise to repair all damage. Then he imposed a penance of prayer and fasting, and then absolved them."

"But this did nothing to satisfy the Benefez people," Nimmy guessed. Elkin nodded.

It was immediately apparent that the election of an eccentric religious ascetic of dubious orthodoxy and religious impulsiveness caused a nervous shuddering to pass through the hierarchy and the institutions of power from coast to coast. It was either an unexpected attack by the Holy Ghost upon the conclave, or the work of the Devil and the Red Deacon.

The Archbishop of Texark interviewed nearly 170 cardinals who had participated in the election before he found enough electors who willing to affirm that their votes for Amen Specklebird had been given under duress. He stayed only three days in the city, and, claiming illness, failed to come to pay homage to the elected Pope. He departed with his troops and quite a few Eastern cardinals who were healthy enough and eager to escape the sickened city. Some members of his faction announced that the Holy See was still vacant because the election was forced. They called upon the old man to admit the election was invalid, to announce another conclave to be held in New Rome, and then to step down from the throne he illegally occupied. Brownpony and others made the case for a valid election, and proposed that the faction recognize His Holiness or face ecclesiastical sanctions. Only one of the group changed his mind at this point, and the others left Valana for home. It seemed obvious that the old wound of schism had again burst its stitches.

By his will, locally drawn, Cardinal Ri left his servants to Cardinal Brownpony, an embarrassment which the Secretary for Extraordinary Ecclesiastical Concerns managed to share with His Holiness the Pope, to whom the Archbishop of Hong left his wife and lesser concubines. The lawyer who drew the will became angrily defensive when questioned about the possibility of a mix-up of the two bequests, with Brownpony supposed to get the women. The Red Deacon echoed his anger, and testified that Cardinal Ri before his death had asked him to take care of his servants afterward. He called it obvious that Ri had intended to leave the fate of his loved ones in the hands of none but the servant of the servants of God, Amen Papa Specklebird. Since the servants of Cardinal Ri were very happy to find a new master, Brownpony decided to keep all but one of them, not as bond servants, but on five-year contracts renewable only with mutual consent. The Pope granted SEEC an increase in funds to pay the expense of keeping them. They numbered six skilled warriors, two personal servants, and Ri's confessor. This priest he released to Saint Ston's, who wanted the former chaplain eventually to teach courses in the Oriental Rite as practiced in his land and in the language spoken there.

As for the Pope's inheritance of the three women, Amen gave them the gold which the prelate had willed to him, plus freedom, and, if desired, he offered a choice of school, a convent, or a marriage broker.

Wooshin for his part was delighted to be in command of a squad of well-trained fighters who shared a military tradition not unlike his own. The Axe was beginning to speak Rockymount like a native, and this fact alone made it natural that he assume command of Brownpony's private army, but he made them go through the formality of choosing him, and then swearing allegiance to him and to the Cardinal Secretary, their employer. Blacktooth wondered if Brownpony knew, as the Axe had once told him, that

any one of the men of his tradition would kill anybody his employer designated, even the Pope, even themselves. Wooshin's comparison of these fighters to Hannegan's assassins revealed his contempt for even the professionals among the latter.

There was too much excitement in Valana for anyone yet to think of questioning what excuse the Secretariat might have for keeping an army of six professional killers on the payroll, although Blacktooth had been wondering the same thing ever since he left Leibowitz Abbey with the Axe under Brownpony's wing. He felt he was less privy to the cardinal's intentions than his inside job suggested. He now realized this more clearly since he had seen Ædrea's weapon. A whole wing of the Secretariat was closed to him. A whole range of SEEC activities were invisible to him. He tried not to be curious. He was temporarily sharing Brownpony's outer office with two other specialist secretaries, and they observed that at least once a day someone from the forbidden wing came to the office with a folder of documents, was admitted to Brownpony's private sanctum, and departed without the folders, which were never filed by the outer office. He had no files in his sanctum, but a stove for burning papers. Together, the other two secretaries had induced an opinion that the forbidden wing dealt with intelligence and operations, and with this Blacktooth did not disagree. He said nothing to them about weapons.

## CHAPTER 13

The Abbot shall see to the size of the garments, that they be not too short for those who wear them, but of proper fit.

—Saint *Benedict's Rule*, Chapter 55

IT SEEMED TO BLACKTOOTH THAT HIS MASTER had become obsessed with Nomad politics during a time of trouble for both the papacy in Valana and the Eastern Church. While he might have been in constant correspondence with Eastern cardinals who had taken part in the election of Pope Amen, he was instead inviting Hultor Bråm of the Grasshopper to enter Valana with all the guards he cared to bring in order to meet the Pope. The purpose was obvious. The cardinal stood accused of favoring the candidacy of Chür Ösle Høngan of the Wilddog Horde over that of the Grasshopper war sharf. To establish a neutral posture, Brownpony had invited Hultor Bråm to meet the Pope before he invited Høngan. He left the Pope's immediate vicinity to ride out onto the Plains accompanied by only one meek-looking policeman instead of his usual ferocious bodyguard to meet the Grasshopper war sharf, although the Pope certainly needed him near at hand during such troubled times. Blacktooth's admiration for his employer's courage had grown, even while he was entertaining suspicions laced with fantasy about the Secretary's loyalty to the Pope and his perceived guns-for-the-misborn activities. "This is the world, O Saint Isaac Edward Leibowitz, that I abandoned as your monk. And where am I now?"

He went early with Wooshin to the place Brownpony had set for their meeting upon his return from the Plains, and there they saw Ædrea's replacement as messenger from New Jerusalem already standing there in the street. Now that Blacktooth had learned both officially from the cardinal and directly from Ædrea something about the exchanges between New Jerusalem and the covert wing of SEEC, he and the Axe had both been introduced to Ulad from the colony. Blacktooth had assumed that all spooks were normal in appearance. Ulad looked normal, if one saw him at a distance with nothing nearby for comparison. But when he stood next to another man in a crowd, he stood about a man-and-a-third high and probably weighed about two men and a half. Thrice Blacktooth had watched the giant, whose hands seemed disproportionately slender, pick the pockets of passersby before he crossed the street to warn

the giant, "If you do *that* again, I'll tell."

Ulad picked him up by the head with one of those long slender hands, the thumb so crushing his temple that he almost lost consciousness from pain. Wooshin slipped behind him and did something to his knee which made him release the monk with a howl and sit down on the pavement, clutching his leg. The Axe stepped in front of him and pressed a sword to his nose, flattening it. "If you do *that* again, I'll kill."

"I didn't recognize you at first," the giant sang out, his voice a surprising contralto, to the tiny old warrior.

"Do you like your job?" asked the Axe.

"It's good to be able to come to town, yes."

"Do your people know you're a thief?" the monk asked, picking himself up.

"It's part of my cover. People know me hereabout. It doesn't matter if I get arrested. The police know me. They think I'm local, and so I am, part-time. Sometimes they lock me up for a few days, but sometimes I work for them. I used to ride as a guard for Ædrea. This place is where we met before going home."

"Does His Eminence know all this?"

"I'm supposed to meet him here. He's coming in the Grasshopper Nomad's coach. I hate Nomads. You look like a Nomad to me, and you called me a spook."

Nimmy faced his glower. "Did you ever see a Nomad wearing a monk's habit?" he scoffed. "Do you look like a spook?" He felt Wooshin touching his arm, trying to warn him, but it was too late.

Ulad growled and pulled a knife. Steel met steel, slid together, and then the edge of the short sword cut the giant's forearm, all in one sweep of motion from the thrust of the dagger through the cut to the fall of dagger and blood on the ground. They stood frozen for a moment; then Wooshin sheathed his blade and said, "Go do something for your arm. It's not a deep cut."

"I think he tried to stab me, Axe."

"You do?" Axe snickered. "Well! The cardinal warned me about Ulad, and he is very unhappy with him as Ædrea's replacement. The man has a habit of going berserk once in a while. He's only temporary, in my opinion; the New Jerusalemites were so infuriated by our master's rejection of Ædrea as persona non grata that they made Ulad her replacement. They can be arrogant."

"Why isn't he caged up?"

"Well, one, because the cardinal wants him to meet this Nomad he's bringing home, and two, because he's apparently a warrior of power and a high officer of a small army that's supposed to be on our side."

"Our side against *whom*, for the love of God? Do your one and your two make a three? Which is our side?"

"Why, our master's side!" Wooshin snapped, glaring at him. "Your loyalty is a question in my mind, Brother St. George. Do not think I would not cut your throat if you ever betray him!"

"Whoa, please! It's me, Blacktooth. I was just trying to understand his thinking."

"That is not your place."

"Are you the one to tell me my place and keep me in it, Axe? This is new."

"I can't tell you your place, but don't let me catch you out of it."

*This is new*—yes, and real. It was the first time he had felt real menace from the old warrior. Brownpony must be more angry than he realized. His fear of Wooshin at the abbey was founded on nervous imagination. But lately he had learned that Wooshin lived only to carry out his master's wishes and protect his person and his welfare; this was the warrior's highest good. Blacktooth, of a different persuasion in matters of loyalty, had disobeyed his master. Wooshin knew it, at least in a vague way, because the monk had been gone so long. Things were not the same between them, although Axe had just saved him from Ulad's dagger. Ædrea had changed everything about his life. Just as Ulad came back with a bandaged forearm, a coach pulled by four beautiful gray stallions appeared from the east and stopped in front of the Venison House. The standard-bearer of the totemic Grasshopper triumph pole rode up, dismounted, and stood at attention with his standard in front of the restaurant.

"Forth come the banners of the king of hell," Blacktooth said sourly, quoting an ancient poet.

Nimmy later learned that when Brownpony met Hultor Bråm, the latter was riding in his royal coach, probably of Eastern manufacture and stolen during a raid into the Eastern timberland, and he was accompanied by sixteen well-armed horsemen, while the Prince of the Church himself had left behind even his formidable bodyguard and brought along only a meek-looking Valana policeman. Bråm seemed embarrassed when he saw that the lone Churchman was his host, and promptly sent all but two of his warriors home. Thus Brownpony rode back alone in the coach with a surprised but not yet friendly sharf. As the party dismounted, Ulad the giant strode toward the coach and presented himself to the cardinal, who frowned at him, spoke a few words, and waved him away.

"He will call you first," the giant said to Blacktooth, and to Axe, "You shall guard the entrance."

Ulad was plainly upset. "They should put all Nomads in jail when they come to town."

"Then how could they do any business?"

"Their only business is to steal!"

"I see. With you, it's a hobby, with them a business."

Ulad growled, and Wooshin nudged the monk again.

Next to the driver sat a Nomad with a long rifle and a mean mouth. Two mounted warriors rode guard. A policeman and a Nomad got out of the coach and then helped the prelate and another Nomad get out. The second Nomad was fancier than the first. Ulad was plainly disappointed to see that the Nomads were not in custody. Three Nomads and the policeman stayed with the carriage while the fancy Nomad and the prelate went inside to eat.

The coach was dirty from crossing the Plains but was of costly design and workmanship. The horses, while obviously tired, were elegant and well-bred animals that could be sold for at least a thousand pios as a team. The door of the coach was enameled blue and gold, with a touch of red on the crest that showed through the dust on the door. Someone was talking about the crest. They stood among a small group of people who, upon passing by or coming out of the inn, saw the Nomads and the police and the well-fitted coach with its spirited team, and lingered, becoming a crowd. Blacktooth kept a wary eye on Ulad.

"I tell you it can't be the Secretary's," the grocer from next door was saying. "Those aren't his arms, nor any Churchman's." "What about the motto?" said a woman beside him. "It's Latin, isn't it?" When the grocer shrugged, she turned to a friar who had come out of the inn and was staring at the coach. "Isn't it Latin, Father?"

"As a matter of fact, it isn't."

"It can't be Nomadic!" she said.

"No, it's a Church language, all right. It's English."

"What does it say?"

"I've been out of school for twenty years," said the cleric. He turned to go, but paused to add, "It says something about fire, though. And that's Cardinal Brownpony inside, so you'd better leave."

"You leave, Father! I live here."

"Maybe the Pope's starting his own fire department," said a student from Saint Ston's who turned out to be Aberlott.

Blacktooth himself put them straight. "The motto says: 'I set fires.' It's the heraldry of a Grasshopper war sharf.

"See you later," he said to his ex-roommate, left the group, and went to stand near the window.

Inside the tavern, the cardinal shared a meal with the Nomad officials. The fare was chicken cooked with herbs served with a local beer. The hungry plainsmen were polite enough not to scorn the lack of beef, but they did scrape away every trace of greenery from the meat. Bråm was continuing a monologue he had begun on the road, but the cardinal saw his secretary at the window and beckoned him inside. Blacktooth entered and found his master being theologically harassed by an offensive sharf in the crudest of terms.

"The father of the mother of God is also her son and her lover," the Nomad was saying. He squinted toward the window and pretended not to be watching the cardinal. "That's the way our Weejus explain it."

The cardinal took another bite of chicken and chewed vigorously while he looked at Brām.

"Did you hear what I said?"

"No," Brownpony lied. "Say it again." His Grasshopper dialect was adequate but he occasionally looked at Blacktooth for support.

"The father of the mother of God is also her son and her lover. This is the way the Grasshopper Bear Spirit sees it as well."

"Just so." Brownpony dipped the chicken leg in the sauce and took another bite. Hultor Brām was trying to antagonize him in the most obvious possible way.

The sharf straightened and frowned. " 'Just so!' You agree?"

" 'Just so' means I heard what you said, Sharf. I'm a lawyer, not a theologian. Have a piece of chicken."

"He invites you to have a piece of chicken," said the monk, sensing a Wilddog usage.

"If you're a lawyer, then why don't you have me arrested?"

"Because I'm not a theologian's lawyer, and if I had you arrested, you would be of no use to anybody." He looked at Blacktooth, who nodded. Only occasionally did he need to clarify what was being said.

"You're the Pope's lawyer."

"Just so. The white meat is dry. Try the dark."

"Jesus is Mary's lover."

Cardinal Brownpony sighed with disgust and began using his drumstick to beat on the table.

"Why do you want to pick a quarrel with me? Do I say ugly things about Empty Sky, or your Wild Horse Woman?"

"You did so once. At a holy council fire. That's why I'm talking to you this way. You tried to drive her away, and your Christian puppet killed her priests."

Brownpony sighed. "So I haven't lived that down, eh? Sunovtash An was nobody's puppet. As for me, what I did was foolish. I know that now, and I regret it. But that happened in the farming areas, not on the eastern Plains."

"No matter, the tribe was formerly Grasshopper. You must remove the sacrilege."

"How can I do that?"

"We have discussed it. You must go to her."

"Where? Back to the farming area?"

"No. In the navel of the Earth, she lives: the breeding pit for her wild horses. It is a place of deadly fires, called Meldown."

"I have heard of it. Isn't that where Mad Bear became Lord of the Hordes before the conquest?"

"The same. Anyone nominated for the sacral kinship had to be chosen by her in that place. After election, each had to spend the night in that place by the light of the full moon. It will be so again. A new *Qæsach dri Vørdar* will be chosen. One of the three of us. It is also the place where we try men charged with crimes, a place of ordeal. Many never come out alive. Many come out sick, and lose their hair. Few emerge in full health. You committed a crime in the eyes of our Weejus and our Bear Spirit, Brownpony."

"And if I submit to the ordeal?"

"There will be an alliance, if you live. And peace with the Wild-dog."

"No matter who is elected Lord?"

Brām shook his head, seemed puzzled.

"As *Qæsach dri Vørdar*," Blacktooth put in.

"Ah, no doubt about that! The old women know best. And the *Høngin Fujæ Vurn*."

The cardinal spoke to Nimmy in Rockymount. "Explain carefully and politely to the sharf that His Holiness is the high priest of all Christendom, and that diplomatic immunity, which he has been practicing on me, does not cover the *crimen laesae majestatis*, so tell him to curb his tongue before the Pope."

Hultor Brām was a powerful Nomad about Chür Høngan's size, but perhaps leaner. His body language had few words. The predominant accent was force, a force prepared to spring at you, either for a hearty hug or to kill. All his muscles seemed drawn up that way.

Nervously, Blacktooth translated Brownpony's message.

For a moment, the sharf glowered at him. The body language said "kill the messenger," but then he turned to the cardinal and nodded curtly. At that moment Ulad stooped to enter the doorway and crossed, as a crouching mass of muscle, toward the table. Brownpony sent Blacktooth away in Ulad's wake. Ulad, the monk intuitively surmised, was to discuss matters not for his ears, for Brownpony needed an interpreter more than ever, because the genny giant spoke only Valley Ol'zark and a little Rockymount. Probably Ulad was there to discuss weapons with the Grasshopper sharf, and Brownpony would have to be interpreter for both of them. Temporarily dismissed, he headed home, accompanied by Aberlott, whom he had not seen since the election.

"Listen, I heard there is going to be schism, maybe even war. What about it?"

"Takes two to make a schism or a war. Who do you have in mind for the war? And why ask me?"

"You work for the Secretary."

"Who probably couldn't answer your question either. Why don't you ask a Weejus woman?"

"I don't know any, do you?"

"Not yet."

"When? I hear your cardinal is thinking of leaving for Nomad country."

Blacktooth shot him a suspicious look. Everybody seemed to know more about his employer's doings than he did. "Where did you hear that?"

"From a man who came out of the inn just before you did."

Blacktooth worried. Brownpony was careless enough to let his conversation with Hultor Bråm be overheard by another customer who understood Nomadic. But there had been no one else visible from their table.

"A secret's out?" asked Aberlott after a moment.

"I don't know. I have a feeling I'm going to be fired, sooner or later."

"By the cardinal? For what?"

"Remember the person who gave you my rosary back?"

Blacktooth said no more than that, but his friend watched his face, saw a blush, and asked no further questions. He turned away to cover a laugh with his hand, then asked, "What will happen to you then, Nimmy?"

"I don't know. I have a big debt to pay. What the hell are you doing out of school?"

"I take no courses during the summer. I like to travel."

"Where do you plan to go?"

"Where the horse takes me. No reins, you know. You just kick the animal when he stops to graze too often."

"Be sure and pick the right horse, you half-wit, or it will take you to its birthplace." He waved east toward the flatlands. Aberlott laughed and walked on alone.

It was two days before Hultor Bråm was admitted to an audience with His Holiness. During Cardinal Brownpony's absence from the Curia, the Pope announced a date for his return to New Rome. If the head of SEEC felt miffed about being left out of the decision process, he at least had an alibi for the bad decision. The Pope planned a very early departure. There had been no communication with Texark about the matter. The Pope used his interview with Hultor Bråm to send the Apostolic Benediction to the Grasshopper Weejus and Bear Spirit people, and to ask permission to cross Grasshopper lands on his way to New Rome. Graciously the war sharf promised that one hundred warriors would escort the Pope's party once it emerged from Wilddog country. Brownpony listened in silence to this, but made it clear to all that he would not accompany the expedition, having urgent business both on the Plains and in Texark itself.

"It is my wish to make you Vicar Apostolic to the Three Hordes," the old black Pope told the Red Deacon the next day.

Brownpony actually gasped, Nimmy noticed, and the few members of the Curia who were present exchanged frightened glances. There was a long silence, because what the Pope just said caused a mental

avalanche. First thought: to make the territory of all three hordes a Vicariate Apostolic was to abolish the de facto status of the Jackrabbit Horde as missionaries of the Texark Archdiocese. It would end the archbishop's authority in the Province, and would force him to recall his missionary priests there or let them submit to a new authority. Second thought: it would infuriate Benefez, no matter who was appointed. But Brownpony? Third thought: before Brownpony could be appointed a Vicar Apostolic, he would have to be ordained and then consecrated as bishop of an extinct ancient diocese, for he would be the equivalent of a bishop in a missionary area not yet a diocese. Blacktooth remembered the cardinal's own words: *I was called to be a lawyer, not a priest, and that's it.*

"Well, Elia? Will you do it?"

"Holy Father, I don't think I have a calling."

"We are calling you. Right now." It was the first time Blacktooth had ever heard Amen use the pontifical *we* except in formal Latin.

With great dignity, Brownpony prostrated himself before the old man, but still he said nothing. He stayed that way until the Pope interpreted it as consent, whereas it was, as it seemed to Blacktooth, merely submission.

"Get up, Elia. We'll have you ordained, consecrated, and on your way by next week. If we do it quietly, you can go to the convention on the Plains before Benefez hears about it."

Later, at the cardinal's request, Blacktooth explained the situation to Hultor Bråm before the sharf left town. "He will be the representative of the Pope to all of the hordes, and govern all Churches and missions both north and south of the Nady Ann. However, you must not speak of it before it is accomplished."

The sharf shook his head. "He will not be accepted by the Grasshopper," Bråm growled, commenting on the appointment, "unless your master makes his peace with the *Høngin Fufæ Vurn*, as he has promised. And the Bear Spirit must be consulted."

"It seems," said Brownpony, when Blacktooth relayed the remark to his employer, "that ever since I made the mistake of denouncing Yordin's speech, I have been ambushed by unpleasant surprises, not all of them from my enemies. Aren't you astonished, Nimmy?"

"Not altogether, since I provided one unpleasant surprise myself." It was as close as he had come to an apology, but the cardinal just looked at him curiously.

The monk's attitude toward Brownpony had been tainted by suspicion, but not to the extent of doubting that the deeds of his friend, Pope Amen Specklebird, were entirely unexpected by the cardinal. Perhaps it had been Sorely Cardinal Nauwhat or Hilan Bleze who, during Brownpony's absence, had put Amen in mind of making all Nomadic territory an Apostolic Vicariate, to be ruled as a diocese would be, but by a bishop directly responsible to the Pope, clearly ending the de facto role of the Texark Archdiocese as missionary to the conquered province. The Churches throughout that Province were now headed by missionaries appointed by Urion Cardinal Benefez, but in no way had the Province been added to the Texarkana diocese. Most of its first priests had been military chaplains. But to create a papally dominated Vicariate out of the whole domain of the Three Hordes was to deprive Benefez of power and revenue throughout half of his nephew's domain. Could a holy old hermit come up with such an idea without a sinister force at his elbow? The sinister force might indeed be the Holy Ghost, so far as Blacktooth could distinguish. The old man was, as Saint Leibowitz used to say, "Independent as a hog on ice." It was an idea just crazy enough to have come from either God or Specklebird. Or as Urion Benefez might say, from either Satan or Brownpony. The very fact that the Red Deacon became an overnight archbishop made it evident, to anyone who wished to think so, that the promotion was a coup, coaxed by cunning out of a crazy old pope-contender who began to rule before he was legally elected.

Elia Brownpony's ordination as a priest and consecration as Bishop of Palermo were conducted in secret ceremonies to which no one was admitted except the participants, nor did Blacktooth's master change his manner of dress or wear a bishop's ring until he was ready to leave the city for the Plains, somewhat in advance of the Pope's own departure for New Rome. It was clear that Filpeo Harq and Urion Benefez were to remain in ignorance of Brownpony's new rank and office until his acceptance by the Nomads of all three hordes as the spiritual leader of Christians on the Plains and in the Province had

been established.

"There's no doubt they'll hear about it, Nimmy," the cardinal told him. "But only the Pope will inform them officially, and when he's ready to tell them. Now I have a new task for you. You will find your predecessor has taken over your office for the time being. I am going to visit first Chür Høngan, then Hultor Bråm.

"Deliver my written message to Mayor Dion in New Jerusalem; among other things, it introduces you. Tell them that Sorely Cardinal Nauwhat will, for the time being, be in charge of the Secretariat. Tell them that Ulad is out of control and must be replaced. If they insist on knowing why I refused to deal with Ædrea, I suppose you'll have to say she became too intimate with clergy."

"I am ashamed, m'Lord."

"How about contrite? Never mind. Do your best to mollify them. Learn as much as you need to know about New Jerusalem. Along the Way, let Wooshin brief you on what is going to happen. These things are secret for the present, although they are becoming less secret every day. You may, or may not, continue working at the Secretariat—for Cardinal Nauwhat. You *may* report back to him, if you wish. If he finds no use for you, he will tell you where to find me, or you *may* go back to your girlfriend in Arch Hollow and perhaps find a home in the colony. Or you *may* go beg them to take you back at the abbey, or become a hermit. I do not want to see you again unless and until this attachment is behind you."

"I expected to be dismissed, m'Lord. I did not obey."

"We'll see how it goes with you."

"And Axe is coming with me?"

"Along with all six of Cardinal Ri's men, and someone from the other wing—Elkin, I believe you know him."

"I didn't know he was from the other wing. I thought he was just a receptionist."

"Top security, and also a fighter almost in Wooshin's class. He was at Leibowitz Abbey once. You'll have a lot of expensive baggage with you, a twelve-mule train, but that will be Ulad's and Elkin's responsibility. When it's safe, they may let you and Ulad and Axe ride on ahead of the train and shorten your journey. Pack your habit and wear something else on the trail. You can put your habit back on when you arrive. Nimmy, I'm trusting you with new secrets."

"I'll be careful. And you, m'Lord?"

"I go to the convention of all the shamans of the hordes, all the Weejus and Bear Spirit people. I hope, with help from Holy Madness and Father e'Laiden, to be admitted as a Christian shaman observer and explain my new role."

"Hultor Bråm will try to keep you out."

"Of course, but the Jackrabbit will want to hear what I have to say, because they will be most affected by the transition. Bråm can't put together a majority. His grandmother might be able to do it, but she won't. Depending on what happens, I may go on to New Rome after the Pope, or even to Texark. Goodbye now, Nimmy. I would bless you, but you have heard me say I have no calling, yet here I am, a pretender."

"M'Lord, I know from history that once upon a time in a much earlier Church, a vocation to the priesthood meant a call from the bishop, not necessarily a call from God. And I heard the Bishop of Rome himself call you to be that which you have now become by ordination and consecration."

The cardinal smiled. "Thank you, Nimmy. Bless you, then, until tomorrow."

Blacktooth bent to kiss his ring, but the cardinal avoided his lips, squeezed his hand, said, "We'll say goodbye again tomorrow," and was gone.

Nimmy found himself near tears, and began to pray as he walked toward the nearest Church. Brownpony had been to him like a kindly Nomad father who was never drunk, while Abbot Jarad had been like a sterner Nomad uncle, always judging and finding fault. But he had missed the latter; he knew he would miss the former more. He knew too that loving people was a way of loving God, but to be attached to the one loved was not proper for a poor monk, and evidence of world-liness or delusion. Not wrong to love, but wrong to be attached to the one loved, for always came the anguish of tearing

loose from all impermanent things.

By the morrow, he had sufficiently recovered from his lapse of anxious worldliness to think of his former roommate and then confidently cajole his beloved (and possibly bedamned) cardinal into interviewing Aberlott, who as a friend of the late Jæsis could serve well as an emissary from SEEC to the dead student's family and help convince the ruling council that nobody had exposed Jæsis as a spook until the police learned of it after his death. There was suspicion at both ends, in the relationship between the colony and the Secretariat, which would now be managed temporarily by Sorely Cardinal Nauwhat, and Brownpony agreed that some gesture of reconciliation was advisable.

"But that would be one more person who knows about the armaments, Nimmy. So I think not." It was the first time Brownpony had mentioned the subject of the guns to him. And he would not have mentioned it now without a realization that the monk already knew through his forbidden contact with Ædrea.

"Do you really believe the secret is safe from Texark, m'Lord?"

"No, it's only possible to minimize their knowledge. They know the genny colony is there. They know it is well armed, and that I have been helping them. I hope that's all they know. I only pray the secret, as you call it, is temporarily safe from the Pope."

The remark caused the monk some surprise. In the first place, nothing was safe from Amen Specklebird, but his surprise was more due to a smell of betrayal about the words. The surprise was duly suppressed, and after some further discussion, the cardinal agreed to see the student, and so Blacktooth departed to seek him out before he began another journey.

"They say the mountains there are wonderfully cool in summer. You get to ride a free horse. You'll meet the family of Jæsis. You'll learn a brand-new skill."

"Like what?"

"Keeping your mouth shut?"

"What use is that?"

"You'll live longer as a secret agent."

Aberlott walked with him to the Secretariat. Brownpony was marching out the main entrance. He greeted his assistant, and his young friend by saying to Aberlott, "Student at the college, I'm told. And what do you think of our city and its young ladies?"

Aberlott answered fast, and the monk felt his face grow hot. "Well, when Blacktooth and I walked down past the police station last month, we saw a corpse hung there feet-in-your-face high, with a sign tied to his ankles. Blacktooth read the sign. 'For coitus interruptus' is what it said. I'm afraid of young ladies here."

Brownpony eyed him in mock dismay. "Do you think the Valana police force is a branch of the papacy?"

"Theology is not my strong point, Your Eminence."

"Or is the papacy a part of the police, perhaps?"

"Certainly I had no such idea in mind, m'Lord!" Aberlott was beginning to turn white.

"Of course you did, and you still do. In Texark, the mayoralty is part of the police. The cities are quite different in that regard."

Aberlott had flirted with danger and was becoming scared. Brownpony had crowded him into a corner and was pressing him for comment. The joking student was, after all, talking to a Prince of the Church.

"Actually, I think the sign said, 'Hanged for impudence to a prelate.' I beg your pardon, m'Lord."

"I don't have your pardon. Get your own." Brownpony smiled a consoling smile at him, then shook his head at Blacktooth. "Do you really think this man can be trusted?"

"Of course, Your Eminence."

"Everything you need for the journey is ready at the stable. Pick up your papers at the office. Wear mufti until you get to the colony. After Ulad is replaced, and the council is satisfied, your ties to the Secretariat continue only if Cardinal Nauwhat needs you. I am going east to meet Chür Høngan, Hultor Bråm, and a Jackrabbit sharf who is still a stranger to me. No telling how long I'll be away."

"Then what, m'Lord?"

"You are free until you hear from me or Cardinal Nauwhat. *Or your abbot.* Goodbye, Nimmy. God love you."

Blacktooth thought about it later. He had expected to be fired. What astonished the monk most was not his master's tolerance of impudence, or even his offhand approval of Aberlott, but that Aberlott had looked at this one cardinal among cardinals and felt safe in being impudent. The student usually had a good instinct for audience. Aberlott had picked up the aura of Brownpony's nonhostile personality; his personality showed through the red cloth. Blacktooth had seen it before, and knew the aura was deceptive. Brownpony wasted no hostility when he struck. He was never hostile, except for show. He seemed to be anticipating the *now* of things just a moment before they happened, and anticipating with the best expectations. When he expected the best, many people hated not giving it to him.

Others who gave him the worst usually regretted it, without much effort on the cardinal's part. He moved easily among a herd of people, but he seemed more a friendly undercover sheepdog than one of the sheep, even among cardinals most of whom had far outranked him before his consecration. He made himself a safe man, approachable from above or below, or from straight and level.

"What a pope he would make!" was Aberlott's only comment. He looked at Nimmy for confirmation, but the monk was pointedly silent.

## CHAPTER 14

Likewise those who have been sent on a journey shall not let the appointed Hours pass by, but shall say the Office by them-selves as well as they can, and not neglect to render the task of their service.

— *Saint Benedict's Rule*, Chapter 50

THE WESTERN ROUTE TO NEW JERUSALEM FROM Valana was less clearly defined and proved more difficult to traverse with wheeled vehicles than was the Pope's road to the east, which Blacktooth and Wooshin had traveled with the cardinal in early spring. There were only four wagons, besides the pack mules, but their wheels had to be spoke-levered to help the animals at every draw, especially after a late summer rain. Annual rainfall was sparse, but this was the season for it, and flash floods often rushed through the desert's low places. The eastern road would have been so much easier and faster if the travelers had no reason to avoid other wayfarers. The reason was "security." While they forded a stream, one of the tarp-covered boxes fell from a wagon and broke open. Blacktooth watched Wooshin and Ri's guards scramble to retrieve rifles from the shallow water, while they furtively looked around as if for spies in the juniper scrub. Later, he was unable to avoid learning about handguns and ammunition in the mule packs. When he asked, Elkin told him it was a comparatively small shipment. The receptionist guard at SEEC seemed to be in charge of the expedition, and he let Nimmy know that he came from the covert wing. The party included several mule drivers, Wooshin, Aberlott, Ulad, and the six warriors from the party of late Cardinal Ri.

Ri's men were already skilled as weaponless warriors. By firelight they sparred with each other, and with Wooshin, who was hard-pressed to cope with the foreman among them, his junior by thirty years. They were speaking their own language among themselves, and Wooshin was laughing. "O Axe, please do remind them," Blacktooth called, "that they're supposed to be practicing either 'Mount or Church."

The Axe grunted at them, and they tried haltingly to continue their conversation in Churchspeak. Nimmy suddenly realized they had been talking about him, because he was an exception to what they saw to be the rule here, that monks don't fight, or can't, or won't. Whereas they themselves were Christians with vows, although one of them had a wife back home. When Wooshin explained this to Blacktooth, the monk was astonished.

Ri's guards were a puzzle to him at first. Wooshin had fallen right in with them, and they seemed to understand each other's language well enough when words were accompanied by frenetic gesticulation. On the third day, Blacktooth dared to remind Wooshin again that he was tasked with teaching Churchspeak to the "Yellow Guard," as they had begun to be called around Valana. Wooshin glowered at the reminder, but after a moment explained, not without embarrassment, that Cardinal Ri's men had been trying to convert him to Christianity.

The monk looked at him incredulously.

Axe laughed at his expression. "I don't think you want to hear that argument in Churchspeak. Have you forgotten that they were Cardinal Ri's men?"

"I assumed they were Christian, and I've heard them chanting, but—"

"But you wouldn't expect soldiers to be very religious?" Nimmy thought about it for a while. His mind caught a chilling glimpse of remembered warriors, his boyhood rapists, in action. "I suppose I'm prejudiced, Axe. The soldiers I've met are often pious, but I never met any warrior except you who seemed to have a spiritual dimension."

"Except me? Do I have a spiritual dimension, Nimmy?"

"You may laugh, but I've thought so. All I really know about you is what you want me to know. Isn't it so, Axe?"

"Well, where these men come from, all monks, even Christians, have a weaponless warrior tradition."

"They're not weaponless now! Are you saying they are monks?"

"Yes, I think you can call them monks. As for the weapons, Ri dispensed them from that rule, and our master extended the dispensation. The order they belong to is Asiatic, and it isn't recognized here. When either Cardinal Brownpony or the Pope understands that they do have religious vows, they will lose their freedom until the Church can decide what to do with them. They are not anxious to go home, but their vows are similar to yours. They want to be free to form a community, but they've been afraid to ask. That's why they want and need to learn Churchspeak as soon as possible. You don't need to nag us about that. I suggested to the cardinal they stay awhile at Leibowitz Abbey. There, they could wear their habits and learn your liturgy. Would they be welcome?"

"I am not the one to speak for Abbot Jarad Cardinal Kendemin." He fought bitterness for a moment, but went on: "You've read the Rule of Saint Benedict, Axe. The Brothers of Leibowitz still honor most of that rule, which means that they must offer hospitality to anybody who comes to them, as if he were Christ wandering in from the desert. But I'm not suggesting that Ri's men take advantage of that rule."

"No, of course you wouldn't want the abbot to know you suggested it by suggesting against it," Wooshin said sourly. "But you're right about their learning Churchspeak. I'll drill them more. If they go to Leibowitz Abbey, it will not be at your suggestion, but the cardinal's which he already made."

"All right. I hereby forget it, although I would like to know about their Order."

"They know that I taught you to fight a little, and they want to know if other monks of your Order would be allowed to learn weaponless combat, or would it be against rules?"

"Well, there is no rule, as long as it's for sport or exercise. We have occasional ball games outside the walls, those of us whose jobs don't involve physical labor." He laughed. "But if you can imagine getting the Lord Abbot's permission to train fighters!"

"I know. It's too bad. Their Order has an interesting tradition. If they are to remain there, they would like to form a community, or merge with one."

Later he confessed to Blacktooth, "You know, Nimmy, my people out on the coast were refugees from these Asian Christians several generations ago. Cardinal Ri was a super-Benefez in his own country."

These Christians were conquerors. My people were the losers, and crossed the ocean."

Nimmy looked at the executioner as if seeing him for the first time. "Mine were the losers too," he said. "We should be spiritual brothers."

A sharp glance from Axe told him this intimacy was getting too thick. He wheeled his mount around and rode back toward the guards and the wagon. Once again, Nimmy realized that Axe did not fully trust him since he had disobeyed the cardinal.

Wooshin had become strange to him again, but he knew the estrangement lay within himself. The news, conveyed by a possibly ironic Wooshin, that the Yellow Guard was trying to convert him to their Christianity—that news discomfited him. Why had he and his fellow monks ignored Wooshin's religion, if he had any? Axe had come to Mass habitually, but never received communion. His dedication and loyalty had a spiritual quality, as did his attitude toward death. He would have made a good monk, Nimmy thought. But the Albertian Order of Leibowitz was never devoted to the conversion of the heathen. That was why. It was against the rules. Monks were free to answer a guest's religious questions, but the Axe never asked any. Now these strange men wanted to bring him into their religious brotherhood. The Order of Leibowitz had missed its chance to have, besides its electric chair, a warrior monk and executioner.

Wooshin's new friends in the Yellow Guard had learned of his years as a headsman for the Hannegans, Filpeo Harq and his predecessor. Nimmy had heard them talking, understood very little of their mixed dialect except when they practiced Churchspeak, but could tell that the aliens were both sympathetic and amused, and he sensed that the Axe came away from the conversation both irritated and relieved. It seemed to Nimmy that Wooshin had succumbed to an attack of almost Christian guilt about his old job, and the warriors were apparently trying to cure him of it by conversion. The Axe obviously missed the cardinal as Blacktooth did; and the monk wondered who was now acting as Brownpony's bodyguard after the attempted assassination. Ri's men had all been loaned by the new Vicar Apostolic to SEEC's clandestine wing, once they had learned to communicate a little in Rockymount, but here they were: far from their new master, and as lost as Nimmy himself.

The monk tried to make religion his only concern again, at least for the duration of the trip, but the effort gradually failed, and the effect of the failure was that he became so irritable he went for three days without even attempting to pray, meditate, or read the canonical hours. His mind, affected by periods of heat exhaustion, kept reaching out to grasp at Jarad, Brownpony, Ædrea, Holy Madness, or the Pope, and to rehearse imaginary dialogues with them, to shake sense into them. Especially Ædrea. This was self-indulgence, self-absorption, vanity, and ego. Because he could not pacify his mind internally, he finally turned outward and tried to stay busy and available for conversation with even Aberlott.

The group of travelers had taken on an almost military structure of command under Elkin, with Wooshin and Ulad as lieutenants. By the route they were to take, there was danger neither from Texark agents nor from motherless Nomads, although drifting outlaws of every stripe occasionally wandered through the arid land, and there was always the possibility of hostile confrontation. The terrain was rougher than that which Blacktooth had encountered on his first visit to Valana. There was no fixed road; only passes through mountainous areas were clearly defined. The group carried conventional arms, besides those carried by pack mules and in the wagons, but they met no one except a wizened old man who joined them one night after sundown, having wandered in behind them from the direction of Valana. The advent of the old man was the occasion of an argument among those concerned with secrecy and security, but the old fellow seemed half dead, and he was headed toward New Jerusalem anyway. Ulad claimed that he had seen him before. "He's been to New Jerusalem," said the giant. "Magister Dion hired him once, so he knows about us."

"Hired him? For what?"

"He can make it rain, for silver."

"Is he any good?"

"It rained, but not much. Dion paid him, but not much."

"He knows the town, then, but does he know about our baggage?" Elkin wondered. "He's already seen us, so he must come with us. If he behaves himself, he's a guest. If he tries to leave, he's a prisoner,

until we get where we're going."

Nevertheless, the old man refused to join them at first, and might have been arrested and bound to one of the wagons if he had not changed his mind upon learning that Blacktooth was a monk of Saint Leibowitz, a fact that seemed to amuse him greatly. He teased the monk about not wearing a habit while still wearing his rosary around his waist. Nimmy tried to avoid conversation with the old man, who seemed to know more about Leibowitz Abbey than seemed probable. The ancient stranger, after a few attempts to talk, shrugged at the monk's reticence, perhaps attributing it to religious silence, but he continued to snipe at him occasionally as if to keep in practice.

He called himself a pilgrim but not a Christian. He wore tattered garments of hemp, coarsely woven, and he carried his belongings in a bag tied to the end of his staff. He protected his pate from the sun with a curiously embroidered skullcap which he called a "yarmulke." Although defensive and suspicious at first, he seemed harmless enough and became talkative after the first day. Nimmy could not believe that Brownpony's enemies would send such a decrepit fellow as a spy. Elkin seemed to agree, for besides allowing him to ride an extra mule, the security man put him on one of the wagons after he complained of being saddle sore, even though he had to sit on a crate of weapons.

He told them he was a Jew and a tentmaker among other things. He was obviously one of those wanderers who peddled his skills as a rainmaker in areas of low rainfall. This old Jew had several useful skills and thus several sources of income. For fifteen pios, he would pull a tooth; for eight, he would scrape the incrustation from the rest of your teeth and scrub them well with talc. Root canals were negotiable. He contracted as a rainmaker, and if he made no rain in a week, he got no pay beyond his week's room and board; if rain came, he received whatever the petitioners could, in his opinion, afford. His advice in every imaginable matter was freely given to whoever would listen to him, and sometimes imposed upon whoever would not.

Blacktooth tried to use the journey for privacy and silence, insofar as his wish to be polite survived its many trials. But the old Jew would not let him be, and he asked all sorts of questions about an Abbot Jerome, who, to the best of Nimmy's recollection, had died seventy years ago at an advanced age, and yet this old man claimed he had been Jerome's friend, Benjamin.

"You must be nearly a hundred years old," Nimmy said skeptically. "Or maybe even more."

"Hmm-hnn! I would have to be, wouldn't I?"

Claims to extraordinary longevity arose in the Valley of the Misborn, but the old pilgrim was not an obvious glep. Still, he had been admitted to the secret nation in the Suckamints, had been allowed to leave again, and was not going back. Magister Dion must have looked into his background. But if he was a spook himself, Ulad should know. Ulad, however, seemed to regard the old Jew as disreputable, at least as a rainmaker. That the Suckamint Mountains were a refuge for the misborn was widely known within the Church, but the nature of the heart of the colony as a nation of spooks was obscured by the fact that gleps like Shard and his family inhabited the surrounding foothills, not admitted to full citizenship, but protected by the well-armed central colony from outlaws, loose Nomads, and Texark agents. Wanderers usually shied away from the area, as they shied away from Misborn Valley, and those who did try to enter were killed or driven away.

"And what business would a monk of Saint Leibowitz have in New Babel," the old man asked. "Especially a monk in disgrace."

"Who told you that?" Nimmy looked at him sharply, surprised that gossip had already passed on to this total stranger. Who in the party knew of his status? Well, they all did. Wooshin, Elkin, Aberlott, everybody. Nevertheless, he was embarrassed that his private life was open knowledge.

"I am merely the bearer of a message from a cardinal to the community. Why do you call it New Babel?"

"Why do you call it New Jerusalem?"

"It is theirs to name, and they named it so. Where did you come from on your way to New Babel?"

"From Valana, the same as you."

"And what were you doing in Valana, praying for rain?"

"I went to see my old friend Amen Specklebird, but they would not let me in, and besides—he's not

the One."

"Which one is that?"

The old Jew shrugged. "Who knows?" was all that he said.

Ulad the giant, whom Blacktooth had first assessed as a dangerous brute and a lunatic, became almost a playful child during the expedition to the Suckamint Mountains. The ugly side of his character apparently arose from his initial mistrust of any human being except a genny, but the mistrust subsided as they all became better acquainted during the long ride south.

On the journey, Nimmy lost his temper once, but not with the old pilgrim. It was only Aberlott, thank God. But, then, he lost it again! with the Abbot Jarad Cardinal Kendemin, in absentia, and really in a daydream. There was something beautiful about the mental image of his own hands grasping Jarad's throat, thumbs against the windpipe, although he always stopped the strangulation before the old geezer lost consciousness. Evil could be lovely, just lovely. This he knew. It was hard to try to tell a confessor how good sin can feel; it made the priest angry, as if the penitent were trying to force him to enjoy such putrid blackguardy. He felt his mind was slipping away from reality of late, and Wooshin caught him muttering blasphemously to himself as they rode the trail. He almost started out of the saddle when Axe whacked him on the back to bring him out of it. So much had happened to him in so few months, and none of it seemed real, and sometimes he felt he was going mad. He daydreamed, when he should be praying, then swore at himself under his breath.

"Stay busy, Brother" was the Axe's advice.

Staying busy was not very hard. Making and breaking camp every day took time and work. The ideal day involved eleven hours of traveling through the pitiless lands in summer, then thirteen hours packing, unpacking, seeing to the animals, hunting, cooking, eating, cleaning up, mending, repairing, and finally sleeping. Eleven hours traveling, with luck. Most days it was only ten.

On the seventh day, Ulad, Wooshin, and Elkin conferred and decided that the train with its valuable cargo would be just as well protected without Blacktooth, Aberlott, Ulad, and Elkin, who could ride on ahead of the baggage and be in New Jerusalem in half the time. Wooshin and Ri's warriors would stay with the mule drivers to fight off any outlaws or desert drifters. The only question was about the safety of the party riding ahead, but Ulad and Elkin were soldiers, and Blacktooth had been taught to fight by Wooshin.

The old Jew was allowed to come with the advance riders, and so was Aberlott, for both were useless if a need arose to defend the ordnance against seizure by enemies or outlaws. Aberlott attributed Blacktooth's recent black moods to madness. "I think you're going crazy," the student said to him the first morning as they emerged from their bedrolls. "You talked all night in your sleep, although you won't talk to anybody else by daylight."

"What did I talk about?"

"A girl with a very small hole."

"What girl?"

"One with a very small hole. You called it a hole in the universe. You're going crazy, Nimmy."

"Holes? Did I call you an asshole, perhaps?" But he saw that Aberlott was serious, and he added, "Well, I was dreaming. But maybe I am going a little crazy. I've failed at two jobs. I guess I need somebody to tell me what to do. I don't know how to get along without an uncle or an abbot or a cardinal."

"Or a pope? Once you mentioned Amen Specklebird in your sleep."

At last the advance party of five came to the western slopes of the Suckamint Mountains. Elkin was convinced they had gained three days on the remainder of the party with the pack mules and wagons. The slopes were steeper here than on the east side of the range near Shard's place, and they had hardly begun to climb before a volley of arrows and stones struck the ground only a few paces ahead. They stopped immediately. Three gleps with bows and one with a musket stood atop the cliff, glaring down at them in the noonday sun. Ulad swore blasphemies at them and identified himself and their mission. The gleps withdrew.

"Scarecrow Alley," the old Jew scoffed. "They would be better off and safer back home in the

Valley."

"Perhaps. There are people in the Valley who believe Christ will come again as one of them," Ulad told them as they rode up the rocky trail.

"You mean he will be born as one of them?" Blacktooth asked.

"Yes."

"But that's not the way it's supposed to happen," said Aberlott. "He will be seen coming on the clouds."

"But he has to be born again before he is seen coming."

"That's not what it says."

"Does it say otherwise?"

"I guess not."

Blacktooth remained silent. The old Jew laughed scornfully at them all.

When they came to a small plateau, Elkin asked Ulad how many hours' journey remained until they reached the heart of the community.

"At least eight hours," the giant said.

The road leading into the mountains at that place was flanked by a deep ravine on the north and on the south by a few flat acres at the foot of a mesa. As darkness was approaching, Elkin decided to make camp here, a decision which Ulad resisted first by describing the land as haunted, then as populated by cougars. A vote was taken, and the giant was overruled.

"Just stay away from those woods, then," Ulad insisted.

They passed a peaceful night, with each man taking his turn at being awake to keep the fire burning. There were neither cougars nor ghosts. It fell to Blacktooth to take the last shift, and the sky became luminous with dawn as the shift ended.

Before waking the others, he descended into the wooded ravine for a bucket of water. Beyond the trees, he found himself on a beach in a boneyard. There was a ten-pace width of sand beside the creek where floodwaters visited the place every spring, and the sand was full of small human bones washed here from some upstream disposal site. New Jerusalem produced its share of monsters, then, and its claim of returning such children to the Watchitah Nation was a lie. Not all the bones were those of newborns. One half-buried skull seemed that of a child of five. Dead kids, a blight inherited from the Great Civilization. There were places like that on the Plains. Nimmy was not shocked, but decided against filling his bucket. There was still drinking water in the canteens. Shaving and washing could wait.

Halfway up the slope, he met somebody coming down very fast. Ulad skidded to a stop, spraying the monk with dirt and gravel.

"What were you doing down there?" he demanded.

"Nothing, as it turns out." Nimmy patted the empty bucket. Ulad grabbed his arm.

"There was an epidemic two years ago," he said. "Many children died."

"I understand," Nimmy said evenly and managed to detach his arm from the other's grip. Ulad let him go. What Nimmy understood was that communities all over the continent fell victim to such epidemics every few years. Often all the victims died in the same week, and all were incredibly glep or worse. When Nimmy later mentioned it to the old Jew, the pilgrim named the epidemic disease "Genny Passover."

"So much for what you said about New Jerusalem and its policy of returning gleps to the Valley," said Aberlott.

Blacktooth shrugged. What he knew of New Jerusalem, he had heard from Ædrea. Dead babies downstream of a village was more of a rule than an exception. That was just it. New Jerusalem was supposed to be the exception.

The climb into the mountains carried them into long U-turns around the sides of a valley or a mountain, and in places the trail was obscured by landslides which the drivers of the mule train would have to remove to gain passage. Great conifers rose above them on the mountainsides. Soon there were new signs of habitation, but the people who came out to eye the travelers were apparently normal. The

few glep families lived on the periphery of the sprawling colony, as Shard and Tempus lived on the eastern slope of the same mountain range. But here there were real farms, although the guardian gleps inhabited the less fertile land. The mountain peaks attracted rain and snow, and the streams flowed continuously after the thaw. In the passes and valleys, beside the streams grew orchards of apples, cherries, pears, and peaches. The crops were ripe now in late summer, and peddlers hawked their produce from donkey carts parked in the community centers, of which there were several. Whole carcasses of beef, mutton, and venison were hung from poles and were cut to order for women shopping. Dusty men with faces darkened by soot and blasting powder walked home from the mines in the late afternoon.

The capitol, so called, was a three-story building of stone and mortar with, on the ground floor, a kitchen and communal dining hall divided into a large room for dirty miners and a smaller one for government workers and guests. The second floor, Nimmy was told, housed Mayor Dion's office and a council room where a small body of legislators met weekly to approve or disapprove administrative decisions. There were only a dozen or so buildings in the center of town, while residences and barns—mostly log structures built on stone foundations—were scattered throughout the mountains.

Blacktooth's perception of the country was colored by what Ædrea had told him, but the baby boneyard had aroused his suspicions. He was relieved when Ulad, who had ridden ahead into the heart of the community, rejoined them to say that Mayor Dion was away in another part of the mountains, and would not return until the next afternoon. Aberlott's meeting with the family of Jæsis was also postponed until tomorrow. He, with Blacktooth, Elkin, and the old Jew, would spend the night in a guesthouse, which already housed one visitor from outside the colony, who came out to meet them with a wide smile. Blacktooth, who first gasped in surprise, knelt to kiss the ring of Chuntar Cardinal Hadala, Vicar Apostolic to the Watchitah Nation.

"And how is Cardinal Brownpony?" asked the Bishop of the Misborn.

"Well when I saw him last, Your Eminence. I believe he is with Chür Høngan and the other Nomad leaders on the Plains."

"Yes, I knew of his plans. I suppose you are quite surprised that I am here?"

"Yes, but I should have realized that you would have a special relationship with New Jerusalem, which was colonized from your diocese."

"Vicariate," Hadala corrected him. "Well, you have come just in time to unpack and wash up for dinner. I'll see you then."

They followed Ulad to their assigned quarters. Hadala's presence reawakened Nimmy's shame for his disobedience to his own cardinal, but he weighed it against his recent perception of Brownpony as subverting the papacy, as disloyal to Papa Specklebird, and if not the author of the conspiracy then a promoter of an earlier plan. The plan was obviously to assure the Valanan Church some military power independent of Nomad alliances. Blacktooth decided nothing was necessarily wrong with this, except that the plan involved concealment from the Pope. Would Amen Specklebird necessarily disapprove the ownership by the Church of arms? Probably, was Nimmy's guess. Was it his duty to tell? He tried to think of a way to determine whether Chuntar Cardinal Hadala was already privy to the secret, but decided he had only to watch the cardinal carefully when Axe and the Yellow Guard arrived with the weapons.

That night at dinner, however, the cardinal invited Ulad and Elkin to share his table, well across the room from where Blacktooth, Aberlott, and the old Jew dined with several clerks from Mayor Dion's office. Watching the cardinal carefully would be a waste of time. That he used dinner for consultations with Ulad and SEEC's covert agent told him enough. He decided to enjoy the venison, potatoes, and fresh fruit, while trying to understand the colony better by listening to Aberlott banter with the clerks. He learned little that he did not know. They described how New Jerusalem had grown by immigration from the Valley.

Watchit-Ol'zarkia, the name claimed by the mountainous region which, north of Texark, had grown into a ghetto nation from the original Valley of the Misborn, was surrounded by frontier guards of both Church and State, but the border was a sieve by night for escapees traveling without baggage, and

escape by spooks was commonplace. Some escapes were mere escapades, and the fugitives returned to their homes after a few days or weeks abroad, and of course they usually came back richer than they left. Men left their mountain homes to steal or work at temporary jobs in the city. Women left for the same reasons, but also sometimes to get pregnant by farmboys with supposedly healthy genes. However, some escapees never came back, and while there were a few small colonies of spooks in the east, the isolation of New Jerusalem in the Suckamint Range, its resources and natural defenses, made it the largest congregation of genetically dubious persons outside the Valley, and most appealing as a sanctuary for permanent fugitives. Especially in the years since the conquest, the population had grown rapidly because under imperial dominance the Jackrabbit Horde was no longer a threat to travelers through the Province, and it was only necessary to evade Texark outposts and local militia.

"We can defend our mountains," the chief clerk explained after dinner, when he walked Blacktooth back to his quarters, "but against Texark we have no offensive weapon except terror. Spooks become good at infiltration. We have people in the army and the Church in Texark. We have people in Valana as well as New Rome. If they abuse our people in Watchitah, we respond with terror."

Nimmy paused and looked around. No one was observing or listening, and the chief clerk seemed more inclined to talk outside the dining hall.

"Was it your men who tried to kill the cardinal and me?" the monk asked.

The official sighed. "I cannot be sure. The order did not come from here. Our people denied it, naturally. Rational men sometimes go crazy under cover.

"Jæsis was to become a priest, before he failed at the university. We have others. Terror is possible. When the time comes, we may use it, although the Church will condemn us, including our friend Brownpony, for all I know. I know no more about Cardinal Brownpony's plans than you do. Cardinal Hadala probably knows, but it may be that there is no long-range plan. I have watched Magister Dion play chess with your cardinal when Dion was in Valana. He won as many games as he lost. He looks ahead a few moves, but there can be no long-range plan in chess. He piles up arms here, for us and for others. We can't know who the others are, but we presume there will be Nomads. He makes alliances with all nations who fear Texark. He has allies east of the Great River and south of the Brave River. He seems to me like a man playing for territory in chess. He does not take any pieces yet. He piles up power."

Nimmy found the clerk's openness surprising. Perhaps Brownpony was not as well liked here as he had supposed. The colony had its agenda, and Brownpony had his own. The monk changed the subject: "Can you tell me the whereabouts of your former agent to Valana?"

"And who would that be?"

"Her name is Ædrea, daughter of Shard."

The clerk opened his mouth, then snapped it closed, frowned at Blacktooth, and replied in a hesitant voice, "I have said too much. Here are your quarters. I have to go now." He turned on his heels and walked back toward the stone building.

That night Blacktooth dreamed he was back at the monastery. No one looked at or spoke to him, and he wondered if this were part of excommunication, this being shunned. But "shunned" was not quite the word for it. He stood directly in Prior Olshuen's path, head slightly bowed, waiting. When the prior's sandals advanced rapidly into his vision, he leaped aside to evade a collision. Olshuen would have walked right into him. Or through him, as if he were a ghost. He went outside to the cemetery and stood by the open grave.

It was the same open grave, and in the same place, as when he left in early spring. There was always an open grave at the Monastery of Saint Leibowitz in the Desert, even if no one was ill. No one had died, then, since the saintly Brother Mulestar. It still awaited its next occupant. The lip of the hole was protected by thatch all around, pointing inward so that drops of rain would follow the straws and drip into the hole instead of eroding the lip. When necessary, a monk would descend into the grave with a shovel and remove any earth which had fallen since the last cleaning. There were seven penitential

occasions every year when the Brothers formed a procession that led to the grave. There they stood looking down for some time while the sun moved westward into the shadows of that yellowish adobe hole. A not-thing was that hole, like the soul itself, a not-thing at the center of the all. Blacktooth did not like this hole or this ceremony of meditation, although some Brothers found it to leave the mind wonderfully focused for at least the rest of that day.

Now the straw thatch appeared damp. As he watched, the grave stopped looking like a grave. As he stared, he saw that the straw was pubic straw, and the hole was not a grave. He shook his head, and, thinking of Ædrea, started to go see the abbot, to tell him that the grave was now a cunt, but then he heard a baby crying. There was a baby in the hole, and he went to look. It was covered with patches of fur, and had no hands: obviously misborn. A genny. His own son?

He heard himself making strangling sounds, then felt a sharp slap on the back of his neck. He came out of the dream-trance and Aberlott was sitting beside him. The student had stayed quite aware of the change in Blacktooth's state of mind and body since the departure from Valana. His daylight fantasies had begun to acquire the quality of nightmare. "The Devil is on my back," Nimmy said.

Blacktooth's sense that the world is a weird place was stirred again when he met a Nomad, Önmü Kun, who returned with Mayor Dion and his party the following day. It was not until he spoke Ol'zark with an accent that Nimmy recognized him as a Nomad. That he was Jackrabbit was apparent from his clothing, which was cloth, his legs, which were not bowed by growing up in the saddle, and his skin color, which was not much burned by the sun. Because of diet, the present generation of Jackrabbit Nomads were shorter than both their ancestors and the wild Nomads of today. It was obvious Kun was present as an unofficial spokesman for his horde to this *Parva Civitas* of New Jerusalem, which was evidently becoming an arsenal for all the children of Empty Sky and the Wild Horse Woman. Nimmy approached him and spoke Nomadic, shifting to a Southern dialect. Kun grinned broadly and they exchanged pleasantries and bits of life histories. They discussed the meeting on the Plains of the Weejus and Bear Spirit people from all the hordes, and Nimmy surprised and delighted him with the news that Cardinal Brownpony was now Vicar Apostolic to the Plains, including the south, pervaded as it was by clergy from Texark. When the monk asked Önmü Kun about his business in New Jerusalem, the monk was gruffly told to mind his own. The Nomad shrugged off his apologies.

"Perhaps your position as the cardinal's former secretary entitles you to ask, but I am unable to answer." To soften the rejection, he then told a dirty Jackrabbit joke about a Weejus woman, the Bishop of Texark, and a long-sought erection.

Aberlott was sent to see the family of Jæsis, and Blacktooth did not see him again in New Jerusalem. No one would talk to him about Ædrea, or even admit an acquaintance with her. As for the Mayor, he did not send for the monk until the day after the party of warriors arrived with mules, wagons, and guns, and a transaction was completed between Elkin and the *Civitas*. Every night the monk dreamed wild dreams about the blond and blue-eyed imp with an impassable gateway. The dreams frightened him.

The dreams also prepared him for the first meeting with Mayor Dion, who came directly to the point. "We know why you are here, Brother St. George," he said gently. "We took insult when the Secretary refused to deal with the agents we designated. We suspected that the killing of our Jæsis was a betrayal, too. But then we were persuaded by Shard's Ædrea that we had been mistaken. She took full responsibility. You need not explain or apologize. A new representative will hereafter contact the Secretariat for us. You will meet him later today. Now do you have any other messages for us?"

Blacktooth looked down for a moment, then up into Dion's gray eyes. "Only my own apology, Magister. Ædrea is not at fault. The fault was mine. Even the cardinal knows that. Ædrea is innocent. Where is she, and may I see her?"

The gray eyes watched him closely. Finally the Magister said, "I must tell you that Shard's Ædrea is dead." He watched the monk again for a moment, then beckoned a guard. "You! Don't let him fall!" then said to another, "Get the monk some brandy, the peach is strongest."

Blacktooth lowered his face into his hands. "How did she die?" he asked at last.

"There was a miscarriage. Something went wrong. As you know, they live way down by the Pope's highway, and by the time our physician got there, she had lost too much blood. So I am told."

The Magister briefly watched his grief, then quietly left the room, after whispering to Elkin, "We'll meet again here tomorrow."

When he had gone through all the motions, and his duties as an emissary were ended, Blacktooth went to confession at the local Church, and fasted for three days in constant prayer for his love and her lost child. To cherish grief was as bad as to cherish anything: lust, triumph, or, as Specklebird would say, as bad as cherishing Jesus. He then spent several days in the city's library. When grief overwhelmed him, he paused in his study of the history of the colony, and studied the grief, pressing it firmly down into his abdomen from the diaphragm, then continued to peruse some of the private correspondence between early colonists and their relatives in the Watchitah Nation. He was looking for anything that would tell him about Shard's people, or their ancestors. Evidently, they were latecomers, as they claimed to be, and of no historical interest to the beautiful inhabitants of these mountains, bristling with guns, and surrounded by their ugly first line of defense. Why did not the glep Helots of those scarecrow alleys rebel against the well-armed Spartan spooks? Perhaps because those Spartans were relatives of men like Shard, and Shard was proud of his Ædrea. There was segregation here, but no visible repression. Only the glep's genes were unwanted.

He found out that the penalty for sexual union between a citizen of the Res Publica Jerusalem Nova and a glep was death for the citizen and the offspring, if any. There were people in New Jerusalem with special talents. Marriages were made by contract between families, and ratified by the Magisterium. People were bred like animals, but people throughout recorded history had bred not only slaves, but sons and daughters like animals. The only thing new here was the criteria by which the genetic potential of such unions was judged, whereas the historical matchmaker was usually interested in combinations of wealth. Nimmy felt vaguely that the criteria were not very different from what the Mayor of Texark would have chosen. But here you grew up a healthy citizen, with special talents, or went to the boneyard of infants, the one they had passed the morning after that night in the foothills. Maybe some glep children of citizens were returned to the Watchitah Nation, as Ædrea had said, but it was a long dangerous trip back to the Valley.

Having given much thought to his doubtful future, he decided that upon completion of his rather unimportant mission here, he would return to the world through Leibowitz Abbey because Ri's yellow monastic warriors wanted to go there, while Wooshin himself had been ordered back to Valana. Nimmy had his own reasons for going as a guide for the warriors. First, he suspected Brownpony had sent him here to get rid of him, and he no longer trusted Cardinals Brownpony, Nauwhat, and Hadala. He wanted to stay clear of any conspiracy, and a conspiracy was anything to which Pope Amen was not privy. His conscience and his relations with God were in need of repair as well. He wanted to confess to Jarad, and Jarad owed him a hearing. He would not be thrown out, but he knew he would not be welcome to stay beyond necessity. He intended that nobody think he was there as a suppliant, but Jarad would try to make him feel like one.

When Blacktooth and the party of warriors were packing gear and saddling horses for the trip, they were joined by Önmü Kun, who was driving a wagon, obviously loaded with arms.

"You can't take that to the abbey," Nimmy told him.

"Who said I'm going to the abbey?" said the Jackrabbit Nomad, and followed the party of riders eastward. The old Jew who called himself Benjamin followed them for a short distance, but changed his mind. "Tell the abbot I shall visit him before winter."

Nimmy promised to deliver the message.

He badly wanted to visit Arch Hollow on the way out of the mountains, despite the Mayor's warning, but as soon as Shard saw him, he ran for a gun. The guards fired a warning shot over Shard's head; then one of them popped the rump of Blacktooth's mount with his crop, and yelled, pointing a direction of retreat. They galloped past the homestead and down the road which led east to the papal highway. Nimmy was not allowed to weep at her grave.

As soon as they came to the Pope's Highway, the Jackrabbit Nomad bade Blacktooth farewell, and announced his intention to leave the trail and travel cross-country to the southeast. This would take him into a kind of no-man's-land where the border of the imperial province was in dispute.

"Aren't you worried about Texark agents?" Nimmy asked.

"I'll be meeting my customers tonight," Önmü Kun said with a grin. "They will then go home, and I back to New Jerusalem."

They parted after exchanging the Jackrabbit peace sign. Nimmy decided that Kun was simply a gunrunner for his captive horde. But he had seen the weapons in the wagon and noticed that they were not of the most advanced design—a precaution against their possible seizure by imperial forces.

On the trip to the abbey, the Yellow Guard's Foreman, whose name was Jing-U-Wan, cautiously questioned Blacktooth about the Order of Leibowitz, and then explained his own.

"The Order of Saint Peter's Sword has two traditions. One is purely Christian. Our creed is not much different from yours. Our canonical prayers are not identical, but quite similar. We use less from the Psalms, and there is more silent meditation. In our work, people expected us to do what non-Christian monks had always done in that country. Outside the chapter house we work in the fields and we beg only when we travel. We maintain a weaponless warrior tradition, because the Tanter's monks had always done so. It was a necessity. In our history, the unarmed victim of a robbery was considered negligent for going about without a gun, and he had to pay for any police action against the robber. Unarmed monks had to be skillful with feet and fist."

"But you carry arms now."

"The rule is dispensed when a monk's job requires it. When the master died, we talked about going unarmed, but the master is at the edge of war."

It took Blacktooth a moment to realize that second master the man referred to was Cardinal Brownpony. "What makes you say he is at the edge of war?" he asked.

The man paused. Being cautious. "In a sense, we are always at war." It was a generality to get rid of the subject.

Nimmy did not pursue it.

He had dreamed about the open grave at the abbey, and it was the first place they visited after exchanging greetings with the gatekeeper, because the gatekeeper pointed them toward it without breaking his silence. To Nimmy's surprise, the open grave had been moved. The old one was recently filled, and a new wooden cross bore the name of the grave's occupant:

HIC JACET JARADUS CARDINALIS KENDEMIN, ABBAS. The date of death was two weeks old.

"Brother St. George," a familiar voice called out to him.

He turned to see Prior Olshuen approaching. He was looking with astonishment at the Yellow Guard, which bristled with swords. The prior was in mourning. The whole monastery was in mourning. Blacktooth went to the chapel to pray sterile prayers for his mistakes, but it felt like self-indulgence. After a while, he went with mounting dread to seek a conference with the prior.

• • •

*It was a truly massive hemorrhage. While offering Mass on a Wednesday morning, Abbot Jarad, having consecrated the bread and the wine, turned to his community in choir and began to say the "Ecce agnus dei" when he turned white, emitted a strangled yowl, and fell down the sanctuary steps with a great crash and a ringing of brass chalice and paten on the stone floor. "Body and blood all over the pavement," said Brother Wren. The Cardinal Abbot of Saint Leibowitz died without regaining consciousness.*

## CHAPTER 15

And let the Abbot be sure that any lack of  
profit the master of the house may find in 1  
the sheep will be laid to the blame of the  
shepherd.

—*Saint Benedict's Rule*. Chapter 2

Y THE TIME NEWS OF ABBOT JARAD'S DEATH reached Valana from the Texark telegraph terminal, the Holy See and most of the Curia had already departed in the direction of New Rome, while Cardinal Brownpony had taken the more northerly route to the sacred meeting place for the Weejus and Bear Spirit shamans. The message went first, of course, to the Sacred Congregation for Religious, whose presiding cardinal had gone with the Pope. His vicar promptly notified SEEC and the Secretariat of State. Cardinal Nauwhat at SEEC was one of the few cardinals who lingered in Valana, and he promptly sent messengers to chase after Brownpony and the Pope, but they had been gone for some days and would not be easy to find on trackless grasslands. Had Nauwhat sent the message with a Nomad skilled in distance signaling, it might have arrived before those to whom it was addressed, but Nauwhat had not inherited Brownpony's Nomad connections with Brownpony's office, and the messengers would have to wander for a time.

The 6th of September 3244 was a Tuesday. The moon was five days beyond first quarter, and arose well before sundown. The Wild-dog's lookouts who watched from the boundaries of the settlement at the "Navel of the World," the breeding pit of the *Høngin Føjæ Vurn*, saw at last a tiny plume of dust on the horizon. A lone rider waved his arms in a Nomad signal meaning "Church," and repeated it until he knew he had been seen, and was therefore recognized as the expected guest from Valana. But alone?

Father Ombroz was astonished, for he had expected the cardinal to be accompanied by his young secretary and at least one familiar bodyguard. He immediately sent for Oxsho, his young acolyte and most recent student, a warrior who was remotely related to Chür Høngan, and who had served at the priest's Masses for three years now.

"I can't go to meet him, because of the funeral," he told the young man. "I want you to stop him before he gets much closer, and warn him of the news. Treat him as you would treat a great uncle, with utmost respect. But you must tell him things he will not want to hear. Hurry, before he gets too close to camp. Try to stay on low ground, or behind a rise. Enemies will be watching. Remember to mention what is said of his mother, whether it is true or not."

"Certainly, Father," said Oxsho, and immediately rode out of the encampment. The youth was as surprised as his master to see that the new Vicar Apostolic had come alone, with a bedroll and a musket, wearing only a red skullcap—easily concealable—to distinguish himself from any other citizen trespassing on Nomad land. The young acolyte had too many things to say to give the cardinal an opening through an exchange of pleasantries. Still staring straight at Brownpony's apostolic ring after kissing it, he began listing the items in the Wilddog news. He seemed ill at ease, and did not directly meet the cardinal's curious gaze.

"Bearcub's father died last night. The sharf is dead. The Mare here is a widow again. The funeral is tonight. It was a ritual death.' His glance flickered up to Brownpony's face to make sure he understood the word "ritual" in this context. A slight wince from the cardinal revealed his comprehension. "But there was much argument among the Bear Spirit and the Weejus. The slaughtering festival would be on Friday, when the moon is full."

"Would be? What does that mean?"

"They postponed it. It lasts several days, and it was about to begin. A postponement of so holy a

celebration is without precedent, but it was inappropriate for the Great Uncle to be, uh, to *die*, while cattle are being slaughtered. And, uh, you know, the feast."

"I see. Go on."

"The funeral will be tonight. Much has happened, m'Lord. A representative from the Church in Texark is here: Monsignor Sanual. An observer from Benefez, but also a spokesman. He ordered Father Ombroz on behalf of the Archbishop to return to his order in New Rome ..."

Brownpony laughed. "I can imagine how the good father responded. Well, as his new Vicar Apostolic, I shall order him to stay. I am very sorry to know that Granduncle Brokenfoot is dead. Your teacher gave him the last sacrament, of course?"

Ombroz's acolyte stared at him for a moment, as if not comprehending, and resumed his list. "The Lord Chür Høngan thinks he has located your mother. He said to tell you she is on her way to this place. He cannot be sure. For that and various other reasons, the desire of Kindly Light, the Grasshopper sharf, to see you spend the night in the devil-woman's breeding pit is probably going to be frustrated. His arrogance does not sit well with the Weejus."

"I may very well spend a night there anyway, whether Hultor Bråm wants it or not."

The young Nomad seemed alarmed. "It is a terrible place, m'Lord. Many have died there."

"Men do die, everywhere."

"She slays anyone she rejects."

"Are you not a Christian?"

"Yes, but she is not!"

"Perhaps I can convert her."

Oxsho showed great consternation. "The *Høngin Fujæ Vurn*—"

Brownpony cut him off. "Of course I would not try. But how else would I prove my right to rule over your Churches? Monsignor Sanual may join me, if he pleases."

The young Nomad giggled. "I think he would wet his cassock."

"Tell me, what makes Holy Madness think my mother is alive?"

"I know only what Father Ombroz said—that the Sisters who raised you spoke only the Jackrabbit dialect, and wrongly translated her family name."

"So I am perhaps not a *brown pony*?"

"There is a Wilddog family name that means a 'sorrel colt.' But in Jackrabbit—" He shrugged.

"What do you know about her?"

"Only gossip, m'Lord. She has royal blood, but her small family is neither wealthy nor distinguished. She is old enough to be your mother, but she has never married. She lives with another woman as husband, and is said to hate men. Perhaps I should not tell you this. But it is not an uncommon thing among us."

Ombroz met them at the edge of camp, his shaved pate shining in the sun. It was dotted with scars where skin tumors had been removed. Looking at him, the cardinal realized that his name in Wild-dog sounded a lot like "shaved bear," although the priest claimed he used the razor to mark himself as different from the typical shaman. When the cardinal told him that Amen Specklebird had canceled his suspension from the Order of Saint Ignatz, and was considering his appointment as Father General of the Order, Ombroz laughed sadly.

"That will carry as much weight in New Rome as your recent promotion, m'Lord."

"Well, yes, but the Pope must assert all of his rights and prerogatives as if no one doubted the legitimacy of his election. He must act the Pope in every way."

"I understand that, but of course the Order will ignore my reinstatement. What about you, Eminence?"

"Well, at the very least, I shall invest you as a pastor of a Church in my Vicariate."

Ombroz laughed again. "My Church is in my saddlebags. Your couriers bring my wafers and my wine along with my mail."

"Even in saddlebags, a wandering Church needs a name."

"It has a name. Our Lady of the Desert."

Brownpony smiled. "The same name as the Pope's old Order? *Ordo Dominae Desertarum*. Very well, and you would no doubt be happier if you changed orders?"

"If His Holiness consents. The Order of Saint Ignatz has been disloyal to the popes of the exile, and they haven't made a move to recognize Pope Amen. I am on their list of their God's enemies. So if His Holiness permits it?"

"Why not? He'll agree, I'm sure." The cardinal looked toward the crowded area. "Now, what's going on? Where is Holy Madness?"

"He is in mourning. As you know, Your Eminence has arrived just in time for his father's funeral."

"His death was expected, was it not?"

"Yes, even planned."

"Human sacrifice again?"

"It was a ritual killing, yes, but I prefer to think of it as euthanasia in his case. Still forbidden to Catholics, of course."

"Did Chür Høngan assent to this?"

"No, he was excluded by the Bear Spirit shamans, because of his religion."

"A religion his father shared."

"Brokenfoot was out of his mind. He did not understand."

"They are not going to—"

"Honor him? I'm afraid so. Tonight."

"I wish I had come a day later."

"I am amazed that you came alone! Where is Brother Blacktooth? Where is Wooshin and the Yellow Guard?"

"In New Jerusalem."

"With the guns?"

"With the guns. You must know that the Pope is crossing the Plains to the south of us, probably camped for the night by now."

"I know. I hope they let him pass. Eminence, there is a legate from Texark here. From Benefez. I would say you have arrived just in time."

"Your young man told me. Who is Monsignor Sanual, and what does he want?"

"He is simply here to meet with the Bear Spirit, the Weejus, and the sharfs. Benefez has never condescended to this before. I wonder if he'll be fool enough to proselytize. I dare say the Grasshopper sharf would have killed him as a spy, if he had tried to attend a meeting in the Grasshopper realm. But he is a guest of Chür Høngan's bereaved family. I counseled Bearcub to play host to the fellow, because otherwise the Jackrabbit delegates would have been forced to accommodate him."

"And thus either make him seem their protector or their ally. Very good, my friend. This will work out better than you could have known."

"No, I knew that all the Jackrabbit Churches in the Province have been made subject to you. *If* you can win them over."

"I cannot take the Churches or their pastors by force, but perhaps I can take their congregations away from them—with the help of enough priests loyal to the Pope. Of course, the priests have to speak Jackrabbit."

"There are many in the Province already, m'Lord, and they are just the ones who will be loyal to the Holy Father, even though they were taught by the Archbishop of Texark. The Nomadic-speaking priests are mostly converted Nomads. They embraced the Mayor's uncle's religion, but not the Mayor or his uncle."

"I'm glad to hear you affirm what I thought was true."

"I also know about Kindly Light's threat to have you atone to the Wild Mare Woman by spending the night in the Navel of the World, as they call it. Hultor Bråm will never be nominated, and he can't

make you do it. However, the Bearcub and I have hatched a plan. May I tell you now, or later?"

"Later, please. We are being observed, are we not?"

"Yes, and it's a mistake not to be seen laughing together more than speaking seriously like this. Let me take you to the leading grandmothers and their spouses. Or do you need rest first?"

"Rest, please. And a bath, if that is possible."

The cardinal slept for a few hours. When he awoke, it was dark except for the flicker of many fires. The Nomads were already celebrating the royal funeral, and there was chanting and dancing. He could smell the cooked sacrament even from inside his tent. When he came out into the firelight he was immediately joined by Oxsho, who pointed and said, "There's your Father Ombroz."

"Mine?" Brownpony eyed him curiously. "Holy Madness told me you were baptized. Is he not your pastor?"

Sheepish, the warrior shrugged. "Sometimes, but he shaves."

"It sets him apart. It saves wearing his collar backward."

"Bear Spirit men do not shave, but sometimes he acts as a Bear Spirit man, as right now. I like him, as we all do, but I do not understand him very well. You want to talk to him now?"

"I should, but I hesitate to interrupt his, uh, meal. He seems to be, if you know the word, zonked."

"He has been smoking Nebraska *keneb* with the others." Brownpony approached him. The unfrocked old priest of the Ignatz Order, whom Amen wanted to be its Father General, sat there on a heap of dried cow hides and gnawed with his good front teeth at the well-roasted remains of a human hand. He dropped the hand back in the bowl as Brownpony approached, but looked up at the cardinal brightly and without shame. Oxsho hung behind. Brownpony could see that he was not drunk but in an extraordinary state of mind from the Nomad sacramental mixture of potions he had consumed. After participating in tribal rites, he seemed a changed man to the cardinal, but Ombroz smiled at him lovingly. Brownpony met his smile with a gaze that seemed to come from a thousand miles away. I do *not know this man, this old friend*.

Ombroz was first to break the silence. "The old sharf willed me his right hand—an honor!—and an insult to refuse."

The Vicar Apostolic remained silent, watching him.

"Sometimes," Ombroz said, picking up the gristly hand of Granduncle Brokenfoot, "I take a piece of bread and consecrate it as the true body of Christ. And sometimes I take the true body of Christ and consecrate it as a piece of bread. Do you understand?"

"Ahh!" It was a surprised grunt from Oxsho. Brownpony looked at him curiously. Oxsho was smiling slightly, as if he *did* suddenly understand.

The cardinal, still from a thousand miles away, said, "You really do wish to join the Pope's old Order, Father?"

Ombroz e'Laiden, not so far gone as to miss the hint of sarcasm, answered, "Tell His Holiness that illness forces me to remain as I am, m'Lord. I cannot return to my Order, but I am too old to change."

"Very well. I'll tell him." Brownpony turned and walked away. Oxsho hesitated, and patted the old priest's shoulder before following. Ombroz grinned at the young man, and resumed his sacramental meal. Oxsho followed Brownpony.

"So much for the Order of Saint Ignatz," said the cardinal.

"Does it disappoint you that he is one of us now?" asked the warrior.

"No, I'm sorry for Ombroz e'Laiden, the man."

"Because he has become a Nomad himself?"

"No, but outside the Church there is no salvation," murmured the cardinal, quoting an ancient claim. The answer seemed to puzzle Oxsho; he had heard of the cardinal from Ombroz, who admired and called him liberal. It was an uncharacteristic remark for such a man to make. But he was a priest now, and a bishop too.

"M'Lord, who is to say who stands outside the Church?"

"Why, the Pope says, and the law itself says, Oxsho."

"Does not God decide?"

"Father Ombroz is an enlightened man," said Holy Madness, who had overtaken them. Both of them looked at him strangely, waiting for Høngan to continue, but he only yawned, shook his head. "The woman who may be your mother has come, m'Lord."

Brownpony looked at the moon and changed the subject. "The Pope is taking a walk tonight. He always walks under a bright moon and sings to the Virgin, her sister. The Pope that would give the Church away to the poor, if Nauwhat and I would let him." My God, what are we going to do?

"Your Eminence, do you not want to see the woman? She is of royal blood, a distant cousin of mine. Which would make you my cousin too." He laughed, perhaps with a trace of bitterness.

"The family name is Urdon Go, not Avdek Gole," he said, after the cardinal's silence. "Not a brown pony, but a sorrel colt."

"Oxsho told me. But my God!" Brownpony whispered, his face draining. "After all these years. The Sisters spoke Jackrabbit, of course."

"Your mother, if that's what she is, is there. She is that old woman sitting on the blankets by the door of the hogan there. I would be very careful. She can be as violent as the *Nunshân*."

"Of course. Thank you." Brownpony walked quickly toward her, then stopped a few paces away. The woman's eyes were white with cataracts. But she had perceived his approach with her ears, her wrinkled mask facing him. "You are Texark?" she asked suspiciously.

"Only half," he said in Wilddog. "Only half, Mother." Calling her "mother" was a polite form of address; she did not need to take it literally.

But she stood. She spat on his face and his cassock. She was chewing a quid of herbs. Perhaps her aim was bad. She was nearly blind. Surely it was unintentional? But they had told him about her. Had they told her nothing about him?

The cardinal retreated. It was no good. He could not tell her that the man she faced without eyes was what had been planted in her by force and ripped unwelcome from her thighs, and that his hair was red. He knew she would not want to know him. She was a simple woman, but bitter. He could see the family, while royal, was not wealthy. But now that it was known to Chür Høngan and the chieftains that he was her son, the news would come back to her that he was here, if she did not already know. Surely she was expecting it. There was nothing he could do about that but tell the Nomad sharfs that he was willing to come to her if she called. He felt certain she would never call. Though depressed, he was glad he had seen her, and glad to think she did not know for certain.

"Your Eminence, please!" The voice calling to him from the doorway of a tent was that of Monsignor Sanual, the Texark Archbishop's legate. The chubby diplomat seemed distraught. "Come in, please, Eminence, come in a moment."

Although Sanual had nearly snubbed him earlier in the day, Brownpony silently complied, stooping to enter a lantern-lighted space, stuffy with earth odors and the smell of spilled sacramental wine. The wine too was on Sanual's breath as he grasped the cardinal's arm.

"They're eating the old chief! I thought you would be staying in your tent tonight!"

"And miss the show?" He carefully recovered his arm from Sanual's grasp. "The Archbishop's legate may sulk in his tent if he chooses. The Pope's legate may not."

Sanual drew back. Both knew they were vying for the favor of the wild tribes and the new Christian chief who might soon unite the Three Hordes.

"You'd do anything!" said Sanual. "If His Holiness knew . . ."

"Look at it this way. My mother was a Nomad. The dead chief was a cousin of mine. The new chief is also a cousin. Remote, of course. But I'm not going to shun the last rites of my own people. Now what did you want to see me about?"

"Just that. Your relationship." Sanual was sneering. "Ombroz told me you've been chosen to be in the

kingship ritual!"

"I just saw Ombroz. He said nothing to me about it. Besides, you always turn your back on the man. I don't believe you, Father. You've been drinking."

"He shouted it at me! And that cackling laugh of his. Of course, he's senile and quite mad, but I believe him. It's so, isn't it?"

"I have only been informed that, as a son of the royal mother-line, I am entitled to be honored during the celebration. The honor is personal, and has nothing to do with my office or my mission."

"Then for the honor of God, Your Eminence, take off the vestments of your office when the time comes."

"Are you here to express Texark's disapproval of the Nomads' pagan ritual, or are you here to honor the inauguration by them of a Christian chief?"

"I was hoping to do both, but I hadn't counted on your willingness to take the Devil to your bosom. We ought to be together on this. For the love of God, Cardinal, tolerance has to stop someplace."

"I was never a priest, Father, until just recently. I'm just a lawyer to whom my late lord the Pope Linus Sixth gave a red hat, and Pope Amen just made a bishop. Fine points of theology are not in my repertory."

"Cannibalism is a fine point, Your Eminence?"

"I take note of your objections, Messér. I'll mention them in my report to the Pope, as I am sure you'll mention them in your report to your Archbishop. Is that all you wanted to see me about?"

"Not quite. There is a rumor that you were sent to assert a pretended episcopal authority over Churches in our missionary territory. Is this true?"

"Your missionary territory is not your missionary territory except by right of conquest, and no right of conquest exists except when a war is a just and defensive war. Pope Amen has made me Vicar Apostolic to the Three Hordes, if that's what you mean, and it has nothing to do with your masters, either of them."

"Damn! There is no pope! We agree on nothing! Not on common decency. Not even on saving the Church from schism!" Sanual turned his back. Brownpony left the legate's tent at once, strode toward the main bonfires, briefly observed the orgy, and then retired.

But that night the blind old woman came and tried to kill him in his sleep. At his outcry, Oxsho leaped from his sleeping bag, grappled with her briefly, forced the knife from her hand, and led her away.

"She cannot be your mother," the warrior said upon returning.

"She is. She just proved it."

Cardinal Brownpony spent the rest of the night staring at the drifting patch of stars framed by the smoke hole in the top of the tent. He thought of Seruna, his wife. He thought of the Sisters who raised him, of the Church and the Virgin, and the *Høngin Føjæ Vurn* to whom the nearby pit was sacred. He knew now that he must indeed accept the ordeal of courting the Wild Horse Woman in her place of ancient fire. If he was to become the highest Christian shaman in the eyes of the People, he must become a Nomad as fully as Father Ombroz. The drunken words came back to him: *Sometimes I take a piece of bread and consecrate it as the true body of Christ. Sometimes I take the true body of Christ and consecrate it as . . .*

Somehow it sounded like a thing Amen Specklebird might say.

The moon had almost set when a dark shadow filled the doorway. Not his mother again! Oxsho was snoring. But it was Holy Madness who called softly to him: "Dress quickly, m'Lord. I want to show you the pit."

Brownpony obeyed, but when they were outside, he asked, "Couldn't we see it better by day?"

"No. If you must face the test, you must face it at night. Even full moonlight obscures the glow of the poison."

They mounted the two horses Høngan had brought and rode quietly out of camp. The orange moon was just touching the horizon and there was little light, but the horses knew the terrain. The rim of the crater was a half hour's ride from the camp. A sentry gave them a sleepy challenge as they passed the

outskirts, but he recognized a grunt from his sharf and sat down.

When they came near the edge of the pit, the moon was down and there was scarcely a hint of morning twilight in the east. The pit was a lake of blackness, and they approached cautiously on foot. Holy Madness grasped the cardinal's arm.

"Damn!" he said after a moment.

"What's wrong?"

"The fire comes and goes. Tonight I can't even see it."

"I don't even know where to look."

"Look at the sky. Find the brightest star in the Thief and then bring your eyes straight down. There should be a tiny red spot near the center."

"The Thief is a Nomad constellation."

Høngan pointed. Brownpony sighted along his arm. "I think we call that Perseus. Yes, and that star must be Mirfak."

They both sat at the rim of the crater and watched in silence. The only sound was the wind and the distant howling of the wilddogs. Occasionally Chür Høngan swore under his breath.

"Does it really matter?" the cardinal asked. "Can't you show me by daylight?" He glanced east. The sky was brightening.

"It does matter. You should see it glow. You must take note of the wind, and stay out of its lee. Some nights you can see a trail of vapor, as well as the hole it comes from."

"Isn't it better if the fire is inactive?"

"Yes, but the whole pit is somewhat contaminated. The only vegetation in it is on the weather side of the average wind here. You should stay where the weeds grow, except when the wind is wrong. You can see what I mean in a few minutes."

Their vigil lasted until the sun cleared the hill. The pit did seem lifeless, except for a little vegetation at the foot of a cliff. At the moment, the breeze was blowing away from it.

On the following day, the leaders of the Bear Spirit and Weejus met to consider Brownpony's wish to pay court to the *Høngin Fujæ Vurn* in the Navel of the World and face the hidden fires of Meldown. The cardinal himself was excluded, but twice Chür Høngan emerged from the council lodge to ask a question.

The first question: "Will you treat the Great Mare with the same reverence as the Holy Virgin?"

"Yes, if I may say my usual prayers to her."

An hour later came the second question: "You realize that if she rejects you, you will not be accepted as having any authority over Christian Nomads of any horde. Will you resign the office the Pope gave you?"

"If I live long enough to resign, yes."

Høngan gave him a hard look and returned to the meeting. When it was over, the Wilddog sharf announced that the cardinal would spend Thursday night in the pit. Friday the Wilddog sharf Holy Madness would pay court to the Wild Horse Woman, and the Saturday's vigil was for the Grasshopper sharf Kindly Light. The Grasshopper's complaint was that of the three of them, only Høngan would have a full moon from dusk to dawn, but Holy Madness explained to him privately: "If you are familiar with the pit, so that you do not stumble into trouble in the dark, the moon is not your friend. You cannot see the hellfire by bright moonlight, and as you know, sometimes not even by dark. Clouds may cover the moon. Spend the day studying her breeding pit from every angle. When the wind changes, you will have to move."

The following night he spent in the pit. Oxsho led him to the place of descent. The moon, nearly full, was in the east at sundown. He carried a blanket but no bedroll. Sleep would be dangerous, but a chill would settle over the area after midnight.

"My teacher wishes me to spend the night on the clifftop and keep a fire burning," the young warrior told him. "I'll hold up a torch when the wind is changing. Watch for the torch. Sometimes a light breeze may be hard to feel down there."

"Is this permitted?"

Oxsho paused. "I won't start it until everyone's asleep, and behind this rock nobody'll see it. And only Sharf Brām might object. God and the Mare keep you, m'Lord."

A wind that swooped down from the lip of the crater carried wisps of dust that dimmed the stars, but it was the dust of the prairie, not the pit. He chose a resting place in the sparse clump of vegetation where the dust of the devil's hole would blow away from him. He was still very sad because of the encounter with the bitter woman whose womb had borne him against her will. He had been a son of violence and hate before his adoption by the Sisters, but his memory of the Sisters was tinged with resentment, except for Sister Magdalen ("Cries-a-River"), a former Jackrabbit Nomad who told him stories and made his education her special concern. Seruna, when he married, had reminded him of Magdalen. Now both were dead. When he passed through Jackrabbit territory to visit some of his Churches, would he visit the orphanage? And was it nostalgia or resentment that made him think of it? Better not, he decided. Neither emotion would benefit his ecclesiastical and political project.

After a while the cardinal began to pray, saying his rosary at first, and letting his eyes linger around the patch of darkness that marked the cave entrance under the moonlit ledge of rock. He spoke softly to the patch of darkness, but he still felt the sting of his real mother's spit like acid in his face. He spoke now to that other mother of myriad names: *Regina Mundi, Domina Rerum, Mater Dei, Høngin Fujæ Vurn*, even the War Buzzard. Her manifestations were always associated with a place: Bethlehem, Lourdes, Guadalupe, and here at the Navel of the World.

"I was born in the south end of your realm, Mother, and I know your paths. Even there, where the People are servants of those who took your land, I have seen your ways. Miriam, mother of Jesus, pray for me."

Oxsho held up his torch when a cloud covered the moon near the zenith. He could at last see a kind of luminosity above and about the hole at the center of the pit, and he moved a hundred paces away from the direction pointed out by the flame.

"Lord, have mercy. *Kyrie eleison.*"

Fortunately, the wind was at his back again.

"My mother was a woman of the Wilddog tribes, Mother; my father did evil to her, and to your people. Let him be dead, as she is now dead for me. Let me not find him, lest I kill him. Long ago, before I knew she was dead to me, her spirit told me to come here. I have not done as she wished. I have left the People. I have taken the religion the Sisters taught me. But at last I am before you, Mother."

The wind was shifting a lot that night. He kept moving.

"Christ, have mercy. *Christe eleison.*"

He moved again to keep the wind at his back, taking his cue from the occasional torchlight, but he went on talking softly in the direction of the cave.

"My hair is red. His was red, she told them. The Sisters who took her in. The Sisters raised me. Miriam, Mother of Jesus, pray for me. If he were living, I would kill him. *Ora pro me*, Wild Horse Woman. *Kyrie eleison.*"

Once during the night, he actually saw her: a woman's figure, black against the glow from the fire pit. Her arms were raised like wings. The *Nunshân*? No, the figure was young; the Night Hag was old. Because of the wings, she had to be the Burregun, the War Buzzard. But when he stood, she vanished.

Amen Specklebird spoke of her as if she were a fourth member of the Holy Trinity, and that was one of the excuses of the Benefez faction for refusing him recognition. A pope who could utter heresy was no pope. But he had not been pope when he said it. Would he say it still? No. Surprising to Brownpony was the ease with which the old man shifted into his papal role. A doubter would call it hypocrisy. A believer would call it the work of the Holy Ghost, protecting the flock against error.

How many popes were in Hell? he wondered. Dante had named a few, but the list was incomplete.

The last pope before the Flame Deluge was surely one of them.

On that thought, he lapsed into slumber, for the moon had sunk below the rim of the pit. It was the brightness of the sky and the shouting of Oxsho that woke him. The wind had gone wrong. He grabbed the blanket and trotted as fast as he could toward the path leading upward. For better or worse, his trial was over.

"If you are sick within the week, you will die," was the matter-of-fact first prognosis of the Weejus who talked to him. "If you do not die soon, you can expect a shorter lifetime. They told you this beforehand?"

"Of course, Grandmother."

She questioned him closely. He told her about seeing the woman with upraised arms he had seen against the glow of the hellfire. She stared at him. After a long pause, she asked, "Do you know of the Buzzard of Battle?"

"I have heard of the Burregun."

"The Buzzard of Battle is red in the sky."

"She was not in the sky."

The old woman nodded, and that was the end of the interview. She took her opinions with her into the council lodge. Later that day, Chiir Høngan came to tell him that the Bear Spirit accepted him conditionally as Christian shaman. The condition was that he not fall ill anytime soon.

Brownpony saw little cause to celebrate. A messenger came from Valana to report that Jarad Cardinal Kendemin, Abbot of Saint Leibo-witz, had gone to meet the Judge. A report also came that the Pope and his party were encamped in the no-man's-land between Wilddog and Grasshopper domains. Holy Madness graciously offered to swap his appointment with the *Høngin Fujæ Vurn* for Kindly Light's, so that Hultor Bråm could leave with his escort party of warriors on Saturday morning to meet Amen Specklebird and lead him to the frontiers of the Empire.

Brownpony decided to ride south with the warriors. Bråm, fresh from his encounter with the Mare, offered no objection.

Early Saturday morning, an hour before their departure, Cardinal Brownpony borrowed bread, wine, a missal, and a portable altar from Father Ombroz. It was his wish to celebrate a pontifical High Mass; it would be good politics and showmanship, but he could not sing well, and had said no more than a dozen Masses since his ordination. Monsignor Sanual stiffly declined his request to serve either as co-celebrant or acolyte. The Red Deacon looked at Ombroz.

"Will you hear my confession first?" asked the old Ignatzian.

"You have something recent to confess?"

Ombroz took his meaning, and shook his head in annoyance. He called instead for Oxsho, his own altar boy. Between them, they rounded up all Christians and invited all the Weejus and Bear Spirit people who wished to attend. The Vicar Apostolic to the Three Hordes offered a simple Mass there on the high prairie with the smoke of dung fires in the breeze and a congregation of wild Nomads circling the altar at a safe distance. Probably more people came forward to receive the Eucharist than there were Christians in the encampment, but he questioned no one. Those who looked surprised at the bland flavor of the Body of Christ were probably pagan shamans. Neither Sanual nor Ombroz came forward to receive. After the *Ite, missa est*, a cheer arose from the crowd, but he could not be sure who incited it. Obviously, he was accepted as the Christian high shaman of the People.

Monsignor Sanual was drinking again. He came out to watch them ride away, and called out to the cardinal that he was following a loser, that the false Pope would never enter New Rome, and that grief for the whole Church would follow.

"Thanks for your blessings, Messér," the Hultor Bråm was not yet prepared to be a friend to a friend of his rival, but he had suffered a bad Friday night in the pit, and he knew that his report to the Bear Spirit council afterward had not been well received. Plainly, the Weejus had already made up their minds. He

conceded to his warriors that unless Holy Madness experienced an even worse Saturday night in the Navel of the World, the office of *Qæsach dri Vørdar* would fall to the Wilddog sharf. At least the ancient office would be restored, reuniting the Three Hordes.

He noticed that Cardinal Brownpony had heard his remarks, and he gruffly asked the cardinal about his experience with the Mare.

"Were you accepted as her stallion the other night?" he wanted to know. "Did you see her at all?"

The cardinal hesitated. "I'm not sure what I saw. You spend hours staring at patches of darkness, you begin to see, but it isn't there."

"What is it that wasn't there?"

"There seemed to be a woman between me and the patch of dim light. I can't describe her. She faced me, and her arms were raised. Then she disappeared."

"Like the Buzzard of Battle?"

"They told you that's what I saw. I never said it."

Bråm nodded. "If I had seen it, I would be *Qæsach dri Vørdar* now. But I am going to die soon."

"Are you ill?"

"You saw the Buzzard of Battle. That is your future. They say I saw mine." Bråm laughed and rode away. Later one of the warriors told the cardinal that the Weejus had decided that the Grasshopper sharf had met the Night Hag in the pit, although, the man said, the Weejus had prejudged the contest in favor of Holy Madness, provided he survived the pit, and that he personally did not believe that Bråm would die as a result of the pit.

The warriors were feeling playful. Bråm had promised them they would be well paid by the Church for performing this escort duty. Brownpony grew more uneasy about the promise each time it was mentioned. He had not spoken of money to the Grasshopper sharf. Perhaps someone else in the Curia had made the offer, or even Papa Specklebird.

He watched the warriors gamboling on the grasslands under the September sun. A man stood up on horseback. Another stood up, and chased the first rider so closely that he had to sit down fast or fall. There was whooping laughter. One warrior could slide down his stallion's flank and crawl under his belly and up the other side. After he had done this three times, the horse began to have an erection. He crawled down a fourth time, took a look, and crawled back up. Somebody yelled a merry insult at him, and in a moment both were on the ground in a knife fight. Hultor Bråm came riding back, watched the deadly dance for a moment, then adjusted his tall leather helmet with his grandmother's crest and the badge of a war sharf..

There was a splatter of blood, not a deep cut, but it brought an order to drop the weapons. "Finish it with your hands and feet," Sharf Hultor barked, "or stop it right now. Hear me well! No killing! Not among ourselves. If you have a grudge against a comrade, save it until this war party gets back home."

"Why does he call it a war party?" Brownpony asked the man who rode beside him. "It was meant to be an honor guard."

"The Grasshopper is *always* at war," declared the rider, and spurred his horse to distance himself from this farmer and red-hat Christian.

## CHAPTER 16

The beds, moreover, are to be examined frequently by the Abbot, to see if any private property be found in them. If anyone should be found to have something that he did not receive from the Abbot, let him undergo the most severe discipline.

—*Saint Benedict's Rule*, Chapter 55

T WAS A TROOP OF FOOLS, THOUGHT THE commander of the police guard. Thirty-seven

cardinals rode horseback along with the Pope while another twenty-four bounced along in the beds of wagons dragged across the roadless grasslands by mules. Thirty Denver mounted police and thirty Wilddog warriors escorted the party, although this force would turn back when the party reached Grasshopper country and met the riders of Sharf Bråm.

When they reached the boundary, they pitched camp and waited for the warriors of the Grasshopper.

Amen Specklebird had waited more patiently than the others. The tents provided by their Wilddog escorts were comfortable enough, and the Pope insisted that the cardinals join him each day in singing Lauds, the Mass, and Vespers, and to pray the other canonical prayers in common. Most of them were accustomed to muttering the first few lines of each psalm; they called it reciting the breviary.

The camp of the itinerant Curia was surrounded by curious women and children of both Wilddog and Grasshopper families whose herds or breeding pits were located nearby, but the escorting warriors kept them at a distance to prevent thievery. Everyone was relieved, except perhaps the warriors themselves, when the Grasshopper riders appeared on the crest of the hill, not gamboling or quarreling now, but riding in a typical Grasshopper battle formation, a line of advance that surged alternately here and fell back there, making the order of battle difficult for the enemy to portray. The Wilddog scouts, outnumbered, grabbed their lances and sidearms and moved to mount their stallions, but Hultor Bråm called a halt and cried out, "Peace! In the name of the *Fujæ Go*."

The Curia watched as Cardinal Brownpony left their fierce ranks and rode forward. Amen Specklebird advanced to meet him, and raised him up when he fell to the ground to kiss the fisherman's ring.

"We have heard, Elia, that Jarad is with Christ, not yet risen."

That was a curious way of putting it, but the cardinal answered, "I knew that would be the first thing you mentioned, Holy Father. If you will excuse me from your presence, I should like to travel now to Leibowitz Abbey and join their mourning."

The old black panther seemed surprised. "I thought you would be going on south of the Nady Ann to visit your Churches in the Province."

"That too, Holy Father. But the Texark forces will be expecting me to cross the Nady Ann, not the Bay Ghost. If I come in from the west, I may not be arrested. And it should only take a day or two to pay my respects at the abbey."

"We shall excommunicate anyone who dares lay a finger on you in the Province. I'll put that in writing. You are ordered to go to Leibowitz Abbey, and then east to Jackrabbit country."

"Thank you. I wish to go on to Hannegan City afterward, Holy Father."

"Then you go as my legate. The wax on your orders will be sealed by my ring. I'll send the papers by messenger to the abbey."

"Forgive me, but that may not impress the Archbishop or his nephew."

"You do not have my permission to be a martyr, Elia."

"Do I need it?"

Amen smiled and changed the subject. "How are our friends among the Weejus and the Bear Spirit? And how was that cave of theirs? You were in it one night?"

"Breeding pit, Holy Father. To be frank, I think its reputation is highly exaggerated by myth and storytelling. It must have been a dangerous place centuries ago, but unless some ill befell Holy Madness, I believe its devil has lost her cunning." He spoke these words three weeks before an attack of nausea and lethargy came over him at Leibowitz Abbey.

When he parted from the Pope and the Curia, he went to thank Hultor Bråm for his courtesy. Bråm complained that no money was forthcoming. The cardinal merely denied any knowledge of the problem, and left it in the hands of the weary prelates of the Pope's company.

Pope Amen's last words to him were "See about Leibowitz Abbey, Elia. Tell them to elect their new abbot, and you impart to him my confirmation. Cardinal Onyo here will be a witness that I so instructed you, if there is any later question."

A quick embrace ended it. He looked back at the Grasshopper escort. The Wilddog warriors and

the Valana police gave them wide berth. The Wilddog mounted, and rode west-northwest, while the policemen lingered for a time.

Later historians were to suggest that the war which destroyed the papacy began when Amen Specklebird accepted the ninety-nine Grasshopper warriors who had been recruited by Hultor Brâm, separated from their families by Hultor Brâm, trained, drilled, and indoctrinated by Hultor Brâm, but not paid by Hultor Brâm, because the Grasshopper sharf was angry with Cardinal Brownpony, and extended his anger to Brownpony's master. After the comptroller with the Pope's party told him there was no gold with the train, the commander of the police guard explained the situation to the Pope.

The papacy in Valana had signed a contract with certain Wilddog and Grasshopper families to furnish for hire fresh horses to Church messengers at relay stations so that crossing the Plains from the Denver Republic to the marginal farmlands of the East could be accomplished in less than ten days. One enterprising Wilddog family and one Grasshopper undertook to carry mail across the Plains, competing with Church messenger service, but not with Hannegan's telegraph. These families were given certain immunities in both written and horde law. It was too early to say that a new class of Nomad entrepreneur was immediately coming into being, but certain grandmothers were accumulating an embarrassment of riches from providing services to the enemy: to civilization. Nomad society had always followed the wild, unfenced cattle, and a wealth of possessions made one's village less portable. But it was under the terms of this contract, as construed by Brâm, that payment was expected.

"Promise to pay them later" was all Pope Amen could say.

After a promise was made to Brâm, the Pope and the Curia proceeded east with these tutelary demons on horseback. Because of the weariness of old men, the journey took four days instead of two. The Pope was fond of chatting with ordinary people, and he spoke frequently to members of the Grasshopper escort along the way, whenever an opportunity arose.

"Our tribes are angry," one of them told him. "We are angry because the Wilddog has allowed Churchmen to be guests at the sacred meeting of the hordes. Not only is Cardinal Brownpony there, but so is an emissary from Archbishop Benefez. And Brownpony favors Ösle Høngan Chür over Hultor Brâm."

The Pope took note of the warrior's polite reversal of Holy Madness' name. Angry or not, he accepted the grandmothers' political will, their favoritism for the Wilddog sharf, as legitimately governing the electoral situation on the Plains. But his resentment of Brownpony was extended to Brownpony's master, the Pope, and thus wages had been requested in advance.

Amen tried to reassure him that the men would be paid, but the list of complaints was not ended.

"Furthermore, the Wilddog offered Monsignor Sanual food and shelter."

"I would have thought Benefez's man would stay with the Jackrabbit delegates," Specklebird remarked.

"Oh, yes, he wanted to. There are Christian priests among the Jackrabbit Bear Spirit delegates. The Jackrabbit delegates are in danger of seeming to be puppets of the Texark Church."

"There is only one Church, my son."

And so went the journey.

According to the Treaty of the Sacred Mare, any farmer or soldier of the Empire who entered Grasshopper territory while bearing arms could expect attack, and any armed Nomad within musket range of the Empire's frontier could be fired upon. Thus, when the Pope's party crossed the hill overlooking the frontier checkpoint, Hultor Brâm and his men halted. The warriors were still grumbling to their sharf about not being paid, but the sharf was watching the confrontation at the border crossing.

"One way or another, you'll all be paid," he insisted, "maybe sooner than you think."

As the procession of prelates approached the gate, Amen Specklebird descended from his coach and brushed the dust of the Plains from his white cassock. He approached the officer who stood with folded arms in the center of the road. Flanking him were two soldiers with double-barreled weapons, probably loaded with buckshot.

"By orders of the Hannegan, you cannot pass," the officer announced. "If you try, you will be arrested."

"Do not bar the way, my son. Bow to God's will."

"Show me God's will."

"Pick up your right foot, and look."

The officer obeyed, and reddened.

"I see my right foot's shadow," he said, ignoring the horseshit with his footprint in it.

"His will is already done," said Specklebird. "Too bad."

"Such a smartass! They call it your 'wisdom,' don't they? Forgive me, but it is a pain in the butt to me, Your, uh, Holiness. I don't think the Lord Mayor will find it a pleasure, either. Why don't you say something new, in plain Ol'zark?"

Amen grinned at him and pointed to the sun while squinting. The colonel's eyes may have flickered, but he resisted looking and said, "Nice try, old man. There are good frauds and bad frauds, I guess. You're pretty good, aren't you?"

"I never thought of it that way, my son, but my office requires it of me, doesn't it?"

"I don't know whether to spit on you or kneel to you, old fool. But make it easy for yourself and go home."

"Colonel, why trap yourself in dualism that way?"

"What are you calling dualism?"

"Spitting God or kneeling God."

"I have my orders from the Hannegan himself. Get back in your coach, turn around, and go back to Valana, or you will find yourself in Hannegan City, facing a heresy trial. Say another word, and I'll testify to everything you say here."

"Bless you, my son, and thank you."

The colonel snorted, spoke in an aside to a captain, then mounted and rode away in a huff. The captain pointed a cavalry pistol at the Pope's thin black face. Two cardinals caught the Pope's arms and a third pushed him back toward the train.

Thus was the road to New Rome closed to New Rome's bishop.

The Grasshopper warriors parted to allow them to pass, but made no move to escort them back, even when Golopez Cardinal Onyo beckoned to Bråm. Bråm frowned and shook his head. His warriors stood there watching until they became a patch of dust in the west. Warily, Amen's party (a good part of the Sacred College) turned to remake the long journey. From far behind came the faint sound of shouting and gunfire, but there was nothing the prelates could do about it, and Pope Amen was a little hard of hearing. From the patches of forest at the east, through scrub and tall grass, through open grassland, through blistering days and chilly nights in the near-desert, some of it irrigated at last, and finally to the mountains they passed. Along the way, they accepted Nomad charity, and they were intercepted at one point by a delegation from the breeding pit.

Chür Ösle Høngan had married the *Fujæ Go*. The new *Qæsach dri Vørdar*, Lord of the Three Hordes, whose wife was the Day Maiden, knelt to kiss the Pope's ring and swore allegiance to His Holiness forever, in the name of God and His Virgin.

Before they parted, Golopez Cardinal Onyo called Holy Madness aside and told him about the behavior of Sharf Hultor Bråm after they had been turned back by the border guard. "They did not return with us, and I heard gunfire and shouting. I cannot be sure, but I think there was fighting."

The Lord of the Three Hordes sat astride his stallion and gathered a slow frown. "If he did what I'm afraid he did, I'll have his head."

"The Pope knows nothing," Onyo told him.

"I'll send to find something out immediately." He grunted an order to a subordinate, then rode away with his party back toward the breeding pit. The subordinate rode east.

There was something to find out. At the border that day, the Grasshopper escort, standing half a mile distant from all events at the gate, began to move. As soon as the dust of the Pope's party had dwindled

beyond the hills, War Sharf Hultor Bråm ordered his ninety-nine elite fighters to take the road to Rome by a feat of arms. They circled south, and cut the road to Hannegan City toward which the colonel who had defied the Pope was riding homeward. He was among the first of many troops to die that day.

They turned north again. The road to Rome was swiftly taken, but only on a very temporary basis. These born-in-the-saddle man-animals cut through the Texark Light Horse, leaving other men and animals full of arrows and spear wounds on the ground. Slow firearms fell back before rapid and accurate bows. Many Grasshoppers used captured sidearms, but only as backup weapons. The Nomad horses were faster and better, and together with their fighters they became for the unseasoned troopers truly the riders of the Apocalypse, ninety-nine of them and a leader with a demonic attitude. They had not been paid, for nobody had brought the papal treasury. They cut the troopers to pieces, killed 146 farmers, raped their wives, daughters, sisters, mothers, sons, and then cut their way back to the frontier through fresh but green reinforcements—cut their way back, yes, all thirty-three of them, adrenaline-drunk, exhausted, including a leader with a brooding attitude and a bad leg. But their saddlebags bulged, and once on the Plains again, they made travois to carry some of the loot. Now they had been paid.

The foray had been just a hell of a good party for the survivors, who came back to their grateful and waiting wives, some of whose hearts and crotches quivered with anxiety and hope, with mostly overworked and limp male members! It took amatory ingenuity on a warrior's part that night to convince a wife that he came home from battle with a real lust for her sexual candy, but most pleaded combat fatigue and went to bed alone.

Being at war was more fun—no doubt about that: even with the odds at two to one you'd die before you got to rape, steal, and burn barns full of newly baled hay.

There was both celebration and mourning that night in late September in the encampment of the sharf's own mother clan. The war cries almost drowned the sound of women crying.

*"I set fires! I set fires!"*

It was the royal motto on the flag of Hultor Bråm. And no one doubted that it was a deliberate slap in the face of the new Lord of the Hordes, whose emissaries would arrive within two days. On the morning after the celebration, several new widows brought their complaints to the Grasshopper Weejus and Bear Spirit. Bråm was summoned before the council. He listened to the accusations in silence and made no defense.

The incursion to the very walls of High New Rome seemed of a devilish inspiration, because it fractured the Treaty of the Sacred Mare, and resumed a state of war between Texark and the Grasshopper. But everybody had fun except the dead, the raped, and the permanently maimed. In war, God is thus! old Tempus might have said.

Helped by telegraph, the news of Hultor Bråm's raid arrived in Valana long before the Pope did, the Pope who knew nothing of what was happening a few miles behind him, except that his Nomad escort had vanished and some shouting and shooting was heard. At home, he found himself facing accusations from Texark that he or the Secretariat of State had ordered the Nomad attack.

• • •

Subsequently in Valana the short, unhappy pontificate of Pope Amen Specklebird produced more important legislation for its duration than had the pontificate of any pope since the schism of the previous century. This was not surprising. The lack of participation by Texark's allies meant that the Curia could approach unanimous consent to proposals by the Pope's new advisers, who were led by Sorely Nauwhat, since Elia Brownpony was on the road. Sorely was in many ways Brownpony's talk-alike. In no way, however, was Amen Specklebird ruled by the Curia. He spoke of resigning, but first there would be legislation.

In a bull named *Unica ex Adam Orta Progenies*, after its opening words, the Pope again affirmed that no one of human ancestry should be regarded as less than human, and that the misborn must not be denied equal rights under the laws of the Church or of the nations. Nor were the Pope's children to be

confined by law to a special domain, such as the Valley. He specifically outlawed their use as virtual slaves in the lumbering camps of the Ol'zarks. There was nothing new in the bull, except that the Pope denounced the practice within the Church of noting family pedigrees on baptismal certificates, since the lack of such documentation was used prejudicially by many states; a stranger might be required to prove that he was not a spook trying to pass as normal. "Rulers who, for political gain, exploit the people's fear of those with hereditary defects, and who sin against them through unjust laws and by stirring up mob violence, shall be held accountable for these evils. Sentences of ipso facto excommunication passed by Our Predecessors against any who, God forbid, do violence to the so-called Pope's children, are by these presents reaffirmed." The bull ended with a punitive clause, defining penalties for the violation of its letter and spirit, and extending the penalties to include violence done under the pretense of law. The language was that of a lawyer, but the message was clearly Amen Specklebird's.

With no help from the Curia, he originated a *Motu Proprio* (strictly by the Pope's own doing) in his own spidery calligraphy, deploring a drift in the Church away from proper liturgical reverence toward the *theotokos* (Mother of God). He did not need to mention which areas of the Church's spiritual domain needed reform in this area. The bishops of patriarchal societies were given to denouncing the Mariolatry of the Northwest, which Amen Specklebird had indirectly endorsed in a speech to the conclave before (emphasis by his supporters) his elevation to the papacy lent infallibility to his ex cathedra pronouncements. The *Motu Proprio*, however, lacked the defining and punitive clauses which were expected of infallible utterances by any pope; it was hardly more than a *tut tut* to his most vocal critics, and a poetic tribute to the Mother of All.

A law governing papal resignation, an event which had hitherto occurred about once per millennium, was ordered revised by the Pope. He decreed that such a resignation must come from the man himself, not from a Pope. A man who had been Pope would rise from the throne, remove all his vestments, and declare that *sede vacante* by saying, "The Pope is no more," and walk away as if the Holy Spirit had departed from him. He would not be admired for quitting, but he would not be punished for it either, unless he tried to change his mind. Specklebird insisted on this change in the existing law, and Hilan Cardinal Bleze tried to sell the others. It did seem to put an end to an ancient argument to the effect that papal resignation was impossible.

"He's planning his own departure," said Nauwhat, but still gave his assent to the law.

Kindly Light was marked for death. He had been so marked when the Weejus told him that what he had seen in the pit was the Night Hag. He had predicted his death to Cardinal Brownpony. Within two weeks of the ordeal at the Navel of the World, he fell ill. When the Wilddog shamans came to confer with their Grasshopper counterparts, he knew what the decision would be. He offered to submit voluntarily to a sacrificial death, provided that his younger brother, Eltür Bråm (Demon Light), be made Grasshopper war sharf in his place. Otherwise, he would take his own life. The Weejus of both hordes conferred, and all the grandmothers were consulted. Eltür was a warrior of considerable renown, but he had not been a member of the raiding party, and was known to be even-tempered, unlike his surly brother. The grandmothers in turn questioned their sons and nephews as to their willingness to follow Eltür. The battle frenzy had died out in the Grasshopper camp, and even the thirty-three warriors who survived the raid understood that Hultor Bråm had committed treason against the *Qaesach dri Vørdar*. They were commanded to purge themselves by ritual fasting for seven days, but were not otherwise punished for obeying their sharf.

It was decided that Hultor Bråm would not be honored by a ritual funeral such as had been conducted for Wilddog Granduncle Brokenfoot. Because of his heavy losses in battle, most of the grandmothers were quite angry with him. One of them said, "There is a wild stallion in my pit which I am about to release."

All of them looked at her, and the manner of Hultor's dying was immediately decided.

To prevent too much inbreeding the Weejus sometimes mated their mares with wild stallions, which

men were forbidden to touch. The Weejus had her own way of stalking a wild stallion. Sometimes it took weeks, even months. A woman gradually introduced herself to a wild herd by staying far upwind. She worked her way closer, bit by bit, until the lead stallion first noticed her. Then she calmly but swiftly went away. The horses begin to tolerate her as a part of the terrain. One day a warrior of her family would bring the Weejus a jar of urine from a rutting mare of her own remuda. She smeared herself with it and approached as usual. When the lead stallion perked up and started to approach, she retreated again. This was repeated, with and without the scent, until the woman could actually walk in among the *grazing* mustangs. Eventually she would choose her animal, feed him tidbits, hang a rope on him, calm and cajole him, entice him, and lead him away to mate with her mares, and then be released. This was a way they had of keeping their own herds from too much inbreeding, but always, the wild ones were respected. When the Weejus seduced him, she did it without riding or breaking him. The only problem was that the stallion, no longer as wary of humans, might now be subject to capture by the motherless ones.

To make this stallion wild and wary again, the former war sharf of the Grasshopper Horde was sacrificed to the Owner of all wild horses, dragged to death by the released animal at the end of a long rope.

## CHAPTER 17

Before all things and above all things, care must be taken of the sick, so that they will , be served as if they were Christ in person; for He Himself said, "I was sick, and you visited me."

—*Saint Benedict's Rule*, Chapter 361

BIQUIU OLSHUEN, ALTHOUGH HIS ELECTION AS abbot after a decent period of mourning was assumed by everyone, limited his decisions to small ones and exerted no more than his usual authority as prior until such elections might take place. He therefore assigned both Blacktooth and the Yellow Guard to visitors' quarters, invited them all to participate in the usual four or five hours a day of manual labor, and told Nimmy himself to join the other monks in choir in the liturgy, but not to receive the Eucharist without specific permission from a confessor, meaning himself.

When Blacktooth told him that the alien guardsmen were not only Christian but had taken religious vows, Olshuen was perplexed. He called Levion the Reconciliator for advice, and with Blacktooth the status of the foreigners was discussed at length. Olshuen and Levion were both uncomfortable with the idea of professional killers with religious vows, and Nimmy knew really very little about their creed and practice. He did know, and reminded Olshuen, that many centuries ago the monks of Saint Leibowitz had defended the monastery by force of arms, as evidenced by the parapet walls and the rusty iron weapons in a locked basement armory, to which only Olshuen now had the key.

Blacktooth found himself distracted by Levion's garments. The monk had become a priest. Although he did not dislike the man, Blacktooth imagined that having the Reconciliator as his confessor might be one of the pangs of his own personal hell, if both of them went there. Blacktooth had not changed a lot since leaving the abbey, but one minor change that had come from serving Cardinal Brownpony and studying warrior's arts under the Axe was a reduction of his fear of people such as these. It shocked him to realize that the ability to kill was a great tranquilizer, even among people he liked and respected.

"Why don't you talk to them instead of to me?" he said to Father Levion, his old shrink.

"I tried to, Brother St. George, but I can hardly understand them. Can't you?"

Not wishing to be stuck with the role of interpreter, Nimmy shook his head. "They are learning Churchspeak, Father. It would be kind of you to help them by communicating. I'm sure you are much better at it than I."

Afterward he tried not to indulge a temptation to feel smug. The alien Christians were soon invited to join the brethren of Saint Leibowitz at prayer; the reception of the Eucharist, however, would be delayed until their understanding of this continent's form of Catholic Christianity could be tested by catechists and

confessors. Not elected abbot yet, Olshuen feared Valana's disapproval, and knew little about the character of either Amen Specklebird or the members of this yellow-skinned war band of the late Cardinal Ri.

He put Nimmy to work washing dishes and scrubbing floors in the kitchen. The errant monk was not respected by former friends, and he tried to avoid their charity. Apparently Abbot Jarad had told them little or nothing about his work for Cardinal Brownpony, and only Olshuen seemed aware of it but not much impressed. If Brother Singing Cow had told anyone that Blacktooth was one of Brownpony's conclavists when Pope Amen was elected, no one was interested. The business of the abbey was prayer and preservation of a heritage. Interest in the outside world was deliberately kept to a minimum. Nimmy was grateful that nobody sneered in his face or spoke of him loudly enough to be overheard.

• • •

Leibowitz Abbey had many visitors that season, and there were only a dozen furnished cells in the guesthouse. When Blacktooth came back from Vespers in the evening, he noticed a lamp burning in a cell which had been empty that morning. He glanced through the small door-window and froze at what he saw. Elia Cardinal Brown-pony, looking pale and drawn, was lying in bed, propped up by pillows. Blacktooth pressed his forehead against the grille, the better to stare at the ailing prelate, his once and future master.

"Is that you, Nimmy? I wondered where you were hiding. Come in, come in."

"Nobody told me you were here, m'Lord." Blacktooth fell to his knees and kissed Brownpony's ring. He felt the cardinal flinch, and resolved not to kiss his ring again.

Two days later, Önmü Kun arrived at the abbey. Nimmy thought it a weird coincidence, but then saw that the Jackrabbit outlaw was taken directly to meet the ailing cardinal without even a visit to the prior. They had talked for several hours when Nimmy brought their dinners from the kitchen. Önmü was friendly, but their conversation stopped dead when Blacktooth entered, and did not resume until he departed. The Jackrabbit smuggler was on his way from the Province to New Jerusalem again, but he stayed until Brownpony was ready to depart, and then stayed some more.

There was no doubt from the beginning that Prior Olshuen would be elected abbot, spiritual father and ruler of the Order of Saint Leibowitz, but Brownpony let him worry about the power of confirmation which had been delegated to the cardinal by the Pope and it apparently came to Olshuen's mind that restoring the cardinal's health must be a paramount concern at the abbey.

For a time, the Red Deacon was afflicted by nausea and fatigue. He had no appetite. Attempts to vomit after picking at the cook's food usually resulted in the dry heaves. He was dizzy whenever he left his bed. He was short of breath, and his heartbeat quickened when he stood. Blacktooth asked to be relieved of his floor-scrubbing duties in the kitchen in order to consult the Venerable Boedullus again, for that respected author had written of Meldown, the breeding pit, and the illnesses that sometimes resulted from exposure to radiation there. He had even recorded a recipe called summonabisch stew, thought by the ancient Plains dwellers to be helpful in its treatment.

Prior Olshuen at first refused to release Blacktooth from the kitchen, for Brother Medic wanted no assistance from the likes of him. But when Brownpony learned that the prior had assigned the most menial of chores to the errant monk, he called the prior to his sickroom and showed symptoms of bad temper. The cardinal even raised the question of his approval of Olshuen's election, if he were so persistent in Jarad's error.

"What error is that, Your Eminence?"

"Keeping your foot on Nimmy's neck, you damn fool!"

"Why, we all do manual labor, and I thought . . ." He desisted, seeing that the Red Deacon was about to explode.

Brother Blacktooth was relieved of his kitchen assignment, and placed at the cardinal's disposal.

Nimmy read Boedullus again, and consulted with Brother Medic and the cooks. The cardinal allowed himself to be placed on a strict diet formulated by these consultants. Twice a day he must eat an

apple into which iron nails had been driven and left for three days. The summonabisch recipe called for organ meats only. "Whatever the dogs won't eat," said a grouchy cook, quite incorrectly, according to the shepherds, whose dogs would eat every part of an animal but horns and hooves, if permitted to do so. The recipe called for wild onions and tiny wild peppers. The smelly wild onions grew only along riverbanks, and there were none near the abbey. The cook used onions from the garden, and although the shepherds found a few chiltepins while tending their flocks, hot peppers from the garden were deemed an acceptable substitute; the curative power was thought to reside mostly in the combination of tongue, liver, heart, brains, sweetbreads, kidneys, and tripe, all finely chopped. These were to be simmered in an iron pot with a splash of red wine or vinegar. The original recipe called for a calf, not a lamb, but none of the abbey's few milk cows had calved this year. Since about two young sheep a week were sacrificed for their organ meats, the monks were allowed, even encouraged, to eat mutton stew, although the Leibowitzian diet normally eschewed red meat. The very religious among them preferred to fast when it was served, but most novices ate it with relish (pepper and garlic relish) and in good conscience.

During the second week, the cardinal's appetite improved. "You know, Nimmy, this stew is actually quite delicious. Ask the cook what's in it, will you?"

"I doubt if you really want to know, m'Lord."

"No? And why are there holes and brown streaks in these apples? And why do they keep feeding me pumpkin seeds?"

"Iron nails in the apples. The Venerable Boedullus thought it's good for the blood. This is October and the pumpkins are ripe."

"But seeds only? Boedullus, eh? He's the one to whom you added a footnote, wasn't he? But not about pumpkin seeds."

"Apparently, I'll never live that down."

"Don't look so downcast. It's nothing to me. Tell me about your stay in New Jerusalem."

"She is dead, m'Lord."

'Ædrea? I'm very sorry to hear that. She was a bright young lady. A bundle of mischief, of course. Do you think you will recover from her?"

"I'll never forget."

"You learned something?"

"Yes."

"Then you have a choice of coming east with me, or staying here with your Order."

"I'll come, m'Lord. And thank you. This place has become an occasion of sin for me. I feel too much unjust anger here."

"Save your thanks. It's likely to be dangerous. And cold. It will be winter before we reach Hannegan City. Do you think you can induce one of Cardinal Ri's guard to come with us?"

"Induce? I don't understand. They regard you as their master, and even their owner."

"I know. That's why I won't tell them to do anything, until they get over that idea of ownership."

Nimmy had no trouble recruiting a bodyguard for the cardinal. They all wanted to come.

"We can't have that," he told them. "We'll be traveling with forged papers. Whoever comes will have to hide his weapons in a bedroll and wear a cassock."

Wooshin had told him Qum-Do was the best warrior among them, but he chose Weh-Geh, the smallest, whose skin was almost light brown. Only his eyes distinguished him from the local population.

By the time the cardinal's sealed papers and a letter from the Pope arrived, Brownpony was ready to leave the monastery and travel east to the Province and then to Hannegan City. The letter told him very little about Hultor's raid, except that it had happened and the Pope was being blamed. The cardinal penned a reply, begging the Pope not to think of abandoning the papacy until Brownpony returned from the Imperial Court. The message was posted in Sanly Bowitts, along with the abbey's mail, which was picked up by a messenger every ten days.

Then the three men, dressed as monks, left for the Province.

Soon after their departure, two more travelers arrived at Leibowitz Abbey. One was an old Jew on his way to the Mesa of Last Resort; he was leading two young nanny goats with blue heads, full udders, and swollen abdomens. Accompanying him was a young woman with bright blond hair, only a little less pregnant than the goats. The old Jew would accept no hospitality beyond a drink of water, a few biscuits, and some cold young mutton. The girl had escaped from captivity by her family, and demanded to see the father of her unborn child.

"They left two days ago. He told the cardinal you were dead," said Olshuen.

"He thinks I'm dead, but the cardinal knows better."

The abbot gritted his teeth and offered grudging hospitality, although the guesthouse was half full of alien warriors and a gunrunner; there were no separate facilities for women, and the monk she was seeking had departed.

"You can stay in a locked cell," he told her, "with a night pot. You'll be safe enough."

"Who keeps the key?"

Olshuen thought for a moment. Might she not come out and molest the men, as well as the other way around?

"Oh, well, I'll keep it myself," he said at last.

"Locked in by you?" She glanced up at three monks regarding her curiously from the top of the parapet wall. Grinning wickedly, she pulled up the front of her leather skirt to waist level. Under it she wore nothing. With her swollen abdomen and her bright blond beaver, she did a bump and grind just for a horrified abbot, dropped the skirt, turned on her heel, and marched away with a wiggling ass toward Sanly Bowitts. Someone cheered. The abbot glared up at the parapet, but the three monks had vanished. Soon a man with a mule and a wagonload of sheep manure stopped to give her a ride. Some minutes later he picked up the old Jew, and went on with the goats tied behind the tailgate.

"Blacktooth, Blacktooth," Olshuen muttered in disgust, and retired to the chapel, where he fell on his knees and tested his pulse before praying. A monk who began to pray, without first quieting heart and mind, prayed badly. He said a rapid paternoster with a rapid pulse and went back to his office.

The journey from Leibowitz Abbey to the eastern boundary of Jackrabbit territory would take nearly two months. Önmü Kun had provided the cardinal with a list of Churches whose pastors and their flocks were of mostly Nomad ancestry, and to whom Kun had sold guns. Some of them were also on the cardinal's list of correspondents with SEEC. As long as they visited only such Churches, their identity was secure. But the cardinal wanted to pass through settlements close to the telegraph line, so that he might pick up news from Valana and Hannegan City. They traveled far enough north so that the Bay Ghost River could be forded without swimming the horses, and also without passing an imperial checkpoint. Their journey thereafter was plotted on a map from Church to Church, settlement to settlement. It was grim dry land, for they traveled mostly to the north of fertile hill country.

It was at one such settlement at the old town of Yellow that Brownpony learned the extent of the offenses of War Sharf Bråm against the *Qæsach dri Vørdar*, and of the former's ritual death. He had never met Eltür Bråm (Demon Light), who was said to be Hultor's fraternal twin, younger by two hours. A Jackrabbit priest named Steps-on-Snake who knew the Grasshopper family told the cardinal that Eltür was less belligerent, less impulsive, but perhaps more cunning than his twin, whom he had worshiped. His election by the grandmothers surprised Steps-on-Snake, who said Eltür would certainly avenge his brother.

From the Grasshopper, Filpeo Harq had demanded the surrender as criminals of all warriors involved in the massacre, and the surrender too of fifty Grasshopper children to be held as hostages insuring against future raids, and the payment of half the Grasshopper's total wealth in cattle and horses. The alternative was said to be total war. But the Imperial Mayor's forces at present lacked logistics to support a dug-in infantry force on the open Plains, although Texark was working on it. Filpeo could only send out his cavalry to harass and be decimated. He would be ready to fight when he could occupy and hold territory. It was his continued occupation and holding of Grasshopper lands that left him little to

spare for enlarging his lands in the west. If Texark's fighters had lost sixty-six out of ninety-nine men in a battle, the survivors would not celebrate. "It took dirty, heathen Nomads to act thus," the priest said wryly. For the foreseeable future the war against the Grasshopper was going to be fitful and opportunistic, but cruel.

The Province south of the Nady Ann was ruled by a proconsul commanding an army of police whose obvious and age-old job was to protect the property of the rich from the greed of the Jackrabbit poor. Blacktooth thought of the guns Önmü Kun was bringing into the territory. Lest some of them fall into Texark hands, they were not the most advanced weapons in the New Jerusalem arsenal, and it seemed to him doubtful that the Jackrabbit was yet capable of revolution, although he had heard talk in Yellow of Jackrabbit bandits, motherless ones, in the hill country far to the south. "Bandit" was a Texark political term.

One fact to Filpeo's advantage was that the Lord of the Three Hordes, Holy Little Bear Madness, was pressing the new Grasshopper sharf to avoid battle. The only permissible attack was a counterattack. Whether Demon Light was more loyal to his lord, the Sharf of Sharfs, than his brother had been was an open question. News of Brām's raid had caused exultation in the Province, coupled with rage at the Grasshopper grandmothers for his ritual death.

All these things Brownpony learned from the Jackrabbit priest at Yellow, where there was an interesting crater nearly as large as Meldown, but inhabited by living things. Steps-on-Snake was in close touch with a Grasshopper Nomad who lived nearby with the family of his Jackrabbit wife. News from his own family and the horde this husband picked up from a man who lived on the Nady Ann and watched Grasshopper and Wilddog signalmen on hilltops beyond the river. The signals were whole-body movements, many rhythmic, and the movements included those of his closely reined mount; such signals were broad enough to be seen and understood at great distance. After such a broadcast, Grasshopper news took several days to reach Yellow.

And so Brownpony's host, Father Steps-on-Snake, was in touch with the Grasshopper, and also with a Texark sergeant who overheard all the official news at a nearby telegraph terminal, and apparently decided for himself as to the sensitivity of information.

"How can you trust the sergeant?" the cardinal wondered.

"His girlfriend is one of my parishioners, and she brings him to my Church every Sunday. I trust her because she likes him less than he likes her. He is too simple to dissemble. But no, I am not prepared to believe him always and every time."

"Is there any way you can get a message to the Pope in Valana?"

"No," said Steps-on-Snake, but hesitated. "It would be a dangerous thing to try."

"I need to try dangerous things."

"It would put a parishioner in danger."

"The girl?"

"Yes, and the corporal, and myself."

"But you know a way?"

"She sent a message once to a relative in the west by coding it and getting the boyfriend to inject it anonymously into the stream of traffic."

"And she could do it again?"

"Don't press me about it tonight," Father Steps-on-Snake answered crossly. "I'll see what can be done."

"The Pope must be persuaded not to resign."

"And a message from Your Eminence would persuade him?"

"I can't promise it."

"Neither can I, but I'll talk to her."

In three days, the message was sent. Although it said only, "Do nothing until I see Filpeo Harq," this tiny nugget was concealed somehow in a few hundred words of schoolgirl correspondence, and Brownpony had no idea how the addressee was identified or what the method of delivery would be.

"All I can say is that it's better than not trying" was all he could say.

He was reluctant to hurry away from the town of Yellow, because this was as close as their journey would take them to the Nady Ann River, across which came news of events on the Plains to the north. Father Steps-on-Snake was a man knowledgeable about the ongoing interaction between civilization and the Nomadic societies of the great grasslands. He had been born during the conquest, and remembered when his father had gone to join rebels in the hill country to the south. When his father was killed, he, like Brownpony more than a generation later, found himself in the custody of nuns for schooling. Later, as a young man, he had gone north with a Wilddog friend, but he lacked the talents of warrior and herdsman, and thus found no family willing to adopt him. He considered joining a band of the motherless ones, but the nuns had given him a sense of sin, so he returned to the Province and became a priest.

Now he was delighted to accept Cardinal Brownpony as his spiritual leader instead of Cardinal Benefez, and his sense of sin did not object to allowing his parishioners to acquire forbidden firearms from Önmü Kun. He even promised to encourage the development of a secret local militia among those he knew to be loyal both to the Church and to a Nomad heritage.

Probably he knew little more about Nomad culture than did Blacktooth and Brownpony, but he was seventy-five years old and saw things from a different viewpoint, which seemed global and almost detached from the passion of his Jackrabbit loyalty.

Father Steps-on-Snake had the most comprehensive view of the Nomad situation any of his three guests had ever heard. Much of it they already knew, in fragments. But the septuagenarian pastor put the fragments together in a larger picture. He was very disturbed by the raid of Hultor Bråm, and not just for the moral reasons of a priest.

The dead sharf was not stupid. He had believed in his own imminent death, for the Weejus had prophesied it to him after his ordeal in the pit. His raid, according to this Jackrabbit priest, was a message to none other than Cardinal Brownpony himself, right here in this rectory, to Brownpony whom Bråm had recognized as the significant figure of power in the Church at Valana.

The cardinal shook his head in apparent discomfort with the idea, but Nimmy noticed he made no denial. "The Grasshopper is always at war," he murmured instead.

"What do you mean by that?"

"It's just something one of his warriors said to me when we rode south from Meldown to meet the Pope."

Steps-on-Snake insisted that Bråm took the war party all the way to the gates of Rome to show the cardinal (and, of course, the Pope) that the brunt of any war would be borne by the Grasshopper, not the Wilddog, and that the Valana papacy was wasting its energy in courting Chür Ösle Høngan. The "success" of the raid was also a demonstration to Filpeo Harq that his opening to the west was more apparent than real, given certain advantages possessed by the Grasshopper. As he listened to this provincial Jackrabbit father, Blacktooth began to admire the late Grasshopper sharf for his bravery and steadfastness of purpose, in spite of his murderous bent. Again, Nimmy wondered if Bråm might be his remote relative.

Steps-on-Snake summarized the military, cultural, and historical situation as he saw it:

One advantage which the Nomad warrior had over the Texark cavalryman was that, as everyone knew, the warrior had grown up on horseback. It is commonplace that a tribe with no previous experience of horses, upon first seeing mounted warriors of an alien nation, see the horse and rider together as a single strange animal. Then they learn to see the phenomenon as two. But if the warriors of the alien nation happened to be Plains Nomads, the first impression would be the correct one. The Nomad horse and the Nomad rider together are one. When at work or at war, a mounted man is not called by his own name, but by the name of his horse, and on formal occasions by the name of his horse and the name of his horse's breeder, often the man's wife's mother. The man was, after all, only the controller of the horse, in war or at work with cattle.

Among the things one first noticed about a Nomad encampment, temporary or permanent, was that there were more females to be seen than males, unless one happened to come on a feast day when most

of the warrior herdsmen returned from the open plains, where they usually lived with the half-wild cattle. When the herdsmen came home, they appeared almost as wild strangers in their own camp or village, where the old men, young boys, the maimed or disabled lived and sometimes worked with the women. At least the boys worked. Older boys became horse wranglers. Younger boys tended the remuda and tried to ride the partly broken horses. The old men tended to feel that their deeds of past glory entitled them to nonproductive retirement in comfort while the boys and women cooked, cleaned, carried water, mended, made clay pots, and tended the horses. Occasionally, a Weeju woman would use her supernatural powers to induce a retired old warrior to work, as long as the task was not demeaning, but the veterans were a lazy lot, usually protected in their retirement by multiple affiliations to the Bear Spirit. Sometimes they redeemed themselves by offering bursts of healing wisdom when the young men were split in angry controversy.

The average herdsmen-warrior north of the Nady Ann was still illiterate, and spoke only the dialect of his horde, but his mother was Weeju, or his grandmother, and was probably learning to read herself, and might even be teaching his younger brothers and sisters. Although lacking in letters or a second language, the average Nomad now imagined in his mind a much larger world than his great-granduncle had imagined. He knew that the Earth did not drop off beyond the mountains, and that there were people who lived beyond the Great River to the east, and that they were just as dangerous and despicable as the human herbivores that lived on this side of the river. He even suspected that the great breeding pit of the Wild Horse Woman was not really the Navel of the World at all, and that his own grandmother's breeding pit, if she had one, was not necessarily lethal to a male human who dared enter it, although staying out of it was probably better for one's luck. He was not quite as much a Nomadic purist as his oldest uncles. He used the tools of citizens, wore citizen's cloth, drank citizen's liquor, and often ate the citizen's beans and corn if he didn't have to grow his own, as Steps-on-Snake remarked with a chuckle.

The Earth was made for growing grass, for cattle and deer and antelope and rabbits and prairie dogs and horses to live on, in turn to be lived on by men and wilddogs and several kinds of cats and buzzards. The animal hierarchy of the Plains was ruled by three overlords in a predatory partnership: men, horses, and dogs. Also by their women, mares, and bitches. Things were much simpler on the Plains than in the country of the growers of corn and beans. One might feel sorrow for farmers, as one felt sorrow for one's own prey, for the Nomad could see that the farmers were actually the prey of other men: soldiers, police, priests, and tax collectors. They were bound to one piece of land, while the Nomad owned the whole world beneath Empty Sky. That indeed was one of the Nomad's ancient names for himself: the Nephew of the Empty Sky. Empty Sky, of course, was a person, but also he was just-look-up-at-it: empty sky. Nowhere but on the Plains from the back of a horse can a man see the Earth's vastness, unless it be from the masthead of an ocean schooner, but the Nomad was not sure he believed in oceans. He knew things came in opposites, so where he was surrounded by a semi-arid ocean of grass, to imagine an ocean of water was just a natural thought. But not all natural thoughts were real. Since his defeat of his great uncles by the second Hannegan's soldiers and the Hannegan's diseased cattle, this new Nomad had become a skeptic. He did not believe everything his uncles or his Weeju woman told him, unless he was getting ready to be a Bear Spirit man. But the average Nomad did not become a Bear Spirit man, and was skeptical of their powers. Among the Wilddog Horde, it was not a rare occurrence for a sick Nomad to visit a mountain town to find a doctor of a different tradition, especially for surgery. Usually the sick ones were young, but sometimes a half-willing older patient would be dragged to a mountain doctor by her younger kin. More than a few Bear Spirit men had worked for a time in the hospitals of the Church or the Empire, learning as much as they could of this different kind of healing. They learned to wash their hands. They learned which drugs to steal for use at home.

Then there were the myths of origin, of the birth of this grassy Earth and its true People, out of an ancient cataclysm.

During the primordial time of the great death, there was fire and ice. A few animals and a few men arose out of that terrible death. Then, after that primordial time, came the Old Time. In the Old Time, there arose a conspiracy among man, dog, and horse to rule the furry, ungoverned cattle that ranged freely on the Plains, that holy country of Empty Sky and the Sacred Mare. The alliance, the

Man-Horse-Dog-Thing, controlled the furry herd to the herd's advantage, usually against the herd's will, driving them to where men knew the grass grew greener. The cattle got something from their predators in return for their flesh and hide and bone; they got Man-Horse-Dog's protection against wolves and large cats, but they remained Man-Horse-Dog's freely running prey, shot down from horseback, and the horses were superior horses.

"Today, the herds of cattle often no longer run," said Steps-on-Snake. All around the fringes of the Plains, fences were going up. These were attempts by some tribes to stay in one place year-round, building permanent houses, culling their herds (now flocks, even) in the fall, first picking out the breeding stock, then slaughtering whatever animals could be used, eaten now or preserved for winter, and finally selling the rest or trading with the farmers for grain. To the true People's ultimate disgust, some of them even raised hogs.

The hordes at first considered these fence-line Nomads as outcasts, as despicable as ex-Nomads who farmed as Blacktooth's family did, except that Blacktooth's kin farmed another man's land. But the old women of the High Plains, these gaunt old grandmothers with leather fists, grinning eyes, and Weeju powers, they took up the cause of the fringe-area people, and they besieged the ears of husband, brother, son, and father with warnings about the Night Hag, who called to her dark bosom those chiefs who wronged their own realms or hurt the beings that lived therein. Not only that, but if these settled herdsmen were alienated by the roving herdsmen, they could only become allies of the farmers and of Texark.

When people began seeing the Hag, the nervous chieftains began to agree that Nomads who settled down behind fences should not be pillaged and killed, but wooed back to the common life of the horde if possible. This tolerance was reserved for haciendas adjacent to existing fences, however. There were a few families on the Plains who had dared to fence off choice areas for themselves, far from any other fences. To these the leaders of the hordes sent warriors to tear the fence down. They forced such people to choose between returning to the common life or leaving the common land. Those foolish enough to stay were killed by outlaws, who could be counted on to save the tribes the trouble and the blood-guilt. The hordes of course joined with the Church in condemning these murderous motherless ones. Things had changed since the time of Høngan Ös, when Hannegan II had spread cattle plague as a weapon of war by driving his infected herds among those of the hordes.

The future was revealed to the tribal seers. It was foreseeable that the open Plains would shrink, and the people and the cattle on it would either perish or change. They had been changing continuously through three generations since the Conquest, and what characterized the present population was youth. The prolific grandmothers and mothers had doubled the population in a very short time. Every Nomad warrior believed that his women's ability to produce babies fast, running even to twins and triplets, rose and fell according to the nation's need. For whatever reason, the Great Plains were shrinking, while their population had been growing fast of late. Was this not the chief cause of war? It usually happened when men settled down in one place with their women and had a lot of sex and babies, too many children to fit into the local scheme of things. Teenage gangs become the first warriors in this process, and because they start trouble with other neighborhoods, it is necessary to put the gangs under the chief's command and give them violent things to do against people who are not enjoying the chief's favor. War is caused by agriculture, in the Nomad opinion. It was, after all, a herdsman killed by a farmer when Cain slew Abel, so Christians said.

The tribes were restless, anxious, angry. They all had compromised; even the wildest among them used the tools and the weapons that were manufactured in the towns and cities to the east and in the mountains. They brought their beef, hides, artwork, wolfskins, bear grease, and surplus ponies to a trading post, and then rode back to Grandmotherland leading a pack mule loaded with tools, gunpowder, musket balls, fabric, beans, and enough distilled spirits for at least the elders to get sloshed. They sang the old songs and danced the old rituals, honored the Wild People, and moved their dwellings and their herds according to the season. Each horde owned a sacred path, and sacred places along it to pitch camp for a season. They navigated the grasslands by the doings in the night sky as much as by landmarks. The sky told them when to move south. It was the middle of the thirty-third century, and Polaris traced a larger

circle in the north sky than it did in the time of Leibowitz, but the hordes called themselves the people of the Polestar when they wandered. When they camped in summer, they were the people of Empty Sky and the Day Maiden. When they huddled down for winter, they were sons of the Wolf and the Hag.

Blacktooth knew much about the tradition, even though he had never lived it. But things were changing. He could see the change now; he had missed it as a boy. Power on the Plains among the warrior herdsmen was out of control, and the old women worried about it. Some leaders were chosen by men without due process of consultation with the grandmothers, the Weejus women, and the Bear Spirit men. War threatened the horses and the sacred bloodlines, and it killed grandsons. The women were usually against any war, except when necessary to curb intertribal horse theft.

When Empty Sky was dying in the presence of his Seventeen Crazy Warriors, he promised them he would come back from the dead in their time of need if each and all seventeen of them would in time of need utter his magic name of seventeen syllables. Empty Sky as part of his last will and testament taught the name to these warrior-Priests who had served him best in battle, leaving to each man a different secret syllable which could be spoken only once—to speak it twice permanently paralyzed the tongue. A dying man could leave his syllable only to his eldest son, or if the son were unfit, to another chosen by the Bear Spirit shamans. Empty Sky promised to come whenever they spoke his name correctly, but to pronounce the name each man would have to utter his syllable in correct order.

What was the correct order?

They had been crowded around his couch at the time, and while most of them agreed as to who owned the first and last syllables, nobody had been counting the ones between; for example, there was a spearman who said Empty Sky had spoken in the ears of at least ten men before him, but not more than twelve. Inevitably, a skeptic who inherited his syllable from his father spoke it aloud, tried to speak it again, and was immediately struck dumb. Others heard him speak the syllable, but now doubt arose. Would it be effective if spoken in the correct order by a man other than its original custodian? And if a man spoke his own syllable, would he be able to repeat the orphan syllable as well, or would dumbness grasp his throat? But one day, about a century ago, they all got together, all except the speechless skeptic, and decided to try to call Empty Sky, because times were getting bad for the people.

When they spoke the syllables, nothing dramatic happened. They deemed it a failure, until they heard the cry of a newborn baby from the adjacent tent. The baby was the son of a mother of the royal tribe, and she was prevailed upon to name him Empty Sky, although at the time of his rite of passage to manhood, he was given the name of Høngan Ös, Mad Bear, who grew up to become the *Qæsach dri Vørdar* who led the hordes into horrible disaster. Obviously, the holy name had been misspoken.

They were fascinated by Step-on-Snake's storytelling. Nevertheless, it was necessary to go on, and to cross one branch of the Red River to the southeast, then make haste toward Hannegan City.

On the edge of town, following such a heading, they stopped at the rim of Yellow's crater. There was a small lake in the center, and the ground around it was fertile and green. Two wild horses were grazing, and somebody was fishing in the lake.

"I'm told," said Brownpony, "that this was a Jackrabbit breeding pit before the conquest."

"Is it like Meldown?" Blacktooth asked.

"No, it is not like the breeding pit of the Wild Horse Woman."

"I see there is a stone marker ahead. The place has a name."

"What is it called?"

"Lake Blessdassurance," Blacktooth read, and looked up at Brownpony, who was staring at the other side of the marker.

"Does it say something on the back side, m'Lord?"

"It says, 'Boedullus was here.' "

"Wh-a-at?" Nimmy took a look. "Paint! Recent paint. It's a joke. It has to be. Or else—" He paused. "Did you know, m'Lord, the Venerable Boedullus died in an explosion at an archaeological site he was investigating? There's a legend about a lake with a giant catfish named Bodolos that later came to

live in the crater where the bomb went off."

"So it's a joke with a theory behind it. It has to be a Leibowitzian joke. Who outside your Order knows about the Venerable Boedullus?"

"Almost nobody, m'Lord, unless Nomads have been reading my translations."

"It seems to be signed with initials: BRT. I'd hate to lose time by going back to ask Father Steps-on-Snake about it."

"Let's ask that Jackrabbit farmer instead," Nimmy suggested, watching a man riding a mule toward them down the road.

The farmer laughed heartily. "My great-granduncle caught that old Bodolos nearly a century ago. He fed the whole village with it. Whoever painted the sign on the back last month couldn't spell. He was wearing the same robes as you, though."

Brownpony and Blacktooth exchanged glances. Nobody at the abbey had told them of a monk of the Order who had recently departed for the Province.

"Well, at least one Jackrabbit farmer learned to read," Brownpony later observed.

"There was a small Church school at Yellow, you know."

"I'm sure there are many Nomads in the Province who can read a book but cannot ride a horse, especially in battle."

"How fast can they learn to march and shoot?" asked the usually silent Weh-Geh.

The question was considered by the monk and the prelate, but not answered.

They crossed the Red River and headed east across the grasslands. In all, they stopped at twenty-three Churches, and secured the loyalty of seventeen Jackrabbit pastors, but many nights they slept in farmers' barns or found natural shelter along creekbeds. Twice they rented rooms from Texark landlords, but there were too many prying questions. The cardinal disliked lying and decided against doing it again, although it became a very cold winter during their trip; freezing rain did not usually come until January in these parts. The cardinal was still not quite well. He began to believe the Weejus' promise that he would have a shorter lifetime as a result of the ordeal. Blacktooth fed him a lot of apples into which nails had been pressed, but he seemed to be losing some of his graying red hair as well as his energy. Such was the curse of Meldown.

## CHAPTER 18

The fourth kind of monks are those called Gyrovagues. These spend their whole lives tramping from province to province, staying as guests in different monasteries for three or four days at a time. ... Of the miserable conduct of such men it is better to be silent than to speak.

—*Saint Benedict's Rule*, Chapter 1

HEY REACHED THE OUTSKIRTS OF HANNEGAN City by early evening, and the cardinal decided to rent rooms and spend the night at an inn outside the city limits. There was the possibility of learning recent news from the innkeeper or fellow travelers; there was the inevitability of reading the government bulletin boards to learn of the response of the bureaucrats to the same recent news. There was a need to change from a monk's habit to red and black. Weh-Geh would need new clothes altogether, and could again wear his weapons as the cardinal's bodyguard. All Blacktooth needed was a bath and a change of habit. They had grown beards during the journey, but only Weh-Geh decided to shave. His whiskers were rather thin and added an alien touch to his appearance. Brownpony's beard was redder than his thinning hair. Blacktooth had more gray on his chin than on his pate, which badly needed reshaving. Weh-Geh barbered Nimmy's tonsure with a short sword, grasping the blade with both hands and drawing it smoothly under the soapy hair. Blacktooth complained that the swordsman was leaning on him too hard.

"Only to hold you still. If you prefer, I could shave you just as easily standing back here," Weh-Geh

said to the lathered monk. Blacktooth looked at him with affected fright. The guardsman held the sword drawn back past his right shoulder, as if to deliver a roundhouse cut to the scalp's long stubble.

"Stop boasting. Lean on me if you need to." He was surprised, because it was the first time Weh-Geh made a joke, a sinister joke besides, and one of the few times he spoke at all. In Jackrabbit country, only once did a need arise to draw his long sword and Brownpony's pistol, when a group of young bullies had decided to pick on three itinerant mendicant monks for fun. Both Nimmy and the cardinal missed Wooshin. Blacktooth wondered if they had, without meaning to, resented Weh-Geh as a poor substitute for the Axe, on whose head there was a price in this realm. But Weh-Geh had no wish to be a substitute for anyone. Nimmy resolved to befriend him, if there was still time.

By midafternoon of a cold and sunny day, they were standing on the steps of the Cathedral of Holy Michael, the Angel of Battle, talking to its Cardinal Archbishop. At the Archbishop's left and rear stood an attractive young acolyte wearing a long surplice with lacework and crocheted borders. Torrildo smiled happily at Blacktooth on first seeing him, but then misinterpreted Nimmy's expression and cast his eyes on the ground. The monk was less shocked that Benefex had hired the pretty fugitive than surprised by a sudden realization that the letters BRT beneath the painted "Boedullus was here" legend at Yellow's crater lake stood for "Br. Torrildo," who had been traveling from Valana to Hannegan City.

Weh-Geh seemed ill-at-ease, for Benefez kept glancing at him, until finally the cardinal asked, "Young man, where have I seen you before?"

Brownpony answered for him, "In Valana, Urion. Weh-Geh was in Cardinal Ri's employ. Now he is in mine."

"Ah, yes, there were five or six of them, weren't there? Where are the others?"

Brownpony shook his head and shrugged. "I've been on the road for two months." The evasion was almost a lie, Blacktooth noticed.

"Of course," Benefez said, then returned to their previous conversation: "Elia, mmm, Your Eminence, of canon law, I too have been a scholar. Before the Flame Deluge there had been only two papal resignations. One Pope, so-called, was a great sinner, one was a great saint. The former sold the papacy, the latter fled from it in holy terror. But the question arises whether either of these men was a legitimate pope. So can a real pope resign? I think not. If he resigns, he was never elected by the Holy Ghost in the first place. This may be against the majority opinion, but it is my opinion. A poet of his own time put him in Hell, but that poet was a bitter man. I think the old fellow was really hallowed, but I doubt the legitimacy of his election in the first place. If he were Pope, he would not and could not resign, and would not be talking about resignation."

"Are we talking about San Pietro of Mount Murrone, or Pope Amen Specklebird?" Brownpony asked.

"Aren't they two of a kind?"

"No, Urion, they are not." He hesitated. "Well, how can I say? Amen Specklebird I have known. I know San Pietro only from a book at Leibowitz Abbey. The writer thought he was a saintly clown."

"Doesn't this describe Amen Specklebird? In a charitable way?"

Brownpony paused. He seemed to be leaving himself open on all sides. Blacktooth tried to remember Wooshin's word for it. *Happu biraki*, he thought. In a fight, it was usually a deadly invitation to be foolhardy.

Brownpony closed in. "If so, then this saintly clown, Pope Amen, His Holiness, is disposed to absolve you, Urion, of any penalty of excommunication you may have incurred, *crimine ipso laesae majestatis facto*, or any other act of rebellion you may have committed in thought, word, or deed. I am here to announce this."

Blacktooth noticed that the purple in the face of Benefez was not merely reflected light from his purple vestments (it had been a day for burying the dead). He did not sputter, however, but purred, "How utterly wonderful of him, Elia. From so generous a man, I'll bet the penance I have to do is only kiss his ring."

"I doubt he would allow you to do that, Urion. He is an honest man. There are no conditions, and no penance unless I choose to impose one."

"You?"

"The Pope sent a plenipotentiary in this case. Me."

"You!"

"And I unbind you, Urion, without condition, *in nomine Patris Filiique Spiritusque Sancti*."

Blacktooth saw the Archbishop's right hand twitch toward mirroring the sign of the cross Brownpony made over him, but it was only the twitch of habit.

"Your credentials are as good as your Latin, Elia. Go home and stop being my gadfly."

"I am also empowered to offer you control over those Churches in the Province where the parishioners are mostly settlers or soldiers whose native tongue is Ol'zark."

"Oh, I see. It's not a matter of geography, then."

"Geography is boundaries and fences. These don't mean much to a Nomad."

"Yes, we had a recent demonstration of that just west of New Rome. Human life doesn't mean much to them either, and they eat men's flesh."

"Only men they honor. It is a funeral rite, or a tribute to a brave dead enemy."

"You defend this evil thing!"

"No, I merely describe it."

Someone was yelling "Make way! Make way!" in the distance, and Cardinal Benefez looked up the street.

"Apparently my nephew is coming down the road," he said to Brownpony. "Do you want to step inside?"

"You mean do I want to hide? No, Urion, thank you. I must see him in order to deliver this." He showed Benefez the sealed papers which he had received at the abbey from Valana. "I must go to the palace to request an audience, unless he sees us and stops."

The Emperor was in a hurry as usual, and ordered his driver to wield the whip. He waved in a friendly way to his subjects in the streets who bowed or curtsied as the royal coach hurried on, preceded by two mounted guards whose costumes were more elegant than that of their ruler. Filpeo wanted to be seen as a man of frugal habits, generous to his subjects, and devoted to the economic interests of the Empire. He sought to distance himself in public from the ferocity of some of his predecessors, and had shortened the list of crimes for which the penalty was death. His own ferocity was carefully contained. He had secretly, on several occasions, insisted on administering the supreme penalty himself, but few men knew about this. One who had known it was named Wooshin, and it was the Hannegan's personal fascination with death by the art of the headsman which had, in fact, cost him his best executioner. The fellow had been repelled by his own art when practiced by his master. And Harq had let him get away! It was one of his few mistakes in judging men.

Filpeo Harq was a Hannegan only on his mother's side, and some considered this inheritance of the throne through the motherline supremely ironic, given the masculine, patrilineal, and certainly patriarchal cast of the Texark civilization, which in its origins was a reaction to the matriline culture of the Plains. The original Hannegan (or Høngan with a Jackrabbit pronunciation), the conqueror of the city, had been leader of a band of Nomad "outlaws," and his acquisition of the mayoralty of the small town and trading post called Texark had been by conquest. The term "outlaws" was a farmer's word; Nomads, who despised them but feared them less, called them "motherless ones," a term which was applied to those wanderers of the Prairie who either evaded family ties because of hostility, or found themselves unwanted by any woman of the horde, and these men formed homosexual (not necessarily in the erotic sense) war bands, taking their women by violence when they felt the urge and saw the chance, and keeping them, if at all, as servants.

From the point of view of the *civis*, every *nomas* was an outlaw, but in the Nomad view, the motherless ones had deviated so far from the Nomad cultural norm that they were loathed by the people of the Plains more than they were by the farmers along the eastern fringe whom they sometimes plundered. As is usually the case, a completely alien enemy is less to be despised than a deviant brother. The motherless ones who originally conquered Texark had been driven there by the right-thinking

orthodox Nomads of the several hordes. It was an infusion of fresh blood and new ideas for the sleepy trading community and the surrounding farmers, and Texark began to grow and to be fortified. It was located in a place where, exposed on both flanks, in order to grow at all it was forced to conquer or perish. However, after five generations the mutation of barbarian outlaw into civilized aristocrat was nearly complete, and Filpeo was a popular ruler except in the conquered territories.

The town of Texark itself, or Texarkana improperly so-called in the Latin of the Church, was not located at the site (now lost) of the ancient city of that name. Now called Hannegan City, it did lie on the Red River, and it grew up at the vague boundary between forest and plain, where it was originally a minor center of commerce between the two areas, the sown and the treeless wild. The relatively peaceful Jack-rabbit people had come here to trade surplus cattle, horses, and hides for wood, metal, spirits, medicinal herbs, products of the blacksmith's art, and whatever trinkets the merchants could show that caught the Nomad fancy. Among the merchants, however, there were a few panderers who took advantage of the sexual hungers of the motherless ones, and actually sold them brides, or rented them for a while. That was the beginning of it. When the price of brides went up, the bandits killed the merchants, took what they wanted, and settled down, but they themselves, not their captive wives, kept and managed the horses—and every other kind of property. In one generation, a way of life was turned on its head.

Filpeo Harq himself was a student of this local and family history, which was not so well known to the residents of his realm. He had taken a personal interest in the writings of historians at the collegium, now a thriving university, and he who wanted tenure and royal favor wrote to please the monarch. He who wrote otherwise was rarely published, and failed to thrive. To put it mildly.

In passing his uncle's Church, the Monarch suddenly signaled his driver to go slow. He pointed at a group of clergy, including his uncle Urion, standing on the steps in the morning sun. Cardinal Benefez seemed to be arguing warmly with another man in a red zucchetto whose back was toward the coach.

"Who is that man?" Filpeo asked sharply.

"Which one, Your Imperial Honor?"

The cardinal with his back toward the coach suddenly looked over his shoulder. The Mayor's head disappeared inside the window and he knocked for the driver to hurry on. Beside the second cardinal stood one man in the robes of the Albertian Order of Leibowitz, and another man-at-arms who was probably a bodyguard. He thought he knew who one of them might be. The armed man was too alien in appearance to be the cardinal's secretary. And Uncle Urion appeared to have acquired another pretty young man as acolyte.

"Drive on, drive on."

The manufacturer's representative had already arrived at the War College when the imperial coach discharged its royal passenger and his courtiers, but he and the officers in charge were not yet ready for the demonstration. Irritated by the delay, but determined to make use of every idle moment, Filpeo called an immediate meeting of staff to discuss long-term strategy on the Plains. It was disquieting to the officers to be quizzed by the Monarch on such an impromptu basis with no preparation, and Filpeo always enjoyed putting them in such a situation. He learned a lot from the practice, and it helped him weed out the fools. The commanders of Infantry and Corps of Engineers were out of the city on maneuvers, however, and their seconds were summarily yanked out of their offices and hauled to the conference room.

Admiral eFondolai was there in person, and so was General Goldæm, Chief of Staff, and Major General Alvasson of the Cavalry.

Infantry and Engineers were represented by Colonels Holofot and Blindermen. Not as a joke, but in a joking manner, Filpeo Harq himself collared Colonel Pottscar, S.I., in the corridor while the Ignatzian Chief Chaplain was returning from Mass and pulled him along to the meeting. "Someone may need your services here, Father," said the Monarch to the astonished Pottscar. "It may even be me. Did you know that Cardinal Brownpony and probably his troublesome monk-secretary are in town."

Colonel Father Pottscar nodded. "I just heard about it as I left the Church. By now, he must have

requested an audience with Your Honor, no?"

"No! Not that I have been told about."

"I'm sure he will, but naturally he would see the Archbishop first."

"By God, I should have him arrested. If Urion knew he was coming, he would have told me. What the hell is going on?"

"I would guess, Your Honor, that he has come to plead the cause of the man he calls Pope."

"Hah! The man who sent the Grasshopper Horde to smash its way to New Rome! By God, they killed two-thirds of the Nomads, and we chased that bastard Curia back to Valana with their Specklebird, all right. But they left a lot of dead men and raped women and burned buildings. There hasn't been an atrocity like that before the second Hannegan's conquest. And now we've got trouble with the Grasshopper all along the frontier, mainly because of him!"

"Who, Brownpony? Sire, you have been misinformed. He was not even with the Curia, so-called, at that time. He was with Monsi-gnor Sanual at the Nomad election. Sanual told me that. He was quite shocked by Brownpony. Says the man is a pagan. But although he rode south with the Grasshopper to meet the Pope, he did not join the others but continued south. Your Honor, according to one of my chaplains in the area of conflict, the, uh, pretender Pope turned back with his whole retinue when the guards refused to let them cross the border. This priest says the Nomad escort attacked only after they were separated from the Valanan cardinals. It's not at all clear that they were acting under Valana's instruction. I know the Archbishop had received a message from this crazy Specklebird. It probably told him Brownpony was coming."

"I wonder that the guards let him cross the border!"

"I doubt that he came through the skirmishing zone, Sire. He probably crossed from the Province."

"By way of Leibowitz Abbey, I dare say, for he was with a monk of theirs. Right now, I want you to send one of your chaplains to bring Brownpony to me. Let a military policeman go with him. Let them not take no for an answer. Bring that monk along too."

Colonel Father Pottscar hurried away. The Hannegan glanced curiously at Admiral e'Fondolai and asked, "I don't remember calling you here. Do we need the Navy to fight Nomads on the Plains? Not that you aren't welcome—"

"I asked him to come," explained General Goldæm. "Brownpony inherited six alien warriors from a cardinal who died in conclave, and Carpy here knows something about their race and nation. We might need to know."

The admiral frowned. Carpios Robbery had been e'Fondolai's nom de guerre in his pirate days, when he had become the second man since antiquity to circumnavigate the globe, but he hated to be called "Carpy," especially in the presence of his Hannegan.

They entered the conference room. First, the Emperor asked about the status of the forces protecting new farming lands, and any further encounters with the Grasshopper people. Told they had drawn back defensively, Filpeo ordered there be no punitive raids by Texark forces until he so commanded. He then stated, "If I were a Grasshopper war sharf, I would make an alliance with the Wilddog to strike the Province. I would cut the telegraph line in several places. The Wilddog will cut the Province in half, while Grasshopper strikes toward Texark. What is your response?"

Colonel Father Pottscar entered the room and nodded to Filpeo.

Colonel Holofot spoke. "They can destroy, but they cannot hold. Such an invasion can be no more than a massive cavalry raid. Our forts would remain secure. They might massacre the Jackrabbit settlers and the colonists, but they would quickly exhaust themselves and be driven back, as in the Grasshopper raid."

General Goldæm looked levelly at his ruler and shook his head. "Your scenario is improbable, Sire. When they began establishing winter quarters after the war, they became vulnerable. If they attacked the south, they know our cavalry would strike in the north at their family settlements, which would not be well defended. When the hordes were entirely mobile, they could retreat forever. They could lead pursuers to exhaustion. Now they have fixed property. It's vulnerable. They have no infantry to take or hold ground."

"Suppose the Jackrabbit revolted and joined the invaders?"

"We have kept them disarmed," said the engineer, Colonel Holofot. "What will they fight with, pitchforks?"

"No, but if they could provide the invaders with food, water, shelter, and places to hide," said the general. "The question is: would they? The Jackrabbit has bitter memories of the Northerners, for the wild hordes were contemptuous of the Jacks. Frankly, to me it seems a tossup whether they hate us more, or the Northerners. But even with Jackrabbit support, Colonel Holofot is right. A mass cavalry attack would exhaust itself in the south, and the northern underbelly would be exposed. They would be more likely to strike the farmlands north of the Valley, uh, north of the Watchitah Nation, and that is what we are not well prepared for yet. But we are preparing fast, and the whole border will be fortified in two years. The surviving farmers there are well armed now, and since the raid, they have a lot of hate for Nomads. We have the troops to back them up, but not to attack prematurely, because we have the same problem in the north as they in the south."

"And that is?"

"We can attack and kill, but we don't have the men or the logistics to occupy Grasshopper territory. Unless, of course, we weaken our forces in the Province."

Filpeo became thoughtful. "I wonder," he said, "why is it that these farms on the eastern fringe, which get more rain, are not as productive as the refugee lands at the foot of the Rockies, where the land is said to be nearly a desert?"

There was a brief silence. The Hannegan's remarks seemed almost idle, having nothing to do with the Nomad as a military problem.

"Sire, that question is outside my field," said the commanding general. "But it may have something to do with discipline. As you know, ours are free peasants, and they work mostly for themselves. When you say 'productive,' you mean it in terms of commercial crops. The ex-Nomads are sharecroppers, working for landowners, especially the Bishop of Denver. They are forced to work, and they grow only a few crops."

"I think that is not an explanation," said Father Colonel Pottscar. "And it's not quite true. The ex-Nomads learned from the mountaineers, who have been dry-farming for centuries. And as for the rainfall—there is a monastery in the hills north of Valana where the monks keep records of events in the heavens, waiting for the coming of the Lord. One of the things they keep track of is rain, because they pray for the weather. They say the rainfall on the western side of the mountains is now nearly twice what it was eight hundred years ago. That, and that alone, is your miracle of the ex-Nomad farms. Of course, the monks think it's their miracle, answering eight centuries of prayer. But the runoff for irrigation is better than in ancient times, miracle or no."

"Well, doesn't the increase apply to the whole Plains?" asked the Monarch.

"Their records are local. I can't say. Thon Graycol points out that there are no very old trees in the edges of our forests where the prairie begins looking eastward. That suggests our tree line has been moving slowly westward for a few centuries, but nobody is sure. The Nomads may have cut the older trees for wood."

"Well," said General Goldæm, "if nature is closing in on them from the east and the west, they're going to lose their precious desert anyway. We'll just give nature a hand in their extinction."

"Extinction? I don't want to hear that word again, General," Filpeo Harq said sharply. "Pacification and containment are the goals, not extermination. We have achieved that in the south. The Jackrabbit population is stable."

"Except that their young men keep running away to join outlaw bands."

"The northern Nomads kill most of those. One way, maybe the only way, to secure the area between the forests and the western mountains is to colonize."

"How, Sire? Except along the eastern fringe, the land is poor, the water scarce, and the weather horrid. Who could, who would live there but wild herdsmen?"

"Tame herdsmen, and a tamer breed of cattle," said Filpeo Harq. "Fenced ranches, as in the south. Some places down there, they use yellowwood trees for fences. If you plant them a foot apart and keep them pruned, they make hedges dense enough and thorny enough to keep cattle in. There may not be

enough water for agriculture, but wells can be dug to water stock. Some land can be fenced, farther north where the cold kills yellowwood. We hold much forested land in the east. Enough timber can be shipped to settlers, and they'll pay with beef and hides. And I'm not so sure agriculture is impossible either. The university is studying that problem. Until civilized men can live there, the Plains will remain an obstacle. The Pope might as well be living on the moon, and there is no way to unify the continent."

"But who in hell would want to live there?"

Harq the Hannegan thought for a moment. "The Jackrabbit itself has settled down in the south. That's why I won't stand for talk of extermination."

"But they were always half-settled anyway, Sire. The Wilddog and the Grasshopper would prefer to die in battle than give up their ways. To farm or to ranch is hard work. To the Nomad, work is slavery."

"The ex-Nomads learned to work when they lost their horses. You merely predict their choice. We must not allow them to have such a choice. There is no need to colonize the Plains if we can civilize the wild tribes themselves. I want Urion to send missions to the northern hordes."

"Cardinal Urion sent Monsignor Sanual to them, and he came back empty-handed, and I think empty-headed. The Christians among them are already tied to Valana, Sire, and there is a rumor this Pope in Valana means to take the Jackrabbit Churches away from our Archbishop," said the chaplain.

"There is no Pope in Valana, and until there is a Pope in New Rome, they are tied to nobody. And Urion hopes to be the next Pope. If not, we'll see whether Urion or some antipope offers them sweeter salvation. Especially to the Grasshopper, after we punish them. The time is ripe for change. The papacy is up for grabs. The new Lord of the Hordes is a Wilddog, not a Grasshopper. We have to influence both.

"Please understand," continued the Hannegan, after a pause, "that what I ask of you is to tell me what you think would happen if we do this, or we do that, even if I would never do either. To show you what I mean, I ask General Goldæm what he thinks would happen if we undertook a war to simply wipe out the Nomad population of the northern Plains."

He spoke again after a silence. "Well, General?"

"Sire, I did not really mean to suggest—"

"Very well, I realize you were just making bellicose noises to exercise your military gland, but go ahead. Answer my question: What would happen if we undertook to wipe out the Grasshopper and the Wilddog?"

The general reddened, and after a few seconds said, "I think we I would fail. We're stretched out. We occupy and police the Jackrabbit country below the Nady Ann. If we try to hit the Grasshopper hard, he can pull back until our supply wagons can't supply our forces."

"The Nomad can live on carrion and crickets. Why can't you?" "I can, but we can't fight without powder and shot."

"Good enough. You have now taken charge of your military gland. However, you can put it to work again and organize a battalion of a special strike force. I want men trained to out-Nomad the Nomads. Take the biggest, toughest, meanest men you can find, both from our own ranks and from any motherless outlaws you can recruit. Teach them to live on the land, speak Nomadic, and learn their way of signaling."

"And what exactly is the battalion's mission, Sire? Not to hold ground, surely."

"Of course not. The mission is to surprise, kill, destroy, and run. Punitive strikes, in case there's another attack on the farmlands. As for weapons, be sure they have the new biologicals from the university. Draft Thon Hilbert, if you have to."

Goldæm looked at Carpios, made a sour mouth, and winked. He did not believe that biologicals were the wave of the military future and he hoped Carpy agreed; but the pirate admiral merely shrugged.

Filpeo turned to the chaplain.

"Colonel Pottscar, suppose my uncle the Archbishop had unlimited funds to spend on the conversion of the Grasshopper Horde. What would happen?"

"Well, if he didn't spend it on young boys, he would waste it sending people like Monsignor Sanual."

The Mayor seemed to suppress a giggle. "How would he spend it on young boys? Charitably?"

"Oh, of course. I was only thinking about how he just last week took in a refugee from Leibowitz

Abbey. He hired a young Brother Torrildo as his assistant and acolyte. He's always thinking of the welfare of young boys."

"I'm acquainted with my uncle, Father Colonel Pottscar. My question is: do you think spending money to Christianize the Nomads would be a wise investment?"

"No."

"Why?"

"Because the Nomads would be baptized, take the money, ignore the priests, and do as they have always done."

"Just so. Well, look at the clock! Let us go inspect the wares of the gunsmiths, gentlemen."

"Wait a moment, Sire," said Goldæm. "I think Carp . . . uh, the admiral might have something to say first."

"Go right ahead, Carp," said the Hannegan.

The admiral winced slightly, but said, "The guns the alien warriors brought with them disappeared soon after they met Brownpony."

"How do you know that? And if true, what does it mean?"

"I heard it from Esitt Loyte, Sire. Their homeland has firearms superior to our own, and such guns are now being made on the west coast." He took out a small pistol, only to have it snatched from his hand by one of Filpeo's bodyguards. The guard seemed to have trouble determining if the gun was loaded. The admiral assured him that it was not.

"Where did *you* get that thing?" Filpeo asked.

"About fifty-eight hundred nautical miles from here, Sire. On a great circle course, almost northwest, I'd guess. Or sixty-three hundred miles, by rhumb line course, nearly due west. That's my best guess without looking at the charts."

"Across the ocean? Not our west coast?"

"No, but they're in production on our west coast by now."

"Show me how it works, Admiral," said Filpeo.

Carpíos Robbery pulled five cartridges out of his pocket, loaded the revolver, walked to the nearest window, aimed at the sky, and shocked their eardrums by holding down the trigger and rapidly fanning the hammer five times with the edge of his hand. When he turned around, Filpeo looked pale.

"My God! Is that what's been piling up in the Suckamint Mountains?"

"I have no way of knowing that, Sire. But this special battalion you want Goldy to organize should have a lot of firepower."

"Give me the weapon. Let's go see the gunsmiths."

The admiral released the pistol with obvious reluctance.

According to the gunsmiths' salesmen, the prototype of a similar weapon was already on the drawing board and might be ready in two years, but they were alarmed to see a competitive firearm already in production.

"Would your possession of this gun hasten production?"

"That is very likely, Sire."

Carpíos Robbery winced again.

"I'll let you have it before you leave the city," Filpeo said, then looked at his admiral's expression and added, "Of course, you must send it back to its owner here when you're done with it."

"Certainly, Sire."

Brownpony's interview with His Imperial Majesty Filpeo Harq, Mayor Hannegan VII, happened in City Hall, also called the Imperial Palace, on Thursday, the 5th of January, thus giving the lie to a Jack-rabbit rumor extant in the Province which held that Filpeo Harq always had himself locked up in his private quarters for three days about the time of the full moon, and would see no one. That Thursday the moon was full, and after opening the sealed papers from Pope Amen, the Monarch flew into such a rage that Blacktooth wished the rumor were true. He and Weh-Geh were made to sit on a bench in the corridor outside the mayoral throne room, and they could hear only muffled shouting without being able

to understand much of it. None of the shouting was done by the cardinal.

Presently a priest with a monsignor's bellyband came down the hall and spoke to the guards. One of them knocked hard, opened the door, and shouted, "Monsignor Sanual, in obedience to the Lord Mayor's summons," and pushed him inside, then followed him and closed the door. There was a lull in the shouting.

Blacktooth had never seen Sanual before, but had heard enough about him from both his master and Father Steps-on-Snake to know that he would be anything but a friendly witness, and that Brownpony's actions at the funeral festival on the Plains and his participation in the affair with the Wild Horse Woman were on the court's agenda. He exchanged a glance with Weh-Geh, and saw that both of them were aware of this.

The guard who took Sanual inside now opened the door and spoke to the other guard. "Seize them," he said, and again closed the door.

The guard had no way to seize them, but he pointed his gun at Weh-Geh and told him to throw his swords aside. Two seconds later, he was flat on his back with a sword point at his throat.

"Get his weapon, Brother?" It was a suggestion, not a command.

"No," said Blacktooth. "That was a mistake, Weh-Geh. Remember the cardinal."

Weh-Geh looked at the door. Then he booted the fallen guard in the stomach. Having taken the wind out of the man, he grabbed the gun and burst through the door. Nimmy observed the startled Monarch sitting on his throne. Brownpony had been forced to his knees, and the guard was holding a pistol to his head. Weh-Geh aimed at Filpeo Harq, and barked, "Let my master go!"

Nimmy leaped away from the door, for the Mayor was flanked by two more guards with raised muskets. The man gasping for breath crawled toward Nimmy, who leaped over him to avoid a fight.

There were three distinct explosions, then silence, followed by Filpeo Harq's voice: "Take him and the one in the hall away."

Blacktooth looked inside again. Weh-Geh lay in a growing pool of blood. One of the musketeers was down, but the Mayor himself was holding a pistol. It looked like the one Ædrea had showed to him in the cave. It was impossible to guess who had killed Weh-Geh. All weapons were still pointed at his body. When the Hannegan saw Nimmy standing white-faced in the door, he raised his pistol again, but the monk leaped aside. He made no attempt to escape. A frightened and humiliated Cardinal Brownpony was still kneeling there.

One of the jails at Hannegan City *was* part of the public zoo, where interesting prisoners were exhibited in cages not unlike those used for cougars, true wolves, and monkeys. On the way in, they passed an open area girded by a heavy fence on which there was a sign saying CAMELUS DROMEDARIUS, AFRICA, CONTRIB. ADMIRAL E'FONDOLAI.

"Guard, what are those things?" Brownpony asked.

"It says right there," snapped the jail guard. "Don't stop to gawk."

"They're domesticated!"

"How astute of you. Otherwise, the boy wouldn't be riding on the animal's back, eh?"

"Are they useful?"

"They can go for longer periods without water than horses. The admiral says they are used in desert warfare where he got them."

"Are there more of them?"

"Not as far as I know, but there soon will be." He pointed to a female with a large belly. "But they're the only camels in captivity on this continent, as far as I know. The admiral brought them in the hold of a giant schooner. Now move along, move along!"

They were escorted past cells full of lesser animals, and then cells full of human prisoners. On each cell was posted the name of the occupant species. The humans were mostly murderers: a *Homo sicarius*, a *Homo matricidus*, but two *Homines seditiosi*, and one child rapist. All of them jeered as the two clerics were locked into the third cell on the left. The jailer unwrapped a sign and posted it above the door of the cage, out of sight and out of reach. The man in the cell across the roofless corridor from

theirs looked at it, entered a whispered conversation with the man in the adjacent cell, and fell silent, watching them as if in awe. His own cage was labeled not *Homo* but *Gryllus* (Grasshopper), and his crimes were war crimes. His jeering had been limited to Nomad grunts, so when the jailer was gone Blacktooth spoke to the man in his native tongue.

"What does our sign say?" he asked.

The man did not answer. He and Brownpony were staring at each other. "I know you," the cardinal said in Wilddog. "You were with Hultor Brâm."

The Nomad nodded. "Yes," he answered in his own dialect. "We took you south to meet your Pope. You asked me why the Lord Sharf called us a 'war party.' Now you know. I was the only captive, to my great shame. But Pforft here says that you tried to murder the Hannegan."

"Is that all our sign says?" Nimmy asked.

Evidently the Nomad could not read. He conversed again with the man named Pforft, then shook his head. "I don't know what all those words mean."

Pforft, himself a pederast, spoke to them: "It says heresy, simony, the crime of wounding majesty, as well as attempted regicide."

Fortunately, the hour was late and the zoo was closed for the day. Although the other prisoners wore uniforms, none were furnished for the cardinal and his secretary. Each of them received three blankets against the January cold. The cage was open to the weather on the south side. At least they would get sun during part of the day.

The cardinal still had not fully recovered from the curse of Meldown. "My Lady of the Buzzards had a buzzard's breath, it seems," he told Blacktooth, when he was feeling almost hysterically cheerful. "When Urion's Angel of Battle fights my Buzzard of Battle, which do you bet on to win?"

"M'Lord, doesn't that old prayer go: 'Holy Michael Archangel, *deliver* us from battle'?"

"No, it doesn't, Brother Monk. It's '*defend* us *in* battle,' but '*deliver* us *from* the snares of the devil.' As you well know. But what would you bet right now on either prayer being answered?"

"Nothing. If I remember the Nomad myth right, your Burregun, since you claim her, always mourns as she eats the fallen warriors, the children of her sister the Day Maiden. She doesn't want war either."

"You are right, we must pray for peace while girding for war. Of course you are right, Nimmy, you're always right."

Nimmy hung his head and frowned. But Brownpony was not being just sarcastic. To avoid being understood by other prisoners, they were speaking neo-Latin, and the cardinal's speech was unguarded.

"I mean it. You were right to leave the abbey, although you are a monk of Leibowitz. You were right to fall in love with a girl like Ædrea. You are right to disapprove of my importing and selling west-coast weapons without telling His Holiness." Blacktooth looked at him in surprise. Brownpony noticed the look and went on: "Pope Linus Six, who gave red hats to your late abbot and me, was the man who assigned me the task, in a letter which I still have in Valana. Linus told me not to show it to anyone unless I got caught, and then only to a pope. Frankly, Nimmy, I have almost wanted to get caught."

"Oh." Blacktooth thought it over. It was certainly true that Brownpony had not been cautious, allowing even Aberlott the Mouth to learn of his activities. But he would probably rather be caught by Amen Specklebird. Suddenly the cardinal seemed less sinister, an unwell man with a hump on his back and an uneasy conscience.

Fortunately, during visitor's hours, when children would spit at them through the bars of their cages, the human animals were fed raw beef and raw potatoes for the amusement of the crowd. No one was watching when they ate cornmeal mush for breakfast. Nimmy remembered from Boedullus that eating raw meat, or better still, drinking fresh blood as the Nomads sometimes did, was "good for the patient's own blood," and he persuaded Brownpony to eat some of the meat. Nimmy liked flesh raw, if fresh, but sometimes the jail meat tasted like coyote kill, and raw potatoes gave them both a stomachache. Filpeo's government did provide enough mush to keep the zoo's display specimens from looking starved. During their stay at the prison, three inmates were led from their death cells to the chopping block. From fellow prisoners, they learned that Wooshin had been replaced with a chopping machine, not another electric chair. The electric dynamo, an expensive affair, could be put to more productive use than frying felons.

The moon phase had waned from full to new. Then one afternoon past visitors' hours, a man in a lacy surplice came and stood looking in at them.

"Torildo!"

The former brother winked at Nimmy but remained silent.

"What do you want, man?" Brownpony snapped.

"My Lord the Archbishop wonders if you would like the Eucharist brought to you here."

"I would like bread and wine with which to offer Mass myself."

"I'll ask," said Torildo, and departed.

"Find out if the Pope knows we're in jail!" Blacktooth called after him.

"Nimmy!" hissed the cardinal.

But Torildo had stopped. Without looking back, he said, "He knows," and resumed his departure.

"Damn! It's all over." Brownpony was angry and downcast.

Blacktooth decided to let him alone. He rolled up in his blankets and took a nap in the icy wind.

Three days later Torildo came back. This time Blacktooth winked at him. Torildo blushed. "I never saw a sarcastic wink before," he said.

"What about the bread and wine?" the cardinal asked.

"Your Eminence will not have time to say Mass." He produced a letter from a sleeve and a key from his pocket. "I am to let you go when you read this and promise to obey these instructions."

Brownpony accepted the papers and began reading, handing each page to Blacktooth as he finished.

"Damn! It's all over," the cardinal repeated, again downcast but without anger.

"I thought every cardinal had a Church in New Rome," Nimmy remarked as soon as he read the first lines.

"There *is* a Saint Michael's in New Rome," Brownpony told him. "And it's Urion's Church, but there he is not called the Angel of Battle."

They read in silence while Torildo watched and impatiently drummed the key in his palm. The first page was thus.

To His Eminence Elia Cardinal Brownpony, Deacon of Saint Maisie's.

From Urion Cardinal Benefez, Archbishop of Saint Michael the Archangel.

Inasmuch as the pretended Pope, one Amen Specklebird, has by trying to resign the papacy, admitted that he was never Pope, it has pleased His Imperial Grace the Mayor of Texark to pardon all of your crimes except attempted regicide, for which you and your servant Blacktooth St. George are under suspended sentences of death. You are to be expelled from the Empire as *personae non gratae*. By countersigning this letter in the place indicated below, you enter a plea to the remaining charge against you of *nolo contendere*, which His Grace is persuaded to accept, and you agree to be escorted under guard as swiftly as possible to a crossing point of your choosing on the Bay Ghost River, and promise never to return except by order of a reigning Pontiff, a General Council, or a Conclave, and only for the purpose of direct passage to or from New Rome from the nearest border crossing.

There was a place for their signatures below a statement acknowledging the charges with a plea of no contest, and agreeing to obey a decree of permanent banishment.

The other pages were a more or less personal plea from Benefez to Brownpony and other Valanan cardinals to accept New Rome as the proper place for an immediate conclave to elect a pope. When Brownpony finished reading, he looked up at Torildo. The acolyte was holding a metal pen and a phial of ink out to him through the bars. They quickly signed, and the key turned in the lock.

Their trip back to the Bay Ghost by coach on the main military highway west was a fast, rough ride, taking less than ten days. Before they left the Province, the guards permitted Brownpony to buy two horses from a Jackrabbit farmer. The moon was full again, allowing them to ride sometimes by night. When they came at last to Leibowitz Abbey, an excited Abbot Olshuen knelt to kiss the cardinal's ring and tell him that he, Brownpony, was now Pope-Elect, chosen by an angry conclave of Valanan

cardinals, called by Pope Amen before his resignation. The cardinals were eagerly awaiting his *accepto*.

"Who brought this crazy message?" Brownpony demanded.

"Why, it was an old guest of ours, who went to New Rome with you. Namely, Wooshin. Cardinal Nauwhat sent him with the letter from the Curia—it's in my office—and an oral message from Sorely."

"What was the oral message?"

"That he had opposed the conclave, but hoped you would accept the election anyway."

"He knows it isn't legal" was the Red Deacon's immediate comment. "Of course I won't accept."

"You have a more immediate problem," said Olshuen, recovering from his initial awe of the cardinal.

"And what is that, Dom Abiquiu?"

"Have you told Brother St. George about his young lady? She came for him while you were gone. He thought she had died. She said you knew she was alive."

Brownpony was suddenly nervous. "We'll talk about that. Let's go to your office. I need to read the letter from the Curia."

## CHAPTER 19

Let all guests who arrive be received as Christ, for He is going to say, "I came as a guest, and you received me."

—*Saint Benedict's Rule*, Chapter 53

HEY HAD ARRIVED AT LEIBOWITZ ABBEY DURING the recreational hour in the late afternoon of Ash Wednesday. The Yellow Guard presided over several kick-boxing matches between novices, and even the professed Brothers Wren and Singing Cow were sparring clumsily. Blacktooth observed that the style of fighting differed in some respects from that of Wooshin—although the Axe would never admit to having a "style". However, Foreman Jing, who had fenced with Wooshin, called it the "way of the homeless sword," and a "style of no-style."

Brownpony's first duty was to confer with Abbot Olshuen.

Blacktooth's was to bring bad news to the Yellow Guard. First he established himself in the guest room.

"You're still here!" he exclaimed upon entering.

"No, no," said Önmü Kun, the Jackrabbit gun smuggler. "I'm back for the second time since you left." He was full of wine and the urge to talk. "The Jackrabbit Weejus and Bear Spirit have chosen me as sharf, did you know that?"

Nimmy doubted it, but didn't much care. By looking around at their war gear, Nimmy knew the comrades of the late Weh-Geh, although they were working hard around the abbey, participating in the liturgy, and teaching weaponless fighting to novices, were still staying in the guesthouse along with Önmü Kun. This to Nimmy meant that Olshuen was not about to take them on as postulants or novices without permission from on high.

They greeted him with smiles and handclasps as they returned from the bouts in the courtyard, but Önmü was still talking and laughing about his adventures in the Province, and the warriors were a polite lot. Only their eyes questioned him ("Weh-Geh? Where?"), but they waited for the smuggler to finish.

Brownpony's flirtations with Churches in the Province had made it easier for Önmü to sell guns, he said. He had only to ask a pastor whether he had seen Cardinal Brownpony on his way toward Hannegan City. If the priest said that he had not, Önmü hurried away. If he had seen him, and showed the slightest enthusiasm, it meant there existed a group of local partisans wanting arms. One cadre which called itself the Knights of Empty Sky was a charity organization. He had supplied them not only with infantry weapons, but made a special trip to bring them three cannon that fired either a peach-size ball or a load of heavy buckshot, for those badly in need of charity. According to "Sharf" Önmü, the Knights anointed each cannon with oil, placed it in a well-caulked box, dug a shallow grave in the Churchyard,

and buried it by night.

Blacktooth murmured politely in reply, but finally turned his back toward the tipsy smuggler, and faced the five warriors who watched him expectantly with those dark eyes with uncreased lids. He was ashamed of his failure to befriend an alien in a strange land for no better reason than that he was not Wooshin.

"Brother Weh-Geh was killed while defending his master," he told them—rather loudly to silence Önmü. "I heard it happen, but I did not see it. There were three shots. There were four men holding guns pointed at him when I looked through the door, and he was already down. He had taken a gun he took from one of our guards. If he fired it, he must have missed. I am very sorry. Whether it was a mistake or not, he was living out his duty. He was a better monk than I."

"Was it a mistake?" asked Jing-U-Wan, the Foreman.

"Who were those four men?" Gai-See wanted to know.

"Did he have last rites?" asked Woosoh-Loh. "A proper funeral?"

"Dare we ask Abbot Olshuen to say a Mass for him?"

Nimmy tried to answer some of their questions and apologize for his inability to answer others. He finished his talk with them by promising to see Olshuen about a Mass for the repose of souls on behalf of Weh-Geh, and he went at once to the abbot's office. The door was open, and Brownpony was sitting at the abbot's desk and talking while Olshuen sat on a stool.

"It's a shame the Hannegan has a monopoly on the telegraph," the cardinal complained as he finished writing a letter which Nimmy was certain was addressed to the Valanan Curia. He turned sideways at the desk to look at the abbot who owned the desk and he saw Nimmy in the doorway, beckoned him in, and continued. "The Church has the money to hire Filpeo's technicians. We could build a line from here to Valana, and perhaps from Valana to the Oregonians."

The abbot said, "Money enough, yes. But what about the copper? I heard Hannegan had to confiscate coinage, pots, and Church bells. Buy it, you might. But who has it to sell?"

"I'm told silver conducts electrical essence even better than copper. And I'm not sure it's practical, but we have a source of silver."

"Oh? Where is that?"

Brownpony changed the subject. He handed Olshuen a letter and asked, "What do you think of this? Come in, Nimmy, come in."

The abbot took it and studied for a bit, holding it so that Blacktooth might read it as well if he wanted to:

To Sorely Cardinal Nauwhat, Secretary of Extraordinary Ecclesiastical Concerns.

From Elia Cardinal Brownpony, Vicar Apostolic to the Hordes.

*Non accepto!*

You know it is not possible to hold a conclave without notification of every cardinal on the continent. The Curia must have recommended to His Holiness that he clarify the law on both resignations and conclaves, and I cannot believe that he made legal a conclave such as the one the Curia has apparently conducted. You know it, and I know it. You must have been a minority in an angry Sacred College.

My imprisonment by the Hannegan forced His Holiness to offer his resignation. But I am free now, and I pray that he reconsider. He is not bound by anything he did under pressure of blackmail; let him renounce his resignation saying that it was forced. If he will not do that, then you must summon every cardinal (including me here at the

abbey) to Valana to choose another successor of Saint Peter, complying in every way with existing legislation.

Although I appreciate the irony of electing a Pope that Hannegan just released from jail in a trade-off of this kind, I have to say again, *non accepto*, as you, Sorely, knew I would.

I await instructions from my sovereign Pontiff, Pope Amen, and when they come, it would please me greatly if you can spare Wooshin to bring them here.

"You ask me what I think? How should I know?" Olshuen said while shaking his head. "In the name of God, m'Lord, I am only a monk of Leibowitz. I am not Abbot Jarad. My only vocation is here, my God is here, and although I am a servant of Holy Mother Church . . ."

"Oh, bother. Stop, stop, please! I'm sorry I showed it to you. Jarad should have refused the red hat, but the seventh Linus insisted. I know that, and you probably do too."

"I'm trying to remember if an abbot here ever refused a Pope's request, m'Lord."

"Maybe not, but if Amen Specklebird made you a cardinal, what would you say?"

Olshuen hesitated before he said, "No, not even from him." It was plain that even those who knew him only by hearsay adored the old priest-hermit-magician Pope. But among lovers of power, only Brownpony seemed to feel a deep affection for him.

Nimmy presented his petition on behalf of Jing-U-Wan's men and their deceased brother, and Olshuen promised a Mass. The next morning Brownpony sent Blacktooth to Sanly Bowitts with the message and gold enough to hire a courier with two horses to carry it quickly to Valana. The messenger promised to ride from dawn to dusk, and by night when the moon permitted, and to wait in Valana for a reply, unless Wooshin replaced him.

While he was returning to the abbey, he met Gai-See riding toward the village. They exchanged greetings and paused for a moment. Nimmy asked why he was going to town, and Gai-See said, "After you left, the cardinal decided to send another message. I have it with me."

"Another letter to Valana?"

"No. New Jerusalem." He frowned at himself. "You have a right to ask that?"

"Probably not. I'll try to forget it."

They went their opposite directions. Nimmy knew well what the cardinal had to say to Mayor Dion. Somehow a small weapon from their west-coast arsenal had found its way into the hand of Filpeo Harq. Both master and servant had seen it. There seemed to be no other possibility than that New Jerusalem had been infiltrated by the Hannegan's agent. But he would not ask Brownpony about it, lest he make trouble for Gai-See, who told him the letter's destination.

While Nimmy in October had found unfriendly attitudes in the atmosphere at the monastery, he now found them downright hostile in early March. He was being shunned again by the professed. On the other hand, some novices seemed to find him much more interesting than before. He tried to find out what had happened since, but "unexpected visitors" was the only mumbled answer he could get to his questions.

The three novices who were in the abbot's waiting room overheard a shouting match between the abbot and Cardinal Brownpony—or "Pope Brownpony," as one of them called him—and mentioned it to Nimmy. Very little of the shouting was understandable, but that it was about Blacktooth, they were certain.

Blacktooth decided to confront the cardinal, but upon finding him kneeling before the lady altar praying to the Virgin, he merely knelt beside him and waited. Brownpony stirred, and Nimmy sensed his discomfort. The Red Deacon crossed himself and arose. The monk waited a few seconds and did the same. Brownpony was pacing toward the door. Nimmy shuffled behind him. Hearing the shuffle, the Red Deacon turned.

"Do you want something, Brother St. George?"

"Only to know what's going on."

They walked outside and stopped.

"I knew she *might* be alive. But I did not want to arouse false hopes. Go climb the Mesa of Last Resort. The man who saw her last may be living there now." The cardinal started walking away.

"She? Who?" Nimmy called after him.

Brownpony looked back at him without answering.

"*Edrea!*"

"Go to the Mesa. I'll tell the abbot I sent you. He wanted to send you himself. But it was my responsibility. I let you down."

Pale as a ghost, Nimmy hurried toward the kitchen to beg some hard biscuits and water for the journey. From the cook, who was in a good humor, he received the biscuits, some cheese, and a

wineskin filled with a mixture of wine and water. Then he went to the guesthouse to pack a bedroll; it was too late to leave that day, so he slept and left before daylight while his brethren were being called to Lauds. It was a long hike to Last Resort, and the first thing he saw when he arrived at the usual way of ascent was a recent grave with two sticks lashed together for a cross. Its meaning eluded him. After the slow climb, the sun was sinking behind distant mountains. He went straight to the ramshackle shelter he had discovered the previous year and found it rebuilt, but no one was home. He was reluctant to try the door.

After shouting a few times and hearing no answer, he sat on his bedroll to wait. The light was becoming too dim for reading Compline, so he said his rosary, sometimes contemplating the mystery of each decade and sometimes contemplating the beautiful waif who had stolen it from him. The grave at the foot of the Mesa kept coming to mind. He shook his head impatiently and resumed contemplation of the fifth glorious mystery, which was the coronation in Heaven of the Mother by the Son, after her bodily assumption. But there was no before or after, according to Amen Specklebird, for whom the coronation of the Virgin was an event belonging to eternity. The Virgin's face became Ædrea's, and he finished the last decade as quickly as possible. When he looked up, a gaunt silhouette with a club raised on high stood over him against the twilight sky.

It croaked: "Don't get up! Who are you? What are you doing here?"

"I am Brother Blacktooth St. George, and my master Cardinal Brownpony sent me."

"Oh, I remember you now," said the old Jew, squinting in the twilight. "On the road to New Jerusalem, you asked too many questions."

"Did you make rain for them?"

"Still asking too many questions. Your master sent you with a message? For me?"

"No, he sent me with a question. What can you tell me about Ædrea? You saw her. Where did she go?"

The old Jew was silent for several seconds. "I happened to be of some assistance to her when she fled from her father. She came here with me, after the abbey turned her away. She had her babies. She went away."

"Babies!"

"Twin boys. They were not alike, though. She left them with me, because they were not perfect. Her father would have killed them. And she had nowhere else to go but home. She knows too much about affairs in New Jerusalem to risk getting caught on the way east to the Valley."

"Where are the children?"

"The milk of my goat did not agree with them. I took them to Sanly Bowitts. I left them with a woman who promised to take care of them until they were sent for."

"By whom?"

"Hmm-nnn. How should I know? Someone from the Valley. Or you, the father, probably."

'Ædrea told you that I am the father?"

"She is a talkative young woman. She was here for, hmm-nnn, seven or eight weeks. She was always singing or talking. I miss her singing, not her talking." He groped in his bag and handed Nimmy pieces of flint and steel. "That's the hearth, there in the shadow. Light the tinder. The wood is stacked."

"Was it a hard birth?"

"Very hard. I had to cut. She lost a lot of blood."

"Cut? You are a physician?"

"I am all things."

Nimmy got the fire started at last. Following the old hermit's instructions, he found in the hut a box of crumbled dry meal, dumped two double handfuls to a pot with a bail, and added water from a great jug by the door.

"Hang it from the tripod. Stir it with a clean stick."

"What is that stuff?"

"Food, Father."

"Don't call me that. I'm no priest!"

"Did I say you were? You're a father, though. I could call you 'Dad.' "

Blacktooth felt himself reddening. "Why don't you call me 'Nimmy'?"

"Is that what they call you at the abbey?"

"No, but my master does."

"Is he not at the abbey?"

"Yes?"

"Well, it seems your master let you think she was dead, isn't it so?"

"He said he couldn't be sure, didn't want to arouse false hope. I think I believe him."

"Hah!" The old Jew began chuckling to himself.

Nimmy stirred the pot until the mush turned thick. The old hermit brought out metal plates, spoons, and cups. Nimmy pulled his biscuits out of the bedroll, poured the cups full of his watered wine. They sat on a bench made of a flat stone supported by fat legs that were sunk in the ground, and ate dinner by the firelight.

Blacktooth crossed himself and whispered the blessing. The old Jew, holding his bowl, sang out a few words of prayer in a strange tongue which Nimmy supposed to be Hebrew.

The mush, Benjamin told him, was made of processed mesquite beans he had brought from Sanly Bowitts. Later in the year, he would pick and process his own. He had raised goats here before, and would try to acquire a herd again. He spoke of past ages as if he had been there personally. Several times he spoke of an "Abbot Jerome" as if he were still ruling the monastery, and referred to the conquests of Hannegan II as if they were still happening. For him, all ages seemed to coexist in his own private Now.

Nimmy spent the night inside the old man's hut. Again he dreamed the dream of the open grave at the abbey, the one with the baby in it, but he awoke in surprise from the dream, knowing that Jarad Kendemin was buried there. In the morning, he dared to ask Benjamin about the recent grave at the foot of the Mesa. The hermit denied any knowledge of it, then noticed Nimmy's doubt.

"If you think I buried her there, go try to dig her up."

"I believe you."

Nimmy was not in a hurry to leave. His anger toward the cardinal had been aroused, and he wanted to rid himself of it, or turn it into mere diminished trust. Brownpony had withheld the truth from him before, but he could not remember an outright lie. From what the old man said, he knew Ædrea thought he lied. But she had not heard his actual words to Blacktooth.

He stayed an extra day and night. The sky was overcast, and a cold wind had risen. The waterskin and the hermit's jug were empty.

"Where do you get water up here?"

Benjamin looked at him, pointed casually at the sky, then continued milking the goat.

Twenty seconds passed. A large, cold drop of water hit the monk in the face. Moments later, there was a brief cloudburst. Nimmy asked no more questions.

The old hermit complained that Nimmy was eating more food than he brought with him. So he left shortly after dawn on the third day. When gravel came rattling down the way behind him, he looked back up the path. The old Jew was following him down with a shovel.

Because of the dream, Nimmy had a brief vision of an open grave. And on the third day, she arose again—

But the grave was not open. Instead, they now found two graves at the foot of the Mesa. Obviously one had been dug only yesterday. The old Jew leaned on his shovel, and squinted at Nimmy.

"No, I won't dig," the monk said. "Goodbye and thank you." He hurried away toward Sanly Bowitts without looking back.

Benjamin had given him the old woman's name. He found her old adobe house without difficulty, and counted seven children playing in the yard. He suddenly realized this was the "orphanage" the abbey had always supported in the town. The woman was sullen. She seemed to know who he was and why he

was here, but considered him an outcast and a scoundrel. "Why did you not come for them ten days ago? They have been taken away for adoption."

"By whom?"

"Three sisters."

"Where were they taken?"

"I'm not at liberty to say."

When Blacktooth showed signs of anger, she called him a scoundrel, a libertine, a false monk. She ordered him to leave at once, and retired to the old adobe building.

"Where did the mother go?" he yelled after her, to no effect. So he marched in gloom back to the abbey.

The shooting began while the monks were in the convent's refectory for lunch on the following day. Atop the parapet wall, Father Levion, now Prior, was fasting when the first distant *boom!* occurred. He was praying, as he often did, toward the grandeur of the broken desert horizon and to the God who made it. The first explosion scarcely distracted him from prayer, although his eyes scanned the open country for a sign of smoke. After the second *boom!* Önmü Kun came running out of the refectory and across the courtyard. He saw Levion on the wall and raced up the stairs to join him.

"Where?" he asked breathlessly.

"I don't know. I didn't see anything."

*Boom!* The interval between explosions was about a minute and a half.

"It sounds like it's coming from over there," said Levion, pointing down the valley.

"The crosswind makes it sound that way," Önmü replied, looking straight at the Mesa of Last Resort.

After the fourth *boom!*, he pointed at the Mesa. There was indeed a tiny wisp of smoke up there.

On the fifth *boom!*, a plume of dust shot up from a spot about two hundred paces from the abbey.

"Damn! He's getting our range!" cried the smuggler.

On the sixth *boom!*, a cannonball hit the center of the road in front of the abbey, bounced through the open gates, caromed off the stone curb around the rose bed, and went on bouncing directly into the convent and through the refectory doors. Screaming was heard, and monks came pouring out of the building.

"Take cover!" yelled the Jackrabbit. "He's got two balls left."

There were no more shots, and while the monks at their meager Lenten lunch were badly frightened, the only damage was in the kitchen; but Önmü had indicted himself by knowing too much. The cannonball was found, and although it had been deformed and somewhat flattened, there appeared to be a few characters in Hebrew scratched upon it. An expert was summoned. The legible part of the inscription said, ". . . maketh bread to spring forth from the Earth." It was a blessing over food. "Apt enough, considering the target," said the translator. There was an immediate conference in the abbot's office. Blacktooth was called in, and appointed interrogator, since he knew the man as well as anyone, and spoke his dialect best.

They met in the guesthouse.

"By what right are you staying here, good simpleton?"

"I was invited," said the Jackrabbit.

"By whom?"

"By Abbot Olshuen, who else?"

"At the cardinal's insistence?"

"Probably."

"The abbot knows what you do?"

"I don't know. But even if he knows, I would not, I could not, bring my merchandise here. I never have."

"So you bury it in the desert here until you're ready to travel again. Then you dig it up."

"This time, the old man dug it up. My bad luck. I thought he never came down, and never had visitors. It's the first time I used that spot. I didn't expect him to desecrate a grave."

"He's a little crazy, but not stupid. He knew it was no grave. So he dug up your cannon, and sent us a message with it."

"He must have exceeded the maximum load to reach this far. And pointed it up about forty degrees."

"And he's shooting from about five hundred feet above us."

"Was he trying to kill someone?"

"Old Benjamin? No. He was telling the abbot about you."

"I'd better leave."

"What was in the other grave?"

"Rifles."

"If you're going to try to reclaim your merchandise, someone is going to go with you. There are six of us. Any one of us can manage you."

"Even you?" The Jackrabbit laughed.

Blacktooth knocked the wind out of him and threw him in the corner. Önmü looked up in surprise, gasping for breath, but without anger.

"Why did you do that, Brother St. George?"

"To show you, if you get into a quarrel with the old man over your guns, you're going to lose."

"But they *are* my guns! They are for the Grasshopper, and I am Sharf."

"You know that's a lie. You told me yourself you get a commission."

"Sure, if I sell them. If I lose them, they're mine."

"I don't understand."

"I have to pay for them. Who do you think owns them, Cardinal Brownpony?"

"I don't know, but I doubt it. Mayor Dion, probably. But whoever sells them, you're only the broker."

"I am also Sharf! Secretly, of course."

Önmü Kun disappeared from the abbey that night, never to return. Being related to the royal tribe was prerequisite to election as sharf of a horde, and Nimmy doubted that any Nomad north of the Nady Ann would recognize his claim. Gai-See was sent galloping toward Last Resort on the abbot's horse to protect the old Jew, and if possible to negotiate the surrender of the weapons. He returned the following day dragging one cannon, and reported two empty graves, also reported that Benjamin had not opened the second grave. Evidently Kun had recovered his rifles and moved on. But so it was that Leibowitz Abbey came into possession of modern ordnance, but as yet no ammunition. Abiquiu Olshuen locked the cannon in the basement room with the rusty weapons from earlier centuries.

Novices reported another loud argument between the cardinal and the abbot behind closed doors. This time it was about guns. Brownpony emerged angry and humiliated; he told Blacktooth that Olshuen felt the abbey's hospitality had been abused.

"He knows now that the Jackrabbit is being armed," he told Nimmy. "He's afraid for the monastery, if the Hannegan suspects his monks are involved. He wants Jing's men to leave."

"But they have nothing to do with it!"

"No, but the concept of warrior monks is alien to Dom Abiquiu's idea of Christianity. To him it's a scandal. We should leave here soon."

"Did the Jackrabbit grandmothers really choose Önmü Kun as Sharf, as he claims?"

"Everything is secretive in Jackrabbit country, Nimmy. With them, the test is not legal but practical. If the men follow him in battle, he is Sharf. If they don't, he is not, no matter what the Weeju say."

Well into Lent, a messenger from Hannegan City brought a petition addressed to all bishops and signed by Urien Benefez and seven other cardinals. It announced a General Council of the Church to be held in New Rome six weeks after Easter, and all bishops and abbots able to travel must attend. The purpose of the Council would be to draft new legislation concerning conclaves.

"Only a sovereign Pontiff can summon a General Council," said Brownpony, and refused to sign. Olshuen also refused. The messenger shrugged and rode on.

Wooshin arrived the following day with the expected summons to a conclave in Valana. He was

warmly greeted by Brownpony, Blacktooth, and the Yellow Guard, but the summons he brought was rather strange. Apparently the Curia knew of the petition for a General Council, for the tone of the summons was angry, and the last paragraph threatened excommunication to any cardinal who attended a rump session in New Rome "where schismatics and heretics will try to install a known sodomite to sit on the throne of Peter the Apostle." The document was signed by *Amen, Episcopus Romae, servus servorum Dei*, but Brownpony was suspicious of the signature, and the language was certainly not Specklebird's.

"Things are getting ugly," said the Red Deacon. "We must leave here at once."

## CHAPTER 20

We think it sufficient for the daily dinner, whether at the sixth or the ninth hour, that every table have two cooked dishes, on account of individual infirmities, so that he who for some reason cannot eat of the one may make his meal of the other.

—*Saint Benedict's Rule*, Chapter 39

OR MORE THAN A YEAR NOW, IT SEEMED TO Blacktooth that he was always on the road. This time there was no coach to Valana. Eight men with sixteen horses rode the papal highway north. Several miles south of the side road which led to Shard's place and on into the mountains of New Jerusalem, Cardinal Brownpony stopped, called Blacktooth and Wooshin to his side, and announced a detour around that whole area.

Blacktooth protested. "M'Lord, the only one who needs to take a detour is me. I can ride east out into the scrub, travel a few miles north, and then catch up with you on the road before dark."

"No," said the cardinal. "I want no more than one of us to be seen. Wooshin, pick a man to ride past the glep guards and take a message to Magister Dion. The message is really for Shard as much as for the Mayor, but Shard will accept orders only from Dion."

"Why not send me?" Axe offered.

"No. Shard remembers you."

Nimmy said, "He may remember any or all of us. He went for his gun and came out shooting when we were on our way to the abbey last fall."

Axe went to consult the warrior monks. When he came back, he said, "I suggest Gai-See. He's the smallest target and rides the fastest horse. If he can't find a way around, he can wait until dark and gallop right up Scarecrow Alley. There's moon enough."

Brownpony nodded and beckoned to Gai-See, then instructed him to avoid any contact with the families that guarded the passage. "Tell this to Dion: 'On the east, open gates to the Wilddog and to the Grasshopper. On the west, send gifts to the Curia.' Now repeat that, please."

"On the east, open gates to the Wilddog and to the Grasshopper. On the west, send gifts to the Curia."

"Good! Then remind him of what Nimmy and I saw in the hand of the Hannegan. I sent him a message about it from the abbey. If he got it, he will know what has to be done. Afterward, he will provide you with a well-laden pack mule. Leave New Jerusalem from the west and come on to Valana as fast as you can."

Gai-See dismounted, bowed to the cardinal, and sat down beside the trail. "He'll wait until dark," said Axe. "I too think it's safer that way."

Brownpony looked at Blacktooth. "Why so disappointed?" he asked.

"It's nothing, m'Lord."

"You were hoping someone would be able to find out if Ædrea is in her father's house?"

"I know it's not practical. It would be dangerous."

"Never mind. Gai-See can ask the Mayor about her."

"And get the same kind of truth about her as he gave to me?"

Brownpony shrugged. "I can't tell Dion what to say or do, except with my own property."

It was the first time the cardinal had spoken of the arsenal as his own property, but that was not Blacktooth's concern.

"M'Lord, I wish Gai-See would not mention Ædrea to Dion."

"Why not?"

"Because he will be wondering about a spy or a traitor when Gai-See tells him about the gun we saw in Filpeo's hand. And Ædrea ran away from home during that time. We know where she went, but the Mayor may not believe her."

The cardinal looked down at Gai-See. "Did you hear and understand that?"

"Yes, m'Lord Cardinal. I'll be discreet."

"We'll see you in Valana. Now, let's ride a mile or so back into the juniper scrub."

Three days later, they camped in the scrub half a mile east of the papal highway on the evening of Monday, April 3rd. It would be the night of the Paschal full moon of Holy Week, but the sun was not yet set, and because their food supply was running short, Nimmy went forth in search of roots and edible greens that might be beginning to sprout, while Wooshin took the party's only firearm and went to hunt small game while the cardinal's warriors gathered wood and tended the fire. Brownpony himself, clearly exhausted from the long journey and developing a nasty cough, wrapped himself in blankets and with his head on a saddle, fell asleep before dark.

Blacktooth dug up a few bulbs of last year's wild onions from the bank of a half-frozen creekbed; they had little value except as seasoning, in case the Axe came back with meat. Of course it was a day of Lenten abstinence, but it was also an emergency, especially for the cardinal, who had never fully recovered from his ordeal in the breeding pit. Nimmy tried to keep track of his direction from camp by watching the sunset, the stars of twilight, and finally the glow of the campfire in the distance. He found yucca, and uprooted some skinny tubers from the hard ground with a sharp stick.

He heard two gunshots, and decided that they came from Wooshin's pistol, but they were closely followed by a third—too closely for the Axe to have reloaded. A horse galloped past along a creekbank at the foot of the hill, and he caught a glimpse of a Nomad rider. There was a burst of shouting from the direction of the camp, accompanied by one more gunshot, but he could make out only the voices of Foreman Jing and Woosoh-Loh in their native tongue, until he heard Axe shout a death threat in poor but understandable Wild-dog, and a weaker echo from the cardinal that the threat was real and enforceable.

Nimmy hurried back toward the firelight as quietly as possible. Two Nomad outlaws were sitting on the ground with their hands tied behind them, surrounded by Brownpony's guards. The cardinal himself was sitting up in his bedroll. A strange small horse was tied to a juniper, and two unfamiliar muskets were propped against a log.

"Nimmy, where are you?"

It was Brownpony's voice. Blacktooth hurried into the firelight and dumped the yucca and wild onions beside the body of a dead wilddog. The cardinal winced at the odor of the onions.

Wooshin explained. Three motherless ones with only one horse among them had tried to steal two horses from the cardinal. One had succeeded but the men who had dismounted to search and rob Brownpony had been surprised and captured by Axe and the others who had heard their approach.

The scruffy Nomads were looking around in terror at the strange warriors with their long blades.

"Nimmy, you tell them what the situation is," said Axe with a wink.

Blacktooth brushed the root dirt from his robe and went to stand behind his master. Facing them across the fire, he drew himself up, pointed at one of the men, and said in impeccable Grasshopper:

"I know you. You haunt this region. Now you have accosted the Vicar Apostolic to the hordes, to whom even the *Qæsach dri Vørdar* Ösle Høngan Chür comes for counsel, not to mention the Grasshopper sharf, Eltür Bråm. Your fellow bandit has just stolen the horse of the High Shaman of all Christendom, the next Sharf and Great Uncle of the Holy Roman Catholic Church. He has also been chosen by the Buzzard of Battle; the Weejus have announced it."

"Don't overdo it, Nimmy," said the cardinal in Churchspeak.

"Horse for horse!" said the bolder of the two. "You take this horse, Great Man. We even."

Nimmy ignored him and spoke again to the man he recognized. "You! It was Holy Madness himself, now Lord of the Hordes, that stopped you from raping Ædrea last year near Shard's place, not far from here."

The outlaw shrugged but seemed suddenly meek.

Brownpony picked himself up out of the bedroll and went to inspect the scruffy mustang. Having walked around the little mare, he faced them and said sternly in Wilddog, "She belongs to the *Høngin Fuijæ Vurn*. You dare to violate a mare of the Wild Horse Woman! Lord Ösle Høngan Chür would have you eviscerated and fed to the dogs. Wooshin, release the animal at once."

The Axe flipped his sword twice, once to slice the hackamore that made her fast to the limb, the second time to swat her behind with the flat of the blade. The mustang snorted, kicked, and clattered away into the night. Since Gai-See had not taken an extra mount on his gallop through Scarecrow Alley, they still had an extra horse per man, but neither Brownpony nor his aides were ready to let the matter lie.

"Who is your master?" the cardinal asked.

"His name is Mounts-Everybody."

"How far is his camp from here?"

"Almost a day's ride, Great Man."

"How many men in your band?"

The outlaw seemed to be counting on mental fingers for a moment. "Thirty-seven, I think."

"And women? Children?"

"Yesterday there were five captives. Today maybe more, maybe less."

"And how many bands like yours?"

"I don't know. Sometimes we encounter other no-family people. Sometimes we fight, sometimes we join together. There are many bachelors along the fringes of the Wilddog range, and to the south along the Nady Ann."

"Do you ever fight or rob farmers?"

"It is not a wise policy."

"Does it happen?"

"Sometimes."

"Would you like to be paid for fighting farmers?"

The captives looked at each other and shifted uncomfortably. Brownpony elaborated:

"There is a war between the Grasshopper and the Hannegan's farmers."

"We know, but we are at war with both."

"But suppose the Grasshopper accepted you as allies?"

"That they would never do, Great Man."

"Did the monk here tell you that I am the Christian shaman to all the hordes?"

"We don't know what that means."

"It means," said Blacktooth, "that the word of His Eminence has power with all three hordes."

"Would you fight against the Hannegan under Demon Light?"

"There is no possibility."

"What about a Jackrabbit sharf?"

The idea of a Jackrabbit sharf brought roaring laughter from the bound men.

"Let the cowards go," Brownpony ordered. "You whimpering wild puppies go tell your Mounts-Everybody to come and see me in Valana, unless he's a coward, and bring back the horse you stole. Otherwise, you will be driven south of the Nady Ann and east of the Bay Ghost. The Hannegan will know what to do with you. Now go."

Easter arrived before they reached Valana. Brownpony concelebrated the Mass of the Resurrection in a wayside Church with a circuit-riding mission priest who stumbled through the liturgy, too frightened by high rank to get anything quite right.

• • •

Some days later a fast rider from Pobla, where they had spent the night, brought word of their coming to Valana, and Sorely Cardinal Nauwhat and the SEEC guard Elkin were waiting for them at the Venison House Tavern, where the cardinal had entertained Kindly Light the previous year. It was close to sundown, so they ordered dinner. The two prelates with their assistants sat together, while Wooshin and the Yellow Guard took an adjacent table. Sorely Nauwhat was a fast talker, and he had a lot to explain.

Before submitting his resignation, which Nauwhat, like Brownpony, regarded as revocable if not wholly invalid, Pope Amen had broken with a recent tradition and created new cardinals, as many as forty-nine of them, and had been induced to take the almost unprecedented action of stripping forty-nine others of their cardinalates. This shocked Brownpony, but it made the attempt at a conclave understandable, if not legal.

Amen Specklebird, who insisted that his resignation had been duly submitted to the Curia, had retired to his former residence, the old building which seemed to grow out of the side of a mountain and which had been at one time a root cellar, and before that a cave whose deeper recesses had never been explored, and which the old man had reopened "to let the mountain spirits come and go." Here the cardinals of the Curia came to consult him, to scold and beseech him, to no avail.

And there was news from Texark. Although the text of what purported to be Pope Amen's resignation had appeared there, by telegraph, the original signed copy of the document, if it existed, could not be found in Valana or anywhere else. One enterprising forger in the Empire's capital sold a clever counterfeit of the original to the Archdiocese of Texark for ten thousand pios, a sum paid after a police expert affirmed that the handwriting was that of Amen the Antipope. But afterward, another expert showed that the document contained egregious errors of the kind often occurring during transmission of text by a telegraph operator, including several pure operating codes, such as ZMF, meaning "break, more follows." The forger escaped into Jackrabbit country and was never seen again.

"As I told you, the Pope refuses to live in the palace," said Nauwhat, "and he has returned to his old home. He said Easter Mass at home, not at John-in-Exile. He will see anyone who comes to him, and cheerfully submits to any indignity. He has signed blank bulls, perhaps by the dozen. He will press his seal of approval into the wax of almost anything. I don't know if he always reads it first. Did he really appoint all these new cardinals, or was it done for him? I should know, but I don't. Because he found out about some guns at SEEC, and he thinks I am responsible."

"Well, I must confess to him on that—"

"No, don't do it. I *am* responsible now. His actions are those of a man who has lost his bearings, if not his sanity, but not his good humor. You, Elia, he speaks of constantly, and he will rejoice that you have returned. You must go to see him tomorrow. You and Brother Blacktooth as well."

"Of course. But what are the agenda, if not weapons?"

"It was he who placed your name in nomination as Pope. His only agendum, probably, will be to submit to you as Pontiff."

"I must set him straight on that."

"Well, you can try. But besides the new cardinals, the College is coming into town again in numbers. And some from the East are bringing the military officers and envoys you invited. They pass for bodyguards."

"In response to the same summons I got? Who was it wrote that foul thing?"

"Domidomi Cardinal Hoydok."

"Do I know him?"

"No. He's one of the new ones. He's from Texark, but Benefez excommunicated him for supporting Pope Amen, so the Pope created him cardinal. He is a civil lawyer, not a priest."

"How are the Easterners getting here?" Brownpony asked.

"Mostly through the Iowa country. There, the farmers seem to get along better with the Grasshopper."

They trade a lot. Only a few Texark patrols go north of the Misery River, and they wouldn't stop a cardinal there, even if they knew he was coming to conclave."

"Misery River?"

"The old name was 'Missouri,' m'Lord," Nimmy put in.

" 'Misery' better suits it now," said Sorely. "Before the occupation of the farmlands, it was a natural route to New Rome."

"Of course. My memory is slipping. The first thing I must do tomorrow is send a messenger to Holy Madness and Swimming Elk to come here for a conference, and to send a war party to New Jerusalem for the new weapons."

"Swimming Elk?"

"Sharf Eltür Brām, Hultor's brother. The Grasshopper sharf."

Dinner was brought to them. This time there was venison and a good red wine. They were nearly starved after the long Lenten trip on light rations. Nimmy wondered absently if he should confess to eating barbecued wilddog on abstinence days, even though the cardinal had granted dispensation in an emergency situation.

"How are things in Texark, by the way?" asked Cardinal Nauwhat.

"Well, the Province is seething with revolt. And of course there is sporadic fighting with the Grasshopper. In Hannegan City, little has changed, except they are importing some desert animals from Africa for warfare in dry country. And they know about our guns."

"Two bad omens."

"And one other thing." He glanced at the adjoining table and tapped Wooshin on the shoulder. "Axe, I think I forgot to tell you of one small change."

"M'Lord?"

Brownpony looked at Blacktooth. "You tell him."

"His Imperial Majesty the Mayor has replaced you with a mechanical head chopper, Axe."

Wooshin shrugged. "A man without shadow and form, when he chops heads, becomes a chopping machine. No change."

This caused a murmur, apparently not of approval, but perhaps of recognition, from the rest of the warriors present.

"A remarkable man," Sorely said with a shiver in his voice as Wooshin turned away again.

"One without shadow and form," Brownpony mused aloud.

Four weeks had passed since they last saw Gai-See, and they had just begun to fear that he had been shot down in Scarecrow Alley when he arrived, not with the well-laden pack mule with "gifts for the Curia" as in Brownpony's message, but with Mayor Dion, Ulad, eight heavy wagons, and a whole brigade of light-horse infantry, bristling with new and superior arms. The secret of New Jerusalem was no longer secret. Brownpony showed no surprise, and Nimmy realized that the message to Dion had been code.

There was no way Valana could accommodate both the influx of cardinals and a whole brigade of light horse, of whom the citizens of the city were quite frightened as the word was quickly passed around that these armed men were spooks. But Magister Dion had no intention of imposing. His troops immediately set about building a fortified encampment on a hill well outside the city. As soon as the wagons were unloaded, they were returned to New Jerusalem for more supplies. Regular convoys were planned to supply his men with food, ammunition, and other necessities of military life. They would sleep in tents, at first, but within four days, a permanent log structure was built, with a basement beneath it, to store ammunition and to reload brass cartridges. The reloading machines were simple and portable, so that they might follow an army in battle.

Seeking information about Ædrea, Nimmy had approached the gate of the newly constructed fort in the hope of obtaining an interview with the Magister, who was now in the role of commanding general. He was told politely to wait, and a guard left for the armory. He struck up a conversation with the other guards.

Blacktooth noticed that their rifles were similar to the pistols in having revolving cylinders, with six chambers instead of five. A guard showed him that the ammunition was of the same caliber as the handguns, and used the same brass; only the weight of the bullets and the weight of the powder charge differed. The pistol ammunition might be fired with safety from the rifles, with a lesser range, but it was unsafe to shoot the more powerful loads from the handguns. With copper being so scarce, it was essential that empty brass be saved after firing, even in battle.

After three hours of waiting, the guard returned. Nimmy was given a polite excuse from Magister Dion and turned away. He returned to the Red Deacon's own private mansion outside the city, where all of them were temporarily living.

Brownpony had obtained a list of new cardinals created by Pope Amen during their absence. He gave a copy of it to Blacktooth for his own information, along with two copies of a summons for all incoming cardinals to register at the Papal Palace with a clerk of the Secretariat of State, which again had been placed in the hands of Hilan Cardinal Bleze by Pope Amen after the interregnum. He told Nimmy to post one copy of the summons in John-in-Exile Square, then to hire a town crier immediately to shout aloud the text of the second copy at every intersection in Valana.

When he had finished these chores, Nimmy returned to his old residence, where he was rather mournfully greeted by Aberlott, who had fallen in love with the younger sister of the late Jæsis.

"It seems to me," said Aberlott with unusual gravity, "that those people in those mountains are just as intolerant of outsiders, as the outsiders have always been of spooks. They actually look down on us.

'Ædrea never did."

"I know. And she's under arrest."

"Oh my God! Did you see her?"

"No, I was not allowed."

"What are the charges?"

"She left without permission some months ago. That's all I know."

Through his employer's intervention, Blacktooth obtained an interview with Magister Dion. Dion listened politely to Nimmy's account of Ædrea's trip to Leibowitz Abbey, and thence to the Mesa of Last Resort, where she had given birth.

"And then she went home to her father's place," he finished. "That's all she did."

"And her father beat her and brought her to me. We can't have people leaving without permission."

"But she always had permission to come to Valana!"

"No, she had orders."

"But her father would have killed her babies."

"Babies?"

"Twins, old Benjamin said."

"Well, what you think you know, you got by hearsay. I'll consider it, but she will remain in custody for the time being. Think of it as protection from her own family. You are never going to see her again. Neither your cardinal nor I will allow it."

Blacktooth left the camp, fuming with anger at both the Mayor and Brownpony. On the way home, he meant to stop at the hillside home of Amen Specklebird and ask for his intervention, but there were at least forty people in a queue outside the door, many of them cardinals, and the Red Deacon himself was tenth in line. So he pretended not to see him, and went instead to a nearby Church to pray his anger away.

On the first day of May—normally a Nomad holy day—in response to Brownpony's call to a war council, Chür Høngan, his half-nephew Oxsho, Father Ombroz, and Demon Light with one of his lieutenants rode into town together. Brownpony was surprised to learn that Oxsho, in spite of his youth, had been chosen Wilddog sharf after Holy Madness was made judge and leader of all three hordes. The Wilddog leaders bowed and kissed the cardinal's ring. Eltür the Demon Light refrained, but offered a Nomad military salute.

From the south on the following day came Önmü Kun, cold sober, and wearing a leather helmet with

his family badge. He introduced himself as Jackrabbit Sharf. Knowing of Önmü's reputation, the others demanded documentation. He presented a roll of soft deerskin with Weejus beadwork depicting a manlike figure with the ears of a Jackrabbit. From his saddlebags, he produced a crest of buzzard feathers, also of obvious Weejus design; the sacred talisman was to be worn on the helmet of the sharf only in battle. After brief discussion, and some shaking of heads, his credentials were accepted by the others. Brownpony, who wished to honor them all, consulted with others of the Curia, then had the Nomad leadership housed in the Papal Palace, since the Pope had retired to his remodeled hillside cave and refused to return.

A military conference was scheduled for Thursday the 4th, at SEEC, and an invitation was sent to Commander Dion to come and bring his senior officers. Then a great embarrassment rode into town on the night of the third, and by the light of the full moon rode on through town and up to Brownpony's private estate, where he made a great clatter at the main entrance. Wooshin and Woosoh-Loh immediately rushed from the dining room to investigate the visitor, but then called for Blacktooth.

Nimmy stared out at the spectacle standing there in the moonlight. Three hundred pounds of muscle and black hair confronted them with folded arms and an angry glare. He uttered obscenities in bad Grasshopper and demanded to see "the Christian shaman who boasted to my men that he was married to the Burregun, and then called me a coward."

Blacktooth swallowed hard and went back to the dinner table. "There seems to be a motherless one at the door who wishes to speak to Your Eminence."

"Who?"

"I think they called him 'Mounts-Everybody.' Remember the outlaws you released? They spoke of their leader—"

The cardinal blotted gravy from his lips, got up, and strode to the entrance.

"Where is my horse?" he demanded of the burly outlaw.

"Tied to the gate, you damn grass-eater."

"Then come in and eat beef with us, you damn thief."

The man came in, surrounded by suspicious warriors with short swords in hand. Because of a foul odor about him, the cardinal had him seated at the foot of the table. Most of the others had finished eating. A servant carved him a few slices of roast beef and fetched him a hot baked potato and roasted onions from the kitchen. It was too early in the season for anything the Nomad would call "grass," but he grunted a few complaints about the lack of "inner meats" to go with the beef. Nimmy knew that Nomads usually ate virtually the whole animal, except for the hide, horns, hooves, and bones. It was the basis for the Venerable Boedullus's prescription for radiation sickness. The outlaw ate with his hands, wrapping slices of beef around bits of potato. The cardinal spoke.

"I thank you for returning my horse. But do you know that all the sharfs of the hordes and the *Qæsach dri Vørdar* himself are here in the city?"

Mounts-Everybody stopped eating and glowered. "You invited me here. They are enemies. You intend to have me killed?"

"No, all I wanted was my horse."

"You spoke to my men of fighting farmers. For money."

"I asked them questions."

"Which farmers are your enemies? Those nearby?"

"No, those are under the protection of the Bishop of Denver."

Blacktooth put in a word here. "His Eminence is trying to use your word for 'citizens,' and he means specifically the subjects of the Hannegan, and even more specifically the armed forces of Texark. He does not mean peaceful people who work the soil and grow crops. Many of them were formerly Nomads, including my own family."

"Thank you, Nimmy," said Brownpony with a trace of irritation, then to Mounts-Everybody: "Just how many fighting men could you muster, if you were inclined to do so."

Mounts-Everybody seemed to be doing mental arithmetic. "That depends on the pay. For gold, not many. We need good horses. The families kill us when we take wild ones. Offer us two good horses and

a woman for every man, and you get a small army."

"Horses, yes, but no women. How small an army?"

"Maybe four hundred warriors. But the Grasshopper is at war against the farmers in the east. We cannot fight beside them."

"I realize that. What about the Jackrabbit?"

Mounts-Everybody was suddenly suspicious. "Wormy-Face told me you threatened to drive us south of the Nady Ann into Texark lands."

"Gai-See, fetch one of the new rifles."

The small warrior stepped into the adjacent room and returned with one of the west-coast weapons.

"Load it and take him outside for a demonstration."

Brownpony and Blacktooth remained sitting at the dinner table while a servant cleaned up after the meal. There were six loud shots in as many seconds, followed by a frightened whinny and hoofbeats in the roadway.

Wooshin came back inside with the outlaw, who was holding the empty rifle and staring at it in awe. "I'm sorry. Your horse ran away," said the Axe.

"When they find him, give him to the sharf of the outlaws here, and also the rifle."

The burly guest stared at Brownpony in amazement. "I made you no promises!"

"I know. And you won't get the gifts until you do."

"No promises!"

"Well, all I want you to do is stay here all night, and most of tomorrow. You can't come to the meeting tomorrow, because I'm afraid someone would kill you. On your way into town, did you observe the fortress on the hilltop?"

"Yes. It is new."

"Tomorrow night, you will go to the fort and talk to Magister Dion and the Jackrabbit Önmü Kun. Any men you recruit will be under their command, as will you, and you will not be driven south of the Nady Ann. You will go there well armed and with other forces."

"I will think about it."

The cardinal looked away. "Axe, see that he takes a bath, cuts his hair and beard, and dress him as a mountain man. He can stay here until moonrise tomorrow."

Mounts-Everybody growled angrily and started to his feet, but six half-drawn swords had a calming effect. He allowed himself to be led away.

Brownpony looked questioningly at Blacktooth.

"M'Lord, those men live by murder and plunder."

"And that is war, is it not?"

Nimmy prayed earnestly for peace that night, but he feared the Virgin would not listen. If the cardinal came to be elected Pope, he would make the Virgin a commanding general of the hordes.

## CHAPTER 21

Whenever any important business has to be done in the monastery, let the Abbot call together the whole community and state the matter to be acted upon. . . . The reason we have said that all should be called for counsel is that the Lord often reveals to the younger what is best.

—*Saint Benedict's Rule*, Chapter 3

IMMY SLEPT BADLY THAT NIGHT, AND AROSE twice from nightmares to pray before the crucifix. Once he had a visitor. Moonlight shining through the window fell on white bedsheets and he could see a dark figure in the doorway. By its bulk, he knew it could only be Mounts-Everybody. He came quickly to his feet, prepared to fight if the outlaw tried to live up to his name. But the hulk merely grunted and moved on. A few seconds later, another dark figure stole down the corridor behind the

motherless one. That would be one of the Yellow Guard, shadowing him. Probably he was only looking for a place to urinate.

Nimmy went back to bed. He dreaded the morrow, for he saw clearly the direction of recent events, and how Brownpony was moving them. It was not as if the Red Deacon had drawn a map of the future, but he was bent toward one goal; whatever happened he examined it to see if it might be useful as a means toward that goal. Nimmy was not opposed to the destruction of the Empire, or the reduction of its power and the restoration of the New Roman papacy. That was Brownpony's end. The means, in part, he might deem legitimate. There was such a thing as a just war; he did not doubt the ancient teaching. But Leibowitz had been a man of peace, had he not?—after a warlike youth—and he was still the Saint's willing follower, although a half-unwilling member of the Saint's present Order under abbots like Jarad and Olshuen. He had renounced the world, just as the abbots and his brethren had renounced it, but now he was in the midst of the world, and the renunciation seemed meaningless. He lay awake most of the night, remembering his devotion to Leibowitz and the Holy Virgin. When he did fall briefly asleep, he dreamed of Ædrea, woke up with an erection, and fought an urge to masturbate because it was dawn and people were moving in the hallway.

Almost unwillingly he accompanied the cardinal to conference in the Palace with the leaders of the hordes and of New Jerusalem. It would surely last most of the day. His employer noticed his reluctance, and said, "I'm sorry, Nimmy, but I'm going to need you. So will the Grasshopper."

Only four members of the Sacred College attended: Sorely Nauwhat, Chuntar Hadala, Elia Brownpony, and a new cardinal, one Hawken Chief Irrikawa, who was said to be king of his northeast forest nation, and who wore a feather sewed to his red hat. He claimed to outrank all princes of the Church except the Pope. Besides the four cardinals, several military people of nationalities both east of the Great River and west of the continental divide were here, and they had come to town with their cardinal electors. There was a roll call, a counting of noses, and many introductions. Mayor Dion was obviously still irked by Nimmy's petition on behalf of Ædrea and at first objected to his and Wooshin's presence.

Brownpony turned to Eltür Brâm, winked, and said, "Would you please give the commander an account of the battles that have happened between the Grasshopper and Texark since the death of your brother?"

The sharf smiled wryly and began to speak. After half a minute of it, Dion held up his hand.

"What is he saying?"

"I understand most of it," said the cardinal, "but I'm only good at Jackrabbit, and fair in Wilddog. Grasshopper is Brother Blacktooth's native dialect."

Dion looked at Nimmy and nodded.

"And Wooshin commands the Yellow Guard, who offer training in very efficient methods of weaponless combat."

The Mayor acquiesced, but as if to prove his impartiality, told Ulad and another of his own officers to warm the bench outside the doors. Blacktooth translated Sharf Demon Light's account of recent skirmishing between his warriors and the Texark cavalry, but it had been low-intensity warfare with few casualties and fewer deaths. Because of orders given by Holy Madness, the Grasshopper forces had not made any further raids on the protected farmlands. Brâm noted with irony that the unprotected farmlands north of the Misery had been free from raids since trading between farmers and Nomads had begun a generation or more ago.

Most of the principals had their own interpreters, and local dialects were translated into Churchspeak. It made for slow going. The focus of attention was usually a wall map of that part of the continent between the Rocky and the Appalotchan Mountains. The map was a problem for all the Nomads except Holy Madness, but Father Ombroz tried to assist them with explanations of correspondences between the Earth and the paper.

Nimmy found himself becoming the ears and the voice of the Grasshopper sharf, and was soon rebuking the others, especially Brownpony and Dion, for communicating between themselves in

Churchspeak or Ol'zark Valley dialect without waiting for his interpretation. Even Önmü Kun was trilingual, but if Demon Light understood anything but the Nomad dialects, he would not admit it; Nimmy noticed, however, that the sharf frowned when the monk interpreted "Red Beard" as "Your Eminence." His Eminence himself, though understanding a bit of Grasshopper, kept a straight face. Brām acknowledged nothing spoken to him in the form of a request or an order unless it came from the Lord Høngan Ösle Chür . Only to the *Qæsach dri Vørdar* did he even appear to defer. He was polite, if only to hide a natural arrogance.

Nimmy found himself admiring the Grasshopper leader. True, it was like the admiration a man might have for grizzly bear or a cougar, but he might, after all, be a distant relative to Demon Light. The sharf was not condescending or rude to the monk, although he knew well enough that Blacktooth's ancestors had deserted the horde to farm on lands owned by the Denver Archdiocese.

At one point during the meeting, he noticed Holy Madness looking up at one of the high windows. Blacktooth followed his gaze, and it was the same balcony window through which Amen Specklebird had been passed into the building at the last conclave. The window was open. A policeman and the young Sharf Oxsho, who had been conspicuous by his absence, at least to Blacktooth, were both gesturing. The Lord of the Hordes came to his feet.

"M'Lord Cardinal, Your Eminence, I must excuse myself and find out what they want." He pointed.

Brownpony looked at the window, nodded, and said, "We will discuss matters which would not much concern your realm while you're gone. If something's amiss, please let us know."

Chür Høngan (Blacktooth tried to remember the deferential name reversal when speaking to the man, but sometimes failed to think it correctly) was gone for a quarter hour, during which the talk was mostly with suppliers of military equipment from the west coast. When the Lord of the Hordes returned, his face was a storm cloud.

"A Texark spy has been listening to every word spoken here," he growled, staring at Brownpony.

"They caught him up there?"

"Yes. Our Sharf Oxsho was on watch."

"Are you sure he's from Texark?"

"Of course. I know him. So does Your Eminence." He paused, and his stare at Brownpony became a glare. "He is, or was, the husband of Potear Wetok. He's your Texark cavalry-tactics expert. You sent him to us, remember? I always suspected him."

Father Ombroz who was sitting nearby dropped his head in his hands. "Esitt Loyte!" he groaned.

Brownpony turned pale. "He is in custody now?"

"Oh, yes, m'Lord. Oxsho bound his hands and has him tethered."

Nimmy winced. He knew what Holy Madness meant by "tethered." Holes were punched in the captive's cheeks and a loop of rope or rawhide was passed through the holes.

"Shall I bring him in for you to question? I'll cut the tether, so he can use his tongue."

"No, have them keep him in the local jail. Let him rot there, for all I care."

"NO! He belongs to me and the Wetok family. When I leave here, he goes with me, dead or alive,"

Brownpony came to his feet and faced the angry Nomad lord. "Trusting him was my mistake," he said. "You are right to claim jurisdiction over him. But Lord Høngan Ösle Chür , as your Vicar Apostolic I forbid you in the name of God to kill him."

They stared at each other. The Nomad gave him a barely perceptible nod. The cardinal sat down.

Høngan left the room again. This time he was gone for nearly an hour. When he came back he faced Brownpony again.

"Is he in jail?"

"Most of him is in jail," said the *QCESCZC/Z dri Vørdar*. "The rest of him is here." On the table before his Vicar Apostolic, he emptied a bag of bloody parts. Nimmy could see a hand, two ears, the tip of a nose, and what was probably the captain's penis.

Sitting next to Blacktooth, Demon Light came to his feet with a deafening Grasshopper battle cry to announce his approval. Brownpony turned and vomited.

"You said not to kill him," Høngan said mildly.

The meeting was adjourned while servants cleaned the table and the floor. When they reconvened, Oxsho joined the other two sharfs in the meeting, and they sat with their Lord Høngan and Eltür's interpreter. Nimmy sat surrounded by four Nomads, and it seemed to him that the others took a different seating arrangement than before. No chair adjacent to a Nomad was occupied.

Magister Dion at first resisted the plan that Brownpony and the Nomads favored; he wanted to join forces with the Wilddog and the Grasshopper and move across the Plains north of the Nady Ann, then join forces with able-bodied gleps from the Watchitah Nation and attack Hannegan City from the north. Chuntar Cardinal Hadala, Vicar Apostolic to the Valley, was familiar with its military potential, once its people were armed, and he backed Dion in his plan for a combined army of spooks from the Suckamints and their glep relatives from Ol'zarkia. It was in expectation of this that the spook commander had brought his light-horse brigade here to Valana.

Brownpony, however, was opposed. Having made reconnaissance in the Province, he foresaw a war on three fronts. Present were military officers from four nation-states in the Appalotcha region, who were prepared to invade the Texark's puppet allies on the east bank of the Great River. Their aim would be less to conquer than to force Filpeo to send forces to the defense of the east-bank puppets, lest he lose control of the river. The plan would be to harass, skirmish, and retreat, and prevent these forces from returning until Hannegan City itself was directly endangered. The commander in chief of the armed forces of the King of the Tenesi was present, and he outlined the plans the eastern nations had made among themselves, with the participation of Hawken Irrikawa.

Most of the Nomads were pleased by this eastern plan. Lord Høngan Ösle Chür suggested that the Grasshopper sharf propose a temporary truce with Filpeo's forces, just before the attack on the east-bank states came.

"That way, he won't be so uneasy about sending forces across the river."

Sharf Demon Light smiled at his lord, and the smile said that the truce, if made, would be opportunely broken.

The role of the armies of New Jerusalem in this plan would be to join with the guerrilla forces of Önmü Kun, who were at present scattered throughout the hill country in the Province. The guerrillas would move in small groups into the disputed areas a few days' ride to the west of the town of Yellow, staying away at first from the well-patrolled, but narrow, telegraph right-of-way that led to the last station nearest Valana. Kun had taken a pointer to the map and used it to draw a circle around the country where the Bay Ghost and the Nady Ann were hardly more than creeks, except for small lakes where antiquity's crumbled dams left small waterfalls. It was outlaw country, to the east of the papal highway, and Blacktooth began to see why his employer wanted Mounts-Everybody among his allies, although the prospect for such a thing was not mentioned at all by the cardinal. The northern hordes would object to the motherless ones, but because of Texark protection, the Jackrabbit had been little bothered by these outlaw bands.

When the forces of Kun, Dion, and perhaps the outlaws themselves converged here under one command, the rearming of the Jackrabbit with the west-coast weaponry which Önmü had not previously been allowed to smuggle would quickly proceed. The complete destruction of the telegraph was contemplated; also the physical removal of the wire to New Jerusalem. Local Jackrabbit militias, already secretly armed, albeit with older weapons, would rise in revolt as Dion's and Kun's armies drove eastward, between the Red and Nady Ann Rivers.

While Texark's forces were thus engaged in the Province and beyond the Great River, the Wilddog and the Grasshopper would join forces and attack from the west, hoping to help arm any able-bodied gleps from the Watchitah Nation and mount a combined attack.

Eventually Magister Dion became convinced. He insisted that Valana should raise its own militia, and occupy the fort his men had built, where citizens might take sanctuary in case of raids by "infiltrators or outlaws," and the militia would be used to assist the police in apprehending disloyal citizens, especially those of Texark origin. He designated one of his two military aides, Major Elswitch J. Gleaver, a short keg of a man with a red face and long mustachios, as the right officer to command the militia. Blacktooth

expected his master to resist this usurpation, but he said nothing. Chuntar Cardinal Hadala broke the silence and said to Brownpony with a wink, "I'll keep a close eye on the Major for you, Cardinal. I'm staying in the fort."

No one raised a question about Valana's possible response to putting an outsider and a spook in charge.

When the meeting finally ended, it was nearly dark outside. Brownpony told the Nomads that the Palace, where they were residing, would be needed tomorrow for the beginning of conclave, and asked them to pack their belongings and move to his estate for the night. "Blacktooth will show you the way."

Then he beckoned to the monk and whispered, "Make sure they don't get there before moonrise. I'll speak privately with Dion now and tell him to expect that outlaw leader."

Nimmy nodded his understanding. He prevailed upon the sharfs and Holy Madness to eat dinner at the cardinal's expense at the Venison House. By the time they arrived at the estate, Mounts-Everybody had gone, presumably to meet with Dion. They greeted their host with minimum cordiality, still angry about the spy, and went at once to their rooms.

The food was gone from the dinner table, but Brownpony asked Nimmy to sit with them over a glass of wine. He asked what he felt about the day's events.

"I felt myself in the service of the hordes instead of you, m'Lord."

"That's quite natural. You were Brām's interpreter. What else?"

"I was both afraid and angry."

"Afraid of whom? Angry at whom?"

"You."

This brought a threatening grunt from Wooshin.

"I suppose that's natural too," said the cardinal. "Holy Madness and the sharfs were certainly angry at me, because of Esitt Loyte. And it rubbed off on you. Loyte was one of the few men I've ever completely misjudged. Well, tomorrow begins the conclave. You'll find that less rowdy than last year, and—" He broke off, noticing Blacktooth's expression. The Axe noticed it too, and was scowling, for his loyalty to his master was absolute.

"Oh, I can get along without you," the Red Deacon said. "I don't need a Grasshopper interpreter in conclave, and I can borrow a secretary from Cardinal Bleze or Nauwhat. Still angry?"

"No, m'Lord. Just very tired."

"It's been a tiring day. All right, then take a vacation until we have a new pope. The Nomads will be in town a few more days. They have things to talk over among themselves and with Dion's officers.

But remember Loyte, and remember last year's attack. Watch your back."

Early the next morning, while walking through the streets Blacktooth saw several cardinals and their servants on their way to conclave at the Palace. One of them was a woman, but she was not Cardinal Buldyrk. He had heard about her, but had not seen her before.

There was a small convent on the south bank of the Brave River where a community of barefoot nuns, Sisters of Amen Specklebird's *Ordo Dominae Desertarum Nostrae*, lived, worked, and prayed, and Mother Iridia Silentia had been created cardinal by Pope Amen, the second woman in the Sacred College. Blacktooth noticed that her conclavists wore the same religious garb that Ædrea had worn when she was serving as courier between SEEC and New Jerusalem. The same Order had last year held a temporary residence in Valana, and Nimmy had assumed that among these local nuns, Ædrea's friend, Sister Julian, had provided her with a habit for disguise. But the local nuns were gone now. He had a wild hunch, and it overcame his misgivings about approaching one of them in the street. He spoke to her in a low voice.

"Forgive me, Sister. I am a monk, not in very good standing, of Saint Leibowitz. A young woman wearing your habit used to come here sometimes from a mountain community. Her name was Ædrea. I was wondering if you might know . . ."

The Sister kept her eyes lowered and did not speak. Mother Iridia noticed her conclavist being accosted by a brash cleric of some sort, and she approached them wearing a frown. She and her nun exchanged murmurs in a foreign tongue. Mother Iridia inspected Blacktooth from head to toe, nodded, reached in her portfolio, and handed him a prayer card.

"God bless you, Brother Blacktooth," she said, making a tiny cross. "Pray for those in trouble." Then she gripped her helper's arm and led her fast away.

Blacktooth, amazed that she knew his name and therefore his sin, felt the heat of a blush in his face. He looked at the prayer card. It was thick, glossy, and heavily enameled, and probably blessed with holy water like many tiny sacramental placards sold by mendicant religious orders. Most were saccharine and sentimental, but this was not. On one side it bore a picture of a crucifix at the top, but the crucified one was a woman, and the name above it was Santa Librada. Beneath the cross was advice in ancient English, which he understood with small difficulty. The English said:

(Pray to Santa Librada in times of  
trouble with the police, the courts,  
and when freedom is not visible. She  
will help you, if you believe.)

*For Ædrea, freedom was certainly not visible!*

He wanted to run after the nuns and ask more questions, but that would be highly improper, and they would not answer. Instead, he resolved to write them a note of inquiry, and get one of Brownpony's housekeepers to deliver it.

He looked at the other side of the card. There was printed a prayer or poem which he had difficulty understanding, for although the language reminded him of Latin, it was not Latin:

Santa Librada del Mundo,  
Tengo ojos, no me miren;  
Tengo manos, no me tapen;  
Tengo pieses, no me alcansan.  
Con los angeles del 43,  
Con el manto de Maria estoy tapado.  
Con los pechos de Maria estoy rosado.

He thought of Aberlott, who was back in school at Saint Ston's, and turned to walk toward their old shared residence. The student might know someone at the school who could translate.

A crowd was gathering in John-in-Exile Square, but this was no mob like last year's raging rabble. There was no sickness in the city, and more fear than anger, and what anger there was, was directed at Texark and cardinals absent from the city. The people wanted Specklebird to remain as Pope, but his refusal they now seemed to accept as a sad reality. Brownpony was well known and popular, but not well revered; if he was lacking in holiness, he was also lacking in haughtiness, and he seemed to feel affection for the common people of the city.

On his way to Aberlott's, Blacktooth paused to watch some of the cardinals recently created by Pope Amen as they arrived and entered the assembly. He stood beside a young priest, who told him their names.

There was Abbot Joyo Cardinal Watchingdown, from Watchingdown Abbey, far east of the Great River.

And Wolfer Cardinal Poilyf, from the North Country, came still wearing his furs, although it was not a cold day.

Domidomi Cardinal Hoydok of Texark was excommunicated by Benefez for supporting Pope Amen, who then appointed him to the College. He was the one who had penned the angry summons to

conclave, and he seemed still angry as he stalked into the hall.

Then came Furi Cardinal Shirikane, quietly, almost slinking along; he was from the west coast, a priest who could also speak Wooshin's dialect, so the Axe had told him. His countenance also seemed to bear a trace of Asia in it.

And there was Abraha Cardinal Linkono, a schoolteacher from New Jerusalem, the only known spook in the College.

"And there is Hawken Chief Irrikawa," said the young priest.

"I know. I saw him yesterday."

"Did you know that it was Cardinal Buldyrk who suggested him to Pope Amen in the first place? The Abbey of N'ork is adjacent to Irrikawa's forest kingdom."

"I'm surprised," Nimmy told his informant. "Last year, the lady seemed to be leaning toward Cardinal Benefez."

"Hah! That was before Pope Amen ordained two women, and made another one cardinal," the priest said—rather stiffly, it seemed to Blacktooth.

"Irrikawa makes strange claims, says his family is as old as the continent itself. And that eagle feather! He doesn't want to be called 'Cardinal.' His servants call him 'Sire' and 'Majesty.' "

Two humbler men then went in the door: Buzi Cardinal Fudsow, a local plumbing contractor who had added a flush toilet of his own invention to Amen Specklebird's hillside retreat, and Leevit Lord Cardinal Baehovar, a merchant from the Utah country.

Then the new Bishop of Denver, Varley Cardinal Swineman, whose diocese included the whole of the Denver Freestate, except for Valana itself; his cathedral was two days' ride to the north at Danfer, a small community on the outskirts of an expanse of half-buried rubble which was once a city of Denver. Although a Bishop of Denver had mounted the throne of Peter a few years ago, the Denver diocesan chair was not traditionally occupied by a cardinal.

Blacktooth thanked the priest and picked his way through the crowd in the square again. The conclave, legitimate or illegitimate, was not yet officially locked and sealed. The doors and windows were all still open, and the crowd in the square was quiet because a loud voice could be heard from within addressing the prelates who had already arrived. It took a few moments for Nimmy to recognize the voice of his master, because there was anger in it:

"I am under a suspended sentence of death imposed by the Imperial Mayor. The Pope has been denounced as an impostor by the Hannegan, the Archbishop, and their allies. They are attempting to convene a General Council of the Church in New Rome, and this—as you know—cannot be done without the approval of the Pope, and if there is no Pope, it cannot be done at all. Texark has begun to wage an undeclared war against the Valanan papacy, and we are all in danger. While we all deplore the Grasshopper raid into the illegally occupied zone around New Rome, and the ensuing massacre of innocents, we find ourselves by necessity allied with the hordes against the Empire. You must protect yourselves. There are Texark spies in Valana. One was caught yesterday and severely mutilated, without my knowledge, by the Lord of the Three Hordes. He is receiving medical treatment in the local jail. As you must recall, assassins tried a year ago Easter to kill me and my secretary. There will be more attacks of this kind.

"Weapons are available—superior weapons—for the Papal Guard, and for any of you who wish them for yourselves or your servants. Valana is an open city. We do not have border guards, and you may be sure that the agents of the Hannegan come and go as they please. Sidearms for you and your servants will be provided ..."

Perhaps the anger he heard in the voice was rhetorical. The monk shook his head in wonder and moved on. He did not regret that Brownpony had chosen other conclavists this time, although he hoped his obvious reluctance to serve as one of them would be forgiven.

Aberlott was not at home. Meaning to copy the strange prayer and leave it on his table with a note, he tried the door but found it locked. He shrugged to himself and started to retrace his steps when a thought struck him: he still had not been able to see Amen Specklebird because of the crowds waiting outside his door. But people who were not at work were now forming the crowd in John-in-Exile

Square, and the cardinals were inside the Palace. So he turned around and started climbing the hill to Amen's home.

"I'll not translate it for you," said the old black Pope, holding Mother India's card. They were sitting together alone in the hillside house of stone. The rocks were cold, but there was a small fire on the hearth, and the room was chilly but not uncomfortable.

"It's more poem than prayer. It is not written in the language the Sisters speak today, but their speech does have more classical Spanish in it than Rockymount or Ol'zark has. This is old Spanish with a word or two of country dialect perhaps. I have seen it before. I know what it means to the Sisters. They think the crucified woman does not depict an event of history, but an event in the mind of Mary when she allowed herself to feel the crucifixion of her son."

"She wishes herself in his place on the cross?"

"Wishes? In her own heart, she's already there. *Librada del mundo* means set free from the world. But the next three lines seem to be spoken by the crucified. She has eyes, but doesn't see herself. With her hands nailed to the cross, she can't touch herself. With her feet nailed there too, she can't walk about. The line after that—'with the angels of number forty-three'—its meaning is lost. The last two lines might be spoken by the Christ child: 'Mary's blanket covers me. Mary's breasts turn me rosy.' The child is nursing. This is the Sisters' interpretation."

"What is yours?"

"I'm not an interpreter. You are, Blacktooth. You have eyes, hands, and feet. Can you see yourself, touch yourself, walk about?"

"I never doubted it before, but—" He paused. "But what I see in a mirror is not me, is it? I can touch my body, but is that me? My feet move, but who is walking?"

"If you have the right questions, why do you need answers? The answers are in the questions." He smiled a cat's smile. "I like your questions."

"Is there anything you can do for Ædrea?"

Specklebird was silent. "Not that question," Nimmy was afraid he would say. After a time he purred a cougar's purr. "Stay awhile and pray with me. We'll pray the silent prayer."

They prayed without words. Occasionally, Blacktooth arose to feed the fire. At dusk, they ate a simple meal, and prayed some more. In the morning, Brother Blacktooth chopped more wood, and Amen Specklebird hung out a sign that said, I PRAY—GO AWAY.

Nimmy stayed with him and prayed with him. The silence was like what the silence at the Abbey of Leibowitz should have been. On the fifth day, someone came and yelled "*Habemus Papam!*" three times before he went away. Specklebird seemed not to notice. The silence was unbroken by the event.

Blacktooth stayed for nine days, a novena of sorts. He learned more about his own soul during those nine days than he had learned during all his years at Leibowitz Abbey. Amen Specklebird was a teacher in silence. The soul of the student somehow began to resemble the soul of the teacher in silence. There was no explanation for it, for to explain would break the silence.

He might have stayed longer than nine days, but when he came out to chop wood on the tenth morning, a great cloud of smoke was arising from Valana. Was the whole city on fire?

Amen followed him most of the way down the hill, until they could see that it was only the Papal Palace and the police barracks burning. *Only!* That was Specklebird's word.

They embraced in silence, and parted in silence. Nimmy was vaguely worried about the old man. He had tried to remove himself entirely from the scene of the ecclesiastical and political struggle for supremacy, but how could he be free from it while men continued to bicker and battle about his quitclaim on the Apostolic See? Was he ever Pope? Was he still Pope? Where was his resignation? If someone had burned the original, Blacktooth felt the old man was not safe. And yet he knew it would be useless presumption to advise him to seek protection.

The fires had been preceded by explosions, the guard at the gate told him. But Cardinal Brownpony, now Pope Amen II, was not dead. He had only fled the city along with most of the Curia. Gone where? The guard could not say. Most of Mayor Dion's brigade had ridden south on the papal highway, leaving

a few men, with part of the Yellow Guard, to train the civilian militia in the fort the spooks had built. Several cardinals had taken refuge there. Perhaps the Holy Father had gone with Dion. The Texark spy had disappeared from the jail, and the guard reckoned there must have been as many as forty infiltrators to accomplish the jailbreak and blow up the Palace. "These bastards have been living among us for years—settlers from Texark. Most of them pretended to be fugitives."

The Nomads had returned to the Plains, he told Nimmy, and perhaps the Pope was with them, instead.

Blacktooth hurried first to Aberlott's. A note on the door said, "Gone to the fort. Help yourself." Blacktooth tried the latch. This time it was unlocked. Judging by the mess on the floor and the overturned furniture, someone had already helped himself, or else the student had been dragged to the fort after resisting.

He went to SEEC. The building was deserted, except for the covert wing. When he tried to enter there, he was quickly ejected. He went to Saint John-in-Exile. Only a curate was present. He told Blacktooth that the new Pope, after escaping from the burning building, had left the city in a coach belonging to the Grasshopper sharf, but they had indeed followed Dion south.

"Did the coach have 'I set fires' painted on the side?"

"Is that what it said? It was ancient English, I think."

Brām was going to take charge of a shipment of guns, Nimmy thought. He started walking to the fort. On the way, he was grabbed by the scruff of the neck and dragged to the fort. It was Ulad, who would not believe that he was going there of his own free will.

"You know I am a servant of Cardinal, uh, Pope Amen Two," he protested.

"If you still were, you would be with him. You are a soldier now, piss-robe," the giant said. "You are going to fight for the Holy City."

*Holy City?* Did he mean New Rome or New Jerusalem?

"Will I get to see Ædrea?"

"Not likely," growled the hulk.

Nimmy stopped struggling, but Ulad kept his long slender hand around his neck as they walked.

## CHAPTER 22

Let a good pound weight of bread suffice for the day, whether there be only one meal or both dinner and supper.

— *Saint Benedict's Rule*, Chapter 39

LIA BROWNPONY—NOW POPE AMEN II—MISSED his Grasshopper interpreter; no one had seen Nimmy since the election. The new Pope was reluctant to believe that Blacktooth had deserted him; he had left messages with cardinals who remained in Valana. Now he rode with Sharf's Oxsho and Demon Light Brām in Brām's coach, while several cardinals came along behind, some in coaches, some on horseback. Wooshin, who was not fluent in any Nomad dialect, rode with the Pope's driver. Inside the coach, the young Wilddog sharf fawned on his Pontiff, somewhat to his Pontiff's annoyance, because Brām was still calling him "Red Beard," and every time Oxsho said "Your Holiness" or "Holy Father," the Grasshopper sharf grew surly. Brām mentioned Esitt Loyte more often than seemed polite. Oxsho argued that the spy had been caught before he could learn much more than the identities of the participants in the war council.

"And that's too much," Eltür snapped. "Once the Hannegan knows we have allies in the east, he will be less likely to send forces across the Great River. Isn't that so, Red Beard?"

Brownpony had been staring out the window at the scenery as if in deep reverie. Eltür was forced to repeat the question. Oxsho rephrased it in the Wilddog dialect, but Brownpony's response was indirect.

"The attack on the Palace was a complete surprise to me. I was too confused to think clearly for an hour or two. The agents who broke Loyte out of jail must have taken him straight to the telegraph terminal. We should have thought of that immediately and sent forces to capture it before he could get a message out. Now it will be captured in due course, but too late."

"So the Hannegan's forces will not cross the Great River!"

"We can't know that until you try to arrange a cease-fire, Sharf Brâm."

"You expect me to play the coward, Red Beard?"

"Of course not! You can seem unwilling. Let him know that Holy Madness demands it of you, that you would be delighted to resume hostilities if Texark turns you down."

Brownpony had the uneasy feeling that Eltür blamed him for twin Hultor's self-destructive behavior, but this feeling probably arose out of Father Steps-on-Snake's opinion that Hultor's murderous raid was meant to send a message to the cardinal who pampered Wilddog Christians and left the Grasshopper out of his councils.

"Your tribes and your warriors, and you yourself, Sharf Brâm, are the most powerful force we have against the Hannegan."

Eltür had trouble understanding. Oxsho tried to shift the dialect to Grasshopper, but the result was less than satisfactory.

"We are not your force, Red Beard," said the sharf.

They passed a dozen armed men from New Jerusalem along the way. The papal highway had been seized by, and was being patrolled by, Dion's forces. The guard drew itself up into formation and saluted as the Pope passed by. Soon they came to their destination. The road to Shard's place was no longer just a path through the bushes leading to Scarecrow Alley. Magister Dion's men were fast builders. The brush had been cleared. Fifty yards from the papal highway, a log barricade had been erected, and twin guardhouses flanked the improved road. A cloud of dust raised by men and horses hovered over the area. The ramshackle houses of the gleps had been razed. Barracks and other log buildings replaced them. Two trains of wagons were loaded and stood ready to move out, while the dust of a third train heading south was still visible—Önmu Kun, Brownpony thought.

Amen II was quickly surrounded by his Curia when he descended from Eltür's coach, and his leave-taking from the Nomad sharfs was perfunctory and less than cordial. Each of them was met by a band of warriors from his horde, and they were ready to move out within the hour. The secrets of the Suckamints were no longer secret, and the colony now was clearly at war.

The Mayor strode up to the group of cardinals, genuflected with military precision to the figure in white, and brushed the Pope's ring with his lips. He answered questions before they were asked.

"The telegraph station has been captured. According to the prisoners we took, Loyte had already been there and gone. Outlaw forces ambushed a cavalry troop in the outlaw lands. The ruffian you sent me brought over a hundred men to us, and they took no prisoners. Our light horse are riding hard toward the second station, and they are passing Jackrabbit guerrillas on their way to join us. Now what of our allies in the East?"

"Well, word has not reached them yet about what's happening here." Brownpony shrugged. "So we'll not know for some time." He gestured toward the mountains. "Is the way open to us?"

"Of course, Holy Father. The buildings are all of logs, but new, and it is your third Rome as long as you wish it to be." He beckoned to a young man with such long legs and short arms that one might have considered him a glep, except that Dion introduced him as his son, and he was both well-mannered and handsome.

"Slojon will be your guide as long as you need one. He will be in charge of my office while I am with the army."

The young man bowed and squinted closely at the Pope's ring without actually kissing it.

Brownpony continued to peer out at the scenery as if in deep thought while they rode upward into the mountains in a coach formerly belonging to the Mayor, who had ordered the door panels repainted with the papal tiara and the keys. This time Wooshin rode with him inside the coach, along with Dion's

Slojon, and Cardinals Hilan Bleze and Mother Iridia Silentia. With the latter, he had enjoyed a distant but enduring acquaintance, and she had thanked him for concurring in the first Amen's choosing her for the cardinalate. Brownpony admitted that he had in fact done no such thing, but he now applauded her appointment after the fact.

During the journey into the mountains, she brought up the subject of Ædrea's captivity, but Brownpony's respiratory weakness returned to him as they gained altitude, and he was unable to say anything to support her in her petition to Dion's Slojon, except to smile at her and gesture in the young man's direction. The gesture could have meant whatever each of them might want it to mean. Hilan Bleze changed the subject to curial matters.

By the time they arrived in the heart of the community, Pope Amen II needed to be carried by sedan chair to his new quarters. He asked the Secretary of State to send an urgent message to Blacktooth in Valana for a copy of a recipe by the Venerable Boedullus. Then he collapsed in a feather bed and slept for sixteen hours. Outside the building was a disappointed crowd of the faithful among these normal-looking "Children of the Pope," who had assembled in the hope of receiving the Apostolic Benediction from their special father. Secretary Hilan Cardinal Bleze blessed them himself, and told them to come back tomorrow.

Corporal Blacktooth St. George never received his Pontiff's urgent message, for when it arrived in Valana, it was routed to the fort and delivered to his commander, Major Elswitch J. Cleaver, who signed a receipt for it in Blacktooth's absence, but somehow forgot to give it to him later. He called Chuntar Cardinal Hadala's attention to the message. The cardinal opened and read it.

"Our new Holy Father must have become a gourmand since his election," said Hadala with a hint of contempt in his tone. "It's only a request for a recipe by a cook named Boedullus."

"Could it be a coded message?" suggested the florid major.

"I think not. If Corporal Blacktooth had any secret information, the Pope would just summon him directly."

"Well, I heard that His Holiness *had* sent for him."

"Where did you hear that?" the cardinal asked sharply.

"A rumor. He may have started it himself, but somebody said it came from Cardinal Nauwhat."

"Damn it! I'll have a talk with Sorely. You know Mayor Dion doesn't want that monk in New Jerusalem. There is his affair with that suspect girl, and the Pope, after all, is now too dependent on the Mayor to risk offending him. I'm sure that's why Elia hasn't summoned him. Besides, he won't need a Nomad interpreter in New Jerusalem, even if—" He broke off.

The Major looked at him and wondered if the distinction between interpreter and translator had stopped his line of thinking. As » to confirm this, Hadala continued:

"Besides, we are going to need someone to handle correspondence between ourselves and the Nomad sharfs. Sorely will surely need him too, for the same reason. That's why we proposed his promotion to corporal, and we want to keep him reasonably satisfied. I doubt any rumor about his going back into Brownpony's, uh, the Pope's service came from Nauwhat."

"Well, I can keep him busy until you need him," said Gleaver. "Right now, the police have him. And then he's on leave until after the funeral tomorrow."

"Better have him watched, lest he make a run for it. He can't be trusted. Brownpony learned that. And don't assign him duty in the city. He's probably too squeamish to shoot traitors."

A cleaning woman, who came on Mondays to scrub the former Pope's clothing, dishes, and floor, usually turned away when she saw his I PRAY—GO AWAY sign in place, but on the Monday in question, a brown stain from something that had leaked out under the door caught her attention. She knocked timidly, but there was no answer. She tried the latch, and the door swung inward. It was a quiet morning, and her scream echoed from the opposite hillside. A farmer and two shepherds responded. The decapitated body of Amen Specklebird had fallen sideways from the prie-dieu where he had obviously been kneeling before his altar when his killer struck. His head had bounced off the wall and rolled under a

table. He had been dead at least two days.

The manner of his death—by a single horizontal stroke of a sword—caused immediate suspicion to fall on the Yellow Guard, but neither Gai-See nor Woosoh-Loh had left the fort during the week of the murder, and the others, including Wooshin, had accompanied Pope Amen II to New Jerusalem.

Blacktooth had been one of the last people to see Pope Amen Specklebird alive, and the police questioned him closely, but in the presence of his lawyer-advocate, a priest appointed by one of the cardinals to look out for his interests. As it turned out, the police did not suspect him, but his advocate was of some help in explaining the religious relationship that developed between the Leibowitzian monk and the retired Pope during their nine days of silent prayer in Amen's residence just days before his murder. Nimmy blamed himself. He had failed to act on his intuition at the time of their parting: the feeling which had come to him that Specklebird was in imminent danger. He was distracted from this worry when Ulad had grabbed him by the neck and drafted him into the militia, but he had felt certainty that Specklebird would ignore a warning anyway.

The police were unconcerned by his guilty feelings; they had as yet no suspects, although the population of the city was being carefully screened, and any citizen who could not offer proof of his place of birth was sent to a detention camp adjacent to the fort. Fifteen known participants in the terrorist uprising had already been shot. The death sword could as plausibly have been a well-sharpened cavalry saber as one of the beautiful blades of the Asian warriors. Nimmy was allowed to go in peace, and his leave was extended to include the time of the old man's funeral. He wanted to run away to New Jerusalem, but he would surely be caught, and Brownpony might not welcome him if he did escape.

Amen Specklebird lay in state, his body illuminated by many candles on the high catafalque in the Cathedral of Saint John-in-Exile, and all the faithful who remained in Valana after the insurgency, the purge, and the flight came now to pay their respects and to pass in a slow line to view the body. There was less pomp and grandeur than if he had died as a reigning pontiff, and a certain amount of chaos, but that was more a result of the exodus to New Jerusalem than it was of his resignation and the previous transfer of papal power to Cardinal Brownpony. Investigators found, for example, that no official had taken from the old man the signet of his fisherman's ring and the two seals (one for wax, one for lead) of office upon his resignation; these seals were normally seized and broken by the Cardinal High Chamberlain during the interregnum after the death of the Pope. Had they been used after Brownpony had ascended? The ring was removed from his finger after death, but militiamen searched his home and found no seals. Stolen by his killer? These and other irregularities cast doubt upon many documents that emerged from the Specklebird pontificate, especially in cases where living witnesses could not be located.

After joining the slow line and awaiting his turn, Blacktooth passed the catafalque. He noticed that the undertaker had done a good job of concealing the fact that the head had been severed from the body, but otherwise the corpse looked more like a pope than Specklebird had ever looked while alive. The wild white hair was carefully combed, the deeper creases in his face were caulked, and his black skin lightened somewhat with a brown powder. The stink of the corpse, however, had begun to penetrate the background odors of incense in the Church. Nimmy choked with tears and hurried into the square.

There was a thin crowd. Many of Amen Specklebird's admirers had been fanatically devoted to the old holy man, and enough of them disputed the validity of his resignation, and therefore the validity of Brownpony's election, that some were heard to suggest that Brownpony himself had arranged the old man's murder in order to secure himself in office. Nimmy overheard two hill-dwellers giving voice to this theory, and he shouted at them, "You stupid oafs! That's exactly what Texark wants you to believe."

The men took umbrage, and Nimmy let himself be goaded into a fight. He won the fight, but lost self-respect, although he was now wearing the green uniform of a militiaman and not his brown monk's robe. He felt pats on the back, however, and heard cheers from Valanans who knew and liked the new Pope.

By the time of the funeral on the following day, Blacktooth smelled the stink of the corpse even through the haze of pinon pine incense that pervaded the cathedral; later witnesses for the cause of

canonizing Pope Amen I would testify of the heavenly perfume exhaled by the body. He knew all about the olfactory miracles performed by saintly corpses; Saint Leibowitz had smelled like ambrosial barbecue, his followers said. He too now tried to smell the miraculous perfume of Amen Specklebird, but his piety perhaps had been diminished by his sins, for the rotten odor persisted.

Suddenly, however, the body of Amen Specklebird sat up on the catafalque and pointed straight at Blacktooth. The whiskers of the cougar twitched, and fangs were bared. Nimmy closed his eyes to squeeze the tears out of them. When he opened them again, the corpse lay back down and never moved during the high funeral Mass, concelebrated by the six cardinals who had stayed in the region.

The purge of Valana's people continued, even during the funeral. When Nimmy emerged from the Church, he learned that the number of suspected conspirators who had been shot had risen to eighteen, and more than thirty citizens were imprisoned in the stockade next to the fort. Anyone unable to furnish proof of his place of birth, either by document or through testimony of witnesses, would, if no one appeared to testify of his participation in the terror, be sent into permanent exile. Any captive with an enemy or two in the city could expect a denunciation and testimony leading to his execution. Old scores were settled thus. The court trying the cases was neither civil nor ecclesiastical, but military. Nimmy guessed that most of the real villains had fled the city immediately after the crime, but the trials provided an outlet for revenge. In the murder of Amen Specklebird, however, the police had no suspects.

When Valana had been pacified and purged, there was no talk of disbanding the militia. That Chuntar Cardinal Hadala and his New Jerusalem officers had their own plan of battle in the war became clear when orders were posted to prepare the combined forces to move out from the city by the first of the month, when the moon was full. Messengers had been sent out to the Wilddog, and Sharf Oxsho replied by sending three guides and more than a hundred horses for those citizen soldiers of Valana who had none of their own. The guides were assigned to Blacktooth for interpretation. He found them ignorant of the fact that they were directly following the orders of Chuntar Hadala, Sorely Nauwhat, and Elswitch Gleaver instead of the Pope. He was afraid to mention it, because Nauwhat had always been close to Brownpony. Valanans were skeptical and complained a lot about leaving the vicinity of the city for a move away from the mountains, but there was as yet no talk of rebellion.

Then, on the first of July, when the militia was preparing to ride east with fourteen wagonloads of arms, a messenger of the Papal Guard rode into Valana and posted on the door of the Cathedral and the wall of the Papal Palace an eight-page document with the papal seal, then proceeded to the fort and posted another copy on the orderly room wall.

Its heading was thus: *Amen II Episcopus Romae servus servorum dei, omnibus electis domini ipsis fidelibus in una Ecclesia vera Catholica atque Apostolica credentibus, qui subsunt nobis secundum Petrum unicum pastorem . . .*

Blacktooth knew historians would call it by the first words of the text, *Scitote Tyrannum*, which followed. Newly returned after dark to the fort from furlough, he read by torchlight the first few paragraphs on the wall:

Amen II, Bishop of Rome, servant of the servants of God, to all the faithful believers in the one true Church, Catholic and Apostolic, to these chosen ones of the Lord, who are subject to Us as to Peter, the only shepherd appointed by Christ to become the head of His mystical body, sends greetings and the Apostolic Benediction.

YOU SHALL KNOW THAT THE TYRANT Filpeo of Texark [Tyrannum Phillipum Texarkanae] together with his uncle, the former Cardinal Archbishop of the City of Hannegans [Civitas Hanneganensis], having by their own acts [ipso facto] been excommunicated, as affirmed by Our predecessor of holy memory, Amen I, are hereby declared by Us to be enemies of God and His Holy Church, are cursed, condemned, cast out, cut off from the Body of Christ, apart from which there is no salvation. For crimes against humanity and the Church, including his own people and their clergy, We declare Filpeo Harq deposed from the office of Mayor; We absolve his former subjects from all oaths of obedience to him, We urge them to reconstitute a legitimate government in his place, and We enjoin all

Christians against serving or obeying him. As long as the tyrant remains in power, We encourage all Christian rulers of peoples throughout the continent to take up arms against him. They shall receive through Our venerable Brethren, their own Bishops, Our blessing upon their armies and their arms.

Moreover, whosoever among the faithful is fit to bear arms shall, upon undertaking to wage righteous war against this heretical tyrant and his uncle, receive from Us through his confessor a plenary indulgence for all his sins and remission of all temporal punishment which may be due either in this world or in Purgatory. Upon confession, his only penance shall be to wage war against the forces of the imperial tyrant, and should he die in battle, We, who hold the keys of the kingdom of Heaven, shall unlock the gate thereof that he may enter into the holy Presence . . .

### *A crusade!*

The word itself was not used, and had not been used since the twenty-third century, but all the characteristics were there. The Pope spoke of heroes marching behind a crucifer into battle. War was to be waged under the sign of the cross and the banner of the papacy. The Church in Hannegan City was laid under interdict. Ecclesiastical courts were ordered closed. Priests were forbidden to say Mass. All sacraments except last rites were withheld. Clergy and laity who ignored the interdict were automatically excommunicated. The sentence did not extend to the Province, except to those parishes which had refused obedience to Brownpony's former Vicariate and remained tied to the Hannegan City Archdiocese.

Upon Urion Benefez himself the Pope pronounced a sentence of "Anathema, from which he can be absolved only by the Roman Pontiff and at the point of death."

There was more, but Blacktooth left the furious document and returned to the barracks by full moonlight. They would be moving out tomorrow. His astonishment was due to the fact that such language came from his former employer, a man slow to anger.

"Why astonished?" Aberlott asked him. "Haven't you heard of a crusade before?"

"Yes, but not since the twenty-third century, and that one of the least holy wars ever fought. The bull or whatever it's called just doesn't sound like Cardinal Brownpony."

"Well, it isn't Cardinal Brownpony. It's Pope Amen II. Maybe his voice changed when it dropped on him."

"It sounds more like Domidomi Cardinal Hoydok."

Aberlott pondered for a moment. "And why not? Hoydok wouldn't dare go back to Hannegan City. He's not here. So he must be with the Pope. And who could better write a letter to anger the Mayor and the Archbishop? He's probably the Pope's secretary for urban affairs by now."

Nimmy's urge to run away to New Jerusalem had not entirely disappeared, because of Ædrea, but it had been diminished in urgency by the tone of the bull *Scitote Tyrannum*. He was not sure that he wanted to work for its author.

Early the following morning, most of the remaining population of Valana turned out to watch its young men ride off toward the Plains and to war under command of the spooks of New Jerusalem. Minor clergy, who had read *Scitote Tyrannum*, had donned vestments and now fell in with the riders. A priest bearing a crucifix marched ahead of Major Cleaver's horse. Blacktooth suspected that the support of clergy had been arranged by one of the cardinals. The show of religion in support of the militia prevented a public display of hostility toward the alien commanders who were leading local soldiery.

The sun was approaching the zenith when Cleaver called a halt for food, water, and a brief rest. When the formation fell in again, Ulad sent Blacktooth to the head of the column as interpreter. Only now that they were safely out of civilian earshot was Cleaver prepared to disclose the planned route to his Nomad guides. Even so, the major ordered that the details be kept secret from the men and from Nomads of either horde they might encounter during the journey.

"From here we ride southeast until we reach the Kensau River. We'll follow the river until it turns northeast, then continue east-southeast until we pick it up again at some of the old dams near Tulse, and on until we're within half-a-day's ride from the Texark patrol road. At that point we reconnoiter, and

send a patrol to infiltrate the Watchitah."

Blacktooth translated for the Nomad scouts, and Cleaver continued:

"The moon should be full again about the time we arrive. Our brothers beyond the border there can arrange incidents to distract the patrols while we try to drive the wagons past the border at night. With luck, we can arm the Valley people without a fight. If we have to fight to get them in, it will mean Hannegan has seen us coming. That means secrecy. Don't talk to any Nomads we meet about where we are going."

The Nomad warriors nodded their understanding, but Blacktooth heard them talking later about the troop being observed by motherless ones, who regularly sold news of Grasshopper movements to Texark agents. There would be a blue moon on the last day of July. By day or by night, a convoy of wagons escorted by light-horse infantry traveling east-southeast across the Plains toward Watchit-Ol'zarkia would not go unobserved. Nimmy and the Nomads expected a fight, but only Nimmy was committed to it, and his Ædrea was in jail.

The whole scheme seemed crazy. A week after the departure from Valana, Sorely Nauwhat caught up with them. He was weary from fast riding and immediately made a bed in one of the wagons. The horse he had been riding bore a brand which identified it as belonging to one of the Nomad messenger families, so it was clear that he had changed horses several times in catching up with them. Why Nauwhat? What was so important about this expedition that the head of SEEC joined the command? Previous to his appearance, Blacktooth had suspected that this feckless sortie of the Valanan militia was entirely Chuntar Hadala's project, and, impressed against his will, he wanted to desert. But Nauwhat had been Brownpony's closest friend and supporter in the Curia, and his presence seemed to confirm the legitimacy if not the sanity of the mission. Gai-See and Woosoh-Loh, now sergeants, had come with the expedition, and their loyalty to Brownpony was beyond suspicion. There would be no deserters with them looking on.

One morning early in mid-July, while passing the cardinals' tent, he overheard a murmur of conversation between these princes of the Church.

". . . peace, yes, but the peace of Christ!" Hadala was saying.

"Sure, Brownpony loves peace," Brownpony's friend answered. "He loves it so much he doesn't care who he kills to get it."

Blacktooth hurried away, but perhaps not before being seen; Sorely Nauwhat began avoiding him immediately afterward.

*O Santa Librada! Freedom is not visible!*

*Pray for us!*

That night he dreamed of a woman, a casualty of war. She was half buried in a hillside pocked by cannon fire.

Blood drained slowly in a thick stream from a hole at the edge of her breast. Half her body and her right arm was swallowed up by the landslide, while her left arm lay free and limp among the stones in sand. He touched her arm and felt for a pulse. He could find none, but the wound in her side continued to bleed. The flow of blood continued. It ran into the sand and between the stones and continued to run ten feet down the slide. He tore off a piece of his robe and tried to stanch the flow, but even after leaving it there while he counted to a thousand, the wound bled unchecked. He began trying to dig her out, but his work moved a critical stone, caused her body to shift, and caused several rocks to roll from above, as if the landslide had not finished its work.

Soon it became apparent that the flow of blood was increasing, until he saw that the blood could no longer be her blood but was coming through her from somewhere deep within the collapsed hill. But the blood was keeping her alive. After a while, she opened her eyes and looked at him.

For a moment, she was Ædrea. She raised her left hand toward his face, and he saw a torn palm with more blood.

*"Tengo ojos, no me miren.*

*"Tengo manos, no me tapen."*

She was Santa Librada now, deposed from the cross.

He backed away in fear. She hissed and turned red and tried to bite him. She was the bride of Brownpony, the Buzzard of Battle. A shadow fell over him, and he looked up. There stood Elia Brownpony in white vestments and wearing the tiara. He sprinkled the woman with holy water, and she shrieked in agony.

Blacktooth always had trouble sleeping under the stars.

## CHAPTER 23

Indeed at all seasons let the hour, whether for supper or for dinner, be so arranged that everything will be done by daylight.

—*Saint Benedict's Rule*, Chapter 41

HE EMPEROR WAS A PART-TIME SCHOLAR.

With the help of a young political-science professor who was also a popular author, Filpeo Harq had written a book. It was a book Brownpony not surprisingly had sent to the Holy Office as soon as he saw it. The Holy Office duly added it to the *Index Librorum Prohibitorum*, although it bore the imprimatur of the Cardinal Archbishop of Texark, and carried an introduction by a monk of Saint Leibowitz, who, unfortunately for his career, happened to agree with the Imperial Mayor that the restoration of the *Magna Civitas* could only be accomplished by secular science and industry under the protection of a secular state against the resistance and hostility of religion. It was such a self-evidently wicked book that the Holy Office wrote neither an attack nor a commentary; the work was filed under "Anticlericalism." Its author was already so thoroughly anathematized that further curses from eternal Rome would seem petty.

But Filpeo was a scholar, and among other things, he had been able to restore several ancient pieces of music, including one of regional origin which seemed well suited to become the new national anthem for the Empire, and he published it in his book. The tune was now well known. Its ancient words were English, but the Ol'zark translation scanned well enough. It began: "The eyes of Texark are upon you." The Mayor wanted his subjects to feel well watched.

Every priest in the Empire who read the crusading bull *Scitote Tyrannum* aloud from the pulpit or who publicly observed the interdict imposed on the Texark Church by the Brownpony papacy—there were only thirteen of them—was arrested and charged with sedition. Two bishops who had suspended Masses and confessions in their dioceses in obedience to the bull joined the priests in jail. In six out of seven parishes throughout the Empire, however, the religious life went on as if Amen II had never spoken. After so many decades of a papacy in exile, the people of Hannegan City and even New Rome had lost sight of the Pope as a real player in their perceived world. He was distant, and his anger was like that of a player on the stage, except that the people only read the reviews without seeing the play. The communications media—mostly paper since the telegraph line to the west was down—kept them informed, but the media were deferentially kind to the relatively absolute ruler of the state.

*Scitote Tyrannum*, therefore—however binding it might be in Heaven—was the least of Filpeo's worries on Earth. The Antipope's forces were going to march, and the Antipope had used the treasures of the Church to arm the wild Nomads with superior weapons to be used against civilization. Filpeo always spoke of him as Antipope, although there was no competing Pope. Filpeo stood for the renewal of the *Magna Civitas*, and Brownpony the Antipope opposed it. It was that simple, from the Hannegan's point of view. Brownpony was the past waging war against the future. He armed the barbarians and would soon send them against civilization's holy places, if not against the City of Hannegans itself. Filpeo was confident he could defend the city until the new firearms were delivered, and after that his forces would be able to drive the spooks back to the Suckamints and herd the Jackrabbit into the southwest desert, push the Wilddog north of the Misery, and herd the Grasshopper into formerly Wilddog lands, so that the two northern hordes would be forced to fight each other for living space.

The Imperial Mayor hoped to win the Nomad outlaws over to his side, and he sent an ex-pirate to recruit them. Admiral eFondolai promised them Grasshopper lands in the aftermath of victory. Filpeo was amused to hear of it at first, but after giving the matter some thought, he decided that he would, if possible, honor the promise Carpy had so rashly made. If the motherless ones could marry farm women and be assigned enough land, they could raise fully domesticated cattle and live in fixed homes, and trade with the farmers and the cities. In such circumstances, they would not develop a society anything like the hordes. Very likely the taboo against capturing wild horses could not survive without the Weejus to enforce it, and the motherless ones, once they settled down, were not likely to restore the matrilineal inheritance of wild Nomads. They would acquire property and fight to defend it. In the Mayor's dream, in the wake of his certain victory, the Grasshopper and the Wilddog and the motherless ones would each be at war against the others, and the Jackrabbit would straggle back out of the desert to be arrested and put to work repairing war-damaged properties.

Filpeo was well pleased with his admiral, but not his general.

When General Goldæm went to the university and demanded Thon Hilbert's cooperation in teaching the troops how to contaminate wells in the Province and infect cattle with the new diseases, Thon Hilbert refused. General Goldæm went to the War Office and got him inducted into the Texark Army as a private. Then he ordered him to teach. Hilbert cursed the general personally, then cursed his Monarch. The general had the professor put in jail for sedition. The Hannegan summoned the general to his quarters, fired him, and retired him at half pay. He then put Admiral eFondolai, alias Carpios Robbery, in charge of the project. Because Hilbert's assistant at the university agreed to teach the military whatever was required, Hilbert remained in jail, pending an apology to the Hannegan. The apology was not immediately forthcoming.

Three months after he fired General Goldæm, Filpeo watched with delight as Admiral eFondolai's model strike force, led by Carpios himself on horseback, marched past his reviewing stand. The Imperial Mayor had never seen such a burly gang of cutthroats outside of a prison yard. They were armed with the several dozen repeating arms which had already been delivered by the gunsmiths, which was quite an investment, and one which Filpeo had been reluctant to make at first. Carpios made the point that for an effective assault force, firepower was everything, so the Emperor placed his most advanced weaponry in the hands of ruffians dressed in wolfskins and chewed leather. He watched them march under a banner that depicted a bird being roasted on a spit over a fire; the bird was branded with both the Weejus symbol for the Buzzard of Battle and with a pair of crossed keys. Filpeo laughed aloud at the sacrilege, called the old pirate back to the stand, and awarded him the ancient title of "Vaquero Supreme of the Plains," which had been claimed by the Hannegans since the time of their Nomad roots, but which dropped out of use after Hannegan IV fell off his horse.

Part of Filpeo's delight was at Carpios' expense, for the sight of the bearded pirate in admiral's white uniform riding at the head of three hundred bathless ruffians dressed in wilddog skins was hilarious. After the parade, Filpeo not only gave him the title of Vaquero but promoted him to field marshal—"so you can choose your own uniform" was the way the Emperor put it. But he made sure to let the old seaman know that when he finished the project, he would be made commander in chief of Texark forces. There was something oceanic about the Great Plains. The admiral sensed it too, and became enthusiastic about the wars that plainly lay ahead.

There was no clear Texark military doctrine for Nomad warfare, not since Hannegan IV fell off his horse, and the admiral's job was quickly to develop such a doctrine. The Plains resembled the ocean in that there was nowhere to hide, and no naturally defensive terrain in which to take refuge. Most land west of the last timber was equally accessible from all directions, and therefore as inhospitable as the storm-tossed sea. A cavalry battle there could be like an engagement between two ships of war—short, savage, and with only one surviving side.

The admiral thrice visited Thon Hilbert in jail. He informed his ruler of the visits, and affirmed their obvious purpose; he promised an account of the ultimate outcome, but declined to give a running report. The jailer told Filpeo that during the admiral's third visit, they played Old Zark chess and talked about nothing but the game. What came of the meetings was also nothing, but Carpy wanted the Mayor to let

the professor go anyway. Filpeo refused. He had no use for an apology, but apology or no apology, Hilbert would stay in jail until the university's cooperation with the military was satisfactory and assured.

"Thon Hilbert's disease is hindering them in the South," a field commander told him. "A few cases have appeared among Brownpony's armies, but it is becoming endemic only in the Province. Because of it, the spooks and the Jackrabbit rebels are exhausting their military energy for the time being. We can soon launch a counterattack."

"And no cases of the disease have appeared among our troops?"

"No, as I told you, as long as they drink Hilbert's preventative every day. It tastes bad, and they don't like it. But there is a standing order that any trooper who catches Hilbert's disease shall be immediately shot. To prevent further contagion is the stated reason."

The Mayor shifted restlessly. "That sounds unnecessarily cruel."

"Well, if carried out, of course. The threat is necessary to prevent contagion; it is only meant to insure the men drink the preventative."

The War Dog was a constellation in the Nomad night, but he was also the mythical pet of the Lord Empty Sky. That ancient hero had led even wilddogs into battle against the army of the Farmer King. Nomads had always sent their dogs against the enemy whenever practical, but Empty Sky's battle was unique in that his dogs were wild-dogs, and in that their elder Weejus bitches had elected Empty Sky to be sharf of the Horde of Wilddogs, while his sister thought the dogs were merely being loyal to the *Qædach dri Vørdar* to whom all loyalty was due. The fact that the Horde of Wilddogs had elected him as its own rival to the human Wilddog sharf suggested that the office was usually held by a dog. That this dog had an equal claim on human Wilddog loyalty and young Wilddog women was a Grasshopper conceit. It was a conceit that sometimes led to fighting between rival bands of drovers of the northern hordes.

But the War Dog was still a Nomad mythic reality, and Swimming Elk had begun his reign as sharf by ordering a return to the old practice of keeping attack dogs trained to accompany horsemen into battle against an unmounted enemy, and he awarded a monopoly on the training of war dogs to the family of his brother's wife. Which is a Nomad way of saying that he gave the job to a brother-in-law, Goat-Wind by name, who happened to be good at it. Goat-Wind persuaded all the adolescents of his extended family to organize parties for raiding lairs of wild bitches and stealing their puppies. He turned the management of puppy collections over to his sister, with an injunction against killing bitches except in self-defense, and another against taking pups younger than six weeks.

A Weejus minority held that stealing wild puppies was an offense like stealing wild colts, but Eltür's sister asked them scornfully, "Who are we offending? The *Høngin Fujæ Vurn* is not the Wild Bitch Woman. The dogs belong to Empty Sky, for whom the sharf speaks. We don't even punish the motherless ones for roasting wild puppy."

Demon Light wanted results within two months, so Goat-Wind collected every available dog with any experience at all as a working companion to a horseman. Even now in late July results were apparent. Thirty-five willing warriors had been given thirty-five dogs to work with, and eighty-one younger dogs were already in school.

There was no way to test dogs in the occasional skirmishes with Texark cavalry, for dogs could never effectively join one side in an encounter between mutually mounted war bands. The dogs could participate in a cavalry attack on infantry, but since Nomad wars were usually ceremonial conflicts between hordes, there had been no reason since the time of Høngan Ös to bear the expense of feeding a large war pack—until Eltür began contemplating battle against the standing armies of the Hannegan. The spirit of the dog-man-horse war entity was still alive in the tribes, however, and Demon Light's attempt to awaken it was immediately popular. It added Empty Sky's blessing to his leadership. But any Nomad-speaking Texark agent—and there must have been at least one—who learned about the training of dogs for war would know that dogs were only for fighting unmounted armies like the defenders of Empire. They would be useful for incursions into Texark space.

His brother Kindly Light, when he broke through Texark border defenses and rode all the way to

New Rome, had needed dogs. With dogs, Hultor might have lost only half as many men, even if it cost him all the dogs. A dog was a lethal loyal weapon, once the man and the dog and the horse became melded into a single spirit, which was then merged into a spirit of a pack. Man became more horselike and doglike. Dog and horse became more human, and more like each other. It was a spiritual unity, but probably the only outsider to notice it as such was that old Christian shaman of the Wilddog, Father Ombroz, a man Eltür much admired, although he begrudged his influence on the Wilddog shamans. The epiphany of the dog-horse-man unity was, when experienced, a Nomad sacrament—according to Ombroz. Monsignor Sanual had called it "*a* bestial form of diabolic possession," a remark which Eltür found flattering.

It was the issue of the War Dog that saved Chuntar Cardinal Hadala and his officers from death at the hands of a Grasshopper war party. The occasion of the issue being raised was a council called when the news of Hadala's invasion first came to the Grasshopper leadership. Demon Light became livid, and was quite ready to launch an immediate attack on the cardinal's forces. For negotiating purposes, it always behooved a Grasshopper sharf to take a harder line in council than he expected the grandmothers to approve. But it was his own sister who used the issue of the War Dog against him after Eltür proposed killing Hadala and anyone else who resisted a seizure of the militia's wagons.

"It is a complete betrayal, my sister," said Demon Light before he yielded. "Brownpony's plan was for the Suckamint spooks to attack in the Province, and the eastern allies to strike at the other shore of the Great River. The Grasshopper was to keep the peace until Hannegan took the forces which now face us to the defense of his allies. Now here comes this army of farmer clowns out of Valana tramping toward Glep Valley with guns! How is Filpeo Harq not to notice them coming? Every motherless one south of here has seen them and tried to sell the information to Texark. The first one who tried probably got paid."

"Yes, and I wonder," his sister said thoughtfully, "if the motherless one who told Texark about your war dogs was properly paid. And whether your dogs will affect Hannegan's temptation to weaken the forces that face us. No, I don't think Grasshopper justice demands killing the fools; it demands they turn back. You should let them choose: take their guns with them or surrender them to you. And that, my sharf, is the Weejus consensus."

Demon Light let his battle fury subside, as it usually did in the face of the Weejus consensus, if no Bear Spirit objection arose. After the council, Brām assembled a force of eighty warriors and led them south by east to intercept this mounted militia of townsmen from the mountains. His men had armed themselves with new five-shooters as well as traditional lances, but Eltür ordered ten repeating rifles brought along for killing officers at a distance if they met resistance from the townsmen.

Then he took an action which changed the course of the war. He sent for Black Eyes, who had been captured during Hultor's raid. The man had been imprisoned by the Hannegan and had met Cardinal Brownpony in jail, but he was released months later to carry a message from Filpeo to his horde. Both Demon Light and the Emperor knew Black Eyes was a double agent, but as such he could be useful to both.

"Tell your contacts about Hadala's expedition," said the sharf, "so they can mount a defense in that area. And tell them I told you to tell them. If they want to know why I let them know, explain that I want hostilities to cease between the Grasshopper and Texark."

"The farmers will be glad to hear it," said Black Eyes with a snicker; he left camp immediately for the frontier.

Demon Light was not really turning on his allies, because he was not convinced of his own complaint of betrayal by the Pope, for while Brownpony alone might be foolish enough to launch such a venture, Brownpony had good advisers on Nomad affairs. Some were sent to him by Holy Madness, Lord of the Hordes. And Eltür thought highly of one of the Pope's secretaries, the Nomadic interpreter monk Ny-inden, who spoke Grasshopper so well. None of these counselors would allow Brownpony to believe that Chuntar Hadala's incursion into Nomad country was acceptable to the Grasshopper, even were it not militarily stupid on the face of it. When his initial berserk reaction to the news of the advent subsided, Demon Light expected his war party to be confronted—not by a force of official crusaders

launched by a Pope, but by a motley parade put in motion by the lunacy of lesser men.

When Brownpony first learned about Hadala's mission, he himself cried betrayal, and his anger was stirred against his successor in the Secretariat of Extraordinary Ecclesiastical Concerns. The Pope could think of no reason why Sorely Nauwhat would betray him or lend support to a harebrained scheme to arm and assist such dubious allies as Hadala's flock of gleps in the Valley, at the cost of probable hardening by Texark of its western frontier. Hadala had gone crazy in the service of his flock, the Pope decided. He would think thus: If Brownpony can arm the Nomads, I can arm the real Children of the Pope—not the spooks in the Suckamints, but the gleps in the Watchitah and Ol'zarks. The Pope could understand Hadala's passion for his own people, but not Sorely Nauwhat's duplicity in the ridiculous undertaking.

The possibility that his old friend Nauwhat had simply gone over to the enemy never occurred to Brownpony until it was put to him by Abraha Cardinal Deacon Linkono, the New Jerusalemite schoolteacher who was invited to join the Curia because he knew everyone in this nation now playing host to the papacy.

"But what could Filpeo Harq possibly offer that would tempt Sorely Nauwhat to betray us?" Pope Amen II wanted to know.

"The papacy perhaps?" the schoolteacher guessed.

Stung by Linkono's speculation, Brownpony sent an immediate message to Valana ordering Cardinal Nauwhat and Brother St. George to appear before him. By including Blacktooth in his summons, the Pope hoped to alleviate suspicion in case Sorely really was guilty. Within two weeks, however, the messenger returned with the news that Blacktooth had gone with the Valanan Militia, and that Nauwhat had disappeared shortly after their departure. The news was very depressing to Brownpony. He called his Nomad messengers and instructed one of them to pursue Hadala's militia and order him to turn back. He deputized another as an Officer of the Curia to arrest Nauwhat on sight if found in Nomad country and to arrest Hadala if he disobeyed the order to retreat. He sent a third messenger to assure the Grasshopper sharf that Hadala's sortie was not authorized, for the Pope feared the wrath of Demon Light.

The Nomad messenger-service families, both Wilddog and Grasshopper, had for decades enjoyed a monopoly on a High Plains relay parcel delivery between Valana and New Rome. They kept fixed camps, and for this un-Nomadic practice they were not admired within their hordes. Sneering warriors would ask to see their "vegetable patches." But they had made money, and they used it to buy horses from outsiders, thus freeing themselves from family obligations incurred by both buyer and seller when the seller was a Nomad mare woman. Brownpony had always used the relay families for communicating with the sharfs and the tribal chiefs. Now he used them for keeping in touch with the *Qaesach dri Vørdar*, and he was encouraging the families to establish relay stations north of the Misery River and well beyond the reach of Texark patrols. He had already sent messages toward the King of the Tenesi and several other rulers beyond the Great River, and he was awaiting news from that front.

To New Jerusalem Brownpony had brought two Wilddog and two Grasshopper riders to open a branch office of the families' service. In the abrupt wake of Nauwhat's and Sorely's defection, he now found need for three of them. To one Grasshopper rider he gave a message for Demon Light. It "authorized" Brām to exercise the papal warrant for the arrest of two princes of the Church in his territory with authorization to imprison them humanely. Forgetting for a moment that the Pope understood their dialect, this Grasshopper rider said to his kinsman, "Our sharf will surely appreciate these new powers in his own realm."

"Your family must send us someone less sarcastic," Pope Amen said to him in half-decent Grasshopper. "You can pass your message on to the next Wilddog relay rider tomorrow. Then you can start riding home to tall-grass country. Your family can send us your replacement when you get there."

He stopped looking at the man and spoke to the Wilddog rider. "You can be home tomorrow, and relay my message to Hadala from there. It will get to him quicker that way. We can't give arrest powers to a Wilddog in Grasshopper country. We do deputize you to arrest Nauwhat anywhere else you may

find him. There will be a reward for him. Spread the word on that."

He turned to the second Grasshopper. "You must chase Hadala all the way to Ol'zarkia if you need to. Give him a copy of the same message. If he's not already obeying it and coming home by the time you catch up with him, you can read aloud to his men paragraph seven. It excommunicates all Hadala's followers who do not disband and desert at once. Arm yourself, but try to get help from your sharf in making the arrest." He then looked pointedly at the maker of the sarcastic remark.

"When you see a man you can't control about to take the law into his own hands, you might as well save yourself embarrassment and put the law in his hands yourself."

The man—having already been fired—answered back: "Nevertheless, Your Holiness will be embarrassed when I tell Sharf Eltür you said that."

Brownpony glared at him for a moment, then broke out laughing. "All right, you can come back here after you pass the message for Brâm to the relay. Someday we'll need an insolent rider with a gift for blackmail."

Grandmother Grasshopper raised insolent colts and children. "Maybe I'll come back, and maybe I won't," the relay rider said.

Chuntar Hadala's war party and ammunition train traveled faster than anyone expected. The moon was nearly full again in the late days of July, but when it left the world dark, setting before dawn, Blacktooth could see distant points of light on the eastern horizon. They looked like fires. Would farmers keep night fires burning? Nimmy knew that a relay messenger had come from the west with a message for Cardinal Hadala on the 28th. The messenger had seemed surprised to find Cardinal Nauwhat with the train. Of course, the Cardinal Secretary had left Valana two days late, and by night, so that no one in the city could be sure of his destination or whereabouts. The messenger left again, but the effect of the message on the cardinals was to command a forced march. The troop rode eastward until midnight.

The next morning, the sun arose above the distant hills where Nimmy had seen points of firelight in the night. Beyond those hills would lie the sprawling glep settlements of "the Valley." After a fast breakfast of biscuits and tea, the militia rode on toward them.

Two days later, near sundown, the Grasshopper sharf with a war band overtook them from the west. The militia had already camped for the night. After conferring with the cardinals, Major Gleaver ordered the wagons arranged in a defensive array and the men to take cover in expectation of an attack.

"This is crazy, Nimmy," Aberlott said. "They are allies."

"Just don't obey any order to shoot. I'll talk to them." Blacktooth walked out of the defensive position and went to meet the Grasshopper warriors as they approached. He could hear Major Gleaver yelling at him to come back, and he stopped once when a Nomad raised a rifle at him; Demon Light spoke a word, and the rifle was lowered. He recognized the monk and beckoned him on.

A bullet struck the ground near Blacktooth's feet. The report came from behind him. The Nomad who had lifted the rifle lifted it again and returned fire. Nimmy looked back in time to see one of the lieutenants standing beside Gleaver drop his pistol and fall to the ground.

"For God's sake, stop shooting, you fools!" Nimmy yelled.

"I'll try you and hang you!" the major yelled back.

Behind Gleaver stood Chuntar Hadala, looking grim.

Sharf Brâm lingered just beyond gunshot range, and he sat there for several minutes while the monk came up to him.

"You remember me?" Blacktooth asked.

Brâm nodded. "But what is the Pope's servant doing with these men?"

"I'm not the Pope's servant now. My master left Valana without me."

"Yes, I knew that. I took him south to meet Dion. He thought you abandoned him. Did you?"

"Not intentionally. I was not in the city when the Palace exploded. When I came back, he was gone and I was drafted into the militia."

"You seem not to have been told the news."

"What news is that, Sharf Brâm?"

Demon Light, unable to read for himself, handed the monk a letter. Blacktooth read it with mounting dismay, looked at Eltür, then back at the cardinals.

"This must be the same message Cardinal Hadala got."

"You go tell him what it says, and ask him. Then tell him if he continues east, I shall not arrest him if he travels alone."

"Alone? I don't understand. What about Cardinal Nauwhat?"

It was Eltür's turn to be surprised. "Is he here? Then they can travel east together. The rest of you will stay here."

"I don't understand. They seem to be expecting you to attack."

"They expect me to arrest them. Doesn't the message say that? What they don't know is that I already sent a messenger to the Texark border guard. The enemy knows you're coming, and he knows why. The only way Hadala can keep the guns from the Hannegan is to give them to us. And the only way the cardinals can escape from me is to surrender to the Hannegan's border guard. Then the rest of you go home. Remind them what Hõngan Ösle Chür did to Esitt Loyte. We can do as much for them, if we have to arrest them."

The letter Blacktooth had read said nothing about handing the cardinals over to the Hannegan, but he chose not to argue. When he returned to the camp, everyone was watching him and Ulad was waiting to seize him. At the last moment, he changed direction to put a group of recruits between himself and the spook sergeant. He spoke quickly to Aberlott:

"The sharf has orders from the Pope to arrest the cardinals. If we resist, we are all excommunicated. And the enemy is ready for us, because Brâm warned them we were coming. Tell the men, especially Sergeants Gai-See and Woosoh-Loh. Tell them to pray, and let Hadala see them praying."

He tried to get to the cardinals before Ulad got to him, but the giant was fast. He arrived in a headlock and was forced to his knees. Sorely Nauwhat since joining the expedition had seemed anxious to avoid Blacktooth, and he now hurried away. Chuntar Hadala bent over the monk. He was a glep himself, his skin dappled with various shades of brown—a common mutation—but he was a handsome man in spite of it, with a goatee and a long mustache that had once been golden.

"Well, Brother, tell us about your conversation with the Nomad warlord," said the Vicar Apostolic to the Watchitah Nation.

"Your Eminence won't shoot the messenger?"

"Nobody sent you as a messenger!" the cardinal snapped. "And the major may yet have you shot. Just tell us what you found out."

"Have you seen the fires in the east at night, m'Lord?"

"Yes, they are our people's beacons. They know we're here."

"So does Texark. The sharf warned them you were coming. The fires belong to the cavalry."

The lighter patches of the cardinal's skin drained of color. "They are supposed to be allies!" he gasped. "Why does he sell us out to the enemy?"

Blacktooth, under threat and afraid, decided not to mention the Pope's letter directly. Hadala already possessed a copy.

The monk resumed: "He says he will not arrest you and Cardinal Nauwhat if you surrender to the Texark troops. He orders the rest of us to surrender the weapons to him and get out of his country."

Hadala sputtered, and went in search of Nauwhat. Soon he came back with an order.

"Go see him again. Invite him here to parley. We will stay out in the open where his men can see us. If he comes alone, he may come armed. Do you think an oath by me that he will not be harmed or taken captive would help?"

Blacktooth thought about it for a moment. "No. He might find it insulting."

"Do the best you can without it, then."

The sharf was not reluctant. He borrowed a second pistol from a warrior, tied the leash of a heavily built war dog to his belt, grasped the monk by his uniform collar, and began walking toward Hadala's encampment with a gun to Nimmy's head.

"I'm not going to hurt you."

"I'm no good as a hostage, Sharf Bråm. They won't care if you kill me."

As they stopped before Hadala, Gleaver, and Hadala's Grasshopper guide, Eltür released Blacktooth, untied the dog's leash, and barked a single word at the animal, who began to growl and stare at the cardinal.

"If I'm shot, the dog kills you."

Hadala spat venom at Demon Light for trafficking with the enemy, and Blacktooth translated it.

The sharf ignored it. Bråm waved an arm toward the east and spoke in short sentences; between them Blacktooth translated:

"This eastward lane here will be kept open. It goes from your camp to the hills yonder and to sunrise. When an armed man steps into the lane, we shoot him. An unarmed man gets one warning shot. But you and the other Red Hat may pass, going east. Take with you any disarmed officers you wish. Red Beard ordered me to arrest and hold you. I am Sharf of the Grasshopper Horde. I give orders here. Empty Sky is my Pope. The Wild Horse Woman is my sister. Høngan Ösle is my Lord." Demon Light gestured broadly at the sky, at the earth, and again toward the northwest prairie where his Lord would be encamped. After a pause, he went on grandly. "I, the sharf of this country, offer you Grasshopper hospitality. You will be required to gather dry turds for the kitchen fires. And the women will make you shovel horseshit. They will tease you a lot, but you will not be hurt. When Red Beard sends for you, you must go to him. If you don't accept our hospitality, you just march east. Without arms and without men. The Hannegan's men will take you in. He may be glad to get you."

"Are you including Major Gleaver?" Hadala asked sourly.

Eltür grew impatient, and began talking in longer sentences. He knew nothing of Gleaver. He had already been told he could take unarmed officers. Bråm made scattered remarks about the cardinal's stupidity. Blacktooth waited for him to pause and then summarized.

"Let Major Gleaver cooperate in his own disarmament, he says. The sharf will leave him in command to hold the men together on the trek back home. He says the rabble will get out of his tall-grass country quicker if we are under command. But if Gleaver wants to surrender to Texark, Sharf Bråm will let him pass."

"He knows we outnumber his men nearly four to one. What makes him think . . ."

"He can stop us? Shall I ask?"

"Ask him if two of his men are equal to seven of ours."

The sharf chuckled as soon as Nimmy translated, then shared a few private jokes with his interpreter. Hadala became angry.

"What does he say? Stop having your own private conversation."

"He says seven-against-two would be fair, if you leave your wagons undefended. Your seven men with seven guns might chase his two men with two guns for several days, inconclusively, but you would lose the wagons. If we defend the wagons, we'll just be pinned down and starved out. And if you don't make up your minds soon, Texark will come out and get the wagons."

"Are those his words, or yours, Brother St. George? Be careful you don't go too far." After this admonition, Hadala began speaking slowly enough for Nimmy to translate simultaneously.

"Look, we are as worried as you are that the wagons will be intercepted by the patrol as we try to take them in. So why don't you help us? Your people have been well supplied with arms, and you don't need my wagons. The occupied territory ahead is just a narrow strip along the western frontier of the Watchitah Nation. It's hardly more than a double roadway. The outer road is patrolled by Texark troops; they look outward toward your country. The inner road is patrolled by the Valley Customs Service; they look inward at the Watchitah Nation, my people. I myself am on the Customs Service Board, for the Church. Their patrol will help us, once we're past the Texark troopers and the patrol sees who I am. If you could just help us hold back the Texark riders until we get the wagons through, we'll all cut and run afterward."

"You are another Christian war sharf? Another military genius in a red hat? There are so many of you." Blacktooth found himself unable to avoid echoing Bråm's sarcastic tone, although he could see that

the cardinal was beginning to seethe. "But what will stop the Texark cavalry from riding right straight into the heart of the Valley of the Gleps to take the wagons away from you?"

"Why, we hoped to cross over by night, unknown to them. But you ruined that by warning them. And the treaty between . . ."

Hadala's explanation was cut off by a Grasshopper war cry. Someone shouted that a large dust cloud and a probable party of horsemen was seen in the east.

"They've decided to come and get you themselves, glep priest, said Brām with a savage smile. "Now, we are going to get out of the way. Aren't you lucky? You can fight them instead of us."

All Nomads took immediately to horseback, and Blacktooth watched them ride away toward the northwest. He was tempted to mount up and ride after them, but Ulad had threatened to shoot him in the back for desertion if he again broke ranks.

Hadala looked at him for a moment. "Do you have an opinion, Brother Corporal St. George?" he demanded sternly.

"Those riders will be here in a few minutes. That is my opinion, Your Eminence." Blacktooth turned and broke into a trot toward the wagons. Sorely Nauwhat and the major had been standing there watching the meeting between Brām and Cardinal Hadala until the shouting started, but Nauwhat had faded from view.

"Cardinal Hadala's done with you, Private St. George!" Gleaver snapped at him. "Report to Sergeant Ulad. Get your arms buckled on, and get in the saddle."

Still wearing corporal's chevrons, Nimmy took note of his reduction in rank without openly acknowledging it. Earlier in the day, the major had been yelling at him about a court-martial and the gallows, so the demotion was a welcome commutation of sentence. When Ulad looked at him, however, he could still see a readiness to kill.

Having observed the Grasshopper withdrawal, the Texark commander halted his advance just beyond rifle range. The troopers dismounted. Some of them began digging.

Demon Light drew up his warriors in a half circle just out of range to the west of the Valanan brigade's position. Blacktooth had no doubt that they would fight to prevent the guns and ammunition from falling into the hands of the imperial forces, but they would not begin to fight until Hadala and his men were defeated by those forces. The Valanan light horse, untested troops and their spook commanders, were sandwiched between two superior war bands.

It was almost nightfall on Tuesday the 2nd of August. The moon rose an hour after sundown. During that hour, Sorely Nauwhat vanished, never to be seen again west of Texark frontiers.

"There is going to be a mutiny," Aberlott whispered to Blacktooth at the first opportunity, "unless the glep cardinal quits."

Nimmy shook his head. "These townsmen could mutiny in Valana, but not out here between two unfriendly armies."

Chuntar Hadala remained at the head of his command. Sergeant Ulad shot a deserter who made a break for Grasshopper lines during the night. When the body was dragged back to camp, it turned out to be the cardinal's Grasshopper guide, who was only quitting his job to return to his people.

Blacktooth told Aberlott: "He was the sharf's man, and here we all are in the sharf's jurisdiction—so look at the sergeant now." The monk was remembering how Ulad at their first meeting in Valana had expressed hate for all Nomads. But now that he had killed one, he showed in his face not satisfaction but an astonishing fright.

## CHAPTER 24

If a brother who through his own fault  
leaves the monastery should wish to return,  
let him first promise full reparation for his

having gone away; and then let him be received in the lowest place, as a test of his humility.

—*Saint Benedict's Rule*, Chapter 29

RIGHT, THE MOTHER OF HATRED, POSSESSED the whole militia, but there was nowhere to run. Behind them, the Grasshopper; in front of them, the Emperor. Prowling among them were Chuntar Hadala, and two willing killers of conscripts: the major and Ulad. The flanks were faced with fires, but it was an unusually windless day. The fires had been set in the night, and no one was sure who set them, but because of the calm air nobody worried about them much. Before dawn, Ulad and three husky townsmen unloaded two cannon from the wagons and dragged them forward to face the foe to the east. Then they unloaded two more and aimed them toward the Nomads. The sharf watched them do it, then broke his forces into two equal groups. He moved one group north and one south; they halted so as to face the Valanans from the southwest and northwest. Ulad rearranged the cannon accordingly, but the Nomad movement spoke of no need for cannon. The way west was wide open, by invitation of the sharf. In Blacktooth's opinion, acceptance was the only sane thing to do, but Chuntar Cardinal Hadala was adamant.

"All you who repent your sins, I absolve you," he announced to the assembled troops at dawn, "*in nomine patris, filii, et spiritus sancti*. And if you die in battle for God's glory and the Holy Father's righteous cause, you will attain Heaven without purgatory's purifying pain. I now bless you . . ."

"This," Aberlott whispered, "from a man with the Holy Father's excommunication in his pocket."

Surprised that other conscripts were not jeering Hadala, Blacktooth asked, "Didn't you tell the others what I told you to?"

Aberlott was meekly silent. Nimmy looked him in the eye, then laughed bitterly. Everybody knew that Aberlott was an outrageous liar, not to be believed. Besides, where would he get the courage to accuse a cardinal behind the cardinal's back when every man would in the end point his finger right at Aberlott and say, "I heard it from him"? Well, Blacktooth would have to spread the word himself, or at least enlist one of the Yellow Guard. It was not easy to get close to them, however. They were close only to Cardinal Hadala, as they had always been to Brownpony.

Water was rationed. The supply of jerky was exhausted, and with no hunting possible, the men ate beans and biscuits. The enemy waited for Hadala to move. Hadala waited for gleps from the Valley to attack the enemy from the rear, but this seemed wishful thinking to Blacktooth. On the third day of the standoff, in plain view of the Valana forces, Sharf Brām sent a messenger under a flag of truce to the Texark commander. This further traffic with the enemy increased the cardinal's fury. At Cleaver's orders, several townsmen shot at the messenger, but he was riding beyond range for accurate rifle fire.

That night before the moon rose, fourteen Grasshopper warriors stole into camp, killed two sentries, and stole or drove away most of the horses. After the rise of the gibbous moon, a detachment of Texark cavalry, which had approached noiselessly in total darkness, mounted and rode through the camp screaming and killing with sabers and horse pistols. Several attackers were killed in turn by the well-armed militiamen. After dawn, eighteen bodies were buried, five of them wearing Texark uniforms. There were seven nonfatal casualties as well. Aberlott had lost his right ear to a Texark saber.

"You never left your bedroll, you bastard," he said to Nimmy.

"I guess I slept through it," Blacktooth lied.

The loss of the horses drove the Hadala over the edge. He ordered an infantry attack on the now entrenched Texark position. The cardinal took a cross and proceeded to march proudly with it at the head of the army, his red cap and sash making him a conspicuous target. Major Gleaver shot three men who refused to move out. Three companies of green troops with bayonets fixed to their excellent rifles moved forward behind sporadic covering fire from three cannon. Ulad, furious as usual, led the way behind the cardinal crucifer, but kept looking back to see that the others stayed in line. Terror whitened men's faces as they came into range and some of them began to fall from a crackle of fire by the enemy. Nimmy kept his eyes half closed and prayed to the Virgin. He was astonished that there was no artillery fire directed at them from the Texark rear.

When they had covered half the distance to the enemy lines, he could see that berms of earth and sod

had been thrown up. Imperial troops were firing at them from well-protected positions, and the effect was devastating. About a third of the men had fallen. Twice Ulad ordered the attackers to halt and fire, but each time the enemy's heads ducked behind the berms.

"Double-time march! Shoot while you run!"

In terms of accuracy, it was a waste of ammunition, but it kept the enemy's heads down. After five shots, it was necessary to slow to a walk in order to reload. Most men had brought two extra cylinders, already loaded, but while it was faster to change cylinders than to reload individual chambers, it was necessary to stop altogether to avoid dropping the pins. And to stop was to be shot by a spook officer.

"Look! They're clearing out. Run, damn it, run!"

Terror changed to a furious glee as the townsmen realized that the Texark rifle fire from the forward berm had ceased, although there was still shooting in the distance.

"*Pope's children! My people are there!*" Hadala was shouting back at them. He kept waving his cross like a club toward the foothills. "*They're attacking from the rear.*"

"That explains why cannonballs aren't raining down," Nimmy said toward Aberlott's bandaged ear. The message was not received above the sound of gunfire, but he added, "Maybe the gleps' cardinal is not as crazy as we thought."

The Texark army was not at all defeated. Forced by guerrillas from the Valley to defend their rear, they had retreated from the attack out of the west to defend their artillery from an attack out of the east. The retreat was limited. When militiamen climbed the first berm, three of them were shot down as they went over the top.

Gleaver called a halt. Obviously there were defenders of the second berm. But the attackers could use the enemy's first berm for their own shelter while they ate pocket rations and sipped from canteens.

Nimmy looked up to see Gai-See crawling toward him up a shallow gully. He was not hiding from the enemy, he was hiding from Hadala and the officers.

"Is it true?" asked the Asian warrior monk after taking a careful look around.

"Yes," Nimmy told him, "if you got it from Aberlott."

Gai-See nodded grimly and crawled away by the same route.

Now something would happen, he thought, but it did not happen immediately.

The sun was scorching in early August, but by midafternoon a light westerly breeze came up. Blacktooth noticed that the restless Grasshopper had moved again. The Nomads had re-formed and split into three groups, positioned to the north, west, and south of the wagons. They were still out of range, visible against a background of smoke, but the groups to the north and south were in place for a flanking attack against either the Hannegan or the cardinal.

The fires seemed to be moving slowly eastward. They marked the probable confines of the battleground and defined the possible lines of advance or retreat for the Nomad groups who had likely set them.

Soon afterward, during an assault on the second berm, while trying to shoot over a man's head Nimmy shot him down. Facing Blacktooth, the Texark trooper lay on his back on the sandbank just as he fell when shot. A glep, a glep in Texark uniform, with Hadala's dappled skin and the rather common hairy ears. He stared up at the former monk, trying to see him against the smoke-blurred orb of the sun. His hands were raised toward his face and they hung limply from the wrists; he looked like a puppy begging for a morsel. Why surrender with a ruined abdomen? He clenched his lids, waiting, hoping to be shot again. But Blacktooth dared not to waste ammunition on pity, or even take time to reload, because Ulad was watching him with deep suspicion. Every time he felt such tension, Wooshin's face and words came to his mind.

"Life is a dewdrop and a flash of lightning—that's the way to look at it, Nimmy."

Touching the point of the bayonet to the man's throat, Blacktooth severed the carotid artery. A blade of lightning, a drop of red dew. The drop became a spurting stream. He stepped back, looking around. His throat hurt and was dry; it was a hot day and the air was full of smoke from burning grass.

"Each man, each being is a world. There are innumerable worlds, my friend. Each world of this innumerable array contains and interpenetrates all the other worlds throughout the myriad cosmos, for there are no barriers between the worlds." Metaphysics from an executioner? For the Axe, religion was a martial art. He wanted to talk to Gai-See or Woosoh-Loh about it, but they were always with the cardinal and the officers, and he was made afraid by Gai-See's crawling to him in a ditch.

It's just that I have cut my own throat somehow, he thought, looking at the corpse. So murder feels like this to the murderer. Holy Mother of God, forgive me, but I don't feel very much.

Sergeant Ulad was still watching him from the left, shaking his head. He must be careful not to waver or hesitate. Ulad was suspicious of his piety. He could see two men beyond Ulad. Corporal Victros had climbed to the top of the berm. He motioned the attack party upward.

The sandbank flanked a scythed and well-hoed—but useless—firebreak. Blacktooth climbed the berm and cautiously peered beyond, but the patrol had fled. Why? It was the best place to stop and fight, unless they thought the Valanans' firepower overwhelming. Or, more likely, they might know that greater safety for them lay ahead, and that the glep guerrillas must be prevented from seizing their artillery. Standing atop the berm, he looked back toward the wagons. What had happened to the men guarding them? He could see Nomads in the distance, but no militiamen with the wagons. Without horses to draw them, they were lost anyway.

Somewhere to the north the tall grass was burning faster. They had been crosswind of the fire whose smoke veiled the foothills in the northeast, but they were almost downwind now and still the breeze was changing. He began to smell the smoke, and could see to the north distant horseback warriors moving west out of the fire's path. If the wind kept veering, the wagons would be in danger. He motioned to Ulad that the enemy had fled. They went over the sandbank and continued their cautious advance, camouflaged shadows flitting from knoll to knoll in the great ocean of grass.

Watching from a distance on a hillcrest south of the battle, the Grasshopper sharf could see some of the fight going on around the Texark artillery pieces. Texark was temporarily in trouble, and he was pleased. Demon Light hoped to influence the outcome of the battle by moving warriors about in a menacing way from time to time without actually exposing them to fire. His only intention at the moment was to keep the wagons from being captured by anyone except himself, although if he got them, the Grasshopper had no pressing need for extra ammunition, and the horde's arsenal was already wealthy in new guns. He was not opposed to giving the gleps guns, if it became possible. Now it seemed it might be possible. It was clear that the Texark force was being harassed from the rear. The fact surprised him as much as it did the Texarki.

Demon Light had warned them of Hadala's expedition, but they had trusted him only enough to send two companies of cavalry, two of light horse, and a few artillery pieces to the region where he told them the townsmen would try a border crossing. Surprising to Eltür was the fact that many of the Texark troops were gleps, drafted from the Valley. They had not expected a glep attack from the rear, and had not come well prepared. They would regret not having taken him seriously enough. Such regret might incline them to trust him more next time. When he sent them a message under a white flag, they had listened politely to the messenger as he laid claim to the contents of the wagons, and if this claim were honored, there would be no reason for hostilities. He had also warned the Texark commander that he was about to steal the townsmen's horses. About the wagons, the commander gave a polite but evasive answer, and he smiled on the horse-theft project. In this situation, Demon Light was reluctant to attack his hereditary enemies except to prevent seizure of munitions.

Nothing prevented his enjoyment of the conflict unfolding before him except a report by a scout from his southwest detachment that a band of motherless ones had approached but stopped a few minutes' ride away and occupied a hilltop there. To Brâm, they were a damn nuisance, and they too wanted the guns. He was aware that many of the motherless ones in the south part of the Wilddog lands had been armed by Dion and sent against the enemy in the Province, but these outlaws were far from that battle, and if they were able to get their hands on the new weapons, they were as likely to shoot at his people as at the Texarki, but they were even more likely to sell the fancy guns to the Hannegan, who had been slow

in getting them.

Though it would spoil his view of the fight for a time, he decided to withdraw his detachment from the north where the fire was beginning to crowd his rear, then to skirt around the townsmen's position and join all his forces together again between the militia and the outlaws. It would give other commanders something to wonder about, and the fires had become the Grasshopper's allies, as the Grasshopper sharp knew they would when he practiced his family motto and set them. As he rode between the Valanans and a group of his own men to the west, he noticed with approval that the horses stolen from the wagoneers were being kept out of sight beyond a ridge. None of his warriors' mounts were broken as draft horses, so seizing and keeping the grass-eaters' animals was essential to his plans. He sent a messenger to tell his cousin to the west of him to post enough men to guard the horses and join the rest of the detachment with Eltür's main force.

Sundown was approaching when the enemy resumed fire, and Cardinal Hadala was among the first to fall. Elswitch Gleaver rushed to his side, inspected his wound, which he seemed to find in the back, and turned to look around at the men. This time Blacktooth saw Gai-See lift his pistol again and shoot Major Gleaver in the forehead. At the same time, a high-pitched scream came from the rear. Ulad's voice. The blade of Woosoh-Loh's sword rose bloody into the air and fell again. Junior officers were shouting angrily.

Brother Blacktooth St. George threw away his rifle, picked up a pistol from the body of a slain officer, and ran south for his life. A bullet struck the ground near his feet, but he was unsure which of three sides was shooting at him.

As he ran around the bend near the crest of the ridge, he noticed a wide tunnel under a rock where something made its home. It was just big enough for him to slip into, and he dived for it, feet first, praying earnestly that the owner was absent. The tunnel sloped downward as he slid into it and it was somewhat deeper than expected. He braked his slide and found his face two feet from the sunlit opening. Between the straps of his sandals, he felt wiggling fur with his feet; something bit his big toe, tiny fangs but sharp. He kicked it off. Other mouths were chewing on his sandal straps. My God, I'm in a cougar's den, and I am going to die!

Today is like any other day in being the day of death. Today a war is going on and I am not a Daniel in this den, O Saint Leibowitz. Still, it's the only day I've got. Last week it was a thunderstorm, and the wet body of a lightning-struck warrior. Year before last a cyclone killed seventeen Jackrabbit peasants. Then the locusts, the locusts, the locusts, and the emaciated corpses found frozen last winter. Just like any other day, he noted, as a bullet ricocheted off the rock above his head. The spent lump of lead fell into his waist and he picked it up to inspect in the dim light. It was no bullet from a Grasshopper or Valanan weapon, but a musket ball from a Texark or an outlaw piece. The fact gave him a general idea of the direction of the enemy.

He felt around with his feet, kicking kittens away. Their teeth were needles. What was keeping their mother? Afraid of the fires, perhaps. He too feared them. "In here, we'll choke to death," he told the kittens.

While he was thus indulging himself in more fear and self-pity than was usual before he had so recently killed a man, something came and darkened the light from the end of the tunnel. He prepared to die.

*Hail Mary full of grace the Lord is with thee . . .*

"Ho! Who is down there?" The language was Rockymount, but the accent was from Asia. Nimmy looked up to see a rifle aimed at his face.

"Don't shoot, it's Blacktooth. Is it safe to come out?"

"It's not safe anywhere yet," said Gai-See, "and the fire is getting too close. Give me your hand."

Nimmy shook a playful kitten loose from one trouser leg and crawled upward into the smoky light of late afternoon. The din of battle had subsided, except to the east where Texark troops were still holding off gleps trying to get at the weapons. The warrior and the monk climbed the ridge and lay on the ground

to look over the top. They could make out the bodies of Chuntar Hadala and Major Gleaver; both had been killed by Gai-See, who, like Wooshin, was prepared to execute anyone who betrayed his master.

"Where is Woosoh-Loh?"

"Ulad shot him when he saw me execute our master's enemies."

"But I saw—"

"My brother lived long enough to kill his killer."

Nimmy observed a detail of Grasshopper warriors hastily hitching three of the wagons to draft horses they had stolen, for the fire was coming closer. The wagons' defenders had scattered during the infantry skirmish. The Valana Militia had been destroyed, by death, desertion, and the absence of command. From the east, Texark cavalry was riding toward the scene, but warily, for behind the ridge to the south was the Demon Light's main force, and just to the north was the advancing wildfire. Half a mile from where they lay, a Texark trooper rode to the top of the ridge to observe the Grasshopper order of battle. Gai-See rolled over, lifted his rifle, aimed very high, and fired. The impossible shot fell close enough to frighten the trooper's horse, and alerted the Grasshopper, who joined Gai-See in firing on the scout. The scout retreated. Gai-See stood up and looked south. Eltür's warriors were watching. Evidently they were not shooting at militia uniforms.

"Look!" said Gai-See, pointing. "Somebody killed a big cat."

Blacktooth stood beside him, then went to investigate. The animal lay on the rocks twenty paces west of them. It was a female.

"Come on," he said to Gai-See, and went back down the ridge to the cougar's den. Soon they had recovered the kittens, but three Nomads rode up with drawn guns and spoke in Grasshopper.

"Drop your weapons at once, citizens! Surrender."

They complied, but Nimmy smiled at the polite word "citizens," and replied in the same language. "The troopers are riding toward the wagons, you know. We'll gladly surrender, but we'll need our weapons to get home again."

One warrior rode to the top of the ridge. The other dismounted and recovered the guns. As he unloaded them, he spoke to Blacktooth.

"You are the man who came out to parley with the sharf. He says you are a servant of the highest Christian shaman. Is that so?"

"It used to be so."

The warrior handed him back his unloaded pistol, then returned Gai-See's empty rifle.

"You are the man who killed the cardinal and the major, are you not?"

Gai-See nodded. The other warrior came down from the ridge and said, "We'd better tell Sharf Eltür it's time to attack. Let's go!"

They both rode away, leaving the two to follow on foot with empty firearms. As soon as the warriors returned to their command, the main party of Nomads split into two groups, one of which rode to the bottom of the ridge, dismounted, and climbed it on foot; they took prone positions on the crest as snipers. From the fact that heavy smoke was blowing south over the ridge, and that the snipers did not commence firing at once, Nimmy deduced that the fire was delaying the movement of the cavalry toward the wagons. Every time a trooper mounted the ridge to the east to reconnoiter, he was fired upon by the main Nomad party. The Texark commander probably wished to cross the ridge before riding west, but the Grasshopper made it impossible. At least some of the wagons were being pulled west by Valanan draft horses driven by Nomads. The rest would soon be caught by wildfire, if not captured first by Texark.

By sundown, the rest of the wagons had been swept up in the fire; some exploded, all burned. Burned too were the bodies of the slain, but the wind subsided at twilight and the blaze did not cross the ridge. Sharf Brâm had rounded up and fed all the militia survivors who surrendered their arms. The few who refused to give them up, mostly spook officers who feared revenge by Valanan conscripts, he ordered killed. He ordered his warriors to treat the prisoners of war with courtesy, but the Grasshopper fighters were too full of playful malice toward farmers for the farmers' comfort. Food was shared, but dipped in sand. One warrior lent Nimmy a leather pouch large enough for three cougar kittens, then

claimed the monk had stolen it. There were less than forty exhausted captives, but some other deserters had perhaps escaped capture by the Texarki or the Nomads.

When he saw Nimmy among the refugees, Demon Light called him to his side as interpreter. After laughing at the kittens, he returned the monk's pistol and ammunition. Nimmy immediately asked permission to turn the weapon over to Gai-See. "My eyes are too weak to hit anything. I killed a man by mistake, when I meant to miss him."

Eltür sent for Gai-See and after a brief conversation through Blacktooth concerning the warrior monk's continuing loyalty to Brownpony, the sharf gave him his weapons back. Then he looked at the smoky sky.

"Your Pope's wife has come. Look. The sister of the Day Maiden."

Overhead, a large bird was circling the battlefield. In the smoke and the light of the late sun, the buzzard appeared to be bright red. Other birds were gathering. They seemed small and dark by contrast, but perhaps they flew at higher altitude.

"It means the battle is over."

Nimmy and Gai-See were eerily silent.

"Tomorrow we leave for the tents of my tribe," Brām said. "The wounded can stay there until they heal. The rest of you will be taken west to be judged by the *Qaesach dri Vørdar*, Høngan Ösle Chür. Then I imagine you will be escorted back to Valana, or in your case, Nyinden, to your Brownpony. Tell this to the others. Tell them they must travel with us, or they will fall into the hands of the motherless ones. We have recaptured enough of Hadala's horses for you to ride."

Demon Light seemed quite friendly, and Nimmy dared ask, "Are you satisfied with today's outcome, Sharf Brām?"

"The Burregun will not eat Grasshopper bodies; I lost no men," said the Nomad leader. "We captured five wagonloads of rifles and pistols before the fire or the motherless got to them. The ammunition wagons exploded. The Texarki must have got about four loads of weapons that went through the fire. Those guns were ruined."

"Ruined as weapons, maybe, but not as patterns for Texark to copy," Nimmy said.

"You think so? And how long will that take?"

"I don't know. Months, probably."

"There is one other matter I do find troublesome, Nyinden," said Eltür. "Do you know that there were many gleps among the Texarki?"

Nimmy frowned. "The man I killed was a glep! That surprised me. It seems that the Emperor is either impressing able-bodied gleps from the Valley, or hiring them as mercenaries. It suggests he is short of manpower."

"Or, he is sending some of his main force to the east of the Great River, as we hoped. There was dissent in the Texark ranks. My messengers told me so. Do you understand why?"

"I think so. Cardinal Hadala was expecting a force from the Valley to strike the troopers' rear. When they did so, the glep troopers probably refused to fight. Maybe that's why they retreated from us."

Eltür snorted. "You townsmen make good corpses but not good killers. It had to be the reason. Now, tomorrow we must go to a messenger family and send today's news to the Lord of the Hordes and your Pope. You may, if you wish, write to Brownpony yourself, so long as you tell me what you say to him."

"Of course! You may read it."

Demon Light laughed scornfully and departed. Blacktooth's face burned. He had forgotten that the sharf was without letters.

Blacktooth was prepared to write his letter on cowhide with ink made of blood and soot, but the messenger family to which Brām brought him the following afternoon kept paper and pens for such emergencies, although they themselves were barely literate. He wrote hurriedly, because the sharf was impatient to return to his family and tribe.

I understand that Sharf Eltür Brām is sending you an oral account of the battle fought here, and to his

words I would add nothing. While most of the weapons were recaptured by the Grasshopper war party, Texark troops found a number of them that passed through fire and are probably unfit for use, but the Mayor's gunsmiths may learn much from studying the design.

I am ashamed, Holy Father, that I was not present in your time of peril. I was staying with the late Pope when you departed from Valana, and then I fell into the hands of your betrayers. Sorely Cardinal Nauwhat has sought asylum in Texark. Chuntar Cardinal Hadala was executed by Brother Gai-See when he learned of his treason against Your Holiness. Many townsmen died in this futile battle. My body was unharmed, but my soul is a casualty, for I killed a man.

I have been invited to stay with my distant Grasshopper relatives (yes, the Sharf knows who they are) of his tribe until I receive orders from Your Holiness, Abbot Olshuen, or the Secretariat concerning my future duties and destination. Meanwhile, Sharf Brām wants me to be tutor to his nephews. I would find this work congenial, but with no books and no proper writing materials it will be difficult.

Again, I beg your forgiveness for my absence without leave in your time of need, and shall gratefully accept and perform any penance it may please Your Holiness to impose.

Your unworthy servant,  
Nyinden (Blacktooth) St. George,  
A.O.L.

The relay horses of the messenger families were fast and frequently changed. In late August, the moon was waxing, permitting them to ride by night. Still, Nimmy was astonished by the speed of Brownpony's reply. It was very simple. "Honor the slaughtering festival, then come at once," said Amen II, only three weeks later.

His cousins had been teasing him unmercifully about joining the fourteen-year-olds who would be undergoing the rites of passage to manhood at the festival, which normally occurred during a period of several days around the last full moon of summer, before the autumnal equinox. "They will stop calling you 'Nimmy,' if you endure the rite," the great-granddaughter of his own great-great-grandmother told him.

"Thank you, but the first man to call me 'Nimmy' was Holy Madness, the Lord of the Hordes, and he intended no insult. I am not a warrior, I am not a Nomad."

This was the same festival which had been declared a movable feast last year when its usual time coincided with the funeral of Granduncle Brokenfoot. The farmers celebrated a harvest festival at about the same date, but for the Nomads it marked the beginning of the time of killing off old cattle and weaklings who could not survive the winter. Women culled out the horses not fit for war or breeding, and sold them to farmers north of the Misery River, or had them butchered and barbecued. Many of the slaughtered animals were converted into jerky for the time of deep snow when the wild herds were hard to reach.

It was a time for dancing, for drums, for gluttony, smoking keneb, drinking farmers' wine, for fighting by firelight, and for celebrating the ravishing by Empty Sky of the Wild Horse Woman. Young men crawled into the tents of sweethearts, and Blacktooth was visited in the night by the dark form of a woman who would not reveal her name, but began removing his clothes. He was careful to do nothing that might offend her, and it turned out to be a hot and sweaty night.

The following morning, one of his female cousins smiled whenever she caught his glance. Her name was Pretty Dances, and she was chubby as a pig, but cute and comely. He thought of Ædrea and avoided her glance as much as possible.

He had established his honor by fighting several young men his own size, and did well enough to avoid further teasing, but they still called him Nimmy more often than Nyinden.

On the day before his departure from the lands of his ancestors, the Grasshopper double agent Black Eyes brought him a book he had obtained in a transaction with Texark soldiers. Black Eyes had occupied the cage across the aisle when he and Brownpony were prisoners in the Emperor's zoo, and he still admired Blacktooth for an alleged attempt to kill Filpeo.

"The book cost me seven steers," he told the monk. "The sharf thinks it might help you teach his nephews, because the soldiers said it is written in our own tongue. I don't understand how a book can have a tongue."

Nimmy looked at the Nomadic title and felt a rush of grief and shame. *The Book of Beginnings: Volume One*, by Verus Sarquus Boedullus. The Texark publisher had done a good job of duplicating Blacktooth's pan-Nomadic orthography, with the new vowels which permitted any Nomad of any horde to hear the words as pronounced in his own dialect. In the front matter, there was an acknowledgment that the translation had come from Leibowitz Abbey, but there was of course no mention of the translator's name. Blacktooth had not included it in the original.

The face of the late Abbot Jarad loomed large in his mind, and Jarad's voice spoke to him as before, saying, "All right, Brother St. George, now think—think of the thousands of wild young Nomads, or ex-Nomads, just like you were then. Your relatives, your friends. Now, I want to know: what could possibly be more fulfilling to you than to pass along to your people some of the religion, the civilization, the culture, that you've found for yourself here at San Leibowitz Abbey?"

"Why are you crying, Nyinden?" asked Black Eyes. "Is it the wrong book for Nomads?"

## CHAPTER 25

If a pilgrim monk coming from a distant region wants to live as a guest of the monastery, let him be received for as long a time as he desires, provided he is content with the customs of the place as he finds them and does not disturb the monastery by superfluous demands, but is simply content with what he finds.

—*Saint Benedict's Rule*, Chapter 61

URING THE TWO MONTHS MOTHER IRIDIA Silentia spent at the court of Pope Amen II in New Jerusalem, one of the Pope's informants called it to his attention that this Princess of the Church and Bride of Christ visited Shard's Ædrea in her house of arrest three times a week, every week. He hesitated to inquire into this, for it was assumed by anybody who noticed or cared that Mother Iridia was either practicing spiritual therapy or teaching the girl the latest edition of the catechism as rewritten and promoted by Pope Amen I—the edition already condemned as heretical by several eastern bishops. Soon it became clear to her jailer that the girl wished to join Iridia's religious community. This caused no alarm, and only Brownpony stirred and became restless. Prisoners often converted to religion in jail.

Mayor Dion, as commander in chief of the insurgent forces in the Province, was gone most of the time, and Slojon's only interest in religion was as a tool to be used in the governance of men. When Ædrea took her simple vows as a nun of the Order of Our Lady of the Desert on Saturday the 12th of August, Mother Iridia visited the Pope and complained that the secular government of New Jerusalem was keeping one of her nuns in prison. Brownpony smiled and sent for Slojon.

"You are holding Sister Clare-of-Assisi in detention for unspecified offenses," said Amen II. "Messér, must I tell you that you have no jurisdiction over religious?"

"I don't even know a Sister Clare-of-Assisi, Holy Father!"

"You know her as Shard's Ædrea," said Brownpony. "She became a nun on the Feast of Saint Clare last week, and so Mother Iridia named her Clare, which is what she will be called in her cloister."

Slojon sputtered. "Her offenses are *not* unspecified. She violated the law by leaving the community without a permit from the Mayor's office. And she is suspected of espionage."

"She is innocent of espionage against this realm, to my certain knowledge," Brownpony growled. "As for your other complaint against her, the Church does teach obedience to legitimately constituted government, such as yours. Since she admits her guilt in disobeying the law while it was in force, I promise you she will be appropriately sentenced for that offense by me. I must take note, however, that you are no longer enforcing the law that she broke. That is your affair. Sister Clare is our affair. You shall release her immediately to an ecclesiastical court. You well know the sanctions incurred for usurping

Church jurisdiction. My predecessor of beloved memory excommunicated the Emperor of Texark himself for jailing me and my secretary."

"So that's the trick! Well, it won't work with me." Slojon turned and walked away from the papal audience with minimum courtesy.

Brownpony immediately drafted a letter to all clergy throughout the Suckamints commanding that the sacraments be withheld from the Mayor's son until he obeyed the order to release Sister Ædrea St. Clare into the custody of the Curia. The Pope knew that Slojon would not give any weight to such a sanction, except for the humiliating effect of the bad publicity when the letter was prominently posted for all to read in every Church in the mountains.

Still, Slojon would not budge until his father returned from battle a week later. Dion conferred with the Pope. First they discussed the war in the Province, which had stalled around the 98th meridian. Then they discussed Ædrea. Whatever he might believe privately, Dion was a public Catholic. After the conference, he released Sister Clare into the custody of Mother Iridia Silentia, O.D.D., who became her defense counsel. The sanctions against the Mayor's son were lifted. In an unusual move, the Pope permitted Slojon to assist the schoolteacher Abraha Cardinal Linkono as inquisitor and prosecutor.

The outcome was inevitable, and the only point in dispute became the sentence to be imposed upon the nun by the Supreme Pontiff.

Brownpony noticed that the beauty of the barefoot Sister who stood before him had not been diminished by motherhood, or completely obscured by her coarse habit. She was radiant, smiling at him faintly, and her eyes were attentive and unafraid. That was bad. It implied that there was a conspiracy, and it had worked. Slojon already knew he had been duped, but—he noticed the faint smile.

Thus spoke Amen II, with some attempt at sternness: "Sister Ædrea St. Clare-of-Assisi, you are remanded into the permanent custody of Cardinal Silentia. For your offense against the laws of New Jerusalem, a legitimate secular authority, we sentence you to cross the Brave River and spend the rest of your life in exile there, or until your sentence is commuted by the Holy See. Should you cross the river again from south to north, you incur excommunication by the very act of doing so."

Ædrea's smile did not change. The sentence imposed was not different from that which her vows imposed. She came slowly forward and knelt to kiss her judge's ring. "Where is Blacktooth?" she whispered.

Brownpony suppressed a chuckle at her audacity, and whispered back, "I have no idea."

Thus it came to pass that the lady cardinal departed from New Jerusalem with Sister Ædrea St. Clare and the three nuns who had been her conclavists in Valana. A coach was provided, and four mounted soldiers were appointed to escort them all the way to the Brave River. At the last minute, Iridia paid the Pope another visit and sweetly asked his permission to make a rest stop at Leibowitz Abbey, a detour which would add no more than a few days to their journey.

Brownpony gazed at her in surprise. Cardinal Silentia was almost his own age, still gauntly beautiful and full of charm if not grace, but now he saw that she was being charmed by Ædrea.

"She wants to know if Blacktooth has gone back to the abbey," the Pontiff sighed.

"That had occurred to me, Holy Father. But the guesthouse there is adequate and secure. The Brothers and my Sisters will see each other only in Church, if at all."

"Very well, but if you lose her, you are both in trouble," he told her. His permission was based on his belief that neither Blacktooth nor Abbot Olshuen wanted to see the other ever again. "However, if you meet Brother St. George anywhere, tell him I require his presence here immediately."

Iridia knelt and withdrew. That was three weeks before Nimmy's letter came to him from a battleground on the eastern Plains. Brownpony found the letter irritating, and said to the messenger, "Tell him to honor the butchering festival, and then deliver me his butt."

But as soon as he said it, there came to Pope Amen II a flash vision of Blacktooth's future—in shock upon learning of Ædrea's sudden calling to religion, and of the Pope's sentence passed upon her. Shock and maybe fury. He resolved not to see the monk immediately upon his arrival. Let him hear about it from Qum-Do, Jing-U-Wan, Wooshin, and the two Oriental secretaries he inherited from Cardinal Ri. They understood his motives and his necessity. Brother St. George would eventually apply his religious thing to

his fury, and then it would be safe for the Pope to see him.

Late September came, and Blacktooth had still not arrived at Pope Amen II's log-cabin Vatican. His Holiness gulped the rest of his brandy, put his heels on the table, leaned back, and smiled at his elderly bodyguard. A single candle lighted Brownpony's private office in the Papal Palace with its log walls and fired-clay floor, but there was an exceptionally bright full moon shining through the big southern windows, and everything seemed to glow in its light, including the faces of the Pope and the warrior.

"Axe, do you know what tomorrow is?"

"Thursday, the twenty-ninth, 'Oliness."

"It is a feast of Saint Michael, the commander in chief of the heavenly hordes."

"I thought it was the 'heavenly hosts.' "

"No, no! All angels are Nomads and there are hordes of them."

"So what of it, 'Oliness?"

"Axe, the Cathedral of Saint Michael Angel-of-Battle is in Hannegan City, and belongs to Urion Benefez. For him tomorrow is a day of pomp and High Masses. And I shall offer the same Mass in a quiet way. The Gospel for the day is the first ten verses of Matthew Thirteen, and at first glance it seems unrelated to the Archangel Michael. In it, Jesus calls a little child to him, and tells how we must all become little children again before we can enter Heaven. Isn't that strange?"

"No, to the children the angel's sword gives life."

Brownpony paused. He knew what Axe meant, but what an odd way to say it.

"An old Jew once told me that this, our angel of battle, is the defender of the Synagogue, just as we see him as defender of the Church. And of course of her children. That explains the choice of the Gospel, I think. But do you know that a bunch of old Nomad women married me off to the Burregun, the Buzzard of Battle?"

"I believe you have mentioned it several times, 'Oliness. I hope it is a happy marriage."

"Oh, it is, it is! We're winning the war, I think." The Pope poured himself another glass of brandy. "But I feel strange praying to Michael now. I hope the commander of the angelic armies forgives me. It was a forced marriage. Must I apologize for imagining Benefez's Angel of Battle pitted against my supernatural bird-wife?"

"No."

"Oh, you have an opinion! It was a rhetorical question, Axe, but why do you say 'no'?"

"Because the angel and the buzzard are the same."

"I wish you had said they are on the same side. You'll never be a Christian, will you Wooshin? And yet you have certain shocking insights. Tell me about Mankiller again sometime."

"Again? I don't remember telling you about him a first time, 'Oliness."

"No, I just heard part of what you were telling Blacktooth one day. Who is Mankiller?"

"The Compassionate One." His capital letters were audible.

Brownpony stared at him by moonlight and wondered.

Wooshin added: "An ancient saying among my people goes: 'The sword that kills is the same sword that gives life.' "

"Have another glass of this good mountain brandy. But to whom has a sword ever given life?"

The Axe declined the brandy. "Whenever there is a fight, the sword gives death to one man and life to the other. And life to his family, his retainers, and lord."

"Yes, I suppose your sword has given me life once or twice. The saying is less than profound, though. Some things you say make a lot of people think you confuse God and the Devil, Wooshin."

"I hope Y'roliness is not among them."

"No, but what do you say to the charge?"

"I deny it. How can I confuse them? I see they are not two."

Brownpony laughed. "Axe, did you ever take paradox lessons from Pope Amen Specklebird?"

"No, but he kindly spoke to me a few times. You say I'll never be a Christian. Foreman Jing says the same. But if I could have been Saint Specklebird's student, I might have become one."

"You just canonized him. That's my job. Are you an atheist?"

"Oh no, I honor all the gods."

"How many belong to that *all*?"

"Countless. And *one*."

"How meaningless!"

"'Oliness, let me hear you count to one."

"One."

"Point at that *one*."

Brownpony stirred restlessly. Finally he tapped his index finger against his temple.

Wooshin laughed quietly. "Wrong. You had to think about it too long. And you didn't count *to* one. You counted *from* one and stopped. The *one* is countless."

The Pope changed the subject. He was no mystic, but he seemed to attract mystics. Specklebird, Blacktooth, and Wooshin—they all had a streak of it, and they were all quite different. He was fascinated, but he did not understand.

In Hannegan City in mid-September, the Emperor called together his generals and waxed gleeful about the captured weapons; fire had not ruined them for study, only for use. Stocks and grips were burned, some cylinders had exploded, and some barrels were bent by the heat and by bursting kegs of powder. Filpeo handled them lovingly, and his hands were black with soot. According to his gunsmiths, it would be possible to begin duplicating this west-coast weapon as soon as they could tool up, produce the right kinds of steel, find copper for making brass for cartridges—if his forces could hold out that long.

Meanwhile Admiral eFondolai, Carpios Robbery, was already equipped with several dozen of the repeating weapons. Soon he and Esitt Loyte (he whom the troops called "Wooden-Nose") would begin their raids from north of the Misery. The wolf-skinned Texark forces, disguised as motherless outlaws, would wreak enough havoc on the Nomad women and horses left behind to draw off the left flank of the Antipope's crusade.

"Admiral?" protested General Goldæm. "I thought Carpy had been made a field marshal."

"Admiral for now," Filpeo answered. "An admiral is a pirate with a uniform, and a pirate doesn't think in terms of capturing territory. His method of warfare is perfectly suited to the ocean of grass that is the Nomad homeland."

Time as well as terror was on the Emperor's side. The opposing armies of Pope and Empire, Church and State, were dug in on opposite banks of the Washita, and it was easier for Filpeo to feed his men than for Amen II to feed his. Moreover, Brownpony was counting on forces he did not control.

"The Antipope thinks he holds the undying allegiance of the Wilddog Horde, but I am not so sure," Filpeo told his generals. "They say Sharf Oxsho licks the false Pope's footprints, but Høngan Ösle Chür seems to have risen above his Wilddog partisanship to become the Sharf of Sharfs, so to speak, of all three hordes. Even Sharf Demon Light pays respect to his lord, and we know how the Jackrabbit leaped into his arms and arose against us. No doubt, Eltür is as much our enemy as his brother Hultor, but he is cautious, he is clever, he is reasonable. And unlike Høngan, he is no Christian. We may be able to negotiate."

"I'm not sure you mean what you seem to be saying, Sire," said Father Colonel Pottscar. "You speak as if Christianity demands submission to a false pope."

"No, Pottsy. It just means Sharf Eltür, with no Christianity, cares nothing about disputes internal to the Church. Therefore he is free to negotiate."

A few days later, the glee of Filpeo Harq surpassed all bounds, and he danced a three-second jig in his private quarters when his uncle Urion came to him with the news that Sorely Cardinal Nauwhat had defected from the service of the false Pope. His jig-dancing stopped when he realized that he should have heard the news about Nauwhat before his uncle heard it.

"Why didn't the commander who accepted his defection report it to me?" he demanded.

"I made arrangement with Sorely while he was still in Valana, and I made the border guard honor it. I

had advance knowledge he was coming, because he agreed to cross over only if my archdiocese granted him sanctuary."

"Bastards! You subvert my own military. Heads are going to roll. And he wants sanctuary from whom, *me*?" Filpeo barked.

"Of course. And I don't think you'll take Father Colonel Pottscar's head or mine."

"Damn! Why, with me the cardinal is completely safe. I'd give him a state dinner."

"That's what he's afraid of. And from you, he would be safe from harm, but not from interrogation."

"What has he got to hide?"

"Everything! He is here to separate himself from this maniac in the western mountains, not to betray him. He will give no aid and comfort to either side. He is neutral, but only under my protection."

The Emperor tugged at his nervous earlobe and paced for a time. "By God!" he said at last. "When this is all over and you elect a real pope, who to choose?—who better than a cardinal who remained principled but neutral?" He turned to watch the Archbishop's face, and immediately laughed. "Uncle Urion, you stand accused of too many bad habits to be the next Pope. I'm sure the accusations are false, but—" He shrugged.

"Yes," said Benefez. "I suppose Sorely has thought about Hoydok's slander."

"Treat him well, Uncle, even if you fear his ambition. And let me visit him in your palace. Invite us both to dine with you."

"Not unless he is comfortable with the idea. If he is comfortable with it, I'll invite you. Otherwise you won't even get an explanation."

The invitation to dine at the Archdiocesan Palace came to Filpeo after only three days. The Emperor eagerly accepted, and warmly welcomed the dissident Nauwhat to Hannegan City. But he began to question him as soon as his uncle briefly excused himself after a whispered message from the subdeacon Torrido.

"Brownpony is under a suspended death sentence throughout the Empire," Filpeo told the Oregonian as soon as Benefez was out of earshot. "His election itself was an act of war by the Valanan Church against Texark. If he is caught, he will go to the chopping machine. He should not blame you for turning your back on him."

"No, Sire. But you call his election an act of war by the Valana clergy, and I helped elect him. I did not—we did not—think of it as declaring war on you, I can tell you that."

"The Valana *clergy* elected him, you say? Not the Sacred College?"

"Sire, in exile, the Valana clergy is the clergy of Rome. The Sacred College is the clergy of Rome only because each member maintains a Roman or Valanan Church. But in an emergency situation, the clergy of the Roman diocese elects its own bishop. The College was a later development in Church history."

"Oh, I wondered how you justified that so-called conclave!"

"I believe it was justified. But afterward, it was Brownpony who abandoned the Curia. You may think of this war as his alone, although others *do* claim it and *do* pursue it. I was in Valana, and was not consulted before he proclaimed a crusade. I am not even sure his war is just, let alone holy."

"And yet I am told that there was a council of war before the election, and that you attended. And how is it that you joined Chuntar Hadala's attempt to bring arms to the Valley?"

"I merely accompanied him across the Plains, Sire. I left him before the battle started."

"Yes, well, tell me this. How long ago did Brownpony begin to pile up an arsenal in the Suckamint Range?"

"Did Cardinal Benefez not tell you that I would give no reply to questions about military matters? I am not a spy."

Archbishop Benefez returned to the table and, having heard the last exchange, began berating his nephew for breaking his promise not to badger the cardinal from Oregonia.

Nevertheless, the Emperor went away happy that night. The defection of Sorely Cardinal Nauwhat, now a guest in the episcopal palace of his uncle, added respectability to Filpeo's cause. Even though

Nauwhat declined to be interviewed by intelligence, and made it plain that he considered himself the equal of his host, the Emperor was delighted at the prospect of establishing good relations with the Oregonians, who were Nauwhat's people. It was the odd move of a knight on the continental chessboard: two squares west and one north. Oregonia was not far from what the Emperor had concluded to be the west-coast source of Brownpony's arms. The man owned land there, and received revenue from it. Filpeo would bestow gifts upon the Oregonian ruler as soon after victory as possible, whoever that ruler by then might be.

To the east, while Hadala was preparing his expedition from Valana, before the time of harvest, the King of the Tenesi had taken advantage of the Mayor's problems with the Grasshopper and with Brownpony's army in the Province. He attacked the Texark puppet state of Timberlen on the east bank of the Great River. Filpeo Harq sent his regulars across the Great River to drive back the Tenesi from his burned and looted ally. But the Tenesi were expecting them; they retreated into impenetrable mountains, which the Texark general then decided to penetrate.

Brownpony in due course learned about these battalions, which constituted a regiment of cunning mountain fighters; the Pope sent a courier to express his wish that the Tenesi might encourage the Texark troops to extend their stay in the east until spring, by a minimum of necessary hostile engagements. The courier carried the message as a coded tattoo in his crotch, and he was too fat to lean over far enough even to see it himself without a mirror, and he did not have the key to the code anyway. Brownpony did not worry about him; there seemed to be no point in torturing the messenger. Nevertheless, agents from Imperial Intelligence caught and tormented him into revealing that the tattoo was a message to the Tenesi, and tormented him some more to establish his ignorance of the code. The I.I. men decided not to kill him, but they strapped him to an operating table and removed the message with a skinning knife. He was then free to go, but could not walk because of the pain between his legs. They salted the skin, tacked it to a board to dry, and sent it to Hannegan City for study. The skinning knife had not been sterilized, and the Pope's fat courier died of septicemia.

Upon learning of his messenger's fate, Brownpony could only heap more ecclesiastical sanctions upon an already excommunicated and anathematized Filpeo Harq Hannegan and his uncle, the apostle of Platonic friendship and other deviations from orthodoxy.

Wooshin did his best to console his master. "It seems to me, 'Oliness, that the Tenesi will be doing what you asked them to do anyway."

"So my message needlessly sacrificed the messenger?"

Wooshin was silent, remembering that his master, even if he did share the warrior's indifference to life and death, would never allow himself to realize it.

"How simpler it must have been to manage a war with the methods of communication of the *Magna Civitas*! Our generals receive our commands—if at all—weeks after we send them, and by then the situation has usually changed!"

"Yes, 'Oliness, and that is why, in my people's tradition, a general in the field is obliged to consider his Emperor's commands only as fatherly advice, unless he is fighting very close to the imperial court. As for the *Magna Civitas*, Brother St. George told me that generals in those days complained bitterly because commands from the rulers were so numerous and came so quickly that the war was mismanaged by politicians. Look what happened to the *Magna Civitas*!"

"I should not try to tell the Tenesi what to do?"

Wooshin was silent again, and Brownpony smiled. "Axe, if it were up to me, you would be the commander of the operation in the Province instead of Magister Dion."

"I have no ambition to command an army, 'Oliness."

• • •

It was November before Blacktooth came limping into the snowy mountains with a sore toe and in the company of Aberlott and a glep cougar kitten with one blue ear and a half-bald skull. He had been

robbed of his mount by outlaws after his Wilddog escort left him on the papal highway, and then Aberlott—who had returned first to Valana and then taken the highway south in the hope of seeing the sister of Jæsis again—found him moaning and half-conscious, with a ravenous kitten sucking at his bloody big toe. When they arrived at the military checkpoint at Arch Hollow, Blacktooth's name was found to be on the guards' list of admissible persons, but Aberlott's name was not.

"He was here with me last year, and we were both here as emissaries from the Secretariat in Valana."

"There is no 'Aberlott' on the list. And I don't think he is one of us."

"Neither am I."

The guard stared oddly at the monk. "No? I could have sworn—"

Aberlott broke out laughing. "You're a spook, Nimmy. I've known it since Ædrea told Anala you were."

Blacktooth sputtered. To the guard, he said, "I'll vouch for the idiot."

The guard called an officer. Blacktooth was made to sign a guarantee as Aberlott's custodian.

"If he breaks any laws, you'll take his punishment."

"What a wonderful opportunity for me!" said Aberlott. "When I'm naughty, you'll get whacked!"

"And you'll get shot!" the officer snapped.

But as soon as they arrived at the new and temporary Holy City, they found themselves in the polite custody of Wooshin, Qum-Do, and Foreman Jing, and for the second time Nimmy had to inform them of the death of a comrade serving their common master. They expressed concern about Gai-See's continued absence.

"I think Sharf Demon Light is keeping him for a while as a teacher of his arts to young Jackrabbit warriors. He wanted to keep me to teach them to read. Now, when may I see His Holiness?"

He found himself looking at Aberlott and three—*uh-oh!*—expressionless yellow faces.

## CHAPTER 26

It happens all too often that the constituting of a Prior gives rise to grave scandals in monasteries. For there are some who become inflated with the evil spirit of pride and consider themselves second Abbots.

—Saint *Benedict's Rule*, Chapter 65

HEN THEY TOLD BLACKTOOTH WHAT HAD BEEN done to Ædrea, they were prepared to restrain him and tie him down until he listened to the whole story, including their master's promise to commute her sentence as soon as the Pope could leave New Jerusalem. Instead Nimmy listened in silence, wept a little, but in the end said, "Good! But what about Gai-See? Has he come back yet?"

"We have heard nothing," Axe told him.

Nimmy wanted an audience with the Pope, but Axe convinced him the time was not right. They waited five more days for the warrior's return. Then Blacktooth said to Foreman Jing, "Come with me to Arch Hollow."

"Why?"

"Because I am no longer the Pope's servant. Nor was Gai-See when he started obeying Hadala and Nauwhat. The guards will not answer my questions. They may talk to you."

Jing agreed. They left the municipal area in the early morning and were back to their servants' quarters before sundown. Blacktooth allowed Jing to tell Wooshin the bad news.

"Gai-See arrived at Arch Hollow a few days after Blacktooth and Aberlott. The guards there seized him, charged him with murder, and escorted him straight up through the mountain passes. They took him to Slojon's court in the central square. There he was indicted, and thence he was sent to the cage. Slojon went directly to the Pope and informed him of the action. They met alone with no witnesses."

"I remember that meeting!" said Axe. "I did not know what it was about."

"Of course," said Qum-Do. "You were there too," he said to Jing.

"So, why aren't *you* looking angry, Axe?" Blacktooth asked.

"At whom?"

"At the Holy Father, of course! For approving Gai-See's arrest."

So unthinkable was the suggestion, so irreverent to their master, that they all glared at him.

"Well, false friends, *I am* going to see the Pope about Gai-See!" said Blacktooth.

"No you're not," said Wooshin, laying a hand on his arm. "His Holiness is not ready—"

Having called him a false friend without provoking him, Blacktooth slapped him. So unexpected was the event that Axe failed to evade the blow. Nimmy stepped back defensively.

"You'll have to kill me to stop me, Axe, and your master won't like that."

"But you're not supposed to crash in without—"

"That's not for you to say. I am going to see the Pope. Come along if you want, all of you." He glanced at Ri's warriors. Qum-Do and Foreman Jing were standing at hand-on-sword alert. Either of them would abandon Gai-See to his fate without protest, if their master so much as frowned at him. So would Axe.

Nimmy turned his back on them and walked out of the house. He could hear them coming behind him. He had recovered from the beating he had taken from the outlaws. The earth felt good under his feet again. However briefly, he had visited his ancestors. While with them he had seen something within himself as in a mirror. The earth, any earth, was his to walk on now. Moreover he had seen the Nomad wife of the Pontiff, red as the sunset, soaring over the corpse-strewn landscape. Gai-See was only the beginning of what he wanted to see the Pope about. Blacktooth was vaguely conscious of casting aside his vow of obedience, but felt no qualms about it this time. Ædrea was in his mind like a vision, but he had nothing to say about her.

At the entrance to the audience room, a member of the Papal Guard armed with a halberd blocked the doorway. Blacktooth stamped the guard's slipper with his heel, seized the halberd, and rammed his stomach with the butt of it to get inside the door. His Oriental companions watched the fight without comment. Once inside the doors, he was seized by Cardinal Linkono and the Grand Cardinal Penitentiary. Axe stepped in to assist them now, but Brownpony called out from the throne.

"Let him in. Let them all in."

Blacktooth strode up to the dais and fell to his knees before his Pontiff. The Pope reached down to lift him up, but the monk evaded his hands and stood erect. Brownpony regarded him with faint amusement.

"Is this so urgent, Brother St. George? We were discussing policy with our eminent brethren. About Ædrea—"

"It's not about Ædrea. Who do you see here besides your eminent brethren?"

"Why, I see an unhappy monk, and three of my personal guards."

"Why not *four* of your personal guards, Holy Father?"

"Oh. I did not know that you and Gai-See were close. It is unfortunate."

"We were not close at all, and your betrayal is worse than unfortunate."

Brownpony frowned as if not quite believing his ears.

"I see it is possible for a Pope to do evil."

Against these insulting words to the master, swords were drawn.

Nimmy turned his back on the Pope and faced his companions. "If your master wills my death, cowards, why do you hesitate? Hit!"

Immediately he turned to Brownpony again. "Can't you see what you've done? Right here before you, they're ready to do what Gai-See did. Except that Gai-See thought he was right and they know they are wrong. And Your Holiness accepts this kind of loyalty in good conscience?"

Brownpony was watching his former Nomadic secretary in apparent fascination. Blacktooth heard one sword return to its sheath. That would be Foreman Jing, he guessed. Wooshin would kill him without the Pope's nod if he thought the Pope's best interest would be served by the killing.

"Blacktooth, you were always a quick study, but this is a new role, isn't it?"

"Holy Father, as a Catholic, I have to believe that what you bind on Earth is bound also in Heaven, and I have to believe that when you are speaking about faith and morals, the Holy Ghost prevents you

from speaking any error."

"You *have* to believe, but *do* you?"

"I have a question. Is a declaration of war an assertion about faith and morals? Ever? Even if you call it a holy war? Father Suarez taught—and he was extending Saint Augustine's teaching—that a war to convert the heathen can never be just. Can a war against heretical Christians be holy, if a war against the heathen is unjust?"

"The war is against neither heathens nor heretical Christians. It is against a tyrant who usurps the apostolic power and oppresses the whole world."

"But it's heathens and Christians who are killed, while the tyrant still lives and the apostle is still in power."

Brownpony seemed to swear under his breath for a moment, then recovered. "You wrote me that you killed a man in battle, Nimmy. Is that what's wrong with you now?"

Blacktooth nodded and spoke slowly. "The man in a Texark uniform was a child of yours, Holiness: a glep from the Valley. I meant to miss him. My aim was bad, and I hit him in the belly. What he wanted from me then was a bullet in the brain, but I cut his throat instead, because a sergeant was watching. Yes, I think that is what's wrong with me, Holy Father. Eltūr Brām, because I had already killed, would have made me a Nomad warrior with only the initiation, without the ordeal of battle. Then they would stop calling me 'Nimmy,' he said, and stop laughing about it. I don't mind the name or the laughter. I want never to kill again. But I don't want to see Gai-See punished. He saw Hadala as a fugitive from your commands. He couldn't arrest him or Gleaver; he did what he thought was necessary."

"He had no license from me."

"You accepted his services as a warrior. Did you really withhold from him the license that he assumed was his?"

Pope Amen frowned and called out for everyone but Blacktooth and one guard to leave the room. It was the guard with the sore stomach who stayed, and who sealed the doors after the others were outside.

"Go on, finish what you have to say."

Blacktooth looked around to make sure Cardinal Linkono was gone. "For one thing, Gai-See is a member of a religious order, and—"

"I see," Brownpony interrupted. "I claimed jurisdiction in Ædrea's case, why not in Gai-See's? Because no pope has yet recognized the Order to which Ri's men say they belong, that's why. I meant to do it sooner or later, but I can't do it just to free Gai-See. It's too transparent. But go on, if you have more to say."

"I cannot, Your Holiness, speak to the Vicar of Christ on Earth as freely as I did to my former employer, the Secretary for Extraordinary Ecclesiastic Concerns. I don't know the Vicar of Christ."

"It seems to me you've been speaking freely enough. But suppose I just take off my zucchetto and tell you that the Vicar of Christ has taken the day off. I am still Elia Brownpony—the bastard son of a lesbian nomad and a Texark rapist. So, Nyinden, farmboy Nomad, sometime monk, sometime lover, speak your mind. I may throw you out, but I won't throw you in a dungeon."

"Then release Gai-See from a dungeon."

"I didn't imprison Gai-See. Cardinal Linkono did."

"Without your permission?"

"You don't understand the situation here, Blacktooth. We are the guests of the city. I won't say we're captives here—until I try to return to Valana and see if they let me go. Cardinal Linkono informed me of Gai-See's arrest. Chuntar Hadala played bishop to these people, because he was bishop to the Valley whence they came. Slojon and everybody here knows that I sent men to arrest Hadala, and, well—"

"Oh. So when Gai-See killed him, they thought *you* ordered the execution."

"Not yet, but they will certainly suspect it if I secure his release now. He killed a bishop, and prince of the Church. Cardinal Hadala was popular here."

"I was there when it happened, Holy Father. All along, Gleaver and his officers had been shooting those of us who wavered or held back. In that light, Gai-See shot in self-defense and the defense of us

all. But first he crawled up to me under fire. He asked if it was true that Cardinal Hadala was defying your orders, and betraying you. I told him it was so. I knew what he might do when I told him that, and I hoped he would do it. So I am the one who sentenced the cardinal to death. Have them arrest me too, Holy Father."

"I'll see what I can do," Brownpony said darkly, and beckoned to the guard and breathed a quiet order. The guard with the sore stomach seized Blacktooth's arm, led him straight to jail, and put him in Gai-See's cell. Gai-See embraced him. During the embrace, the guard reached through the bars and punched Blacktooth hard in the kidney with the butt of the halberd.

"I'll be back for you soon," he said with a sweet grin.

Gai-See was not alone in jail. Two men who claimed to be political refugees from the Empire and who now sought asylum in New Jerusalem were imprisoned there until their claims were thoroughly investigated. One was Urik Thon Yordin, S.I., the Ignatzian who was also a professor of history at the secular university at Texark, and whom Brownpony had suspected of hiring the thugs who tried to kill them on Easter before the last conclave. How desperate the man must be to escape Texark, that he should come here for asylum! He glanced at Blacktooth once, but neglected to recognize him.

The other man was Torrildo.

"Blacktooth, my God! You can't imagine what that beast Benefez did to me!"

Nimmy sat down on Gai-See's bed and fell to questioning the warrior. He tried to ignore Torrildo's confession of the intimately brutal sins the Archbishop of Texark had perpetrated upon his person.

According to Gai-See, Yordin and Torrildo were refugees, not from a terrible Emperor, but from a furious Archbishop who had suddenly been made to realize that he could never be Pope, even if his nephew conquered all of his enemies. At the university, Yordin had made the mistake of saying openly that Benefez was now *non papabilis*, and Torrildo himself was part of the Archbishop's problem which insured that he would never wear the tiara. In each fugitive's case, it was his own confessor who, after hearing the rumbles from the top of the mountain, advised his penitent to do his penance in some land far from the reach of the Imperium and the Diocesan Ordinary. So there they sat in a New Jerusalem jail, hoping to be of some value to a Pope who had the power to set them free. Blacktooth found this interesting and ironic, but decided not to concern himself with their fate.

After a while, the guard came back for him and they returned to the throne room. He asked Wooshin in a whisper if he knew about Yordin and Torrildo, but the Axe ignored him.

"Is Gai-See sick?" Brownpony wanted to know. "Is he mistreated or badly fed?"

"He is sick at heart. Keeping him caged is mistreatment, and so is the food."

"If you had not been hiding out with Amen Specklebird when they blew up the Palace, none of this would have happened," Brownpony told him. "You would have come here with me. Now you are furious, as if it were my intent that you fight or kill in battle."

"I was *not* 'hiding out' with the Pope."

"Just praying?"

"Not quite. We talked. One thing we spoke of was war, and I made the traditional mention of 'the Church Militant on Earth, the Church Suffering in Purgatory, and the Church Triumphant in Heaven.' But the Pope said to me, 'There is no Church Triumphant in Heaven, although I have heard that foolishness before.' I asked him why he said that, in disagreement with all the elders, and he told me, 'John says it. Chapter Twenty-one, Apocalypse, "And I saw no temple therein." In the presence of God, the Church is a discarded crutch.'

"What I am saying to you, Holy Father, is that if the Church Militant on Earth does not produce members of a Church Triumphant in Heaven, then its militancy is not . . ."

"Stop. I bow to all the words of my predecessor, but not to *your* explanation of them. Especially not on the subject of war."

Nimmy fell silent, feeling stupid.

"It wasn't murder, when you accidentally shot that man. You don't need absolution for it—but I can shrive you if you like." The Pope stared at Blacktooth's face for a time, and began to frown. "I think you

would *not accept* absolution from me if I gave it to you!"

"You have already given me a plenary indulgence and a passport to paradise in *Scitote Tyrannum*, Holy Father. What more could I ask?"

Brownpony reddened at the sarcasm, but Blacktooth persisted in standing there with his hands spread wide as if to receive gifts. In reality, he was frozen in fright by what he had said.

"Get out of here!" Brownpony erupted. "Go visit your patron saint at the priory. I don't want to hear this."

"May I be excused now?" Stupid again!

"Yes. Go."

Blacktooth glanced at the Pope's hand. Brownpony did not lift his ring, and Blacktooth did not reach. He made a fast genuflection and beat a faster retreat. He did not see Brownpony again during that winter.

He took residence at the Priory of Saint Leibowitz-in-the-Cottonwoods, where Prior Singing Cow St. Martha assigned him work in exchange for room and board. He was not required to assist in the Divine Office, but he was not forbidden either. So he added his voice to the choir, took dictation and penned letters for the prior, washed dishes and took his turn as cook. The brothers were kinder to him here than at the abbey, although they were the same monks; he had known them all at the monastery in the desert. They were all specialists. Brother Jonan, who used to wake Blacktooth every morning for Lauds, was a mathematician. Brother Elwen, who had been Torrildo's lover and went over the wall, had come back repentant and become skilled in his previous studies: mechanics and engineering. Old Brother Tudlen, whom Blacktooth had barely known because he had been on leave from the abbey for so many years at sea, was a naval architect, astronomer, and navigator; he seemed somehow out of place this far from the ocean, but Brownpony, like Filpeo, had ambitions. Tudlen had built a schooner in old Tampa Bay, and it was supposedly the property of the Order; here in the mountains where the air was thin and clear, he was grinding a telescope mirror. The others were specialists in Church history, in political and military history, and in the work of Boedullus among other authorities on the *Magna Civitas* and its catastrophic collapse.

Persuading Mayor Dion to permit the opening of the Leibowitzian priory in New Jerusalem had been no small undertaking. Singing Cow had only high praise for the Pope as a persuader and as a devotee of their patron saint. "His Holiness convinced Dion that we would be of educational value to the community here. But so far, no schools have called on us; Linkono runs them. These spooks don't want their superbabies growing up to be monks. There are two layers of religion here: Catholic above ground, and New Adventist below ground. They're out to save the world. Hadala was typical."

"The old Jew Benjamin told me about them," said Blacktooth, "but he kept mumbling, 'It's still not him, still not him,' and I don't know what he meant."

Singing Cow smiled as if he knew but said nothing.

He confessed to Father Prior "Mooo," as the Brethren sometimes called him. As one ex-Grasshopper farm kid to another, it proved a strange experience for them both.

"Were you taken into the Nomad war cult, my son?" Father St. Martha asked, in connection with Blacktooth's confession of killing a man in battle.

"No, Father. The Grasshopper people treated me with kindness, as they would a boy who had not yet passed through the ordeal. I did not intend to shoot the man."

"Of course not, but you intended to cut his throat, did you not?"

"I thought he was begging me to. I still think so."

Singing Cow, who sometimes liked to think of himself as a Nomad, mentioned that the Church frowned upon assisting a suicide, but that he would probably have done the same; still it was an act to be repented.

Nimmy failed to mention disobedience among his many sins. Singing Cow did not remind him. Absolution was forthcoming, and the penance was mild: pray five mysteries of the rosary and begin singing for his supper.

One cold night he and the Cow were walking home through the snow after singing Compline in the neighborhood Church which they shared with the local pastor and his small flock. Compline was the night prayer of the Church, concerned with sleep and wakefulness, life and death, sinning and receiving grace. But it was no lullaby, and left him feeling lonely.

"I can tell you something I think you'll want to hear, Father."

"Tell away," said Singing Cow.

"Remember when we ran away and tried to join the Grasshopper? They fed us, let us rest two days, and then drove us out of the camp with whips in a snow like this. Were you as bitter as I was?"

"Those rope whips! Listen, I still don't know what we did to offend them. I used to think that you or Wren must have made a pass at a girl. Because our parents farmed? Was that why? Yes, I was bitter, and Grasshopper Nomads still make me uncomfortable."

"If we had fought back, we might have had a chance; instead, we just cringed and ran. There is a Grasshopper Weeju there who thinks she remembers three wandering orphans at about the time we visited their tents. She explained to me why they offered us no more than food, water, and two nights' sleep."

"Explaining cruelty doesn't absolve it."

"Perhaps not. But I'll try to repeat what she told me as best I remember. 'Who wants to adopt a teenage nimmy,' she said, 'no matter how he was raised? A Weeju spends four or five years feeding him, clothing him, and teaching him the horses. In exchange for what? Unskilled and lazy labor. He's horny and he gets in fights. He starts trouble with other families. Maybe she catches him coupling with one of her own daughters, but they can't be married under the breeding rules. Or worse, he runs off to marry a daughter of her horse-breeding rival! A family that mourns a dead son would be better off adopting a young cougar than another boy.'"

Singing Cow laughed. "She knew about your kitten?"

"I was carrying Librada when I visited her. She herself had adopted a pubescent orphan girl. But among Nomads, when a girl grows up she stays with her mother. A boy grows up and leaves her and her whole family when he marries. Motherless boys are as welcome as leprosy there, unless they can fight and join the war cult."

"Rope whips." Cow was ruminating on it.

"That was more than twenty years ago, Father. This year, the sharf himself wanted me to stay and tutor his nephews. I would have been adopted, at my age."

"Well, I'm glad you told me *why* they were cruel. Charity's rarely convenient; sometimes it's completely impractical." Singing Cow thought for a moment. "The sharf's grandmother probably believed your vow of chastity protected all of the daughters," he added.

Blacktooth looked away and blushed. "You're supposed to forget what I tell you in confession!" he complained as they entered the monks' dormitory.

At the small priory, each man took his turn at cooking or menial labor. Blacktooth had been told by the Axe that the Pope had wanted his recipe for summonabish stew, and when his turn came to cook, he asked Father Moo's permission to prepare the dish for all the Brothers, who needed permission to eat meat. When permission was granted, Blacktooth bought the ingredients from a local butcher, prepared the feast, and sent a quart of it to the Papal Palace. The lack of a response seemed an indicator of the Pope's disfavor. Librada consumed the leftovers with gusto. She had caught a mouse on her first day, thus insuring her room and board.

"Why did you name her Librada? What does it mean?" Cow asked.

"It was Spanish, and means 'set-free.' Because that's what she'll be, before she's much bigger and eats one of us."

The winter of '45-'46 was the mildest in memory. Most of the Wilddog Horde moved their cattle south as usual. Hannegan's agents among the motherless outlaw bands observed the migration, but saw nothing unusual to report until March, when all the warriors of the horde assembled as an army under

Lord Høngan himself, with Oxsho second-in-command. They rode swiftly eastward for several days, then south to the river. Before Filpeo Harq learned about the movement, the Nomad horsemen had forded the Nady Ann and attacked from the rear those Texark forces dug-in along the east bank of the Washita. With them they brought three Grasshopper dog trainers and nearly a hundred dogs who would kill any unmounted man who did not smell like a Nomad. At least six of Sharf Oxsho's warriors were bitten for not having the usual Grasshopper aroma; by the light of the full Pascal moon the dogs tore out the throats of Texark soldiers in the trenches along with some of their reluctant Jackrabbit allies who ate too many onions to smell friendly. The dogs' attack on the night of Holy Saturday enabled the forces of Önmü Kun to cross the Washita without coming under fire until they charged the fortifications with fixed bayonets. By Easter's sunrise, the trainers had regained control of ravening dogs and the battle was won without further Jackrabbit casualties, and Mayor Dion's well-rested men crossed the river to carry the war eastward on horseback.

After the fray, Høngan Ösle Chür met with Önmü Kun in the middle of a battlefield at dawn; he then rode with the Jackrabbit's forces without taking command. This was his reason for defying his shamans. The Jackrabbit were lacking in respect for Önmü the smuggler. Their respect for the Lord of the Hordes was enhanced by the fact that he was not Jackrabbit. Such was the self-contempt of a conquered people.

Father Steps-on-Snake had recently come to the vicinity and he now celebrated the Mass of the Resurrection at noon on March 25th—the earliest Easter in many years—and gave the Eucharist to Lord Høngan Ösle together with Sharf's Oxsho Xon and Önmü Kun in the sight of all the warriors and the Jackrabbit population of the region. Thus did the faithful rejoice in the victory of the Nomad over tyranny at the same time as the victory of the Christ over death. Never in the memory of old Steps-on-Snake had the subject people expressed such jubilation on this highest feast day.

Holy Madness spent nearly a week building up the Jackrabbit's esteem for the Jackrabbit sharf by accompanying him everywhere, listening to Önmü address the rebel fighters and civilian groups, then reinforcing the sharf's words with a few of his own, bringing on rousing cheers from the multitude.

There were about seven hundred unwounded prisoners. Jackrabbit warriors had begun to maim them until Holy Madness put a stop to it. That Nomad custom had been abandoned soon after the Texark conquest, except for captured spies and saboteurs, but the Jackrabbit was only trying to honor the custom, for they had been told by Önmü what Høngan had done to Esitt Loyte.

But the forces of the Hannegan were rushing westward to rejoin the battle against the Jackrabbit rebels, and Önmü's gathering army now marched to meet them following Dion's light horse. Having destroyed the enemy forces in the immediate vicinity and inspired the Jackrabbit fighters with a new enthusiasm for battle, Høngan and Oxsho withdrew the Wilddog horsemen from the area by crossing the Washita and riding westward to cross the Nady Ann at a point where their movement would not be observed by Texark scouts.

When the warriors rejoined the rest of the Wilddog Horde at their wintering grounds, Høngan Ösle first sent messengers with an account of the battle to Sharf Bråm and Pope Amen. Then he summoned Father Ombroz as well as his senior Bear Spirit shaman and his own Weejus mother; he told them to prepare immediately to accompany him to New Jerusalem and the Court of Amen II.

• • •

The Lord of the Hordes and his party arrived in New Jerusalem at the end of April. They were greeted by the Pope and the Mayor—Dion was briefly home from the wars—with high ceremony. The Major General Quigler Durod was already in town as plenipotentiary from the King of the Tenesi. Durod had taken the trouble to learn a Nomad dialect (Jackrabbit, because in his youth he had served in the Province as a Texark mercenary), and he made friends quickly with Høngan Ösle. Besides Durod, armorers had come from the west coast, bringing samples of their latest model firearms.

Although Høngan Ösle as *Qæsach dri Vørdar* spoke for all three hordes, Brownpony expressed regret that Sharf's Bråm and Önmü Kun were unable to attend the council of war. Three days later, an

angry Grasshopper emissary rode up from Arch Hollow to confront the Pope.

The Grasshopper messenger was not a Christian. He stood defiantly before Amen II and six members of the Curia to voice the demands of his sharf. "Unless you release Nyinden and the swordsman Gai-See into my custody, the Grasshopper will make war not against your enemies, but against you!"

"Perhaps your sharf has been lied to by someone," the Pope said. "Nyinden is staying at the priory with the other monks. If he wants to go with you, there is nothing to stop him."

"And the yellow warrior? Where is he?"

"He's in the city's jail. I did not put him there. The only man in this room with any voice in city affairs is Cardinal Linkono, who grew up here. Your Eminence, would you please?" He beckoned to a short man with a white beard who looked like a gnome wearing a red skullcap. Then he said to the messenger, "I think your sharf would want his message to go to the right man. I am the wrong man, and His Eminence Abraha is not the right man either, but he can take you to the right man."

"Are you not the most powerful man in this awful place—not Pope Redbeard, the Lord of the Christian Horde?" the Nomad demanded.

"Not really Lord as you understand it. You might think of my office as that of a high priest."

Linkono limped up to stand beside the Nomad, facing him, and spoke in a voice surprisingly deep for so small a man. His Nomadic was heavily accented but understandable.

"Young man, why is this an 'awful place'?"

Brownpony himself explained: "The Nomads say evil spirits come down from the mountains, especially the Old Zarks, and inhabit wombs. The belief explains why a Nomad woman sometimes gives birth to a glep baby."

"I see. Well, young man, compare our Pope to your oldest Bear Spirit shaman. Neither he nor your sharf has to obey the other. The sharf in this place is Mayor Dion. But he just left here to go back to the war. His son takes his place. This, the Church, is like the Bear Spirit Council. There is nothing we can do for you here, my nephew, except pray."

Linkono was smart enough not to say "my son" to a Nomad, but this Nomad did not like "nephew" either.

"My *only* uncle is Demon Light, gray runt. My name is Blue Lightning, and I am the *eldest* son of his eldest sister. We both witnessed Hadala's crimes."

"Surely you mean the crime against Cardinal Hadala!"

"I mean Hadala's crimes, for which he was executed."

The gnome's jaw fell. "Crimes under what law? Nomad law?"

"The Treaty of the Sacred Mare. He violated it by bringing an army into our lands. Hadala violated the law and defied our sharf. By his order, his officers killed his own men. If Nyinden and the yellow warrior hadn't put him to death, my uncle would have done it."

"I had not thought of it in that way before," Brownpony said. "He's right, you know, Abra. Hadala clearly violated the Treaty."

"Holy Father, I can't believe what I'm hearing!"

Blue Lightning grabbed the small cardinal by the shoulders and shook him. "I can make war or peace, little man. My words are my uncle's words. Perhaps we cannot bring war to you here in your evil mountains, but we can join the war against your men who fight south of the Nady Ann. Take me to the man who jails the victim instead of the criminal."

Linkono limped toward the exit as fast as he could move, with the burly Nomad crowding his heels. When they were gone, Brownpony turned to his personal guard. "Axe, go with them, and take Jing and Qum-Do. Keep that Nomad out of trouble, and make sure Slojon has to look you in the face when he talks about Gai-See." Then, to the Cardinal Penitentiary who was also his personal confessor, he said, "Go to the guests' quarters, please, and tell Høngan Ösle Chür what has happened here. Blue Lightning does not realize that his *Qæsach dri Vørdar* is in town."

In the administration building, Slojon haughtily dismissed the Nomad's claim. The Nomad grabbed him by the ears and hauled him, squeaking in pain, across the desk. A sergeant drew a pistol, and

instantly three swords were in the air.

"Drop it, or lose your head," said Axe. The sergeant dropped it.

Eltür's nephew now stood behind Slojon with his arm in a hammerlock and a knife held to his throat. He pushed him toward the door. "This fart is going to jail," said the Nomad.

Slojon screamed as he felt his own blood running down his chest.

"Stop him, Wooshin! Stop him!"

"Only you can stop him, Messér. Take him to the jail in peace."

"Brownpony is behind this!"

"No, the Pope is not! The man behind it is also behind you, right now. You did violate the Treaty, Messér."

"All right, we'll go to the jail."

The trip to jail was halted by the sudden entrance of Høngan Ösle Chür and his two shamans. Blue Lightning took one look at him, gasped, and released the Mayor's son. He made a sweeping *kokai* to the chosen one of the Day Maiden, Husband of the Prairies, then fell silent to await orders.

The Lord of the Hordes asked for an explanation of the problem. Blue Lightning spoke first, then Slojon and Axe. Then the *Qæsach dri Vørdar* told the Mayor's son that he, Høngan Ösle Chür, ruled in favor of the Grasshopper claim and made the same threat to Slojon that Blue Lightning had made. The hordes would turn against New Jerusalem for breaking the Treaty, and might even carry the conflict into these feared mountains. The Jackrabbit would turn on the spooks in battle and kill Slojon's father as well.

Thus it came about that the charges were dropped and Gai-See was released into the protective custody of Blue Lightning. Because the Nomad claimed plenipotentiary power to speak for his uncle, Brownpony invited him to attend the council of war, which had all but ended upon the departure of Dion, but was now renewed in the presence of the Grasshopper. The Pope dispatched a message to Bråm through the Nomad relay network to assure the sharf that Gai-See and Nyinden were free. He also thanked him for sending Blue Lightning, who added to the document his initials—Blacktooth had taught him to draw them—and peace was restored among the allies.

After his harsh beginning, Blue Lightning proved a well-rounded diplomat. In spite of his initial threat to abandon the alliance and join the other side, he brought intelligence gathered from several sources. On balance, the news was good, but there were things to worry about. Filpeo had new repeating arms now, but not yet enough of them to turn the outcome of any foreseeable battle. The countryside surrounding New Rome was by no means demilitarized, but the occupation forces there were thinned out by the withdrawal of troops being sent to the Province to halt the eastward advance of the armies of Önmü Kun and Mayor Dion. Sharf Bråm estimated that no more than seven hundred men, Texark cavalry and glep mercenaries, remained to block access to the gates of New Rome.

And there was trouble in the Valley. Texark recruiters had been ambushed and killed. "I wonder who could be doing that?" Quigler Durod asked innocently, provoking laughter. Everyone present knew that Tenesi agents disguised as gleps had crossed the Great River and infiltrated the Watchitah-Ol'zark region. Further recruiting in the Valley of the Misborn was inhibited, if not halted.

"If we don't strike now," Høngan said, "the Emperor's firepower will increase rapidly. We will lose the advantage the Pope's weapons have given us."

Blue Lightning murmured assent. General Durod wanted to know if it was possible to use the Nomad relay network to contact his men in the Valley.

"If you have a secure cipher, maybe," said Blue Lightning. "There is a risk of a messenger being caught. He must not know what your message is."

Pope Amen came to a sudden decision. "We shall mount an expedition to capture New Rome, and do it as soon as possible, unless one of you disagrees."

Nobody objected. After so many decades in exile, the Holy See was going home.

Pentecost came on May 14th in 3246, and Blacktooth had known for a week that Holy Madness and other important guests were in town to consult with the Pope, but the consultations were private and

he was as ignorant as any local citizen of what happened behind the closed doors. Prior Cow wanted all eight of them to attend the Pontifical High Mass in the Pope's log-and-stone cathedral, but Nimmy begged off. Instead, he attended Mass at their usual neighborhood Church, sang the *Veni Creator Spiritus* with the small choir, and assisted the priest in distributing the Eucharist to local spooks and their beautiful children.

Singing Cow found him sitting in the garden, trying to extract a still fluttering pigeon from the jaws of his growling glep cougar. Librada slashed his hand and clamped down on the bird. Nimmy gave up. "I think it's about time for Librada to be *librada*," he said to the prior.

"We'll take care of it, Nimmy. You're going to be too busy."

"It's up to me, Father. I brought her here. She ought to be let go as far as possible from humans. She's not afraid of anybody. And why do you say I'll be too busy?"

"I think you will be. The Pope wants to see you right now. He's going away."

"Away?"

"To New Rome—as a conqueror, I believe. Now go bandage your hand and run over to the Palace."

As soon as he saw that Gai-See had been set free, Blacktooth felt shame for his earlier impudence toward his Pope, and he looked for an opportunity to apologize. But Axe had assigned him to a place in the baggage train in the rear, and the procession had been in motion for three days before he found an opportunity to approach his former employer. They were both on horseback.

"Don't thank me, thank God and the Grasshopper," said the Pope after waving aside Blacktooth's apology.

"I don't understand, Holy Father."

"You don't have to!" Brownpony snapped, and after a pause relented. "Somebody told Sharf Bråm that you and Gai-See were both in jail for killing Cardinal Hadala. Hadala was violating the Sacred Mare Treaty by bringing an army onto Nomad land. The sharf would have killed him if Gai-See hadn't. I don't know what made him think you helped kill him."

"I did help, Holy Father. I told Gai-See that Hadala was defying you, and I knew what I was doing when I told him. Eltür knew this."

"I see. Well, he became quite angry and sent his nephew with an oral message to Gai-See's jailer."

"Which nephew was this?"

"Stützil Bråm—Blue Lightning. He's up ahead with Høngan Ösle's party. At first he thought I was the jailer. He told everybody that unless you were released at once, he would make peace with the Hannegan and attack Dion's forces wherever he found them. Høngan Ösle stepped in at that point and took over; he even threatened to hit New Jerusalem. So you can thank the Nomads, not me. I'm only bringing you along to satisfy Eltür Bråm."

"So that's why!"

"That and your prowess as a soldier," said Brownpony, and spurred his horse to get away from the conversation.

## CHAPTER 27

Except the sick who are very weak, let all abstain entirely from eating the flesh of four-footed animals.

—*Saint Benedict's Rule*, Chapter 39

HIEF HAWKEN CARDINAL IRRIKAWA, WHO HAD departed Valana for his own country some months ago, returned suddenly to rejoin the Curia's wagon train. He explained that his road home north of the Misery River was temporarily blocked by the presence of Texark troops in the region. The lands beyond the Misery were considered open range, and both Grasshopper and Wilddog peoples drove

cattle there in season, although the campsites were not permanent and there were no breeding pits. If Texark troops were in the area, it was in violation of the Treaty of the Sacred Mare. The Pope was alarmed at first. But those who questioned the cardinal closely concluded that what he had encountered was a band of well-dressed and well-armed outlaws, imitating Texark cavalry maneuvers. It was strange, but only Sharf Oxsho seemed worried. "Too many outlaws on the move," he said softly to Father Ombroz. "Too many to believe."

The Pope's train gradually gathered a multitude as it moved east. Parties of ten or twenty warriors converged with the growing army every few hours. While passing through Wilddog country, the legion grew to sixteen hundred horsemen and their animals. Sometimes when the moon was bright in June, nocturnal riders thundered into camp with obscene war cries followed by laughter as sleepy men scrambled out of their bedrolls. There was talk of victory in the air, talk of spoils and of farmers' women. And rebuke for such talk from Sharf Oxsho's lieutenants.

Blacktooth rode in the back of the hoodlum wagon with Librada, his cougar. He had made a rawhide collar and kept her on a short leash. A sickness of the spirit had come over him. He was unable to pray except to God in his cat.

That was the summer of the Year of Our Lord 3246. On the eve of the solstice the moon was pink and full over the western horizon when dawn broke on the Plains. As Blacktooth crawled from under the hoodlum wagon, he could see that breakfast fires were already being extinguished here and there about the militant horizon. Groups of armed men, horses, cattle, and cannon as far as the eye could see: it was seething, but not yet boiling, this pot.

The Hannegan knows we are coming. When will he respond?

There was no haste to resume the journey, probably because today was a special day. Blacktooth could not be certain, for he was out of touch with those in command. A tripod with the remains of a slaughtered cow hung near the wagon. He scraped some raw meat from the bone with the hood's stolen bayonet. A monk of Leibowitz never ate such meat without the abbot's permission, which was rarely given, except on high holy days, or to the gravely ill. I am gravely ill, he said to Jarad breathing over his shoulder. The hood handed him a pancake, a cup of tea, and the usual morning insult. The hood was a Wilddog Nomad, whose name was Bitten Dog, drafted by the Pope's chef as cook's helper, and Blacktooth was supposed to be the Bitten Dog's helper, but diarrhea and deep sadness made him useless. His only work became the gathering of dry manure for fuel during stops, and the polishing of kitchen implements during days in the wagon.

As it turned out, the day was indeed a special day. The Nomads ordinarily celebrated the Nomad Feast of the Bonfires at the solstice; and the Church once had observed on the twentieth of June the Feast of Pope Saint Silverius, the son of Pope Hormisdas. Silverius had offended the Empress Theodora, and she exiled him—a punishment which led to his suffering and death in 538 A.D., and therefore to his being called a martyr. Pope Amen Specklebird had borrowed his feast day (which had been borrowed twice previously) for the observances of Our Lady of the Desert, patroness of his Order. But now it was not Specklebird's feast that Brownpony chose to celebrate, but the Mass of a Sovereign Pontiff, *Si diligis me*; for to consecrate a bishop was his aim, during an early Mass that day in the midst of his armies on the hot and arid plain.

Amen II gathered about him the eight cardinals who accompanied the train. He called it a consistory, and made the intended announcements. He and Wolfer Poilyf, Bishop from the North Country, together with Bishop Varley Swineman of Denver, consecrated Father Jopo e'Laiden Ombroz, S.I., as Archbishop of the ancient but moribund diocese of Canterbury, and then made him Vicar Apostolic to the Nomads—including of course the Jackrabbit Nomads, whose present clergy was now fleeing from the advancing Crusaders of the Western Church. The reluctant Bishop Ombroz was obedient to Brownpony, but less than elated by his own elevation. The Pope made him a cardinal as well, as announced in consistory. The elders of the Bear Spirit would, Ombroz said, laugh at his finery, and he would be called Cardinal Cannibal in Texark. Ombroz was now the ninth cardinal accompanying the main army of the crusade, and Brownpony confided in him and in Wooshin that he would be naming a

tenth cardinal soon; he did not mention a name.

From what little Blacktooth saw of the Pope from a distance, it seemed to him that Brownpony looked more ethereal and spiritual than before. Maybe closeness had made him miss something in the man. The change, however, was not necessarily good. Brownpony looked at the sky a lot, other observers said. He always seemed to be looking for something in the clouds or on the horizon, and gave little attention to those around him.

Blacktooth wondered who had suggested to Brownpony the motto he had inscribed upon his new coat of arms as Amen II. It said LIKE HELL YOU WILL in ancient English, instead of the usual Latin. He understood it, but he wondered if the Pope really did. When Brownpony's coach overtook Eltür Brām's coach one day, Jopo Cardinal Ombroz was the only member of the College who knew enough ancient English to laugh at the juxtaposition of their mottos.

It was to celebrate Ombroz's ascension to the Sacred College that Önmü Kun had traveled north with Father Steps-on-Snake and a party of thirty Jackrabbit warriors. They arrived well before the event, and brought with them disease, although none fell ill until days after their arrival. Blacktooth, already ill, was one of the first to get sick after Önmü came up from the south to meet the train; he heard talk of epidemic in the Province. At first they blamed the water, but a week later three of the warriors and several Grasshopper children fell ill, and then Blacktooth St. George, who already had the runs.

As Önmü explained it, the crusaders in the south at first attributed the affliction to poisoned wells left by retreating Texark forces, but the cattle that drank from the wells were not so afflicted. And the disease seemed to spread from the men who had drunk of the wells to men who had not. So far, the enemy was not affected by the plague, if such it was. The disease, whose symptoms were something like those suffered in Valana before the election of Pope Amen I, was not yet epidemic. To contain it, certain fighting units were quarantined.

Blacktooth did not attend the Mass of a Sovereign Pontiff or Father Ombroz's consecration, but watched from a distant hilltop while squatting in the grass, taking a long painful dump. Blacktooth had given himself over to the Devil. He had stopped praying the Divine Office, except when it came to him in snatches. He listened to himself fart and said amen. He had ceased to meditate, except for an occasional rosary in honor of the Virgin—but then his mind dwelled on Ædrea in the role of God's mother.

He assumed that he would never see her again, for she was now a nun. He had not, and would not, ask Brownpony for assurance that he had done what he had said he would do as soon as they were gone from New Jerusalem, that is, commute her sentence from permanent exile. He had no evidence for believing that the Pope had remembered or kept the promise, and he could not ask. He knew he was going mad; the origin of his cosmic madness was his inflamed bowel, which was caused by his guilt, which was driving him crazy during this summer of the Year of Our Lord 3246, the year of the Reconquest, not the previous year when he had killed a pitiful, drafted glep, for that had not been a year of diarrhea and fever.

His days of madness made him reclusive. Only the responsibility he felt for Librada, the duty to return her to the country of her birth, kept him from abandoning all hope and fleeing. Father Steps-on-Snake was available to him, but he did not confess. The idea of confession seemed to make his diarrhea worse. He had made himself a stranger to his master by his insolence. The journey was misery, and every few days he had a day of delirium and uncontrollable behavior.

But it was on such a bad day that the dead Pope Amen came to comfort him.

"Your Christ is the true man of no identity," Amen Specklebird told him while he took a dump at sundown, "the one not wearing a mask; he comes and goes through your face, where your mask is. He comes and goes as he likes, fore and aft, and your mask sees him not.

A mask sees self only in a mirror. But the true Jesus without a mask is alive and well; austere he sits in solitude under the bridge where the Christ sleeps, and takes a dump."

"Are not all sins, in themselves, their own punishment?" Blacktooth asked, impertinently. He thought he remembered Specklebird saying something like that during the nine days of prayer they had shared.

"Punishment like your congress with old Shard's daughter?" the Pope replied with a grin, and disappeared before Nimmy could say *that was not* a mortal sin.

Besides his illness of body and spirit, another factor discouraged flight. Just out of sight beyond the southern horizon another train was traveling eastward on a parallel course, and another might be coming behind it. There was too much chance of being caught. Dust from the other train was usually visible by day, and the glow of its wagoners' fires by night. A rare glimpse of the wagons and riders occurred when the train mounted a low hill in the distance. Some of the wagons flashed in the sunlight as if they were covered with metal, but with the heat and the distance even the hills seemed to be made of red-hot metal in the late light. The Nomad riders stayed clear of the mysterious train; they had been so ordered. No one to whom the monk talked knew much about it, except that it had departed from New Jerusalem after the Pope's train, and that someone who knew someone who knew Wooshin said that it carried secret weapons, and that it was under the command of Magister Dion.

A few days later, Blacktooth became aware that they had penetrated into tall-grass country. He knew it without looking up from where he lay on the feed sacks in the back of the bouncing hoodlum wagon. He knew because the bands of incoming warriors were beginning to speak the dialect of the Grasshopper, and their animals began to include dogs. The dogs were not immediately friendly to Wilddog Nomads, and were noisily hostile toward Churchmen and New Jerusalemites. Because of the dogs, Blacktooth began sleeping inside the cramped hoodlum wagon instead of under it.

Pursued by a pack of the wolfish beasts, a screaming man leaped upon the tailgate of the hoodlum wagon one morning, and Blacktooth helped haul him inside. A snarling dog refused to let go of his shin. Librada shrieked. Cat and monk lunged for the dog at the same time. The man's shin was well wrapped in military leggings, but he kept screaming until Blacktooth beat the dog off with a fagot and restrained the cat.

"Thank God! And thank you, Nimmy. I didn't know you were with us."

"Aberlott! What in hell are you doing here?"

"I'm just here for the crusade. Wooshin let me join the team. Damn, it's bleeding. Your cat did that."

"You've been on the train all along?"

"Sure, but this is the first day I've had free."

Blacktooth thought for a moment. When the Pope's party of Churchmen had left New Jerusalem, they brought with them seventeen wagons and an "elite" fighting team from the Suckamints, men whose only loyalty to the Pope was guaranteed by their frightened respect for Wooshin, their sergeant general—a rank created for the occasion by the reigning Pontiff in a moment of whimsy. The wizened old warrior wore gold chevrons and a star on his plaid tunic, which Amen II had given him. That he had accepted Aberlott among his so-called crack troops strained Nimmy's credulity, but the student swore it was true. Blacktooth was glad for the company, at least for a day.

"Are you ready to run away again?" the student asked. "Like last year?"

Nimmy snorted. "Last year, one mad cardinal was leading a crowd of amateurs. This year, the Vicar of Christ is leading three hordes of warriors and two small armies."

"Two? Where's army number two?"

"It's moving south of us."

"Oh, you mean the tanks. That's different. That's something I'm not supposed to talk about, if I know anything, which I don't."

"Tanks? Secret weapons?"

"Water tanks for all I know. We'll need a lot of water."

While they marched across Grasshopper country and the Pope watched the sky, the Burregun flew over the procession so often that it became a Nomad joke. During this time, Pope Amen I appeared to Blacktooth more than once, and warned him against continuing his rebellion against his master. When he answered the old black cougar, Bitten Dog the hood accused him of talking to himself, and he sent a

message to Wooshin saying that the monk needed a witch doctor. The doctor who came turned out to be the Pope's personal physician, although the patient had never seen him before, and was unable to guess to which of several schools of medicine the doctor belonged. He wore Nomad leathers and he swore Nomad oaths under his breath, but he carried a black bag full of pipes, needles, pincers, and charms, like a member of the ancient and mystical school of allopaths.

The doctor told him that the Pope was also not well, although he had not yet contracted the four-day fever, as it was being called. His symptoms reminded Blacktooth of Meldown. Blacktooth described the Venerable Boedullus's summonabisch stew. The doctor immediately claimed it was an old Nomad dish, and became enthusiastic when he learned that Brownpony had thrived on it. When he left Blacktooth, he went to see the cook. The reinstitution of summonabisch stew as a foundation of the papal diet was thus probably responsible for Blacktooth's elevation to the cardinalate when the Pope had another whimsical moment.

Because the movement of armies of horsemen was also a religious procession, each day must be begun with a sunrise Mass, and the Christians among the Nomads must be fed the bread of Heaven before the march resumed for the day. Out of deference to his Lord Høngan, Eltūr Brām put up with this sanctimony for a whole week before he went over his lord's head and asked the Pope's leave to lead his warriors on ahead as skirmishers. It was a bad idea only if one assumed the worst of the Grasshopper sharf. Brownpony had done his best to see the man without assumptions. The Pope took the sharf by the arm and led him into the tent of the *Qæsach dri Vørdar*.

Høngan Ösle Chür opposed the Grasshopper's request at first, but the Pope said, "There is merit in moving to separate a strong striking force from liturgical encumbrance, especially as we grow closer to the enemy. That enemy knows very well we are coming."

"That is true," said Holy Madness. "And what worries me most is that we don't see him doing anything about it. But I am not ready to relinquish my command to Sharf Brām. With Holy Father's permission, I will take the sharf and as many of his warriors as he wants to bring, along with an equal number of Wilddog warriors under my command, and we shall advance as skirmishers toward the frontier."

The Pope turned to Wooshin, who quickly endorsed the plan, but added, "The Lord Høngan is right to worry. We must find out soon where the Texark force is massed, but skirmishers should avoid battle until our main force arrives."

"It is possible that they are embattled in the east," Brownpony suggested. "They dare not lose control of the Great River."

"If it is so," Axe said, "New Rome may not show much defense. Hannegan City will have the defense."

It was agreed then. At least six hundred warriors, part from each horde, stacked their arms for the Pope's later blessing and knelt beside the wagon tracks to pray at their last Mass before battle. Sharf Brām and perhaps two hundred active disbelievers, both Grasshopper and Wilddog, waited on a distant hilltop for the Mass to end. The two forces then united and rode east.

Holding court in a field of sunflowers in the heart of Grasshopper country, the Pope mentioned the name of the next candidate for a papal battlefield promotion to the Sacred College, whereupon Wooshin went into a waking trance, while Jopo Cardinal Ombroz blinked and walked away uttering mysteries. The fall from grace by Blacktooth Brother St. George ended with a thud when the Pope—in a recurrence of the whimsy which had moved him to create the rank of sergeant general for his bodyguard—created Blacktooth St. George a Cardinal Deacon of Brownpony's old Roman Church, Saint Maisie's.

The monk was not immediately informed of this signal honor, for such announcements normally emerged from a full consistory, but he got wind of it in small whiffs, as when Aberlott first addressed him as "Your Eminence." Nimmy correctly attributed this to sarcasm. He therefore blamed Aberlott again

when Wooshin rode back to the hoodlum wagon on the Pope's white stallion and used the same form of address.

"The Holy Father sends me to thank you for the special stew, and to ask about Your Eminence's health," said Axe.

Blacktooth glared quickly at Aberlott and responded, "I shit sixteen times a day, Axe. I'm weak. Every fourth day I have fits and Bitten Dog ties me up. Except for that, I'm very well, thank the Holy Father."

"I'll tell him you're dying," Wooshin grunted, and left. The physician returned that afternoon to check him over again.

"You have the Hannegan's science to thank for your illness," he told the monk. "Jackrabbit warriors brought the curse up to us from the south."

Sometimes the physician spoke Rockymount with a Grasshopper accent, and sometimes he spoke Grasshopper with a Rockymount accent. He made Nimmy eat bits of charcoal from a mostly dung fire and drink a slurry of its ashes. He put Blacktooth on a diet of meal boiled in milk, and gave him some bitter bark to chew. These measures could be either Nomad medicine or allopath remedy, but he blew *keneb* smoke toward the four quarters, mumbled a litany, and prescribed *keneb* to be smoked on Blacktooth's crazy days. The Pope apparently liked this medicine man, and Blacktooth was grateful to Brownpony for his care.

Before he left, the physician gave him a small package. "The Pope sent you this. I almost forgot."

Blacktooth neglected opening it. A gift from his former master would make him feel more guilt.

Sometimes he wanted to go to the Pope and prostrate himself as he had often done in his early years before Jarad and his brethren to obtain their forgiveness for putting a lizard in Singing Cow's bed, or for yodeling in choir; but that was within a brotherhood of equals under the Equalissimus. His present *laesae majestatis culpa* seemed much less forgivable. But that, of course, was before he opened the package and found the red hat. It was not the big red hat that was customarily nailed to the cathedral ceiling after the first wearing, but only an extra scarlet zucchetto borrowed from Chief Hawken Cardinal Irrikawa; it was identifiable by the hole in the brim through which the cardinal monarch inserted his feather.

"Now we shall have to ordain you deacon of Saint Maisie's," said Brownpony's note.

The Pope gave him three days to recover before summoning him to the head of the papal caravan. Blacktooth refused the honor. The Pope refused his refusal. "Put on the red cap," he said. "It means you get to vote for the next Pope. It is not a reward for holiness or good behavior."

"Then for the stew?"

"Not even for the stew of many blessings, Nimmy."

"A punishment for sin, then?" Blacktooth wondered.

"Ah! Symmetry. Either punishment or reward. You were always a symmetrical dualist, Nimmy."

"A symmetrical duelist?" asked the *Qæsach dri Vørdar*. "What is that, Holy Father?"

"Ambidextrous swordplay," the Axe told him in an aside.

Blacktooth was still holding the hat between thumb and forefinger as if it were dripping slime.

"Grab him, Axe," said the Pope.

Wooshin seized his shoulders. Brownpony took the zucchetto from his hand and centered it carefully upon his stubby tonsure, then patted it down. When the sergeant general released him, his hand darted toward his head, but the Pope grabbed it and laughed.

"Do I have to wear it all the time?" asked Blacktooth Cardinal St. George, Deacon of Saint Maisie's.

When news of the war finally came, it came from the rear. Texark cavalry had descended mysteriously out of nowhere to fall upon the Wilddog families in the west. They were dressed like motherless ones, and they made a great slaughter of the Weejus women and their breeding stock, the messenger said. At one family compound—that of Wetok Enar—there was a complete massacre, apparently to eliminate witnesses, but two daughters nevertheless survived, and one described a cavalry colonel with a wooden nose and long hair that covered his ears. The other, Potear Wetok, lived long enough to name her former husband, Colonel Esitt-of-Wetok Loyte, as the commander of the troop of

Texark marauders. She had watched them shoot her whole family before he, full of hate, personally shot her in the lower spine so that her death was slow.

The Texarki seemed to know just which horses to kill among the breeding stock in order to ruin every Weejeus as a breeder. Between murderous raids on family encampments the marauders were observed doing something to the Nomad cattle whenever they had made camp for the night.

When all this was reported to Brownpony, the Pope became sad but was not surprised. He looked at Hawken Irrikawa and said, "Your Majesty was right. They were Texarki you encountered in the north, although I'm surprised they made it that far west without encountering the Wilddog."

He turned to Sharf Oxsho and said, "You'll have to take care of it." To Blacktooth, it sounded like neither a command nor a suggestion, but simply an observation about Oxsho's fate, or perhaps his own.

Sharf Oxsho called together the Wilddog warriors who had not ridden on ahead with the skirmishers. "There is a difference between being a shepherd to the Lord's sheep and a cowherd to Christ's wild cattle," Brownpony said mildly, as he watched a fourth of his army prepare to advance to the rear. He sent the Wilddog messenger on eastward to report the raids to the Lord Høngan Ösle.

Three days later Høngan returned to confer with the Pope and Wooshin. He brought no news from the east. No Texark patrols had been encountered, and even the motherless bandits were staying clear of the hordes as they advanced in battle array. The Grasshopper sharf had sent patrols toward Texark, but they had not yet returned when Høngin left the skirmish line to come here.

They took a census of the forces remaining to them after the homeward departure of Oxsho and his warriors. Their strength had diminished by a quarter. All leaders conferred, and were joined in conference by the spook commander from the secretive train to the south. There could be no change in the master plan. The strongest force would be directed southeast toward Hannegan City, as before, and only the force of the assault on the "protectors" of New Rome would be diminished.

But tonight the Pope determined that for a few hours, at least, there would be no more talk of war. Since leaving New Jerusalem, the same group of people always gathered around the Pope after supper on the trail. The summer nights were hot, and everyone sat well back from the fire, but close enough to hear and be heard. In the beginning the cardinals had wanted to say Compline at this time of evening, followed by religious silence. But the Pope objected to this as an imposition on non-Christian Nomad leaders who were part of his court, and he called this his "Curia Noctis," and encouraged the telling of stories. Tonight, he had determined that the subject would be saints and holy men, although anything but talk of war might be permitted.

Because Holy Madness was still with him, he sent for Cardinal Blacktooth to join them at the fire. The monk was too weak to walk alone. Axe gave him a shoulder to lean on, but at last carried him on his back to the Pope's vicinity.

"Where is your red hat?" Brownpony demanded.

"It was stolen by a holy man, Holy Father," said Blacktooth.

"Really? Who's the holy man, Your Eminence?"

"Your predecessor, Holy Father."

"You have been visited by Amen Specklebird, Brother St. George?"

"He comes to see me every fourth day."

"If so, he should have cured you. Tell him we need miracles to canonize."

"I don't think he wants to be made a saint."

"Why, Blacktooth! Nobody makes a saint. He is already a saint, or he isn't. And that is up to us to decide."

"Of course, Holy Father."

"Well, make him give you your hat back. Don't come back here without it."

Blacktooth confided in Wooshin. "Tomorrow is my crazy day. I already feel queer. Don't let me do anything disgraceful."

Some of the cardinals seemed to be dozing. There was a long silence at first. The Pope looked at Wooshin. The Axe cleared his throat, then offered a few words to open the session. "I admire the saints.

You may not think so, Lords and Eminent Fathers, because I myself am not religious, but my people do honor holy men, and one of them was called Butsa. When he had squeezed his way out from his mother's gateway at birth, he stood erect. He pointed upward with one hand, down with the other, and said, 'Sky above, ground below, and I alone am the honored guest.' "

Ombroz laughed. "Every squealing baby says that before I baptize it. That's exactly what the kid's howling about. He is all too much the honored guest."

Sitting cross-legged, Axe smiled as if his point was made. He closed his eyes and became a sixteen-foot golden body, weighing seventeen tons. Then he vanished and became a blade of grass. Blacktooth noticed that Pope Amen I, having come earlier than expected, was standing in the fringes of the firelight. He had stopped there to piss. Having retucked his long black member into his robes, he slowly approached the fire—but he cautioned Nimmy by touching a finger to his quiet smile. It was plain that nobody else could see him. Blacktooth could even smell him, and he smelled like death.

Made nervous by the smiling Specklebird spirit, Blacktooth broke the silence.

"Saint Leibowitz spoke at birth too, you know," said the monk. "He stuck his head out of the birth canal and asked the midwife, 'Now what?'"

"The midwife answered, 'For ninety-nine years, a great waste.' "

"Ag!" It was a low grunt from the Axe.

"Saint Isaac said, 'Begone!'"

"She vanished. He lived ninety-nine years, you know."

The Pope smiled wryly. "Saint Leibowitz had the Devil for a midwife, then? Does this story come from the basement of Leibowitz Abbey?"

"You can find strange legends down there, Holy Father," Blacktooth admitted. "The earliest 'Life of Saint Leibowitz' was anonymous. A man could be hanged for writing a book. We have no bylines from those decades. But that's not the only story that connects Leibowitz with the Devil."

"Tell another," said the Pope.

"I can't, really. Did you ever hear of Faust, Holy Father?"

"I think not."

"It's about a pact with the Devil. We have only pieces of the story. I can't tell you why the Venerable Boedullus thought Faust was Leibowitz."

"Didn't the simpletons think he made a pact with the Devil?"

"Yes, but the Venerable Boedullus was no simpleton."

Amen II laughed. The word "simpleton" had come to be a polite form of address, and Nimmy had just asserted that Boedullus was no gentleman.

"I mean, he was not a Simplifier, who thought the Devil inspired all books except Scripture."

"And the Venerable Boedullus didn't think so?"

The questions were making Blacktooth dizzy. He watched Pope Amen II, who slowly and in a serpentine manner was becoming the sixteen-foot golden body of the idol Baal. Blacktooth after a moment of dizzy indecision lurched up to smash the Pope idol, until Wooshin objected. They took him to the hoodlum wagon bloody but unbowed, and they helped Bitten Dog tie him down. It was another day of the plague, and the war that disappeared only at the Curia Noctis.

During his dementia, the cougar Librada ran away.

## CHAPTER 28

In time of famine, when the garden fails, when the brothers are eating yucca roots, cactus paddles, chaparral cocks, snakes, and the laying hens, and yet are near to starving, "let the Abbot pray for Saint Benedict's blessing and allow them to eat the four-footed livestock, unless there be able hunters among them to stalk the wild blue-head goats.

*Rule of Saint Leibowitz, Deviations 17*

BBOTS WERE NOT ALL ALIKE JEROME OF Pecos, abbot before the Conquest in the time of Pope Benedict XXII and Mayor Hannegan II, had thrown open the monastery gates to the world, and had allowed his sons to listen to natural philosophy lectures by practical atheists and play with electricity machines in the basement. What had happened to the religious vocation in that time, Abbot Olshuen could only wonder. The monks of Leibowitz Abbey under his guidance had kept themselves as unaware as possible of the changing world, including the controversial pontificates of the two Amens. Without offending the Pope, such isolation had not been possible under Abbot Jarad, who was also a cardinal, but Dom Abiquiu had discontinued Jarad's policy of letting the monks know about Church affairs outside the monastery. Always conservative in his interpretation of the *Rule of Saint Leibowitz*, the abbot withheld most news, including ecclesiastical news, of the outside world from his cloistered flock; the only monks he had told about the bull *Scitote Tyrannum* were the abbey's business manager and those Brothers native to Texark or the Province whose families were in the path of war, and these were told to keep silent.

But Amen II, when he marched out of New Jerusalem to conquer New Rome, sent Olshuen two letters. The first told him that he, the Servant of the Servants of God, was undertaking a Crusade to correct the errors of his beloved son, the Emperor, and that the S.o.S.o.G. needed the prayers of all the monks of Leibowitz to support this holy cause. The second letter ordered him to grant sanctuary at the abbey to a certain Sister Clare-of-Assisi in case she chose to avail herself of the Pope's clemency and return from her exile at the Monastery of the Nuns of Our Lady of San Pancho Villa of Cockroach Mountain south of the Brave River. Brownpony did not mention that Sister Clare was formerly Blacktooth's lover, but the abbot knew this anyway. Iridia Cardinal Silentia had visited Leibowitz Abbey on her way south. Olshuen had been startled to observe that the young Sister accompanying her was the same girl who had impudently flashed herself at him from the roadway the previous season before she followed the old Jew to the Mesa. He stirred unhappily at the memory, but the command to grant her a temporary refuge was the Pope's.

Olshuen was strict in matters of the rule, but he was neither a rebel nor an especially brave man. If he must lead his congregation in prayers for the Pope's intentions, he felt he must tell them about the Crusade. And if he must grant sanctuary anytime soon to a barefoot whore in an O.D.D. habit, he must begin construction immediately of a special extra cell.

The messenger who brought the Pope's letters to Olshuen had ridden as fast as possible to Leibowitz Abbey from New Jerusalem, and the next day he had to ride on south as fast as possible to San Pancho Villa Nunnery, evidently with a message of clemency for the girl.

Upon receipt of the Pope's letters, the abbot immediately sent a message of his own to New Jerusalem summoning Singing Cow home from his priory. This too was irregular. But the abbot needed to know how the departure of the Pope from his Suckamint Mountain sanctuary might affect the relations between the government of New Jerusalem and the monks of the Priory of Saint Leibowitz-in-the-Cottonwoods, a mission of the Order.

The special extra cell was a lean-to against the north wall of the guesthouse, but there was no door between them. Compared with the monks' cells, the whore-hut (as Olshuen thought of it) was luxurious, having its own running water, a charcoal stove for cooking or heating, a wooden tub for bathing, and an adjacent one-hole privy only three paces from a side door. Like the monks' cells, it had a cot with a straw mattress, one chair, one table for writing or eating, one prie-dieu for praying, and one crucifix before which to pray. A missal, a psalter, and a copy of the *Rule of Saint Leibowitz* were on the bookshelf. If the cook brought her food, the trollop would not need to leave the guest accommodations even for meals, unless she came to Mass, which the abbot considered unlikely.

The abbey had two guests already. One was Snow Ghost, a younger brother of Sharf Oxsho, who wanted to become a postulant. The other was Thon Elmofier Santalot, Sc.D., Vaq. Ord., who, besides being an associate professor at the Texark university, was a major in the Reserve Cavalry. His unit had been called to active duty, but he was on a leave to pursue his studies at the abbey, where he spent all his time in the vaults and the clerestory reading room, joining the monks only at meals and at Sunday's Mass. No one, not even the abbot, knew the purpose of his study at the abbey. Seventy-two years ago, Abbot

Jerome would have begged him to tell them all. Now Dom Abiquiu begged him not to discuss anything with the monks.

Snow Ghost spoke no Ol'zark. Santalot spoke no Wilddog, although he had learned a little Jackrabbit while serving in the Province. Both of them knew a little Churchspeak. They had trouble communicating, but since they were enemies, this was just as well. Snow Ghost was already attending Mass and chanting the hours with the other monks in choir, although his habit was still being tailored for him. The abbot had warned him sternly against discussing politics with the Texark scholar, but the warning proved unnecessary. Snow Ghost seemed thoroughly afraid of the man.

Thon Santalot, whose life seemed to be driven by curiosity, became curious at this time as to why the extra cell was being built when the guesthouse was nearly empty. Snow Ghost could tell him nothing; Brother Carpenter said it was for a special visitor, and that was all he knew.

The expected trollop was never to occupy the extra cell, however. In late June, the old Jew who never died came out of the east and collapsed outside the gates. The abbot ordered him carried to the guesthouse, but when he began raving in Hebrew, Thon Santalot became frightened of him, and so Dom Abiquiu housed him in the whore-hut and fed him bread and boiled goat's milk.

Brother Medic was unable to diagnose the ancient hermit's illness, which seemed to abate on the day following his arrival. He insisted on going back to his mesa, but on the fourth day, before he got under way, he went wild again and had to be restrained. When he recovered temporarily from his fever, he insisted to Olshuen that he was a danger to the community, and exacted a promise of sanitary measures. He said he had caught the disease while traveling behind the lines in the Province, where he had sold military weather to both sides. He insisted that to prevent spreading the contagion, the doors and windows of his cell were to be covered with cloth to exclude insects. Knowing that old Benjamin had medical experience, the abbot readily consented.

When Elmofire Santalot heard of the nature of old Benjamin's illness, and where he caught it, the scholar went straight to the abbot's office. The abbot was out, so he gave the abbot's secretary a bottle of pills, explaining that he had needed them to avoid catching Hilbert's disease from the troops in the Province. The scholar was having a late breakfast in the refectory the following morning when Dom Abiquiu sat down beside him, placing the bottle of pills on the oak table.

"If you take one pill a day, it's a preventative," said the scholar. "Take twelve a day, for five days, it's a cure. You should have enough to give two pills to any monk who had contact with him."

"And you want me to give the rest to Benjamin?"

"If you want to save his life. It is not usually lethal, but he is so old and feeble . . ."

"Old yes, feeble no. But I don't understand how you happened to have these with you. You called it Hilbert's disease?"

Thon Santalot looked around the empty refectory. It was almost time for lunch. Beside the abbot, only Brother Cook and Brother Reconciliator were listening. "Thon Hilbert's disease is no longer a secret, really, I suppose. Our forces have prophylaxis—these pills—and the invaders don't."

"Go about your business," said the abbot to the other monks. When they were gone, he asked Santalot, "Are you saying that Hannegan's military is deliberately spreading the disease in the Province?"

"Certainly. Those who wage war have always used disease, Domne. Pestilence is one of the horsemen of the Apocalypse, is it not?"

Olshuen shook his head. "No. Well, there are various interpretations."

"You must remember that a sexual disease was one of the weapons used in the so-called Flame Deluge. A disease was used by Hannegan Two on the Plains back in the last century."

"But Hannegan's was a plague of cattle, not human beings."

"Well, yes, it is being used again on cattle. Horses too. That was part of Hilbert's work. He isolated the microorganisms. Today, we can infect the Nomad's animals directly, without driving diseased herds among them."

"How is that done?"

"I'm not sure. The cavalry carries it around in bottles. It can be sprayed from upwind, I think."

"You called it Hilbert's disease," murmured the abbot, who often became quiet when astonished.

"Who is Hilbert?"

"Thon Brandio Hilbert is, or was, a brilliant epidemiologist, formerly occupying the Chair of Life Science at Hannegan University."

"Was? Formerly? Is he dead?"

"No, he's alive, but he's in jail. He conscientiously objected to the military use of his work. Well, here they come for lunch, Domne, and I must return to my research. Thank you, Brother Cook, for feeding me at this odd hour."

As they left the refectory, the abbot knelt to pray at the feet of the wooden figure of another conscientious objector who had founded the Order. Olshuen managed to pray for the Pope's soul and the Pope's beloved son errant, the Emperor, without mentioning victory in battle. He prayed only briefly, then returned to the refectory with his flock to consume his daily bread, red beans, and milk. Afterward, he took the pills to the old Jew.

The cure was effective. A week later, the patient returned to his mesa after leaving instructions for decontamination of the cell he had occupied. The procedure involved burning sulfur and leaving the cell vacant for several months, during which time it could not serve its designed purpose, if and when the need for a whore-hut arose.

If Singing Cow resented the abbot's midsummer summons, he kept it to himself, but his return from New Jerusalem did not seem a happy homecoming for him. Olshuen suppressed his eagerness for news of Brownpony's Crusade, for Cow seemed half-dead of heat exhaustion, and he let him rest for a day before interrogation. But on the following day, the prior of Saint Leibowitz-in-the-Cottonwoods claimed ignorance of the doings of the Papal Court. Further, said Father Moo, the relations between his priory and the government of Magister Dion could not be affected by the Crusade, because no such relations existed, by Brownpony's design. When Olshuen wanted to discuss Sister Clare-of-Assisi, Singing Cow knew her only as Blacktooth's Ædrea; and since this knowledge had come to him through the confessional he would say nothing about her, nor would he listen patiently to the abbot's gentle slanders.

The abbey had accepted seven Jackrabbit refugees as postulants that season, so Singing Cow's old cell was occupied. The abbot put him in the guesthouse with the Wilddog postulant and Thon Elmofier Santalot after telling him what Santalot had said about Hilbert's disease. Father Moo remained expressionless. Dom Abiquiu went away with a faint smile. He had not asked Singing Cow to question the scholar.

Three weeks elapsed, and no one else at the abbey became infected. Singing Cow requested permission to return to Leibowitz-in-the-Cottonwoods. Olshuen realized that it had been a minor mistake to summon him, but he was reluctant to let him go without putting him to good use first.

"I want you to go over all the work that Brother St. George left behind, not only the Boedullaria, but also the Duren manuscripts, and see if you can make a glossary..."

A cloud of dust arose far to the south of Sanly Bowitts. At the time, three novices happened to be standing on the parapet wall, where they were recording the altitude and azimuth of the sun for comparison with an ephemeris; the purpose was to reset the monastery's clock. A coach escorted by two men on horseback emerged from the distant dust and entered the village, then reappeared a few minutes later on the road toward the monastery. The novices watched, transfixed, as the richly decorated coach stopped outside the gate and the two uniformed soldiers of the Laredan King opened the doors, whence emerged Sister Clare-of-Assisi, an unknown Sister, and the cardinal herself, Mother Iridia Silentia, O.D.D.

"Five for the guesthouse," someone called out.

It was after the evening meal and almost time for Compline. Iridia Silentia appeared at the abbot's office, but seemed reluctant at first to sit down. She seemed nervous but full of enthusiasm.

"Sister Clare is a vessel of the Holy Spirit, Domne. I am certain of it. The reason I am certain is that

she cannot command this talent, and she will not pretend to heal when she can't. She is deeply sympathetic, and in some cases it might be helpful to pretend to be healing someone whose ailment is partly emotional. But she will not pretend."

"Does she attribute it to God?"

"I think it would not be prudent to ask her that," the cardinal said sharply, and Dom Abiquiu reddened. Iridia finally sat down. "If she said yes, she would become a problem for the Church. If she said no, she would become a problem for the Church. This is why we cannot accept such a treasure in our community. She has taken our vows, walked on our stones with her bare feet, prayed with us, eaten God's Body with us, and we quickly came to love her. But she is a treasure, and she has to be released."

"Did Brother St. George know about this talent?"

"She told me she had teased him. I think she meant she showed him her gift, in minor ways. You can see how we cannot have anyone special in our midst except the Lord."

"So you have brought her to me."

It was the cardinal's turn to blush. "Because the Pope told me to ... No, not quite. The Pope told me to send her here if she wished to leave us. I decided she should go, and I helped her to wish it, and I brought her myself. If I sent her, I would not be able to tell you about her."

"You could have written a letter."

"I could not have written a letter, nor can you put anything at all about her in writing unless you want to destroy her. Don't you see?"

Dom Abiquiu was briefly silent. "Like asking her if her gift is from God or not?"

The cardinal smiled warmly, causing the abbot's heart to squirm.

"She needs to go home, if the Mayor's son will let her. You need keep her here only until the Holy Father can arrange it."

"You are aware that the Holy Father is otherwise occupied?"

Silentia ignored Olshuen's irony. "I'll tell Sister Clare that she must avoid talking to anyone outside the guesthouse."

"There is one of our postulants in the guesthouse."

"Then she must—"

"But I'll get him out. Who is the other Sister?"

"My assistant. She will return with me to San Pancho."

Brother Liveryman appeared in the doorway, caught the abbot's eye, and in response to the abbot's nod asked: "Domne, did you tell our guests to choose their own rooms?"

"Yes, of course. Is there a problem?"

"Only that one of the nuns chose the, uh, isolation cell."

"You must get her out of there! It's not safe yet."

"She said it was built for her. I don't know what she meant."

The cardinal studied the abbot's expression for a moment and said, "I think I know." She arose.

"Well, Domne. I am very tired and would like to retire. If I may be excused, I shall say Compline alone in my room. I'll speak to my student. I do thank you for all."

Student? The word lingered in the abbot's office behind her.

• • •

That evening, Sister Clare abandoned the abbot's whore-hut for a cell in the guesthouse with the others, saying that she knew it had been meant for her originally, but that she had been unaware of the quarantine. Singing Cow suppressed his curiosity about her and said nothing.

Three nuns, two soldiers, a scholar from Texark, a Nomad who was a possible postulant, and Father Singing Cow now shared the guesthouse. Ædrea stayed in her cell except when they all went to the refectory or to Mass together. The cardinal, her assistant, and the Wilddog Nomad Snow Ghost were often absent from the building, presumably singing the Divine Office with the Brothers. Singing Cow was busy in the Scriptorium making a glossary from the work of Brother Blacktooth, and Thon Elmofier

Santalot was usually busy searching the bookshelves in the basement, or reading and making notes in the clerestory. The Laredan soldiers were left alone most of the time, with Ædrea staying behind a closed door. One of the soldiers rode into Sanly Bowitts on the second day and brought back a jug of local hooch. When the soldiers were both solemnly drunk, the bolder of them knocked upon the pretty nun's door and offered her a drink.

Ædrea opened the door, took the proffered jug, tilted it, and swallowed mightily.

"Thank you, Corporal Browka," she said with a smile, then closed the door and clicked the latch.

Browka knocked again, but there was no answer. "You saw her smile at me?"

Father Moo and the Nomad youth returned from Church, and soon after, Santalot came in. The soldiers offered everyone a drink, but there was little left in the jug and no one accepted. The cardinal came in and sat down in the reading room for a moment before retiring. The soldiers hid the jug and pretended to be sleeping.

"We shall leave here after Lauds in the morning," said Mother Iridia. "We must all thank the monks for their hospitality." She was speaking Churchspeak, which was the only common language among the monastery's guests. The soldiers spoke it poorly, but as soldiers they were very curious about the military campaigns of the present Pope, and had many questions, asked and unasked. In two days at the abbey, they had learned very little.

In the morning, after a last conference with the abbot, Mother Iridia bade her student a tearful goodbye and she and her servants departed. Ædrea cried in her cell for an hour after they were gone. She shared the guesthouse now with Singing Cow, Snow Ghost, and Elmofier Santalot the scholar. Abbot Olshuen told Snow Ghost he could now move to a cell in the dormitory, but Snow Ghost resisted, saying he was not yet quite ready for silence and solitude. Surprised, the abbot glanced quickly at Ædrea, as if he wondered whether the Nomad was not quite ready for chastity either, but he did not press it. Nomad vocations were rare, and except when Singing Cow was present, Brother Wren, the abbey's cook, had no one to talk to in his own tongue or a related dialect.

It was during the Feast of Saint Clare, one year after her taking her vows, from which she was now released, that Ædrea Sister Clare-of-Assisi performed a miracle in the guesthouse of Leibowitz Abbey.

In late August Brother Wren got permission to visit Singing Cow in the guesthouse, and Ædrea Sister Clare-of-Assisi became aware that Brother Cook had a cancer eating his throat. His voice had diminished to a hoarse whisper. He called his cancer Brother Crab, and joked about it. Ædrea came up behind him as he sat and talked with his old friend, Moo. He started up as she touched him, but then settled back in his chair with a smile and let her hands explore his throat. He started again when she pressed down hard with her fingertips below his Adam's apple.

"Relax, Brother. Does it hurt?"

"Not much," Wren whispered. "What have you done? Something popped."

She continued caressing his throat for a while, then left him and went to her cell. Father Moo crossed himself. Brother Wren noticed and followed suit.

"Better not tell anyone," Singing Cow said.

Within three days, Wren began to get his voice back. Word got around. Within a week, Sister Clare had healed infected blisters, a hernia, an abscessed tooth, and a probable case of gonorrhea of the eye. All this might have passed unnoticed, but when she cured the old librarian, Brother Obohl, of his myopia and he got a look at the beautiful woman who had laid hands on his eyes, his squawk of astonishment was followed by the joyful noise of his thanksgiving, and this fell upon the ears of Dom Abiquiu.

Singing Cow was present in the guesthouse when the abbot strode to the closed door of Ædrea's cell.

"I told you not to mix with the monks."

"I have not mixed with the monks."

"Cardinal Silentia forbade you to practice your healing tricks."

Sister Clare opened her door. "Beg pardon, Domne, but she did not. I do not have any healing tricks."

"You argue with me! Where is your religious training?"

"You prefer Brother Librarian half blind?"

"It was my fault, Domne," put in Father Moo. He ventured a lie: "I sent him to her."

"What?" Olshuen gasped and paused for self-control. "You are not to lay hands on anyone else while you are here. Do you understand?"

"Yes, Domne."

"Will you obey?"

"Yes, Domne."

The abbot glared at Singing Cow. "I think it is about time you returned home."

"Thank you, Domne." As soon as Dom Abiquiu was gone, he said, "Alleluia!"

Sister Clare smiled. "Will you carry a message to my family and the Mayor when you go?" she asked.

But Singing Cow had not yet departed when her wounds began to appear. When Ædrea went to Mass, she knelt in the back of the Church behind a pillar where she was not visible to the monks in the choir. Thus she always left the Church first. Following her back to the guesthouse, Singing Cow noticed dark spots in the prints of her bare feet in the sand. When she walked across the guesthouse floor, the blood was even more apparent. He called out to her, asking how she had hurt her feet.

The young nun stopped, pulled up the skirt of her habit, and looked down. She stared, then looked back at Father Moo. When she lifted her hand to her face, he saw that the palm was bloody. She seemed very confused.

"Who hurt you, Sister?"

Her voice trembled. "I don't know. It was dark. I think it was the Devil. He was wearing a robe like yours."

"What? Someone actually attacked you?"

"It's like a dream. There was a hammer—" She stopped, looked at him wildly, then bolted into her cell and latched the door. Singing Cow could hear her praying. He went to look for Dom Abiquiu, whom he found praying before the wooden Leibowitz in the corridor.

"She said it was like a dream," Father Moo told him. "But she thinks somebody with a hammer, maybe the Devil—"

"Was she raped?"

"She didn't say anything about it."

"Let's go. Did you tell Brother Pharmacist?"

"He is on his way."

The pharmacist had already arrived when they entered the guesthouse. The door to Ædrea's cell was open, and she was lying on her cot. As they started to enter, the pharmacist pushed them back outside, joining them and closing the door behind him.

"Her wounds?" the abbot whispered.

"The wounds of Christ," the medic answered softly.

"What are you talking about?"

"The wounds of the nails. The wound of the spear."

"The stigmata? You're saying the female, the, uh, Sister, has the stigmata?"

"Yes, she does. The cut in her side is clean. The wounds in her hands and feet have bruised blue edges. She speaks of a hammer."

"Devil!" It was as close as Olshuen ever came to swearing. He turned and walked out of the guesthouse with Singing Cow at his heels.

"Retaliation!" he spat. "Retribution!"

"Excuse me? What do you mean, Domne?"

"I forbade her to use healing powers. This is her answer."

Singing Cow was silent for several moments as they walked toward the convent, then he shook his head. "Domne, I am leaving tomorrow for home."

Abbot Olshuen stopped. "Without asking permission?"

"You already gave it, remember?"

"Of course." The abbot turned on his heel and walked away, alone.

A few hours later, when Brother Wren St. Mary came to inquire about a change in the diet for the sick, he found Abiquiu Olshuen lying on the floor of his office. He could not move his right leg. When he tried to speak, he squawked.

Brother Pharmacist came directly to the infirmary where Wren had carried Olshuen.

"Is it a stroke, Brother?" Wren asked.

"Yes, I'm afraid it is."

The abbey had its own prior again, and Father Devendy was immediately summoned, along with Singing Cow. Wren went back to the kitchen.

Prior Devendy turned to Prior Singing Cow. "Can you get the Sister who heals to come?"

"You know about her?"

"Dom Abiquiu told me what Mother Iridia told him. I know he was alarmed, but—he may die, you know."

"I'll go ask her. She was, uh, injured, you know. Did Brother Medic tell you?"

"No," put in the pharmacist.

"Describe the wounds to Father Devendy," Father Moo told him, "but don't interpret them."

"I understand. Make sure she wears shoes of some kind and doesn't walk on the bandages."

Singing Cow glanced at the abbot. Dom Abiquiu was shaking his head from side to side with his eyes closed. It meant nothing, Moo decided.

Cow found a small pair of sandals in the storeroom. They were very old and might once have belonged to him or to some other adolescent Nomad whose feet had not finished growing. He took them to Sister Clare and told her they might once have been Blacktooth's. She said nothing to that, and put them on without protest.

"Where are we going, Father?"

"To see Dom Abiquiu. He needs you."

Ædrea had become accustomed to obedience, and came without asking why she was needed. When she limped into the infirmary and approached the bed, Dom Abiquiu groaned mightily and shrank back from her, his eyes wide and his face a mask of dread. He used his left hand to shield his eyes from her. Ædrea stopped and stared.

"Oh, pigs!" she said abruptly, and crossed herself with a bandaged hand. "There is nothing I can do for him."

"What do you mean?" asked Prior Devendy.

"I mean I can't do it tonight. And he told me not to do it again anyway." She turned and started to leave the room.

"Sister Clare, please, he may be dying," said Singing Cow.

She crossed herself again, but walked on down the corridor without looking back.

The next day, she was missing from the guesthouse, and her small traveling bag was not in her cell. No one had seen her leave, but there was a note on her bed: *I'm sorry about your abbot. Thank you for your hospitality. God bless.*

No one knew where she had gone. On his way back to New Jerusalem, Singing Cow stopped in the village of Sanly Bowitts to ask about her. She had been seen going toward the Mesa of Last Resort. He followed the trail to the foot of the cliff. Once he found a spot of blood on a stone, but no other sign of her. She was with Benjamin, then. Father Moo was certain the old Jew would cure her of the Lord's stigmata. Feeling a little guilty for abandoning her and Dom Abiquiu, he steered his mule toward the papal highway leading north. It was already September and he traveled by the dark of the moon.

## CHAPTER 29

Just as there is an evil zeal of bitterness which separates from God and leads to hell, so there is a good zeal which separates from vices and leads to God,  
—*Saint Benedict's Rule*, Chapter 72

LACKTOOTH CARDINAL ST. GEORGE, DEACON OF Saint Maisie's, was on the hillside taking a long and painful dump, his first of many for the day, when he heard the *pop pop pop* of repeating guns. It was coming from the main encampment, in the wooded bend of a wide, shallow creek back over the hill.

Blacktooth couldn't see the camp from where he was standing, or rather, squatting. For his morning ritual, which was the only one he found the leisure to perform in privacy, he preferred the western slope of the little bluff, a hill so small that it barely cleared the trees. Truth was, Blacktooth was homesick. Not for a particular place; he had never had anything even approximating a home except for Leibowitz Abbey, and while he sometimes (indeed, fairly often) missed the companionship of the Brothers and the security of the routine and the Rule, he never missed the abbey itself. He was homesick for the desert, the grasslands, the country of Empty Sky.

Even though he could see nothing to the west but more trees, Blacktooth knew there was open land beyond—rolling plains that went on and on, treeless and townless like Eternity itself. And the sky seemed definitely bigger to the west.

Unsmiling, unspeaking, unlimited.

From here I greet you, Empty Sky.

*Pop pop pop.*

Blacktooth stumbled as he stood up, hurriedly wiping himself with a wad of grass—then slowed, no longer alarmed, recognizing the sound. It was celebratory, ceremonial, not real; not a firefight. The Grasshopper sharf's warriors, disciplined for firing the precious brass cartridges but bored by the lack of military action, had perfected the art of imitating the sound of the new repeating "Pope rifles." As with everything the Nomads tried, they had quickly learned to do it well.

Blacktooth had first noticed it in the outriders returning from a scouting mission a few days before; he had remarked to his boss, Bitten Dog, that the warriors were mimicking the sound of the brass shell-firing guns from across the sea. "Imitate the sound of pots being scoured, Your Eminence," Bitten Dog had growled.

The *pop pop pop* was joined by the sound of dogs. It was not barking but the alarming half-howl, half-growl of war dogs being brought up on leash. All this was coming from the camp of the Pope's armies down at the edge of the trees, in the bend of the creek called Troublesome or Trouble Some. Attempting to shade his eyes from the early-morning, late-September sun, tying his habit back around him with his booklegger's cord, Blacktooth crossed the crest of the hill and started down toward the camp. He took off his sandals and carried them, so that he could walk barefoot in the pleasantly wet grass. Through the trees, he could see horses milling and stomping, warily watching the dogs that circled them like a dust devil.

The *pop pop pop* was punctuated by whoops and cries, and Blacktooth could see the Grasshoppers now, painted up, pumping their weapons into the air. More than a small party, too.

Something was afoot; or rather, a-horse.

Blacktooth was almost glad. For several weeks now, on the final approach to New Rome, the tension had been growing among the Nomad warriors that had attached themselves to the Pontiff's crusade. As the twelve-hundred-strong party, now fully a day's march long, crawled east, the arms of trees extending out into the prairies had become more numerous, longer and thicker, until it had changed—in a day, and Blacktooth remembered the day—into arms of prairie extending into trees. It was like an optical illusion; one thing turning, with a trick of the eye, into its opposite.

As they left the tall-grass country and began to penetrate the woodlands, the warriors had expected resistance from the Texark troops Hannegan II had—supposedly—left behind to guard the approaches to the Holy City. There had been none. The warriors had expected resistance from the semi-settled Grasshopper farmers, and the settlers Filpeo had sent to live among them. There had been none.

Foraging horsemen had found nothing but abandoned farms, barns burned or burning, cattle killed or driven away, leaving behind only their footprints or their still-soft droppings. The log homesteads were burned or looted, sad-looking little homes bereft of even doors or window glass. The Grasshoppers in particular had looked forward to breaking glass, and this made them even more impatient. The contemptible grass-eaters had either broken or taken their windows with them.

The new cardinal was as firmly attached to the hood wagon as the old monk had been, but several times Blacktooth had deserted his pots and pans and explored one or two of the abandoned houses, hoping perhaps—although he never admitted this to himself—to find signs of Librada, his glep cougar that had freed herself before he could set her free. But Librada didn't eat carrion and the few farmers and farm families Blacktooth had found had been mostly carrion. Several times he had watched as parties of the Nomad horsemen, singing death songs and seated well forward on their ponies, had gone out into the trees—nervously at first and then with growing confidence, finally with boredom. The countryside around New Rome had been stripped of its people. There were no warriors to fight, no women to rape or even to be restrained from raping. Nothing but trees, dumber than horses and stiller than grass. The farmers—many of them of Grasshopper origin—had deserted their farms, and whatever troops Hannegan II had left in the region to defend the city were gone as well.

In fact, some said it was the troops that had driven the farmers away. An old man found wounded on his barn floor, and brought back to the camp to die, had told the Pope and his Curia that it was the Texark soldiers who had shattered his window glass and torched his fields, and his neighbors' as well, but Blacktooth thought he was lying. Or at least partially lying. Truth was as rare as beauty in wartime. It occurred by accident, in unexpected places; like the glint of sun off a button on a corpse.

*Pop pop pop.*

And now, some action at last. Blacktooth felt like two men: one who dreaded the excitement, and one who desired it; one Brother who slipped eagerly down the hillside toward the milling horses, and one who held back, heels digging into soft dirt. He valued the hilltop because it carried him above, or almost above, the trees. Descending into them was like descending into a prison.

*Pop pop pop.* One of the shots, at least, sounded real. Perhaps the Texark main force had been located by a scouting party, and a battle was planned for the day. It would have to be to the east. As he half slipped and half walked down the hill, Blacktooth squinted out across the sun-bright ranks of trees. Beyond them was New Rome, within a day's ride at most. And beyond the city, also unseen, was the Great River—the Misspee, the grass-eaters called it. Blacktooth had dreaded the Crusade's arrival for months but now he looked forward to it, even if it meant a battle. Much to his eternal regret, Blacktooth knew battle; and he knew that even worse than the fighting was the long waiting, the constant tension, and the heavy smells of men on the move.

The camp smelled like shit and smoke. It smelled like Hilbert's fever, the bowel-emptying sickness that Blacktooth shared with at least a third of the men, Nomad and Christian alike. The smell had thickened as the tall grass had turned to trees, as the world of Empty Sky had given way to a world folded in branches, hedged by trees. Darkness and mud and stumps and shit—in greater and greater profusion as the Pope's Crusade approached New Rome. The Mother Church was coming home.

*Pop pop pop!*

Down in the camp, the huge night fire had been rekindled. Logs as big as corpses smoldered and smoked, as reluctant as corpses to flame back into life. Everything here in the woodlands was damp. The edge of his habit wet from the long grass, Blacktooth joined the milling crowd around the fire pit at the center of the camp. Horses and people and dogs made an uneasy mix. More warriors came from the smaller Wilddog and Grasshopper campfires, joined by the *Qaesach dri Vørdar* and his personal guard. Nomad warriors were spitting into the fire and stomping, and firing their imaginary shots toward the impenetrable gray of the sky. It looked like rain again; it had threatened rain now for a week.

The Grasshopper sharf, Eltür Bråm, came out of the trees, holding up his repeating rifle, joined by a squat shaman in an intricate hat riding a white mule.

*Pop pop pop.*

Brownpony was conspicuously absent, but a small contingent of his Papal Guard joined the party, leading uncomfortable-looking horses. Their rifles were identical to the ones the Wilddog warriors carried. Blacktooth was surprised to see Aberlott among them.

"Don't look so sad, Your Eminence," said the pudgy Valana student, holding a repeating rifle anything but sheepishly.

"Where are you going?" Blacktooth asked, ignoring his old friend's sarcasm.

"To get a biscuit." Aberlott gestured toward the morning wagon, where there was a line, all Wilddog and Grasshopper; or rather, all men with guns. "Come."

Wooshin, the Axe, was in the morning-wagon line and he let Aberlott and Blacktooth in beside him. This was, Blacktooth knew, acceptable practice among the Nomads, who regarded every man as an extension of his friends and family. If a man was in line, his connections were in line as well.

"Morning, Axe."

"Good morning, Cardinal Nimmy. Why so sad?"

Do I really look so sad? Blacktooth wondered. He shrugged. Perhaps it was the sickness. It seemed he had been sick for years, although he knew by the marks he had made on the inside of the hood wagon that it was only two weeks.

"Maybe it is war," he said. "War makes men sad."

"Some men," said Aberlott. He reached up under his long hair and touched, as if for luck, the little knob of gristle where his right ear had been sliced off by Texark cavalry.

"All men," said Axe.

The line crept forward, feet sucking in the mud which seemed to be always laying in wait, even under what looked like dry grass.

"Perhaps His Eminence is mooning over his little lost cat," said Aberlott to Axe.

"She's not so little," said Blacktooth, "and I wish you would stop calling me His Eminence."

"Sorry, Cardinal," said Aberlott. It was his turn. He took two biscuits and gave one to Blacktooth. Apparently they were distributing extra biscuits only to the men with rifles. Blacktooth took it grudgingly. Life was difficult enough without Aberlott's continual sarcasm.

He followed Axe and Aberlott back to the fire, which was now blazing.

"It's a war party," said Aberlott. "The early patrols, Wilddog I think, entered the city yesterday. There was no resistance. Today we go in with Eltür Brâm and his shaman." He nodded toward the old man on the white mule. "Maybe we'll get to see the basilica of Saint Peter's."

"You're going?" Blacktooth asked.

"With permission. Along with most of the Pope's Guard," said Aberlott, glancing toward Wooshin, the Pope's sergeant general, who shrugged. Wooshin was staying behind with his master.

Aberlott held up his rifle, pumping it toward the sky as the Nomad warriors did. "Pop pop pop," he said, but not convincingly. He smiled, showing Blacktooth his bad teeth, and opened his hand, showing three brass shells. "His Greatness the Sharf didn't want to take us but His Holiness, Pope Amen II, insisted. We are his eyes and ears."

"And rifles," Blacktooth said.

"That too."

It was looking more and more like rain. Blacktooth secured his cardinal hat under the cover of the hood wagon—he was afraid the red would run if it did rain—and gathered up the morning pots and pans that had been left for him by Bitten Dog. His elevation as the Crusade's tenth cardinal had not released him from his duties as assistant to the assistant potscrubber. Nor had it reduced the intensity or frequency of the fevers that raged through his body.

A third of the camp, almost a thousand men, were sick. The rich smell of human excrement mixed with the usual camp smells of horse and smoke. The overall feeling was one of gloom. Maybe it will rain, Blacktooth thought, as loaded down with pots and pans he stepped over and around the ubiquitous dog turds. Better rain than threatening rain. Impermeable to almost every kind of adversity, the Nomads seemed to fold up in the rain.

He finished the pots, scrubbing them with sand in the feeder creek that ran from under a slab, out of a thousand-year-old drain. He took the long way back to the hood wagon, between the Pope's carriage ("LIKE HELL YOU WILL") and the gleaming metal wagons of Magister Dion's caravan, which had joined them two days before, where the long arms of the door prairies were merging into one narrower and narrower grassy swale, interrupted by pitches of shattered concrete and stone.

This morning was the first time Blacktooth had seen Dion's wagons up close, in the daylight. They looked like stoves on wheels. "Tanks," Aberlott had called them, but who would carry water from the dry plains to the rainy east? They were clearly weapons of some kind.

A glep was dozing on the seat of one of the wagons. When he saw Blacktooth he smiled an idiot smile and crossed himself, laughing. Blacktooth thought the man was mocking him, until he saw Brownpony standing with Dion, almost out of sight behind one of the metal wagons. They seemed to be arguing and Dion seemed to be getting the worst of it. Blacktooth couldn't see Brownpony's face but he recognized the slow hand movements of lawyerly persuasion passing into papal compulsion. The monk, now cardinal, turned away and hurried on toward the center of the campsite. He knew that he would be in trouble if Brownpony saw him without his zucchetto.

It was late afternoon before the rain finally came. The clouds that had been massing in the northwest all day, like riders on a hilltop, descended just when the Grasshopper sharps party was returning. There was no *pop pop pop* this time, no strutting horses. The warriors looked gloomy and damp. One of the horses carried double, and the white mule carried a corpse tied on like a pack and left uncovered in the rain. The side of the mule was pink with rain and blood.

"The sharf's shaman," Aberlott said to Blacktooth, who was helping him dismount. He tried to hand the monk his rifle but Blacktooth wouldn't take it.

"Texark troops?"

Aberlott shrugged. "Snipers," he said. "They fired on us from the great houses."

"Great houses?"

"Piles of stone, really, although some of them still have windows. We have the better guns but we couldn't see them. We never saw any Texark troops."

Four women untied the shaman and carried him away. The dogs were howling, straining at their leashes and jumping up to sniff the side of the white mule that was smeared with blood.

"They must have been Texark troops," said Blacktooth.

"I don't think so. There was a lot of fire but they only hit two men, and we were all in the open. I was right behind the shaman when he fell. He was singing some Weejus song, and they shot him through the throat. I think it was a lucky shot."

"Lucky?" said Blacktooth.

"Lucky for someone; not so lucky for him." Aberlott showed Blacktooth three empty cartridges, nestled in his palm like little empty eggshells. "I fired all three of my shots, though. I liked that part. Not like you." He was referring to Blacktooth's depression after killing the glep warrior in the battle two days' march behind, at the edge of the grasslands, almost a year before. "I fired all three, pop pop pop."

It was Blacktooth's turn to shrug.

"I liked that part," Aberlott insisted.

Aberlott had been more impressed with the city than with the fighting. The city of New Rome wasn't a hole in the ground like Danfer, he said, or a collection of shacks like Valana. It was mostly stone, grown over with weeds and trees. "The center of the city is all great houses. They mine them for stone and steel. They don't care about defending them either. What is there to defend? What can you carry off? You can't fight men who won't fight."

"They fought you," said Blacktooth.

"That wasn't fighting," said Aberlott. "There wasn't that much firing, even. They are hiding in the city, taking pot shots at us."

"Did you find the cathedral?"

Aberlott shook his head. "We rode out behind the sharf. Who will burn them out, he says, and toss

their livers to the dogs." He smiled sardonically, gesturing behind him to the center of the camp where the dismounted Nomads were milling angrily, confused, ashamed. A wail came up from the women tending the wounded man. The wounded man was dying. He had been shot in the side with a gun that fired stones.

Blacktooth left Aberlott for the medicine wagon where the wounded man was being bandaged. He was wondering if the Texarks had managed to duplicate the repeating weapons yet, and he imagined that he might be able to tell from the man's wound. But the wound was just a wound and not a sign; it did not speak. The ugly welt cut through the Nomad's flesh and hair like a road ripped heedlessly through grassland. In the back of the wagon the Grasshopper shaman's body was being prepared for burial. The old man's neck wound was already stuffed with clay the color of shaman skin.

*Ashes to ashes, dirt to dirt.* Both men would be carried out of the trees for burial under the haughty uncaring glare of Empty Sky. But not until the rain had ended.

The women and the medicine men shooed Cardinal Blacktooth away, even though he was wearing his zucchetto.

The next day a smaller party went out, while the Grasshopper war sharf met with the *Qaesach* and the Pontiff. As a member of the Curia, Blacktooth was invited to take part in the discussion, after he had finished the pots and pans, of course, and freed Bitten Dog for a day of drinking mare wine and playing bones. Brownpony's suspicion that the Emperor had withdrawn all his regular forces from the Holy City was confirmed when the rear guard of Eltür Brâm's war party came back with its only live captive, a farmer armed with a stone-firing musket. He had been dragged from one of the "great houses," along with two of his colleagues who had not survived the ten-mile trip back to the Crusade's war camp. Under questioning the grass-eater revealed that he and the other farmers had been driven from their homesteads into the city by the Texark regulars, then armed with leftover weapons and stationed in the tallest ruins. They had been told that if they surrendered they would be cruelly tortured by the Anti-pope's Wilddog, Grasshopper, and Jackrabbit fanatics; but that if they held out they would be rescued by returning Texark reinforcements from Hannegan City.

Brownpony doubted that the last part of this was true; so did the rest of his Curia. As for the torture, the farmer died before he could be convinced that it was propaganda.

Aberlott thought it was a trap. "But you think everything is a trap," Blacktooth reminded his friend. The two were sitting on the side of a wagon, in the unfamiliar sunshine, listening to the interminable martial speeches of the Nomads. Even though the speeches decided nothing, they had to be suffered by the Pope and his Curia.

"Everything *is*," whispered the former Valana student. His long hair was smeared with grease, and tied back to show his missing ear: a badge of honor. He held his repeating rifle between his legs. Though he was, technically at least, a member of the Papal Guard, he wore the bone earrings and hair bracelets of a Wilddog horseman. He looked, Blacktooth thought, like a man who had avoided the trap of the Mother Church only to fall into the trap of war.

"We can wait them out," Brownpony was saying. His Nomadic had gotten better and he no longer needed Blacktooth as translator. "If they were driven into the city, chances are they don't have enough food to last through the winter."

"The winter?" said the Grasshopper sharf. "The winter is far away. Our women are far behind, and like the Wilddogs they are threatened by the motherless ones who strike from above the Misery. Without the Weejus our medicine is weak but our war power is strong. We must strike now while we can. We can take them with just a few men. We can burn them out."

Grunts of pleasure and assent greeted these words. Wettened fingers were held up, as if to confirm that the prevailing winds were from the west. The fingers were also, for the Nomads, a signal of impending fire; of their willingness to watch the world burn.

Amen II stood, looking unusually ethereal and spiritual. When Blacktooth had seen him the day before, he had not realized how sick he looked. Brownpony's hair was mostly gone. His face looked like

something drawn on an egg; a bad egg. "This is the Holy City of New Rome," he said in measured Churchspeak. "It is sacred to the Mother Church. There will be no burning. We are here to take the city, not destroy it."

He sat back down. There was grumbling as his words were translated into Grasshopper and Wilddog. The grumbling fell silent as the *Qæsach dri Vørdar*, the War Sharf of the Three Hordes, stood to speak.

"We were going to feint south for Hannegan City," said Chür Høngan Ösle. "There is the heart of the Empire, not New Rome, which is nothing but a ruin. We will still head south. But now instead of feinting we can actually *strike* south. Now that we know there are few defenders in New Rome, we have more men to strike south at Hannegan City. The war will be over sooner. We can return to our women and our winter pastures." He spoke in Wilddog with only a few words of Rockymount and none of Churchspeak. Blacktooth thought it was ominous. The Crusade was becoming less of a crusade, and more a depredation of the Three Hordes.

There were grunts and clicks of approval from the Nomads as the *Qæsach* sat down. He had a boy behind him to arrange his robes when he sat; another watched the feathers on his headdress in case of wind. The numbers of the Nomads had increased, so that now men (and a few women and children as well) stood on all sides of the wagon on which Blacktooth was sitting. It had turned from a meeting of the Curia to a public meeting attended by warriors and drivers and hangers on. That, too, seemed ominous. Cardinal Blacktooth St. George was feeling trapped. His bowels were grumbling like the crowd, and he began to look for an avenue of escape.

"A few hundred men left here will be enough to drive the farmers out of New Rome!" said Eltür Bråm.

Wooshin was shaking his head but, as usual, remained silent. Brownpony stood up to answer the sharfs. He stumbled as he stood, and Blacktooth was surprised and a little shocked to see that he was wearing an empty shoulder holster over his cassock, under his robe.

Holding on to the side of a wagon, Pope Amen II made one last plea.

"We need the fighters here," he said. "With a show of strength we can force the farmers out of the city without much fighting." Blacktooth knew that Brownpony was trying to avoid a battle. He wondered if it were to save lives, or to avoid damage to the city and Saint Peter's. As soon as he asked himself the question, he knew the answer. Lives were cheap.

The Pope sat down, seemingly unnoticed. There was no grumbling; he was not even granted the honor of dissent. The power Blacktooth had watched him exercise over the conclave in Valana was gone. Perhaps it was the Meldown, or perhaps his rhetoric was useless with the war sharfs and their warriors, who excelled at oratory when they wanted, but were not in the mood for talk these days.

Or perhaps it was the trees. They seemed almost evil, there were so many of them crowding in on every side. Blacktooth touched the cross that rode under his habit and called up, as he did when he was panicked, the image of Saint Leibowitz. But instead of the dubious smile of Saint Isaac Edward he saw the harsh glare of the desert sun, and he felt a sudden wave of homesickness so powerful it almost knocked him off the wagon bed.

"What's the matter?" whispered Aberlott. "Are you OK?"

"Are you?" answered Blacktooth. The warriors on the edge of the crowd were starting to make the *pop pop pop*. They were tired of waiting around for battle. Neither did they wish to ride into a city where the defenders were shooting at them from the windows of "great houses."

"They're going to burn them out, no matter what His Holiness says," said Aberlott. "Where you going?"

Eltür Bråm had risen to speak again. Blacktooth slipped away through the crowd toward the main trench, which was, even at this hour, even with all the excitement of the debate, busy with grunting men.

When he got back to the campfire, it was too crowded to get close. The Grasshopper sharf was still speaking. Blacktooth's fever was raging and he felt weak. He dragged himself off to the back of the hood wagon and rolled up in a blanket and went to sleep. In the distance he could hear drumming, and the martial, celebratory *pop pop pop*.

That night, while Blacktooth slept, Amen I came to visit him for the first time in over a week. The old man had the face of a cougar. Had he always had the face of a cougar? Blacktooth wondered in his dream; but of course! And Ædrea was there. She was sitting beside Specklebird, smiling, riding a white horse like the *Fujæ Go*; but no, her robe was open, and what he had thought was a white horse was the light coming from the gateway he had once—

Someone was shaking him, pulling his foot. It was Aberlott. "We are leaving," he said.

"Leaving? Who is leaving?" Blacktooth groaned and sat up. Aberlott was outside the wagon, leaning in. His face was painted. His greasy hair was pinned back. Beyond him Blacktooth could see the sky, a metal gray. He could hear horses stamping and men cursing and laughing. In the near distance, dogs.

"They've been up all night," said Aberlott. "After you went to bed there was another conference. But this was among the sharfs. The Pope was sent away."

"Sent away?"

"Wooshin was allowed to listen, but he was thrown out when he disagreed."

Blacktooth was amazed. No one threw Axe out of anything. "Thrown out?" Blacktooth was still woozy, half in and half out of his cougar dream. As he sat up, he realized with a sudden and unusual moment of clarity that his entire life since leaving the abbey, since he had met Brownpony in fact, had had the quality of a dream. So why was it that Specklebird, instead of Brownpony, came to him in his dreams? Brownpony was in the real dream.

Aberlott grinned and shrugged. "Not exactly thrown out, then, but asked to leave."

Blacktooth got out of the wagon. The rain clouds that had rode across the sky for days had disappeared, and the camp was almost as bright as day even though the sun hadn't yet risen.

"They are leaving only a few men from each horde, about three hundred in all," Aberlott said, too loudly. "The rest are heading south with the *Qæsach dri Vørdar* to take Hannegan City. I'm going with them!"

"But you are in the Papal Guard!"

"The Pope's Guard is going, all except Wooshin. Besides—the Pope didn't give me these!" Aberlott opened his hand. In his palm, where three empty shell casings had nested the night before, now there were six, and each was filled; each had a dark bullet peeping out of one end as though eager to be on its way.

"Goodbye then!" Blacktooth said angrily. Wrapping his robe around him against the morning chill, he half walked, half ran toward the latrine trench. As he squatted, through the bushes he could see hundreds of men stirring, grumbling, dressing, farting, laughing. *Pop pop pop!* Some were pulling at dogs, some at horses. The pall that had fallen over the camp in the last few days, the pall of rain and forest, was lifting even as the skies brightened toward the east. Almost a thousand warriors were crossing the creek, many of them slapping the sides of the metal wagons to hear them ring.

"He's taking all the healthy men," Blacktooth muttered to himself.

"There aren't that many healthy men," said the man at the trench beside him, who sounded and smelled very unhealthy. "And I'm not that healthy and I'm going."

He spoke in Wilddog. Before Blacktooth could answer, he was off and running, barely wiping.

Through the shrubs that cloaked the latrine, Blacktooth watched the horses cross the creek, and then crawled back into his bed. It would be an hour or so before breakfast and he wanted to get some rest. He searched for Ædrea and Amen through his dream, but it was like prowling through an abandoned house, empty even of furniture. When he woke again his fever was back. He sat up, dazed. He could see by the sun on the wagon's hood that it was almost noon.

"Your Eminence," said Bitten Dog. "His Holiness and whatever, His Eminence the Pope wants to see you."

"Brownpony?"

"He wants your butt in his Pope wagon right away."

Brownpony had stopped shaving but it had hardly changed his appearance. There wasn't much left of

his beard, just a few wisps of hair on his chin. Some were dark and some were light, giving him the look of a sketch that had been abandoned. He was finishing his breakfast of horsemeat jerky and plums when Blacktooth found him, at a small table that had been set in the shade of the papal wagon. "Nimmy," he said, "where is your zucchetto? I have a commission for you."

"As a soldier?" Blacktooth answered. He was ready to refuse.

"As an ambassador," Brownpony said, ignoring the novice cardinal's sarcasm. "As the papal legate to the farmers. They are all that is left in the city. Hannegan's troops have abandoned the place and left them there to fight. We could have avoided the fight altogether by peacefully slipping a thousand men into New Rome."

"A thousand Nomads are not peaceful, Your Holiness," replied Blacktooth. "And besides, the farmers have shown an inclination to fight."

"True. Perhaps you're right," Brownpony said. "Perhaps this is all for the best. We have only three hundred men anyway, mostly the Grasshopper." The Pope waved an astonishingly skinny arm around at the camp, which looked deserted in the harsh daylight, like a dream only half-remembered. Brownpony looked weaker than Blacktooth had ever seen him. Surely, he thought, it was the Meldown. *Nunshân* the Night Hag was claiming her husband, calling him to her cold bed.

"The War Sharf of the Three Hordes, the *Qæsach dri Vørdar*, our old friend and companion Chür Ösle Høngan, has taken almost a thousand of my crusaders south, to Hannegan City. Even Magister Dion and the New Jerusalemites have gone with him. They intend to join the Jackrabbit warriors and the gleps that are preparing to besiege the city, and instead of a siege we will have a battle." Brownpony sat down wearily. "Perhaps it is all for the best."

"Not so," said Wooshin.

"My sergeant general disapproves," said Brownpony. "But what does it matter? It is done." The Pope's hands fluttered in the air, like two birds. Blacktooth watched, intrigued; with that motion, this most worldly of men suddenly reminded him of Amen I.

"I'm sick anyway," Blacktooth said.

"We're all sick," said Brownpony. "Except for Wooshin, of course. Where is your hat, Nimmy?"

"Here." Blacktooth pulled his red cardinal's zucchetto from his robe. "I don't wear it around the camp. It might blow off my head and fall into the dogshit."

"No wind here," said Wooshin, who disapproved of Blacktooth's attitude toward his master.

"Oh yes, the dogs," said the Pope distractedly. "We get to keep the dogs. The *Qæsach* didn't want to take them on the campaign south. We have been left with three hundred men and almost as many dogs. And the Grasshopper sharf, of course. The farmers don't know this, not yet. What I want you to do is go into the city, Nimmy, and make them an offer of peace. Extend to them my offer of peace. The Pope's hand in peace."

"Before they discover your numbers have been reduced," Blacktooth said, scornfully.

"Why, yes. Wear your hat and your robes. I will give you a papal seal to carry."

"They will shoot me before they see it."

"Put it on a stick," said Wooshin. Blacktooth could see from the yellow warrior's eyes that he wasn't going to be allowed to refuse the mission. He resigned himself to it. He was curious to see the city anyway, and sick to death of pots and pans. So what if he got killed? Wasn't that bound to happen sooner or later anyway?

"You look very sick, Cardinal Nimmy," said Wooshin, his voice almost gentle. "Tell the farmers that we wish them no harm. We want to settle things peacefully. The Empire has deserted them but not the Vicar of Christ."

"And don't mention that the Vicar of Christ is down to three hundred men and as many dogs," Blacktooth said.

"I will overlook your insolence since it has never been an impediment to your vocation. Indeed, Nimmy, sometimes I think it is your staff. I hope for your sake it is not your crutch. Better get going, though. This has to be done today, or at least attempted."

"I have to walk?"

"Eltür Brâm has a white mule you can use," said Brownpony. "And God go with you, Nimmy." He made the sign of the cross and allowed Blacktooth to kiss his ring.

The grassy swale had been a highway a thousand years before, and now it was a highway again. The muddy tracks of wagons crisscrossed in the grass. Who knew how many years this "door prairie" had pointed like an arrow from the plains into the forest and then to the city—or, Blacktooth thought, the other way? Though the monk had never thought much of the Pope's plans to return the papacy to New Rome, lately the Holy City had been appearing to him in his dreams. It had arrived with the fever. In the dreams it beckoned on the distant horizon, like small, steep mountains. How different was the reality! There was no horizon at all. The road ran straight between trees and low ruins that were just mounds of earth, some with openings where they were mined, others barricaded where some pitiful creature had chosen an intact basement or a mined-out room as a cave. The farmsteads were smaller here, close to the city, usually just a weedy vegetable patch and a ruined building or two; perhaps a shed emptied of pigs and chickens.

Just when Blacktooth had given up all hope of seeing New Rome, just when he least expected it, the road topped a small rise, and there it was—just as it had always been in his dream.

"Whoa." Blacktooth needn't have bothered; the white mule only moved when he got on and only stopped when he got off. He slid down and the mule stopped to nose at skunk cabbages beside the road. They were at a turn: the road went at an angle down the last hill before the valley of the Great River, or Misspee as it was called locally.

Blacktooth couldn't see the river but he could see the distant towers of what once had been a bridge; and he could see a low line of tree-covered bluffs on the other side, like a mirror image of the hill he was on. And in between, a few miles away, were steep brush-covered stumps of towers, like low steep mountains, just as he had seen them in his dream. New Rome.

But it was already afternoon, and there was no time to enjoy the view—even if it was the first horizon Blacktooth had seen in almost a month. He got back on the shaman's white mule and it started down the hill, and soon they were in the trees again.

There was more concrete and asphalt here, mixed with the grass. It would have made for treacherous passage on a horse, but the mule seemed unbothered. There were fewer farmsteads and more houses, even though the houses were just sheds attached to the sides of the ruins. Blacktooth even saw smoke coming from one or two, and shadowy shapes that could have been children playing or their parents hiding.

"Gee up," he said to the mule, just to hear his own voice and to let whoever might be watching know that he was in control and on a mission. He wished now he had bothered to learn the mule's name.

It was late afternoon before he passed the gates of the city, a low barricade now abandoned. A couple of corpses in the sentry box showed how the Nomads had avenged their murdered shaman, and how little the grass-eaters cared about their dead.

Of course, the corpses might have been Texark soldiers. Two pigs were rooting at the door, seemingly eager to find out.

"Gee up!" The white mule stepped over the rubble and Blacktooth rode on through, holding up Amen II's papal seal. It was made of parchment stretched over sticks like a kite, and held aloft on a spear decorated with feathers and the cryptic symbols of the Three Hordes. An amalgam of the sacred and the profane, the civilized and the barbaric. Like Brownpony's papacy itself.

There were more pigs on the street here, though there were no bodies. New Rome seemed deserted. The streets were straight and wide. The "great houses" Blacktooth had seen from the horizon were less impressive up close, but more oppressive somehow, dark ruins shot full of holes. There was no movement. Blacktooth knew he was being watched, though. He could feel it; he could feel more and more eyes on him as it got darker and darker.

"Whoa," he said, but the mule didn't stop.

Ahead Blacktooth saw a single figure in the center of the street. It was a man carrying a rifle.

"Gee up!" Blacktooth kicked his mule but the mule walked at the same slow pace, whether kicked or

not.

"Wait," Blacktooth shouted at the man, but the man backed slowly into the shadows.

"I have a message . . ." Blacktooth shouted, just as the man knelt and fired.

Blacktooth slid off the mule, which was the only way to stop it.

He waited behind the mule for another shot. The silence was excruciating.

The man was gone.

The dialogue was too one-sided. His only chance, Blacktooth saw, was to push on toward the center of the city and hope that he came across someone with either some sense or some authority, and preferably both, before he got shot.

He got back on the mule.

"Gee up."

It was dark when they shot the mule out from under him. Blacktooth was almost in the center of the city, under the biggest of the "great houses." It must have been a long shot, because the animal went down before Blacktooth heard the shot; the *crack* came rolling through just as he was falling on his side, under the mule, which fell as heavily as an abbot having a stroke.

Blacktooth scrambled to his feet, looking for the papal seal-on-a-stick, which had snapped and was lying half under the mule. He was tensed through his shoulders, waiting for the next shot, which he knew he wouldn't hear and might not even feel. It never came.

With the papal seal, he ran back into the rubble of the "great house," where he hid under a stone slab. From here, he could see down the street both ways. It was almost dark; the sky was a salmon pink turning to rose in the west, and a darker blue ahead, in the east.

The mule was on its side, braying violently. It wasn't bleeding much, but clearly it was done for. Its front legs were kicking but the rear legs were still; maybe spine shot. Blacktooth felt his fever growing and then a fit of diarrhea hit him, and he squatted behind the stone slab. Should he hold the papal seal aloft, or did it just make him a better target? "Not now," he prayed aloud. "Not like this."

Finished, and still not shot, he decided to continue on with his mission. He had to find someone, and soon, before it got dark. Otherwise, he would be sleeping alone in the dark in one of these great piles of stone. Holding the papal seal aloft, he started walking. He knew he was still feverish, because he could sense Amen I beside him, his cougar face composed and quiet; free of concern as well as anxiety. Amen had nothing to say; lately he had had little to say.

The problem was, the mule wouldn't shut up. It kept braying louder and louder, the farther Blacktooth walked away from it.

"I have to go back," he said to Amen. He knew the old man couldn't, wouldn't, answer, but he wanted to hear the sound of a human voice, even if it was just his own.

"I'll do for him what I did for the glep soldier," he said aloud. "It'll be a sin, too, just the same." A sin but he had to do it. Wasn't that what a sin was? Something you had to do?

No, *that's duty*, replied Specklebird, with his unquiet, ambiguous smile. *You have often confused them.*

It was a long way back to the white mule, and Blacktooth's legs were getting wobbly. He walked backward, holding the seal high, his shoulders tensed against the shot he expected. The mule was almost quiet by the time he got to it; the brays had turned to hoarse, honking moans. The front legs were still kicking rhythmically. The big eyes looked at Blacktooth with neither curiosity nor fear. Blacktooth knelt and said a prayer, a made-up one, as he put his knife to the creature's throat, and said a second prayer as he pulled it across.

It was like pulling a string and watching the grain flow out of a bag. The mule sank into a sudden quiet restfulness.

Blacktooth wiped his knife on the mule's coat. He was about to stand when he felt the knife on his own throat. "Stand," said a voice, and he did what he had been about to do anyway. He started to drop his knife when a hand took it from his.

*Grass-eater*, he thought, but perhaps he said it aloud, for someone hit him from behind, almost

knocking him down. There was the smell; the grass-eater smell. There were too many hands—he thought perhaps it was a glep—and then realized that it was two men who held him, and a third who picked up his papal seal from the ground where he had laid it before taking out his knife to cut the mule's throat.

They marched him back down the street, the steps he had retraced to kill the mule. He felt a gun prodding him through his cassock. As he passed the corner where he had turned back, he thought, Why hadn't they taken him here? Had they been waiting for him to come back?

"I have a message for your leader," he said. "From His Holiness, Amen Two. I am his papal ..."

"Shut up," said one of the men, in a tongue Blacktooth recognized as a variant of Grasshopper.

He was taken into a basement room that reminded him of the library at the abbey. It was lit by oil lamps, and several men were inside, armed with iron swords and old rifles. Most of them were dressed in rags but one wore the jacket of Hannegan's Texark cavalry. He spoke to Blacktooth in Churchspeak.

"Are you sick?" was his first question. "You smell bad."

"I come from His Holiness the Pope with a message for your leader," said Blacktooth. "We are all sick. We all smell bad. There are thousands of sick, bad-smelling warriors, bloodthirsty Nomads, on the outlying reaches of the city, preparing to strike. I am here to give you a chance to . . ."

"Shut up," said the Texark soldier. He nodded at one of the other men, a farmer, who handed Blacktooth a cup of water and a handful of brown pills that looked like rabbit pellets. "Take one," the soldier said.

Blacktooth smelled the pills. He shook his head.

"Take one." A gun prodded him in his back.

Blacktooth took one.

"I am here to give you a chance to surrender the Holy City peacefully," he said. "The Empire is finished. The papacy is returning to New Rome. The Pope, His Holiness Amen Two, wants only to occupy his rightful place in the ..."

"Shut up. I know who you are."

"I am the His Holiness Amen Two's—"

"We know who you are. The Archbishop sent us word to look for you," the Texark soldier said. He unrolled a scroll that had already been untied. "Are you not Blacktooth St. George, Secretary to the Antipope, and banished under sentence of death to the far reaches of the Bay Ghost and the Nady Ann?"

Blacktooth was at a loss for a reply.

A gun prodded him in his back. "Say 'I am.' And what's that hat? Military?"

"I am a cardinal," Blacktooth said. Suddenly the seriousness and the ridiculousness of it all struck him, simultaneously. The enterprise had been foolish. Perhaps even the Crusade. Now here he was, back in the Hannegans' zoo. "A joke, really. Cardinal. Pope. Soldier."

The pill was making him dizzy. He wondered if he should take another.

"We have orders to shoot you," said the Texark officer, rolling the scroll back up tightly and tying it with a ribbon. "But first you should get some rest. The pills will help you sleep. Take him to the death cells."

It was cool under the street. By standing on tiptoe, through a barred window, Blacktooth could see an alleyway and an occasional dog or pig, the pigs wearing medallions that identified, Blacktooth presumed, their owners. One pig was especially friendly; it kept coming back and sticking its nose into the bars, perhaps for the coolness of the iron.

As darkness fell, Blacktooth felt his fever subside, like a stream sinking into the sand. The chamber pot in the corner of his cell waited, empty, like the pig. The guard came just after midnight with a jug of water but no food. Blacktooth took another pill. This time they were going to shoot him, and he had little doubt that they would keep their promise. Somehow, the thought of it made him drowsy.

That night, again, he dreamed of Ædrea. She was waiting for him under the waterfall while his old friend, the white mule, grazed on the rocks outside. There was no grass but it sprung up as the mule ate. It had a hole in its throat like a wound, and Ædrea had wounds too; she showed her wounds to Blacktooth.

"Where have you been?" she asked in Churchspeak. "Where are you going?" Since he knew she didn't speak Churchspeak, he knew, in the dream, that he was dreaming.

## CHAPTER 30

In the reception of the poor and of pilgrims the greatest care and solicitude should be shown, because it is especially in them that Christ is received; for as far as the rich are concerned, the very fear which they inspire wins respect for them.

—*Saint Benedict's Rule*, Chapter 50

HAT NIGHT WHILE BLACKTOOTH WAS dreaming, a small party of farmers mounted their horses, most of them draft plugs, and rode toward the camp of the Pope's Crusade. These were the farmers who had survived after seeing their families and livestock killed by the Texark soldiers. Now they wanted revenge and the only one they could get it on was the Antipope, whose armies their scouts had told them were heading south, toward Hannegan City and the Red River. They knew that Blacktooth was lying. They had seen only one party of raiders, had wounded one and killed another. They wanted what the Grasshopper and Wilddog Nomads wanted: they wanted blood and revenge. It was late September and there was no moon. They left, forty riders in all, soon after dark, counting on the starlight and their knowledge of the road. It was after all the road they had ridden in on; it was the road that led to their abandoned and ruined farms.

• • •

The Pope, meanwhile, was beginning to lose all hope for peace. The Grasshopper warriors were excited and eager for blood, after the long and loud funeral for the shaman. Many of them were drunk, and though the ceremony had been hidden from his eyes, Brown-pony suspected many more had fed on the shaman's liver and lights.

"You must understand, my emissary has ridden into the city to make peace," he said to Eltür Bråm.

"You mean Nyinden. Nimmy."

"My cardinal," said Brownpony. "A member of my Curia."

"Cardinal Nimmy, then," said the Grasshopper sharf. He sat on the tailgate of the Pope's wagon beside His Holiness, watching the whooping, weeping warriors around the main campfire. It was a novelty to the Nomads, unlimited firewood, even if it was damp. The blaze grew bigger and bigger.

"They seek revenge," said Eltür Bråm. "Can you blame them? Can I deny them? They need it; it is like grass for ponies."

"The victory of the Church will be their revenge," said Brownpony, but even as he said it, he knew he didn't believe it himself. The muddy ground was crowded with moving shadows; the sky was scratched with trees. Brownpony yearned for the harsh outlines and open horizons of the grasslands and the desert. Here in the forest the noises and smells were too close.

*Pop pop pop.* The warriors pointed their rifles at the sky, barely visible as a smattering of stars behind the trees. The Grasshopper sharf had managed to keep only two shells apiece for them, but he knew that Brownpony had more, left with him as a concession from the stores in Magister Dion's wagon train.

"You must give the men the rest of the brass bullets—Your Holiness," Demon Light added, with a faint smile.

Amen II shook his head. "They must wait until my emissary comes back. Then your warriors can ride in, in triumph." In fact, Brownpony was already worried. He knew that if Blacktooth had not returned by morning it would mean he had probably been killed; perhaps even hanged under the interdict they had both signed when they had been released from the zoo in Hannegan City.

"Tomorrow, then," said Eltür Brâm. He looked up at the tree-hedged, moonless sky.

The Pope took the sharf's arm. "And you must control them!" he said. Across the clearing, in the firelight's gleam, he could see the sharf's carriage, with I SET FIRES painted on the door. "There will be no fires, Demon Light. The farmers will surrender when they see your force. They may have already surrendered to Nimmy."

"I think not—Your Holiness."

"I want no fires in New Rome. I am here to restore the city, not to destroy it." The Pope twisted the sharf's arm. It was like arm-wrestling; the point was not to defeat him but simply to show that he knew and understood Nomad ways. "No fires, understood?"

"Understood," said Eltür Brâm, pulling his arm loose and stalking off to join his warriors at the fire.

"I have unleashed a storm that I cannot control," said the Pope, retiring into the wagon and arranging his robes for sleep.

He was speaking to Wooshin, who stood in the shadows beside the wagon. The Yellow Warrior shrugged. That was, as far as he was concerned, the nature of all storms and all wars.

The Pope was asleep when the farmers came. They had dismounted and were leading their horses across the creek when the dogs awoke, and awoke the warriors who were sleeping it off around the dying campfires. The fighting was brief and vicious, and except for the screams and the splashing, almost silent. The Grasshoppers were reluctant to use their few bullets but eager to try the knives and clubs that slept by their sides, where women might have been.

When dawn came, the water was still bloody in the little pools along the shore. Death by the knife is a messy, lingering business; some of the farmers still flopped like fish. Four of them were captive, uninjured except for the rawhide cord passed through their cheeks. They sat tethered in the shade of the food wagon, one whimpering, the others waiting stolidly for whatever awaited them.

The Pontiff awakened to find his camp almost deserted. The Grasshopper warriors were gone; so were their horses and the dogs. "You said you were going to wait!" he complained, finding Eltür Brâm by his fire, eating breakfast.

"They gave us no choice." The war sharf shrugged. "They tried to steal our horses."

Brownpony kicked the fire. "They were only a few fools. You could have chased them off."

Eltür Brâm shrugged again. "The dogs followed them. My men had to follow the dogs. They are under orders not to burn the city, though."

Brownpony didn't believe him. And before noon the smoke was rising over the wall of trees to the east, from the city he had never seen.

• • •

The pig came in the morning, but the jailer didn't. She stuck her snout between the cool bars and sat, staring down at Blacktooth, who was trying unsuccessfully to pray.

As the morning dragged on, Blacktooth heard shots in the distance, shouts closer, the scuffling of feet in the narrow street outside. He still had six of the little pills but nothing to take them with. He was afraid of the warm water in the bucket by the door, so he took one with the last of his own spit. Toward noon, he drank the water.

Already hungry when he was locked in the cell, he grew hungrier. It was hard to tell time because there was no sun and it was raining, a gentle shower that spattered onto the alleyway all day, muddling the footsteps of the occasional passerby, always a dog, never a human.

The pig came again in the afternoon, or what seemed to be the afternoon.

Blacktooth kept the pills in his cardinal hat, which his captors had allowed him to keep, along with his cross and rosary. The zucchetto kept the little brown pills dry. They seemed to work. The fever was gone, and Blacktooth didn't miss the cramps and the runs that had kept him busy, especially in the mornings, for days. But he felt lonely without the visions of Ædrea and Amen, the companions who had walked by his side and accompanied him not only through his dreams but through the interminable waking dream that seemed, lately, to be his life.

Blacktooth had never felt so alone. He remembered with a certain affection Brownpony and the prison-zoo in Hannegan City, when they had been spied on by the Wilddog prisoner and observed by the amused citizens. He remembered brooding, taciturn Wooshin. He remembered the insolent, chubby Aberlott, failed contemplative and lover of cities. He missed them all; he missed even Singing Cow. From his solitary basement cell, Blacktooth looked back on the life at the Abbey of Saint Leibowitz and wondered at the cunning and perfect mix of solitude and companionship that was the monastic life. Some men were made for solitude, but not most; and certainly not he. Specklebird had loved his solitude because he filled it with spirit. He was never alone. Ædrea's solitude had been spook-solitude: accepted by none, scorned by all.

Desired by one.

The two of them in their solitude had kept Blacktooth company. But then, he thought, I don't require much in the way of company. "Right?" he asked the pig when she stuck her head between the bars again. And like Ædrea, like Amen, she returned no answer.

By afternoon no food had come and the rain had stopped. Was there to be no last meal? To die seemed bad enough, and to die hungry seemed the final, the ultimate insult. Would he then be hungry forever?

Shocked at his own impiety, Blacktooth fell to his knees and prayed for forgiveness.

The door was heavy wood, probably oak. It seemed more substantial than the black iron bars on the little high window. Blacktooth knocked on the door, then kicked it, timidly at first, then harder and harder. There was no response. He couldn't tell if anyone was out there or not. And what was out there—a hallway? He couldn't remember. It had been dark when he was brought in. That had been only a day ago—hadn't it? Blacktooth wished now that he had made marks on the whitewashed stone walls, as the previous occupants had done.

There was nothing in his little cell but the bed, which was two boards laid over stone blocks, a coarse wool blanket, a stool, and two buckets: one by the door and one in a corner. The bucket of warm water by the door was still almost full; the bucket in the corner was still empty. The room had apparently been used as a prison by the Texarki before; the walls were filled with intricate but illiterate scratchings—faces, smiles and frowns, a sun, various interpretations of the male and female body. The wall looked to Blacktooth like the surface of a monk's brain, the scratchings on the soul that a man learns to live with and, usually, hopefully, eventually, to ignore.

He sat on the bed. He lay on the bed. He stood at the window. He stood on the stool and looked out the window. He saw a narrow deserted alley with a ruined step against a wall where there was no door. There were bloodstains on the wall above the step. While Blacktooth watched a dog came and sniffed at the stain, then walked away. Was this the end of it, then? The killing place? The stairs that went nowhere, the wall without a door . . . He shivered. He was very hungry.

In the distance the street opened onto another, busier street, and Blacktooth could see people passing, carrying mysterious packages, or occasionally, guns. The ones with guns walked in twos and threes. Closer at hand, another dog sniffed at the stained steps in the alley, then trotted away.

"That's where they *execute*."

Blacktooth turned and saw that the door to his cell had opened silently; beyond it was an indeterminate darkness. For such a huge door it swung on silent hinges. An unfamiliar farmer/guard stood in the doorway with a bucket. Young, in his rude twenties; redheaded, a grass-eater. "You're not supposed to be up there," he said.

"I'm praying."

"What about your hat?" The zucchetto was on the bed.

"We don't wear the hat to pray."

The guard crossed to the corner and picked up the bucket; he set it down again when he felt that it was empty. He carefully avoided looking into it.

"I'm supposed to empty this," he said. It was a reproach.

"I suppose that means I'm supposed to fill it," Blacktooth said. "But aren't you supposed to bring me

food? I had no supper, and now no breakfast."

The farmer/guard shrugged. He wore leather pants and a canvas vest, probably taken from some soldier's locker. Or body. His teeth were gone bad already. "They didn't tell me anything about food. They only told me to empty this. And bring the water."

"Are they going to—shoot me?" asked Blacktooth. He felt dizzy; he had to step down off the stool. When he looked up, feet on the cold stone floor, the guard was gone, almost as if he had been an apparition. The door closed, then a bolt slammed shut. Loudly.

"Bless you, my son," said Blacktooth, making the sign of the cross. "I'll go back to my prayers." He stood back up on the stool and looked out at the world, or what little of it he could see from his tiny window. Prayers indeed. But what else was prayer but an attempt to look out of the tiny window of the soul? Perhaps he would try to pray later, as it got closer to the time for his execution.

Would it hurt? he wondered. It seemed to be the wrong question, but he couldn't think of the right one.

Another dog came by and sniffed at the dark stain on the step—also praying? In the distance an old woman and a child poked through rubbish with a stick. When the woman turned up something, the child would lean down to get it. Blacktooth couldn't tell what they were collecting.

There were more shots in the distance, then a strange and yet familiar wild smell. Even before Blacktooth realized what it was, his heart was pounding.

Smoke.

"You told your men to set the fires," the Pope, Amen II, said to Eltür Bråm. Demon Light denied it but Brownpony knew better. *The Grasshopper is always at war... I set fires...* And what did it matter if he denied or affirmed it? It was done.

Brownpony and the sharf were sitting on the bed of a wagon, watching the returning warriors thunder across the creek. It was beginning to rain again. Brownpony couldn't see the sky, but he knew from his Curia—half of whom were sick, and spent time at the secondary latrine halfway up the hill—that a curtain of smoke hung over the city a few hours' ride to the east.

"Fires just happen," said Eltür Bråm. "No man can prevent them. No man should."

Dogs barked. Horses neighed. The Nomads were straggling back in twos and threes, calling to the women to prepare bandages and food, and replenish the firewood stacks. They were shouting triumphantly, but in truth they had had few encounters with the mysterious enemy. The few wounded had been injured when their horses had stumbled in the unfamiliar streets, or had burned themselves setting fires.

None knew, still, how many defenders the city had, or even if it was being defended at all. And Blacktooth had never returned. It was almost sunset. "Perhaps he has found the peace you robed ones always say you are looking for," said Eltür Bråm.

"Perhaps," replied Brownpony, choosing to ignore the Nomad's sarcasm. But he doubted it.

Smoke. It was getting dark; or was it? The few people Blacktooth could see at the end of the street were running.

He got down from the window and banged on the oak door. He put his ear to the wood, but he couldn't hear footsteps or voices. It was a strange place, this room at the end of Blacktooth's life. It reversed normal life, which we go through always looking backward. Now it was the past that was the mystery. Blacktooth could see clearly into the future. Too clearly. He could smell it. It filled the air—like smoke.

He was afraid he would panic, and he did. It wasn't the fear of fire, or even the fear of dying. It was just panic, pure animal panic. It filled him, rushing in unbidden, with no thought or emotion intervening. As sudden and as irresistible as lust (which he had grown to know so well), it both comforted and terrified him with its intensity. Like the faith he had searched for but never found, it replaced all doubt with certainty.

Blacktooth let it rage, kicking and beating on the door, shouting first "Fire!" then "Help!"; then, "For

the love of God!"

It brought no peace. The pain of his bruised fist and his own screams brought him back to a different reality; a more monklike reality. He stopped screaming, surprised at how easy it was to stop, and knelt by the bed with his rosary. The smoke was thicker, but the air was still breathable. Blacktooth was no longer hungry. The water in the water bucket was dancing, and in the distance he could hear dull booms—buildings falling or bombs going off. . . .

He must have fallen asleep. He sat up and saw that it was still dark outside the window. In the distance he could hear shooting. The farmer/guard was standing in the open door with the bucket. He wore a scarf over his face. For the smoke? It seemed to have diminished.

Blacktooth started coughing. "Excuse me," he said when he had stopped. The guard/farmer still stood in the doorway. "What's happening?" Blacktooth asked.

"They are fighting. Your Antipope is burning the city."

"Ah."

Then he was gone. He never returned. Whether he was killed or not, Blacktooth never knew. The shooting never got closer and it eventually faded away.

When dawn came it was a strange dawn that seemed to come from inside the cell, rather than outside, filling the tiny basement room with an eerie light. The city was on fire. The wind was scouring the alley, picking up bits of straw and grass and dust and scraps of ash and paper.

Blacktooth banged on the door, but he didn't scream this time. He didn't expect anyone to come and no one did. The fire seemed to be getting closer; the wind was hot, as if it were pulled through one fire on the way to feed another. Blacktooth stood as long as he could at the bars, and felt his face burning—then realized he had forgotten the pills. There were four left, folded in the hat. He took one and poured the last of his water over his head. Death by fire. He could smell fuel oil. He recognized the smell from when he was a novice, handling the abbey's relics for the first and last time. . . .

*Beatus Leibowitz ora pro me!*

He heard footsteps in the alley. "Help," he called out, but no one came. Not even the pig, who had probably been eaten. Blacktooth said his rosary, then put on his zucchetto and lay down on the narrow plank bed, on top of the jail blanket. Better to just wait, he thought. Sooner or later the end will come. "A dewdrop, a flash of lightning," Amen had said. "Ash, dust . . ."

He must have fallen asleep, for soon he was back at the waterfall with Ædrea. The water had stopped falling, though. It stood like a sheet in the sun. She was standing in it, in the sun, very wonderfully beautifully perfectly naked. "Hey," she was shouting.

"Hey!"

Blacktooth sat up. Someone was at the bars. He thought at first it was the pig, but it was a woman with a child.

"Are you a priest?"

No.

"So what's the hat?" It was the old woman he had seen with the stick, going through the trash piles.

"I'm a cardinal," he said, taking it off.

"What's a carnidal?" she asked, reversing the syllables as simple people sometimes did. "Is that like a priest?"

"Sort of," Blacktooth said. "Help me out of here. I'm afraid I got myself trapped."

"I can't do that," the old woman said. "Will you baptize my son?"

She pushed a face to the window. The boy looked too young to be her son, and too old at the same time. He was bald and his wrinkled forehead was blue. A glep.

"I can't do that," Blacktooth said. "I'm not a real priest."

"He's not my real son," the old woman cackled. "I bought him."

"Bought me!" said the glep boy. "I commensurate the deception. Am."

"What?" A bell was ringing somewhere, faster and faster. Then Blacktooth heard the spray of shots. It was being rung with bullets.

"He's very strong," said the woman.

"Strong," said the glep. "Accurate am I the exception."

"He says all you have to do is move this brick."

"What brick?"

The woman stood up and made a scraping noise with her stick. With a fierce demented grin, the boy pulled a bar loose, then another. "Strong!" He threw both bars into the cell at Blacktooth, who ducked. They rang on the floor with the sound of bells.

"Hey!"

Blacktooth flattened himself against the wall. Had the bars been loose all along? The jail was like the abbey; all he had to do was walk out and he was free.

He waited until he was sure the old woman and the glep boy were gone; then he pushed his zucchetto and the jail blanket through the bars, and climbed after them into the alley.

The air was thick with smoke, and he held his sleeve over his nose. It had been easier to breathe in the basement jail. At one end of the street he saw the woman and the boy, poking through garbage unconcernedly, as if the world were not on fire. They seemed to have forgotten him. "Bless you, my son," he whispered—and walked quickly the other way.

## CHAPTER 31

On the day they return, let them lie prostrate on the floor of the oratory and beg the prayers of all on account of any faults that may have surprised them on the road.

—*Saint Benedict's Rule*, Chapter 67

LACKTOOTH HAD SEEN ONLY TWO CITIES IN HIS day: Valana, built of wood and stone, and Hannegan City, made of wood and mud. The Holy City, New Rome, was a city built of old pieces of old cities; it was a mixture of old and new, more like an abbey than a city, with piles of brick and stone built upon piles of brick and stone, all mixed and leavened with wood and grass and straw. All flammable, all tinder, and, it seemed to Blacktooth, all burning.

He was on a wide, straight street with mounds of rubble and stumps of towers, the "great houses," on both sides. At first he was alone, but as he walked farther east, into the rising sun and away from the fire, the street became more and more crowded with frightened, silent people. Blacktooth felt an unexpected, unwanted kinship with these frightened grass-eaters who were suddenly emerging from basements and the stumps of buildings (just as he had), dragging their pitiful rags and remnants and pots and animals and children with them. Everyone was leaving the city.

In the distance behind him, he heard shots, rare and ragged. If there were any fighting Nomads in the city, they didn't show themselves. No fighting horses, only mules and old nags. Only stray dogs.

The fleeing people were weirdly silent. Shouts or cries would have been welcome, but Blacktooth heard neither; it was as if the window from his basement cell had led him into a world where only children cried or complained. The adults were glumly silent, stumbling forward. Perhaps they thought their accents would give them away, or perhaps there was just nothing left to say.

New Rome was burning.

Blacktooth had prepared himself for execution, and now even his hunger was gone. A hand plucked at his sleeve—a child's hand—and he found himself, through some process he neither understood nor fully noted, part of a small group dragging a frightened mule up the steps from a basement room. How it had gotten there, who it belonged to, and who wanted it—these were questions that belonged to another reality. All that was present was the need to help coax the terrified, braying beast up the narrow steps.

Then it was gone into the gathering, streaming crowd, its owner—and the child—chasing it; and Blacktooth was half walking, half running after them. The wind had risen and now there was a wall of flame directly behind, to the west.

Four men and four women, all naked and holding hands, snaked through the crowd, singing hysterically. Blacktooth tried to look away from the women's breasts but couldn't. It wasn't desire he felt but some other, almost forgotten feeling: hunger, or hope. Two men in uniform with repeating rifles ran past, then two more, all running in step. It was almost comical. Blacktooth pulled off his zucchetto and hid it under his habit. A fallen mule in the traces of a cart was screaming pitifully, trying to rise. One haunch was smeared with blood.

The fire was either closer, or hotter, or both. At the end of the street it was a wall of flame, taller than the "great houses." Blacktooth now had two shadows, one that walked before him and one behind.

"I set fires," thought Blacktooth, remembering the blue and gold inscription on the Grasshopper sharf's carriage.

A farmer leaned over the injured mule and drew his knife. Blacktooth stopped him, with a hand on his arm. "Let him live," he said in Churchspeak.

"Huh?" The farmer stared at Blacktooth's robes, and then cut the traces. The mule limped off, whickering, and the farmer stuck the knife back into his belt.

"I will help with the wagon," said Blacktooth, in Grasshopper. He put his hat back on and pushed.

It was a two-wheeled cart of vaguely Grasshopper design, loaded with household goods and junk—including an ancient, tiny black-skinned old woman with two kittens, which she was kissing, first one and then the other. Blacktooth pushed and the farmer pulled, then two more men joined in, throwing their possessions in the back along with the old grandmother. They all spoke Grasshopper, mixed with a little Churchspeak and smatterings of Ol'zark. They fled on east, toward the Great River.

Blacktooth stayed with the farmer with the cart all day. Hair-Puller was his name; or it might have been a description, or even a confession. The man was bald. He was so solicitous, sharing his food and water, that Blacktooth assumed he was a Christian; until he realized that the farmer thought Blacktooth's red zucchetto meant that he was a soldier. Though he lived in the Holy City, he had never heard of the Church. To the farmer there were only two types of people, farmers and Texark soldiers. Though he was of them by blood, the Grasshopper Nomads, "the people," coming in from the plain "where the trees do not go," were less than human, or more, perhaps. An elemental like a herd or a storm.

Even after escaping from his basement jail, Blacktooth still felt imprisoned, between the fire to the west and the still unseen river to the east. By noon the smoke had eaten the sun itself, and a terrifying red darkness fell over the streets like a pall. The stream of refugees grew to a flood, all heading east. The streets grew wider, and at the same time more choked with refugees, all farmers. The "great houses" to the east were even greater, and there were no trees; Blacktooth had never imagined he would miss them.

It was late afternoon when they reached the river. Blacktooth didn't know what it was at first. The crowd piled up on itself, then started milling, turning. There was fire to the west, and fire to the north as well. There was a scuffle, a swift panic, and Hair-Puller was lost in the crowd. Once Blacktooth thought he heard the familiar creak of the wagon, then lost it again. Luckily he had managed to save his jail blanket.

It was getting dark. Except for a few children crying, the refugees were silent again, milling in place, making decisions through some sort of slow, visceral process, like a worm. The main stream turned south, following the bank of the river out of the city. Suspecting what it was that had turned them, Blacktooth climbed a low stone wall. A few others, like himself, stood on top, looking at the Great River.

Blacktooth had never seen, or even imagined, so much water before. It was a different substance than the water he had known in the mountains or on the Plains. It didn't dance, or swirl, or fall. It lay like a sheet of muddy glass, half brown and half silver. It was a plain of water. He thought he could walk across it, but he knew better.

Squeezing past the others, Blacktooth walked along the top of the wall to a fallen pier at the water's edge. Boats were standing off shore. He hadn't seen many boats before, just the flat-bottomed ferries on

the Red, but he knew what they were. These were barges, some with sheds built with chimneys and window glass, and long sweeps that turned them and moved them on the water. People on the decks and roofs watched the city burn. The boats made small circles in the current, watching the fire, perhaps waiting to move in later to loot. A few farmer refugees tried to swim or wade out to the boats, but they were beaten away with the sweeps.

A few shots were fired. The people on the barges were dressed in rags, the same as the farmers, but Blacktooth assumed they were from the other shore.

The fire was getting closer. From the water, it was almost beautiful: fire, loveliest of the four elements of the world, and yet an element too in Hell. Blacktooth found a spot at the end of the pier, and wrapped himself in his jail blanket; paradoxically, it kept him cool. Beneath the wall of smoke and flame, he could see the stream of refugees heading south along the riverbank.

"So many," Blacktooth muttered. The man standing beside him grunted what sounded like assent. He was holding a long gun, but not a repeater. It was the type that fired stones through a thick iron barrel. For some reason, Blacktooth felt safe beside him. He had no desire to rejoin the refugees and head south.

"They could have defended the city," Blacktooth whispered, and the man grunted again. They could have, Blacktooth thought, but they hadn't wanted to. New Rome wasn't their city. They had been driven there by the Texark soldiers and then driven out by the flames. Few were armed, and those with very ancient weapons, of the kind that had killed the shaman.

Perhaps the man standing beside him had fired the shot.

The howling wind was whipping the water into whitecaps. It was blowing from the east, sucked into the city by the flames. As night fell the flood of refugees lessened to a stream, and then to a trickle, all turning south along the riverbank, heading toward Texarkana, as if drawn by some ancient, instinctive urge. Late that night their fires could be seen in the low line of wooded bluffs to the south. By then Blacktooth was asleep. He slept for hours, alone at the end of the pier. By daylight the fire had almost died away.

And the Holy City of New Rome was burned.

The smell of food awakened him. Blacktooth had slept wrapped in his jail blanket, propped against a wooden upright at the end of the pier. If the fire had kept coming it would have followed the pier to him, and consumed him along with the rest of the world. But he had been spared. He had taken off his boots and hidden them under his blanket; they were still there, as was his zucchetto, with three pills left. As soon as he sat up, he felt Hilbert's fever returning. But couldn't it be hunger? He hadn't eaten in days.

He smelled fish cooking. At the end of the pier, a boat was tied up on the muddy bank. A group of men were gathered around a small fire. Blacktooth stood up, pulling the blanket around him to hide his monk's robes. These boatmen were probably less Christianized even than the Grasshopper farmers, who were themselves barely Christian at all. And he remembered his jailer's remark, that the Antipope was burning the city.

Something in the shape of the group, their stance or the tone of their voices, told Blacktooth that he could join them safely. Still, he edged in cautiously, walking slowly along the edge of the wooden pier.

A body floated by, buoyed by its own gases. A woman's face smiled upward toward a scrim of smoke and sky. Blacktooth looked away and stepped onto the mud. Someone passed him a piece of fish, wrapped in big soft leaves. The smell of it was so overpowering, so delicious, that he had to sit down to eat it. No one paid any attention to him or asked him any questions. The men by the fire seemed united by a sort of rough charity; they were boatmen, and spoke a version of Ol'zark that Blacktooth could barely make out. The outsiders, two or three stragglers like himself, spoke not at all. Their silence seemed to be essential to the rough peace that prevailed.

After he had finished the fish, Blacktooth looked around. Now that the smoke had cleared he could see the big towers of the ancient bridge. He could make out low bluffs on the far side. The water was impossibly wide. The Great River, the Misspee, flowed into the sea; how big, then, must the sea be? Already this was more water than Blacktooth had ever imagined.

"The Nomads coming," said one of the boatmen. The word for Nomad in their dialect was "horsepeople." The implication was, so *we ourselves must flee!*

There were no women among the boatmen; but even as Blacktooth was noticing this, several women walked down the bank, trudging from rock to rocky step, tracking ash and carrying armloads of what looked like rags onto the barge and into the shed/cabin. They were followed by other women with bags that clinked; perhaps crockery?

Someone passed Blacktooth another piece of fish, followed by a pot of warm water which seemed to be some kind of weak tea. "The Nomads are coming," said another woman, arriving at a run. The "horsepeople."

There was a shout, and Blacktooth and the other "guests" stood back while one of the boatmen scattered the fire with a stick. Before Blacktooth realized what was happening, the barge was spinning off in the current. The other "guests" by the dead fire quickly scattered—and Blacktooth found himself holding the boatmen's water pot, alone again. It was just as well. For the first time in days, he felt his bowels calling, so it was with pleasure that he found a hidden place by the water's edge under the pier and took a dump, and then cleansed himself and went into the city.

Blacktooth assumed that the Grasshopper warriors would arrive as soon as the fire burned out, and begin looting and raping, and with them would come Brownpony and the Curia. But it was noon and the streets were still empty. He had rolled up his jail blanket, and now he felt exposed and vulnerable in his habit and zucchetto as he walked the right angles of the streets waiting for the Nomads to find him and take him to Brownpony.

No one came. It was as if the Holy City had been cleansed. Even the corpses in the street, blackened like cinders, seemed cleansed somehow, as if the fire had swept away their corruptions leaving only a purified husk.

There wasn't much to loot. The fire had consumed everything but the brick and stone, reducing the city back to the rubble it must have been before the Harq-Hannegans had rebuilt it. How many times had these bricks fallen? Blacktooth wondered. How many conquerors had passed under this lintel, this stone? The Holy City with its grid of streets between blackened piles of rubble and shells of burned buildings was like a palimpsest of civilization and misery, all intermixed and intermingled, one age falling onto the other like leaves; like cottonwood trash, the debris of centuries good only for a twenty-minute or a twenty-hour fire.

No Nomads came—no howling barbarians to pick through the ruined and smoking center of all Christendom. No shots, no shouts, no neighing horses, no mad laughter or cries of delight or screams of dismay. A great fire brings with it a truce in the natural order of things, a still center; and there weren't even scavengers in the streets. The occasional corpses, one every block or so, lay in quiet dignity as Blacktooth walked around them. There were only the buzzards gathering high overhead, like fly ash.

Saint Peter's was not hard to find. The roof had burned and fallen, but the smoke-stained dome still stood over the ruins. Most of the interior was destroyed. Blacktooth sat in the back in one of the long pews that had survived the lottery of destruction. It was curious, he thought, what was left and what was consumed, by time as well as fire. There were a few memories left of his childhood—the hard months among the Nomads, the early days at the abbey. But whole years were gone, leaving nothing but ash, like the long rows of gray ash marking where the clean-burning oak pews had been. Where a pew was gone, its footstool might be left behind. It was like the remnants of the *Magna Civitas*, burned to the ground more than a thousand years ago. Parts of it stood almost intact, like the Church; other parts were not even remembered.

For the first time in months, Blacktooth closed his eyes and prayed; not under duress but because he wanted to. He stayed on his knees when he finished. He could feel Hilbert's fever returning, like an old friend. He welcomed it—for there was Ædrea again, in the waterfall that had no water where water did not fall. And there was Amen Specklebird.

Amen I with his cougar smile—

Amen was shaking him by the shoulder. But it was Amen II. "Nimmy, is it really you? We thought

you were dead!"

"So here you see my Church," said Brownpony. His hair was gone and his eyes stared out of dark hollows. Even the red beard of the Red Deacon was mostly white. All around the basilica, the great empty windows looked out on ruins. The deserted streets were quiet and only the howling of dogs could be heard, far off in the distance.

"Oh, God, the Grasshopper!" Brownpony knelt and blackened his hands in the ashes, and held them up toward the smoke-stained dome. "What a fool I have been, Nimmy. To trust the Grasshopper!"

"Holy Madness trusted them too, Holy Father," Blacktooth replied. "And so did Axe!"

"I trusted Brām to fight well," said Wooshin. "He did that, before the desertions."

"It may be," said the Pope, "that he could not control his warriors, once they felt the battle fury—drawn down from Empty Sky, as they say." He wiped his hands on his dirty white cassock; over it he wore a repeating pistol in a shoulder holster. "And the Grasshopper warriors have no love for the Church hereabouts."

Wooshin stood by, still wearing the plaid tunic and sergeant general's stripes Brownpony had made for him. He seemed depressed. Blacktooth was not surprised. All Wooshin's friends, the Yellow Guard, were either dead or gone south with Magister Dion and the *Qæsach dri Vørdar*. His master, Brownpony, seemed weaker than ever; and ruined.

"Nimmy," Brownpony was saying. "Look what I have done to my Church. It wasn't for myself that I wanted this throne. And now look at it."

"It wasn't you . . ." Blacktooth started. But he couldn't finish. Who else had done it? It was Brownpony who had assembled the Three Hordes, who had armed them with repeating weapons, who had set them in motion across the sea of grass toward New Rome—and who had then told them not to set fires.

I SET FIRES, Eltūr Brām's carriage was inscribed. He had made no secret of it. LIKE HELL YOU WILL, the Pope had answered.

*Like Hell*—and now, look around.

Brownpony laid his hand on Blacktooth's brow, leaving a smear of ash. "Your fever seems better, Nimmy," he said.

"I got over it," said Blacktooth. "They captured me and gave me some pills, the same pills the Texark are using south of the Nady Ann. But they are almost gone."

"You don't feel feverish."

"I can feel it," said Blacktooth. "I can see it coming. When I am feverish I see the girl, Ædrea. And the old Pope, Amen Specklebird. They were with me just now, before you came in." He saw no point in lying to Brownpony; not anymore. "I was glad to see them."

"Do you see them now?" Brownpony asked.

"No, of course not. The fever is not that bad."

"The fever is not that bad," repeated Brownpony. He seemed more distracted than ever. Then suddenly he drew the pistol from his shoulder holster. "Do you hear that, Nimmy?"

"Hear what, your—"

"Shhhh!—"

Wooshin drew his short sword from his belt; he left his long sword in its steel scabbard. Seconds later, Blacktooth heard what the old warrior and Brownpony had heard. Hooves on the paving stones, and then on steps, and then on wood—clattering "inside" the cathedral.

It was Black Eyes, the Nomad double agent who had briefly been imprisoned across from Brownpony and Blacktooth in the Hannegan City zoo. He was dressed in the full regalia of a Wilddog warrior, riding a sorrel pony. "Your Holiness," he said sarcastically. He nodded at Nimmy and avoided Wooshin's eye—and sword—altogether.

"Put it away," said Brownpony, softly—although he still held the repeating pistol in his hand. Wooshin put the short sword away, but kept his hand on the hilt of the long one.

"What are you doing here? I thought you were with the Emperor in Hannegan City." Brownpony stood straighter, tried to look regal. Black Eyes didn't seem impressed.

"As a spy," the Nomad said. "When the Lord of the Three Hordes came south, with the tanks and the glep army, I crossed the Red River to join them. But the battle is lost. The Hannegan's guns spoke too loudly, and too fast. The gleps have run back to their valley, the spooks are on their way back to the Suckamints, and the War Sharf of the Three Hordes is on his way home."

"Høngan Ösle?" Brownpony looked stricken. "The *Qæsach dri Vørdar* is going home?"

"The Weejus are calling," said the Nomad. His pony was dancing in and out of the pew ashes, ruining their straight lines. "The Texark Wooden-Nose is burning our lodges, killing our women, stealing our horses. We ride for the short grass. I am only here to make sure that none of the children of the Big Sky Woman are left in the city when the grass-eaters arrive. You should leave also. You are also her child and she is also your mother, begging your pardon, Holiness. The Texark cavalry is on its way."

"From the south?" The Pope pointed with the pistol. "From Hannegan City?"

"From the north as well. From the sea of grass. We will leave their city to them. Good luck, Your Holiness."

He rode off loudly, hooves clattering, and Brownpony fell to his knees, cursing his fate. "*Vexilla regis inferni prodeunt!*"

"What's he saying?" Wooshin whispered.

"Forth come the banners of the King of Hell," said Blacktooth.

"It is not their city," Brownpony muttered. "They never wanted it!" He looked up toward the sky and saw only the blackened ruined dome. He tossed his pistol into the ashes.

• • •

In the center of the ruined sanctuary, the throne of Saint Peter's had been miraculously spared. Behind it was a painted wooden statue of the Holy Virgin, also spared. Blacktooth and Wooshin silently followed Brownpony as he crossed toward the throne, picking his way through the litter. Brownpony paused in front of the throne and studied it before smoothing his cassock and sitting down. His freckled skin was drawn and thin strands of gray hair showed at the edges of his dirty white skullcap. He still wore his empty shoulder holster.

"Here."

Wooshin tried to hand him the papal tiara, but Brownpony shook his head, so the Yellow Warrior placed it in the ashes at the foot of the throne. It was getting dark. Blacktooth had no difficulty finding a live ember with which to light a few candles. Set behind the throne, they hardly illuminated anything except the face of the Virgin, and that only barely.

Brownpony's eyes were shut as if in prayer, and Blacktooth was glad. Looking into them had been like looking in the window of a burning house.

Wooshin squatted beside the throne of Saint Peter, kneeling back on his heels, balanced on the scabbard of his long sword he still wore at his side. Though limber, he was also, Blacktooth saw, an old man. He moved without joy or ease.

The truce the fire had created was ended. Outside in the street Blacktooth saw a dog chase away a buzzard, to pull at a blackened body; then it was chased away in turn by a pig. His old friend? Another dog stopped at the huge open door and looked into the basilica in the dying light. It sniffed the smoky air, pissed on the bronze door, and trotted off into the gathering darkness.

A riderless horse wandered past, part of a severed human leg hanging from the stirrup.

"Glory to God in the highest." It was the weak, tired voice of Elia Amen II Papa Brownpony, speaking as if Job's wife had told him to curse God and die, and he was wearily complying. "I think I hear the Texark cavalry coming. Blacktooth, do be sensible and run for your life."

"It was only a riderless horse," Blacktooth said. But he cocked his ears and heard something in the distance. He could feel it as much as hear it: a low, indistinct rumbling that might have been faraway

thunder.

"There's nothing to keep them out of the city now," Wooshin said.

"But you, m'Lord—" Blacktooth was confused. "Where will you go?"

If Brownpony heard him he gave no sign. Blacktooth looked at the statue of the Holy Virgin behind the throne of Saint Peter's. She stuck out her tongue. It was black, and forked.

The fever's coming back, Blacktooth thought. He looked around for Specklebird and Ædrea, the companions of his delirium, but they were nowhere to be seen.

Brownpony turned and looked up at the Virgin. His eyes grew bright. "So it's you, after all."

"Huh?" Blacktooth and Wooshin both asked at once.

"Mother, Mother of the night and the mares of night, the dreams."

"M'Lord?" Blacktooth took the Pope's arm.

"Look! Look at her!" Brownpony jerked his arm loose and pointed at the Virgin. The dark spot crawled out of her lower lip.

"A-a w-worm," Blacktooth stuttered.

"The Night Hag! My real Mother!" Brownpony said. "Blacktooth, escape while there's time. Loyalty to me stops here. Obey me: go!"

Blacktooth stepped back. "Why should I start keeping my vows by obeying you now?"

Brownpony laughed weakly, but repeated: "Go. Go be a hermit and teach those who come to you about God. Be yourself. That is His calling to you."

Faintly Blacktooth could hear distant hoofbeats, getting louder.

"Go!"

Wooshin was still hunkered down beside the throne, his narrow eyes closed as if in prayer. Behind the throne the Virgin's face glowed in the flickering candlelight. Blacktooth walked under her, circling slowly toward the still-standing back wall of the cathedral. There was definitely a worm on her lip. Or a tongue that moved. Forked, black. Maybe it was a shadow from a candle. *Ora pro nobis nunc et in hora mortis nostrae!*

There was a door in the back. Halfway there, Blacktooth heard a sharp *hissssss* like an intake of breath. He recognized the sound of Wooshin's sword being drawn from its scabbard. Then he heard the murmur of Latin. To Blacktooth's surprise, this least orthodox of Popes was reciting the creed. In spite of himself, Blacktooth stopped and listened. It began as the creed of Nicaea: "I believe in one God, the almighty Father, maker of the earth and the sky, and of all things seen and unseen, and in one Lord Christ Jesus . . ." but before Brownpony was done, the creed of Athanasius crept in and took over, saying, "and in One Holy Roman Catholic and Apostolic Church outside of which there is neither salvation nor remission of sins—*unam sanctam Ecclesiam Romanum etiam Apostolicam, extra quam neque sa-lus est neque remissio peccatorum*—"

"Now?" It was the voice of the Axe.

Blacktooth paused, afraid to look around, and heard the rustle of silk. There was a faint affirmative grunt as Elia Brownpony, Amen II, fell to his knees at the foot of the throne. The whisper of the sword cutting the air ended in the chunk of flesh and bone, and the thump of the head, and the splashing of gushing fluid on the littered floor.

Blacktooth ran toward the exit as fast as he could. He had almost reached the doorway when Wooshin's quavering voice called after him. "Help me, before you go, please!"

He stopped again, and turned this time. He saw Axe sitting on the floor beside the corpse. Wooshin had taken out his other sword, the short one, and held it pressed against his belly. While he pressed slowly with one hand, with the other he picked up the bloodstained long sword from the floor, and tossed it toward the monk. It fell short, ringing like a bell on the stone floor.

Blacktooth stepped over it, shaking his head. With long steps he strode to the warrior's side. "No!" he said fiercely. "Would you now abandon your master?"

Wooshin looked at the heap of bloody silk beside him, glared up at Blacktooth, and pressed the blade into his belly until the blood came. He groaned and stopped and looked up at Blacktooth again, pleading.

Nimmy picked up the long sword. But instead of lifting it for a strike, he leaned on it as if it were a cane. "Your master's enemy still lives," he said. "Cut open your belly if you want to, Wooshin, but I want to hear you say 'Long live Filpeo Harq!' before I help you die."

Wooshin removed the blade from his flesh, and said something in a strange tongue, clearly a curse. Blacktooth knelt down and looked at the wound. It was bleeding profusely, but it seemed not to have penetrated far, if at all, into the abdominal cavity. He helped the aged warrior to his feet, then knelt down and tore off a piece of the Pope's white silk cassock. He gave it to Axe to hold against his wound.

Wooshin picked up Brownpony's head and placed it next to his body; then he covered both with the jail blanket, perhaps forgetting that it was Blacktooth's.

"Shouldn't we bury him?"

Wooshin shook his head. "This was the way he wanted it. 'Leave me for the Burregan, the Buzzard of Battle.'"

"His bride," said Blacktooth. He looked for the Night Hag, but she was gone. The Virgin was back, with her glowing baby and gentle smile. Looking down at Brownpony, dead under the blanket, a still form, Blacktooth felt strangely unmoved. So much of his life since leaving the abbey had been in service to this worldly man. But who or what was Brownpony in service to? Do any of us know, ultimately, what it is we serve? Blacktooth wondered. Then he felt immediately ashamed. Was he not a brother of the Albertian Order of Saint Leibowitz? Why had he wanted so long to be released from his vows, if the vows meant nothing?

The hoofbeats were closer now, rattling in the square outside the front of the cathedral, then on the low, wide steps. For a moment Blacktooth thought of stepping out into the street and offering himself up for capture. Then would he be given the pills he needed; and perhaps the death.

But no. Wooshin recovered and sheathed his long sword. Blacktooth followed him out the back door of the cathedral. There was nothing more in Saint Peter's to do. The dogs were wandering back into the city, smelling new blood and death. Where was it written? *And the dogs ate Jezebel in the field of Jezrahel . . .*

As he followed Wooshin down the alley toward the river, Blacktooth could hear horses' hooves inside the cathedral of Saint Peter's; then raised voices over the dead body of Amen II.

## CHAPTER 32

They are able now, with no help save from God, to fight single-handed against the vices of the flesh and their own evil thoughts.

—*Saint Benedict's Rule*, Chapter I

IT RAINED THE NEXT DAY, AND THE NEXT. THE sky was close and heavy, not like the bright Empty Sky of the grasslands, and Blacktooth felt bent by it, even more than by the rain, which was little more than a persistent drizzle. He followed Wooshin, and the Axe followed a small train of wagons and livestock headed for the Watchitah Nation. It was an informal attachment but it seemed better than traveling alone. The farmers spoke a degraded form of Grasshopper mixed with Ol'zark larded with old English Churchspeak, a dialect Blacktooth assumed was confined to the environs of New Rome. He had trouble understanding it at first but his talent for languages rescued him, and he was surprised to find a dialect so rich in sources and influences, so poor in subtlety and nuance, though it may have been his understanding that was poor; or perhaps it was the farmers themselves.

There were few women among them. The apparent leader of the train was a spook (Blacktooth suspected) named Pfarfen. He had a daughter, beautiful except for her huge glep ears, and her hands, which she kept mysteriously covered with rags. Pfarfen kept her in the wagon where she sewed and sang all day, and (Blacktooth was alarmed to discover) entertained her father sexually at night, when the wagon was pulled up with the others alongside the muddy road.

The Holy City was far behind them now, still burning, a smudge on the northeast horizon that was

seen only when the low clouds broke. The army that had gone south with Høngan Ösle had been routed, and the thinning stream of refugees heading south was mixed with a thickening stream of refugees heading north, giving the impression at the narrow stretches of highway of a great milling herd heading nowhere. At these points the traffic left the roads for the still-green fields, which were quickly churned into quagmires by wheels and hooves and feet. Though they all spoke versions of Grasshopper, it was not difficult to tell the Nomad warriors from the Hannegan's semi-civilized farmers: many of the refugees heading north were wounded, and most were still armed. A few had even kept their horses, and several times these looked at Blacktooth's clerical garb with an alarming anger.

"Come on, Nimmy," said Axe, whenever Blacktooth showed signs of wanting to ask about the *Qaesach's* campaign. He was in a hurry to reach Hannegan City. Since Blacktooth had refused to act as his *keisaku* and help disembowel him, the wizened old warrior had rediscovered his own purpose. Blacktooth suspected, but didn't want to ask, what it was. Axe had the peculiar ability to go for days without food and never look malnourished. This was not true for Blacktooth, who had a monk's love of dinner; but because he helped with the wagons when they were stuck, he was welcome at the meager dinner and breakfast fires.

The river was only a memory, somewhere to the east. Now there were the bottomland streams, at least two to cross every day, almost too deep to ford. At each crossing there were piles of abandoned, unburied bodies, stacked in grotesque positions as if they were in the process of composing themselves from the earth, rather than the reverse. The refugees walked by them pretending not to notice and commanding their children to look away. But children have always understood war better than adults. Death only mildly interests them; it holds neither the horror nor fascination it has for adults, who can almost hear the wings.

Overhead the sky was black with circling dots.

The faithful Burregun.

The spook-farmers with whom Blacktooth and Axe were traveling were tolerant of Blacktooth's tonsure and habit, even the zucchetto which he carried over his back without wearing. Still, he worried. He remained under the Hannegan's death sentence, as far as he knew. It was the death sentence that had given him Hilbert's pills, which were almost gone. Leaving New Rome with three, he had cut his dose to one a day, taken in the morning with his corn gruel. There were two left the day Blacktooth saw three brother monks, crucified by the side of the road, but whether by the Texark soldiers or by angry Nomads routed from their promised looting of Hannegan City, it was impossible to say. The Burregun had feasted and the bodies were too far gone.

"Come," said Axe, and after a hasty prayer, Blacktooth hurried to catch up with his companions. He wanted to bury the dead but he didn't want to join them yet. Above all, he didn't want to be alone.

The next day he took his next-to-last pill. That afternoon he came across a second group of two clerics, hung from poles by a muddy roadside. It appeared that they had been hung up and then stoned and shot with arrows, a merciful death overall. Their faces looked almost peaceful, as if they had only just entered the doorway into death. Blacktooth studied them for a long time. They looked familiar; it was not their faces, although in truth all men look alike, and looked increasingly alike to his Most Reverend Cardinal Blacktooth St. George, Deacon of Saint Maisie's, in these days in what he was beginning more and more to think of as the twilight of his life (even though it turned out to be a long twilight). They looked to him as monks all looked, hung on the cross of life. This was not their world. There was something almost inspiring in it.

"Come," said Axe.

"Go ahead," said Blacktooth. "I'll catch up." *Feed the hungry, clothe the naked, bury the dead.* He borrowed Wooshin's short sword and used it to bury the two by the side of the road, using stones and sticks to complete the work. When he finished, it was dark. Not wanting to travel alone at night, he slept in a shallow dirt cave by the side of the road, using his mud-stained zucchetto for a pillow.

The next morning he took his last pill, and under the clear sky he was almost overcome by terror. He hurried all day, hoping to catch up with the spook-farmers and the Axe. The few refugees he saw on the road eyed him curiously but left him alone. But he kept remembering the crucified Churchmen, and he

was afraid. He hid the red hat under a bush, and later that day saw a chance to get rid of his habit, trading it for the leggings and tunic of a farmer who had been laid out beside the road, almost tenderly, a corpse not too old. The monk buried him and took his clothes. *Bury the dead, clothe the naked.*

It had been easy to toss the zucchetto, but leaving behind the coarse brown Leibowitzian habit was not so easy. After a few moments of hesitation, Blacktooth rolled it up like a bundle and carried it with him. He felt like a pilgrim, or a booklegger again.

Under a clear sky speckled with buzzards, he pushed on south and west.

Hilbert's fever traveled with him. Blacktooth had no hunger, and after a few days no diarrhea, but no strength either. There were fewer and fewer travelers on the road, and those Blacktooth saw spoke in Ol'zark, or not at all. The stream of refugees had diminished to a trickle. Some had crossed the Great River, counting on the water to protect them from the depredations of Filpeo's soldiers and their Nomad adversaries, still thought of as the Antipope's army. Others had just disappeared into the forests to hide, to die, to wait for neighbor or kin.

Blacktooth never caught up with the wagons. He had lost Brownpony; now he lost Axe. When the road forked west he followed it, putting the morning sun at his back, even though he knew that Wooshin must be heading south for Hannegan City. Blacktooth was hungry for Empty Sky. The fever was like a companion, another consciousness. Often it took on a human form, as when he was crossing a small creek (the creeks got smaller and smaller, the farther west he went) and he saw Specklebird waiting on the far bank. Eagerly, Blacktooth waded across, but when he reached the bank the old black man with the cougar face was gone. Another time he saw Ædrea standing in the doorway of an abandoned hut. The illusion, if it was illusion, was so perfect that he could hear her singing as he climbed the hill toward her. But in the hut he found only an old man, dead, with a crying baby in his arms.

He waited for the baby to die before burying them both together. *Bury the dead.*

It would be dry and hot for days, and then the rain would come, announced by lightning, attended by thunder, falling in sheets and turning the roads to mud. Hilbert's fever was handy, enabling Blacktooth to go for miles without eating. The long feverish days reminded him of his Lenten fast as a novice, when he had been seeking his vocation and thought he had found it among the Albertian book-leggers of Saint Leibowitz. And hadn't he? He missed the abbey and the Brothers, now that he had the freedom he had sought. He had even been released from his vows by the Pope himself; or had he simply been bound in new chains?

*Go, and be a hermit.*

• • •

The day Blacktooth saw Saint Leibowitz and the Wild Horse Woman, he had been traveling all morning over open grasslands between wooded draws. He was worried about outlaws because he had seen several campfires near the road, still smoldering, yet never saw anyone. He considered putting his habit back on, but decided against it. Even those who didn't hate the Church for what it had supposedly done to their world, often thought it was rich, and even a poor monk could be a target for highwaymen.

By midday he had the distinct feeling someone was following him. He looked back every time he crossed a high spot—the road was empty and he saw only buzzards, flyspecks to the south and east. Blacktooth was glad to see that he had crossed that shifting boundary where the forest begins to give way to the grass; but the feeling of being followed wouldn't go away. It became so real that when he crossed the next creek, he hid on the far bank behind the corpse-colored trunk of a fallen sycamore, to watch.

Sure enough, a white mule with red ears came through the trees and down the muddy bank. At first he thought the woman on the beast's back was Ædrea, with the twins she had gotten by him under the waterfall. But it was the *Fujæ Go*, the Day Maiden herself. Far beyond Ædrea in beauty, she carried an infant in each arm, one white and one black, both nursing at her full breasts. Even as she rode the mule down the muddy bank and into the water, they sucked on.

Then she dropped the reins. The mule stopped in the center of the sluggish stream. Its black eyes

were looking straight at Blacktooth; no, *through* him.

He stood up, no longer trying to hide. As he stepped over the log, he realized that what he was seeing was not in his world and not for him to touch. He knew with certainty that if he spoke, she would not hear him, and that even if she looked straight at him, she would not see him. He felt that he had changed places with one of his own fever dreams, and that it was they, and not he, that were real.

That he was the dream.

It was then Saint Leibowitz stepped out of the bushes and took the rope halter. Blacktooth knew him from Brother Fingo's twenty-sixth-century wooden statue in the corridor outside the abbot's office; he recognized the curious smile and dubious eyes. That the Saint was no vision, Blacktooth knew from the faint, sweet fuel-oil smell that hung in the air as he passed. It was Blacktooth who was the dream.

As she rode past, the *Fujæ Go* gazed up toward the sky. Blacktooth hadn't noticed how majestic the little oaks could be, a filigree of branches against a pale sky. One baby was blinding, albino white; the other was as black as Specklebird. Both had their eyes squeezed shut like tiny fists fending off the world. The mule looked straight through Blacktooth, like the Day Maiden. Only Leibowitz, in his burlap robes with his rope over his shoulder, looked directly at the monk as if to say, like Axe, "Come."

Then he winked and walked on.

*Sancte Isaac Eduarde, ora pro me!*

Blacktooth followed; Blacktooth had always followed where Leibowitz had led. But now he was weak and he fell twice climbing the bank. By the time he got to the top, the two (the three? the five?) were far down the narrow trail, almost lost in the dappled shadows. He hurried after them but he was feverish, and even though they were not walking fast, he gradually fell behind. He had to stop again, and he must have fallen asleep, for when he woke it was almost dark and they were impossibly far away, like a speck in the eye, an iota shimmering in the distance.

But something was wrong.

The sun was setting behind his right shoulder. Saint Leibowitz and the Wild Horse Woman were not heading west into the sea of grass, but south, toward Hannegan City. The *Høngin Fujæ Vurn* always chose the victor as her Lord, and the Hannegan had won the war. By choosing a husband, she chooses a King, and she was Filpeo's now. Leibowitz was taking her to him.

Blacktooth wandered on, hoping to find Texark soldiers who would give him pills. The winter was coming; it was the winter of 3246. The Empire and its borders were being redrawn and the few travelers Blacktooth passed were wary. Every few days he buried a corpse as he walked west, no longer a cardinal, no longer even a monk. *Go and be a hermit.*

It no longer rained. The trees thinned out into shadows in the draws, and the road led higher and higher into a world all grass under a dome of sky. Blacktooth's fever had become a small fire that both weakened and sustained him. The morning he left the last of the trees behind, he saw a great bird circling far above. It was a Red Buzzard, the Pope's bird. Ahead by the road something or someone had fallen. Two smaller black buzzards pulled at it, but the meat was not yet ripe enough for their beaks. Nimmy stopped to watch as the Burregun, the Pope's bride (as he thought of it), swooped down. Awed by her size, the smaller buzzards stepped back, black heads bobbing; but she ignored them, and they soon joined her at the attempted feast. The Red Buzzard was stronger and had a little better luck, but still the carcass was too fresh for easy eating.

From where he sat on a hummock of grass, Blacktooth could not tell if the corpse was human. "Feed the hungry, nurse the sick, visit the prisoner," he said aloud, reciting the corporal works of mercy.

*Bury the dead.*

He tossed a rock. The birds stopped and eyed him with funereal solemnity, then strutted and preened and resumed eating. He tossed another rock and they ignored it. He still carried Wooshin's short sword, but he could not summon the resolve to quarrel with the queen of the buzzards.

Then he watched as a bald eagle came, driving them all away, even the Burregun, the Buzzard of

Battle. The bald eagle was Filpeo's National Bird. It nosed at the corpse, then lost interest and left, riding a thermal straight up into the china blue sky.

Blacktooth St. George got to his feet and went to see what it was he had been left to bury. He hoped it was not another child.

## CHAPTER 33

Let all things be done with moderation, however, for the sake of the faint-hearted.

—*Saint Benedict's Rule*, Chapter 48

IT WAS A GOOD YEAR FOR THE BUZZARDS. THEY followed Blacktooth all the way back to the Abbey of Saint Leibowitz, little dots like eyespecks against the expanse of Empty Sky. Blacktooth gave up on finding Hilbert's pills, and the disease gradually gave up on him, burning down to embers. If he had a fever it was the same fever that had plagued him all his life, the burning that Amen and Brownpony had noticed, each from his own particular perspective.

There was no longer a safe route across the grasslands. One could no longer evade the Empire by traveling north of the Nady Ann, or avoid the hordes by traveling to the south. Both groups had interpenetrated, and the contended territories on both sides of the Nady Ann were passable, and yet uncertain. South of the Brave, the Kingdom of Laredo had collapsed in on itself.

The grass itself seemed to be shrinking back into the earth.

There were stretches of sand and dust that took half a day to cross. The Empty Sky seemed even more of an emptiness than before. Blacktooth wore his habit again, and said his rosary as he walked. But had he eaten? And where had he found water? The few people he saw were on horses, on the horizons.

One day there was rain. But it was a swift dry rain, the kind that comes to the high plains and barely reaches the ground, darkening the dust and throwing it up in great splotches, and then evaporating suddenly in the flashes of sun that showed, like slow lightning, after the clouds had ridden away on their long ponies.

Empty Sky.

There was no road, and then no trail. Blacktooth followed the setting sun. Wagon tracks braided across the dry rivercourses, running in every direction. The few people Blacktooth met were peaceful and shared their food; the bodies he found he buried, using the short sword he had borrowed from the Axe.

He walked alone most of the time, accompanied only by his shadow striding before him in the morning, and falling behind by evening. Only at noon, in the heat, would it desert him altogether. Reduced to its essentials, sky and earth, the world seemed more intricate and complex than ever.

Blacktooth missed the little glep cougar with its blue ears. He wondered what had become of Aberlott, who had so loved the little brass cartridges of war. Had he become one of the motherless ones? Or found his final home under the prairie soil?

Other such thoughts came, one with each step . . . arriving and departing without speaking, like birds. At other times Blacktooth walked with an empty mind, a gift, like Empty Sky, in which each step was a prayer.

It was a good year for the buzzards. Blacktooth could tell by how easily they were chased away. There were always other feasts waiting, just over the next hill.

Dom Abiquiu Olshuen had died after another stroke, and Prior Devendy was taking his place until a new abbot could be elected according to the time-honored Benedictine rule. Once he had arrived, Blacktooth had little desire to stay at the monastery, even though most of his good memories (as well as many of his bad ones) were set amid those ancient adobe walls. The stories of Ædrea's stay as Sister Clare had become almost legend, and Blacktooth heard several versions. They were linked with the

apparition some of the Brothers claimed to have seen of the Holy Virgin in the eastern sky.

"That's the Night Hag," said Blacktooth. "She means war and death, not peace and hope." He could tell by the way Brother Wren and the others crossed themselves that they didn't want to hear it— even though they were preparing for war in their own way. They had sealed the holy relics in their original chamber and dusted off the Jackrabbit smuggler's cannon. Brother Carpenter was in the basement, planing boards for a heavier door. The defeat of Brownpony's plans for a new order signaled the beginning of a new age of darkness. Somehow Blacktooth no longer feared it, or even thought about it. Blood and screams were the water in which humankind swam.

Four children had been brought in from the village. Two of them had already died. It seemed there were new diseases abroad in the desert.

After visiting Jarad's grave, Blacktooth stood looking into the empty one that was always kept waiting. The straw around the open maw was hardly necessary, as there had been even less rain this year than usual, Prior Devendy explained. The grave was so deep that it seemed to Blacktooth that he could see all the way to the bottom of, of ...

He swayed and almost fell. "Gerard's affliction," the Brothers called it after the beloved fainting monk of almost a thousand years ago.

"You seem a little woozy," said Prior Devendy. "Come."

He led Blacktooth through the crowded dayroom of the monastery, under the old familiar *vigas*, into Olshuen's office. Using a key that hung from a cord around his neck, Devendy opened a drawer, and took from it another key, with which he opened a cabinet of dusty bottles. He poured a glass of brandy. Blacktooth almost waved it away until he saw that Devendy was pouring one for himself as well.

"Oregon," he said. "It was left here as a gift for Brownpony when he became Pope Amen Two. He took the papacy to New Jerusalem and never drank it."

"And now he is dead," Blacktooth said. He had told no one about the scene in the basilica of Saint Peter's—only that the Pope was dead.

"He made you a cardinal," said Devendy. "Where is your hat?"

"My zucchetto. I put all that behind me. I suspect whoever is made Pope will undo all Brownpony's cardinals anyway."

"You don't need to be a cardinal here," said Devendy. He smiled tentatively. "Only a priest."

"Only a what?" Blacktooth looked at the old priest warily.

"The Brothers want to elect you Abbot. For that you will have to be ordained."

"That's not possible," said Blacktooth. "*Non accepto.*"

"My thoughts exactly," said Devendy, looking relieved. "But I promised I would ask."

"I have no vocation for it," said Blacktooth. "I was given my vocation by Pope Amen Two. I will stay a couple of nights and then go."

"To the Mesa of Last Resort?"

"I thought I might go that way."

"That's where she went," said Prior Devendy. "She was, uh, injured, you know, and she stayed with the old Jew after she left here. But I'm sure she must be gone."

Blacktooth looked out the window toward the Mesa. It shimmered in the distance like a mirage of rock.

"Is the old Jew still there?"

The old Jew was still there. Blacktooth left the abbey the next morning with the gifts of a blanket and breviary, a canteen and a loaf of bread. He was greeted with a rattle of stones halfway up the trail that led to the top of the Mesa. He ignored them; they were only pebbles. He wedged himself up through the last crack onto the top, and there was Benjamin Eleazar bar Joshua, looking no older than he had looked ten years before, or a hundred years before that for all Blacktooth knew.

"You," said the old man. "I suspected it might be you."

"Brownpony is dead," Blacktooth said.

"He was not the one" was all old Benjamin had replied. He told Blacktooth that Ædrea had stayed with him several months, until her sores had healed, and then had left without revealing her plans.

Had he found her much changed?

"Changed?" The old Jew only smiled and shook his head, apparently misunderstanding. "It never was any better, it never will be any better. It will only be richer or poorer, sadder but not wiser, until the very last day."

Irritated, weary of oracles and parables, Blacktooth wrapped himself in his blanket and went straight to sleep. He stayed with Benjamin two nights, sleeping in the tent where Ædrea had slept. The old tent-maker himself never stayed in a tent if he could help it. Blacktooth was awakened by rain on the tent every night, a few great splattering drops. Or was that a dream sent to advertise his tentmaking and rain-making skills? There was dry lightning off to the east each night: the Horse Woman, admonishing her children on the Plains.

He left on the third day. The old Jew filled his canteen from a pool hidden under a rock. The water was cold and clear, and Blacktooth was surprised to find that it lasted him all the way to New Jerusalem.

"Even if she had come," Prior Singing Cow told Blacktooth at Saint Leibowitz-in-the-Cottonwoods, "I would have turned her away. You heard what had happened to her."

"Yes."

Blacktooth had followed the papal road north, then cut off at Arch Hollow, into the Suckamints. The settlement at New Jerusalem was much diminished. Magister Dion had not made it back from the "Antipope's war" (as even the spooks were calling it), and no one knew of Shard's Ædrea, except that she had left for Laredo under interdiction. No one believed Blacktooth when he told them that the interdiction had been lifted by the Pope who was not a pope, at New Rome which was no longer New Rome.

Nor was she to be found in Valana.

But Aberlott was, working as a secular scribe in the square of Saint John's, under the walls of the Great Hall of Saint Ston's and next door to the old Papal Palace where Amen had delivered his now-legendary seventeen-hour acceptance speech. The air of Valana was rich with the familiar urban smells of horse dung, food, and smoke. The streets were bustling; after the Crusade's defeat, many of the Nomads had come to settle in the narrow strip of farmland watered by the mountains. They bought and sold horses and cattle, changing their ways to suit their world's changing ways.

"I got tired of being a soldier," Aberlott said. "Did you tire of being a cardinal, Your Excellency?"

"I'm not a cardinal anymore," Blacktooth said, finding his old companion's sarcasm as tiresome as ever. Aberlott had a long scar under one eye, which he said he had "earned" outside the gates of Hannegan City when the Texark troops had outflanked and ambushed Høngan Ösle's warriors. It went well with his missing ear.

"I almost bled to death," Aberlott said. "I ended up in Hannegan City. Once the fighting was over, the Empire just folded us in, like raisins into a cake. Many of the *Qoesach dri Vørdar's* Nomads are now part of the Emperor's guard. I wandered around for a few weeks, then got a spot as secretary to a N'Ork Churchman who arrived for the conclave, and couldn't speak Ol'zark."

"Conclave?"

"Oh, yes," Aberlott said. "Sorely Nauwhat called a conclave and had himself made Pope, or perhaps we might say Filpeo had him made Pope. Urion Benefez was bitter; still is, I imagine. Without Brownpony to resist and stall and prevaricate, the bishops and archbishops drifted in, and Sorely nullified all the nullifications of the Amen Two, and then Wooshin nullified Filpeo."

"The Axe."

"Indeed," said Aberlott. "Stopped his carriage in the street. Sliced off his head when Filpeo stuck it out the window to see what was going on. The Hannegan's guard showered your yellow man with bullets but he welcomed them, he bared his throat and chest and belly to them. I saw it."

When Blacktooth closed his eyes he could see Wooshin's disapproving narrow eyes. "I would be dead now if it were not for him."

"Wouldn't we both? Anyway, you are no longer a cardinal. The papacy has been removed to Hannegan City, which is ruled by Benefez, as regent for several of Filpeo's sons, who will settle it among themselves, in typically bloody fashion, I imagine, when they come of age. In the meanwhile, a rough peace reigns."

Aberlott had married Anala, the sister of Jæsis, bringing her and two small children to Valana from New Jerusalem. He offered Blacktooth a place to stay, but the house was small and Blacktooth discovered he had no taste for domestic life. "I have been a monk too long," he told Aberlott, bidding him farewell and heading out toward the south.

It was a very good year for the buzzards. The younger generation waxed strong, soared high and far on black wings, waiting for the fruitful earth to yield up her bountiful carrion. One night, Blacktooth awakened in a cold sweat and thought that his fever was back. Then he looked north and saw the sky filled with *Nunshân*, the Night Hag, huge and ugly. He could see stars through her upraised arms. "Who is dying?" he asked aloud; he found out later it was his old friend Chür Ösle Høngan. Brownpony's plan had been a disaster for the Nomads. After the defeat, the Three Hordes had turned their backs on one another. The Treaty of the Sacred Mare no longer held, and the Plains were littered with bodies thrown down by drought, by famine, and by the motherless ones.

Blacktooth traveled south across the Nady Ann, the Bay Ghost, and at last the Brave. No longer a cardinal, he expected to be turned away at Mother Iridia's convent of San Pancho Villa of Cockroach Mountain, but she welcomed him almost as an old friend. She had no news, though, of Sister Clare-of-Assisi. She suspected Ædrea was somewhere with her own people.

"Her own people?" Blacktooth protested. "I was at New Jerusalem, and they knew nothing of her."

"The gleps," said Mother Iridia. "The spooks. The Valley of the Misborn."

The Jackrabbit country had always been harsh, but after two dry summers it had become even harsher. The wet years were over. Sand was taking the grass. Hannegan City was prospering, though. The Empire had turned east, and was looking toward the woodlands and the growing commerce up the Red from the Great River.

Blacktooth worked several days in the marketplace as a scribe before he was summoned to a papal audience. The summoner surprised him even more than the summons, for it was Torrildo, wearing a curate's gown, complete with feather.

"I told His Excellency you were here," the still handsome young man told Blacktooth. "You should be more careful; you are still under interdiction."

"I don't see why. If he took away my cardinalship, why couldn't he take away my interdiction?"

"It's Benefez," Torrildo said. "He thinks you had a hand in killing Filpeo."

I did, thought Blacktooth.

"He probably thanks you for it," said Torrildo. "But he doesn't particularly want you *around*."

Sorely Nauwhat was most respectful and even curious to hear of Blacktooth's adventures. He was especially interested in the situation on the Plains, but he knew more than Blacktooth. The apparition of the Night Hag had been seen all over the High Plains. The Weejus women were not pleased. When the *Qæsach dri Vørdar* returned from the South, he was called before them and put to death. After the funeral feast his bones were buried in three widely separated locations, decided by each of the three hordes.

"Why is he telling me this?" Blacktooth wondered as the plump, grave Pope rattled on, seemingly unconcerned about the time. *He is burying Brownpony's dreams.* Filpeo's were buried next: the Pope, who had been in the Emperor's carriage, described in gruesome detail how Wooshin had done his work. Filpeo's guard were equipped with the first copies of the repeaters, and several misfired. Axe had removed the head of the seventh Hannegan in a single stroke, then laid down his sword and knelt to receive the bullets chasing into his chest like bees into a hive.

*Dominus ex deo.*

The audience lasted all afternoon, and was exhausting. After the lengthy and bloody assassination,

Pope Sorely described the imperial situation in great detail. The repeating weapons were decisive. With them, Texarkana at last controlled the Plains. The old way of life was dying, and those who could not see the end coming could hear it keening in the wind. Even the grass was going. Crescent-shaped hills of sand marched slowly from west to east. The Empire that had secured its western frontiers now looked more and more to the east. New Rome smoldered for years but was never rebuilt. . . .

"My son—"

Blacktooth had fallen asleep. The Pope didn't seem insulted. When he left the log Papal Palace, Blacktooth was given a small sack of gold coins at the door. Pay for listening, he thought; and then on reflection realized it was travel money. He was to make himself scarce.

That had been his intention all along. Hannegan City, like Valana, was in turmoil. The streets were crowded with horses and men. The army was being decommissioned, new legates were piling out for the west, and the Grasshopper lands to the north were being opened up to the motherless ones and also to those among the Hannegan's former enemies who wanted to celebrate the new peace by raising cattle and grass.

Leaving was easy. Blacktooth was weary of cities and old friends and enemies. He was weary of mankind, so using the Pope's money he bought himself an ass, or to be precise, a mule, and headed north along the ragged edge where the forest meets the plains.

Grass. It stretched unbroken to one horizon, and meandered among the low, dark trees on the other. The little mountains called Winding Stare were lit with fires, whether of celebration or mourning, Blacktooth couldn't tell.

He rode unchallenged past the first log outposts of the gleps. He hoped the Valley of the Misborn would take him in, and it did. The Valley, or the Watchitah Nation as it was now called, had grown to be a network of valleys, up and down the low mountains called the Old Zarks. Blacktooth wandered until he found a little community of bookleggers and memorizers, called Post Cedar. He traded his mule for a g'tara much like the one his father had given him, and lived on the mountainside above the abbey, swapping his services as a scribe and a tutor for food.

He found shelter in a rockhouse cave, very like the cave where Amen had lived, except that these eastern caves were broad and open, like a mouth. They provide protection against the rain, and some against the cold; but none against the years.

And so, Blacktooth St. George grew old, reciting the Divine Office and meditating on *The Rule of Saint Leibowitz*, which enjoined him to the humility he was surprised to discover had been waiting for him all along. It was a sister to the deep loneliness he treasured, a loneliness he no longer wished filled. It was an emptiness as tangible as love. Some nights, though, he found himself praying to whatever might answer such a prayer that Ædrea would come to him. He had heard that a blond spook who wore a nun's robe practiced medicine in the next valley. The local priest called her a witch; sometimes she healed minds the priest had cursed, and because of this, the priest feared her.

Blacktooth needed his mind healed, but that was not what he feared in her. He feared the gateway beneath the clitoris, torn open by the black god and the white god he had seen riding with the Day Maiden on her rubriauricular white mule. Or had the old Jew done that to her? It was just over the hill waiting for him, the world gateway of the Lord Jesus and of all the saints, and he was a coward. Sometimes he stroked himself into a moment's ecstasy thinking about it, and he did not hide his shame from the Holy Mother Day Maiden *Fujæ Go* who watched him from the corner of the hut of his mind. Neither did he mention it in his annual confession to the Leibowitzian priest who visited him every Maundy Thursday. The priest always wanted to wash Nimmy's feet on behalf of the abbot on that occasion, but the hermit refused.

"You won't acknowledge your poverty? Isn't that your pride?"

Blacktooth signed and let the man wash his feet and give him communion.

He had given up Jesus several times, as Amen Specklebird had advised, when the Savior became an occasion of sin for him: but he always came back, and so, it seemed to him, did the Savior. *Well, how have you been doing lately, Lord?*

For three hours every weekday, he taught thirteen children of various ages how to read and write their own dialect; he also taught them a little music, and taught them—sometimes to their parents' disbelief—a few things about the geography of the continent, and as much as he knew about the history of the world and the fall of the *Magna Civitas*. Some of the children believed him, and others believed their parents; but the laughing parents brought him food in payment for their urchins' literacy, and they mended his clothes, furnished him blankets, and occasionally brought him a hemina of wine for his weakness.

When he was alone, he opened himself. Sometimes the ecstasy of God came through the opening, but more often it did not. He decided to stop leaving an opening for God. That was what Meister Eckhart advised: to be so poor that he had no place for God to come into. When God had no place to come into, He was in every place. There was nothing else.

But Blacktooth did not consider himself a religious man. He did not know if God was the Father, or the maker of Heaven and Earth, and of all things visible and invisible. He couldn't see that it mattered, since God Himself, when He became manifest as a whirlwind bush, never bothered to tell him; never said, "Blacktooth, I am your Almighty Father, and I made this Earth you're kneeling on and the sky you are kneeling under."

## CHAPTER 34

Let those who receive new clothes always give back the old ones at once, to be put away in the wardrobe for the poor.

—*Saint Benedict's Rule*, Chapter 55

UST OVER THE MOUNTAIN FROM POST CEDAR was a convent, where there lived a nun known as Sister Clare. She awakened one morning with one of her "feelings," and knew that the hermit who lived in the next valley was dead. She had known of him for years but had elected to leave him in peace, knowing the difficulty of the journey he was on. No one told her he was dead; no one besides herself knew it yet, and she only knew because of the feeling, not unlike joy and yet not unlike sorrow either, that wouldn't leave her. She welcomed the feeling. The hermit had few enough left in this world to miss him.

With the abbess's permission, Sister Clare packed a loaf of bread, a little cheese, and then, as an afterthought, a freshly dead mouse from the trap in the kitchen. She walked over the steep and little-used trail to Post Cedar. On the far side of the valley, across from the monastery, she found the narrow path to the dry cave, just where she knew it would be.

The old man hadn't been dead long. It was not his death but his age that filled Sister Clare's eyes with tears. She had expected somehow to find a handsome young man, even though she was herself an old woman, bent and spotted with years.

Blacktooth was sitting against a stone with the head of a small cougar in his lap. The animal lifted its blue head when she approached. It was Librada. Ædrea waited but the cougar wouldn't leave, and finally had to be coaxed away with the mouse so that she could bury Blacktooth and place at the head of his grave the little cross she had carried with her all these years.

The rosary that was clutched in his hand, and the crude g'tara he had left leaning against the back wall of the cave, she took with her.

## ABOUT THE AUTHOR

Walter M. Miller, Jr., grew up in the American South and enlisted in the Army Air Corps a month after Pearl Harbor. He spent most of World War II as a radio operator and tail gunner, participating in more than fifty-five combat sorties, among them the controversial destruction of the Benedictine abbey at

Monte Cassino, the oldest monastery in the Western world. Fifteen years later he wrote *A Canticle for Leibowitz*. The sequel, *Saint Leibowitz and the Wild Horse Woman*, followed after nearly forty years.

(From the Dust Jacket)

It has been nearly forty years since Walter M. Miller, Jr., shocked and dazzled readers with his provocative bestseller and enduring classic, *A Canticle for Leibowitz*. Now, in one of the most eagerly awaited publishing events of our time, here is Miller's masterpiece, an epic intellectual and emotional tour de force that will stand beside 1984, *Brave New World*, and *A Canticle for Leibowitz*.

## SAINT LEIBOWITZ AND THE WILD HORSE WOMAN

In a world struggling to transcend a terrifying legacy of darkness—a world torn between love and violence, good and evil—one man undertakes an odyssey of adventure and discovery that promises to alter not only his destiny but the destiny of humankind as well...

Millennia have passed since the Flame Deluge, yet society remains fragmented, pockets of civilization besieged by barbarians. The Church is in turmoil, the exiled papacy struggling to survive in its Rocky Mountain refuge. To the south, tyranny is on the march. Imperial Texark troops, bent on conquest, are headed north into the lands of the nomads, spreading terror in their wake.

Meanwhile, isolated in Leibowitz Abbey, Brother Blacktooth St. George suffers a crisis of faith. Torn between his vows and his Nomad upbringing, between the Holy Virgin and visions of the Wild Horse Woman of his people, he stands at the brink of disgrace and expulsion from his order. But he is offered an escape—of sorts: a new assignment as a translator for Cardinal Brownpony, which will take him to the contentious election of a new pope and then on a pilgrimage to the city of New Rome. Journeying across a continent divided by nature, politics, and war, Blacktooth is drawn into Brownpony's intrigues and conspiracies. He bears witness to rebellion, assassination, and human sacrifice. And he is introduced to the sins that monastery life has long held at bay.

This introduction comes in the form of Ædrea, a beautiful but forbidden "genny" living among the deformed and mutant castouts in Texark's most hostile terrain. As Blacktooth encounters her again and again on his travels—in the flesh, in rumors of miraculous deeds, and in the delirium of fever—he begins to wonder if Ædrea is a she-devil, the Holy Mother, or the Wild Horse Woman herself.

Picaresque and passionate, magnificent, dark, and compellingly real, *Saint Leibowitz and the Wild Horse Woman* is a brutal, brilliant, thrilling tale of mystery, mysticism, and divine madness, a classic that will long endure in every reader's memory.

**Short Fiction**

In alphabetical order, here are the shorter works.

## Anybody Else Like Me?

QUIET MISERY IN a darkened room. The clock spoke nine times with a cold brass voice. She stood motionless, leaning against the drapes by the window, alone. The night was black, the house empty and silent.

*"Come, Lisa!"* she told herself. *"You're not dying!"*

She was thirty-four, still lovely, with a slender white body and a short, rich thatch of warm red hair. She had a good dependable husband, three children, and security. She had friends, hobbies, social activities. She painted mediocre pictures for her own amusement, played the piano rather well, and wrote fair poetry for the University's literary quarterly. She was well-read, well-rounded, well-informed. She loved and was loved.

Then why this quiet misery?

Wanting something, expecting nothing, she stared out into the darkness of the stone-walled garden. The night was too quiet. A distant street lamp played in the branches of the elm, and the elm threw its shadow across another wing of the house. She watched the shadow's wandering for a time. A lone car purred past in the street and was gone. A horn sounded raucously in the distance.

What was wrong? A thousand times since childhood she had felt this uneasy stirring, this crawling of the mind that called out for some unfound expression. It had been particularly strong in recent weeks.

She tried to analyze. What was different about recent weeks? Events: Frank's job had sent him on the road for a month; the children were at Mother's; the city council had recommended a bond issue; she had fired her maid; a drunk had strangled his wife; the University had opened its new psycho-physics lab; her art class had adjourned for the summer.

Nothing there. No clue to the unreasoning, goalless urge that called like a voice crying in mental wilderness: *"Come, share, satisfy, express it to the fullest!"*

Express what? Satisfy what? How?

A baby, deserted at birth and dying of starvation, would feel terrible hunger. But if it had never tasted milk, it could not know the meaning of the hunger nor how to ease it.

*"I need to relate this thing to something else, to something in my own experience or in the experience of others."* She had tried to satisfy the urge with the goals of other hungers: her children, her husband's lovemaking, food, drink, art, friendship. But the craving was something else, crying for its pound of unknown flesh, and there was no fulfillment.

*"How am I different from others?"* she asked herself. But she was different only in the normal ways that every human being is different from the exact Average. Her intelligence was high, short of genius, but superior. To a limited extent, she felt the call of creativity. Physically, she was delicately beautiful. The only peculiarities that she knew about seemed ridiculously irrelevant: a dark birth-mark on her thigh, a soft fontanel in the top of her long narrow head, like the soft spot in an infant's cranium. Silly little differences!

One big difference: the quiet misery of the unfed hunger.

A scattering of big raindrops suddenly whispered on the walk and in the grass and through the foliage of the elm. A few drops splattered on the screen, spraying her face and arms with faint points of coolness. It had been oppressively hot. Now there was a chill breath in the night.

Reluctantly she closed the window. The oppression of the warm and empty house increased. She walked to the door opening into the walled garden.

Ready for a lonely bed, she was wearing a negligee over nothing. Vaguely, idly, her hand fumbled at the waist-knot, loosened it. The robe parted, and the fine spray of rain was delightfully cool on her skin.

The garden was dark, the shadows inky, the nearest neighbor a block away. The wall screened it

from prying eyes. She brushed her hands over her shoulders; the sleeves slipped down her arms. Peeled clean, feeling like a freed animal, she pressed open the screen and stepped out under the eaves to stand on the warm stone walk.

The rain was rattling in the hedge and roaring softly all about her, splashing coldness about her slender calves. She hugged herself and stepped into it. The drench of icy fingers stroked her with pleasant lashes; she laughed and ran along the walk toward the elm. The drops stung her breasts, rivered her face, and coursed coldly down her sides and legs.

She exulted in the rain, tried to dance and laughed at herself. She ran. Then, tired, she threw herself down on the crisp wet lawn, stretching her arms and legs and roll-ing slowly on the grass. Eyes closed, drenched and languorous, she laughed softly and played imagining games with the rain.

The drops were steel-jacketed wasps, zipping down out of the blackness, but she melted them with her mind, made them soft and cool and caressing. The drops took impersonal liberties with her body, and she rolled de-murely to lie face down in the rainsoft grass.

*"I am still a pale beast," she thought happily, "still kin of my grandmother the ape who danced in the tree and chattered when it rained. How utterly barren life would be, if I were not a pale beast!"*

She dug her fingers into the sodden turf, bared her teeth, pressed her forehead against the ground, and growled a little animal growl. It amused her, and she laughed again. Crouching, she came up on her hands and knees, hunching low, teeth still bared. Like a cat, she hissed—and pounced upon a sleeping bird, caught it and shook it to death.

Again she lay laughing in the grass.

*"If Frank were to see me like this," she thought, "he would put me to bed with a couple of sleeping pills, and call that smug Dr. Mensley to have a look at my mind. And Dr. Mensley would check my ambivalences and my repressions and my narcissistic, voyeuristic, masochistic impulses. He would tighten my screws and readjust me to reality, fit me into a comfortable groove, and take the pale beast out of me to make me a talking doll."*

He had done it several times before. Thinking of Dr. Mensley, Lisa searched her vocabulary for the most savage word she could remember. She growled it aloud and felt better.

The rain was slowly subsiding. A siren was wailing in the distance. The police. She giggled and imagined a headline in tomorrow's paper: PROMINENT SOCIALITE JAILED FOR INDECENT EXPOSURE. And the story would go on: "Mrs. Lisa Waverly was taken into custody by the police after neighbors reported that she was running around stark naked in her back yard. Said Mrs. Heinehoffer who called the law: 'It was just terrible. Looked lo me like she was having fits.' Mr. Heinehoffer, when asked for comment, simply closed his eyes and smiled ecstatically."

Lisa sighed wearily. The siren had gone away. The rain had stopped, except for drippings out of the elm. She was tired, emotionally spent, yet strangely melan-choly. She sat up slowly in the grass and hugged her shins.

The feeling came over her gradually.

*"Someone has been watching me!"*

She stiffened slowly, but remained in place, letting her eyes probe about her in the shadows. If only the drippings would stop so she could listen! She peered along the hedge, and along the shadows by the garden wall, toward the dark windows of the house, up toward the low-hanging mist faintly illuminated from below by street lights. She saw nothing, heard nothing. There was no movement in the night. Yet the feeling lingered, even though she scoffed.

*"If anyone is here," she thought, "I'll call them gently, and if anyone appears, I'll scream so loud that Mrs. Heine-hoffer will hear me."*

"Hey!" she said in a low voice, but loud enough to pene-trate any of the nearby shadows.

There was no answer. She folded her arms behind her head and spoke again, quietly, sensually.

*"Come and get me."*

No black monster slithered from behind the hedge to devour her. No panther sprang from the elm. No succubus congealed out of wet darkness. She giggled.

"Come have a bite."

No bull-ape came to crush her in ravenous jaws.

She had only imagined the eyes upon her. She stretched lazily and picked herself up, pausing to brush off the leaves of grass pasted to her wet skin. It was over, the strange worship in the rain, and she was weary. She walked slowly toward the house.

Then she heard it—a faint crackling sound, intermittent, distant. She stood poised in the black shadow of the house, listening. The crackle of paper . . . then a small pop . . . then crisp fragments dropped in the street. It was repeated at short intervals.

Taking nervous, shallow breaths, she tiptoed quietly toward the stone wall of the garden. It was six feet high, but there was a concrete bench under the trellis. The sound was coming from over the wall. She stood crouch-ing on the bench; then, hiding her face behind the vines, she lifted her head to peer.

The street lamp was half a block away, but she could see dimly. A man was standing across the street in the shadows, apparently waiting for a bus. He was eating peanuts out of a paper bag, tossing the shells in the street. That explained the crackling sound.

She glared at him balefully from behind the trellis. *"I'll claw your eyes out,"* she thought, *"if you came and peeped over my wall."*

"Hi!" the man said.

Lisa stiffened and remained motionless. It was impos-sible that he could see her. She was in shadow, against a dark background. Had he heard her foolish babbling a moment ago?

More likely, he had only cleared his throat.

"Hi!" he said again.

Her face was hidden in the dripping vines, and she could not move without rustling. She froze in place, star-ing. She could see little of him. Dark raincoat, dark hat, slender shadow. Was he looking toward her? She was desperately frightened.

Suddenly the man chucked the paper hag in the gutter, stepped off the curb, and came sauntering across the street toward the wall. He removed his hat, and crisp blond hair glinted in the distant streetlight. He stopped three yards away, smiling uncertainly at the vines.

Lisa stood trembling and frozen, staring at him in horror. Strange sensations, utterly alien, passed over her in waves. There was no describing them, no understanding them.

"I—I found you," he stammered sheepishly. "Do you know what it is?"

*"I know you,"* she thought. *"You have a small scar on the back of your neck, and a mole between your toes. Your eyes are blue, and you have an impacted wisdom tooth, and your feet are hurting you because you walked all the way out here from the University, and I'm almost old enough to be your mother. But I can't know you, because I've never seen you before!"*

"Strange, isn't it?" he said uncertainly. He was holding his hat in his hand and cocking his head politely.

"What?" she whispered.

He shuffled his feet and stared at them. "It must be some sort of palpable biophysical energy form, analyti-cally definable—if we had enough data. Lord knows, I'm no mystic. If it exists, it's got to be mathematically definable. But why us?"

Horried curiosity made her step aside and lean her arms on the wall to stare down at him. He looked up bashfully, and his eyes widened slightly.

"Oh!"

"Oh what?" she demanded, putting on a terrible frown.

"You're beautiful!"

"What do you want?" she asked icily. "Go away!"

"I—" He paused and closed his mouth slowly. He stared at her with narrowed eyes, and touched one hand to his temple as if concentrating.

For an instant, she was no longer herself. She was looking up at her own shadowy face from down in

the street, looking through the eyes of a stranger who was not a stranger. She was feeling the fatigue in the weary ankles, and the nasal ache of a slight head cold, and the strange sadness in a curious heart—a sadness too akin to her own.

She rocked dizzily. It was like being in two places at once, like wearing someone else's body for a moment.

The feeling passed. "*It didn't happen!*" she told herself.

"No use denying it," he said quietly. "I tried to make it go away, too, but apparently we've got something unique. It would be interesting to study. Do you suppose we're related?"

"Who are you?" she choked, only half-hearing his ques-tion.

"You know my name," he said, "if you'll just take the trouble to think about it. Yours is Lisa—Lisa O'Brien, or Lisa Waverly—I'm never sure which. Sometimes it comes to me one way, sometimes the other."

She swallowed hard. Her maiden name had been O'Brien.

"I don't know you," she snapped.

His name was trying to form in her mind. She refused to allow it. The young man sighed.

"I'm Kenneth Grearly, if you really don't know." He stepped back a pace and lifted his hat toward his head. "I—I guess I better go. I see this disturbs you. I had hoped we could talk about it, but—well, good night, Mrs. Waverly."

He turned and started away.

"Wait!" she called out against her will. He stopped again. "Yes?"

"Were—were you watching me—while it was raining?"

He opened his mouth and stared thoughtfully down the street toward the light. "You mean watching visually? You really are repressing this thing, aren't you? I thought you understood." He looked at her sharply, forlornly. "They say the failure to communicate is the basis of all tragedy. Do you suppose in our case ... ?"

"What?"

"Nothing." He shifted restlessly for a moment. "Good night."

"Good night," she whispered many seconds after he was gone.

Her bedroom was hot and lonely, and she tossed in growing restlessness. If only Frank were home! But he would be gone for two more weeks. The children would be back on Monday, but that was three whole days away. Crazy! It was just stark raving crazy!

Had the man really existed—what was his name?—Ken-neth Grearly? Or was he only a phantasm invented by a mind that was failing—her mind? Dancing naked in the rain! Calling out to shadow shapes in the brush! Talking to a specter in the street! Schizophrenic syndrome- dream-world stuff. It could not be otherwise, for unless she had invented Kenneth Grearly, how could she know he had sore feet, an impacted wisdom tooth, and a head cold. Not only did she know about those things, but she felt them!

She buried her face in the dusty pillow and sobbed. Tomorrow she would have to call Dr. Mensley.

But fearing the specter's return, she arose a few min-utes later and locked all the doors in the house. When she returned to bed, she tried to pray but it was as if the prayer were being watched. Someone was listening, eavesdropping from outside.

Kenneth Grearly appeared in her dreams, stood half-shrouded in a slowly swirling fog. He stared at her with his head cocked aside, smiling slightly, holding his hat respectfully in his hands.

"Don't you realize, Mrs. Waverly, that we are mutants perhaps?" he asked politely.

"No!" she screamed. "I'm happily married and I have three children and a place in society! Don't come near me!"

He melted slowly into the fog. But echoes came monot-onously from invisible cliffs: *mutant mutant mutant mutant mutant ...*

Dawn came, splashing pink paint across the eastern sky. The light woke her to a dry and empty consciousness, to a headachy awareness full of dull anxiety. She arose wearily and trudged to the kitchen for a pot of coffee.

Lord! Couldn't it all be only a bad dream?

In the cold light of early morning, the things of the past night looked somehow detached, unreal. She tried to ana-lyze objectively.

That sense of sharing a mind, a consciousness, with the stranger who came out of the shadows—what crazy thing had he called it?—"some sort of palpable biophysical energyform, analytically definable."

"If I invented the stranger," she thought, "I must have also invented the words."

But where had she heard such words before?

Lisa went to the telephone and thumbed through the directory. No Grearly was listed. If he existed at all, he probably lived in a rooming house. The University—last night she had thought that he had something to do with the University. She lifted the phone and dialed.

"University Station; number please," the operator said.

"I—uh—don't know the extension number. Could you tell me if there is a Kenneth Grearly connected with the school?"

"Student or faculty, Madam?"

"I don't know."

"Give me your number, please, and I'll call you back." "Lawrence 4750. Thanks, Operator."

She sat down to wait. Almost immediately it rang again. "Hello?"

"Mrs. Waverly, you were calling me?" A man's voice. His voice!

"The operator found you rather quickly." It was the only thing she could think of saying.

"No, no. I knew you were calling. In fact, I hoped you into it."

"Hoped me? Now look here, Mr. Grearly, I—"

"You were trying to explain our phenomenon in terms of insanity rather than telepathy. I didn't want you to do that, and so I hoped you into calling me."

Lisa was coldly speechless.

"What phenomenon are you talking about?" she asked after a few dazed seconds.

"Still repressing it? Listen, I can share your mind any time I want to, now that I understand where and who you are. You might as well face the fact. And it can work both ways, if you let it. Up to now, you've been—well, keeping your mind's eye closed, so to speak."

Her scalp was crawling. The whole thing had become intensely disgusting to her.

"I don't know what you're up to, Mr. Grearly, but I wish you'd stop it. I admit something strange is going on, but your explanation is ridiculous—offensive, even."

He was silent for a long time, then "I wonder if the first man-ape found his prehensile thumb ridiculous. I wonder if he thought using his hands for grasping was offensive."

"What are you trying to say?"

"That I think we're mutants. We're not the first ones. I had this same experience when I was in Boston once. There must be one of us there, too, but suddenly I got the feeling that he had committed suicide. I never saw him. We're probably the first ones to discover each other."

"Boston? If what you say is true, what would distance have to do with it?"

"Well, if telepathy exists, it certainly involves transfer of energy from one point to another. What *kind* of en-ergy, I don't know. Possibly electromagnetic in character. Out it seems likely that it would obey the inverse square law, like radiant energy forms. I came to town about three weeks ago. I didn't feel you until I got close."

"*There is a connection,*" she thought. She had been wondering about the increased anxiety of the past three weeks.

"I don't know what you're talking about," she evaded icily, though. "I'm no mutant. I don't believe in telepathy. I'm not insane. Now let me alone."

She slammed the telephone in its cradle and started to walk away.

Evidently he was angry, for she was suddenly communi-cating with him again.

She reeled dizzily and clutched at the wall, because she was in two places at once, and the two

settings merged in her mind to become a blur, like a double exposure. She was in her own hallway, and she was also in an office, looking at a calculator keyboard, hearing glassware rattling from across a corridor, aware of the smell of formaldehyde. There was a chart on the wall behind the desk and it was covered with strange tracery—schematics of some neural arcs. The office of the psychophysics lab. She closed her eyes, and her own hallway disappeared.

She felt anger—his anger.

*"We've got to face this thing. If this is a new direction for human evolution, then we'd better study it and see what to do about it. I knew I was different and I became a psychophysicist to find out why. I haven't been able to measure much, but now with Lisa's help ..."*

She tried to shut him out. She opened her eyes and summoned her strength and tried to force him away. She stared at the bright doorway, but the tracery of neural arcs still remained. She fought him, but his mind lingered in hers.

*"... perhaps we can get to the bottom of it. I know my encephalograph recordings are abnormal, and now I can check them against hers. A few correlations will help. I'm glad to know about her soft fontanel. I wondered about mine. Now I think that underneath that fontanel lies a pattern of specialized neural—"*

She sagged to the floor of the hall and babbled aloud "Hickory Dickory Dock, the mouse ran up the clock. The clock struck one—"

Slowly he withdrew. The laboratory office faded from her vision. His thoughts left her. She lay there panting for a time.

Had she won?

No, there was no sense in claiming victory. She had not driven him away. He had withdrawn of his own volition when he felt her babbling. She knew his withdrawal was free, because she had felt his parting state of mind: sadness. He had stopped the forced contact because he pitied her, and there was a trace of contempt in the pity.

She climbed slowly to her feet, looking around wildly, touching the walls and the door-frame to reassure herself that she was still in her own home. She staggered into the parlor and sat shivering on the sofa.

Last night! That *crazy* running around in the rain! He was responsible for that. He had hoped her into doing it, or maybe he had just wondered what she looked like undressed, and she had subconsciously satisfied his curiosity. He had planted the suggestion—innocently, perhaps—and she had unknowingly taken the cue.

He could be with her whenever he wanted to! He had been with her while she frolicked insanely in the rain-sodden grass! Perhaps he was with her now.

Whom could she talk to? Where could she seek help? Dr. Mensley? He would immediately chalk it up as a delusion, and probably call for a sanity hearing if she wouldn't voluntarily enter a psychoward for observation.

The police? "Sergeant, I want to report a telepathic prowler. A man is burglarizing my mind."

A clergyman? He would shudder and refer her to a psychiatrist.

All roads led to the booby-hatch, it seemed. Frank wouldn't believe her. No one would believe her.

Lisa wandered through the day like a caged animal. She put on her brightest summer frock and a pert straw hat and went downtown. She wandered through the crowds in the business district, window-shopping. But she was alone. The herds of people about her brushed past and wandered on. A man whistled at her in front of a cigar store. A policeman waved her back to the curb when she started across an intersection.

"Wake up, lady!" he called irritably.

People all about her, but she could not tell them, explain to them, and so she was alone. She caught a taxi and went to visit a friend, the wife of an English teacher, and drank a glass of iced tea in the friend's parlor, and talked of small things, and admitted that she was tired when the friend suggested that she looked that way. When she went back home, the sun was sinking in the west.

She called long distance and talked to her mother, then spoke to her children, asked them if they were ready to come home, but they wanted to stay another week. They begged, and her mother begged, and she reluctantly con-sented. It had been a mistake to call. Now the kids would be gone even longer.

She tried to call Frank in St. Louis, but the hotel clerk reported that he had just checked out. Lisa knew this meant he was on the road again.

*"Maybe I ought to go join the kids at Mother's,"* she thought. But Frank had wanted her to stay home. He was expecting a registered letter from Chicago, and it was ap-parently important, and she had to take care of it.

*"I'll invite somebody over,"* she thought. But the wives were home with their husbands, and it was a so-cial mistake to invite a couple when her husband was gone. It always wound up with two women yammering at each other while the lone male sat and glowered in uneasy isolation, occasionally disagreeing with his wife, just to let her know he was there and he was annoyed and bored and why didn't they go home? It was different if the business-widow called on a couple. Then the lone male could retire to some other part of the house to escape the yammering.

But she decided it wasn't company she wanted; she wanted help. And there was no place to get it.

When she allowed her thoughts to drift toward Ken-neth Grearly, it was almost like tuning in a radio station. He was eating early dinner in the University cafeteria with a bedraggled, bespectacled brunette from the laboratory. Lisa closed her eyes and let herself sift gingerly into his thoughts. His attention was on the conversation and on the food, and he failed to realize Lisa's presence. That knowledge gave her courage.

He was eating Swiss steak and hashed brown potatoes, and the flavors formed perceptions in her mind. She heard the rattle of silverware, the low murmur of voices, and smelled the food. She marveled at it. The strange ability had apparently been brought into focus by learn-ing what it was and how to use it.

"Our work has been too empirical," he was saying. "We've studied phenomena, gathered data, looked for correlations. But that method has limitations. We should try to find a way to approach psychology from below. Like the invariantive approach to physics."

The girl shook her head. "The nervous system is too complicated for writing theoretical equations about it. Empirical equations are the best we can do."

"They aren't good enough, Sarah. You can predict results with them, inside the limits of their accuracy. But you can't extrapolate them very well, and they won't stack up together into a single integrated structure. And when you're investigating a new field, they no longer apply. We need a broad mathematical theory, covering all hypothetically possible neural arrangements. It would let us predict not only results, but also predict patterns of possible order."

"Seems to me the possible patterns are infinite."

"No, Sarah. They're limited by the nature of the build-ing blocks—neurons, synaptic connections, and, so forth. With limited materials, you have structural limitations. You don't build skyscrapers out of modeling clay. And there is only a finite number of ways you can build atoms out of electrons, protons and neutrons. Similarly, brains are confined to the limitations of the things they're made of. We need a broad theory for defining the limits."

"Why?"

"Because . . ." He paused. Lisa felt his urge to explain his urgency, felt him suppress it, felt for a moment his loneliness in the awareness of his uniqueness and the way it isolated him from humanity.

"You must be doing new work," the girl offered, "if you feel the lack of such a theoretical approach. I just can't imagine an invariantive approach to psychology—or an all defining set of laws for it, either. Why do you need such a psychological 'Relativity'?"

He hesitated, frowning down at his plate, watching a fly crawl around its rim. "I'm interested in—in the quantitative aspects of nerve impulses. I—I suspect that there is such a thing as neural resonance."

She laughed politely and shook her head. "I'll stick to my empirical data-gathering, thank you."

I ha felt him thinking:

*'She could understand, if I could show her data. But my data is all subjective, experimental, personal. I share it with that Waverly woman, but she is only a social thinker, analytically shallow, refusing even to recognize facts. Why did it have to be her? She's flighty, emotional, and in a cultural rut. If she doesn't conform, she thinks she's nuts. But then at least she's a woman—and if this is really a mutation, we'll have to arrange for some children ...*

Lisa gasped and sat bolt upright. Her shock revealed her presence to him, and he dropped his fork with a clatter.

*"Lisa!"*

She wrenched herself free of him abruptly. She angrily stalked about the house, slamming doors and muttering her rage. The nerve! The maddening, presumptuous, ill-mannered, self-centered, overly educated boor!

Arrange for some children indeed! An impossible situation!

As her anger gathered momentum, she contacted him again—like a snake striking. Thought was thunder out of a dark cloud.

*"I'm decent and I'm respectable, Mr. Grearly! I have a husband and three fine children and I love them, and you can go to hell! I never want to see you again or have you prowling around my mind. Get out and STAY out. And if you ever bother me again—I'll—I'll kill you."*

He was outdoors, striding across the campus alone. She saw the gray buildings, immersed in twilight, felt the wind on his face, hated him. He was thinking nothing, letting himself follow her angry flow of thought. When she finished, his thoughts began like the passionate pleading of a poem.

He was imagining a human race with telepathic abilities, in near-perfect communication with one another. So many of the world's troubles could be traced to im-perfect communication of ideas, to misunderstandings.

Then he thought briefly of Sarah—the nondescript laboratory girl he had taken to dinner—and Lisa realized he was in love with Sarah. There were sadness and resentment here. He couldn't have Sarah now, not if he were to be certain of perpetuating the mutant character-istic. The Waverly woman ought to be good for three or four children yet, before she reached middle age.

Lisa stood transfixed by shock. Then he was thinking directly to her.

*"I'm sorry. You're a beautiful, intelligent woman—but I don't love you. We're not alike. But I'm stuck with you and you're stuck with me, because I've decided it's going to be that way. I can't convince you since your thinking habits are already fixed, so I won't even try. I'm sorry it has to be against your will, but in any event it has to be. And now that I know what you're like, I don't dare wait—for fear you'll do something to mess things up."*

*"No!"* she screamed, watching the scenery that moved past his field of vision.

He had left the campus and was walking up the street—toward her neighborhood. He was walking with the briskness of purpose. He was coming to her house.

*"Call the police!"* she thought, and tried to dissolve him out of her mind.

But this time he followed, clung to her thoughts, would not let her go. It was like two flashlight beams playing over a wall, one trying to escape, the other following its frantic circle of brightness.

She staggered, groped her way toward the hall, which was confused with a superimposed image of a sidewalk and a street. A phantom automobile came out of the hall wall, drove through her and vanished. Double exposures. He stared at a street light and it blinded her. At last she found the phone, but he was laughing at her.

*"Eight seven six five twenty-one Mary had a little lamb seven seven sixty-seven yesterday was May March April..."*

He was deliberately filling her mind with confusion. She fumbled at the directory, trying to find the police, but he thought a confused jumble of numbers and sym-bols, and they scampered across the page, blurring the lines.

She whimpered and groped at the phone-dial, trying to get the operator, but he was doing something with his fingertips, and she couldn't get the feel of the dial.

On her third try, it finally worked.

"Information," said a pleasant impersonal voice.

She had to get the police! She had to say

*"Pease porridge hot, pease porridge cold, pease porridge in the pot, nine days pretty pony parrot played peacefully plentiwise pease porridge . . ."*

He was jamming her speech centers with gibberish, and she blurted nonsense syllables into the mouthpiece.

"You'll have to speak more distinctly, madam. I can't understand you."

"Poress, Policer ..."

"The police? Just a moment."

A series of jumbled sounds and visions clouded her mind. Then a masculine voice rumbled, "Desk, Sergeant Harris."

She found a clear path through the confusion and gasped, "Three-oh-oh-three Willow Drive—'mergency come quick—man going to—"

"Three-oh-oh-three Willow. Check. We'll have a car right over there."

She hung up quickly—or tried to—but she couldn't find the cradle. Then her vision cleared, and she screamed. She wasn't in the hall at all!

The telephone was an eggbeater!

His voice came through her trapped panic.

*You might as well give in,"* he told her with a note of sadness. *"I know how to mess you up like that, you see. And you haven't learned to retaliate yet. We're go-ing to cooperate with this evolutionary trend, whether you like it or not—but it would be more pleasant if you agree to it."*

*"No!"*

*"All right, but I'm coming anyway. I hoped it wouldn't be like this. I wanted to convince you gradually. Now I know that it's impossible."*

He was still ten blocks away. She had a few minutes in which to escape. She bolted for the door. A black shadow-shape loomed up in the twilight, flung its arms wide, and emitted an apelike roar.

She yelped and darted back, fleeing frantically for the front. A boa constrictor lay coiled in the hall; it slithered toward her. She screamed again and raced to-ward the stairway.

She made it to the top and looked back. The living room was filling slowly with murky water. She rushed shrieking into the bedroom and bolted the door.

She smelled smoke. Her dress was on fire! The flames licked up, searing her skin.

She tore at it madly, and got it off, but her slip was afire. She ripped it away, scooped up the flaming cloth-ing on a transom hook, opened the screen, and dropped them out the window. Flames still licked about her, and she rolled up in the bed-clothing to snuff them out.

Quiet laughter.

*"New syndrome,"* he called to her pleasantly. *"The patient confuses someone else's fantasy with her own reality. Not schizophrenia—duophrenia, maybe?"*

She lay sobbing in hysterical desperation. He was just down the street now, coming rapidly up the walk. A car whisked slowly past. He felt her terrified despair and pitied her. The torment ceased.

She stayed there, panting for a moment, summoning spirit. He was nearing the intersection just two blocks south, and she could hear the rapid traffic with his ears.

Suddenly she clenched her eyes closed and gritted her teeth. He was stepping off the curb, walking across—

She imagined a fire engine thundering toward her like a juggernaut, rumbling and wailing. She imagined another car racing out into the intersection, with herself caught in the crossfire. She imagined a woman screaming, "Look out, Mister!"

And then she was caught in his own responding fright, and it was easier to imagine. He was bolting for the other corner. She conjured a third car from another direction, brought it lunging at him to avoid the impend-ing wreck. He staggered away from the phantom cars and screamed.

A real car confused the scene.

She echoed his scream. There was a moment of rend-ing pain, and then the vision was gone. Brakes were still yowling two blocks away. Someone was running down the sidewalk. A part of her mind had heard the crashing thud. She was desperately sick.

And a sudden sense of complete aloneness told her that Grearly was dead. A siren was approaching out of the distance.

VOICES from the sidewalk: ". . . just threw a fit in the middle of the street . . . running around like crazy and hollering . . . it was a delivery truck . . . crushed his skull . . . nobody else hurt ..."

After the street returned to normal, she arose and went to get a drink of water. But she stood staring at her sick white face in the mirror. There were crow's feet forming at the corners of her eyes, and her skin was growing tired, almost middle-aged.

It was funny that she should notice that now, at this strange moment. She had just killed a man in self-defense. And no one would believe it if she told the truth. There was no cause for guilt.

Was there?

Frank would be back soon, and everything would be the same again: peace, security, nice kids, nice home, nice husband. Just the way it always had been.

But something was already different. An emptiness. A loneliness of the mind that she had never before felt. She kept looking around to see if the lights hadn't gone dim, or the clock stopped ticking, or the faucet stopped dripping.

It was none of those things. The awful silence was within her.

Gingerly, she touched the soft spot in the top of her head and felt an utter aloneness. She closed her eyes and thought a hopeless plea to the Universe:

*"Is there anybody else like me? Can anybody hear me?"*

There was only complete silence, the silence of the voiceless void.

And for the first time in her life she felt the confine-ment of total isolation and knew it for what it was.

## The Big Hunger

I AM BLIND, yet I know the road to the stars. Space is my harp, and I touch it lightly with fingers of steel. Space sings. Its music quivers in the flux patterns, comes creep-ing along the twitch of a positron stream, comes to whis-per in glass ears. I hear. Alec! Though I am without eyes, I see the stars tangled in their field-webs, tangled into One. I am the spider who runs over the web. I am the spider who spins, spinning a space where no stars are.

And I am Harpist to a pale, proud Master.

He builds me, and feeds me the fuel I eat, and leads me riding through the space I make, to the glare of another sun. And when he is done with me, I lie rusting in the rain. My metal rots with ages, and the sea comes washing over land to take me while I sleep. The Master forgets. The Master chips flint from a stone, leaving a stone-ax. He busies himself with drums and bloody altars; he dances with a writhing snake in his mouth, conjuring the rain.

Then—after a long time—he remembers. He builds an-other of me, and I am the same, for like the Soul of him who builds me, my principle lies beyond particular flesh. When my principle is clothed in steel, we go wandering again. I the minstrel, with Man the king.

Hear the song of his hunger, the song of his endless thirst.

There was a man named Abe Jolie, and he leaned against me idly with one hand in the gloom while he spoke quietly and laughed with a female of his species.

"It's finished, Junebug. We got it made," he said.

And the girl looked her green eyes over me while the crickets sang beyond the wall, and while the shuttling of their feet echoed faintly in the great hangar.

"Finished," she murmured. "It's your success, Abe." "Mine, and a lot of others. And the government's money."

She toyed with the lapel of his coveralls, grinned, and said, "Let's steal it and run away."

"Sssh!" He looked around nervously, but there were no guards in sight. "They can shoot you for less than that," he warned. "The S.P. doesn't have a sense of humor."

"Abe—"

"What?"

"Kiss me."

He kissed her.

"When is that going to be illegal, too?" she whispered. He looked at her grimly, and she answered her own question.

"As soon as the eugenics laws are passed, Abe. Abe Jolie, who built the spacedrive, a genetic undesirable." "*Don't!*"

They stood there breathing quietly, and there was hate in their throats.

"Well?"

He looked around again, and whispered, "Meet me here at eleven o'clock, Junebug."

They parted to the sound of casual footsteps.

At eleven o'clock, a lion roared in the hangar. At eleven o'clock a steel juggernaut tore through the hangar wall and paused on a concrete ramp while bullets rico-cheted off the hull. Then the first star-chariot burnt a verticle column of flame in the night. Thunder walked upward on fiery stilts, while men shouted angrily. When we were alone in the airless, star-stung, sun-torn blackness, I stroked the web of space, and listened to the muted notes. When the tune is memorized, I speak. I contradict. I refute the universe. We lived in a spaceless space beyond stars.

The man and the woman had gone. But the plan re-mained on Earth. My principle lingered on the drawing boards, and in the dreams of men—men who said they were sick of wars and politics and the braying of collectivist jackasses. Others were sick of petty peace and cheap-ness and Independence Day speeches and incorporated jackasses who blubbered disgustingly about various free-doms.

They wanted the one Big Freedom. They built me again, these pale, proud bipeds, these children of an Ape-Prince who walked like a god. They packed themselves in cylinders of steel and wandering, riding starward on a heart-tempest that had once sung them down from the trees to stalk the plains with club and torch. The pod of earth opened, scattered its seed spaceward. It was the time of the great bursting, the great birth-giving. Empires shivered in the storm.

Sky-chariots flung themselves upward to vanish beyond the fringes of the atmosphere. Prairie schooners of space bore the restless, the contemptuous, the hungry and the proud. And I led them along the self-road that runs around space. The world seethed, and empires toppled, and new empires arose whose purpose it was to build the sky-chariots.

Young men, young women, clamored at the gates of launching fields. Those who were chosen grinned expect-antly at the stars. They climbed aboard in throngs and deserted Earth. They were hard laughers with red freckles and big fists. They wore slide rules at their belts like swords, and they spoke familiarly of Schwarzschild Line-Elements and Riemann-Christofel tensors. Their women were restless talkers, big women, with flashing white teeth. They teased the men, and their hands were strong and brown.

Poets came—and misfits, and saints, sinners, dirt-farmers. Engineers came and child-bearers, fighters, uto-pianists, and dreamers with the lights of God glowing in their starward eyes.

"Why were we taught to pray with *downcast* eyes?" they asked. "When you pray, look starward, look to the God at the north end of the Universe."

Man was a starward wind, a mustard seed, a wisp of Brahma's breath breathed across space.

They found two corpses in an orbit about Arcturus. The corpses were frozen and the ice was slowly sublimat-ing into space-vapor. One of them had an Engineering Union card in his pocket. It gave his name as Abe Jolie. The other was a girl. And, because the corpse had given them the blueprints that led to space, they hauled him aboard with the girl. Somebody sang the "*Kyrie*" and somebody said, "I am the Resurrection and the Life." Then they cancelled out the orbital velocity and let the corpses go toppling toward Arcturus, toward a burning sun-grave where their light would shine forever.

There were those who remained behind. There were those who made Earth their business and stayed at home. Their tribes were numbered at two billion souls. And they were somehow different from the spacers. They liked to sit in their rocking chairs. They liked prettiness and a one-hundred-cent dollar. They voted for the Conservative Party. They abolished centralization. Eventually they abolished government. And for the first time in anyone's memory, there was peace on Earth, good will among men.

My Master was hungry for land. My Master sought new worlds. And we found them.

There was a yellow sun in Serpens called 27 Lambda, lying eight parsecs inward toward the galactic heartland and seven parsecs north toward the galactic pole. A lush green planet drifted at one hundred twenty megamiles from the friendly sun-star, and it awoke in the wandering biped nostalgic thoughts. We paused in space-black, we looked, we came down on tongues of lightning from the clear sky to set jet-fires in the grassy plain near a river and a forest.

Man was a seed replanted.

He wandered away from the sky-chariot and drank from a pool in the jungle. A behemoth with several legs and a parasite-rider came roaring his appetite at the pale biped. And his bones lay whitening in the sun, and his descendants learned that it was easier to stay alive by ignoring the biped from the sky.

I lay rusting in the rain. Houses of log and stone grew up on the hillsides. They crumbled slowly into ruin. A man wearing a fur robe came and built an altar at my feet. He burnt his eldest daughter on it while he sang a battle song and danced, danced a victory under strange sky.

The sons of men molded clay and chipped arrowheads and built fires. The old men told them stories of a space-going god, and the stories became their legends. They kidnapped the daughters of neighbors, knew wives, and multiplied.

A glacier came and ground me into dust. Millenniums passed, and each Prophet had his Bazar.

One of the prophets wrote an energy equation. Men crucified an Agitator on a telegraph pole. They purged a minority-group. They split a uranium atom into atoms of strontium and xenon. They wrote immortal lines deploring war while they invented better ways to wage it. They refashioned a body for my life-principle, for the tensor-transformers that constitute my soul. They mounted me again in a sky-borne prairie schooner because they were weary of sanctified braying.

There were growling columns of blue-white fire in the night, and growling voices of restless masses of men. Men darted along the road around space.

Men departed for other stars. But after a thousand years, many remained on the planet of their birth—home-bodies and movie-idols and morticians, nembatal-addicts and advocates of world-government.

When the restless ones, the wild-eyed spacers were gone, the addicts got religion and the federalists became placid anarchists and the Parliaments voted themselves out of existence. There was peace of the third planet of 27 Lambda Serpentis, and good will among the inhabit-ants thereof. They made love and studied sociology under a friendly sun, under a pleasant blue sky forever.

On the road around space, my Master hungered for land.

And there was a yellow sun in the region of the Scor-pion, and once it had been called 18 Scorpii, but now they named it Ba'Lagan. It was a little south of Serpens, a little nearer to the galactic nucleus. They named its planets Albrasa and Nynfi, and they were twins. Albrasa was already populated by a clan of hairy intellectuals with teeth and twittering voices. They liked the flavor of man-flesh, digested it easily.

Man came down on sky-lightning. Man came down to walk on the land and own it. I lay quietly rusting in the rain.

Man taught his grandson to hammer virgin copper into a vicious battle-ax, and taught him the mystic recipe for roasting a hairy intellectual. It was forbidden to boil a young intellectual in the milk of its mother, but it was permissible to roast it alive and remind it that its fathers had dared to attack a two-legged god.

Man's grandson waxed strong and malicious. He com-mitted genocide on the furry natives and used their skips for blankets. He shattered their braincases and erected his own altars in their temples. He butchered an octo-genarian on one of the altars, because the old man had made the silly suggestion that

they sacrifice a perfectly healthy young virgin to their god. The young virgin watched the ceremony with quietly triumphant eyes; then she married the chief priest and bore him many children.

The biped bludgeoned the planet into submission. He assured himself that he was the Chosen Child of the Most High. He built himself a throne and sat upon it—while he listened to a newscaster describe jet-battles over the North Pole. Centuries wandered by, decked in gaudy robes. And there was a war with Nynfi between the worlds.

And then another Abraham Jolie bent over his drawing board. Another crew of big-fisted men wrapped steel flesh around my principle. Another race of men spat contempt on the soil—the soil that had drunk the blood of their fathers, felt the fire of the suns as the rockets heaved skyward bearing my body and the bodies of my Master.

Men were steel-jacketed motes of flesh, scurrying among the stars. Men were as dust, rolling across the galactic prairie—bits of dandelion fluff whirling in a rising tempest that bore them along the arm of the galactic spiral and inward, ever inward. Their eyes were on Hercules and the far distant globular clusters. He paused at Nu Lupi and 15 Sagitteia and a nameless yellow sun in Ophiuchus where he met a native race who dared to be bipeds. He crushed them quickly.

There were always those who remained behind, lingered on the planets where their ancestors had fought. I watched them with my last eyes as the last ship hurtled into space. I watched, and saw the lust go out of them, saw them become as a cauldron removed from the fire. Their boiling waned to a simmer, and they cooled. They always found peace when the spacers were gone.

This I have never understood. I, the machine, the space-spider, cannot understand. But I have seen it—the exodus of the hungry, the settling of peace over those who chose to linger. The hungry drink of the emptiness of space, and their hunger grows. The placid eat of the earth, and find peace, yet somehow—they seem to die a little.

Ever deeper pressed the starships, deeper into Sagittarius and Scorpius, and Lupus, Ophiuchus and Sagitta. Now and then they paused to colonize and conquer. A planet devoured a handful of men and tormented them with its biological devices. But the men grew and beat the savage planet into a slave after long ages, forced it to pay tribute to its king. Once more they coveted the stars. Once more they darted heavenward, leaving reluctant brothers in peace.

They wrote a song. They called it "Ten Parsecs to Paradise." They sang the song as if they believed it. This I have never understood.

It was always ten or twelve parsecs to another sun with a class G spectrum, with a planet chastely clad in green forests and white clouds. There he landed to rebuild, to furrow the fertile earth, to rock in a porch swing at twilight sucking his pipe, and to thoughtfully stare at the stars while his grandchildren romped like young chimpanzees on the cool lawn.

He had forgotten Earth—this old man—his race had forgotten its history. But he knew a little. He knew the star-going cycle—the landing of the starships, the regression to savagery, the painful rebuilding, the cruelty, the re-learning, the proud exodus. He knew these things because Man had learned to keep a little of the past in tact throughout a cycle. He no longer fell back to chipping arrowheads. Now he managed to begin again in an age of bronze or soft iron. And he knew in advance that he would carve mighty industries out of savage wilderness.

But the old man was sad as he sat on his porch. He knew so little of the Great Purpose. Why must his seed fling itself starward? He knew that it *must*—but he lacked a reason. His grandchildren played in the twilight, played space-games, although there was not yet a starship on the planet.

There was a small boy on the lawn who tried to tease the girls, but the girls put on masks of superior sophistication and ignored the little man. Disgruntled, he looked up and saw the old man dreaming on the porch.

"Gramp's got star-craze!", he shrieked. "Look at Gramp menting! Nnyahh! Gramp's got star-craze."

Musical laughter tittered over the lawn. Another voice took up the cry. The old man chuckled affectionately but wistfully. They were young, but they knew about the star-thirst. The planet was young, too young for starships, even though the priests preserved the records and scientific writings in the

temples. The planet knew about space and coveted it. Yet, the children would all be dead before the first vessel was launched.

The laughter on the lawn subsided. The eldest child, a gawky and freckled girl of eight years came trudging up the steps to sit against the post and stare at him quietly in the gloom. He felt a question lurking in her silence. He nudged her ribs affectionately with his toe.

"What weighty matter worries you, Nari?" he asked pleasantly.

"Why is star-craze, Gramp?"

He rocked thoughtfully for a moment. "Why are there men to feel it?" he countered.

The child was silent.

"I know only what the priests say, Nari;" he told her gently. "They say that man once owned a paradise planet, and that he ran away in search of a better one. They say he made the Lord Bion angry. And the lord hid the paradise, and condemned Man to forever wander, touched his heart with eternal hunger for the place he lost."

"Will people find it again, Gramp?"

"Never—so the priests say. The hunger is on him, Nari."

"It's not fair!" said the little girl.

"What isn't, my child?"

"Star-craze. Last night I saw a lady crying. She was just standing there crying at the sky."

"Where?"

"On the street. Waiting for a motor bus."

"How old was she?"

Nari scraped her heels and muttered doubtfully. "It was kind of dark."

Gramp chuckled reassuringly. "I bet she wasn't over fourteen. I bet she was still a kid. Star-craze comes to little girls about the time they start being interested in little boys. Works the other way, too. But you grow out of it, Nari. By the time you're twenty, it won't make you miserable any more. It gives you a goal. Gives everyone a goal. Something to work for. Something to long for and fight for. The stars—you'll want to give them to your grandchildren."

"Won't I get to go?"

"Not ever, Nari."

They fell silent again, and the old man peered up into the deepening blackness with its countless array of suns sitting like hens on their nests of planets. He scarcely believed the legend of the lost paradise-planet, but it was a good story to tell little girls. It made him sad though, and revived a little of the forgotten restlessness of his youth. If only he could have lived two centuries later—

But then a gust of wind brought the sweet perfume of freshly cut hay from the field to the east of the farmhouse, and the odor made him smile. The field would have to be raked tomorrow, and the hay brought in to the barn. A lot of things like that needed to be done before the starships could rise again. And every straining muscle helped toward the ultimate goal. The hay fed the animals whose flesh fed the men who made the tools which built the factories which fashioned more complicated tools—and so the journey, down the long road to space again.

The old man didn't know why the road had to be traveled, nor did he really care. The road was there, and it beckoned, and it gave meaning to life, for surely the Lord Bion was less cruel a tempter than the priests sometimes proclaimed Him. Surely there was something more than despair at the end of the long, long road.

The old man grew older, and died peacefully, and his ashes were scattered across the fields he had tilled since boyhood. His children, and his grandchildren, followed in his patient steps, and their ashes were mingled with his own before the first gleaming sky craft burst star fire in the night.

When the spacecraft at last rumbled upward, the crowd thundered a triumphant roar, the crowd gathered to witness the culmination of their labors, and the labors of their ancestors. Men walked with shoulders erect and with pride glowing in their faces. Again they triumphed over forces that held them bound to a grain of sand in the sky. Again they slashed through the knot that held them in the web of the

continuum, and shed the weights that dragged at their feet.

I noticed a subtle difference in those who lingered behind. They no longer lingered of their own choosing. They were no longer the peace-seekers and placid ones. They were those who could not go because they were old, or sick, or because the industries were half-deserted and there was no one left to build the ships. They still stared longingly upward on dark nights.

"We'll do it again," they promised. "We'll repopulate and do it again."

But the bitterness of their plight was upon them, a sense of defeat and doom. They fought savagely among themselves. They fell in feudal wars, while the starward wave receded.

I am the acolyte of the space-priest, the server of the pale proud biped. I have taken him onward across the void, to the Hercules Cluster, and beyond it to the un-charted regions past the dust clouds of the Great Rift, into the star-pact heartland of the galactic nucleus where other races were testing their space wings and tasting of the great freedom. I have watched him, and have felt the life-aura of his longing. And I have wondered. What is his goal? Where is an answer to his hunger?

My neural circuits are not of flesh. My circuits are of glass and steel. My thought is a fanning electron stream. But I have prayed. I, the spider who builds around space, have prayed to the gods of the biped I serve. I have prayed to the God of the North End of Space. I have asked, "Where is his peace?"

*No answer came.*

I have seen my Master change.

The biped was thunder across the galaxy. The biped was a swift and steel-clad spear hurtling ruthlessly on-ward. He made no friends; for he came as a being who owned the stars, and he took what he wanted along the way. He left his seed to grow anew. A creature of fierce pride! And fiercer longing. He trampled hatelessly such races as he encountered. He crushed them, or harnessed them to his plow, or borrowed their neural circuits for his bio-computers. Sometimes he fought against his own race, men who had traveled other routes to the galactic heart-land. When man battled against man, they fought with hatred and cruelty and bitterness—but never with contempt. Man saw a rival king in man. Against other races, he waged only cool contempt and hot death.

Sometimes a thoughtful old man would say, "Seems to me they've got as much right to live as we have. Seems to me all intelligent creatures have got a common denominator. God, maybe." But he muttered it quietly, speculatively. Even if he believed it, he never objected to the swift ambush of the alien ship, nor to the razing of the alien city. For the biped stalked a new frontier. The ape-tribe stole across a field where danger lurked. He was fresh from the branches of the trees, not wise to the ways of the plains. How could he risk offering peace to the shaggy beast who crouched in the tall grass? He could only weigh the odds—then strike or run away.

He took the planets of the yellow suns—deep in the galactic heartland. He skipped from one to the next in jumps as long as his patience would last. He captured the globular clusters. He inhabited each planet for a few generations. He built ships, and battled with his brothers for the right to take them. Many were left behind. They repopulated after an exodus, rebuilt, launched a second flight, and a third—until those who finally remained at home were those who lacked the incentive of the big hunger.

Those who lacked incentive sought their peace. They molded a pleasant place to live in and infested it. Or else they scorned pleasantry and made themselves a battleground.

My Master is the Nomad, gaunt and tall. My Master grits his teeth in staring at the stars, and his eyes go narrow and moist. I have mirrored his hunger, have allowed his life-aura to seep into the cold steel and hot glass of me, have reflected his thoughts in my circuits. Sometimes he wonders if I am alive. But then he remembers that he built me. He built me to think, not to be alive. Perhaps I am not alive, but only a mirror that catches a little of my Master's life. I have seen him change.

The spearhead groups pushed relentlessly across the gleaming blackness, and each generation grew more restless than the one before it. The restless moved ahead. The contented remained at home. Each exodus was a separation, and a selection of the malcontent.

The biped came to believe his priests. He believed the legend of the lost home. He believed that Bion had touched him with the hunger curse. How else could they explain the pressing cry of the heart? How could they interpret the clamor of the young, the tears—except as a Divine Thirst.

The star-craze. The endless search.

There was a green planet beyond the heartland, and it was ripe for bursting its human star-seed. There was a launching field, and a ship, and teeming crowd, and a fence with guards to keep the others out. A man and a girl stood at the fence, and it was nearly dawn.

He touched her arm and gazed at the shadows on the launching site.

"We won't find it, Marka," he said quietly. "We'll never find it."

"You believe the legend, Teris?" she whispered.

"The Planet of Heaven? It's up there. But we can never find it."

"Then why must you look?"

"We are damned. Marka."

There was a silence, then she breathed, "It *can* be found. The Lord Bion promised—"

"Where is *that* written, Marka?" he scoffed coldly. "In a woman's heart."

Teris laughed loudly. "What does the heart-writing say?"

She turned to stare at the dark shadow of the ship against the graying sky. "It says: 'When Man is content—without his lost paradise—when he reconciles himself—Bich will forgive, and show us the road home.'"

He waved his hand fiercely at the fading stars in the west. "*Ours*, Marka. They're ours! We took them."

"Do you want them?"

He stiffened angrily and glared at the shadow of her face. "You ... you make me sick. You're a hanghacker."

"No!" She shook her head wildly. "No!" She caught at his arm as he retreated a step. "I wish I could go! I want to go, do you hear?"

"I hear," he snapped. "But you can't, so there's no use talking about it. You're not well, Marka. The others wouldn't let you aboard." He backed away another step.

"I love you," she said frantically.

He turned and stumbled away toward the sky-chariot. "*I love you!*"

He began to trot, then burst into a wild sprint. Afraid, she thought in triumph. Afraid of turning back. Of loving her too much.

"*You'll never find it!*" she screamed after him. "*You can't find it up there! It's here—right here!*"

But he was lost in the crowd that milled about the ship. The ship had opened its hatches. The ship was devouring the people, two at a time. The ship devoured Teris and the space crew. Then it closed its mouth and belched flame from its rockets.

She gasped and slumped against a fencepost. She hung there sobbing until a guard drove her away.

A rocket bellowed the space song. The girl tore off her wedding bracelet and flung it in the gutter. Then she went home to fix breakfast for the children.

I am the Weaver of space. I am a Merchant of new fabrics in flux patterns for five-space continua. I serve the biped who built me, though his heart he steeped in hell.

Once in space, a man looked at me and murmured softly, "You are the cross on which we crucify ourselves."

But the big hunger pushed him on—on toward the ends of space. And he encountered worlds where his ancestors had lived, and where his peaceful cousins still dwelt in symbiosis with their neighbors. Some of the worlds were civilized, some barbaric, and some were archaeological graveyards. My nomads, they wore haunted faces as they re-explored the fringes of the galaxy where Man had walked before, leaving his footprints and his peace-seeking children. The galaxy was filled.

*Where could he go now?*

I have seen the frantic despair in their faces when, upon landing, natives appeared and greeted them politely, or tried to kill them, or worshiped them, or just ran away to hide. The nomads lurked near their ships. A planet with teeming cities was no place for a wanderer. They watched the multifaceted civilizations with bitter, lonely eyes.

Where were new planets?

Across the great emptiness to the Andromeda galaxy? Too far for the ships to go. Out to the Magellanic clouds? Already visited.

Where then?

He groped blindly, this biped. He had forgotten the trail by which his ancestors had come, and he kept re-crossing it, finding it winding everywhere. He could only plunge aimlessly on, and when he reached the last limit of his fuel—land. If the natives could not provide the fuel, he would have to stay, and try to pass another cycle of starward growth on the already inhabited world. But a cycle was seldom completed. The nomads intermarried with the local people; the children, the hybrid children, were less steeped in hunger than their fathers. Sometimes they built ships for economic purposes, for trade and commerce—but never for the hysterical starward sweep. They heard no music from the North End of Space, no Lorelei call from the void. The craving was slowly dying.

They came to a planet. The natives called it "Earth." They departed again in cold fright, and a space commander blew out his brains to banish the memory. Then they found another planet that called itself "Earth"—and another and another. They smiled again, knowing that they would never know which was the true home of Man.

They sensed the nearness of the end.

They no longer sang the old songs of a forgotten paradise. And there were no priests among them. They looked back at the Milky Way, and it had been their royal road. They looked ahead, where only scattered stars separated them from the intergalactic wasteland—an ocean of emptiness and death. They could not consign themselves to its ultimate embrace. They had fought too long, labored too hard to surrender willingly to extinction.

But the cup of their life was broken.

And to the land's last limit they came.

They found a planet with a single moon, with green forests, with thin clouds draping her gold and blue body in the sunlight. The breath of the snowking was white on her ice caps, and her seas were placid green. They landed. They smiled when the natives called the planet "Earth." Lots of planets claimed the distinction of being Man's birthplace.

Among the natives there was a dumpy little professor—still human, though slightly evolved. On the night following the nomad's landing, he sat huddled in an easy-chair, staring at the gaunt nomadic giant whose bald head nearly touched the ceiling of the professor's library. The professor slowly shook his head and sighed.

"I can't understand you people."

"Nor I you," rumbled the nomad.

"Here is Earth—yet you won't believe it!"

The giant snorted contemptuously. "Who cares? Is this crumb in space the fulfillment of a dream?"

"You dreamed of a lost Earth paradise."

"So we thought. But who knows the real longing of a dream? Where is its end? Its goal?"

"We found ours here on Earth."

The giant made a wry mouth. "You've found nothing but your own smug existence. You're a snake swallowing its tail."

"Are you sure you're not the same?" purred the scholar. The giant put his fists on his hips and glowered at him. The professor whitened.

"That's untrue," boomed the giant. "We've found nothing. And we're through. At least we went searching. Now we're finished."

"Not *you*. It's the *job* that's finished. You can live here. And be proud of a job well done."

The giant frowned. "Job? *What* job?"

"Why, fencing in the stars. Populating the galaxy." The big man stared at him in horrified amazement.

"Well," the scholar insisted, "you did it, you know. Who populates the galaxy now?"

"*People like you.*"

The impact of the scaring words brought a sick gasp from the small professor. He was a long moment in realiz-ing their full significance. He wilted. He sank lower in the chair.

The nomad's laughter suddenly rocked the room. He turned away from his victim and helped himself to a tum-bler of liqueur. He downed it at a gulp and grinned at the professor. He tucked the professor's liqueur under his arm, waved a jaunty farewell, and lumbered out into the night.

"My decanter," protested the professor in a whisper.

He went to bed and lay whimpering slightly in drowsi-ness. He was afraid of the tomorrows that lay ahead.

The nomads settled on the planet for lack of fuel. They complained of the climate and steadfastly refused to be-lieve that it was Earth. They were a troublesome, boister-ous lot, and frequently needed psychoanalysis for their various crimes. A provisional government was set up to deal with the problem. The natives had forgotten about governments, and they called it a "welfare commission."

The nomads who were single kidnapped native wives. Sometimes they kidnapped several, being a prolific lot. They begot many children, and a third-generation hybrid became the first dictator of a northern continent.

I am rusting in the rain. I shall never serve my priest here on Earth again. Nuclear fuels are scarce. They are needed for the atomic warheads now zipping back and forth across the North Pole. A poet—one of the hybrids—has written immortal lines deploring war; and the lines were inscribed on the post-humour medal they gave his widow.

Three dumpy idealists built a spaceship, but they were caught and hung for treason. The eight-foot lawyer who defended them was also hung.

The world wears a long face; and the stars twinkle in-vitingly. But few men look upward now. Things are prob-ably just as bad on the next inhabited planet.

I am the spider who walked around space. I, Harpist for a pale proud Master, have seen the big hunger, have tasted its red glow reflected in my circuits. Still I cannot understand.

But I feel there are some who understand. I have seen the pride in their faces. They walk like kings.

## **Big Joe and the Nth Generation**

A THIEF, HE was about to die like a thief.

He hung from the post by his wrists. The wan sunlight glistened faintly on his naked back as he waited, eyes tightly closed, lips moving slowly as he pressed his face against the rough wood and stood on tiptoe to relieve the growing ache in his shoulders. When his ankles ached, he hung by the nails that pierced his forearms just above the wrists.

He was young, perhaps in his tenth Marsyear, and his, crisp black hair was close-cropped in the fashion of the bachelor who had not yet sired a pup, or not yet ad-mitted that he had. Lithe and sleek, with the quick knotty muscles and slender rawhide limbs of a wild thing, half-fed and hungry with a quick furious hunger that crouched in ambush. His face, though twisted with pain and fright, remained that of a cocky pup.

When he opened his eyes he could see the low hills of Mars, sun-washed and gray-green with trees, trees brought down from the heavens by the Ancient Fathers. But he could also see the executioner in the foreground, sitting spraddle legged and calm while he chewed a blade of grass and waited. A squat man with a thick face, he occasionally peered at the thief with empty blue eyes—while he casually played mumblety-peg with the bleeding-blade. His stare was blank.

"Ready for me yet, Asir?" he grumbled, not unpleas-antly.

The knifeman sat beyond spitting range, but Asir spat, and tried to wipe his chin on the post. "Your dirty mother!" he mumbled.

The executioner chuckled and played mumblety-peg.

After three hours of dangling from the spikes that pierced his arms, Asir was weakening, and the blood throbbed hard in his temples, with each jolt of his heart a separate pulse of pain. The red stickiness

had stopped oozing down his arms; they knew how to drive the spike just right. But the heartbeats labored in his head like a hammer beating at red-hot iron.

*How many heartbeats in a lifetime—and how many left to him now?*

He whimpered and writhed, beginning to lose all hope. Mara had gone to see the Chief Commoner, to plead with him for the pilferer's life—but Mara was about as trustworthy as a wild hiiffen, and he had visions of them chuckling together in Tokra's villa over a glass of amber wine, while life drained slowly from a young thief.

Asir regretted nothing. His father had been a renegade before him, had squandered his last ritual formula to buy a wife, then impoverished, had taken her away to the hills. Asir was born in the hills, but he came back to the village of his ancestors to work as a servant and steal the rituals of his masters. No thief could last for long. A ritual-thief caused havoc in the community. The owner of a holy phrase, not knowing that it had been stolen, tried to spend it—and eventually counterclaims would come to light, and a general accounting had to be called. The thief was always found out.

Asir had stolen more than wealth, he had stolen the strength of their souls. For this they hung him by his wrists and waited for him to beg for the bleeding-blade.

*Woman thirsts for husband,  
Man thirsts for wife,  
Baby thirsts for breast-milk  
Thief thirsts for knife ..*

A rhyme from his childhood, a childish chant, an eenie--meenie-miney for determining who should drink first from a nectar-cactus. He groaned and tried to shift his weight more comfortably. Where was Mara?

"Ready for me yet, Asir?" the squat man asked.

Asir hated him with narrowed eyes. The executioner was bound by law to wait until his victim requested his fate. But Asir remained ignorant of what the fate would be. The Council of Senior Kinsmen judged him in secret, and passed sentence as to what the executioner would do with the knife. But Asir was not informed of their judgment. He knew only that when he asked for it, the executioner would advance with the bleeding blade and exact the punishment—his life, or an amputation, depending on the judgment. He might lose only an eye or an ear or a finger. But on the other hand, he might lose his life, both arms, or his masculinity.

There was no way to find out until he asked for the punishment. If he refused to ask, they would leave him hanging there. In theory, a thief could escape by hanging four days, after which the executioner would pull out the nails. Sometimes a culprit managed it, but when the nails were pulled, the thing that toppled was already a corpse.

The sun was sinking in the west, and it blinded him. Asir knew about the sun—knew things the stupid council failed to know. A thief, if successful, frequently became endowed with wisdom, for he memorized more wealth than a score of honest men. Quotations from the ancient gods—Fermi, Einstein, Elgermann, Hauser and the rest—most men owned scattered phrases, and scattered phrases remained meaningless. But a thief memorized all transactions that he overheard, and the countless phrases could be fitted together into meaningful ideas.

He knew now that Mars, once dead, was dying again, its air leaking away once more into space. And Man would die with it, unless something were done, and done quickly. The Blaze of the Great Wind needed to be rekindled under the earth, but it would not be done. The tribes had fallen into ignorance, even as the holy books had warned:

*It is realized that the colonists will be unable to maintain a technology without basic tools, and that a rebuilding will require several generations of intelligently directed effort. Given the knowledge, the colonists may be able to restore a machine culture if the knowledge continues to be bolstered by desire. But if the third, fourth, and Nth generations fail to further the gradual retooling process, the knowledge will become worthless.*

The quotation was from the god Roggins, *Progress of the Mars-Culture*, and he had stolen bits of it from various sources. The books themselves were no longer in existence, remembered only in memorized ritual chants, the possession of which meant wealth.

Asir was sick. Pain and slow loss of blood made him weak, and his vision blurred. He failed to see her coming until he heard her feet rustling in the dry grass.

"Mara—"

She smirked and spat contemptuously at the foot of the post. The daughter of a Senior Kinsman, she was a tall, slender girl with an arrogant strut and mocking eyes. She stood for a moment with folded arms, eyeing him with amusement. Then, slowly, one eye closed in a solemn wink. She turned her back on him and spoke to the executioner.

"May I taunt the prisoner, Slubil?" she asked.

"It is forbidden to speak to the thief," growled the knifeman.

"Is he ready to beg for justice, Slubil?"

The knifeman grinned and looked at Asir. "Are you ready for me yet, thief?"

Asir hissed an insult. The girl had betrayed him. "Evidently a coward," she said. "Perhaps he means to hang four days."

"Let him then."

"No—I think that I should *like* to see him beg."

She gave Asir a long searching glance, then turned to walk away. The thief cursed her quietly and followed her with his eyes. A dozen steps away she stopped again, looked back over her shoulder, and repeated the slow wink. Then she marched on toward her father's house. The wink made his scalp crawl for a moment, but then ...

*Suppose she hasn't betrayed me? Suppose she had wheedled the sentence out of Tokra, and knew what his punishment would be. I think that I should like to see him beg.*

But on the other hand, the fickle she-devil might be tricking him into asking for a sentence that she *knew* would be death or dismemberment—just to amuse herself.

He cursed inwardly and trembled as he peered at the bored executioner. He licked his lips and fought against dizziness as he groped for words. Slubil heard him muttering and looked up.

"Are you ready for me yet?"

Asir closed his eyes and gritted his teeth. "Give it to me!" he yelled suddenly, and braced himself against the post.

Why not? The short time gained couldn't be classed as living. Have it done with. Eternity would be sweet in comparison to this ignominy. A knife could be a blessing.

He heard the executioner chuckle and stand up. He heard the man's footsteps approaching slowly, and the singing hiss of the knife as Slubil swung it in quick arcs. The executioner moved about him slowly, teasing him with the whistle of steel fanning the air about him. He was expected to beg. Slubil occasionally laid the knife against his skin and took it away again. Then Asir heard the rustle of the executioner's cloak as his arm went back. Asir opened his eyes.

The executioner grinned as he held the blade high—aimed at Asir's head! The girl had tricked him. He groaned and closed his eyes again, muttering a half-forgotten prayer.

The stroke fell—and the blade chopped into the post above his head. Asir fainted.

When he awoke he lay in a crumpled heap on the ground. The executioner rolled him over with his foot.

"In view of your extreme youth, thief," the knifeman growled, "the council has ordered you perpetually banished. The sun is setting. Let dawn find you in the hills. If you return to the plains, you will be chained to a wild hilfffen and dragged to death."

Panting weakly, Asir groped at his forehead, and found a fresh wound, raw and rubbed with rust to make a scar. Slubil had marked him as an outcast. But except for the nail-holes through his forearms, he was still in one piece. His hands were numb, and he could scarcely move his fingers. Slubil had bound the spike-wounds, but the bandages were bloody and leaking.

When the knifeman had gone, Asir climbed weakly to his feet. Several of the townspeople stood

nearby, snicker-ing at him. He ignored their catcalls and staggered toward the outskirts of the village, ten minutes away. He had to speak to Mara, and to her father if the crusty oldster would listen. His thief's knowledge weighed upon him and brought desperate fear.

Darkness had fallen by the time he came to Welkir's house. The people spat at him in the streets, and some of them flung handfuls of loose dirt after him as he passed.

A light flickered feebly through Welkir's door. Asir rat-tled it and waited.

Welkir came with a lamp. He set the lamp on the floor and stood with feet spread apart, arms folded, glaring haughtily at the thief. His face was stiff as weathered stone. He said nothing, but only stared contemptuously.

Asir bowed his head. "I have come to plead with you, Senior Kinsman."

Welkin snorted disgust. "Against the mercy we have shown you?"

He looked up quickly, shaking his head. "No! For that I am grateful."

"What then?"

"As a thief, I acquired much wisdom. I know that the world is dying, and the air is boiling out of it into the sky. I wish to be heard by the council. We must study the words of the ancients and perform their magic, lest our children's children be born to strangle in a dead world."

Welkir snorted again. He picked up the lamp. "He who listens to a thief's wisdom is cursed. He who acts upon it is doubly cursed and a party to the crime."

"The vaults," Asir insisted. "The key to the Blaze of the Winds is in the vaults. The god Roggins tells us in the words—"

"Stop! I will not hear!"

"Very well, but the blaze can be rekindled, and the air renewed. The vaults—" He stammered and shook his head. "The council must hear me."

"The council will hear nothing, and you shall be gone before dawn. And the vaults are guarded by the sleeper called Big Joe. To enter is to die. Now go away."

Welkir stepped back and slammed the door. Asir sagged in defeat. He sank down on the doorstep to rest a mo-moment. The night was black, except for lamp-flickers from an occasional window.

"Ssssst!"

A sound from the shadows. He looked around quickly, searching for the source.

"Ssssst! Asir!"

It was the girl Mara, Welkir's daughter. She had slipped out the back of the house and was peering at him around the corner. He arose quietly and went to her.

"What did Slubil do to you?" she whispered.

Asir gasped and caught her shoulders angrily. "Don't you *know*?"

"No! Stop! You're hurting me. Tokra wouldn't tell me. I made love to him, but he wouldn't tell."

He released her with an angry curse.

"You *had* to take it sometime," she hissed. "I knew if you waited you would be too weak from hanging to even run away."

He called her a foul name.

"Ingrate!" she snapped. "And I bought you a huffen!"

"You what?"

"Tokra gave me a ritual phrase and I bought you a huffen with it. You can't *walk* to the hills, you know."

Asir burned with full rage. "You slept with Tokra!" he snapped.

"You're jealous!" she tittered.

"How can I be jealous! I hate the sight of you!"

"Very well then, I'll keep the huffen."

"Do!" he growled. "I won't need it, since I'm not going to the hills!"

She gasped. "You've got to go, you fool. They'll kill you!"

He turned away, feeling sick. She caught at his arm and tried to pull him back. "Asir! Take the huffen and *go*!"

"I'll go," he growled. "But not to the hills. I'm going out to the vault."

He stalked away, but she trotted along beside him, trying to tug him back. "Fool! The vaults are sacred! The priests guard the entrance, and the Sleeper guards the inner door. They'll kill you if you try it, and if you linger, the council will kill you tomorrow."

"Let them!" he snarled. "I am no sniveling townsman! I am of the hills, and my father was a renegade. Your council had no right to judge me. Now I shall judge *them!*"

The words were spoken hotly, and he realized their folly. He expected a scornful rebuke from Mara, but she hung onto his arm and pleaded with him. He had dragged her a dozen doorways from the house of her father. Her voice had lost its arrogance and became pleading.

"Please, Asir! Go away. Listen! I will even go with you—if you want me."

He laughed harshly. "Tokra's leavings."

She slapped him hard across the mouth. "Tokra is an impotent old dodderer. He can scarcely move for arthri-tis. You're an idiot! I sat on his lap and kissed his bald pate for you."

"Then why did he give you a ritual phrase?" he asked stiffly.

"Because he likes me."

"You lie." He stalked angrily on.

"Very well! Go to the vaults. I'll tell my father, and they'll hunt you down before you get there."

She released his arm and stopped. Asir hesitated. She meant it. He came back to her slowly, then slipped his swollen hands to her throat. She did not back away.

"Why don't I just choke you and leave you lying here?" he hissed.

Her face was only a shadow in darkness, but he could see her cool smirk.

"Because you love me, Asir of Franic."

He dropped his hands and grunted a low curse. She laughed low and took his arm.

"Come on. We'll go get the huffen," she said.

*Why not?* he thought. *Take her huffen, and take her too.* He could dump her a few miles from the village, then circle back to the vaults. She leaned against him as they moved back toward her father's house, then skirted it and stole back to the field behind the row of dwellings. Phobos hung low in the west, its tiny disk lending only a faint glow to the darkness.

He heard the huffen's breathing as they approached a hulking shadow in the gloom. Its great wings snaked out slowly as it sensed their approach, and it made a low piping sound. A native Martian species, it bore no resemblance to the beasts that the ancients had brought with them from the sky. Its back was covered with a thin shell like a beetle's, but its belly was porous and soft. It digested food by sitting on it, and absorbing it. The wings were bony—parchment stretched across a fragile frame. It was headless, and lacked a centralized brain, the nerv-ous functions being distributed.

The great creature made no protest as they climbed up the broad flat back and strapped themselves down with the belts that had been threaded through holes cut in the huffen's thin, tough shell. Its lungs slowly gathered a tremendous breath of air, causing the riders to rise up as the huge air-sacs became distended. The girth of an inflated huffen was nearly four times as great as when deflated. When the air was gathered, the creature began to shrink again as its muscles tightened, compressing the breath until a faint leakage-hiss came from behind. It waited, wings taut.

The girl tugged at a ring set through the flesh of its flank. There was a blast of sound and a jerk. Nature's experiment in jet propulsion soared ahead and turned into the wind. Its first breath exhausted, it gathered another and blew itself ahead again. The ride was jerky. Each tailward belch was a rough lurch. They let the huffen choose its own heading as it gained altitude. Then Mara tugged at the wing-straps, and the creature wheeled to soar toward the dark hills in the distance.

Asir sat behind her, a sardonic smirk on his face, as the wind whipped about them. He waited until they had flown beyond screaming distance of the village. Then he took her shoulders lightly in his hands. Mistaking it for affection, she leaned back against him easily and rested her dark head on his shoulder. He kissed her—while his hand felt gingerly for the knife at her belt. His fingers were numb, but he managed to clutch it, and press the blade lightly against her throat. She gasped. With his other hand, he

caught her hair.

"Now guide the huffen down!" he ordered.

"Asir!"

"Quickly!" he barked.

"What are you going to do?"

"Leave you here and circle back to the vaults."

"No! Not out here at night!"

He hesitated. There were slinking prowlers on the Cimerian plain, beasts who would regard the marooned daughter of Welkir a delicious bit of good fortune, a gustatory delight of a sort they seldom were able to enjoy. Even above the moan of the wind, he would hear an occasional howl-cry from the fanged welcoming committee that waited for its dinner beneath them.

"Very well," he growled reluctantly. "Turn toward the vaults. But one scream and I'll slice you." He took the blade from her throat but kept the point touching her back.

"Please, Asir, no!" she pleaded. "Let me go on to the hills. Why do you want to go to the vaults? Because of Tokra?"

He gouged her with the point until she yelped. "Tokra be damned, and you with him!" he snarled. "Turn back."

"Why?"

"I'm going down to kindle the Blaze of the Winds."

"You're mad! *The spirits of the ancients live in the vaults.*"

"I am going to kindle the Blaze of the Winds," he insisted stubbornly. "Now either turn back, or go down and I'll turn back alone."

After a hesitant moment, she tugged at a wing rein and the huffen banked majestically. They flew a mile to the south of the village, then beyond it toward the clois-ter where the priests of Big Joe guarded the entrance to the vaults. The cloister was marked by a patch of faint light on the ground ahead.

"Circle around it once," he ordered.

"You can't get in. They'll kill you."

He doubted it. No one ever tried to enter, except the priests who carried small animals down as sacrifices to the great Sleeper. Since no outsider ever dared go near the shaft, the guards expected no one. He doubted that they would be alert.

The cloister was a hollow square with a small stone tower rising in the center of the courtyard. The tower contained the entrance to the shaft. In the dim light of Phobos, assisted by yellow flickers from the cloister win-dows, he peered at the courtyard as they circled closer. It seemed to be empty.

"Land beside the tower!" he ordered.

"Asir—please—"

"Do it!"

The huffen plunged rapidly, soared across the outer walls, and burst into the courtyard. It landed with a rough jolt and began squeaking plaintively.

"Hurry!" he hissed. "Get your straps off and let's go." "I'm not going."

A prick of the knife point changed her mind. They slid quickly to the ground, and Asir kicked the huffen in the flanks. The beast sucked in air and burst aloft.

Startled faces were trying to peer through the lighted cloister windows into the courtyard. Someone cried a challenge. Asir darted to the door of the tower and dragged it open. Now forced to share the danger, the girl came with him without urging. They stepped into a stair-landing. A candle flickered from a wall bracket. A guard, sitting on the floor beneath the candle glanced up in complete surprise. Then he reached for a short barbed pike. Asir kicked him hard in the temple, then rolled his limp from outside. Men with torches were running across the courtyard. He slammed the heavy metal door and bolted it.

Fists began beating on the door. They paused for a moment to rest, and Mara stared at him in fright. He ex-pected her to burst into angry speech, but she only leaned against the wall and panted. The dark mouth of the stairway yawned at them—a stone throat that led into the bowels of Mars and the realm of the monster, Big Joe. He glanced at Mara thoughtfully, and felt sorry for her.

"I can leave you here," he offered, "but I'll have to tie you."

She moistened her lips, glanced first at the stairs, then at the door where the guards were raising a frantic howl. She shook her head.

"I'll go with you."

"The priests won't bother you, if they see that you were a prisoner."

"I'll go with you."

He was pleased, but angry with himself for the pleasure. An arrogant, spiteful, conniving wench, he told himself. She'd lied about Tokra. He grunted gruffly, seized the candle, and started down the stairs. When she started after him, he stiffened and glanced back, remembering the barbed pike.

As he had suspected, she had picked it up. The point was a foot from the small of his back. They stared at each other, and she wore her self-assured smirk.

"Here," she said, and handed it casually. "You might need this."

They stared at each other again, but it was different this time. Bewildered, he shook his head and resumed the descent toward the vaults. The guards were battering at the doors behind them.

The stairwell was damp and cold. Blackness folded about them like a shroud. They moved in silence, and after five thousand steps, Ash stopped counting.

Somewhere in the depths, Big Joe slept his restless sleep. Asir wondered grimly how long it would take the guards to tear down the metal door. Somehow they had to get past Big Joe before the guards came thundering after them. There was a way to get around the monster: of that he was certain. A series of twenty-four numbers was involved, and he had memorized them with a stolen bit of ritual. How to use them was a different matter. He imagined vaguely that one must call them out in a loud voice before the inner entrance.

The girl walked beside him now, and he could feel her shivering. His eyes were quick and nervous as he scanned each pool of darkness, each nook and cranny along the stairway wall. The well was silent except for the mutter of their footsteps, and the gloom was full of musty odors. The candle afforded little light.

"I told you the truth about Tokra," she blurted suddenly.

Asir glowered straight ahead and said nothing, embarrassed by his previous jealousy. They moved on in silence.

Suddenly she stopped. "Look," she hissed, pointing down ahead.

He shielded the candle with his hand and peered downward toward a small square of dim light. "The bottom of the stairs," he muttered.

The light seemed faint and diffuse—with a slight greenish cast. Asir blew out the candle, and the girl quickly protested.

"How will we see to climb again?"

He laughed humorlessly. "What makes you think we will?"

She moaned and clutched at his arm, but came with him as he descended slowly toward the light. The stairway opened into a long corridor whose ceiling was faintly luminous. White-faced and frightened, they paused on the bottom step and looked down the corridor. Mara gasped and covered her eyes.

"Big Joe!" she whispered in awe.

He stared through the stairwell door and down the corridor through another door into a large room. Big Joe sat in the center of the room, sleeping his sleep of ages amid a heap of broken and whitening bones. A creature of metal, twice the height of Asir, he had obviously been designed to kill. Tri-fingered hands with gleaming talons, and a monstrous head shaped like a Marswolf, with long silver fangs. Why should a metal-creature have fangs, unless he had been built to kill?

The behemoth slept in a crouch, waiting for the intruders.

He tugged the girl through the stairwell door. A voice droned out of nowhere: *"If you have come to plunder, go back!"*

He stiffened, looking around. The girl whimpered.

"Stay here by the stairs," he told her, and pushed her firmly back through the door.

Asir started slowly toward the room where Big Joe waited. Beyond the room he could see another

door, and the monster's job was apparently to keep intruders back from the inner vaults where, according to the ritual chants, the Blaze of the Winds could be kindled.

Halfway along the corridor, the voice called out again, beginning a kind of sing-song chant: "*Big Joe will kill you, Big Joe will kill you, Big Joe will kill you—*"

He turned slowly, searching for the speaker. But the voice seemed to come from a black disk on the wall. The talking-machines perhaps, as mentioned somewhere in the ritual.

A few paces from the entrance to the room, the voice fell silent. He stopped at the door, staring in at the mon-ster. Then he took a deep breath and began chanting the twenty-four numbers in a loud but quavering voice. Big Joe remained in his motionless crouch. Nothing hap-pened. He stepped through the doorway.

Big Joe emitted a deafening roar, straightened with a metallic groan, and lumbered toward him, taloned hands extended and eyes blazing furiously. Asir shrieked and ran for his life.

Then he saw Mara lying sprawled in the stairway entrance. She had fainted. Blocking an impulse to leap over her and flee alone, he stopped to lift her.

But suddenly he realized that there was no pursuit. He looked back. Big Joe had returned to his former position, and he appeared to be asleep again. Puzzled, Asir stepped back into the corridor.

*"If you have come to plunder, go back!"*

He moved gingerly ahead again.

*"Big Joe will kill you, Big Joe will kill you, Big Joe will kill—"*

He recovered the barbed pike from the floor and stole into the zone of silence. This time he stopped to look around. Slowly he reached the pike-staff through the doorway. Nothing happened. He stepped closer and waved it around inside. Big Joe remained motionless.

Then he dropped the point of the pike to the floor. The monster bellowed and started to rise. Asir leaped back, scalp crawling. But Big Joe settled back in his crouch.

Fighting a desire to flee, Asir reached the pike through the door and rapped it on the floor again. This time noth-ing happened. He glanced down. The pike's point rested in the center of a gray floor-tile, just to the left of the entrance. The floor was a checkerboard pattern of gray and white. He tapped another gray square, and this time the monster started out of his drowse again.

After a moment's thought, he began touching each tile within reach of the door. Most of them brought a response from Big Joe. He found four that did not. He knelt down before the door to peer at them closely. The first was unmarked. The second bore a dot in the center. The third bore two, and the fourth three—in order of their distance from the door.

He stood up and stepped inside again, standing on the first tile. Big Joe remained motionless. He stepped diag-onally left to the second—straight ahead to the third—then diagonally right to the fourth. He stood there for a moment, trembling and staring at the Sleeper. He was four feet past the door!

Having assured himself that the monster was still asleep, he crouched to peer at the next tiles. He stared for a long time, but found no similar markings. Were the dots coincidence?

He reached out with the pike, then drew it back. He was too close to the Sleeper to risk a mistake. He stood up and looked around carefully, noting each detail of the room—and of the floor in particular. He counted the rows and columns of tiles—twenty-four each way.

Twenty-four—and there were twenty-four numbers in the series that was somehow connected with safe passage through the room. He frowned and muttered through the series to himself

0,1,2,3,3,3,2,2,1 . .

The first four numbers—0,1,2,3. And the tiles—the first with no dots, the second with one, the third with two, the fourth with three. But the four tiles were not in a straight line, and there were no marked ones beyond the fourth. He backed out of the room and studied them from the end of the corridor again.

Mara had come dizzily awake and was calling for him weakly. He replied reassuringly and turned to his task again. "First tile, then diagonally left, then straight, then diagonally right—"

0,1,2,3,3.

A hunch came. He advanced as far as the second tile, then reached as far ahead as he could and touched the square diagonally right from the fourth one. Big Joe re-mained motionless but began to

speak. His scalp bristled at the growling voice.

*"If the intruder makes an error, Big Joe will kill."*

Standing tense, ready to leap back to the corridor, he touched the square again. The motionless behemoth re-peated the grim warning.

Asir tried to reach the square diagonally right from the fifth, but could not without stepping up to the third. Taking a deep breath, he stepped up and extended the pike cautiously, keeping his eyes on Big Joe. The pike rapped the floor.

*"If the intruder makes an error, Big Joe will kill."* But the huge figure remained in his place.

Starting from the first square, the path went left, straight, right, right, right. And after zero, the numbers went 1, 2, 3, 3, 3. Apparently he had found the key. One meant a square to the southeast; two meant south; and three southwest. Shivering, he moved up to the fifth square upon which the monster growled his first warning. He looked back at the door, then at Big Joe. The taloned hands could grab him before he could dive back into the corridor.

He hesitated. He could either turn back now, or gamble his life on the accuracy of the tentative belief. The girl was calling to him again.

"Come to the end of the corridor!" he replied.

She came hurriedly, to his surprise.

"No!" he bellowed. "Stay back of the entrance! Not on the tile! *No!*"

Slowly she withdrew the foot that hung poised over a trigger-tile.

"You can't come in unless you know how," he gasped. She blinked at him and glanced nervously back over her shoulder. "But I hear them. They're coming down the stairs."

Asir cursed softly. Now he *had* to go ahead.

"Wait just a minute," he said. "Then I'll show you how to come through."

He advanced to the last tile that he had tested and stopped. The next two numbers were two—for straight ahead. And they would take him within easy reach of the long taloned arms of the murderous sentinel. He glanced around in fright at the crushed bones scattered across the floor. Some were human. Others were animal-sacrifices tossed in by the priests.

He had tested only one two—back near the door. If he made a mistake, he would never escape; no need bothering with the pike.

He stepped to the next tile and closed his eyes.

*"If the intruder makes an error, Big Joe will kill."*

He opened his eyes again and heaved a breath of relief.

"Asir! They're getting closer! I can hear them!"

He listened for a moment. A faint murmur of angry voices in the distance. "All right," he said calmly. "Step only on the tiles I tell you. See the gray one at the left of the door?"

She pointed. "This one?"

"Yes, step on it."

The girl moved up and stared fearfully at the monstrous sentinel. He guided her up toward him. "Diagonally left—one ahead—diagonally right. Now don't be frightened when he speaks—"

The girl came on until she stood one square behind him. Her quick frightened breathing blended with the growing sounds of shouting from the stairway. He glanced up at Big Joe, noticing for the first time that the steel jaws were stained with a red-brown crust. He shuddered.

The grim chess-game continued a cautious step at a time, with the girl following one square behind him. What if she fainted again? And fell across a triggered tile? They passed within a foot of Big Joe's arm.

Looking up, he saw the monster's eyes move—following them, scrutinizing them as they passed. He froze. "We want no plunder," he said to the machine. The gaze was steady and unwinking.

"The air is leaking away from the world."

The monster remained silent.

"Hurry!" whimpered the girl. Their pursuers were gain-ing rapidly and they had crossed only half the distance to the opposing doorway. Progress was slower now, for Asir needed occasionally to repeat

through the whole series of numbers, looking back to count squares and make certain that the next step was not a fatal one.

"They won't dare to come in after us," he said hopefully.

"And if they do?"

*"If the intruder makes an error, Big Joe will kill,"* announced the machine as Asir took another step.

"Eight squares to go!" he muttered, and stopped to count again.

"Asir! They're in the corridor!"

Hearing the tumble of voices, he looked back to see blue-robed men spilling out of the stairway and milling down the corridor toward the room. But halfway down the hall, the priests paused—seeing the unbelievable: two intruders walking safely past their devil-god. They growled excitedly among themselves. Asir took another step. Again the machine voiced the monotonous warning.

*"If the intruder makes an error ..."*

Hearing their deity speak, the priests of Big Joe bab-bled wildly and withdrew a little. But one, more impulsive than the rest, began shrieking.

*"Kill the intruders! Cut them down with your spears!"*

Asir glanced back to see two of them racing toward the room, lances cocked for the throw. If a spear struck a trigger-tile—

"Stop!" he bellowed, facing around.

The two priests paused. Wondering if it would result in his sudden death, he rested a hand lightly against the huge steel arm of the robot, then leaned against it. The huge eyes were staring down at him, but Big Joe did not move.

The spearmen stood frozen, gazing at the thief's familiarity with the horrendous hulk. Then, slowly they backed away.

Continuing his bluff, he looked up at Big Joe and spoke in a loud voice. "If they throw their spears or try to enter, kill them."

He turned his back on the throng in the hall and continued the cautious advance. Five to go, four, three, two—

He paused to stare into the room beyond. Gleaming machinery—all silent—and great panels, covered with a multitude of white circles and dials. His heart sank. If here lay the magic that controlled the Blaze of the Great Wind, he could never hope to rekindle it.

He stepped through the doorway, and the girl followed. Immediately the robot spoke like low thunder.

*"The identity of the two technologists is recognized. Hereafter they may pass with impunity. Big Joe is charged to ask the following: why do the technologists come, when it is not yet time?"*

Staring back, Asir saw that the robot's head had turned so that he was looking directly back at the thief and the girl. Asir also saw that someone had approached the door again. Not priests, but townspeople.

He stared, recognizing the Chief Commoner, and the girl's father Welkir, three other Senior Kinsmen, and—Slubil, the executioner who had nailed him to the post.

"Father! Stay back."

Welkir remained silent, glaring at them. He turned and whispered to the Chief Commoner. The Chief Commoner whispered to Slubil. The executioner nodded grimly and took a short-axe from his belt thong. He stepped through the entrance, his left foot striking the zero-tile. He peered at Big Joe and saw that the monster remained motionless. He grinned at the ones behind him, then snarled in Asir's direction.

"Your sentence has been changed, thief."

"Don't try to cross, Slubil!" Asir barked.

Slubil spat, brandished the axe, and stalked forward. Big Joe came up like a resurrection of fury, and his elbow was explosive in the vaults. Slubil froze, then stupidly drew back his axe.

Asir gasped as the talons closed. He turned away quickly. Slubil's scream was cut off abruptly by a

ripping sound, then a series of dull cracks and snaps. The girl shrieked and closed her eyes. There were two distinct thuds as Big Joe tossed Slubil aside.

The priests and the townspeople—all except Welkir—had fled from the corridor and up the stairway. Welkir was on his knees, his hands covering his face.

"Mara!" he moaned. "My daughter."

"Go back, Father," she called.

Dazed, the old man picked himself up weakly and stag-gered down the corridor toward the stairway. When he passed the place of the first warning voice, the robot moved again—arose slowly and turned toward Asir and Mara who backed quickly away, deeper into the room of strange machines. Big Joe came lumbering slowly after them.

Asir looked around for a place to flee, but the monster stopped in the doorway. He spoke again, a mechanical drone like memorized ritual.

*Big Joe is charged with announcing his function for the intelligence of the technologists. His primary function is to prevent the entrance of possibly destructive organisms into the vaults containing the control equipment for the fu-sion reaction which must periodically renew atmospheric oxygen. His secondary function is to direct the tech-nologists to records containing such information as they may need. His tertiary function is to carry out simple directions given by the technologists if such directions are possible to his limited design.*

Asir stared at the lumbering creature and realized for the first time that it was not alive, but only a machine built by the ancients to perform specific tasks. Despite the fresh redness about his hands and jaws, Big Joe was no more guilty of Slubil's death than a grinding mill would be if the squat sadist had climbed into it while the Mars oxen were yoked to the crushing roller.

Perhaps the ancients had been unnecessarily brutal in building such a guard—but at least they had built him to *look* like a destroyer, and to give ample warning to the intruder. Glancing around at the machinery, he vaguely understood the reason for Big Joe. Such metals as these would mean riches for swordmakers and smiths and plun-derers of all kinds.

Asir straightened his shoulders and addressed the machine.

"Teach us how to kindle the Blaze of the Great Wind."

*"Teaching is not within the designed functions of Big Joe. I am charged to say: the renewal reaction should not be begun before the Marsyear 6,000, as the builders reckoned time."*

Asir frowned. The years were not longer numbered, but only named in honor of the Chief Commoners who ruled the villages. "How long until the year 6,000?" he asked.

Big Joe clucked like an adding machine. "Twelve Marsyears, technologist."

Asir stared at the complicated machinery. Could they learn to operate it in twelve years? It seemed impossible.

"How can we begin to learn?" he asked the robot.

*"This is an instruction room, where you may examine records. The control mechanisms are installed in the deepest vault."*

Asir frowned and walked to the far end of the hail where another door opened into—*another anteroom with another Big Joe!* As he approached the second robot spoke:

*"If the intruder has not acquired the proper knowl-edge, Big Oswald will kill."*

Thunderstruck, he leaped back from the entrance and swayed heavily against an instrument panel. The panel lit up and a polite recorded voice began reading something about "President Snell's role in the Eighth World War." He lurched away from the panel and stumbled back toward Mara who sat glumly on the foundation slap of a weighty machine.

"What are you laughing about?" she muttered.

"We're still in the first grade!" he groaned, envisioning a sequence of rooms. "We'll have to learn the magic of the ancients before we pass to the next."

"The ancients weren't so great," she grumbled. "Look at the mural on the wall."

Asir looked, and saw only a strange design of circles about a bright splash of yellow that might have

been the sun. "What about it?" he asked.

"My father taught me about the planets," she said. "That is supposed to be the way they go around the sun." "What's wrong with it?"

"One planet too many," she said. "Everyone knows that there is only an asteroid belt between Mars and Venus. The picture shows a planet there."

Asir shrugged indifferently, being interested only in the machinery. "Can't you allow them one small mistake?"

"I suppose." She paused, gazing miserably in the direction in which her father had gone. "What do we do now?"

Asir considered it for a long time. Then he spoke to Big Joe. "You will come with us to the village."

The machine was silent for a moment, then: *"There is an apparent contradiction between primary and tertiary functions. Request priority decision by technologist."*

Asir failed to understand. He repeated his request. The robot turned slowly and stepped through the doorway. He waited.

Asir grinned. "Let's go back up," he said to the girl.

She arose eagerly. They crossed the anteroom to the corridor and began the long climb toward the surface, with Big Joe lumbering along behind.

"What about your banishment, Asir?" she asked gravely.

"Wait and see." He envisioned the pandemonium that would reign when girl, man, and robot marched through the village to the council house, and he chuckled. "I think that I shall be the next Chief Commoner," he said. "And my councilmen will all be thieves."

"Thieves!" she gasped. "Why?"

"Thieves who are not afraid to steal the knowledge of the gods—and become technologists, to kindle the Blaze of the Winds."

"What is a 'technologist', Asir?" she asked worshipfully.

Asir glowered at himself for blundering with words he did not understand, but could not admit ignorance to Mara who clung tightly to his arm. "I think," he said, "that a technologist is a thief who tells the gods what to do."

"Kiss me, Technologist," she told him in a small voice. Big Joe clanked to a stop to wait for them to move on. He waited a long time.

## Bitter Victory

By WALTER MILLER, Jr.

*Klia had a beautiful body. And why not? She made it herself.*

HE PROWLED the city's the crowds with eyes of gray steel, waiting for Klia's probing thoughts to touch some unwary Terran. Sooner or later she would have to betray herself to him if she meant to pursue her goal. And then he would kill her and go. This was his task, set for him by the director of the Phoenician Quarantine Commission.

He had been here six months, and thus far the only evidence of her presence was a series of articles in a technical journal, written by a certain Willa E. Foggerty, M.S. The author had access to information possessed by no Terran scientist. The information was presented tidbit-style, almost humorously, and as pure speculation rather than as fact, but it was obviously calculated to steer the minds' of readers toward certain doors that Klia wanted opened.

Klia's mental formative-patterns were those of the paranoid, but having matured in a society where such patterns were the norm, she was neither insane nor neurotic. Her mind was keen, and her goals

were those of the predator. San Rorrek had to find and kill her quickly.

He watched the streets by night because her race and his were both non-sleepers. They were capable of resting a part of the brain at a time, having two cortical areas for each bodily function. He knew she would become bored by night-time inactivity; sooner or later she would come wandering, while most of the city slept. In what guise would he find her? Her normal racial appearance did not conform to Terran standards. She was tall, willowy, nearly albino, with pink-gray eyes, slightly slanted, and with rich red hair that swept upward in a natural tufted appearance. But hair and skin could be dyed. And over a period of several weeks she could control her circulatory and glandular systems in such a way that fatty deposits would appear where she desired them and disappear in other places so that she could change her features and her form at will, as he himself had done.

Of one thing he was certain: Her paranoid pride would not permit her to assume a guise regarded as ugly by this world. Most certainly she would make herself strikingly beautiful.

San Rorrek however had reduced his body-weight, padded his cheekbones to give himself a gaunt appearance, dyed his hair black and his skin a sallow shade. An irritant, rubbed into pinpricks on his face, resulted in mild acne that made him something less than handsome. He smeared his teeth with brown stain, wore shabby second-hand clothing, and a pair of plain-rimmed glasses. He was not here to attract attention; he was here to kill. He looked like a peddler or a laborer out of a job.

He was walking down a side-street at midnight when he caught the first faint aura of her presence. She was somewhere within a few blocks, and she was planting a suggestion in the mind of the Terran who would not recognize the source of the thoughts as stemming from outside his own consciousness.

*Sweee-whew! That dame on the corner! Did she look at me? Think I'll walk that way.*

This was it! San had not reached out to touch the Terran's mind, for in doing so he would broadcast his own thought-aura and reveal his presence to Klia. He had merely listened to Klia's planting of the thought in the Terran's mind, and he caught the general direction from whence it came. He began walking rapidly up the street, then cut through the blackness of an alley.

Was she playing games, or had she chosen a Terran to be of some service to her? Perhaps she was bored, and only wanted a brief love-affair.

AT THE END of the alley, he paused to peer toward both intersections. There were a few people on the sidewalk, but no woman tall enough to be Klia. He jaywalked and darted down the next alleyway. If the Terran had responded immediately to her suggestion, they would perhaps be gone before he could reach them.

But then he caught another brief flash of thought—not words, but an image. She was helping the Terran imagine what she might look like without clothing. San chuckled as he trotted ahead. Unknowingly, she had given him a clue as to her appearance. Through glandular control, she had apparently padded herself to a remarkable condition of mammalian grandiloquence. The effect was almost surrealistic; the way a male might design a female if he had any choice in the matter.

"You liked that, eh?" snarled a quiet voice from the darkness of a doorway.

He stopped abruptly in mid-alley, caught in a puddle of moonlight. She had tricked him. There had been no Terran. The phoney suggestion had been a trap. He glanced quickly around.

"Don't move," she snapped. "I've got a native gun on, you—a projectile weapon, in case you aren't familiar with their artifacts."

He stood in stony silence, staring at the doorway until he made out her faint shadow. There was a tiny venom-gun strapped to his wrist, but its action would not be immediate, and if he used it, she would have ample time to kill him before she died. If it came to that he would use it, but now he hesitated, trying to piece together her immediate intentions.

He shrugged and grinned. "Okay. So I lost. Shoot and get it over with."

"Not here. They'd run an autopsy on you, pastoral. They'd figure you weren't quite Terran."

"I'm no pastoral. I'm an inventive."

"It's all the same to me, Rorrek. You're a lousy Thirder. Now move! Stay in the moonlight and walk slow. Stop when you come to the street. I'll be right behind you."

"Where are we going?"

"Shut up! And don't start making suggestions at a policeman, or I'll kill you."

Rorrek started walking. He felt her thoughts scanning lightly through various regions of consciousness-patterns until she found a taxi-driver. *Then: I gotta hunch there's a customer on the next street. Think I'll turn right.*

The taxi was approaching the alley entrance as they emerged. "Flag it," she ordered. Rorrek obeyed grim-lipped.

"You get in first, darling," she said in a pleasant tone. "I like to sit on the right."

"That's just because I'm right handed, dear," he purred acidly.

"Where to, sir?"

*Out of the city*, the girl ordered Rorrek wordlessly. *Tell him.*

"Ask her. She's boss."

The gun jabbed him ruthlessly in the ribs. The driver grinned. "Where to, lady?"

She hesitated. "A long trip?"

"How long?"

"Oh, thirty, forty miles. North."

"It'll cost you."

"That's all right. Will twenty dollars do it?"

"Maybe. Watch the meter and double it. You'll have to pay both ways."

"Let's go."

Rorrek glanced at her sourly as they moved through the traffic. She had been exaggerating only slightly with the mental image used to trap him. The platinum blonde hair, the gray eyes, the aristocratic features, the full, slightly cynical mouth—she conformed perfectly to the beauty standards of this world. The black dress revealed things that would have won her first place in any of the inane native female contests.

"You've done well by yourself, I see," he said, eyeing the expensive clothing and jewelry.

*What telepath couldn't? And stop talking aloud.*

He watched her for a moment. The gun was in her handbag. So was her hand. And she was keeping a sharp eye on him. Rorrek frowned. No opening yet.

*Where are we going?*

*Someplace where you can dig a hole without being seen.*

Rorrek stared ahead at the traffic for a moment. He didn't need to ask her what the hole was for.

THE DRIVER was approaching an intersection and the light was just changing from green to red. Having heard the girl summon the taxi, Rorrek knew the man's consciousness pattern. He adjusted to it quickly and planted a rapid suggestion: *Damn the light! I can make it!*

The girl cursed and lifted the handbag. The light was already red. A car shot out from the other street. The brakes screamed. A police-whistle shrilled angrily.

"Shoot," Rorrek dared, smirking at Klia.

The handbag hesitated. "Make a wrong move and I'll have to."

The driver was too busy with his own troubles to hear them. The cop came stalking across the pavement. "You like to live dangerously, huh?" he said in a bored voice.

The cabby began a plaintive explanation.

"Come on, dear," said Klia. "We'll catch another cab."

"I like this one."

*Get out, or I'll kill you and the cop too. Pay the driver.*

Rorrek handed the driver a dollar. They crossed to the sidewalk and the girl looked shaken. This was a busier street and there were more pedestrians. He grinned at her again.

"May I buy you a drink before you finish me off?"

Surprisingly, she replied, "I'll let you live that long, pastoral. It's interesting to watch you try to wiggle out of it."

He knew she meant it. She could have hypnotized the cop and the driver, shot him in the cab, and strolled calmly away as one of a dozen multiple mental images. She could still do it, but evidently the idea of making him dig his own grave appealed to her icy sense of humor.

They entered a small bar and she directed him toward a secluded booth. "I'm surprised you haven't used your wrist weapon yet," she said as they sipped a martini. "Apparently you pastorals have no capability for self-sacrifice."

His face showed no surprise, but he rested his arm across the table. He smirked. "I was waiting for a better opportunity, but since you put it that way let's get it over with." His other hand darted toward the lethal wrist.

"One moment," she said.

He paused.

"Do you have an extra projectile?"

He frowned, then nodded.

She smiled again, and laid a braceleted white arm across the table. "I'll save you the trouble of firing. Prick me with it."

His throat started with surprise.

"You're not immune," he hissed.

"To Ayoyo venom? Try me."

Rorrek gained new admiration for her. The process of immunization was an excruciatingly painful treatment covering three years and usually it shortened the lifespan considerably. This could, mean but one thing.

"You've been plotting this for a long time then?"

Her eyes narrowed and she leaned forward. "Correct, pastoral. Ever since you excluded us from your society and sent us to an iron-less planet."

"I'm *not* a pastoral," he protested. "I'm an inventive."

"An artificial category. An inventive is a maladjusted pastoral who wishes he were a Klidd."

Her use of the ancient feudal name for her race startled him. His people had almost forgotten it. Once on Nu Phoenicis IV there had been the Klidds, or barons, the Algon, or serfs, and the Taknon, or artisans. The feudal system had lasted more than five thousand years, and because of natural selection operating within the occupational groups, the three classes had become genetically distinct. After the rise of a technology, the Klidds were overthrown and exiled to the ironless fourth planet where they formed their own ruthless social order under a strict space quarantine, enforced by the Taknon space-force which Rorrek served.

"I'll stop arguing heredity with you, Klia," he said. "Finish your drink and let's go."

"I'll call the signals."

"I love your Terran idiom," he grunted, "and your company is charming. But get your business over with."

"You're anxious to die?"

He shrugged indifferently. "Someone else will come and kill you, if I don't do the job. They know you're here now."

A smile. "You underestimate these people, Rorrek." She waved a casual hand toward the rest of the room. "Before another yokel like you can find me, I'll have these primitives building a five-space drive and proving that Nu Phoenicis has habitable planets. Then let's see you stop us."

He nodded thoughtfully. "So that's the picture. You get Terra to send ships to your world, expecting no human life there. The ships come back to Terra full of your people, ready to take over. Then you get your hands on Terran iron and steel to use in attacking my people."

"In general, yes." Her gray eyes were icy calm, and she hated him with a fierceness that he could feel —hated him as a symbol of the race who had exiled her people.

"You're pathetic," he said quietly.

She flushed, then her face went hard. He bored in.

"I have always felt intensely sorry for your asinine emotion patterns."

No Klidd could endure that. She turned white and hissed a curse in her native tongue. He locked a probe in her consciousness, and when she squeezed the trigger of her gun, he was on his feet heaving the table into her lap. It crashed down as the gun exploded. The bullet tore his calf. He lashed out with a heavy fist, hard to her temple, and hoping it was brutal enough to kill her. She sagged and toppled to the floor.

THE LOUNGE was in an uproar, the people cringing toward the walls. A police-whistle made an ear-shocking screech as the traffic cop from the corner came lumbering in to investigate.

"Don't anyone move!" he bellowed, and charged across the room toward Rorrek, who was about to kick Klia's temple to insure her death. His foot froze and settled to the floor.

"Call an ambulance," the cop bawled at the manager. "Everybody stay back!"

Rorrek began, "It was purely an—"

"Don't say anything. Just stand there and keep your hands in sight."

Rorrek kept his hands in sight. He stared at the cop, suggesting nausea, suggesting a fluttering of the heart, suggesting asphyxiation. The cop began to gasp and reel. Rorrek increased the mental dosage. The cop choked and fainted.

As Rorrek walked calmly out into the night, he heard voices behind him telling that the girl was dead. He felt sick himself now. There was something compelling about Klia, something that attracted. He felt a little like a child, drawn toward a cruel mother—or a husband, lured to a wantonly selfish and unfaithful mistress. He knew she had to be killed, yet now that it was done, he felt rotten inside.

At last he found a doctor and had his flesh-wound dressed. He stared at the doctor peculiarly and the medic seemed to forget it had been a bullet wound. Rorrek went home to his apartment, packed his belongings and called a cab.

An hour later he was aboard a flight for San Francisco. There was no returning to his home planet for he had ditched the ship at sea lest it be found by Terrans. Such were the quarantine regulations. He felt certain that Klia had done the same with her stolen Hydrian ship for another reason: Lest it be found by a commission agent such as himself. Also, her plan for leading Terrans spaceward, luring them to Phoenicis IV, and taking their ships, required that they continue in their naive belief that Terra possessed the only human life in the galaxy.

So he was stuck here for life unless a Taknon ship came to pick him up, and there had been no guarantee of that from the Commission. Secret landings on nonspacegoing planets were forbidden except in several specifically defined emergencies. Rescuing a second-class agent was not one of them.

He was faced with a life of ease but of loneliness. A telepath would have no difficulty acquiring tremendous wealth here, but a telepath would have no company—unless he could find a few natives whose neural associative circuits were so ordered as to make telepathy latently possible. Occasionally he had encountered a Terran whose thought-aura was vaguely perceptible. Perhaps, through long and patient hypnotic conditioning, their latent abilities could be brought forth. If the genetic hodgepodge could be straightened out, Terrans had high possibilities. Their basic genetic emotion-patterns were not as sharply divided into groups as those of Nu Phoenicis, but the patterns were present, and the conflict among them was present. Rather than calling them Pastorals, Inventives, and Imperials, as in the Phoenician case, he decided perhaps that the basic Terran-patterns could best be described by the goals they were inclined to favor. The "Security-Seekers", the "Knowledge-Seekers", and the "Glory-Seekers" perhaps.

Phoenician code forbade any tampering with non-threat cultural forms, but who was there to enforce it? And in a sense, this was his planet now. Marooned here, he could participate in a subtle (way, and help a few local inventives find new directions. Maybe he owed them that much for killing Klia, who would certainly have steered them spaceward, although the end result would have been disastrous for them, had her plan worked.

THE FIRST WEEK in San Francisco he spent replenishing his funds through poker games, wrestling matches, and various forms of betting in which thought-projective powers were a distinct advantage.

Then he rented a house in the suburbs, ordered half a ton of various electronic parts, and began building several computer units while he concentrated on revising his physical appearance to a more pleasing form.

As the weeks passed, he put on weight, removed the fatty tissue from his cheekbones, thickened his cheeks enough to remove the gauntness, and restored his complexion to a healthier hue. When he was finished, he had the appearance of a gregarious young businessman, cleanly attractive but not offensively handsome.

He finished the computer shortly after he finished himself. It was not a large unit as computers went. It was built into a chassis the size of an eight-foot refrigerator. A Terran might say it was constructed to handle problems in that rarefied strata of mathematics known as the Von Neumann theory of games. But the twenty-four instruments on its face were calibrated in "points per share".

Rorrek spent a month in libraries, photographing stock-market reports covering a thirty-year period. These he laboriously studied, plotting the rise and fall of each stock on graphs, writing empirical equations to describe each graph, and feeding the equations to the computer's memory tanks. Fed also into the tanks, were thirty-year record-equations describing tax-rates, population growth, national income, government expenditures, world armaments, exports, imports, and average individual incomes. The computer, required to assume that all the variables were dependent upon one another, evolved an implicit function in some thirty-seven variable quantities.

He then fed it the "present conditions" and required it to extrapolate the values forward over a period of two months. Eleven stocks appeared due for sharp rises within the period. San Rorrek invested ten thousand dollars. At the end of two months, the stocks had risen fifteen thousand. He corrected the small errors in the computer's estimates by supplying new data, then extrapolated again, selling and reinvesting in accordance with the new predictions. There was danger, of course, that a completely unpredictable series of events might occur to cause unfavorable market fluctuations. Therefore he very carefully watched world conditions, political developments, and technical advancements.

Klia's articles were still appearing in magazines and technical journals, but that was not surprising, considering the usual lag between the acceptance of an essay and its publication. And the pieces were having subtle repercussions in the news, attracting no attention in themselves, but spurring certain scientists to think along new lines. Klia had suggested a method for testing basic mental formative patterns in infancy; and now a western university's psychology department was setting up a research lab "for studying the basic affective reaction patterns of infants at birth".

Klia, under another pen-name, had suggested an extension of relativistic mechanics to cover hypothetical N-dimensional universes. The newspapers announced now that the famous mathematician, Larwich, was beginning work on the creation of a mathematical physics with no basic assumptions other than those of elementary arithmetic. "Man's only insight into reality," said Larwich, "derives from his ability to count on his fingers. All else is purely experiential approximation."

Rorrek grinned. Klia had been trying to steer Terran inventors straight toward a five-space interstellar drive, while the government was still spending billions on rocket research in the hope of reaching the moon. She was trying to get the mathematicians to see the velocity of light as a constant *only* at one specific universe-level of five-space, and as a different constant at other levels. And she had managed to steer Larwich in the right direction.

Only one thing was lacking: an experiential tie between observable reality and the theory Larwich would certainly develop. Without it, the theory would remain merely abstruse mathematical speculation of an invariantive nature. Rorrek's fingers itched at the typewriter, longing to supply the missing suggestion. A guilt-reaction, he told himself, probably associated with Klia's death.

Nevertheless he wrote an essay entitled "Origin of Interstellar Hydrogen", and sent it to a university press periodical. The article suggested that the spontaneous appearance of matter in the four-space cosmos could be explained in terms of a five-space continuum with a circulation of matter along the fifth component.

The essay was rejected with a brief note from the editor: "Sorry, but we just last week purchased an essay dealing with the mechanics of this 'continuous creation' notion. Your style is good. Try us again,

soon, Editor."

Rorrek snorted and chucked the essay in the wastebasket. Some local yokel had probably beat him to the draw with some weirdly empirical notion that left out the tie with five-space.

The rejection irritated him. He decided to give it up for a while, and concentrate on making himself a millionaire. Then he learned that Dr. Larwich was in San Francisco for the summer. After some debate about the desirability of direct intervention, he found the professor's address—a modest cottage overlooking the bay with a short stretch of narrow beach before it.

RORREK RENTED a cottage half a mile away. Three days later he wandered past the professor's cottage, having spied three brown bodies sunbathing on the beach before it. As he drew nearer, he studied them curiously. An elderly couple and a girl in her late twenties, possibly Larwich's daughter. She was watching him casually—a large, dark girl with hazel eyes and firm breasts.

Rorrek approached the group. "Am I still on a public beach?" he asked, "Or am I a trespasser?"

The elderly couple glanced up questioningly. The girl smiled. "Trespassers are welcome. Help yourself." She had a nice musical voice.

"I've got the next cottage down the line," he said. "But I scarcely realized I had neighbors."

"It is lonely out here. Won't you sit with us awhile? You look tired."

Rorrek grinned and patted a slight bulge in his mid-section. "Trying to work off my bay window." He strolled toward them, scraping his feet in the sand.

The old man looked down at his own sagging belly, then glowered at the stranger. "Young man, you have just committed a grievous *faux pas*," he grunted.

"I'm Edith Larwich," said the girl. "This is my father, Frank Larwich . . . and my mother, Louise."

He nodded and sat down. "I'm Sam Rory." He hesitated, looking at the professor and gathering a frown. "Larwich—Frank Larwich—I've heard of you, I think. Is it Doctor Larwich—of the new look in invariantive viewpoints?"

The old man looked surprised. He lifted his eyebrows first at his wife, then his daughter. He extended his hand to Rorrek and looked a beam of amusement down his slender nose. "Young man, you have just absolved yourself of that *faux pas*. What school are you with?"

"No school."

"What research lab, then?"

"No lab, I'm a gambler."

"Bah! Stop joking. Laymen don't talk about invariance, or remember the names of old codgers like me."

He shrugged. "I apologize for being a layman, sir, but I like mathematics. I've read a few of your pieces in the digest."

Larwich glanced at his wife and daughter again. They were looking curiously at Rorrek.

"My fame comes as a distinct shock to me," the old man said with a slight smile.

"Have a cup of iced tea," said Edith, pouring from a thermos.

He thanked her and managed to pull his eyes away from her body. Terran standards of beauty were beginning to appeal to him.

"When do you expect to publish your new theory, Doctor?" he asked casually.

"Make it 'Frank'," grunted the oldster. "And I expect to publish it within a few months. It's coming along much faster than I thought. In fact, it scares me sometimes."

Rorrek fell briefly thoughtful. Any man who could work that theory out in a few months was certainly the mental equal of the best minds of his own race. It startled him. Here seemed proof enough that Terran-humanity was going places, given a little intelligent biosocial reform.

"That's remarkable," he murmured. "I thought it would be at least two years."

"So did I. But Edith here helped me tremendously with certain down-to-earth suggestions. It may seem unbelievable to you, but I think this thing is going to have some practical applications, and apply to certain observable phenomena."

Rorrek looked sharply at the girl. She was smiling at him faintly with the cool green eyes. The old

man laughed.

"Edith forgot to mention—it's Edith Larwich, Ph.D. in physics. She instantly spotted some possible correlations between my theory and some of the modern cosmologies."

Rorrek was still staring at her. "Such as the mechanics of spontaneous creation of matter?" he asked quietly.

The girl nodded, and smiled amusement at her father who appeared taken aback. "If Sam Rory is really a gambler, let's not invite him to any poker games." She grinned at the visitor again. "This is remarkable. We'll have to get better acquainted."

He murmured pleasantly, but felt a vague uneasiness. He had come to plant a hint of the correlation in the mathematician's mind, but now there was no need to do so. When Larwich was through, physicists could build an experimental five-space generator on the basis of his theory. When the physicists were through making data-tables, engineers would be able to constrict a working model interstellar drive, provided someone would make the investment. Rorrek, busy making a fortune in the stock-market, musingly saw himself as angel for the first ship.

Edith stood up, tugging at her suit to cover a streak of white hip. She smiled down at him. "Think I'll swim. Care to join me?"

"Leave him here for a while, will you?" grunted Larwich.

Rorrek nodded at the girl. "I'll meet you in the water."

She trotted toward the surf, lithe, brown, and lovely in the sun.

"Your daughter is very beautiful, sir," Rorrek murmured.

"Eh? Oh, thank you. I find myself marvelling about her change so much that I scarcely notice her prettiness."

"Change?"

"In personality. You see, she was nearly blind until a few months ago. Cataracts. And she was always so retiring, quiet and introspective. It's remarkable what the removal of a physical defect can do for a girl's personality. You wouldn't call her shy and retiring now, would you?"

"Not at all. Quite friendly, I'd say."

Rorrek watched her plunging gracefully in the surf, and he wondered at his vague uneasiness.

"What do you really do, Sam?" Larwich asked.

"Investor. I hit it lucky on the market. Gambler—same thing."

Larwich chuckled. "You evidently read technical publications as a hobby, then. Or are you working on a mathematical way to beat the stock market?"

Rorrek smiled enigmatically, and got to his feet. "You might try the Von Neumann theory of games," he offered, then smiled sheepishly. "If you'll excuse me, I think I'll join your daughter for a swim."

HE WAS far out beyond the feeble breakers when he trotted through the shallow water, but she rolled on her, back to wave and watch him. A very beautiful, intelligent girl, he thought calculatingly. If he were to remain marooned on Terra, it would be interesting to see if normal procreation could result from marriage with a native. He felt an urge to touch the girl's mind, then decided against it for the present. Some Terrans seemed sensitively receptive, and they became startled by undue power.

She lay treading water until he swam up beside her, then she smiled but her eyes were thoughtful.

"Water's nice!" he grunted. "Is it?"

He frowned. "Why the challenging tone?"

"Who are you, anyway?"

"Just who I said I was. Sam Rory, gambler, investor."

She said nothing more about it, but her eyes were suspicious. They swam in silence for a time, then she called, "How's the beach down at your place?"

He hesitated. Was she angling? "Just fine," he said. "Why don't you come down?"

She lifted her wet head from the tide and nodded soberly. "I will. Very soon."

Again he felt the vague uneasiness.

Rorrek spent the afternoon on his porch, watching the bay. Tomorrow he meant to go back to the

suburbs, return to the task of making himself the wealthiest man in the country as quickly as possible, then start endowing universities with research grants like a fat old capitalist with a guilty conscience.

Twilight came, and he felt the loneliness of an alien longing for home. He visualized the warm, rolling hills of Phoenicia III, dotted with pastoral Algon villages, and the great walled city-states of the Taknon, covering hundreds of square miles and set in the midst of the Algon landscape. They worked in harmony, the two races—each maintaining its own government, each keeping itself socially and biologically separated, yet each realizing that one could not exist and prosper without the other. It was a class society that worked, worked because the classes were divided according to the goals they sought, not according to any artificial framework. Of course, Man's goals were chosen in the light of his emotions and aptitudes, and at least among the Phoenicians, emotion and aptitude patterns were founded on genetic bedrock. It was only rarely that Taknon aptitudes were born in an Algon village, and equally rare when a pastorally inclined child appeared in the Taknon cities.

Loneliness weighed heavily on him. With some misgivings he closed his eyes, and searched through the transor regions for the Larwich girl's pattern of consciousness. When he passed through it, he started up with a low gasp—and lost the pattern. There had been a knife-edge sharpness about it—a clarity of focus that suggested resonant neural circuits as in the trained telepath. He groped for it again.

But when he found it, the sharpness was gone—if it had really been there. The transor was strong but blurred, unreadable. He decided his first impression had been illusion.

*I wonder what that young man is doing?* he suggested. *He did invite me to his beach. Maybe if I walked down that way.*

He paused a moment, trying to catch the blurred images that swam in leisure through her consciousness. But they were too muddled. He withdrew from her and waited. Half-a-mile might be too far for the untrained mind to catch the faint suggestion, and even though she would mistake the thoughts for her own, she might offer herself some counter-excuse for not coming.

HE WATCHED the cottage in the failing gray of twilight. After a few minutes, the screen door opened, and someone stood on the porch. Then she trotted down the steps to the beach and came walking his way, but looking toward the sea. As she drew nearer, he saw that she was wearing white shorts and a pale blue blouse with the tail knotted about her waist. The wind whipped the blouse against her breasts and ruffled her short dark hair like a nest of feathers. He watched her come toward him with narrow speculative eyes, and he wondered again: Was a procreative union possible here?

She looked toward him and waved, breaking his reverie, then on apparently sudden impulse turned and plodded through the sand toward his porch.

"Am I trespassing? Or did you invite me to your beach?"

"Come on up," he called. "I was just wishing you'd drop by."

She hooked her foot on the step and cocked her head at him. "Why?"

It startled him. "The answer to that," he chuckled, "might be found in textbooks of psychology and biology, particularly the latter. Come up and sit down."

"Not if you're going to be biological."

"Only introspectively so. I have insufficient data on the subject to feel safe in rash experiments."

She laughed and came up to take a chair, propping her long, trim legs on the rail. "The subject is a carnivore who might chew off an ear."

"Mmm! How about a nice thick steak with onions and french fries and a gallon of beer?"

"The bloated subject would fall asleep in her cage."

"Exactly."

She watched him with cool amusement in the dusk. "I think we find each other attractive."

"I'm glad it's mutual. I have plans for you."

She dropped her legs, rested her elbows on her knees, and swung half around to grin peculiarly, head cocked up at him. "Okay, Sam. Finish the funny story."

He leaned toward her and tried to steal as softly as possible into her consciousness pattern, but he kept his voice light and casual.

"The plan is simple biology, but it involves many unknowns as yet. For instance—"

He pulled her face toward him slowly, and moulded her mouth with his. Quietly they slipped to their feet, locked tightly together, laughing quietly with soft fire where their faces touched. He brought his mind slowly into full resonance with her pattern, demanding her to respond.

The response was white flame, but not of the body. His mind reeled for an instant before he understood. *Full focus! Too bright!* And something hard against his ribs.

*You should have been born a Klidd!*

He backed away, staring at her, and the glint of metal in her hand.

*I wasn't certain, she went on until you threw that full resonance at me.*

"Klia!"

"Yes." She found a cigaret with her left hand and lit it while she held the gun on him with her right. He could see her face in the match-flare, and it appeared tight and drawn.

"Your lipstick is smeared," he offered.

"Thanks. It was a pleasure. I'm really sorry I have to kill you."

"Like you killed Larwich's blind daughter and took her place?"

Klia snorted. "She's not dead. She's still blind, and she's an amnesiac in a Pennsylvania psychopathic ward."

"Hypnotically induced amnesia, undoubtedly."

"Right. I had to get her personality patterns, and leave her a blank."

"I thought I left you dead on the floor."

She sighed impatiently. "Would a Terran know when a Phoenician was dead?"

Rorrek saw his blunder and gritted his teeth. He'd been a fool to believe. Naturally, every time someone touched her wrist to test her pulse, she had simply stopped her heartbeat until the fellow let go, or perhaps shut off the circulation in the arm.

"Well, you've got Larwich well on the road to the theory of a space drive, I see."

She nodded, started to reply, paused, then: "You didn't suspect me because you thought I was dead. Then why did you come prowling around Larwich?"

"To do what you've already done."

"You're lying."

"See for yourself." He began sliding into resonance with her, but she backed away warily and blocked him out.

"You can break it whenever you want to," he said.

She risked it, and their transors found sharp focus again. He reeled off the contents of his associative circuits relating to Larwich and his theory, reeled them off too rapidly for them to be inventions of the moment. Then he switched to memories concerning his thoughts of her.

"Why did you do that?" she muttered when he was through. Her voice was shaky, and the gun seemed to be sagging in her hand.

He shrugged. "We're a long way from Nu Phoenicis. I expect to be here for good."

"You will be," she said ominously, straightening. "Start marching down to the water."

"Why?"

"The tide's going out. You'll go with it."

"Suppose I suggest we work together."

She laughed scornfully. "Move quickly, Taknon!"

He walked slowly down the steps and into the faint moonlight. He moved ahead with a calm leisurely tread. Behind him the girl laughed.

"You're part Klidd, Rorrek. A hybrid—or a throwback."

He failed to ask her why.

"I could feel affection for a Taknon, but I couldn't love one. I've watched you. You're part Klidd. I can feel it."

He wondered why his throat constricted. He said nothing.

"I love you, Rorrek. Damn your hide."

But she loved her planet more.

"What are you going to do about Larwich now?" he asked coldly. "Are you going to switch to someone else, or are you going to keep on brazening it out?"

"Switch. I'm through with him. He's on the right course."

Rorrek started wading into shallow water.

"Go on out past the breakers," she called. "I don't want you to wash back in."

"Glad to oblige," he grunted, but he paused to look back. She had kicked off her sandals and was wading after him.

She stopped, gun glinting in the moonlight. "Well?"

"One thing."

He scanned for her mind, but she blocked, refusing him resonance. He bludgeoned through until he made a strong but fuzzy contact. He held the contact, but turned away and began wading through the gentle rush of breakers while he wandered through his associative circuits concerning her.

*Stop it, Rorrek!*

Then the resonance was complete, and he chuckled, because she was going to feel it when she shot him. Beyond the breakers, he turned again to face her. She was reeling dizzily, holding the gun at arm's length, with her left hand pressed tight to her face.

HE WAS unprepared for the shots when they came. Two went wide, but the third seared his chest, and he went down, fighting for air, hearing a choking scream from Klia. He gasped once and went under, swimming weakly for deeper water. Another bullet streaked phosphorescence through the blackness about him. He drove still deeper, clinging precariously to consciousness. Another slug streaked under him and he veered upward. Seven cartridges in the gun, five gone. If he could only live a little longer.

Then he had to rise for air. He spun around and came up slowly, facing shore. She was walking dejectedly back across the beach toward his cottage. He waited for her to look back. He dog-paddled with the waves, but the tide seemed to be sweeping him out.

*"PraTalv Bladen, Klia!"* he choked in their native tongue. "For the love of Man!"

She heard him. She turned slowly, watched him coldly for a moment, pistol lifted high.

*"PraTalv' Kliddn, Taknon!"* came her icy paraphrase.

The gun barked, and barked again. Seven! But this time it was his abdomen, and he heard himself screaming as he fought toward shore. He could only partially control the flow of blood to the wounds. When tissue cried for blood, the unconscious reflex let it go. It was like holding one's breath, and occasionally he had to bleed.

She was standing there watching him, white in the moonlight, locked in a kind of trance.

*Go,* he thought at her savagely. *When I get there, I'll kill you—for those last two shots.*

She looked at the gun in her hand. She let it drop, stared down at it, wiped the hand distastefully on her shorts. She backed away a step, stumbled in the sand, and sat down, rolling her head on her knees. He groped for her mind, and she erected no block. She hoped he would die before he got to shore, but she wasn't going to move.

Fate, about to be satisfied—it gave him angry strength. A breaker washed over him from behind, and he rode with it briefly. When it passed him by and dropped him, he stood chest-deep, wading shoreward. He peered at her dazedly, hands clenching and unclenching in anticipation. He let her feel the strength of his hate, but her thoughts were wandering—her home, her people. But she saw them differently somehow, as if she were no longer capable of being guided by their values. Her affective framework had collapsed. She sat in a bewildered daze.

He staggered from the water and fell to his knees on the sand. He crawled toward her with savage deliberation in the moonlight.

*Run, Klia—I'm going to kill you!*

She looked up slowly, watched him crawling toward her. Then she pulled herself up and went to meet him. Snarling, he lurched for her.

"Let me get you to a doctor," she said.

He laughed, groped for her. She slipped her shoulders under his arm to support him. His fist cracked savagely. Something brittle shattered. She screamed and pawed at her face. He hit her again and again, rblbing across the sand, battering her face until his fists were driving into wet pulp.

"My eyes! My eyes!"

Weakly he crouched over her, staring. She had been wearing contact lenses. The green irises had been stained on the glass to cover her gray ones. Now jagged slivers of glass protruded from under her eyelids. She rolled her head and moaned, trying to escape him.

Flashlights were coming down the beach, and Doc Larwich was shouting frantically. Rorrek backed away from the girl. She came to her feet and began running blindly, staggering toward a sand embankment.

"Rorrek!" The cry was plaintive.

He moved drunkenly after her, groping for resonance, steering her toward the pathway around the cottage. His car loomed on the driveway. He guided her into it, followed her.

The girl drove, watching the' road through his eyes.

*You're finished, Klia!*

There was only wildness and fright in her racing mind. *My eyes, my eyes, my eyes .*

He let her alone, clinging precariously to consciousness and fighting internal hemorrhage. The glaring lights on the road dazed him, and the car weaved crazily as she used his dimming vision to guide her.

He knew he had won. He had stopped her, for as in every paranoiac culture, loss of function or deformity was cause for shame and ridicule among the Klidd. A blinded Klidd, like a Kwakiutl tribesman or Zulu warrior, was disgraced and ashamed. The only recourse was death.

Why didn't she accept it then? He was waiting for her to ram the car into a truck or bridge, but she drove as straight as his failing sight would allow.

A SIGN on the road said, "Robert Honkler, Physician and Surgeon." He stared at the white house, and the girl pulled to the curb.

"Get out!" she ordered, but left the engine running and stayed behind the wheel.

So that was it. She brought him here, and now, blinded, she was going to plunge on.

"Why?" he gasped. "Why—help —me—?"

"*PraTalv' Bladen, Rorrek!*" she snapped with a sarcastic viciousness that masked her heart. "—for love of Man!"

He jerked the key from the ignition and fell across her to hold her in the car. His elbow pressed against the horn and held it down.

"Let me go!"

*We'll work together, Klia. We'll get these people into space, and somehow we'll help your people.*

She laughed bitterly. *Help them? You never gave them a chance! When the feudal order collapsed, the Taknon and the Algun adapted themselves to technology. But you banished the Klidd without letting them find a place in the new society. You hated them too much as your former tyrants.*

"A place? What place could a Klidd—"

*Administrators, coordinators, organizers. But you exiled us to a world without iron, condemned us to an eternal stone age. There is but one fundamental right of Man, Taknon! The right to try. You denied it to us.*

Footsteps were coming down the walk, and gentle hands were dragging them out of the car. Came blackness.

When he awoke, he expected to see iron bars, or the walls of a hospital room. Instead, he was in his own home in the suburbs. He tried to move, and groaned. Something rustled in the room.

"Lie still," she said.

He rolled his head weakly to look at her. She sat stiffly in a straight-backed chair by the window, morning sunlight playing in her hair. There was a bandage across her eyes. He groped for her mind, and

found the answer. She had helped the doctor forget that he had ever seen three bullet-wounds and a pair of ruined eyes.

"As soon as you're able to get up, I'll go," she said coldly.

"No. You'll stay. We'll build ships. We'll get your people to a ferrous planet somehow—an uninhabited one. If they can build a civilization from scratch, they deserve it."

She stood up and faced the window for a time, soaking in the warm sunlight, and he allowed her the privacy of her thoughts.

*The right to try—even for a race of power-grabbers.*

*PraTalv' Bladen.* For the love of Man.

"My eyes," she said dully. "He said there's not much chance."

"There is a chance?"

She shrugged.

"We still have *one* pair." And he showed her herself through them; showed her herself with ever-increasing daring until she blushed crimson.

But her hands reached out to him.

THE END

## Blood Bank

THE COLONEL'S SECRETARY heard clomping footsteps in the corridor and looked up from her typing. The footsteps stopped in the doorway. A pair of jet-black eyes bored through her once, then looked away. A tall, thin joker in a space commander's uniform stalked into the reception room, sat in the corner, and folded his hands stiffly in his lap. The secretary arched her plucked brows. It had been six months since a visitor had done that—walked in without saying boo to the girl behind the rail.

"You have an appointment, sir?" she asked with a pro-fessional smile.

The man nodded curtly but said nothing. His eyes flick-ered toward her briefly, then returned to the wall. She tried to decide whether he was angry or in pain. The black eyes burned with cold fire. She checked the list of appointments. Her smile disappeared, to be replaced by a tight-lipped expression of scorn.

"You're Space Commander Eli Roki?" she asked in an icy tone.

Again the curt nod. She gazed at him steadily for several seconds. "Colonel Beth will see you in a few minutes." Then her typewriter began clattering with sharp sounds of hate.

The man sat quietly, motionlessly. The colonel passed through the reception room once and gave him a brief nod. Two majors came in from the corridor and entered the colonel's office without looking at him. A few moments later, the intercom crackled, "Send Roki in, Dela. Bring your pad and come with him."

The girl looked at Roki, but he was already on his feet, striding toward the door. Evidently he came from an unchivalrous planet; he opened the door without looking at her and let her catch in when it started to slam.

Chubby, elderly Colonel Beth sat waiting behind his desk, flanked by the pair of majors. Roki's bearing as he approached and saluted was that of the professional soldier, trained from birth for the military.

"Sit down, Roki."

The tall space commander sat at attention and waited, his face expressionless, his eyes coolly upon the colonel's forehead. Beth shuffled some papers on his desk, then spoke slowly.

"Before we begin, I want you to understand something, commander."

"Yes, sir."

"You are not being tried. This is not a court-martial. There are no charges against you. Is that clear?"

"Yes, sir."

The colonel's pale eyes managed to look at Roki's face without showing any contempt. "This investigation is for the record, and for the public. The incident has already been investigated, as you know. But the people are aroused, and we have to make a show of some kind."

"I understand, sir."

"Then let's begin. Dela, take notes, please." The colonel glanced at the papers before him. "Space Commander Roki, will you please tell us in your own words what happened during patrol flight Sixty-one on fourday sixmonth, year eighty-seven?"

There was a brief silence. The girl was staring at the back of Roki's neck as if she longed to attack it with a hatchet. Roki's thin face was a waxen mask as he framed his words. His voice came calm as a bell and clear.

"The flight was a random patrol. We blasted off Jod VII at thirteen hours, Universal Patrol Time, switched on the high-C drive, and penetrated to the ten-thousandth level of the C'th component. We re-entered the continuum on the outer patrol radius at thirty-six degrees theta and two-hundred degrees psi. My navigator threw the dice to select a random course. We were to proceed to a point on the same co-ordinate shell at thirty theta and one-fifty psi. We began—"

The colonel interrupted. "Were you aware at the time that your course would intersect that of the mercy ship?"

The girl looked up again. Roki failed to wince at the question. "I was aware of it, sir."

"Go on."

"We proceeded along the randomly selected course until the warp detectors warned us of a ship. When we came in range, I told the engineer to jockey into a parallel course and to lock the automatics to *keep* us parallel. When that was accomplished, I called the unknown freighter with the standard challenge."

"You saw its insignia?"

"Yes, sir. The yellow mercy star."

"Go on. Did they answer your challenge?"

"Yes, sir. The reply, decoded, was: Mercy liner Sol-G-6, departure Sol III, destination Jod VI, cargo emer-gency surgi-bank supplies, Cluster Request A-4-J."

Beth nodded and watched Roki with clinical curiosity. "You knew about the Jod VI disaster? That twenty thousand casualties were waiting in Suspendfreeze lockers for those supplies?"

"Yes, sir. I'm sorry they died."

"Go on with your account."

"I ordered the navigator to throw the dice again, to determine whether or not the freighter should be boarded for random cargo inspection. He threw a twelve, the yes-number. I called the freighter again, ordered the outer locks opened. It failed to answer, or respond in any way."

"One moment. You explained the reason for boarding? Sol is on the outer rim of the galaxy. It doesn't belong to any cluster system. Primitive place—or regressed. They wouldn't understand our ways."

"I allowed for that, sir," continued the cold-faced Roki. "I explained the situation, even read them extracts of our patrol regs. They failed to acknowledge. I thought per-haps they were out of contact, so I had the message re-peated to them by blinker. I know they got it, because the blinker-operator acknowledged the message. Evidently carried it to his superiors. Apparently they told him to ignore us, because when we blinked again, he failed to acknowledge. I then attempted to pull alongside and attach to their hull by magnetic grapples."

"They resisted?"

"Yes, sir. They tried to break away by driving to a higher C-level. Our warp was already at six-thousand C's. The mass-components of our star cluster at that level were just a collapsing gas cloud. Of course, with our auto-matic trackers, they just dragged us with them, stalled, and plunged the other way. They pulled us down to the quarter-C level; most of the galaxy was at the red-dwarf stage. I suppose they realized then that they couldn't get away from us like that. They came back to a sensible warp and continued on their previous course."

"And you did what?"

"We warned them by every means of communication at our disposal, read them the standard warning."

"They acknowledge?"

"Once, sir. They came back to say: This is an emergency shipment. We have orders not to stop. We are continuing on course, and will report you to authority upon arrival." Roki paused, eyeing the colonel doubtfully. "May I make a personal observation, sir?"

Beth nodded tolerantly. "Go ahead."

"They wasted more time dodging about in the C'th component than they would have lost if they had allowed us to board them. I regarded this behavior as highly suspicious."

"Did it occur to you that it might be due to some peculiarity in Sol III's culture? Some stubbornness, or resentment of authority?"

"Yes, sir."

"Did you ask opinions of your crew?"

A slight frown creased Roki's high forehead. "No, sir."

"Why not?"

"Regulation does not require it, sir. My personal reason—the cultural peculiarities of my planet."

The barb struck home. Colonel Beth knew the military culture of Roki's world—Coph IV. Military rank was inherited. On his own planet, Roki was a nobleman and an officer of the war-college. He had been taught to rely upon his own decisions and to expect crisp, quick obedience. The colonel frowned at his desk.

"Let's put it this way: Did you *know* the opinions of the crew?"

"Yes, sir. They thought that we should abandon the pursuit and allow the freighter to continue. I was forced to confine two of them to the brig for insubordination and attempted mutiny." He stopped and glanced at one of the majors. "All due apologies to you, sir."

The major flushed. He ranked Roki, but he had been with the patrol as an observer, and despite his higher rank, he was subject to the ship commander's authority while in space. He had also been tossed in the brig. Now he glared at the Cophian space commander without speaking.

"All right, commander, when they refused to halt, what did you do?"

"I withdrew to a safe range and fired a warning charge ahead of them. It exploded in full view of their scopes, dead ahead. They ignored the warning and tried to flee again."

"Go on."

Roki's shoulders lifted in the suggestion of a shrug. "In accordance with Article Thirty of the Code; I shot them out of space."

The girl made a choking sound. "And over ten thousand people died on Jod VI because you—"

"*That will do, Dalai*" snapped Colonel Beth.

There was a long silence. Roki waited calmly for further questioning. He seemed unaware of the girl's outburst. The colonel's voice came again with a forced softness.

"You examined the debris of the destroyed vessel?"

"Yes, sir."

"What did you find?"

"Fragments of quick-frozen bone, blood plasma, various bodily organs and tissues in cultured or frozen form, prepared for surgical use in transplanting operations; in other words, a complete stock of surgibank supplies, as was anticipated. We gathered up samples, but we had no facilities for preserving what was left."

The colonel drummed his fingers. "You said 'anticipated.' Then you knew full well the nature of the cargo, and you did not suspect contraband material of any kind?"

Roki paused. "I suspected contraband, colonel," he said quietly.

Beth lifted his eyebrows in surprise. "You didn't say that before."

"I was never asked."

"Why didn't you say it anyway?"

"I had no proof."

"Ah, yes," murmured the colonel. "The culture of Coph IV again. Very well, but in examining the debris, you found no evidence of contraband?" The colonel's dis-tasteful expression told the room that he knew the an-swer, but only wanted it on the record.

But Roki paused a long time. Finally, he said, "No evidence, sir."

"Why do you hesitate?"

"Because I still suspect an illegality—without proof, I'm afraid."

This time, the colonel's personal feelings betrayed him in a snort of disgust. He shuffled his papers for a long time, then looked at the major who had accompa-nied the patrol. "Will you confirm Roki's testimony, major? Is it essentially truthful, as far as you know?"

The embarrassed officer glared at Roki in undisguised hatred. "For the record, sir—I think the commander be-haved disgracefully and insensibly. The results of the stoppage of vitally needed supplies prove—"

"I didn't ask for a moral judgment!" Beth snapped. "I asked you to confirm what he has said here. Were the incidents as he described them?"

The major swallowed hard. "Yes, sir."

The colonel nodded. "Very well. I'll ask your opinions, gentlemen. Was there an infraction of regulations? Did Commander Roki behave as required by Space Code, or did he not? Yes or no, please. Major Tuli?"

"No direct infraction, sir, but—"

"No *buts!* Major Go'an?"

"Uh—no infraction, sir."

"I find myself in agreement." The colonel spoke di-rectly at Dela's note pad. "The ultimate results of the in-cident were disastrous, indeed. And, Roki's action was unfortunate, ill-advised, and not as the Sixty Star Patrol would approve. Laws, codes, regulations are made for men, not men for regulations. Roki observed the letter of the law, but was perhaps forgetful of its spirit. However, no charge can be found against him. This investigating body recommends that he be temporarily grounded without prejudice, and given thorough physical and mental examinations before being returned to duty. That brings us to an end, gentlemen. Dela, you may go."

With another glare at the haughty Cophian, the girl stalked out of the room. Beth leaned back in his chair, while the majors saluted and excused themselves. His eyes kept Roki locked in his chair. When they were alone, Beth said:

"You have anything to say to me off the record?"

Roki nodded. "I can submit my resignation from the patrol through your office, can't I, sir?"
