A few weeks later we hopped on a night flight down to Goma hub, catching a connection to the airfield used by USAF Transport Command, and finally a coach around to the new infantry base, the first four hundred American soldiers in place and making friends with the creepy crawlies. Rows of uniform, yet simple huts stretched out into the distance, a few brick buildings now under construction. Their commanding officer called together the officers and NCOs, many of the men in this first batch aiming to become instructors in the future.

Jimmy stood on the bonnet of a jeep to address the assembled men. ‘Welcome to the jungle. And that jungle is not as frightening as it may seem at first glance; some people make it their home. They go to sleep in it each night, they hunt in it, they have sex in it, and they raise their families in it. To them, it’s not so scary.

‘To you, it’s a hostile environment ... until such time as you decide that it’s not. And that’s all you need to do, you need to decide that you can master the jungle, and tame it. Members of the Rifles are dropped into the jungle naked, in groups of two or three, a hundred miles from the nearest road. They carry nothing with them. And, as the Rifles say: if you can’t make it back – we don’t want you back!

‘To them it’s a big joke, and a game. To most western soldiers it’s a nightmare come true, and probably a death sentence. The difference ... is one of a little training, and a big shift in your state of mind.

‘You’re here ... to try and see how the Rifles do what they do so well, and possibly to emulate that training for yourselves and your men in the future. But you fine gentlemen didn’t grow up sleeping on the floor with the insects. You did not eat with your fingers, go hungry, and be beaten a lot. That, gentlemen, cannot be reproduced in a training schedule, nor should it be attempted. The fact is, nice white western soldiers cannot do what the Rifles can do, and for that you should be grateful.

‘So are we saying that you could never reach their level? Well, it’s a case of ... would you wish to? Your political paymasters do a good job of making sure that you grow up in nice safe environments, and that you don’t sleep on the floor. Otherwise, what’s the point of a successful and civilised western democracy?

‘The question that you’re now thinking, is can a western soldier be trained to overcome his soft upbringing? The answer is partly yes, in that British and American Special Forces personnel are mostly capable of walking out of the jungle. But they represent a small fraction of your men. And a group of British or American Special Forces soldiers would not win against the Rifles.

‘To understand that, consider this: the training programme for the Rifles is equivalent to your paratroopers, followed by your Rangers, followed by your Green Berets, followed by Delta Force. That’s followed by extensive jungle, desert and mountain warfare training programmes. And that, gentlemen, is what every basic infantryman in the Rifles goes through, the best of whom are selected for the Pathfinders.

‘All of the Rifles have been injected with the super-drug, and are fit enough to run a marathon and break a world record. They get up at 5am each day and go for a twenty-mile run. After breakfast, they start the day’s training, and don’t finish till 7pm, where they then start educational studies or educational games. Those finish around

11pm, when they have time to clean up and have a beer. Theirs, is a working day of around fifteen hours, and during basic training they're not given time to think.

'Each soldier is trained on all of the world's weapons: pistols, rifles, machineguns, mortars, and artillery pieces. They're taught to drive a variety of vehicles, from jeeps to tanks, and their annual allowance for ammunition would stagger you. In the west, soldiers may go months without firing a shot. The Rifles will fire most every day for two years during basic training.

'In the west, we have an emphasis on self-training, and self-discipline. Here, we don't rely on such things. The Rifles philosophy is to use every minute of the day, whereas in the west you'll find soldiers sat around a lot of the time. That ... is your first key difference. If you were to start afresh with new recruits, you should design a programme that allows them no time to think.

'The Rifles are also taught through the playing of games, similar to the techniques employed by Rescue Force. Around a large field a number of tables would be set up. At each is an NCO with a weapon, or a book, or a piece of equipment. Teams run around the field, stopping at each table. They may be required to strip a weapon, find a fault, or answer a question. The teams compete for prizes, and these games can take eight hours, all the time the soldiers kept so busy they don't notice the passing of time. That, is your second key difference.

'The final difference, is one of culture and motivation. The Rifles have a great camaraderie: the Regiment is home and family, friends and fun, work and relaxation all in one. To be threatened with being kicked out is enough to strike terror into any of our soldiers. But that in itself is not enough to explain the main difference between them ... and you.

'Consider the following scenario. A four-man team of Special Forces soldiers reaches its objective, but two are killed and one wounded. What does the last able-bodied man do? He helps his wounded buddy out, writes a book about what a hero he was and lives happily ever after. The Rifles would press home the attack, even if it meant certain death, they'll never give up.

'Now consider World War Two, and the same scenario on D-Day. Would the last man have given up? Probably not, because he knew what was at stake; his life may have saved a hundred others. So what's the difference between D-Day, and now? The answer is one of no war, no particular enemy, so no motivation to make a grand gesture and a sacrifice.

‘So how do you, officers and NCOs, train and motivate men to fight to those standards in a small war, in a country that is not a threat to the US of A? How do you motivate your soldiers to fight to the end? The answer is – you can’t, and should probably not try to. But, when a real threat arrives, you’ll find some meek individuals willing to give all in that fight. You cannot artificially reproduce the kind of scenario where someone would lay down their life without a strong motivation.

‘The Rifles do not wear body armour, they don’t wear helmets, and they don’t stop if their colleagues are wounded. They learn early on that to take the objective will stop their friends from being killed. Stopping to give first aid will simply create even more wounded on the battlefield. They also learn tactics that are very different from yours. In some ways, you could say that they sneak around more than patrolling in lines, riding in jeeps – and generally letting the enemy know where they are.

‘They would not simply exchange machinegun fire, or mortar fire, from fixed positions. They hate static positions, and their philosophy is one of gaining the advantage where possible – a tactic more akin to your Special Forces than your basic infantry. They’re happy to pick off the enemy, run and hide, and try again later, instead of mounting a frontal assault. It’s about winning, not sticking to rules and conventions, or gentlemanly conduct. They’ll use decoys and set traps as part of basic infantry manoeuvres, something that you’ll not see in western armies. To understand the Rifles, you’ll have to grasp that the objective is everything, the tactics employed don’t matter.’ He jumped down and we led the commanding officer away.

‘An interesting approach, both for you and the Rifles,’ the man commented.

Jimmy replied, ‘A hundred years ago, men stood in neat straight lines in red and yellow uniforms and fired at each other. It’s taken a while to get away from that, and to fight more like the Indians - than General Custer and his men. The job ... is to get the job done, not to stick to formations and procedures on the battlefield.’

‘You think we won’t meet their standards?’

‘Your Special Forces already do – to a degree, and British Special Forces teach the Rifles. The point is, you shouldn’t attempt to reproduce their mindset, or your soldiers will go home on leave and start killing their neighbours. When you take a nice white boy and brutalise him, he goes psycho. The Rifles don’t.’

‘So ... you think this mission is doomed?’

‘Any mission ... needs an objective, clearly defined, in order to reach that objective. What, exactly, is your mission ... as far as you’ve been told.’

‘Well, we tried to train the Liberian Rifles, and failed before you got involved with them. That caused a few harsh words in the Pentagon. And we’ve seen what your boys can do. So it’s a mix of the two: how we could train a proxy army, and be more like them.’

‘That’s politics, that’s not an objective,’ Jimmy stated. ‘Your objective ... is to win the engagement, to kill the enemy – in whatever theatre of conflict you find yourself. So, I’ll make it easy for you. Follow my training manual, take the experience and benefits that it gives your men, but never try and be something that you’re not. Your soldiers want to go home to their wives and girlfriends, to serve a few years and learn a trade before getting a civilian job. You can’t treat them as we treat Rifles. So don’t.’

‘But after a few years of this, we’d be able to recruit and train our own proxy army?’

‘Most definitely.’

We did not stay long, and flew back after an hour-long chat, reclaiming our rooms at the golf hotel. Several ministers came across to petition us for various things, before we made it clear that anyone just turning up would be buried in the foundations of the new marina. Still, we chatted to half a dozen ministers about various projects, and I must admit that I found giving general pointers easier than scanning reports and making my own decisions in my office.

At 1am, sat in the quiet rooftop bar, I said to Jimmy, ‘Do you ever wonder what happened to the younger you?’

‘Younger ... me?’

‘You said he went to Canada, forwards in time.’

‘You shouldn’t believe everything I say; the right lie to the right people at the right time. He didn’t go anywhere, I killed him.’

I faced Jimmy, beer in my hand. ‘You ... killed your younger self?’

Jimmy nodded, reflecting on the past.

‘Would that not cause some sort of paradox?’

‘No.’

‘So ... how?’ I gently nudged.

‘I appeared in that field in Canada, suitable passport with visa stamp, plenty of money, a few diamonds. I waited till nightfall and walked to the nearest town, trying not to be seen. I hopped on an overnight bus - in Canada they don’t stop at night. At the next large town I hopped on a train, couple of days to reach Toronto.

In Toronto I bought a suitcase, then some clothes, a toiletries bag, the works. I bought a second camera and took snaps, having them developed, bought a few postcards and maps, and made like a tourist for two weeks, buying a plane ticket and flying to London.

‘In London, I grabbed a hotel room as a base, then caught the train down to Cardiff, to see if my younger self was where he should have been. You see, in late 1984 my original self got a job at stockbrokers in Cardiff. I did quite well and eventually landed a job in London, but I had four weeks between jobs. I had moved out from my parents’ house and was living in a small bedsit in the Roath area of Cardiff, student land.

‘I spied on my younger self, saw what his hairstyle looked like, any marks on his face or hands. Happy with that, I knocked on his door late one night and shocked him. I told him that I was him from the future, and listed off a few things that only we would know. When he wasn’t looking I broke his neck. In the early hours I dragged his body out to the car I had hired and dumped the body where I knew it wouldn’t be found.

‘Back in his apartment I squeezed into his clothes, then bought a few more the next day. I rang my mum and made small talk, but avoided seeing her till I moved to London and started at McKinleys – and the managers there had only met me once. I worked in London for two months, telling my mum I’d put on weight and that I was working out at the gym a lot, finally going back to Newport to stay for a week.

‘They saw the difference, but put it down to London and the extra weight, and gym training. After that, it was a case of start ticking boxes.’

‘Why replace yourself like that? Why take the risk?’ I puzzled.

‘How would it look if the world’s intelligence agencies couldn’t verify my past?’

‘Well, yeah, they’d definitely think you a fucking alien!’

‘So I had to slip back into the timeline.’

‘What would have become of him?’

‘He would have grown into an arsehole. He’d have stayed with the wrong girls ... and left the one he should have stayed with. He would have ... made a lot of mistakes. You wouldn’t have liked my younger self; it took me sixty years to finally figure it all out, and to be comfortable with myself.’

‘You spend a lot of time thinking,’ I noted. ‘If you haven’t figured it all out yet, what hope for the rest of us?’

He laughed, staring into his beer. 'I'll let you in on a great secret.' He faced me. 'I'm not even supposed to be here.'

I stared at him. 'What?' I puzzled, a heavy frown forming.

'I'll explain it at some point. But my stepping through the portal - not quite what it may seem.'

I was not looking forwards to the next day's political activities, but it had to be done. We travelled the short distance around to the Pentagon building and spent the entire day meeting ministers, glad to be out the door at 5pm. But after our evening meal it started again, Yuri and Marko introducing us to new business partners involved with the shopping centre project.

We were then approached by an Indian businessmen, a hotel guest, playing golf and enjoying the facilities. Thinking him a guest, I invited him to sit. We soon discovered that he was from South Africa, and owned a chain of washing machine factories both in South Africa and India. And could he open one here?

I was starting to wonder if the place had a bad name; of course he could open one here. But when I cautioned him about a small market and a poor populace, I answered my own question about peoples' attitude to the region. Our region was growing, but it was not a great market for luxury goods.

Turned out that his washing machines were quite cheap by western standards, and that he sold many around Africa. I offered him free land, fifty percent of his factory construction costs – not including plant and machinery, and a two year tax break. He thanked me for that, but what he was really interested in was cheap plastic, rubber and steel – the raw ingredients of an African housewife's wobbly washing machine.

With Jimmy sat watching, but not interfering, I said, 'How about this: we create a joint venture, and split the profits. That way, I have no problem about giving you the materials at raw cost, which is just about zero in some cases.'

'What percentage?' the businessman asked.

'What would you say was reasonable ... if I was hanging you out of a helicopter by your ankles?'

The man laughed. 'I'd say sixty-forty to you in recognition of the raw materials, and my forty percent represents my network, and expertise.'

'You'll have a two year deal, then a review.' We shook hands. With the businessman gone, I asked Jimmy what he thought.

‘Our aim is to create jobs, and to give back to the people - so fine. At the moment, people here import stuff like that, and it’s not cheap.’

Suffering further approaches for the next hour, I called over two of the bodyguards, and they stood between us - and those interested in talking to us.

Old Goma town was our first call in the morning, a short flight over. In a large field northeast of the town, a new town in itself had sprung up, hundreds of the self-assembly huts now laid out in neat rows. Accompanied by a resident RF team, we wandered along and greeted householders, enquiring if they had everything they needed, and finding them all smiles. The RF team then informed us that many of the new happy householders had been in tin shacks prior to the explosion and fire. These huts were a significant step up.

In the town itself, we stopped and stared up at tall yellow cranes, an apartment block – or ten – in progress. I recognised the design; four storeys, twenty apartments per block. The mayor of the town welcomed us, thanking us for all our help. Well, since the bomb was aimed at us, it was the least we could do.

In Gotham City, the marina was coming along, an army of local builders toiling over it. The large round concrete swimming pool would, someday soon, be a marina. Now, it was dry and deep.

‘Why so fucking deep?’ I asked Jimmy.

‘To get sailboats in, keels of four metres.’

‘That’s a big boat!’

‘That’s ... Yuri and Marko measuring their dicks. Still, it’ll be nice to see them sat here. Otherwise it would just be speedboats.’

The basic shape of the bars and cafes could be discerned from their foundations, and we’d name the place after Shelly as promised: Shelly’s Marina.

A quarter-mile by coach brought us to another building site, a more important one. The canal we found was again a large empty concrete swimming pool, the deep foundations for our stock exchange being laid, a second building taking shape next to it. Progress.

‘Will the stock exchange be busy?’ I asked Jimmy.

‘Yes, because they’ll trade on all the world’s exchanges, plus our own metals, ore and oil market. Oh, and diamonds.’

‘Will that piss off the Israelis?’

‘Not at all, they’ll be running it. I’ll make contact with the main merchants in Amsterdam soon. African women like jewellery, so I’ll persuade someone to open a factory or two down here.’

‘I mentioned this place to McKinleys. They’ve already bought a few spare apartments ready, they can’t wait.’

‘I think we could attract two thousand traders at least,’ Jimmy suggested. ‘They’ll be followed by buyers.’

‘Buyers?’ I queried.

‘Raw material buyers. They’ll look at oil, ore and metal ingots, and haggle for them here, arranging their own transport out. Take that Indian factory. Their buyer would sit around a pit and, when a new batch of steel was ready, they’d bid for it. At the moment, the people buying the raw materials we produce are at the end of a phone or computer. Down here they’ll have a team trying to get the best deals. Same for our food produce in the future.’

Back at the hotel, we took a call from the African Times editor; a car bomb had gone off in Somalia. Jimmy rang the head of PACT, only to find out that two Sudanese agents had been picked up thirty miles from Mawlini. The men had been gainfully employed scouting for an attack.

Jimmy told the man, ‘I want a line of men on the border, from Kinshasa to the Red Sea. Deploy the Rifles, and put all of my interests on alert.’

‘They’ll strike back at us?’ I asked when Jimmy had lowered his phone.

‘And they deserve to,’ Jimmy softly stated. ‘And, what’s more, I don’t want to do anymore damage to Sudan.’

‘You wanted to drive a wedge,’ I pointed out.

‘It’s ... easy to see things in the 2025 perspective, and to react accordingly. But, part of me hopes that we can chart another course, that maybe 2025 can be dealt with quietly. And ... I don’t always like pitching nations against each other for 2025 posturing – innocent civilians getting clobbered in the process. I know it’s wrong for 2025, but we could have seen a few more years of peace.’

Jimmy called Abdi, getting the details of the car bomb. A busy market had been hit, a hundred injured, thirty dead so far. We sat in the rooftop bar, a fine day, and slowly ate lunch, not much said. I could see Jimmy struggling with the turn of events, not least because he had caused them. But the bad news had not ended; this episode was only just getting warmed up.

After lunch, we packed ready to leave, our cases now with the bodyguards. In reception, Jimmy took a call, the detail causing him to close his eyes for a moment. He faced me. ‘A civilian airliner has crashed in Mogadishu. It ploughed into the city centre.’

‘That’s no coincidence,’ I quietly stated.

‘No.’ Jimmy stared at his phone for a few seconds, then dialled Forward Base. ‘What aircraft do you have on the apron?’

They indicated a 737 headed for Mawlini.

‘I want that plane, hold it, we’re on our way.’

He told the senior bodyguard to take us around to the airport, and to grab Hueys for the short hop down to Forward Base. The Hueys were sat waiting when we arrived, their rotors turning. With the bodyguards carrying our luggage, we ducked our heads and jogged across to the open doors, soon on our way to Forward Base across lush green countryside, Jimmy oddly quiet.

At Forward Base we boarded the waiting 737, our luggage simply placed between seats. The plane was not full, and contained the usual mix of RF staff, Rifles or UN staff. With the door closed, Jimmy grabbed the passenger tanoy.

‘Ladies and gentlemen, a plane had crashed in Mogadishu. We’re going to detour there, after which this plane will carry on to Mawlini. Sorry for the inconvenience.’

When the plane was airborne, and the seatbelt sign was off, Hacker appeared next to us. ‘Guys,’ he acknowledged.

‘Hey, stranger,’ I offered. ‘Where you working these days?’

‘Teaching in Cuba mostly, but I run courses here. Are we deploying to this plane crash?’

Jimmy said, ‘There’re plenty of RF staff based around Mogadishu. Nothing we can do in time.’

‘Was it a crash on landing?’ Hacker innocently asked.

‘No,’ Jimmy said after I glanced at him. ‘We think maybe a bomb, or terrorists.’

‘And there was a car bomb this morning,’ I put in.

‘Sudan kicking back?’ Hacker knowingly asked.

‘Perhaps,’ Jimmy replied. ‘Maybe al-Qa’eda. Either way, it’s bad for Somalia – and the region.’

With Hacker seated, I wandered along the isle, greeting people and chatting, finding a few familiar faces. Touching down at Mogadishu airport, we lugged our cases down the steps, our bodyguards joined by Somali Pathfinders, a bus waiting. Only then did I think to call home and explain the situation. At least Helen and the girls had not boarded the coach to meet me at the airport.

At our hotel, we found an empty suite, our luggage dumped before we headed around the government buildings. Abdi had visited the crash scene earlier, but now greeted us, dressed in his odd general’s uniform, wide shoulders and much braid.

‘Many dead,’ he simply reported.

‘Whose airline?’ I asked.

‘Oman Airlines,’ he reported. ‘A hundred people on the aircraft.’

‘And on the ground?’ Jimmy asked.

‘The aircraft hit an apartment block being built, so no people living in the rooms. Maybe sixty builders hurt or killed, some people on the street, taxis. And this an hour from the car bomb!’

‘No coincidence,’ Jimmy agreed.

‘You think it is Sudan?’ Abdi asked.

‘We picked up Sudanese men near Mawlini,’ I put in.

‘I have thirty thousand men on the border!’ Abdi warned, a finger raised. ‘They will not get through.’

‘Sudan may not be behind the attacks,’ Jimmy suggested to Abdi, and I had to wonder the logic of that. But I kept quiet. ‘I think maybe al-Qa’eda wanting revenge for Sudan.’

‘So we need to go back to Afghanistan?’ Abdi asked.

‘I hope not,’ Jimmy stated.

A man rushed in, shouting in the local language. Abdi faced us as the man retreated. ‘Gunman had entered a hospital, they hold it hostage.’

‘Don’t go near it,’ Jimmy insisted as he raised his phone. ‘Get the Pathfinders and snipers, but don’t enter the hospital.’ Into his phone, Jimmy said, ‘Ngomo, gunmen have captured a hospital in Mogadishu. Have EMPs brought from Scorpion Base, and the new counter-hostage toy. Quick as you can, my friend.’

‘We hit the hospital electrics first,’ Abdi realised.

‘I have another trick,’ Jimmy suggested. ‘We’ll see how it works before we destroy a hospital full of equipment. I’ll need a command post near the hospital.’

‘I will arrange it,’ Abdi faithfully promised as he lifted a desk phone.

Jimmy dialled Mapley in the UK. ‘Bob, Jimmy. I want Rescue Force Alpha from Mawlini - in Mogadishu - ten minutes ago.’ He hung up.

‘A Chinook could be here quickly,’ I suggested.

‘That, or a C130 Hercules.’

Fifteen minutes later we joined a well-protected convoy and ventured through the traffic to a city centre hotel. On the top floor of the hotel we tried to commandeer a room. But as the guests from this floor we’re being ushered out, Jimmy recognised a face. He lunged forwards and grabbed the tan skinned man about the throat, slamming the man against a wall.

‘Stop all the guests from leaving,’ Jimmy barked as he held the man. ‘Move them all to a secure site.’ With the bodyguards close by, Jimmy threw the man into a vacant room.

The bodyguards righted the man and held him. ‘Why are you here? To watch the hospital? To warn them when our people are ready? What?’

The man defiantly resisted.

Jimmy closed in on the man. ‘Do you know what the Somali Rifles will do to you?’ The man struggled, but would not speak. ‘Take him out, make him talk.’

Abdi shouted orders.

Jimmy glanced out of the window, the hospital three hundred yards away across scrubland. ‘Why was he here?’ he quietly asked I as drew level.

‘Radio the gunmen,’ I suggested. ‘Let them know what the police are up to.’

‘Which would suggest a long siege. Why a long siege?’ He faced Abdi. ‘Is this the best building to watch the hospital from?’

‘Yes,’ Abdi responded.

‘Which would make it an ideal spot for a police command post, which our friend probably knew. Evacuate! Now! Everyone out – it’s booby-trapped!’

In a mad jumble, we made it to the foyer before the first blast hit, taking out much of the top floor, showering us in glass.

‘Run!’ Jimmy encouraged, everyone making a mad dash up the street in a disorganised rabble; police, bodyguards and terrified guests. As we reached a corner the hotel restaurant blew, the hotel now well alight.

Jimmy lifted his phone, dialling Mapley. ‘Bob, it’s Jimmy. I want Rescue Force Kenya moved to Mogadishu airport as an emergency deployment. All of them!’ He hung up and dialled again. ‘It’s Silo. I want a full mobilisation of the Pathfinders. I want as many as possible in Mogadishu.’

He faced Abdi, grabbing him by the shoulder. ‘Get on the radio, tell all citizens to stay indoors! Have the police announce it with loud hailers.’

Abdi stepped away and lifted his phone.

Jimmy grabbed a Somali officer. Pointing, he asked, ‘What’s that building?’

‘A government building, sir.’

‘C’mon, that’s our new base. Let everyone know.’ Jimmy led everyone off at the jog, soon at the bland government building and

up to its top floor. The office we selected afforded us a modest view of the hospital.

‘Why haven’t they blown-up the hospital yet?’ I asked.

‘They want something, something more than just that,’ Jimmy suggested as he stared across at the hospital. ‘They may be setting booby-traps.’

‘They want to kill the Pathfinders when they storm the place,’ I put in.

Jimmy heaved a sigh. ‘Yes.’

Fifteen minutes later we were set-up, radios and phones, satellite phones, a dozen Somali officials, senior Pathfinder officers.

A Kenyan Pathfinder officer appeared with an NCO. Lobster. ‘We have the device, sir.’

‘We’ll need someone to get close with it,’ Jimmy stated.

‘I will do it, sir,’ Lobster offered.

‘You know the settings?’ Jimmy asked.

‘Yes, sir.’

‘First, we must play their game. They want us to wait for their own reasons, we wish to wait for our reasons.’

‘Sniper report,’ an officer cut in with. Reading from a sheet, the man said, ‘Eight men, AK47 rifles, three seem to have explosive vests, and they are fixing explosives to the stairs from floor number two and higher.’

‘And the spider said to the flies, come to me,’ Jimmy loudly stated. He approached the window. ‘Contact your best sniper, and ask him to shoot out all of the windows on the north side, but to do it slowly, and without hurting anyone.’

‘Yes, sir.’

I closed in on him. ‘Won’t that spook them? They may blow it up?’

‘First, it helps the device if the windows are gone. Second, we need the Somalia Army to *behave* like the Somali Army.’

Jimmy opened a window, the echo report of a fired round registering with us a few seconds later. He faced the assembled men. ‘Now we wait like the spider ... till the medics are here.’ He pointed at Lobster. ‘Go and find a way to get within two hundred yards, but no closer.’

Lobster dashed out.

‘Will an EMP help?’ I whispered.

‘It’s not an EMP,’ Jimmy revealed.

‘Ah.’

Twenty minutes later, the air reverberated with the sounds of heavy helicopters, our Chinooks landing nearby. An officer reported Rescue Force landed, Jimmy leading me down to them as they assembled on patch of parched brown grass.

Jimmy beckoned the teams closer, some thirty people. 'Listen up. The next job that I ask you to undertake will be dangerous. It will involve getting the hospital staff, the wounded, and the patients out of a hospital that has both gunmen – and is wired to blow.'

Our people glanced at each other.

'This could go badly wrong,' Jimmy added. 'But, if the gunmen blow up parts of the hospital, and themselves hopefully, we'll have a matter of minutes to get in there and get as many people as we can out. Entering the building after the bombs go off will be handled according to unstable building protocols, something you all practise. If you go in with the soldiers, it will be *keep you head down* protocols. They may also shoot at you as you approach the hospital.'

'This is not regular Rescue Force work, so an opposed entry will be volunteer only. You have fifteen minutes, so think about it. I have no problem with anyone who has reservations about an armed assault.'

We left them to digest the detail, returning to the office.

'How many snipers?' Jimmy asked the Pathfinder officer.

'Thirty in place, sir.'

'I want the senior man to have a running commentary of the movements of the gunmen. If we shoot, we need to hit as many as we can in one go.'

'The windows are all broken now, sir. Make for a better shot.'

'Yes,' Jimmy agreed with an affirmative smile.

Five minutes later, Lobster confirmed his position. Jimmy lifted a pair of binoculars and checked. To the senior Pathfinder officer he said, 'Two seconds after the device is fired, all snipers should hit any targets, but only fire for five seconds before you call ceasefire. Then the Rifles go in, the medics right behind. Got that?'

'Yes, sir. Two seconds, five seconds, move in.'

'Make sure that everyone knows.'

We again walked down to the RF teams. 'Gather around,' Jimmy called. 'The Pathfinders will use a type of gas to sedate the gunmen, who should not be able to detonate their explosives. Unfortunately, the gas will only last four minutes, and will have a detrimental effect on the patients.'

‘That gas, and its use here - today, must always be denied afterwards. It will produce symptoms similar to heat stroke and shock. Try and cool down your patients any way you can.’

‘Will it linger?’ a man asked.

‘No,’ Jimmy adamantly stated. ‘It disperses very quickly, and we’ve shot out the windows; you’re not at risk. Now, listen carefully. You’ll go in behind the soldiers, and they’ll deal with gunmen and explosives. But you may trip across one we missed. If you see a weapon, unload it. If you see a gunman, stamp on the man’s neck before you do anything else.’

They glanced at each other.

‘Your job ... is to save lives. But if one of the gunmen recovers, and sets off his explosives, it could kill fifty people – including you and your colleagues. Those gunmen will die anyway, either by sniper or by the gallows, so don’t waste time worrying about them. Your job is to get the patients out. And if you see any explosives ... don’t touch! Right, anyone want to pull out?’

They all stood fast.

‘Any one got any comments?’

A man raised a hand. ‘If we survive this ... do we get extra time off?’

They laughed.

‘If you survive, you all get a week at any of my hotels.’ Jimmy called over a Pathfinder officer. ‘Split them into teams for each doorway, to be behind the Pathfinders. No one closer than twenty-five yards till the signal is given.’

The officer led our rescuers off, and we again climbed the stairs to the office, sweating now.

‘We are ready,’ Abdi confidently stated.

‘When the medics are in place, we’ll go,’ Jimmy said to Abdi, a hand on his arm. We stared out of the window, the Pathfinders and rescuers approaching the hospital from a blind side with no windows.

‘We are ready,’ an officer announced five minutes later.

‘Put me on with the man holding the device,’ Jimmy requested.

‘Nbeki here,’ crackled a voice.

‘This is Silo. Count to ten, fire, count to two and radio for the snipers to fire, count to five and order ceasefire. Understand?’

‘Yes, sir.’

‘You have a go.’ Jimmy lowered the radio and approached the window.

Ten seconds later the device fired, no sound or visible trace given. Two seconds later, a crackling echo reached us, and continued for what seemed more than five seconds. Finally, calm reclaimed the scene.

‘They are moving in,’ came a voice.

‘Explosives on second floor.’

‘Wires in stairwell. Disarming.’

‘Ground floor clear.’

‘X-ray killed.’

‘Second X-ray killed.’

‘Second floor being evacuated.’

I paced up and down.

‘X-ray killed.’

‘All people unconscious, in fits.’

‘Third floor stairwell cleared.’

‘Patients being carried out.’

It was a long fifteen minutes, and I paced up and down, listening to the reports, or glancing across at the hospital building.

‘Building secure,’ finally crackled out of a radio.

Jimmy tipped his head, and led me out, down the now familiar stairs and into the heat. Across parched grass, we walked with our bodyguards towards the hospital. On the grass in front of the hospital we found a triage area, patients being treated, many being fanned in the heat, some fitting and convulsing, a few being intubated and worked on. Overall, I figured at least three quarters were coherent, not knowing what their pre-existing conditions had been. After all, they were in hospital for some reason.

We weaved through the busy teams, and to the group leader. ‘How they doing?’ I asked.

‘Hard to know why they were in hospital to start with, so ... overall not too bad.’

‘What are their symptoms?’ Jimmy asked.

‘As you said, heat stroke and shock; classic symptoms. That gas knocked the gunmen out. Should I ask –’

‘No,’ Jimmy cut him off with.

Ambling back towards the command post, I asked, ‘What the fuck did all that?’

‘A type of microwave burst; it warms your body up very quickly from the inside, instant heatstroke. People fit, convulse, collapse, and pass out. After that, you have five minutes to get to them.’

‘And it was developed for...?’

‘Situations just like this, to knock out captors and captives.’

Abdi met us in the car park, a smile for us. 'It worked well, Jimmy.'

'Yes it did - a good field test. Now we have to think about what we do next.'

'We strike Sudan!'

'No.'

'No?' Abdi queried.

'We struck Sudan. And if we strike again they will fall into anarchy and chaos, which will be even worse. As far as I'm concerned, these men were all al-Qa'eda. And, in the weeks ahead, I will think about Sudan, and what to do next. We play the spider, not the raging bull, my friend.'

'The people will want revenge,' Abdi cautioned as we walked towards our coach.

'That's why we have a great leader like you,' Jimmy told him. 'To lead, to persuade, and to influence.'

'It will not be easy,' Abdi complained.

Jimmy stopped and faced him. 'If you strike without me, you will lose me forever.' He held his gaze on Abdi.

'I have never understood what you do ... till after you do it. I am always reminded of who knows the best course.'

'And...?' I nudged.

'I will wait to see the wisdom.'

We shook hands, and boarded the coach, soon on a flight to London.

During the flight, Jimmy turned his head to me and said, 'The airliner flown into the ground was typical al-Qa'eda, I don't think that's anything to do with the Sudanese. I think al-Qa'eda believes Abdi responsible for the hit on Khartoum, and that they want to strike back at him. Those two Sudanese near Mawlini, that seems more likely as a Sudanese response. And the hospital, that was just strange. It feels like al-Qa'eda, but to put bombs on that hotel first was very clever. Too clever.'

'You have someone else in mind?'

'Once they identify the gunmen, and the lookout from the hotel, then maybe we'll get a better idea. Sykes' team are on their way down, so forensics might shed some light on it.'

Helen greeted me on the coach, the girls at a pony show in Wales. Halfway home, Jimmy took a call. He lowered his phone and stared at it before pinching the bridge of his nose and massaging it.

'Problems?' I asked.

His look suggested that I had understated something. After a long moment staring out of the window, he heaved a sigh. 'The lookout at the hotel gave up a name during interrogation. Rahman.'

'Rahman?' I repeated, unfamiliar with the reference.

'It's not his real name, and the man is a ghost. Some believe that he's half western and half Arabic, that he grew up in the west and converted to Islam.

He dialled a number. 'It's me. Increase the budget for PACT by fifty percent immediately. Then increase the budget for security at all pan-African airports in our region. After that, I want you to talk to President Errol, and for him to start a process whereby any old aircraft that doesn't have a secure cockpit door is banned from flying to, from, or over our pan-African airspace.'

When he finally faced us, he said, 'We've altered a great many things, and rightly so. We've ... fixed a great many things, and brought forwards many plans, altering the time line. The problems that we'll face in the next two years were not due to kick-off till closer to 2015, or after.'

'And these ... problems?' I nudged.

'A very capable individual inside al-Qa'eda. In the next two years he'll hijack aircraft and fly them into the ground, and there'll be little we can do about it ... because the aircraft will take off in small shitty airports with fuck-all security, fly over a border and plough into the cities of neighbouring states.'

'The west will be OK,' I suggested.

'The west is not the problem. It's the shit airliner taking off in Oman that hits Nairobi ... that's the problem.'

Jimmy checked his watch and dialled Chase in Washington. 'Mister President, got a paper and pen? Until our new F15s are up to speed I need three squadrons of your F15s - piloted by your guys, in Kenya, the Congo and Somali, and I need them there today. And yes, you should be worried. I'll be briefing the "M" Group at the house later. Thanks.'

'US cavalry to rescue,' I quipped.

At the house, arriving at 9pm, the "M" Group representatives were sat waiting in a lounge. We stepped in and joined them.

'OK,' Jimmy began, taking a breath. 'We can all expect an increase in hijackings in the next few years. The plane that crashed into Mogadishu was – most likely – al-Qa'eda, and organised by an individual code-named Rahman. He will, in the next few years, hijack planes from the Middle East, North Africa and the Russian Caucuses, crashing them into cities.

‘The following steps will need to be taken as a matter of some urgency. All aircraft crossing your airspace must have secure cockpit doors. Pilots ... must never give up the cockpit, no matter how many passengers are killed in the cabin. If they do they’ll just be killed when the plane hits the ground anyway.

‘All pilots should have mace sprays and tazers in the cockpit, senior flight attendants should have mace in the forward galley. Flights to and from a list of nominated countries should have an air marshal seated at the front. I’ll draw up that list for you. Next, comes the hard part. You will all need to introduce protocols and procedures whereby a civil airliner on approach, that is not responding - or has indicated a hijack, is shot down.’

Eyes widened, mine included, and the group glanced at each other.

Jimmy continued, ‘If not, those hijacked aircraft will plough into London, Paris or Moscow. But first, they’ll start ploughing into African capitals.’

He faced me. ‘Check up on the status of the F15s we bought. See if some, at least, could be put on standby with instructors sat next to them ready to go. We have Sidewinders?’

‘We bought a shit load of them.’

To Michelle, he said, ‘I want a meeting in Paris, in a week, a meeting on global air transport security. Invite every country in the world. What I would like to see ... is that airports are classified as secure, very secure, or not secure. That coding would be imposed, whether the airports in question like it or not.’ He turned his head to me. ‘Draw up a list of all airports in Africa that serve jet airliners, and have them reviewed to see if they have metal detectors.’

To the group he said, ‘I would also like to see the following radical approach adopted in as many areas as we can. Any aircraft that does not have a secure cabin door cannot cross a border into another country, certainly not to a country we care about. That means that a Tu154 taking off from Tashkent would not be allowed to land in Europe, Russia or China – or Africa.’

Ivan put in, ‘We have secured the doors.’

‘On small airlines in the Caucasus?’

‘They are outside of our control,’ Ivan said defensively.

‘Then ban them crossing a border until such time as their doors are secured,’ Jimmy firmly suggested. He took a moment. ‘Back in 2000, there should have been an attack along these lines. I warned everyone about securing aircraft doors, and I *removed* several key individuals. The idea, however, has not gone away. Crashing a 747

into a city is the poor man's weapon of mass destruction, and that poor man is now keen to employ this tactic. The attacks will start in Yemen, Oman, Sudan, Ethiopia, Djibouti, the former soviet Islamic states and North Africa. Flights from Oman and Yemen must be seen as flying missiles till further notice. We'll reconvene in the morning at 9am. Earn your keep, people.'

I greeted the girls, back from their pony show, and made no mention of the problems. Both girls had won rosettes, and the security detail had digital images and video for Helen and me to review.

After a large meal we headed to bed early, both up at 5am. I left Helen to sort the girls and headed to my office, a million things to do today. I sent Ngomo an email, suggesting that I wanted the Rifles at each small airport in our region. I wanted men inside the airport terminals, assisting with body and bag searches, additional men stood outside as deterrents. We had a surplus of police officers, and I asked our new security minister to deploy permanent teams to all small and regional airports. This crisis, unwelcome as it was, would create thousands of new jobs.

I then found the contact details of the company we used when buying airport detectors and scanners. I checked my watch, 7.30am, then selected a mobile number. 'That ... Nick Fisher?'

'Yes. How can I help?' came a sleepy voice.

'Paul Holton. I want a price on bulk purchase, installation and training of your airport scanners.'

'You need more? We have your five airports covered – to western standards.'

'We're going to roll them out to all African airports.'

There came a pause. 'Oh. Er ... how many should we quote for?'

'Do you have a list of all African and Middle East countries that don't have scanners, and that you're trying to sell to?'

'It's engraved on my heart. It's what I do all day; trying to sell that lot scanners.'

'How many units could you sell if they all suddenly said yes?' I pressed.

'That would be close to a thousand units.'

'And the total costs? Roughly?' I asked.

'Around three million raw cost, plus transport installation, maintenance and training. So, all in, around six million.'

'That all,' I scoffed. 'I'm going to send you five million pounds today on account. I want you to make as many as you can, and then

to donate them to countries we nominate, starting with Oman, Yemen and the Russian Caucasuses.'

'What?'

'You heard, get a coffee and get to work.' I hung up.

I headed down to the main house later, for the "M" Group meeting, grabbing a bite and a cup of tea in the diner first. A TV was now fixed to the wall, and the morning news reported that half the world's airports were on full alert. Many flights had been cancelled, certain countries now banned from flying to Europe, a few passengers stranded.

I took my mug of tea into the lounge at 9am, the gang assembled, Sykes down, as well as New Dave.

Jimmy began, 'To summarise what actions have been taken overnight – it's fucking chaos out there. So let me be clear: only those flights originating at airports with poor security records need be a concern. Flights taking off in Europe, Russia or the west are not an issue. Flights taking off from Bora Bora are not an issue, even if the airport there is not secure.

'So, Yemen, Oman, Djibouti, Ethiopia, Sudan, Chad, Senegal, and all North Africa states – they're the airports of interest for now. Let's not create another ash cloud fiasco, people.'

'I've ordered a thousand airport scanners,' I put in. 'I'm going to install them whether the airports in question want them or not.'

'Good,' Jimmy said with a nod. 'I've banned all flights from certain North African states from landing in Goma hub or Nairobi till we're happy with their security. Concentrate on them for the scanners. Mr Sykes, kindly put together a pan-European team of inspectors and send them around those nations, and Africa. Let's start working on that airport ranking system.'

Keely announced, 'We have an aircraft carrier off Mogadishu, so if another plane is hijacked we'll shoot it down. That air umbrella covers Kenya as well.'

'Good. Thank you. ETA for fixed wing assistance?'

'Could take a while to get them in place,' Keely warned.

'Then send pilots for the F15s we've already got as a stop gap.'

Keely ventured, 'Hardon Chase asked if they would be welcome to stay long-term?'

'For what purpose?' Han asked.

'To help out in situations like this,' Keely suggested.

'No,' Jimmy said.

'No?' Keely repeated.

‘Once the Africans can defend their own airspace, they’ll handle that task. I would have, soon, suggested US training bases in the Congo – for combined operations and infantry exercises, the same in Somalia. That’s a training wing, not an active squadron, so word it that way and tell Mister Chase that he is most welcome.’

‘On that note,’ Jack put in. ‘I’ve been asked by the Prime Minister to mention that we have jet training aircraft we can offer the region, but more than that ... we’ve put together a package of instructors and technicians. That way, RAF pilots get more flying time and exposure to other regions. And you have cheap fuel for them!’

‘I’ll accept three training squadrons; one at the Rifles base, Mombassa, one at Forward Base, and one in Somalia at Scorpion Base. I’ll also accept a helicopter training squadron at Mawlini. We’ll buy second hand Hawk training aircraft, ten aircraft at each base. As well as any old Provost or Tucano you have. That package was always part of my plan. By 2025 we’ll need African pilots. Good ones!’

I put in, ‘I’ve asked for extra police at all small airfields around our region, Rifles there for now – high profile.’

Jimmy said, ‘It’s time to create a Borders and Airports Police Authority. Advertise for a minister of that title, then get President Errol on it. Set-up a common training facility at Forward Base, create a common uniform, give it a high profile and a big budget – it’ll be a front line agency in the years ahead.’

‘I know someone who would be a great help with that,’ Sykes mentioned.

‘Fine; hire him, send him down. Help us to create that training facility.’

‘Are you aware of specific aircraft attacks?’ Jack asked.

‘Things have been altered a lot in recent years, so I have less of a focus on when and where they’ll be. But I think the next will be from Yemen towards Somalia, then Chad towards Nairobi.’

‘I’ll focus the scanners on them then,’ I helpfully offered.

‘Unfortunately, you’ll just move the attack to another place,’ Jimmy explained.

We spoke for forty minutes, made a few plans, then split to our desks to implement them. At my desk, I quickly scanned all of the emails in my inbox. I printed off many and simply put them to one side, organising the money for the scanners as a priority. The scanner company, being a bit cheeky, came back on with a question

about hand held scanners. I ordered the six thousand they claimed that they could produce in three months.

I then noticed an email from the White House, sent late last night. Opening it, it was hint from Chase about US manufacturers of scanners and airport systems, a link to their website. Seemed that Chase was now psychic. I clicked on “enquiries”, populating the form. In the textbox I typed: ‘Paul Holton, where are you trying to sell your kit – and failing? I’m interested in North Africa and Russian Caucasus.’

An hour later an email came back, someone up early – or to bed late. ‘We’ve been negotiating with airports in those regions recently. What did you have in mind?’

I emailed back: ‘That you offer a ninety-percent discount, and bill me the difference. Spend twenty million dollars. Knock yourselves out. And quickly!’

In fairness to the company, they came back with a list of countries, airports – large and small, the equipment currently installed, and that which they were trying to sell.

For the next few days, that list occupied my every waking minute. I even sat down with Jimmy and trawled through it, marking those airports most likely to be affected in the near future.

Many countries protested their treatment, their citizens having to take extra legs in their journeys to the west. Still, we had focused their attention. Scanners were hurriedly installed at airports where the resident airlines were squealing. Wands turned up, soon humming over passengers in queues, and the who’s-who of bad airports was posted online.

Within our own region, I was confident that we’d have it covered. We had taken surplus police officers out of villages and towns, and each small airport now counted at least thirty officers, the first few scanners arriving. Ngomo had nominated a senior Pathfinder officer for the post of Minister for Borders and Airports, and we accepted him with a telephone vote by the leaders. He occupied an office immediately, staffed by former and serving Pathfinders, and worked sixteen hours a day at his new project.

The new Borders Police would wear dark blue shirts, darker than most of their colleagues, with shoulder flashes that labelled their function. The new airport police training facility was set-up quickly, staff emanating from the existing airlines, from Sykes, but mostly from the manufacturers of the scanners. The new recruits had to learn all about passports, and spotting fakes, and the rules of

immigration to the various pan-African nations. The study of visas would be a two-week course in itself.

Coal, the black gold

With the airport panic calming, and scanners winging their way to third-world countries, Jack brought an RAF officer up to my office. I made them tea.

‘This is Wing Commander Russell, he’ll oversee the training squadrons in Africa.’

‘We already agreed the deal, you don’t need to hard sell it!’ I quipped.

The man smiled. ‘No, just here to clarify a few points.’

‘You mean, you’re here to try and sell us some old kit!’

‘Not exactly. We wanted to know ... just how you see the training evolving, since we could offer a basic flying programme, followed by a fast jet conversion, followed by specialist programmes.’

‘I’d say ... all of the above. But we’ll have to talk to the national leaders. But, as you know, they don’t have much in the way of shiny new aircraft to play with.’

‘Our American cousins have some cheap F16s they’re happy to impose on you,’ Jack said.

I cocked at eyebrow. ‘I see.’

‘And we have a great many Tornados about to be decommissioned.’

‘Which would still be more than adequate for regional use in Africa,’ the Wing Commander nudged.

‘We’ve only just bought a few F15s,’ I pointed out. Firmly. ‘We’ll have more planes than enemies!’

‘These particular Tornados and F16s would be a steal,’ Jack said with a grin.

I eased back. ‘What are you up to, Jack?’

‘I’d hazard a guess, and say Anglo-American influence in the region.’

‘They wouldn’t be under your influence ... would they?’

‘No, but they’d be preferable to a ... growing and emerging economic superpower buying Migs.’

‘Ah...’ I let out.

‘And once started on the route of western aircraft,’ the Wing Commander began, ‘they would buy western aircraft in years to come.’

‘When they had a little money to spend,’ Jack added.

‘You know what I think? I think ... I’d like three squadrons of F16s and three squadrons of Tornados to start with. Spares, technicians and instructors. I’d then see *all* of the countries in our region having a squadron. Will that get you two reprobates out of my office?’

‘It would,’ Jack said with a smile.

An hour later, Jimmy knocked and entered. ‘Are you decent?’

‘Dressed decent? Or well behaved decent?’

He sat. ‘You agreed to the RAF deal?’

‘Yes, made sense. A bit early, but we need a culture of good flying, and that takes years.’

‘It does,’ Jimmy agreed. ‘And the British Army are building a base near Mawlini, one in Somalia, and one near Forward Base.’

‘We being invaded?’

‘Hopefully,’ Jimmy stated, a strange answer. ‘Oh, French interested in a base near Forward Base, and Mawlini, and one in Somalia.’

‘We being invaded?’ I repeated.

‘Hopefully,’ Jimmy repeated, making me puzzle just what the hell they were all up to. ‘Anyway.’ He handed over a sheet of paper. ‘The kids in Shanghai have finalised a project that I won’t release fully – not just yet.’

I scanned the detail. ‘So ... they can turn coal into oil.’ I lifted my gaze. ‘Industry can already do that. It’s expensive, and eco-unfriendly.’

‘Not any more. The process they’ve developed creates a type of oil that burns in a more eco-friendly manner. And the cost of the process has been slashed. And ... our region of the DRC has enough coal to last a thousand years.’

‘Oh...?’

‘Order up the first coal mine and refinery.’

The sound of voices outside my door preceded a knock, and the PM stepping in with an aide. ‘This where all the real work goes on?’

We stood and shook hands, and I ordered drinks from my secretary.

Settled, the PM said, ‘We’re happy about the RAF deal.’

‘Bet you are,’ I complained.

‘We won’t be paying for your contribution, though,’ Jimmy told him.

‘No?’ the PM puzzled, a heavy frown taking hold.

‘No,’ Jimmy repeated. ‘And we’d like the rights to re-start coal mining in this country, and on a large scale.’

‘Coal ... mining?’ the PM puzzled. ‘What the hell for?’

‘After 2025, oil will be at a premium, expensive before then.’

‘Coal fired power stations? Are you mad?’ The PM challenged.

‘We can make them eco-friendly with new technology,’ I put in.

‘You can?’ the PM puzzled.

‘We can now,’ Jimmy answered. ‘But we won’t be building too many. That’s not what we want the coal for.’

‘You going to start making some sense, Jimmy?’ the PM implored.

‘How much is a barrel of oil right now?’ Jimmy asked.

‘Sixty something dollars a barrel,’ the PM answered.

‘Well, don’t tell anyone, but I can convert coal to oil for fifteen dollars a barrel. And I think we can dig it up for the equivalent of twelve dollars an oil barrel. That gives a profit margin of at least thirty dollars a barrel for capital equipment costs.’

The PM stared back, his mouth slowly opening. ‘That ... that could employ tens of thousands of people, and replace North Sea oil.’

‘That’ll piss of the Scottish Nationalists,’ I said. ‘This will be cheaper!’

‘My God, Jimmy. The ramifications are huge!’

‘The Yanks should be happy, they have plenty of coal,’ I put in.

‘So too the Chinese,’ the PM’s aide mentioned.

‘But there’s a problem,’ Jimmy noted. ‘If oil purchases from the Middle East slowed too much it would be like 2025 – only sooner. So this technology needs to be limited for now, but in place for 2015. We’ll build a plant in Africa, one here, one on the States, one in China. And then we’ll make it look more expensive than it really is, hiding the profits.’

‘How much coal is there in your region?’ the PM asked.

Jimmy glanced at me. ‘Enough to worry the Saudis. In simple terms, enough to keep the whole world going for thirty years.’

The PM blew out. ‘No wonder you spend so much time and money on that region.’

Thirty minutes later, Jimmy led the PM out, asking me to break the news to Chase. I checked my watch, and dialled the White House, eventually getting through after I told the lady receptionist

that the reason for the call was a need for advice on improving my sexual technique.

‘Paul, they announce you now as Rude Paul. How can I help?’

‘You sat down?’

‘At my desk.’

‘America has a lot of coal, yeah?’

‘Yes. Why?’

‘We’d like to buy it.’

‘Buy coal? What the hell for?’ Chase queried.

‘Would you sell it to us?’

‘Sell you coal? No law stopping you from running a mine or exporting the damn stuff. But what the hell for?’

‘Oh, we just found a way to turn it into oil for fifteen dollars a barrel.’

There was a long pause. ‘You what?’

‘We can convert it now, perfected the technology.’

‘Future technology?’

‘Where else would it come from, dope.’

‘Fifteen dollars a barrel?’ Chase repeated.

‘Yep. So, that coal, you’ll sell it to us?’

‘Like fuck! You can *fuck right off* ... to quote Rude Paul. When can we get the technology?’

‘Sometime after we’ve drawn up a shopping list.’ I hung up.

At 5pm, I noticed an email from the White House. ‘We reckon it takes two barrel equivalents of coal to make oil, and that we can dig that up for twenty-two dollars, less with improved technology and efficiencies. Downstream costs may add another twenty dollars. It’s not a huge saving, but a great alternate. And creates jobs here.’

I emailed back. ‘The process creates a special oil that burns clean for power stations. It can be converted quickly to car gasoline. PS. Jimmy says he can mine coal for twelve dollars an oil barrel equivalent, so check your sums.’

North Korea

Jimmy had visited North Korea once before, with a Chinese delegation, and we had been quietly supplying them with cheap

medical equipment, ships of wheat, and the odd oil tanker. Now, Jimmy said it was time to try and nudge them our way.

On a hot August day, I nudged my family onto the coach, iPADS being carried. Shelly and Lucy sat with Han and practised recognising Chinese symbols on their iPADS. Helen and I fired up our laptops and attacked the hundreds of emails we both received. Still, the motorway journeys passed quickly.

Landing in Hong Kong, Po met us with a coach, plus plenty of security, that routine now handled by the local police. Booked into Po's hotel, we relaxed for a day; swimming, massages, eating, the girls competing to see who could read the most Chinese symbols on the walls.

On the second day, Po brought his family seniors around to talk shop. They had heard about the washing machine factory in Goma and were interested in opening their own factories.

Jimmy began, 'If you open a factory, it should be for goods that are in need, and could be sold locally, ideally back to us.'

'What do you need?' they asked.

'Uniforms,' I said. 'Police and army.'

'We can do that,' they offered. 'Synthetics.'

'No, local cotton,' Jimmy insisted. 'Synthetics are not great in hot humid climates. They're good for rain coats, and we need them as well.'

'OK, we make raincoat and hats, umbrella, cotton uniform. And we can make cheap TV and radio – old parts.'

'They would be good,' Jimmy agreed. 'And we need satellite dishes, furniture – plastic and steel, tools for construction.'

They now had a list of products, and they were keen to have a go.

'The land is free,' I said. 'And we'll help with factory costs.' That pleased them. 'And the more people you employ the better, but the minimum wage is set by us.'

'OK, OK, no problem.'

We agreed to areas where they would locate factories, a Po family plot some two miles square, fifteen miles west of Goma. I emailed the corporation, nudging them to make a start on clearing the land. Our guests then insisted that they build their own tower block and a separate hotel.

'I think there are enough hotels,' I pointed out.

'No, no, we look. When Golf come, many people have no room, and many tourist now from China.'

'So you want a Chinese hotel for Chinese tourists,' I realised.

'Yes, the staff speak Chinese,' they pointed out.

‘Fine,’ I said. ‘Build a hotel, but if doesn’t make money it’s your problem.’

The next day, leaving Shelly and Lucy with Po, we flew up to Beijing, joining a flight down to Pyongyang to meet the Korea leader, the man much maligned in the west. Their airport was basic, and their streets similar to Beijing in many respects; grey. I took in what I could as the dated bus trundled around to the government palace, the People’s Palace, although the people did not get to enjoy it.

Our guide, the Chinese Ambassador, led our group inside, met by his counter-part, and we sat awaiting their exalted leader for twenty minutes. I already wanted to hit him. He stepped out ten minutes later, and I found myself forcing away a grin as the puppet movie, Team America, came to mind. His puppet character was more lifelike. He wore a drab grey, and waved like the Queen as he approached. Everyone was bowing, so I joined in, eventually told to sit. I glanced at Han, wondering just how the world produced leaders like this.

‘Thank you for seeing us,’ Jimmy offered. ‘I would like to begin, by informing you that we developed the technology to convert coal to oil very cheaply. We would like to open a plant here and assist your oil production. If that plant is successful, we can create many more, and boost your economy significantly.’

‘That would be a great assistance,’ the translator told us. ‘But I am sure that you have something to ask for in return.’

‘There are a great many things that we could do to assist your country, whether others like it or not. If you are prepared to negotiate, we will negotiate for the future advancement of this country.’

‘Negotiate what ... in particular?’

‘All of those things that keep you at odds with the west,’ Jimmy responded.

‘I still do not understand your motives,’ the leader complained.

‘I seek peace for all the countries of the world,’ Jimmy responded.

‘And if we agree to these demands, what do we get?’

‘You get unlimited oil from coal to start with. You could even sell it.’

‘That would be a benefit.’

Our glorious leader then rubbed his chest, as if in pain, and pinched the top of his nose. An aide rushed over as our host just

about fainted. We were asked to leave, in a hurry, and soon on the bus heading back to the airport.

‘He is not a well man,’ Han pointed out. ‘We may be able to return in a few days.’

After our two-minute conversation, we reversed our trip, back in Hong Kong twelve hours and two flights later.

In the hotel, Jimmy said, ‘He won’t survive.’

‘Then why we negotiating with him, instead of the next idiot?’

‘Oh, he would have lived a few years yet. But I ... quickened the process.’

I puzzled that. ‘How?’

‘Technology. And don’t tell anyone.’

The next day, a full two days after the leader had passed, his death was announced to the world, the former head of the Army appointed as President. The first thing that the new President undertook, was to extend an invitation to the President of South Korea to visit his northern neighbour.

A senior delegation of Chinese officials met us in Shanghai the following day, after we made a quick visit to the gifted kids – who were now breeding like rabbits. So much for being autistic; they were more like sex maniacs.

We met the Chinese in a government building, Helen practising her Chinese, which was now reasonably good considering she had dedicated so much of her youth to filling her head with other languages. Jimmy produced a small device and plugged it into a wall, informing our hosts that it would jam all electronics.

‘We have a similar device from the children,’ they mentioned in passing.

The Defence Minister got straight to the point. ‘We are concerned by the military build up in your region. Now talk of more soldiers and western aircraft.’

‘Why is that a concern?’ Jimmy asked.

That stopped the minister dead. ‘Well, what is the purpose of the build-up?’

‘What do you consider the reason behind it?’ Jimmy countered, being quite adversarial today.

The Minister glanced at his team. ‘This is a preparation towards 2025?’

Jimmy explained, ‘For the African armies, and air forces, to be ready for that date they would have to start now. You don’t train pilots and officers in a few years, you need a good tradition of such training establishments. Now is the right time to start that process, so

that a plentiful supply of officers and skilled pilots are available at the time. And if my aim was to use western pilots, then these steps would not be necessary.'

They seemed to acknowledge the sense in that.

'You are teaching the Americans, and now the British, how to fight the Brotherhood.'

'Of course.' Jimmy waited.

'Will that disadvantage us in the future?'

'I see no scenario where Chinese troops move into the Middle East. If the Brotherhood reaches Western China then the tactics will be different.'

'The Americans would take the lead in a war with the Brotherhood?'

'The most likely scenario is that the Americans protect Israel and Saudi Arabia, that the African armies defend the south, that the European Armies defend Turkey, and the Russians draw a line at Georgia.'

'That would leave the east open,' they noted.

'India would take that burden, hopefully with your support.'

'And Pakistan?'

'For them, it's hard to say which way they'll turn. But to start with, Pakistan would resist the Brotherhood – all governments will.'

'And if factors change, as they have already done many times? As you say, there is no point in knowing the future just to repeat it.'

'Indeed,' Jimmy said with a polite smile. 'If they change, then we can assess them at the time.'

'And would it not be wise for at least some Chinese units to be trained to fight in the Middle East?'

'I could give you the manual and you can create your own programme, here in China, sure.'

'Would there not be some merit to training in the region of concern, alongside the Africa soldiers.'

I hid a smile.

'That would be a better option, but it would be very difficult to mix your soldiers with others. Your soldiers are like worker ants, your officers like moronic automatons, your style of warfare dated.'

Oh dear, I thought. For some reason that I could not put my finger on, they did not seem to like that.

'You say that our army, and our officer structure, is disadvantaged?'

'Very much so. But your forces are fine to defend China. They're just no good at expeditionary fighting, or guerrilla fighting, or co-

ordinating with western armies. That's fine, they don't need to be, not till 2025.'

'If we lack such a basic skill as expeditionary fighting, then do you not think that it should be addressed?' the minister unhappily pressed.

'There are not many scenarios where you'd need to run an expeditionary war involving others.'

'But there are some,' they pressed.

'Well, yes, if things go wrong.'

'Is it not always the case, that things *going wrong* are the start point of most conflicts?'

'Usually, yes,' Jimmy conceded. He took a breath. 'If you wish to create a unit and send them to Africa I'll do the very best I can with them. But I warn you, they may end up being less able to integrate with rigid infantry manoeuvres afterwards. They'll be taught to fight like the Rifles.'

'We could ring-fence such a unit,' they insisted.

'Then, when you're ready, I will do all I can to assist.'

They asked simple questions for an hour, thanked us and we headed back to Hong Kong. We enjoyed a few days in the colony, Jimmy not even mentioning Korea, and flew back to Blighty. All he would say, was that the device developed to kill the Korean leader was now being field-tested by Mossad agents.

Haiti

I had just about cleared my desk of topical issues when we set-off to Haiti in September. On the flight, I opened my laptop and read the detail of emails that had been downloaded and stored. With the software I now used, I could return emails, and they would be sent when I connected to a 3g mobile connection upon landing, or the phone line in a hotel.

Anna had sent me a lengthy report, her daughter now working with her. Christ, how long had it been since I saw her daughter last? Girl must be eighteen or more by now. And it seemed that Anna was trying hard to do my job for me around our region. She had greatly expanded the orphanages into colleges, children over fifteen

studying vocational subjects, those over sixteen studying for recognised qualifications.

That would have been fine, but Anna had gone further. In each orphanage, at least twenty-five percent of the boys attended the cadet movement training sessions – evenings and weekends, plus summer camps. More than a third of all girls qualified on a basic Rescue Force course and Anna was producing a shit load of nurses, some of who were destined for our village school projects.

But above and beyond the normal needs for warm bodies that we had, she had taken it upon herself to contact the corporation and enquire about skills – and the lack thereof. She now reported some eleven thousand kids studying bricklaying and construction, others training to become electricians, decorators, metal workers. She ran courses for budding oil workers, mine managers, plastics workers. Fighter pilots were not on the list, I checked.

At this rate, our skills shortages would diminish rapidly, especially in the Congo, where our orphanages-come-colleges now totalled sixty thousand attendees. And that number was now being boosted by the prison orphanages, where truant kids were forced to attend. So far, they only held five thousand inmates, and many kids were moved to other schools after a few months of food and schooling.

Anna had also taken Haiti under her wing, the super-sized orphanages working along the exact same lines as Africa, French speaking African teachers populating the blackboards. The first colleges were also under construction, hopefully good construction, and with decent concrete.

Our aircraft landed directly at Port-au-Prince airport, the airport facilities having been improved and extended. The tented city had not completely gone, a large number of re-construction workers still utilising them, alongside RF staff and the Rifles. I did, however, glimpse a large barrack block in the distance, numerous cranes littering the horizon as we landed.

A coach met us, thirty Rifles with jeeps acting as escort for the short trip around to a new hotel, positioned about a mile from the old Presidential Palace. That palace no longer supported a roof to keep the rain out, a myriad of small cranes attending it like crabs on a corpse. Our hotel was a simple collection of long three storey blocks, more functional than attractive, and I noticed again the angled buttresses that ran up the walls. It had been built to last.

The rooms were basic, but nicely decorated, and had a new smell to them. My bathroom looked unused, a lonesome cockroach in the

sink. After a satisfactory meal in the main restaurant, we occupied a conference venue room, the new President and his team coming across to us. Guess his palace still needed a lick of paint. And a roof.

‘Welcome,’ Jimmy offered.

‘Welcome to you,’ the President offered, his words heavily accented.

With everyone seated, coffees made, Jimmy began, ‘How’s progress?’

‘We have demolished four thousand houses or buildings and rebuilt them, and constructed thirty new apartment blocks here in the capital.’

‘And the soldiers?’ Jimmy asked.

‘Our own army is now seven thousand strong, some deployed on the streets.’

‘And the police?’

‘More than six thousand that are the new police force,’ the President offered. ‘Many former officers not working now.’

‘And crime?’ Jimmy nudged.

‘Crime is low, very low now,’ the President proudly stated. ‘Two, three hangings a week.’

‘And the UN?’ Jimmy asked.

‘They petition us every day not to hang or shoot.’ The President gave a large, gallic shrug.

‘Prison college?’ I asked.

‘Many of the prisoners now study the house building, yes. And working with the wood. We release many, not so many problems.’

‘Good. Well, we’d like to bring in oil exploration teams,’ Jimmy announced.

It was news to me, and made me smile.

‘Oil?’ the President repeated. ‘You think there may be oil here?’

‘We’ll not know till we look,’ Jimmy said. ‘I have the forms with me, you can sign them later ... and we’ll make a start.’

With our guests gone, I asked Jimmy about the oil. ‘Off the southern coast. Not much, but enough.’

‘And the real reason we’re here?’ I pressed.

Jimmy sipped a cooling coffee. ‘The chances of the States going at it with Venezuela have diminished, but not gone. So Haiti and the Haitian Rifles are a chess piece; on the chessboard sat ready. There’ll also be unrest in Central America after 2015. And finally, the Caribbean would have fallen to the Brotherhood around 2029 without a boost, and some suitable soldiers to hand.’

‘A piece on the chessboard,’ I repeated.

The following day we reviewed the RF teams still in place, making like electioneering politicians at the hospitals, especially the two new ones that we had raised with our own money. In the afternoon we met the Rifles instructors with their Haitian Rifles charges, and reviewed regular African Rifles still on duty here. With the sun low on the horizon, a UN chartered flight gave us a lift up to Washington.

Hardon Chase welcomed us to the White House the next day, but this time we used the front door, and were filmed doing so. I suspected he was after something. In the oval office, tea plentiful, Chase began with, 'So, coal technology.'

'We'll develop test sites in Africa, so you can have a peek when they're running,' Jimmy placated our host with.

'Timescales?' Chase nudged.

'A year at least.'

'Some excited folk over here,' Chase admitted. 'And ... a few concerns.'

'Something about gift horses and teeth come to mind,' I put in.

Chase ignored me. 'The ... Chinese have a lot of coal.'

'As do the British,' I added. 'And ... Poland.'

Chase glanced at me, but waited a response from Jimmy.

'Your concern, oh great leader?' Jimmy toyed.

'That if the Chinese economy gets the technology, and makes good use of it, that'll it'll give them a big boost. And ... then we'd see lower oil sales, and pressure on the dollar.'

'Oh, no,' I quipped. 'Did someone arrange for all oil to be trading in dollars? Bummer.'

Chase gave me a fatherly, disappointed look.

Jimmy said, 'The Chinese use of coal-oil will have very little affect on oil prices, since emerging markets will take up the slack.'

'Yes?' Chase firmly nudged.

'Yes,' Jimmy repeated. 'But what it will do, is keep oil under seventy dollars a barrel, whilst upstream costs rise, and the profits for fat Saudis fall.'

'Everyone's ... upstream costs will rise as the years go by, so oil is bound to rise,' Chase thought out loud.

'Yes, but in proportion - and measured,' Jimmy commented. 'Otherwise, oil will reach over a hundred dollars a barrel by 2013.'

'And the effect of coal-oil on the US economy?'

'You'll move away from foreign oil, but still keep at your gas guzzling when you should be turning to electric cars and the next generation of nuclear plants.'

‘We’re cooperating with the plant in Somalia, learning a few new tricks.’

‘Here’s the thing,’ I began. ‘Your good friends the Chinese have a drawing board, and on it are more next generation reactors than I have fingers and toes. Then there are the Russians, and we may also involve the Indians in the technology. So don’t cogitate too long.’

‘You seem to be helping the Chinese a great deal,’ Chase complained.

‘No,’ I said. ‘We tell them what we tell you, but they listen and react quickly. Go figure, huh!’

Chase gave me another look. ‘I’ll look at it again. Anyway, I hear the French have landed in Africa.’

‘The French have been there a long time,’ Jimmy commented. ‘They still have a pseudo-colonial attitude to Africa.’

‘You’ll train them to fight the Brotherhood?’

Jimmy nodded.

I said, ‘You may as well know now, that the Chinese were not happy about us training your guys. So...’ I checked my nails.

‘You’ll train Chinese soldiers? In Africa!’

‘We will,’ Jimmy confirmed with a forced smile. ‘Alongside the British contingent that’s on its way, and the aforementioned French. Oh, and the enlarged Indian detachment in the Congo.’

‘Are all the damn “M” Group countries trying to get in on it?’ Chase loudly asked.

‘Can you think of a good reason why they wouldn’t?’ Jimmy broached. ‘Or did you wish to face the Brotherhood alone?’

‘It’s not that that I’m worried about.’

‘How can you be worried ... about foreign soldiers learning to fight in the desert?’ Jimmy posed. ‘Any threat to you - from those countries - would be by airpower, naval or nuclear. Not counter-terrorist.’

‘Well, yes,’ Chase conceded. He sipped his coffee. ‘We have enough airpower in the region to stop a hijacked plane.’

‘For which I am grateful,’ Jimmy offered. ‘But keep up the pressure on crap old airlines flying crap old aircraft out of crap fucking airports.’

‘We’re upsetting a few as we speak,’ Chase noted. ‘The officer training college OK?’

‘They’ve started the first term, three thousand entrants,’ I reported.

‘And the bit here that I’m missing, that you two sneaky shits are hiding?’

‘You saw what I did with the Rifles,’ Jimmy began, a hint of a grin creasing a cheek. ‘Now see what I do with the officers.’

‘Future leaders?’

‘Future leaders,’ Jimmy confirmed. ‘Pro-west, pro-America, pro-Baywatch and 90210, at a time when African GDP matters to the world.’

‘You’re welcome,’ I quipped.

‘We’ve contributed to the officer college, and to the new infantry bases,’ Chase thought he needed to mention.

‘Always appreciated,’ Jimmy told him.

‘A lot of folks over here getting twitchy about al-Qa’eda. It may just be an African and Middle East thing at the moment, but that aircraft coming down has worried a few people.’

‘It should.’

‘We’ve used satellite imaging over Afghanistan,’ Chase informed us, as if that in itself might have been a bit naughty. ‘And we can see training camps, upwards of five thousand fighters sat around the campfire. Maybe more.’

‘I’m working on a solution, one you’ll like, and one that those digging your ribs will like. It’ll come to a head in a year. But don’t forget, to take any action you’ll need the public behind you, and not just here. You’ll need wider public support.’

‘Support for ... what?’ Chase puzzled. I wanted to know that as well.

‘Wait and see. And trust me.’

Thirty minutes later we left the President to run the evil empire.

On the plane, mid Atlantic, I asked, ‘The officer college: you said it would change the world. Not seeing how?’

‘You will in a month or so, if you’re bright enough.’

Lebanon

A handful of rockets landed in Northern Israel a few weeks later, but instead of invading, Ben Ares came to talk, an odd move. A very odd move.

I welcomed him at the front door on a damp September day, New Dave and a few officials with him. In the lounge we found Jimmy

with Han, our Chinese representative bowing his head at our guests and leaving us alone.

With the door closed, Ben got straight to the point. 'We have EMPs, we have the counter-terrorist device, we even have the hand-held devices. We have a few blinding laser rifles, and we have the silent dart guns for close-up work by soldiers. And now we have the prospect of a war in Lebanon.'

'It's not a war, it would be *you* invading,' I pointed out, earning a look.

'Is there anything else we can use against Hezbollah other than the James Bond gadgets? Because they don't stop rockets!'

'I'd be happy to put the Rifles back in there,' Jimmy announced.

'You would!' Ben and I said at the same time, both equally surprised.

'Yes. But, I would not use Kenyans, that could be seen as ... antagonistic. I'd use ... Somalis.'

'Somalis!' Ben and I again repeated.

'Somalis would attract al-Qa'eda to Lebanon!' I put in. Loudly.

Jimmy eased back and waited.

I exchanged a puzzled look with Ben Ares. 'Hezbollah would attack them, as would al-Qa'eda?' I noted. 'Abdi has been calling the Arabs a few names of late.'

'Hezbollah would attack, and get themselves killed by the Somali Rifles,' Ben thought aloud. 'A thousand Somalis, with the James Bond gadgets, waiting for Hezbollah to make a move.'

'It would be a massacre,' I suggested. 'Which might just make it worse!'

Jimmy said, 'If Hezbollah fighters were massacred, it would take them a long time to recover.' I was surprised by that. 'But, I would keep the Somalis there for a year or more,' Jimmy added.

'So every al-Qa'eda operative goes to Lebanon to attack them,' Ben Ares realised. 'And get themselves killed in the process.'

'I don't think the UN would sanction Somali peacekeepers in Lebanon,' I quipped. 'Something of a contradiction: Somalis and peacekeeping!'

'No,' Jimmy agreed. 'They'd have to attack north through Israel, with the world watching. Fortunately, the "M" Group would handle the media, and we'd explain that it was either Somali peacekeepers – or a full-on Israeli invasion. Since we control the UN Security Council, not a problem. Ben, rattle some sabres towards Lebanon. Threaten to invade.'

'When could the Somalis be ready?' Ben asked.

‘In five days.’

‘Did you anticipate this?’ Ben pressed.

‘I may have put a unit or two on standby.’

‘Abdi wants payback,’ I realised.

‘You’ll need to re-supply them, Ben; food and water. We’ll handle the munitions, and the gadgets.’

A long way off, Sergeant Nbeki, better known as Lobster, packed his bags and said goodbye to his wife and children.

With the Israelis gone, I asked Jimmy, ‘Is this wise?’

‘You ask that whilst looking at the world from this perspective. So, try and imagine a scorched earth, the Brotherhood running rampant, and ask it again. I see things from a different perspective. If there’s no *end-of-the-world*, then it’s not wise at all. It’s all about perspectives.’

‘Oh.’

‘When you started that officer training college, you set in motion a chain of events that will have huge ramifications. When Rahman downed that plane, he set in motion a second set of parallel events, and the two will collide in around thirteen months.’

‘And when they do?’

‘The world will stop and pause on its journey to 2025,’ Jimmy enigmatically stated. ‘And people will take a long hard look at each other.’

That following week, Jimmy ordered a massive push by Rescue Force into Southern Sudan, a huge charm offensive that would be spread out over the next year, and I had to consider that a war with Sudan was possible. Jimmy said otherwise. He asked me to divert as much food as we could spare to Southern Sudan, along with extra water containers, and even electric buses and scooters.

I had hardly finished speaking with Mac on the phone when an incident occurred at Mawlini. Mac had driven to the nearest town in his four by four air-conditioned jeep, to a merchant who claimed he could get a hot-tub for Mac. The shopkeeper confirmed that the hot-tub was in Mombassa, and being loaded on the lorry as they spoke. Placated by that, Mac decided to return to base and do some proper work.

But getting back into his car he noticed two suspicious men, appearing to be Somalis or Ethiopians. As Mac drove off, the two men jumped into a jeep and followed, cutting up a few bikes in the process. Mac reached across to the glove compartment and pulled out his pistol as he started the journey back to base. On the edge of

town, the two men were still following in their beaten up old car, a lonely stretch of road ahead. Mac used his phone to call the base.

Ten minutes along the straight stretch of road, and having passed only the odd lonely oil tanker, Mac could see helicopters on the horizon. Half a mile later he slowed and pulled up, the men behind being a bit obvious and pulling up two hundred yards back on this desert highway. Pistol in hand, Mac jumped down to the roar of approaching helicopters, and moved to the rear of his jeep. Stood in the middle of the road, pistol in hand, he stared at the other vehicle.

The two men in the car were now less sure of themselves, something of a debate going on as to what to do next. They eventually decided that retreat was the best policy, and executed a three-point turn, starting back down the road as a Cobra dropped from the sky to a hover just ten feet above the road, some three hundred yards in front of them. As opposing traffic went, the Cobra was more worrying than a large lorry driving erratically. They halted.

From their side windows they could now see Cobras either side, Hueys behind the Cobras, a curtain of sand being blown up as if to hide what was about to happen next.

The lead Cobra hit the car engine with a burst of fire, shredding it. The two would be assassins burst from the car, one with an AK47. Righting themselves, one ran away, the second firing toward the Cobra, for all the good that would do. The Cobra, not wishing to be unsociable, returned fire, taking the man's legs off. They went one way, his torso the other way. The second man, the runner, held up his hands in surrender as Mac walked slowly forwards.

A Huey full of Rifles landed nearby and ran at the survivor, soon kicking him to the ground and stamping on him. Two other Hueys touched down as Mac waved off the Cobras. The Rifles ran forwards, checking the car, opening the boot and searching.

Mac stepped up to the Rifles officer, a captain. Over the roar of helicopters, Mac said, pointing at the dead man, 'I want him questioned!'

The captain stared at the blood-soaked sand that lay between the upper half and the lower half of the would-be assassin, his fists on his hips. 'Medic!' he called with a smile.

The survivor was dragged over. 'Take him back. Make him talk!' Mac ordered. 'And send some men to the town, search it.'

A line of three jeeps pulled up, more Rifles jumping down as Mac ambled back to his jeep, wondering when his hot-tub would arrive.

I received an email about the incident, suggesting that senior staff make use of driver-bodyguards. Mac refused, so I made it an order, copying in Bob Davies, then shouted down the phone at Mac. When that didn't seem to persuade him, Jimmy called Mac and offered to sack him and kick him off the base and out of his house. He would have a driver bodyguard. Or else.

Three days after that incident, Somali soldiers started to land in Israel. The UN had been petitioned to allow Somali peacekeepers into the UN patrolled area of southern Lebanon, but the UN had seen the obvious flaw in such a deployment straight away. They resisted. Overnight, the Somalis – complete with blue helmets, drove north from Israel to the UN bases now occupied by soldiers from West Africa, and replaced their colleagues. Those colleagues had been briefed a few hours earlier and were looking forward to returning home. They drove to the coast, where ships had arrived during the night, and were whisked away before dawn. The Lebanese woke to find no difference in the black Africans with blue helmets, and all was normal. Everything appeared the same.

The UN woke to find that their deployments had been altered overnight, and without their say so. The West Africans were on their way home, and would refuse to go back, the Somalis now in place. Not wanting to have their authority tested in this manner, the UN convened a meeting and ordered the Somalis out. The UN Security Council then convened and requested the Somalis to stay where they were, the outside world a little confused to say the least. One group of Africans had been replaced with another. So what? What was the big deal?

Hezbollah found out the next day, the papers reporting the presence now of Somalis on the Israeli border. For the most part, the average citizen of Lebanon shrugged and said “so what?” But the Hezbollah leadership, and their sponsors in Syria and Iran, knew only too well of the west's nuclear power plant and waste dump in Somalia, of western support for Somalia, and now the build-up of western bases on Somali soil.

What I found odd at the time, was the fact that neither Hezbollah, the Syrians, or the Iranians liked al-Qa'eda, or even spoke to them. The Iranians hated al-Qa'eda, because al-Qa'eda supported dissidents and separatists in the south east of Iran, bordering Afghanistan. So I failed to see how they might cooperate on attacking the Somalis.

That first week, the Somalis did little other than play at peacekeeper, and the world's media lost interest, not that it showed

much interest in the first place. But the Somali Pathfinders, along with Kenyan Pathfinders wearing Somali shoulder flashes, checked their ground and set-up reconnaissance patrols. Men were now dug in and hidden with their supplies, night sights and gadgets ready, satellite phones for secure communications.

Five days after the Somalis deployed the first team of Hezbollah fighters set-off to fire a few rockets towards Israel. The rocket team pulled into a lonely orchard at midnight, three cars and one lorry, and began setting up. Dawn saw no sign of the men, their families out looking for them, their vehicles nowhere to be seen. Those vehicles were actually sat in a compound in northern Israel, forensics being carried out, the bodies being examined.

Much scratching of heads followed. A second team, in a second area, set off after dark to prepare more rockets. Four cars and one truck, all now with their lights out, pulled into the rear of a large house, shaded by high walls, a lookout on the roof. Death crept quietly forwards. The man on the roof rubbed his chest, felt unwell, and slumped. The second lookout, in a field at the rear, thought he saw a flash of light, then wondered why the night had suddenly become so dark. By dawn, the cars and truck were across the border being examined, the rockets unused.

The Hezbollah regional commander was now suspicious, sure that Israeli commandos were out and about after sundown. He said as much to his people, asked them all to be vigilant, and sent forwards close to a hundred men to try and engage the Israeli invaders. By noon the next day the news was not good. Only six men had returned, along with twelve bodies, the nature of the men's deaths yet to be determined. The rest had vanished.

The various outlets for Hezbollah claimed the Israelis were capturing men and taking them prisoner, killing others. Israel pointed out that they had no soldiers in southern Lebanon, and went so far as to blame the Somalis, which was a bit cheeky of them. Ineffectual mortar fire was then directed towards the Somali peacekeepers, no one hurt.

For some odd reason, it had taken Hezbollah command a while to figure it was the Somalis, and not the Israelis, despite what happened when the Kenyans had been in position. With no other logical choice, Hezbollah anger was directed towards the peacekeepers, whose vehicles got stoned when they ventured out. So the Somalis stopped venturing out in the white UN armoured personal carriers. And, just for spite, the Somali's blew every electrical appliance in

the nearest large town. People recognised the effect, since some had been on a rally where the same thing had happened. No TV tonight.

With the Israelis providing intelligence about local Hezbollah leaders, some living forty miles from the border, Somali snatch squads captured the men, typically leaving most of the household dead. But the deaths were causing concern, since the people just seemed to have stopped living. There were no signs of injury, and post mortems revealed nothing at all. They had just stopped.

Panic over the strange deaths spread, rumours of the Israelis using chemical weapons. The UN got involved, sending in doctors to examine the bodies, but found nothing. It was all very puzzling.

Al-Qa'eda then showed up, permission asked for safe passage, permission to blow up the Somalis. Permission was granted by Hezbollah, and the al-Qa'eda team drove south. In the Somali base, a computer screen tracked an active satellite phone being intermittently used on its journey south. Teams were warned, others made ready, as the signal closed to within five miles.

The car was spotted on a quiet road, its movement matched to the signal being tracked. A mile further on, Lobster readied a device, a new toy, and moved to within ten yards of the road, not too fussed about being seen. As the car drew closer it slowed, spotting him, the device discharged. The explosives being transported had blown when small sparks permeated the vehicle – and everything inside it, the very purpose of this new device. The last thing the men felt was a tingling, like a million small electric shocks. The device had been successfully field tested, Lobster clambering to his feet and dusting himself off, jibes and rude comments coming from his Somali colleagues.

In the rear command post, situated in northern Israel, a Pathfinder officer explained the device, and its range limitations, the Israelis fascinated. Unfortunately, the device could not be widely used in everyday life without electrocuting innocent Palestinian drivers. The Israelis were not seeing a downside, keen to try it.

In Lebanon, local villagers saw the explosion, and went to investigate. The news reaching Hezbollah command was that the explosives had gone off prematurely; so much for al-Qa'eda's reputation as proficient bomb makers.

A long way off, Rahman sat thinking about many things.

Shelly's marina

With permission from the school, we took the girls and a group of their friends down to Goma for the grand opening of the main phase of the marina. The kids enjoyed a day at a safari lodge, chasing after balls of fur that were faster than they were, and the next day we all dressed smart for the grand opening. Many of the ministers were due to attend, as well as Marko and Yuri, Po and his family, plus a few of the senior staff from the corporation.

But arriving at the marina we could see thick crowds, many tourists, others appearing to be local businessmen in their smart suits. I even saw a few Indians and Arabs amongst the crowd. Security was tight, a line of police officers in blue stretching out and marshalling the crowds.

There remained tall yellow cranes around the casino, but that structure was taking shape nicely, and in the distance I could just make out very tall cranes around the new stock exchange. Pulling up in our electric bus, we stepped down being photographed by hundreds of people, the crowds ten deep at least behind the police and barriers. I waved, getting snapped by tourists.

The canals were now full of green-tinted water, clear at the top, but I could not see the bottom. The concrete sides had been nicely finished with a type of brown tiling, a black-painted iron guardrail running alongside the canal's edge to stop drinkers and revellers from falling in. The sun glistened off the water's surface, and even this small section was appealing to the casual visitor. We strolled along the canal's edge, soon to the main circular marina, wooden pontoons and a handful of boats in place, including a tall sailboat that Yuri had flown down in an IL76. Stood at the edge, at the railing, a hand on Lucy's shoulder, I was very pleased with our new marina.

Turning, I could see the curving row of cafes and bars, signs above doors proclaiming the names and dishes served within. The head of the corporation led us on, finding Po, Marko and Yuri inside an ice cream parlour, suitable produce in hands. We accepted ice creams as we greeted the gang, Jimmy leading us slowly up to the second floor. There we found that all of the restaurants offered balcony seating, and that you could walk along the balcony, which we now navigated as a group.

From the second floor I could appreciate the whole of the marina and its horseshoe of bars and cafes. Directly opposite the cafes,

edging the main canal down to the lake, sat two areas of neatly mown grass, many benches dotted about, play areas for kids tucked into corners.

Helen and the girls took snaps with digital cameras for five minutes, before we wandered down to the ribbon-cutting ceremony. We crossed an ornate wooden bridge, local dignitaries and ministers stood waiting in the sun, TV crews and journalists backing them. President Errol handed Shelly an oversized pair of scissors, and under the gaze of the crowds my daughter cut a large red ribbon. Behind it stood a plinth with a plaque, dedicating the opening to Shelly. Shelly's Marina, Gotham, City, had been born.

With a nudge from Jimmy, I approached the microphone, now the focus of the TV cameras and the keen journalists, some appearing to be western.

'Ladies and gentlemen, thank you all for coming here today, to the opening of Shelly's Marina. This marina was named after my eldest daughter, because she drew the pictures that inspired the creation of this facility for the people of Goma, and for tourists to enjoy.

'It is our aim to create more water features and marinas to improve the appearance of the city, and to attract more tourists, helping the economies of Africa. To that end, I would like all of you to visit the cafes and bars, and to spend some money on cold drinks on this warm day, and some food later. Thank you.'

The crowds applauded, and Jimmy nudged me towards them. They snapped us close up, many asking for autographs. I had to wonder when I stopped fearing the public, and they started asking for autographs. I greeted families from all over the world, a wide range of accented English uttered. I practised my Russian, my Chinese, and even some German.

Yuri led us to his own restaurant, our group soon sitting on the balcony in the sun, having lunch as the crowds spread out, people either walking along the canals or using the bars. Sat there in a gentle cooling breeze off the lake, I could hear metal wires tapping the yacht masts, a familiar sound in any marina. The arrival of a hungry pink pelican was a treat, the bird resting on a pontoon and being keenly photographed by the tourists.

Not to be outdone by Yuri, Po was building his own restaurant – and on a grand scale, and now handed us a sketch of the hotel he was going to build. My first thought was that he would not fill it, but it was a beautiful design. If he wanted to build it he could, the land free, the materials and labour both cheap enough.

After lunch we sat chatting, cold beers on a warm day with a great view; I could have stayed there all day. The girls wanted to see the view from the tallest tower, so we reclaimed our bus and set off as a group, soon on the windy viewing platform, the balcony now complete with wire mesh to stop jumpers. The girls peered down, getting a birds-eye view of the marina, and the sections that were still a work in progress.

The main structure of the casino was complete, and in the distance we could make out the first four floors of the stock exchange in skeletal metal form, a second tower rising up next to it. Po and Yuri seemed to be in a heated debate about what new buildings should go where – and who should build them. Jimmy and I didn't care; they could build as many new structures as they liked.

Jimmy called Po over to a large plastic drawing of the city, one that detailed the various attractions for the tourists. On the drawing, he pointed out where Spiral III was being built, and a new estate called Hilltop. I took a wild guess and figured it would be atop the distant hills that backed Spiral III. Po then studied the distant hills through a telescope fixed to a pole.

That led to a debate between Po and Yuri about who should buy the land and build the houses, Jimmy resisting a smile. Jimmy intervened, explaining that neither Spiral II nor Hilltop was up for grabs, but if they wished they could sponsor Spiral IV and V each. These estates would be closer to the Stock Exchange. I peered out across the city, and figured that they might, by a whole hundred yards or so. Po and Yuri, keen to measure their dicks, agreed to one each.

‘My estate will be better than your estate,’ I whispered to Helen.

‘We should get Shelly to design them, and charge a fee!’

I took my wife to the south side. Pointing at the lakeside, I said, ‘Jimmy will build marinas all the way along, a mile or so. If they're like the first one, it'll make this place the Venice of Africa.’

‘We should build a house here.’

I stopped dead and faced my wife, the one I was supposed to lose in a year or less. ‘You serious?’

‘Yes. Why not? It's cheap to build, and the city is nice place to visit now. We all have a lot of work here, so why not.’

‘Holton Mansions,’ I quipped. ‘Shelly!’ I called. When Shelly drew near I pulled her in. ‘We want you to design a new house, a big one that we can live in when we come down to visit.’

‘On the lakeshore,’ Helen put in.

Shelly peered out at the lake. ‘Where?’

I pointed to a place beyond the Stock Exchange. ‘Half a mile further down the lake.’

Five minutes later, stood with Jimmy, I said, ‘Helen wants a house down here, a big one. What do you think?’

‘Helen ... suggested a house? Here?’

I was surprised by his surprise. ‘Yes. Would that ... not have happened anyway?’

‘No.’

‘Oh.’ We took in the view. After a moment I said, ‘Is ... that a good sign?’

‘I guess so. It’s ... all new to me.’

‘And the house?’ I nudged.

‘May as well make it talk of the town. Make it a fucking great pink palace, Miami style, rooms for us all; offices, staff, security lodge, gates - and a dinning hall to entertain guests. Ten guest lodges.’

‘Governor’s residence,’ I quipped.

‘About time, really.’

I told Po and Yuri about it. It took a whole ten seconds for them to ask if they could build along the shoreline like that. I agreed. And down here, a ten-bedroom mansion cost about fifty thousand pounds to build. If that. Returning to Jimmy, I suggested that we build a row of mansions ourselves, and sell them or rent them out as holiday homes to the rich, especially pro-golfers. He lifted his eyebrows and nodded.

‘Shelly!’ I called.

The snowball effect

Back in the UK, with Shelly busy refining drawings, and Helen having a strong input to our own mansion’s design, I got back to the drudge of running the empire. A golf tournament was about to start, and the hotels were packed out, limiting the spectators. Houses in the Spirals, and the city’s existing apartments, were being rented out for two weeks at a premium, some residents moving out for those two weeks to make money. Other householders had moved in with neighbours to allow their homes to be rented out.

I was busy directing food to Southern Sudan, that country now suffering from the destruction of its oil pipeline. Southern Sudan had all the oilfields, but the north controlled them, the south remaining dirt poor. I now arranged regular food shipments, and also bought food on the open market to ship over. Rescue Force had moved in, being kept busy distributing food to villages. Rudd had organised the self-assembly huts in their hundreds, and the lorries now trundled through Ethiopia to reach their destination.

Anna got a nudge, and some of the new school-building budget went to the southern-most parts of the Christian southern Sudan. With that organised, I returned to the cooperation group, and to facts, figures and statistics. Zimbabwe's crop yields were an inspiration, growing by fifty percent or more a year. They had even seen the return of white farmers. I was not sure that was a good idea, but the farmers did know how to till their own land for the best results.

One report caused me to stop and stare at it. The Chinese, thinking that they should be more involved with grabbing future African GDP and import markets, had made our bank a loan, a great deal of money. That had been followed by the British, the French and the Germans, and finally by Hardon Chase. They all wanted a slice of a future apple, and were falling over themselves to get in there now.

Traditional African investment was seen as "owning" the country, since the country in question could never pay back its debt. That would lead to lucrative mining contracts for the creditor nations. I wondered how much of that attitude was still alive and with us. I heaved a sigh, and realised that everything I had spent or earmarked had been topped-up. Back to the drawing board.

In a bold move, I ordered an entire estate built east of Goma hub. It would replace the huts that sat there now, and would consist of neat rows of our standard four-storey apartment blocks, thirty-six of them at the first go. When complete, those living in the huts would be offered the apartments for the same small rent they paid now. The huts would then be moved elsewhere.

I increased the budgets for thirty town councils, but then had an idea. It was outlandish. It was so outlandish as to make outlandish ideas seem normal. I smiled, but then I shook my head, expecting Jimmy to shout at me. But the damn idea would not go away. Standing at my window, hands in pockets, I decided that the worst Jimmy could do was shout.

Hopping into my electric car, which I still had not charged, I raced down to the house, finding Jimmy in the office. ‘Got a minute?’

‘You have a phone, dear,’ Helen quipped from behind her screen.

Jimmy eased up and stretched.

I tapped a large map of our region, one affixed to the wall, and Jimmy closed in, awaiting my great idea. ‘Kinshasa is a thousand miles away from where the action is. If - and it’s a big if - a new capital city was built here, south of Forward Base, it would be at the centre of all the action, and have road, rail and air links to everywhere. It would create jobs in this region, and make it easier to spread the money around through their existing institutions. And such a new capital would have no shanty towns, people would only be allowed to live there if they had work there.’

Jimmy sat back down. ‘One of the main reasons for having Goma hub where it is, was to isolate it from the corruption of Kinshasa. To be ... a new start.’

‘As this would be,’ I countered.

‘And another reason, was that we run the region – seen at the time as a giant swamp – so that we can control it, its growth and its money.’

‘Which should not change, not now; everyone is loyal to us, not Kimballa. Look, I can only grow the region so much without wasting money, or spending it on projects that are someone else’s ideas. For the region to grow faster it needs entrepreneurs, businesses, and people growing their own city naturally – like every other city on the planet did.’

‘True,’ Jimmy admitted. ‘And it would transplant a million people into our region, people with jobs and skills.’

‘And ... Gotham City would be more Beverly Hills to this new city’s Los Angeles. We keep Gotham City elite, and make this new city a proper working city.’

Sharon, her daughter and Helen, were all now keenly listening.

‘The growth of Gotham City has always been a struggle in my mind,’ Jimmy explained. ‘Because it will attract poor people, as it does now. I’d guess, that twenty years from now, it would be less ideal ... and more traffic jam.’

‘So this would make it a posh suburb,’ I concluded.

‘I had planned on building the next phase of Goma to the south and south west,’ Jimmy explained. ‘The stock exchange area would be mostly posh apartments, the lake would be Miami, the hills would have the Spirals, and south west would be more working class

apartments. If those working class apartments were twenty or thirty miles further south it would not do any harm.'

'Put a rail link in,' I suggested. 'They can commute.'

'Could you move a whole city?' Sharon asked.

'Most of Kinshasa is shanty town anyway,' I said. 'And there would still be business and buildings left there, we would not be pulling them down. I reckon that a quarter million of the best paid jobs might move.'

'Go sell it to Kimballa,' Jimmy suggested. 'See what he says.'

A few days later, Shelly presented me with some typically Miami style mansions, all beautifully drawn by hand. I asked her to photograph them and email them to me, pleased with the work. She then presented me with her drawing of our new house, Helen having had a hand in it.

The house was a large "H" shape, and reminded me at first glance of a French chateau, a slopping tiled roof with numerous small windows. It was two-storey, three with the attic rooms, offered ponds and gardens, and lodges for guests.

'Twenty-four main bedrooms,' she explained. 'Another twenty small rooms in the attic, ten guest lodges, an indoor and outdoor pool, a gym, a dinning hall and three reception rooms.'

'Excellent work, babes. Where would your room be?'

She pointed at a window facing the lake. 'Lucy would be next door, you and mum are here, and Jimmy there.'

I faced Helen. 'Are you happy with the design?'

'Yes, it should be lovely.'

'It's a deal then. I'll call Rolf tomorrow and start it. Right, young lady, I have a new project for you as well. See if you can draw a design for a whole new city, in Africa, but nothing too strange.'

'Am I getting paid for this?' my daughter nudged.

'What ... would you like?'

'A horse, twelve or fifteen hands.'

I turned my head to Helen. And waited. My dear lady wife shrugged. 'OK. Find one you like.'

'Portia has one for sale, he's called Max,' Shelly said with a smile. She ran off to phone whoever Portia was.

When Rolf turned up the next day, he found the Kangaroo in the drawing straight away, this Kangaroo peering out from a window. I wagged a warning finger at him. 'Design it, and build it where I marked on the back. Then I want twenty mansions built, different design for each, as per the other drawings. Think ... Miami waterfront properties and canals. Po and Yuri will build their own

houses at the end of this row. There'll be a road down the backs of the houses, and another row of mansions the other side. Think ... Beverly Hills.'

'We get the whole contract?'

'To design and build, but using local labour. Go to work.'

A week later, Jimmy told me to pack a bag, and we flew down to Goma hub with Big Paul and his mates, jumping on a flight for Mawlini. At Mawlini we booked into the hotel before boarding a flight of three Hueys that had been sat waiting for us. Ten minutes of flying southeast towards the border delivered us to a base almost as big as Mawlini, hundreds of huts, high fences with guards, many brick buildings partly complete, many cranes attending others.

Landing on a concrete apron next to a Huey hangar, we were met by Ngomo himself. 'Welcome to the United Nations.'

'UN?' I queried as I shook his hand.

'The "M" Group military academy,' Ngomo clarified. It was news to me. I didn't even know that this super-sized base existed. I knew there were foreign soldiers about somewhere, but not where.

Ngomo led us to jeeps, which whisked us around to an officer's mess. Stepping down, I could now see Big Paul and his mates suitably armed. Ngomo led us inside.

In a large and air-conditioned lounge we found a sprinkling of officers sat about, and a variety of national uniforms. The officers eased up and lowered books, newspapers and files, stepping slowly towards us.

Ngomo introduced the men, just about getting the names right. We had an officer from the British Parachute Regiment, an American Rangers officer, a Russian Parachute Corp officer with his distinctive blue and white stripped vest, an Indian officer in a turban, a French Foreign Legion officer and a Chinese officer.

Wow, I said to myself, wondering what the hell Jimmy was up to.

'My sister is not a goat,' the Chinese officer said to me. And in English.

'Your English is good, for a mainland Chinese officer,' I probed.

'A condition of being here; everyone must speak English.'

'Yes?' I faced Jimmy.

'One size fits all,' Jimmy responded. 'And it saves having to use interpreters ... too much.'

Ngomo put in, 'In the evenings, all the foreign soldiers have lessons in English, two or three hours a day.'

The British officer said, ‘And the native English speakers have learnt how to offer insults about sisters, and farm animals, in a variety of languages.’

The other officers agreed whole-heartedly about that. The Russian said, ‘In my language, “whoey” is a bad word. So, instead of “How are you?” the English boys say “Whoey are you?”’

I smiled. I had used the phrase myself once or twice.

‘How’s the training progressing?’ Jimmy asked Ngomo.

‘They were all injected on day one, and most now train like the Rifles. A few accidents, and few broken bones, but they are progressing.’

‘And the discipline?’ Jimmy pressed.

‘Not where we would like it,’ Ngomo admitted. ‘A ... change in culture for some.’

‘Punish the whole squad, and their officers, when they break the rules,’ Jimmy insisted. ‘If they’re a problem, send them home.’

‘The English and Americans are the worst offenders,’ Ngomo mentioned. ‘They like to play the fool and play tricks on others.’

‘Have the worst offenders flogged in front of their units, remove liberties and beer, or just kick them out. If you like, flog their NCOs and officers – I don’t fucking care.’

The British Major stood silent, and looking worried, as Ngomo grinned at him. Back in the sun, we boarded the jeeps, soon out of the base and heading along dusty tracks to a firing range. This particular range was enclosed by high brick walls, sand dunes having blown into place against their base.

At the entrance to the range we climbed a set of steep metal steps to a viewing platform, a thick glass pane protecting us from errant rounds or ricochets. Below us, a squad of six men stood in a line – appearing British, no flack jackets or helmets worn. In front of them a man stood waiting our signal. He now lifted his colleague into a fireman’s lift, held up his M16 and stepped slowly forwards.

A target popped up on the left. He swung left, fired twice, then checked the area to his front and right. The target dropped away. A few steps in he fired to the right, followed by a target at the front. At the end of the fifty-yard range he turned around, facing his squad, and started back.

‘In the UK, this would be illegal,’ I noted.

‘It would be in most countries,’ Jimmy agreed.

The man being tested swung his weapon around and fired as he progressed. Back at the squad he carefully laid down his travelling companion, stripped his weapon whilst using his mock-injured

colleague as a mat to keep the rifle parts off the sand, then reloaded his weapon, checking it. He lifted the injured man, and repeated the exercise.

‘How many times would they do that?’ I asked Ngomo.

‘Till they are so tired they cannot think.’

‘Anyone ever been shot?’

‘Yes, a few Rifles have died this way. But it’s good training.’

At the next range, soldiers were holding small targets at arms distance, their colleagues firing at them with pistols from ten yards. After that came a grenade training exercise.

‘How the fuck do you train ... for a grenade going off?’ I asked.

‘You see now,’ Ngomo said.

From behind a thick glass screen, scratched heavily on one side, we observed a soldier with a standard NATO grenade. He walked forwards, alone on the enclosed range, and pulled the pin. My eyes widened and my heart stopped. The man tossed the grenade into the sand, just four yards in front of himself, spun around and lay down so that the axis of his body pointed to the grenade through his boots.

The grenade exploded in a puff of smoke and sand, the soldier jumping up and joining his colleagues emerging from a brick room. He sat down and took his boots off, revealing blood on his foot.

‘He caught some!’ I noted.

‘Yes, he need the doctor to remove it,’ Ngomo calmly said.

‘Everybody get a piece in the foot.’

‘And ... the point of this exercise?’ I firmly nudged.

‘Not to be afraid the grenade, and to know what to do.’

‘No wonder this doesn’t go on in the west,’ I quipped. ‘Shit.’

At the next range, a group of Russians were being put through their paces by Rifles NCOs. Those NCOs had their berets on, but shirts off, each looking like a heavyweight boxer – only more scary. I guessed that they didn’t get much backchat from the recruits.

A long bench crossed the range at this end, on it some twenty weapons. The assorted weapons started with pistols and ended with an M82 fifty calibre sniper rifle, and the aim of the exercise was simple: to see if the recruit could remember how to handle each weapon. There was just the one small problem. The ammunition was on a separate table, in a bowl, all jumbled up. If you tried to stick the wrong round in the wrong weapon you were in trouble. You could even blow your own head off.

Back at base, we observed as men were learning to drive a variety of vehicles, forty-eight different types of them available, and all had to be mastered. The philosophy here was simple. They learnt all

vehicles, all weapons, all scenarios, till they were confident that they could tackle anything. That basic training would then be extended into desert specifics, such as desert survival and desert sniper courses, jungle survival and jungle fighting, mountain climbing and mountain fighting. And that was before they got anywhere near unit manoeuvres and company manoeuvres.

The final training area was for advanced first aid, Silo Stiffys getting plenty of attention in rooms built like lecture theatres. Teams of four men were now competing with each other to correctly diagnose the patient. We sat to observe.

‘What do you see,’ Jimmy whispered.

‘What do you mean?’

‘What ... do you see?’

I studied the men. ‘Soldiers ... training in advanced first aid.’

‘What else?’

‘Training to ... fight the Brotherhood?’

‘Open your eyes, numb nuts.’

With a curious frown, I studied the teams trying to diagnose the patient. And I was still studying them thirty seconds later.

Then the clock on the wall froze, and the world stopped turning.

I glanced at Jimmy as he waited expectantly, and turned back to the soldiers. Each team had four men, but of different nationalities. The team on the left offered a Russian, an American, an Indian and a Chinese soldier.

‘The national soldiers are training together, and bonding,’ I whispered.

‘Good. And what else?’

‘Might make it harder for them to fight each other in the future,’ I whispered.

‘Soldiers don’t make policy, politicians do, so that’s not a factor. What else? What ... current and near-future events may be affected?’

‘They ... could be used in Africa? Against Sudan?’

‘Never. Where ... else?’

I gave it some thought. I ruled out Lebanon, the Somalis were there, and we didn’t want western soldiers to be seen there. A thought occurred to me, and I grinned towards Jimmy.

‘Finally,’ he said.

‘Hardon Chase is pushing for an invasion of Afghanistan,’ I whispered.

‘He’d need some suitably trained soldiers first.’

‘And a multi-national force would stop complaints about western aggression,’ I whispered.

‘And such a campaign would need cooperation at the highest national levels,’ Jimmy suggested. ‘With the public behind them. Chase doesn’t realise it, but this will be the undoing of the Pentagon hawks. If he was sensible, he would never have agreed to this – it was a huge mistake.’

With the competition at an end, rude words exchanged by the various the teams, we walked down to them and chatted for ten minutes.

Back at Mawlini, we spoke to international soldiers undertaking basic flying lessons, both Tucano and Huey, before tackling a well-earned steak in the rooftop bar. Mac stepped out fifteen minutes later, pistol holster on his hip. It looked a bit odd, because he wore RF medical whites.

Mac was looking better these days, better than the gnarled old baldy he had been most of the time I had known him. He looked ten years younger now, the little pot belly gone, even the sunglass crows feet gone from his eyes.

‘Expecting trouble?’ I asked, pointing at the pistol.

‘Never know around here.’

‘And the two men who tried to follow you?’ I asked.

‘Sudanese fuckers. And fucking amateurs!’

‘Compared to an expert like yourself,’ Jimmy said with a straight face, but we all knew he was taking the piss.

‘Aye, bollocks,’ Mac responded.

‘You look ... well,’ I nudged, knowing full well that he had been injected four times.

‘I’m ageing backwards!’

‘Mentally, or physically?’ Jimmy asked.

‘Both! And you could have given me some of that stuff twenty years ago.’

‘We had to test it first,’ I lamely suggested.

‘How’s the wife?’ Jimmy asked Mac.

I snapped my head around to Jimmy, then back to Mac. ‘Wife!’

‘We ain’t married, she ... er ... just lives with me.’

‘A nice bit of black,’ Jimmy said. ‘A nice ... nineteen year old ... bit of black.’

‘Aye, well ... I couldn’t tell how old she was when I met her. They all look the same to me.’

‘Did they not list her age in the catalogue?’ Jimmy asked.

‘I’m helping the local community, providing a job and a home,’ Mac said defensively. ‘That’s my story, and I’m sticking to it.’

‘She’s less than a third of your age,’ I pointed out.

‘Yeah, well I can still get it up.’

‘So how’s the base?’ Jimmy asked.

‘Still fucking growing with the new camp out there; they all fly here.’

‘More people for you to shout at,’ I quipped.

‘So why the big move towards Sudan?’ Mac broached.

‘Since their referendum was inconclusive, the situation has become ... less clear. And, with the damage to their oil industry, I figured we should help.’

‘Aye, and I don’t know who did the damage either!’

‘It’s a mystery,’ I said, shaking my head.

‘Should the people of Southern Sudan wish to break away, I may consider assisting them,’ Jimmy suggested.

An F15 came into land, right in front of us.

‘They based here?’ I asked Mac, certain that they weren’t.

‘No, Mombassa. But always up here for a visit, or to bomb the ranges.’

A second F15 came in behind the first, and I faced Jimmy. ‘Do you think anyone would tell Helen?’

‘You’d be divorced,’ Jimmy suggested.

‘It’s no fun, is it,’ I said with a sigh.

‘Stick to golf,’ Mac suggested. ‘We do.’

‘You play down in Mombassa?’ I asked.

‘No, there’s a wee course here now.’

‘You ... have a golf course?’

‘Four holes so far, we made it ourselves,’ Mac explained. ‘We formed a committee, paid a few labourers, cleared an area and dug up the dirt so that the good stuff was on top, watered it and spread grass seeds. Took six months. Plenty of sandy bunkers, no water feature.’

‘You can allocate some money to it,’ Jimmy offered.

‘We can?’

‘Yes. I’ll be ordering a new estate, just like yours, to sit the other side of the road. May as well have a nice course for the people who live around here.’

‘I’ll get on it sharpish,’ Mac threatened. ‘Any major deployments in the works?’

‘Nothing on the horizon at the moment other than Southern Sudan,’ Jimmy replied. ‘But there’s plenty to do around Africa, so

keep them reaching the villages. And the next time you waste the fuel of eight helicopters to deal with a few gunmen the cost will be taken out of your fucking salary.'

Mac raised his hands in surrender. 'I called the base and told them the situation, that's all. It was their decision to send out a full squadron. Or two.'

'Don't keep a pistol under your pillow, Mac,' I warned. 'You annoy that nice young girl and she'll blow your balls off.'

This visit, the senior staff did not wish to corner us and worry over the drug, or any of our innovations and inventions. They were all now reported to have been injected – and enjoying the benefits. I stood at the wall as the sun hit the far horizon, beer in hand, and enjoying the amber hue that everything adopted this time of day. Hueys came and went, that sound that I was so fond of, and two F15s glided effortlessly by, heading home for tea.

Big Paul drew level, an elbow on the wall, peering down with a beer in hand. 'You miss this place?'

'Yeah. And I miss the stress of a deployment or a battle.'

'Getting old, you see.'

'Fuck off, underling. Where you been, anyway?'

'I've been working on the training programme with Jimmy for the past six months. I'm the liaison, computer in the house.'

'Kept that quiet.'

'Jimmy don't want the world to know. Al-Qa'eda might come straight for us then.'

'Yeah, I suppose,' I softly stated. 'Looks like the Sudanese are intent on sniffing around this place.'

'They think the Pathfinders blew up their bridges. Can't blame 'em.'

'How're the international soldiers getting along?' I asked.

'Yeah, fine, no problems. What you gotta keep in mind, is that this lot are all volunteers, and that back in the UK they'd have fuck all to do other than exercises after exercises. Being here is like going to war for them. And the training they're getting – well, when they finish they don't need to apply to join the SAS, they exceed the old standards – and then some. Prime Minister was concerned.'

'About what? Accidents?'

'No, about the Rambo types going home and kicking-off in civvy street.'

'Ah, I see. That a problem?'

'No, soldiers want to show off when they think they have something to prove. When this lot get back they'll have seen some

action, nothing to prove to anyone. They'll all get patrols in northern Somalia, a few places in the Congo where rebels hold out, Angola. But it's been a fucking eye opener for the British and Russians, being taught by blacks who know more than they do. And the fucking Chinese have never seen blacks.'

'No Israelis here?' I puzzled.

'Some problem with the injections I heard. Not sure if they want their people injected, some religious crap.'

'It's been banned in the Middle East,' I informed my sometime-bodyguard. 'But they fly to Goma to get it. Pope spoke out against it as well.'

'Ah, fuck 'em. What'd they know.'

'Haven't seen your lad for a while.'

'He's down here, at the beach hotel, trainee assistant manager. Having a ball, plenty of girls on holiday.'

I smiled. 'Not a hard life for him. You got anyone steady?'

'Nah.'

Jimmy appeared the other side of Big Paul. 'Any minute now.'

'Any minute now ... what?' I asked.

'Italian UN coordinator with a great cleavage.'

We waited. She appeared beneath, stopping to chat to a few people, but our eyes were not good enough to appreciate the boobs.

'Reckon we could hit the cleavage with our drinks?' Jimmy asked.

'Only one way to know for sure,' I said, and we poured, ducking back and getting three more beers, soon sat looking innocent as the lady in question stormed in; wet hair, and now a wet see-through top. A few cat calls went up, an applause issued from one table as the fiery Italian babe shouted at a waiter, pointing at the wall. That waiter pointed at the men clapping, turning to us with a grin as she assailed them with curses in Italian. We eased back in our seats. After a minute, she realised that she was leant forwards as she shouted, and coming undone. The men, all RF doctors, beckoned her back when she turned away.

She returned ten minutes later with the senior Italian representative, and Coup, lambasting the doctors again. They had cheered when she reappeared.

'Do you think we should intervene?' I asked, without sounding sincere.

'And spoil their view of her cleavage?' Jimmy questioned.

Everyone in the bar was now laughing as she assailed the men in English and Italian, her best assets wobbling as she wagged a finger, eliciting even more laughter.

Jimmy scraped back his chair and stood, wandering over with a napkin. He uttered a few soothing words, wagged a finger at the men, and rubbed her cleavage with the napkin. Coup threw his hands in the air and walked off, Jimmy leading the lady below.

‘That’s him gone for the night,’ I said. I stood at the wall and rang home, chatting to the girls and getting the latest on the new horse, Helen hinting that Shelly had a steady boyfriend. We didn’t know the lad, and we were not about to pry. I drank with Big Paul, chatting to many of the senior staff, and hit the sack around midnight.

At noon the next day we landed back in Goma, a meeting with Kimballa arranged in the Pentagon. At the Pentagon building, we took a little time to view the canal reaching towards it and a new café under construction, before proceeding inside. On the top floor, we entered President Errol’s office, making use of his boardroom, Kimballa and his team sat with Errol and chatting away.

When everyone was settled around the boardroom table, I lifted the shroud on the first drawing that Shelly had made for me, certain that any Kangaroos would be too small to be visible to my audience. ‘We have, for some time, considered building a larger city in this region.’

My audience were quietly stunned by the scope of the undertaking.

‘That city would be designed from the ground up, literally, to be a modern African city, and a shining example to the world of what can be achieved here. But, such a city would compete with Kinshasa and draw the talented individuals this way. To that end, I have the following suggestion. Why don’t we build a new city here, and move your centre of government from Kinshasa, to here.’

They were shocked.

‘Move the capital?’ Kimballa asked.

‘A capital with no slums, with new road and rail links, clean streets, tall towers and low unemployment,’ I teased. ‘A capital, that would put Lagos, Nairobi and Johannesburg to shame. The centre of Africa, the capital ... of Africa.’

They were still stunned, but pleasantly stunned.

‘It would take a long time to move the government and its staff,’ Kimballa complained.

‘We would build certain departments and ministries first, and move just those, and could build enough buildings and apartments to accommodate all of your government’s staff and functions. These new buildings would be purpose built, luxury, yet functional. There would be a new university, a major hospital, parks, cinemas ... everything that you would see in a modern western city, but there would be no slums or pollution.’

‘How long would it take?’ they asked.

‘We would at start the centre and work out, so some ministries could move in a matter of months. And, to start with, it would be a giant complex for the government and its workers. After that would follow apartments for civilians, business offices, factories and industrial parks. The entire project would take ten years or more, but the first stage could be ready quickly.’

I opened a folder and handed out sketches of buildings, images of what such a city may be like in the future.

‘You would pay for this?’ Kimballa asked.

‘Out of the money we make here, plus other money that we would put in,’ Jimmy answered him. ‘Some buildings we would own, some you would own.’

I showed Kimballa the sketch of my new house. ‘We’re building many houses like that along the lake. You could all live in one.’ Now I could see the kind of response I wanted, and from the simple sketch of a house.

‘And what of Kinshasa?’ they asked.

‘It would go on as now, still a major city,’ I assured them. ‘It would only be the government moving, and then key sectors,’ I lied, hoping that they would not question it.

I answered their questions for twenty minutes before we sat around drinking cold lemonade on the balcony. My audience was keen, I could see that, it was just a matter of logistics. I ended by saying, ‘If we build it, it will attract all of the key businesses from Kinshasa, and become a powerful city.’ I could see Kimballa’s grey matter working away, and I knew that he feared us breaking away.

We thanked him for his short visit and showed him out, our President already buying properties off-plan in Spiral III. Our luggage had remained with airport security and Big Paul. We now reclaimed it and passed through our own scanners, boarding a British Airways 747 bound for London.

En-route, I asked Jimmy about the meeting.

‘I would have built up Gotham City, but not as much as you’re proposing for this new city. It’ll use up a lot of cash, but at the end

of the day it'll create jobs and improve the regional GDP, which is just as important. If it's a modern city, and we ring-fence it to keep the poor out, then it should attract a lot of talent.'

'And Gotham City is the rich suburb up the road.'

'Which would not be a bad thing,' Jimmy agreed.

Winter

As winter approached, India and Pakistan were making threats, which worried us all, and the Ukraine was in danger of splitting along ethnic lines. Sumatra had suffered a major quake, RF deployed in time, and Samoa was hit again.

In Lebanon, the complaints to the UN were souring, allegations of the Somalis kidnapping hundreds of people. Fortunately, the UN were very short on hard evidence, and even their own inspectors on the ground did not understand it, many of those inspectors embedded with the Somalis.

An Israeli invasion had been averted, and two-dozen al-Qa'eda attacks had been thwarted. Unfortunately, our scanners had come too late for Chad, a plane hijacked and crashed into its capital, an odd move for al-Qa'eda since it achieved little. A third plane, taking off from Yemen, had been hijacked at gunpoint, despite us donating scanners, and had been shot down by Kenyan F15s with American crews, thirty miles off the Somali coast.

That was the first time a hijacked airliner had been shot down, but it would not be the last. The Middle East, and many countries far and wide, condemned the shooting down, but the UN Security Council countries all spoke in favour of the action, and the dangers that such aircraft posed to the world's major cities.

Unfortunately, many US commentators were suggesting an invasion of Afghanistan, joined by the Russians. The Russian capital had suffered numerous bomb attacks, despite Jimmy's warnings. Problem was, as soon as the police spotted a suicide bomber from the Russian Caucasus, they blew themselves up in the street, or wherever they happened to be when spotted. Many of those fighters, Chechen and others, had made a happy home in Afghanistan, as Jimmy had predicted. We now had the odd situation where Russia and America were on the same page over global terrorism.

In November, I hosted a meeting with Po and his family, Yuri and Marko, plus other investors in our new city. In on the meeting were all of the household “M” Group representatives, CAR and our property management business, the US bankers that we were friendly with, as well as Rolf the architect – now MD of the company that he worked at.

The meeting, at the club in London, concerned the new city south of Goma. Using a large screen, and images created by my laptop, I first displayed a map of the area and labelled various building projects, outlining future projects for Gotham City. That led to an image of the new city, and a few gasps.

‘If you build this, what will happen to Goma?’ Yuri asked.

‘Goma will be kept for higher earners and quality housing, and tourists,’ I explained. ‘And it will have a fast road and rail link to the new city, which will be less than thirty miles away. That city will have everything you may imagine of a modern western city, and may also house the Kinshasa Government. Gotham City will be a rich suburb, with no shanty towns.’

That pleased Po and the Russians no end, all of them now building their own phallic mansions on the lakeshore. Han indicated that his government would be interested in a substantial stake. He was followed by Keely making similar noises on behalf of Chase, and our property development company was certain it could raise more money for the project.

Drinks were brought in, and plans were made, Po suggesting that it could be the new Hong Kong, but African. This was not turning out to be a hard sell, and everyone wanted to know when they could lay claim to a patch of land. Figures were bandied around, sums large enough to give our US bankers an erection. I could see them salivating as they stood over a drawing of the proposed new city. Since property prices in the States were now rising at less than two percent a year, they were keen to invest.

That two percent was a worry for us all, since we knew what a fall in house prices may mean. Jimmy issued stark warnings, and the European Governments made sure that their banks were not exposed. Jimmy said that if prices could be held static for three years we would see some growth afterwards. We stopped building houses, and spare cash was now being earmarked for Africa, not the west’s property market.

In the first week of December, damp and chilly in the UK, we flew down to Goma for the much-publicised grand opening of our new stock exchange and metals market. McKinleys had a key role,

supported by many of the world's key bourses, especially from the "M" Group countries.

Computers had been set-up well in advance and thoroughly tested, even EMP proof, and a group of traders had used a practise program to try everything, all the usual trades. We even had a group of traders sat in Gotham City trading the various world markets till ours was ready.

Our exchange, our stock exchange, was not so much a national exchange of company shares as a subsidiary of six other exchanges, plus links to existing African exchanges as full members. We had not floated CAR, not yet, and it controlled a massive slice of the markets in Africa.

Our oil, ore and metals exchange, on the other hand, would be a world-beater, the volumes potentially huge. We had deliberately stockpiled ore, metal ingots and gold, and they would be for sale on day one. Each of our mines had agreed to partner the exchange, making life easier for them. They dumped their stock with us, and either their own traders or ours would try to get the best price for it, the mines no longer having to worry about transport costs. Their jobs ended when they handed over the ore or refined ingots.

The building was finished, a gleaming beacon that I noticed as we came into land. Next to it stood an office block, where mining companies and traders could have offices. In front of the new exchange ran a canal, down to the lake one way, around to the marina bars the other way. The young traders living here were already singing its praises: It's like Canary Wharf in London, but with all year round sun and cheap beer! Spare apartments were at a premium.

We drove around in convoy, some of the directors of McKinleys with us, plus a representative of the Bank of England and the London Stock Exchange. And fifty reporters.

Inside the building, we took the lift to the second floor, and walked out to applause from young traders in pink shirts. This floor offered an open-cry pit, but also computers around the walls for posting and receiving trades and instructions.

'Are you ready?' Jimmy loudly called, getting back a cheer. He cut a ribbon in front of six TV cameras and fifty photographers, and the main screens came to life. Trading life had begun.

We had posted ore, metal and even some oil deals at good prices, the buyers now making offers to our sellers. Leaving the melee, we took the lift up one floor and viewed a room of computerised trading

stations, young men and women sat behind three screens at once and trading the global markets.

One floor up we found the room for McKinleys, since they were principals to many derivatives traded here; they offered the bets and took the punters action. Above them we found Yuri, Marko, Po and others, champagne flowing. Po had his own traders, as did the Russians, and I suspected that insider dealing might be an issue.

I accepted a champagne flute, one for Helen, and we stood chatting to traders, the first few trades of the day pointed out on screens. Wondering up another level, we met the regulators, the internal police of our exchange, those who would try and spot the insider dealing. Stepping to a window, I could see the canal below, several small speedboats sat waiting some trade, local drivers, and across a wide area of mown grass sat the main marina. I smiled; this place was coming along rapidly.

The other place for gambling your money, although definitely biased in favour of the house, was the casino. After an hour in the exchange we headed that way in a speedboat, tearing along at the legal limit of three miles per hour, bodyguards in front and behind. I smiled; this was the way to travel to work in the mornings. What a contrast to when I started trading, commuting to work on the tube in chilly old London.

At the casino, the neon lights were already flashing, smartly dressed local staff helping us out of the boat, a red carpet laid on, ropes through brass poles. We stepped into the cool, air-conditioned interior, past a security check with airport-style scanners, a quick nose into the cloakroom, and onto the main floor, already hundreds of tourists playing games. Well, Yuri had given them all free chips to play, valued at two hundred dollars.

We gravitated towards a long bar, grabbed beers, and eased down around a table that offered a view of the action below, the bar raised whilst the main roulette tables floor was sunken.

‘Very nice,’ I said. ‘Rooms for shows as well.’

‘They have a few stars playing,’ Helen put in. ‘Talk about west-end shows coming here.’

‘There’re enough tourists,’ Jimmy commented.

‘Can’t build Spiral II fast enough,’ I said. ‘All sold off plan. Half of Hilltop sold off plan.’

Jimmy turned his head. ‘Extend the marina behind us, and put a row of nice apartments along it, maybe four storeys, but long. Ground level should be parking. Build a good three hundred apartments. Call it ... Casino Row.’

Po joined us, Yuri and Marko working the room. Well, they did own half of it.

‘New Hong Kong,’ Po insisted.

Yuri showed us the show rooms and stages, and I could imagine Katie Joe up there singing. I wondered what she was doing now. Stepping outside, and into the brilliant sun, we donned sunglasses and ambled along the side of the casino, parkland and benches that led towards the marina and canals. At the main canal we walked left, and towards the central marina, a fine day for a stroll.

Tourists waved, or took our pictures as we progressed, and I noticed millions of small fish in the canal, pointing them out to Jimmy.

‘Safe still water for breeding,’ he commented.

At the main marina square we noticed a crowd, many pointing into the water. A local, dressed as a chef, tossed a dead chicken into the water. A huge splash followed a pair of massive jaws snapping at the chicken.

‘Jesus,’ I said. ‘That croc is ten feet long!’

‘No swimming today,’ Helen quipped.

We closed in on the scene, the croc now munching on its chicken and swallowing, the tourists snapping away. Well, it was Africa, what did they expect.

‘Can’t prevent them,’ Jimmy said. ‘And have boats in here. Besides, they’re a pull for the crowds.’

Those crowds turned and snapped us more than the croc as we wandered past, but we were soon upstairs in an Indian restaurant and ordering food, enjoying the view below. The sun sparkled off the water, and the white sailboats looked great, now a dozen of them moored.

‘It’s coming along,’ I said, contented with my work.

‘Beautiful,’ Helen agreed. ‘And our house will be ready first week of February with a bit of luck.’

‘I told Rolf to make a few security enhancements,’ Jimmy put in. ‘Ground floor will be stronger, windows bullet-proof.’

I nodded, absently.

The head of PACT came and found us, Jimmy pulling over a seat for him. ‘The Ethiopians have sent us a delegation. They surrender.’

‘They ... surrender?’ I queried.

‘They’ve seen the new F15s, although they’re thirty years old, and the American squadrons, and the new RAF squadrons, now the multi-national force training near Mawlini – and they think we’re going to invade.’

‘Ah,’ I let out. ‘We do have a lot of soldiers on their border.’

Jimmy sipped his beer. ‘Ask them if they would like to join the cooperation group.’

‘Yes?’ the head of PACT asked.

‘Yes?’ I also asked.

Jimmy nodded. ‘They have resources, they’re well placed, and we don’t want them siding with Sudan, especially not if we have designs on Southern Sudan.’ He faced the head of PACT squarely and nodded, the man stepping away.

‘They would assist with Southern Sudan,’ I realised. ‘And secure Kenya’s northern border.’

‘I have no desire to build up Ethiopia,’ Jimmy began. ‘But there’s some merit to clearing out certain groups from within.’

‘Sudan won’t be happy, they’ll be ... twitchy.’

Jimmy nodded. ‘They could be an issue.’

I took in the boats. ‘That money you asked me to spend? By the end of this year I’ll have more than when I started the way things are going.’

‘You give someone a simple task,’ Jimmy mock complained. ‘Don’t waste it, but be bold.’

‘You don’t call moving Kinshasa *bold*?’ I complained.

‘Actually, that surprised me about you. And the house down here.’

‘It did?’ I asked, Helen equally surprised.

‘It did,’ Jimmy confirmed. ‘You’re doing better than I had expected.’

‘Thanks, Granddad.’

An hour later we were still there, enjoying the weather, the food and the cold beers.

The head of the corporation came and found us instead of calling, an excuse to get out of the office. Jimmy offered him a seat. ‘Some interesting news, sir. Kimballa has agreed the move of the government.’

Helen and I exchanged looks. Jimmy took a moment, ‘Thank you, start making preparations. Recruit a team of a hundred people; architects, designers, builders, sewage engineers, road builders - find them an office. Start with a four lane highway south, towards the new location –’

‘And a monorail,’ I cut in with. ‘From the airport. It should be raised at the airport, eight metres or so, to allow for traffic, then ground level the rest off the way. At the city, I think it should be raised again, traffic underneath.’

Jimmy approved. 'We need a design, starting with sewers and roads, a new sewage plant capable of handling a million people, a new power plant further south. Design the road layout first, based on New York, then the sewers, then the electricity, then the government buildings, and finally residential areas.'

The man looked stunned. He blew out, stood up and returned to the office.

'What do we call it?' Helen asked. 'New Kinshasa?'

'That would be the obvious name,' Jimmy commented.

'Shelly City?' I ventured, causing a smile.

Jimmy raised his phone. 'May as well shake up a few people.' He dialled the African Times. 'It's Jimmy Silo. Listen, Kimballa has agreed to move his seat of government to a purpose-built new city south of Goma hub. Building projects will be allocated soon. Thanks.'

'Did that just treble property prices around here?' I asked.

'At least. I'll be ordering Spiral V, VI and VII.'

'Need a bigger airport now,' I complained.

'No, it's big enough.'

We wandered back around to the casino, and into its cool dark interior to find the gang. Po and the Russians were sat together, plotting and scheming as usual.

'Some news,' Jimmy said. 'Kimballa has agreed to move his seat of government to a new city south of here.'

'Should treble property prices,' I added, and I could see their grey matter firing up.

'Be big building contract?' Po asked.

'Very big,' Jimmy emphasised.

I tried my hand at roulette, blackjack and even the slot machines. That evening, we returned to the marina, the water illuminated from beneath – a nice touch. From the balcony restaurant we could see the fish darting about, also the odd crocodile sliding past. The bars and restaurants were well attended, and I glimpsed my first batch of drunk city traders in pink shirts. Seems that they had a good day on the markets. If they had a bad day, they wouldn't need to jump off the tall tower, they could jump into the water here and be croc meat.

'A lot of people here,' Helen noted.

'All the lodges advertise it,' Jimmy commented. 'And the hotels. Left and right of us are the smaller marinas. They have a few bars and restaurants, and they attract people wanting some peace. Once the waterfront is extended it'll thin out a bit. But some people are

coming down here for the city, not for the lodges. And we get golfing holidaymakers now.'

At 9pm, Jimmy suggested some shopping, the new centre open till midnight. With a blanket of bodyguards, we wandered back past the casino, through a well-lit park and to the new over-sized shopping centre.

The centre's security staff opened glass doors with golden handles, the interior air-conditioned, the floor marble. It resembled any shopping centre the world over, a wide variety of products on offer, a good spread of jewellery shops. I noticed a second floor, people peeking down at us, a few cameras flashing.

The first cross-section of isles offered a café, and we jumped into glass lifts for the second floor, the place now reminding me of Hong Kong. We passed a shop that sold safari goods, khaki green shorts if you wanted to get into the spirit of things. We stopped at a bar, beers ordered, and sat peering down at the shoppers below.

'Well attended,' I commented. 'Even at this hour.'

Jimmy said, 'Some people, with an hour to spare at the airport, come out here. But now, most safaris have the last day being a night in a hotel here, giving people most of a day to see the city and to shop here.'

'That last golf tournament put the place on the map,' Helen put in.

'I've increased the prizes,' I informed Jimmy. 'All the best players want to come here now.'

'Yeah, well one particular golfer will be here in the morning, upsetting the smooth running of things,' Jimmy informed us.

'Who?' I puzzled.

'Chase.'

'Chase is flying in?' I asked. 'What for?'

'Bit of an African tour, and a few rounds of golf. He'll be off to River View after this place, bit of a break. He's meeting the Tanzanians for a bit of plotting and scheming, after which they'll call me.'

Back at the hotel, we could see the Secret Service wandering around, a stronger presence of Pathfinders in suits, sniffer dogs with their twitchy noses to the floor. In the morning, Chase's coach arrived below the rooftop bar, no armoured limo for his short trip from the airport. He came up and met us, most of the hotel's rooms now reserved for his party.

I shook his hand. 'Welcome to Africa.'

‘So, this is where it all happens.’ He stood at the wall and took in the golf course, the Pentagon building and the distant Spiral estates. ‘Looks just like Los Angeles.’

‘You heard the news?’

‘Yes,’ Chase said, facing me with an intent expression. ‘A new capital, plenty of building contracts.’

‘Should boost the region significantly,’ I pointed out as Jimmy and Helen closed in.

‘Not on the course yet?’ Jimmy asked as they shook hands.

‘Can’t wait. But let’s chat first.’ He gestured towards a table, a hovering waiter beckoned over.

With cold drinks ordered, Chase’s Chief of Staff and his aides seated, Chase began, ‘This new capital – it’ll be the power centre of things African?’

‘It would be,’ Jimmy agreed. ‘This place would be a posh suburb, plus a tourist attraction.’

‘It already looks like Beverly Hills,’ Chase noted. ‘So where would the seat of power be? Your corporation, this new pan-African parliament, or this new city?’

‘The simple answer is – a bit of each, since they all have different functions. The corporation is us ... putting money back into the region, our profits back into the region. The pan-African assembly is to coordinate the countries and establish standards across Africa plus, in time, a common army and defence policy. The new city will tie together this region in a bigger way, and boost the GDP. If it’s done properly, that city will attract smart white guys with good business ideas. When that happens, we have the next Hong Kong right here.’

‘We would, obviously, wish to be in on the ground level,’ Chase firmly told us.

‘Kimballa will follow my lead,’ Jimmy said. ‘So, if we want American companies in here, with incentives and tax breaks, we can organise it. But don’t forget how far we are from the coast. We’re still trying to improve the infrastructure.’

‘The new rail link to Angola looks promising,’ Chase suggested, and I was impressed with how much the devious bugger had researched it.

I said, ‘That rail route could become a road route as well, a good port facility on the west coast, and some stretches of the rail track could be high speed rail, at least higher-speed.’

‘And will Kimballa adopt the dollar?’

‘I think so,’ Jimmy offered.

‘And the neighbouring states?’ Chase pressed.

‘Some would love to, but we have to stabilise them and improve their economies first.’

‘OK, let’s talk about Southern Sudan. You’ve offered to let Ethiopia join the assembly, so what about Southern Sudan?’

‘You been spying on us?’ I teased.

‘We have a whole section dedicated to you,’ Chase joked, but we all knew that it was no joke.

‘I would like, very much, to get hold of Southern Sudan,’ Jimmy suggested. ‘But not at the cost of a war.’

‘We could make that war a ... quick war,’ Chase risked.

‘And antagonise the Muslim North African states!’ Jimmy pointed out.

‘The referendum in the south was in favour of cessation from the north, just about.’

‘The infrastructure of the South is tied into the North. Most business in the south are run by the north.’

‘And their oil profits taken – at least till they lost their pipeline.’

‘I’ve organised a charm offensive in the south,’ Jimmy explained. ‘And when the time is ready I’ll nudge Sudan towards a semi-autonomous region, but with the north benefiting. The best of all worlds.’

‘Timescale?’ Chase asked as he eased back.

‘Twelve months.’

‘And the effect on the region’s GDP?’

‘They have oil in places they don’t know about, and ore. But those two markets are stable, prices stable, so we can’t just boost output without hurting ourselves.’

‘True,’ Chase conceded. ‘This new city, how many Americans would end up working there?’

‘Hopefully, many. But we’re talking about ten thousand, so no boost to jobs back home.’

‘But we will be able to sell our goods from a base here, like Caterpillar?’

‘Definitely. And I’m hoping that you’ll sell a lot of high-tech equipment here, computers and software, and boost African technology by a decade or two.’

‘Consider it done,’ Chase threatened. ‘And when I return to DC, I can confidently state that American companies will get major contracts here?’

‘You can,’ Jimmy said with a smile. ‘Even if some of it is your own money.’

We laughed.

‘And US citizens can live and work here with no visa?’ the Chief of Staff asked.

‘I’m the governor, but Kimballa has the last word on that. At the moment, they can live and work here with twelve-month visas, simply to keep track of them. And you can own property here. I would say that, within the city limits, any westerner could live and work, but the locals may not be happy with that. There may be some protectionism. We’re trying to create jobs for Africans, not for you lot.’

I put in, ‘If an American business employs Americans – fine. If a local newspaper advertises a job, then you’d not want white faces sat waiting an interview, pinching jobs.’

‘Besides, the wages would not attract many people,’ Jimmy suggested.

‘But no restriction on opening a factory?’ the Chief of Staff asked.

‘There’re none now,’ Jimmy told him. ‘You want land - it’s yours. Problem is, the people around here are on low wages, so can only buy cheap goods.’

‘That will change,’ I said. ‘Year by year, but they won’t be buying many big four by four jeeps.’

The Chief said, ‘But companies like Motorola, Coca-Cola, MacDonalds – they’d all get a good foothold?’

‘Sure,’ I said. ‘They can move in now if you like. The locals can sit in MacDonalds and enjoy a Coke whilst sending a text message.’

We laughed.

‘The university we built here was cheap,’ Chase noted. ‘We could build another one at the new city.’

‘Counting on it,’ Jimmy told him. ‘And you can set-up the mobile phone towers and grid, meaning that the locals would use your service first.’

‘When will the ground be cut?’ Chase asked.

‘Soon. But first we need to design it, and you can have an input to those designs. That way, you can prepare your corporations, pick out buildings and sites, the works.’

‘I can send a team down here to work on the design?’ Chase asked.

‘Just as soon as you’re ready,’ Jimmy offered him.

‘You don’t have any qualms about us investing heavily in the project?’

‘African GDP and dollar usage was planned with you in mind,’ Jimmy pointed out. ‘So knock yourself out.’

‘How much ore is being produced, compared with what’s under the ground?’ Chase asked.

‘Fuck all,’ Jimmy replied. ‘We could increase ore production ten fold. But then prices would fall.’

‘What I meant was, how long will the ore here last?’

‘At least a hundred years, probably more.’

‘Will you be in office then?’ I asked Chase.

‘Two more years,’ he reflected.

‘And will they erect statues to you?’ Jimmy asked.

Chase cocked an eyebrow. ‘Maybe around here! Anyway, military want a word, they’re set-up downstairs.’

We all eased up and wandered to a restaurant below, eight generals and their aides sat waiting. After exchanging pleasantries, we settled, coffee poured. Chase gestured towards the Chairman of the Joint Chiefs and took a back seat.

‘We’re advanced in our planning for an invasion of Afghanistan. Realistically, we don’t see much of an alternative to invading and clearing out al-Qa’eda, before more aircraft are hijacked.’

‘So far so good,’ Jimmy commented.

They glanced at each other. ‘You don’t think it’s a bad idea?’

‘I think ... it’s inevitable. I have no problem with the invasion, just your plan.’

‘Our plan?’

‘Yes. Why don’t you give us a very brief overview.’

‘Well, we’d land in Kabul, thirty thousand troops supported by helicopters, aircraft and armoured vehicles, and push south.’

‘Might I ask, what the fighters living on the border might do when you land?’

‘They’ll move over the border into Pakistan’ I put in. ‘And wait for you to leave, then move back afterwards.’

‘We’d be working closely with the Pakistanis –’

‘Yeah, good luck with that,’ I quipped.

‘And *your* plan?’ the general snapped.

‘Do you have any soldiers suitably trained for mountains and deserts?’ Jimmy asked, checking his nails.

‘Our Special Forces and Rangers can handle mountains,’ the general said defensively.

‘I see. And what multi-national support would you have for this risky venture?’

‘The “M” Group countries get on well enough these days. I think we could get a UN resolution,’ the general stated.

‘And I’m certain ... that I could get you a consensus,’ Jimmy told him.

They exchanged looks. ‘If ... we modify the plan to one that you approve of.’

‘Yes.’

‘And that plan?’

‘Was worked out a long time ago,’ Jimmy told them. ‘As you might imagine. So, what is your objective?’

‘To neutralise al-Qa’eda.’

‘Al-Qa’eda is an idea, not a person or a place. They exist in Lebanon, Yemen, Saudi Arabia and North Africa. So, as far as Afghanistan is concerned ... what is your objective?’

‘To destroy as many training camps as we can.’

‘And then?’

‘To stop them coming back.’

‘Which would mean a long-term presence, which would be a disaster as your troops drive over mines every day, the folks back home not too happy, the incumbent feeling their wrath – and becoming rapidly less popular.’

They all focused on Chase for a moment.

‘And your plan?’ they testily asked.

‘First, I’d produce some suitable soldiers, then train them ready for such an operation.’

‘The Rifles?’ they asked.

‘No.’

‘No?’

‘Do you have any of your own soldiers that are starting to look and train like Rifles?’

‘The unit in Kenya?’ they queried. ‘There are not many of them.’

‘Do you need many of them?’ Jimmy posed. ‘It’s mountain and guerrilla warfare.’

‘And then there’s the matter of international support for the operation,’ I put in.

‘A multi-national force?’ they queried. ‘Mixed infantry?’

‘Mixed infantry, operating like Special Forces,’ Jimmy explained.

‘Why do you think they’re there?’

Chase said, ‘You set that base up ... to train them to invade Afghanistan?’

Jimmy turned his head to Chase, lifted his eyebrows and nodded.

‘Will they be ready?’ Chase asked.

‘In May, the best time to go in. Armed with EMPs, lasers, silent darts, and suitably trained. They’ve all been injected, and they are all currently undergoing a modified training program, Afghanistan in mind. Many of them are in the hills of Somalia as we speak, and those hills are just like Afghanistan. They’ll be ready in May, around four thousand of them, supported by two thousand Rifles.’

The generals were shocked. ‘And ... support and logistics?’

‘That’s what you lot are there for. They’ll take Kandahar airport again, and try and draw out the fighters, ambushing them on the roads. Separate units will move into the border region to prevent any escape.’

‘Six thousand? That’s all?’ they queried.

‘More than enough. I’ll give you my logistical needs soon, but the Chinese will cover much of it, and the Russians will assist.’

‘How long would they stay?’

‘Four months maximum, then out. They’d return two years later.’

‘And the Afghan government?’ Chase asked.

‘A waste of space, and will always be a waste of space. Try and fix that country and you’ll come badly unstuck, so don’t bother.’

‘Could we alter the make-up of troops in Kenya between now and May?’ a general asked.

‘Sure, but make sure that they all get three months at least.’

‘They’ll use helicopters?’

‘No, they’ll walk, drive or ride horses. They won’t have any body armour or wear helmets. They will ... feel their environment and interact with it.’

‘And the casualty rate?’

‘Less than one percent. As the Rifles say: if you get shot, you’ve let the side down.’

‘Just to be clear,’ Chase began. ‘We’re talking about our soldiers fighting alongside Russians, Chinese and British soldiers?’

‘And black Africans, and the French. And can you see the UN Security Council voting against such an action?’

‘Jesus,’ Chase let out.

‘Keep it under wraps for now. Very ... securely under wraps.’

Chase tried to improve my golf swing later, and I quite enjoyed the game. We took him to the top of the tallest tower, pointing out the various features, and he toured the university at length. Hell, he paid for it. With Chase on his way to Mombassa in Air Force One, we bordered a flight back to London, war now on the cards.

End of year

By mid December, the designs for the new city were coming along, some two hundred people involved. I called them all to London, where a number of models had been designed. Fortunately, the models moved, and you could break bits off.

Around a monstrous table, some six feet square, we pored over drains and sewer works first. They were followed by power lines and phone lines. Then came the main roads, and the link to Gotham City, a four-lane highway now in progress. That highway would cut right through the middle of the city and carry on south another thirty miles, splitting as it headed towards nearby towns.

The monorail was already being built, and would be a two track elevated line to the city centre, Chicago style. In the centre it would split and loop around, looking like a giant pair of scissors. Electric buses would be a key feature, running every ten minutes on most streets, every five minutes down the main drag.

The original idea was for the government buildings to be near the lakeshore, till we figured that the most valuable land would be there. It was moved half a mile inland, a large marina planned. Behind the marina would sit a huge shopping centre and an indoor bar and restaurant area, New Orleans with a glass roof. That would lead to business centre, tall towers, behind which would sit the government buildings. On either side of the government area we would build quality apartments.

Along the lakeshore, north towards Goma, would be a series of posh estates, gated complexes with their own marinas – after the shallow water had been dredged and the mosquitoes killed. Millionaires row, where my new house sits, would be extended a good few miles towards the new city. We planned on two distinct housing estates on nearby hills, nice houses and gated complexes.

South and west of the city would be industrial areas, business parks and factories. The city would have its own hospital, and four regional medical centres, a new university, several technical colleges, a library, a football stadium, a swimming pool and several posh gyms. We were not short of ideas.

I awarded the mobile phone network to an American company, the sewerage to a German company, the phone lines to another American company. The building contracts for the government

buildings were spread out amongst several western contractors, but after that it was a bidding war as to who would get what; I allocated the shopping centre to a consortium operated by Po and Yuri.

It was then a case of people wanting plots, with any buildings that they erected being done so at their own cost. Those near the city centre would charged for, those on the outskirts given away free. The row of international embassies was down to us to build, and they would stretch north towards Goma. In essence, the north and the lakeside were posh, the south and west working class. And, risking some criticism, we would impose a license to live in the city, roadblocks on the main roads. Locals could not simply move in and set-up a shack, since it would be well policed.

I had complained about not spending my budget, but this project would certainly have eaten it all up. At least it would have, but so many people wanted to invest in the new city that we'd have money left over. The Americans, the Russians and the Chinese were falling over themselves to have influence. And the American banks, they all asked for offices to be built in Gotham City, even the ones we didn't get along with. Behind the stock exchange, six modest towers were taking shape, a banking quarter in the making, property prices still under pressure. I could see a Spiral Twenty-Two on the horizon. Literally on the horizon.

Considering New Year, we all agreed that Gotham City was an option; we could get a bit of work done whilst there. We travelled down when the girls finished their school term, the senior staff from RF Mapley invited down, as well as the Mawlini gang. Po, Yuri and Marko, and many others travelled down, a fireworks display and lightshow planned.

Jimmy gave all the RF staff five hundred dollars worth of chips to lose in the casino, and New Year's Eve found us in the marina, at the Chinese restaurant, sat on the balcony under the stars, watching the resident monster crocodile below. That croc was now fed chickens every day and had become an attraction in itself. So far, it had not tried to eat anyone. A woman now stood with a small pooch on a lead, the dog barking at the floating log. My money was on the croc.

At midnight we all stood, a barge on the lake beginning its expensive fireworks display courtesy of Po and the Russians. Gotham City had been here a while, but this felt like its birth, its real birth, the start of a something special. I held Helen around the waist and watched the display.

She leant in and whispered into my ear. 'I'm pregnant.'

Part 13

A new baby

New Year's Day, 2012, I woke to find Helen's head on my chest, her arm over me, and I wondered about the future. Our future. I also wondered why my clothes were on the floor. We had both agreed we wanted the baby, and we both reassured the other that no thoughts had entered our minds about getting rid of it. Yet we both felt we had to mention it.

I lay there listening to her breathing, thinking about another baby, and even if there was anything to think about. We were not short of money, we could afford full-time nannies, and we had done it all before. Twice. Not only that, but our daughters were now old enough to baby-sit for us. And as Jimmy often pointed out, Shelly was more practical and sensible than her dad.

No, I couldn't see any problems, other than a few wars, terror attacks, assassination attempts, being exposed, the plagues to come and the rise of The Brotherhood. But besides all that, I was happy to bring a new life into the world. My daughters were now too big to hug their dad very often, and I would love to have a dependent child again; one that didn't answer back with a smart comment in five languages. Or Latin.

Helen stirred, lifting her gaze to me. 'Awake?'

'Just thinking that it would be nice to have a kid that doesn't answer back.'

'That would be nice. I caught Lucy looking at porn the other week.'

'What kind of porn?'

'Gay men giving blowjobs.' She eased up and dropped her legs. 'She likes men with cut abs.'

'Could be worse,' I said as I eased out, heading to the balcony and stepping over my clothes. I peeked through the curtains. 'Rained in the night.'

Before breakfast, we knocked on Jimmy's door. He let us in, and we grabbed chairs whilst being curiously observed.

'If you've damaged something in your room, you can pay for it,' he dryly stated.

'We have some news,' I said. Jimmy grabbed a chair, and waited.

'I'm pregnant,' Helen admitted after a moment.

'I've told you before about sharing the bath water,' Jimmy quipped. 'And in answer to your question: no, this was not supposed to happen, I have no idea if it'll be a boy or a girl, and yes I'm very

happy about it - since your daughters are too big to fall asleep on me and they swear at me in Latin.'

'Not ... a good time to be bringing a new life into the world,' I tentatively suggested.

'When was?' Jimmy asked. 'If we thought that ... we'd never have any kids. It'll be fine. So, when do you announce it to the world?'

'May as well get it over with,' Helen suggested, a glance toward me.

'Announce it at the casino tonight,' Jimmy suggested. 'Give the tabloids something to print.'

That day we dumped the girls on Jimmy – whether he wanted them or not, and went for a drive to a safari lodge, enjoying a long walk. Hand in hand, we strolled through the heat, the bodyguards keeping their distance. Back at the hotel, that evening, the girls were curious about our strange behaviour.

'I'm thinking of trading you in for a younger model,' I told Shelly. 'One that doesn't answer back.'

Shelly put her fists on her hips, her mouth hanging open. 'Mum! Are you pregnant?'

'Pregnant?' Lucy repeated.

'Yes,' Helen said. 'We've sold you to a local chief for two goats, and they are nice goats, so it'll be just me and your father from now on.'

'They'll paint your faces red for the marriage ceremony,' I told the girls.

'That's great, mum,' Shelly offered, ignoring me. 'I can't wait to have a baby.'

'What?' I barked.

'I want one at sixteen,' Shelly informed us.

We stood shocked. 'Don't you think you should find the right husband first?' I barked.

'Oh, dad, you are *sooo* ancient. A man would just interfere with my plans.'

'Kids cost a lot of money to raise,' Helen pointed out to our daughter.

'Oh, like we're short of money,' Shelly scoffed. 'Jimmy has created a trust fund for us, we won't starve.' She headed off to her room.

I glanced at Helen, and we set off to confront Jimmy, finding him in the rooftop bar. His guests excused themselves, and we sat. 'You've set-up a trust fund for the girls?'

‘Of course. Why wouldn’t I?’

‘You might have told us,’ Helen complained.

Jimmy sipped his beer, taking a moment. ‘By time Shelly is sixteen she’ll have moved out, studying abroad at eighteen.’

‘What?’ Helen gasped. ‘Moved out?’

‘She’ll be ... a very independent young lady.’

‘She’ll be that difficult?’ I challenged, shocked by this revelation.

‘Not difficult, she’ll be just about the most sensible and practical woman on the planet. But she’ll also want to do her own thing. If you try and rope her in she’ll just go anyway, you’ll only end up hurting yourselves. Once she’s made up her mind there’ll be no stopping her.’

‘Move out at sixteen?’ Helen repeated. ‘Where?’

‘To the main house; be illegal otherwise.’

‘Why?’ I asked.

‘Why does any teenager want space?’ Jimmy posed. ‘You can’t apply logic to it, you just need to be there for her when she needs you ... which will be just about never. She’s tough as old boots is our Shelly.’

Helen and I exchanged looks. ‘And Lucy?’ I asked.

‘She’s the one you’ll be trying to marry off and kick out the door,’ Jimmy emphasised. ‘And you have a new kid on the way.’

‘You’re saying that we won’t be able to rein-in Shelly?’ I pressed.

‘The more you try ... the more she’ll move away.’

I sighed, facing Helen. ‘I think we could get two camels for her.’

‘She’ll take after her mum,’ Jimmy added.

‘I was just like that,’ Helen admitted.

That evening, at the casino, we informed the gang, getting many rude comments, offers of condoms or suitable books to read. I informed the African Times so that our paper could claim an exclusive.

The following day, trying to relax on the golf course, I received dozens of congratulation texts and emails, the phone eventually turned off. Fortunately, the next day would see a return to business meetings, a respite from the baby talk. Jimmy had called a meeting of everyone involved in the new city, Po and the Russians keen to get going.

In a large room at the convention centre, we stood about a map as Jimmy took charge, some fifty people now in attendance. ‘OK, our corporation will, first of all, create a worker’s village here.’ He tapped the map. ‘Two miles south of the proposed city centre. That

workers village should have two hundred wooden huts, canteens, shower blocks, a fence and a few guards.

‘Next to it, our corporation will create a vehicle park for bulldozers and diggers. They’ll start clearing the land and digging the future drains. The eight-lane highway will pass straight through the main city centre, dipping under the centre in a small tunnel. That highway will continue on south another thirty miles. From the city centre, two other highways will reach outwards, northwest and southwest - towards the nearest towns. That ... is the priority; we need good roads to bring in cranes and heavy loads.

‘Next, each contractor involved in the project will build its own workers village next to ours in the south. Each contractor is responsible for its workers and equipment, and everyone will carry ID cards.’ He pointed at a local man. ‘Yours is the largest concrete producer. I want your quarry turnout to be increased six fold.’

The man look shocked. Pleasantly shocked.

‘In addition to greatly increasing concrete output, I want to start a factory that will create pre-cast concrete blocks of given sizes, some with metal mesh inside, some with metal girders inside. They’ll be moved afterwards, many being utilised as pre-cast sections for covers over sewers. And don’t worry, you’ll get a loan from us to expand your operations. Yuri, we’ll want as much steel as you can produce, at least a twenty fold increase in your current capacity.’

‘We are already expanding as fast as we can,’ Yuri put in.

Jimmy pointed a local man. ‘I want as much wood as you can get. Don’t chop down the rainforest, buy it from existing wood mills. Start bringing it in and stockpiling it under cover.

‘OK, next we’ll build the power station southwest of the city, and we’ll start today. That will be both oil-fired, and coal-fired. My aim is that the sewers will be dug first, the pipes laid, the sewerage plant working. Then we need to think about water mains, electrical cables, phone cables. Those pipes and cables will run through concrete tunnels high enough for a man to stand up in. The roof sections will be pre-cast concrete, and will form the pavements of the city, access being via hatches and control points. Our aim is to have the utilities infrastructure for a million people in place before we even have a single person living in the city.

‘Next, we’ll build an estate of standard four-storey apartment blocks in the south, just north of the workers compounds. Those apartments will be available for workers, engineers and visitors. I want forty apartments built straight away, but keep in mind that

they'll not be temporary - they'll be there for decades. So make them nice enough, parks and gardens nearby, shops and facilities.

'But what I don't want ... is for workers to be travelling up to here unnecessarily, creating traffic and walking around in their muddy boots. So everything that the workers need must be provided south of the city centre.' He wagged a warning finger.

'Now, the first building to be constructed will be the corporation building, to house the corporation staff involved with building control. That building should be a quarter mile from the city centre, and started straight away, as soon as the highway reaches it. We'll then work on the following aspects, and in this sequence: roads, mono-rail, bus depot and bus routes. That will allow everyone to move around.

'We'll then have the unusual situation of building a city with many buildings - but no people. Because of that, we'll build apartments along both sides of the road southwest; nice apartments near the city centre, standard apartments further down. They'll have shops, bars, and restaurants. There'll be a clinic, a police station, and other utilities. That community will support those moving into the area, who'll need to buy things on day one.

'The foundations, and lower levels, of the marina and shopping centre will be built - but not used. That will be followed by the first government building, with nice apartments nearby for their staff to live in. Those buildings and apartments will be ready a good six months before anyone moves in.

'The local council office will be built next to the corporation building, more apartments nearby. When that building is finished, you can start work on the nice housing estates to the north and northwest, but in stages.

'Then, when the first government officials have moved in, the marina and shopping centre will be finished, plus the first tall apartment blocks - quality apartments, shops on the lower levels. Next to them will sit office blocks. There's no point in building office blocks without apartments; they need to be ready at about the same time. We'll then look at additional government offices step by step.

'What I have just described ... will be under the direct control of the corporation. Other contractors may build on land allocated to them whenever they like, but do so at the risk of having no one to use those buildings for six months. It's up to you.'

He tapped the map. 'Here, south of the city, is a piece of land jutting out into the lake. I want a golf course built here, a nice hotel,

and a small marina. That golf course will be thirty miles away from the existing course, so it won't take business away.'

He placed a finger on the map. 'The university will be here, in the west, a large industrial park here in the southwest. In the south, near the golf course, will be a small airport for regional aircraft, Dash-7s.' He stretched across the map. 'There will a train line here, with a passenger station, and that line will transport people all around Africa. Inside the city ... there'll be no train track, but it is my aim to make buses free for everyone. Buses and taxis will be electric, and either free ... or very cheap.'

He pointed at a Nigerian. 'We'll be offering you contracts for steel girders and pipes.' He repeated that to a South African. 'Every neighbouring country will get a contract. OK, questions?'

We spoke for forty minutes, promising loans and grants to numerous factories, the nice people from Caterpillar receiving major contracts. Basically, our entire cash surplus would be used up, as well as the investment money. But never one to miss a good deal, Jimmy had reserved the best lakeside land for the corporation to build on and to sell afterwards. We'd make a quid or two.

The tax position was odd, in that this was still our region. Half of all of the taxes would still come to us – all of the taxes for the next four years, which we would then spend on the region as if they had gone to Kinshasa in the first place. The only difference was one of control. I had to wonder what would happen when Kimballa, or his successor, was in power here.

We broke for lunch, eating with the Caterpillar directors and some of Senator Pedersen's buddies. After lunch, people bid for patches of land, a few plots sold, some kept back, a few plots given away. I then met with Steffan Silo, Jimmy showing little interest in seeing his brother.

I met Steffan in the restaurant atop Spiral II, Steffan keeping a house below. Settled at a table, I asked, 'How's the track through Angola?'

'We've improved the worst sections. Why?'

'I'd like to put a lot more ore out that way.'

'It's single track in many places, so we're laying additional track and marshalling areas. Then it will simply be a case of inland on the left, heading to the coast on the right.'

'Timescale?'

'Nine months.'

'And if you had more money and more people?' I pressed.

'Three months. But why the rush?'

‘In case you hadn’t noticed, New Kinshasa will need heavy goods brought in.’

He shrugged. ‘I’ll review it, award contracts to Angolans and Zambians.’

‘What about a road along that route?’ I asked.

‘There is one, good enough in some places.’

‘Could you improve it, send lorries back and forth?’

He made a face and shrugged. ‘We can award the contracts.’

‘It’ll have priority over the northern train line, now that New Kinshasa is under way.’

‘I can fix the worst parts of road, create a few bypasses; that’ll speed up the route.’

‘It may end up being the main artery for the new city, all one thousand miles of it.’

‘I’m working on the city roads as well,’ Steffan mentioned.

‘A man of many talents,’ I quipped.

He made a face and shrugged.

We left Goma hub having started a new city in the heart of Africa. The first coal mine was under way, a South African company running the project for us, and the first coal-oil refinery was under construction. All in, I figured that the new city would keep fifty thousand builders gainfully occupied, and that the city would then house up to a million people in time. It solved my inability to spend money and create jobs in one stroke.

Warfare of the future

Big Paul stood at a foldaway table in front of a shooting range, sunglasses on. Stood in front of him were four groups of ten men keenly observing, interpreters ready, a few Rifles NCOs to hand.

He raised a grenade. ‘This ... is a standard NATO grenade.’ He tossed it to a Rifles NCO, who then walked into the range, pulled the pin and dropped the grenade into a barrel of water. Three seconds later the water reached up ten feet, moistening the parched sand as it came back down.

‘If that grenade went off here, chances are many of you would be injured, but no one killed.’ He tossed a Chinese grenade to the NCO.

‘That’s a Chinese pineapple grenade. When it explodes it sends out larger pieces of metal, and they kill.’

The water again reached up around ten feet. Big Paul lifted up a grenade the size of a lipstick. ‘This is a new grenade, weighing less than one sixth of a regular grenade, so you can carry more of them.’ He tossed it to the waiting NCO. You turn the cap at the top so that the red line is exposed. You then press down against something hard, your finger won’t do it.’

The NCO checked the setting, banged it against the rusted oil drum, and dropped the grenade inside.

‘You have five seconds, longer than the NATO grenade,’ Big Paul added, the water reaching up as high as the previous grenades. ‘A bandolier of these grenades weighs very little, yet they have the same basic effect. You can, however, throw these further. There’s also an adapter for most rifles, especially the AK47, and you can fire them two hundred yards out. If you aim right they’ll detonate above an enemy position.’

He lifted a square grenade, the size of an old nine-volt battery, and weighing almost two pounds. ‘This ... is known as the square grenade, or battery grenade. It has three settings: five seconds, ten seconds, or one minute. Such a long setting is necessary for demolishing bridges and buildings.’

He held the grenade up. ‘This would not only kill everyone here, but they would not find any body part big enough to identify us by.’ He pointed to the desert, to a jeep with two Rifles NCOs, some three hundred yards away. Lifting a radio, he said, ‘Standard grenade.’

They threw a grenade and ducked down. It detonated with a puff of smoke and sand, a dull thud registering a few seconds later.

Big Paul lifted his radio again. ‘Battery grenade.’

The distant NCOs checked settings, dropped the square grenade into a hole, jumped into their jeep and sped away in a burst of sand. Big Paul put his hands over his ears, others copying. The battery grenade blew, the sand cloud blocking out the sun as the blast washed over them, small rocks raining down. It was ten seconds before Big Paul could see his audience again, the men coughing.

‘That, gentlemen, is one mother of a grenade. They’re useful for blowing up small bridges, houses, and compounds. But never think that you could pull the pin and throw it. If you’re up a mountain, then throwing it down is fine. If you want to demolish a building, set it to one minute – and run like hell!’

The nearest NCO attended a mortar, an 81mm. He checked his front, the desert clear, readied a shell and fired. It landed a thousand yards away and blew up a dust cloud.

‘That’s a standard 81mm shell,’ Big Paul informed his students. ‘This ... is an improved model.’

The NCO fired the second shell. Four seconds later an angry dust cloud rose up, four times higher than the previous, the blast washing over the men.

Turning back to the table, Big Paul lifted a standard Russian 7.62mm cartridge. ‘This is a standard Russian 7.62mm. We now have them in Teflon; they’ll do a lot of damage to a car engine, and pass right through a civilian vehicle.’ He raised a larger cartridge. ‘This is a fifty calibre round, also now in Teflon, good for hitting a vehicle engine. It will even damage lightly armoured vehicles.’ He selected another fifty-calibre cartridge. ‘This is an exploding shell. If your enemy is hiding behind a rock, you aim at the rocks left or right for a ricochet shot, and it explodes like a grenade. It’s also good for houses with thin walls, because it explodes inside the house. It won’t kill the people inside, but it’ll wound them all.’

Big Paul lifted a final grenade, similar to the battery grenade. ‘This is the Good Morning grenade. It has an eight-hour fuse, or thereabouts. It may be six hours, maybe ten; it’s random. The minimum fuse time is four hours, the maximum time being twelve hours. You bury them where you know your enemy will return to collect their dead or wounded, and bang! You can also sneak in to a place at night, spread them around, and sneak out. You’ll be long gone when they go off, and they’ll go off at random – scaring the crap out the enemy. It’s a good way of making people think that you’re still around - when you’re not.’

A long way off, Lobster sat waiting some trade in the shade of pleasant orchard in Southern Lebanon. He had dug a shallow trench into a dirt road and planted a long strip of specialist explosives, covering it over. Near the explosives, he left a reason for an approaching driver to stop, a rusted old AK47 lying in the road.

The sun slowly said goodbye and hid itself, the chill coming on quickly in the olive orchard, the location a favourite of mortar crews trying to hit the Somalia UN base.

An hour later he noticed lights. He grabbed his radio and clicked three times, repeating the signal. Readyng his detonator, he waited dispassionately, death not a concern to him, just a consequence. The job was everything. The objective was everything.

The target vehicle slowed, but kept its lights on, soon illuminating the AK47 and squeaking to a halt. A door opened after some debate, a man checking around carefully. The car was in the right position, so Lobster threw the switch.

The blast was not much, it was not designed to be, hence the use of a special explosive. But the car lifted up and rolled, landing on its roof after reaching an apogee of some six feet. It landed in a ditch and crumpled, the man who had eased out blown off his feet, but not killed.

Lobster walked silently forwards, dart pistol ready. The dazed gunman offered little challenge, killed with a dart made of wood, a throat shot. Groans emanated from the car. Lobster twisted off the petrol tap, gas dripping to the sandy floor. He dropped in a pencil thin incendiary stick and walked away, the fuel ablaze a few seconds later.

His colleagues had been kicking dirt back into the hole made by the explosives, but soon running through the orchard to a vantage point. A full six minutes later, a slow roasted mortar shell blew the car in half.

The net effect of the earnest labours of Lobster and his associates, was a great deal of unrest in the south of Lebanon, many fingers pointed at the Israelis and Somalis, but not so much evidence revealed. Bodies were being found, chemicals blamed, UN doctors proving otherwise. And the number of men disappearing was increasing.

Unfortunately for Hezbollah, a great many mortars and weapons had been found by UN inspectors. And there always seemed to be a picture in the Beirut press of a burnt out car, a rocket tube in the back. All told, it appeared as if a great many accidents had taken place by mortar crews and bomb makers. To be helpful, the Israelis suggested that Lebanon introduce a health and safety code for bomb makers; perhaps a certificate of competence for rocket crews.

Rahman had been observing, thinking, and waiting. Now he was ready to strike, sending out his minions in a carefully thought out attack.

A Pakistani registered ship set off from Karachi, taking on board its crew of fighters a few miles off shore, its supply of explosives from a second ship. It sailed south. Through the Yemen Straits it passed without problem, passing under the radar and the watchful gaze of the Somalis, and US Navy ships patrolling close by.

At the town of Suez it took its turn in the queue, accepted aboard a pilot, and progressed north into the canal, heading toward Little Bitter Lake. As soon as the ship was inside the canal, the pilot and his mate were killed, their bodies dumped over the side. The ship's lifeboat was lowered, a deadly cargo of explosives and gunmen inside. That lifeboat powered to the side of the canal as its parent ship headed on.

A second lifeboat was lowered a mile further on, the gunmen inside all prepared to give their lives for their chosen cause. The first lifeboat spotted its target, a huge container ship. It motored to the rear of the ship, turned in its wake and caught up with the slow moving giant. The giant's gangplank was hooked with a grapple, the first fighter climbing up. That fighter stepped up the gangplank, shooting dead the two surprised men staring down at him. Operating the gangplank controls, the gunmen lowered it for his comrades, shots fired at the ship's bridge.

The alert was given, but it was too late. The container ship slowly passed the second lifeboat, that boat's crew destined for a third ship. The container ship's crew were soon overpowered, the Philippine crew all shot. Cutting the engines, the momentum of the great ship carried it forwards as it was coaxed closer to the sandy banks of the canal. Judging the decaying speed, the gunmen turned the nose sharply and jammed it into the bank, blocking a third of the canal.

Down below, explosives were being placed against the hull, more than enough to cause a suitable hole. When ready, the timer was duly set, the gunmen retreating to their lifeboat, a further ship in mind. As they motored north, looking for a suitable ship heading south, the container ship took on water, its stern lowering.

From behind, a second ship dug its nose into the sandy banks of the canal, directly opposite the stricken container ship. With a hole blown into its hull, it also slipped lower at the stern, the Egyptian authorities now alerted and rushing to the scene. The news services around the world had also picked up on the story.

Jimmy received a call from Sykes. 'Two or more ships have been hijacked inside the Suez Canal.'

'Rahman.'

'You thought this would happen?'

'It was one of his ideas, not implemented before. I've changed my plans, and he's changed his. If he's true to form ... then he's wired the ships to blow when the authorities try and board them. Let the Egyptians know your concerns, and keep me updated, please.'

A third ship had been snared, and sunk in the middle of the canal. The Suez Canal was now plugged. Not listening to the advice from Sykes, the Egyptians boarded the partially sunken vessels and tried to move them, the controls smashed, engines damaged. The crew bodies were removed, recovery barges sent for.

The recovery barges were just about the widest vessels allowed into the canal, not least because of their shallow drafts. One moved in from Suez town, another moving down from Great Bitter Lake. The plan was simple: when in place, drag the ships clear if possible, sterns lifted first. Divers would be used to plug holes, watertight doors sealed, air blown in. That would take several days, followed by an additional few days to get the barges into place, for them to grapple their prey, and to start the operation. In the meantime, additional ships were now alongside the stricken vessels, containers being offloaded.

Rahman had anticipated just such an operation. Noon, the day after the attack, his men on the canal banks transmitted the correct radio signals. Those first few containers to be removed, the obvious ones stacked at the top, blew. The blasts killed crews, damaged cranes, and cracked the sides of ships. At the same time, the main target of this exercise, the two rescue barges, blew, soon heading to the bottom.

Rahman had plugged the canal for what should have been at least six weeks, and Jimmy uttered a few rude words.

After a walk around the grounds, Jimmy made a few calls, quite a few calls. Some of those calls were to do with the Suez Canal, now known as the Suez Bottleneck. Tugs had been hired by the British Government, tugs from all around the eastern Mediterranean, as well as from Somali, Jordan, Israel, Kenya, and even Pakistan. They were all headed towards the Suez bottleneck, small enough to squeeze past the wrecks.

The following morning, some twelve tugs tied off ropes and chains to the partly sunken ship blocking the centre of the canal. They put the pedal to the metal, and pulled for all their worth, scraping the ship along the sandy bottom at a very slow pace. Not to be disheartened, and working on double the normal rates, six other tugs turned up and fixed ropes of varying lengths. Eighteen tugs now powered up, creating a hell of a backwash, and dragged the stricken ship along at a modest pace.

Nine hours later, the lumbering cargo container reached the mouth of the canal, the lights of Suez town a backdrop to a thousand spectators. A further two hours allowed the tugs to turn left, and to

drag the ship half a mile away from the mouth of the canal. A cheer went up around the world.

The recovery barges, the ones that sunk before they could recover anything, were less of a problem, and were duly dragged clear the next day. Five days after the attack the canal stood clear, loose containers now being recovered from the depths.

When Jimmy saw a picture of the ships graveyard, east of Suez town, he said, 'They'll still be there in ten years, rusting away.'

In a palatial Dubai apartment, Rahman walked to his window and stared down at the bustling modern city below. Thinking.

Calm before the storm

The next "M" Group meeting was due, and due to be held in Washington, whilst difficult questions were now being asked about Rahman. Jimmy had few answers to offer them, and a few plans would have to be altered.

We stayed the night in the usual Washington hotel, meeting US investors interested in New Kinshasa, travelling around to the White House the next morning. A room normally used for state dinners had been moved around, and I was reasonably sure that we'd not be bugged. Not here. Everyone had arrived at the front door, being filmed, and even the President now openly referred to these meetings as "M" Group, offering no denial about our role. The public were not suspicious, they were keenly awaiting whatever tricks, gadgets or magic potions we came up with next.

I had heard about a Manson Drug Users Club in California, a group of people who got together to discuss the effects of the drug on their bodies, the drugs characteristics - instead of its side effects. They shared recipes for maximum health and strength - whilst allowing minimum weight gain, posed for photographs, and seemed to be caught with prostitutes a lot.

I had not met with either of the new Republican or Democratic candidates, but Jimmy suggested that he was comfortable with either. He saw no major problems with them, but was not a hundred percent sure of the Republic candidate.

In Rome, the numbers of both electric cars and electric scooters were increasing, as was the death toll amongst young riders. We pointed towards Italian driving. The Italians had, however,

introduced speakers to the scooters, speakers that gave off traditional scooter sounds, warning slow moving Italian housewives that there was a teenage Italian driver on an electric scooter approaching at high speed, but with no training, no helmet and little care.

In Nairobi, the scooters had also been popular. Unfortunately, they were just as popular with irate lorry drivers, who seemed to delight in knocking scooters out of the way. The death toll was high, the Kenyan lorry drivers motoring like Italians with attitude.

The people who had claimed the super-drug to be some sort of magic, or alien technology, were now being shot down by researchers working on stem cell projects, those researchers claiming that they would have come up with it in a few years. Yeah, right. We also now enjoyed the Japanese claiming that their scientists were within five years of creating the electric car batteries. That led to a TV programme that described us a “leeches”, grabbing cutting-edge research and finishing it off with the brute force of money. There was also the suggestion of industrial espionage, that we had stolen the plans and profited by them. But even our harshest critics had to agree that the profits had been ploughed into Africa, and to feed the poor.

Jimmy and I now worked the room, greeting leaders and aides in a variety of languages, making everyone feel welcome and needed, but also making everyone feel that we preferred them to the others. Jimmy eventually called order.

‘Ladies and gentlemen, politicians, hard-working aides.’ Everyone smiled. ‘Our first order of business is the Suez Canal. But first, we need to discuss a terrorist with the codename of Rahman – since I’m sure he was behind the attack. If ... I had not altered the way things go, then this gentleman would have appeared around 2015, caused problems for three years, and disappeared forever more. We *have* altered things, and for some reason he has appeared early.

‘And, as if not fully awake, he could have done a better job of it in Suez, sinking those ships in the centre of the canal, not the mouth. His next target should be the Bosphorous Straits, Turkey, and with little effect other than a huge oil spill for Turkey to deal with. That’s assuming that he is true to form. He was behind the plane hijackings in Mogadishu, in Chad, and again in Yemen – the aircraft that was shot down.

‘He will continue to try and hijack aircraft, hoping to crash them into populated western cities. Everyone ... must be vigilant. If contact is lost with an approaching aircraft, put a jet fighter on its

wing and have a look. Now, I can tell by some of your looks that you're struggling with that concept. Your countries ... are your choice, but consider what a 747 crashing in your capitals may do.

'Now, other than what I have already described, I know very little about Rahman. I have little else to offer, so don't ask. But, since he's out of school early, I have taken a few steps of my own. Yesterday, Kenyan and Somali forces re-took Kandahar airfield in Afghanistan.'

Many of the leaders glanced at each other, shocked.

'They flew in on scheduled UN flights; we did a little hijacking of our own. The difference, this time, is that they will stay for several years.'

'How does this affect the plan to invade?' Chase asked, clearly concerned.

'It makes it easier,' Jimmy suggested. 'Because the Taliban and al-Qa'eda fighters will think it a Somali issue, and will try and unseat the Africans from Kandahar airfield. That movement of fighters will help us to gauge their numbers and positions, radio traffic, leadership structures, the works.'

'And thin them out a bit,' I added.

'Will the African soldiers attack civilians as before?' the Germans asked.

'They have specific orders not to, and to stay put, fending off attacks. The previous civilian deaths came from Somalis who took a wrong turn into a town, and most of the soldiers on the ground are Kenyan. Still, there will be civilian casualties, as there were in Mogadishu when al-Qa'eda attacked. An ... eye for an eye is an important part of Somali culture.'

'Is their aim simply revenge?' the Germans asked.

'No, their aim – my aim – is to draw out al-Qa'eda fighters, and to keep them busy in Afghanistan instead of busy hijacking planes. I fully expect that all Islamic fighters, terrorists or would-be fighters, will travel to Afghanistan to join the fight, the more the better.'

'Keep them off the streets elsewhere,' Chase noted.

Jimmy told him, 'I would appreciate you monitoring any movements into Afghanistan, but without intercepting any of them. We want as many as we can to be bottled up there.'

'How many Africans have landed?' the French asked.

'Four hundred.'

'It is not many. There a thousands of fighters and Taliban.'

'It's more than enough. The Rifles have taken receipt of the next generation of advanced weaponry.'

‘How ... advanced?’ the Germans asked.

‘Enough to worry you; you would not wish these weapons to be on the streets of Europe. Now, since we’re discussing Afghanistan, some of you are already aware of the American desire to invade Afghanistan and to root out al-Qa’eda. I have, for the past decade, spoken out against such a move, not because it would have been a bad idea, but because conventional warfare would have been used.

‘American soldiers, training in Somalia, are being specifically trained to fight the Taliban, and the techniques are similar to those that would be necessary to fight The Brotherhood. All of the nations assembled here should be aware that I’m training the foreign soldiers in Kenya and Somali in this fashion, but I’m also training them to invade Afghanistan.

‘Those soldiers, who may later become instructors, will learn techniques that will be directly employed against The Brotherhood, and will also allow those instructors to train their own proxy armies. When the invasion of Afghanistan draws near, it will be spearheaded by American and British soldiers, with Africans in support. The Chinese will supply aircraft and logistics, but I do not ask nor encourage Chinese soldiers to participate ... unless they wish to do so.’

‘We wish to do so,’ Han immediately announced. ‘Since we consider the techniques valid for own forces in the future – if need be.’

Jimmy faced the French. ‘You have some very excellent soldiers from the Foreign Legion being trained in Africa. They would be most welcome, and a great benefit to us.’

‘We are willing to commit five hundred men,’ the French offered.

Jimmy faced the Russians. ‘What say the Russians?’

‘Our people will not be happy for our soldiers to return to Afghanistan, but we wish to find certain terrorist leaders. So we have created an expeditionary force of five hundred men, all volunteers. Most are in Africa now.’

‘Thank you. Moving on –’

‘Do you not ask us?’ the Germans posed.

‘Your soldiers are only fit for barrack duty.’

I hid a grin, and Chase looked away.

The German Chancellor composed herself. ‘Then maybe we should change that – if they will be needed for counter-terrorist operations in the future.’

‘To be ready for May, your soldiers would need to be in Africa next week,’ Jimmy pointed out.

‘We have considered a volunteer unit, and discussed it with our French counterparts. We can have four hundred men ready.’

I asked, ‘And they’ll work under black African instructors?’

‘They have volunteered for the work, so either they know – or they don’t know where Africa is!’

‘We will be glad to have them,’ Jimmy offered the Germans, a quick glance my way. ‘And afterwards, it is my intention to create a dedicated multi-national force, a desert, jungle and mountain warfare brigade. All of your soldiers will then be able train with that unit, to give them experience of what might be required in the future.’

‘And us?’ Ben Ares asked.

‘There is no way ... that I want Israeli soldiers in Afghanistan,’ Jimmy firmly told him. ‘But you are welcome to join the desert training brigade in Kenya.’

The Germans asked, ‘The soldiers in Afghanistan, now and during the invasion, they will breach the Geneva Convention?’

‘If you have thoughts and concerns along those lines, then don’t send your soldiers, and don’t attend these meetings.’ He held his stare on her. ‘We’re now in 2012, and 2015 will see the start of world coming to the end. You’d best wake up and realise what faces you, because what comes next ... I can’t stop. Millions of Germans will die. If you’re worried about sticking to the rules, then maybe Germany needs a stronger leader.’

Well, if looks could kill, I thought. Leaders collectively checked their nails.

‘Moving on,’ Jimmy finally said. ‘The Somalis are in Southern Lebanon, and have killed a great many Hezzbollah fighters, and disrupted al-Qa’eda cells, people that would have ended up turning their attentions to the west.’

Chase faced the German leader. ‘Good people sleep safe at night, because bad people patrol the borders.’

‘Very true,’ Jimmy agreed. ‘And a few years from now ... none of you will care about the Geneva Convention.’ Jimmy took a moment. ‘You’ve had it easy up to now. I’ve removed terrorists and other threats, I’ve averted wars, and I’ve averted financial crashes and other problems. What comes next *cannot* be prevented. The years between 2013 and 2019 will be the worse six years any of you will ever encounter. If ... you survive them at all. The good times are almost at an end, and those good times may not return till 2019.’

I glanced at Helen, thought of our unborn child.

‘As an aside, I hereby request that you all increase your research into SARS, Swine Flu, and the flu family of viruses. A combined research facility in France might be nice. OK, at this juncture I’ll open the floor to questions and suggestions.’

‘Can you explain the super-drug, and its interaction with the flu virus?’ Chase asked.

‘The basic super-drug will assist seventy-five percent of people to resist the flu virus family. The Manson drug will assist ninety-five percent of people to survive the flu viruses. Unfortunately, a person with the basic super-drug will become susceptible to the flu viruses after they have recovered. Some will die. Not many people with the Manson drug will die, but it is not one hundred percent. The flu virus family is adaptive, and no – there is nothing I can do to help. Your only hope is that you come up with something new and different to treat the viruses.’

‘Given that you know the future, we obviously don’t find a cure,’ the British PM put in.

‘There’s always a chance that some bright young scientist will stumble across something,’ Jimmy responded. ‘After all, there’s no point in knowing the future just to repeat it.’

‘The Suez incident was not seen?’ The French asked.

‘It was seen ... to be an idea for an attack in 2016, not now.’

‘Then maybe such future threats should be planned for now,’ the French suggested.

‘I’ve altered my approach, and I’ll warn you of such things. Unfortunately, you can’t stop and search every ship in the canal, or elsewhere. The best bet is to find the people responsible, and read them the Geneva Convention ... as you slowly hang them.’

The Germans still looked peeved.

‘The city in the Congo,’ the French asked. ‘What are your aims there?’

‘To build up the region, adopt the dollar, to increase GDP and to buy western goods when your own economies have gone to shit.’

‘With foresight ... we cannot avoid such a financial fate?’ the French pressed.

‘You ... are not the problem. The nice man who lives here, or his successors, are the problem. When the petrol-dollar crashes, you’ll go with it – because you’re too closely linked. And no, there’s nothing you can do about it. That fork in the road was taken a long time ago, and we all now live in a very integrated and inter-dependent world. But, if there is something you think this group could tackle – concerning the petrol-dollar – then by all means

present it. I would, however, caution you about suggesting that OPEC switches to the Euro, since some mistakes should not be repeated. If OPEC comes calling, send them away.'

The French looked as if they were now hesitant about making additional suggestions. At least openly.

We spoke about electric cars, nuclear technology, and New Kinshasa for an hour before breaking for lunch, time for the aides to scurry about with ideas.

Chase led us to the Oval Office. At the window, he turned. 'Will Europe nudge OPEC their way?'

'Not if I have anything to do with it,' Jimmy offered. 'Besides, OPEC may look at the Yuan in 2017. But, that was before I altered a few things; Africa may alter the playing field a bit. If Kimballa adopts the dollar, and we grow the GDP by 2017 – OPEC won't have a choice.'

'Is that achievable?'

'It'll be close,' Jimmy cautioned. 'I'd need to grow the region, and the only way to do that is the internal market. Any increase in exports ... and we lower prices.'

Chase walked around and sat against the desk, folding his arms. 'So how do we increase the size of the internal market?'

'Use the products internally. Make things and sell them locally,' I said. 'Africans making things to sell to the next town, not the west.'

'But the money to pay for those goods,' Jimmy began, 'comes from export revenue. So it's finite.'

'We could print a few dollars, boost local wages,' Chase risked.

'You'd be spending a great deal now ... in the hope that we hit the target GDP, and there're no guarantees,' Jimmy pointed out.

'As I said, we print them; they slosh around Africa, some used to buy American goods.'

Jimmy shrugged. 'Get someone to work out of our corporation, allocate a few building contracts to companies around Africa, the kind of building projects that use up a lot of manual labour. Make it look like us.' Jimmy faced me. 'Spend some time on the internal markets; factories full of cheap goods.'

'Po is on that one. I can ask him to produce household goods, and subsidize his materials.'

'Ramp it up,' Jimmy said. 'Big time.' He faced Chase. 'Get your people to think about what we can make – what American products can be assembled or made locally, under American parent company control. We have plastic, rubber, steel, aluminium, tin, wood, glass.'

'That covers most things,' Chase noted.

‘TVs, radios, computers,’ I suggested. ‘Basic household goods; light fittings, lamps, furniture. Anything that an African housewife might desire.’

In the afternoon session, we started with coal-oil, a few leaders unaware of the breakthrough.

Jimmy began, ‘For those of you who are not aware, and those not spying on our every move, we have developed the technology to convert coal to oil at a reasonable price. Germany: you have no oil, but you do have coal, as well as access to cheap Polish coal. Within six months we’ll be able to show you the technology, and you can make some of your own oil. That will, unfortunately, not impress our good Russian friends, who would like to sell their oil to Europe, even more than they do now.’

‘We cannot hold back the relentless advance of technology, and the coal-oil converters would have appeared soon enough. After 2025, those converters will be essential, and Russian oil will be insufficient in quantity to serve the needs of Europe and elsewhere. I would like to point out at this juncture that Russia itself also has a great deal of coal, and to balance things out a little I’ll be installing a conversion plant there very quickly. That will give our Russian friends the opportunity to reach a point – in say four or five years – where its production cost of coal-oil matches that of extracted oil. All they need do then – is find buyers, and that is not my concern.’

‘And China?’ Chase asked, getting a look from the Chinese.

‘Will start to produce some of their own oil from coal, but are conscious of the effects of over-production and over-use internally. The Chinese approach will be ... measured, in that I have asked them to sell oil to Japan at a suitably friendly rate.’

The Japanese were all ears.

Chase was a little surprised. ‘Our Chinese friends ... will export oil?’

‘As part of an agreed deal,’ Jimmy emphasised. ‘Not globally. At least not globally till that deal ends in 2017. Five years.’

‘And we get the technology ... when?’ Chase unhappily asked.

‘If you were to produce a great many barrels internally, what would it do to dollar oil prices externally?’ Jimmy posed.

‘Well, it could lower them,’ Chase admitted.

‘So a *measured approach* ... may be prudent. Yes?’

‘Always,’ Chase said with a false smile.

‘Ladies and gentlemen. I could, very easily, lower oil prices. I won’t ... because of the effect that it would have on the dollar, and on over-heated economies. We have a route-map between now and

2025, the aim being to get there without being out of breath. That means that I will try and hold oil at sixty-five dollars a barrel for a few years more, and then manage the price rise – with your kind assistance. We need to get to 2025, and getting there rich will not help; we need to get there united to have any chance of survival.

‘In 2025, and the years that follow, a few thousand well-trained soldiers will make more of a difference than large piles of cash. And for those of you that are interested, the technology being deployed in Afghanistan now ... is the forerunner of technology that will be used to fight The Brotherhood. For most of you, the final report into the conduct of the Afghan campaign will probably be the most important document you’ll ever read.’

They were all listening intently.

‘That document, will give you what you can expect when your expeditionary forces tackle The Brotherhood. Keep a copy next to your beds.’

An hour later we broke for the day, meetings organised between the various leaders. At our evening meal, in the same room at the White House, I asked an innocuous question. ‘Does Rahman know that we’re onto him?’

Jimmy took a long moment, raised a finger, then grabbed his phone. He called Sykes. ‘Leak the basic details of what we know about Rahman. Straight away please.’

By 10pm, US news channels were questioning who Rahman was, listing him as a terrorist mastermind residing in Dubai. In his expensive apartment in Dubai, Rahman was suddenly terrified by this turn of events. He was out of his apartment inside thirty minutes.

In our hotel in Washington, at the bar, Jimmy said, ‘If he’s foolish – and if there is a God – Rahman will run to Pakistan, to personally oversee the fight against the Somalis. And, if we’re very lucky – or he’s very stupid, he’ll enter Afghanistan.’

‘Good move then, naming him,’ I realised.

‘Could have been the most significant move of the fight against him,’ Jimmy agreed. ‘You know, during the Second World War, Hitler refused to believe that the British had broken the Enigma codes. Rahman doesn’t know that he’s up against a time traveller. I ... have broken his code, to some degree.’

‘Spook him then,’ Helen suggested.

‘Spook him?’ I repeated.

‘You know what he has planned, so reveal it. It’ll make him think that some of his own people leaked it.’

‘Helen, you’re wasted as a PA,’ Jimmy told my wife. ‘You should have been a spy.’

Helen cocked an eyebrow and exchanged a look with me.

Jimmy lifted his phone. ‘Sykes, Jimmy. Leak to the press that Rahman is planning to block the Bosphorous Straits with an oil tanker. Thanks.’

What we didn’t know at the time, was how wrong we were, or who Rahman really wanted to target.

Kandahar

A day prior to our “M” Group meeting, Lobster had stepped off a UN plane that had been borrowed by the Rifles. The Russian pilots had been paid off, and would deny any knowledge of the trip, even of an ability to fly. Plane? What plane?

‘Back again,’ Lobster muttered. Being blasted by the turbo-prop back draft, he lugged his kit forwards, dumping it alongside other rucksacks whilst taking in the familiar terminal building. It had not changed at all. Back at the rear of the aircraft, he helped his colleagues push a pallet off, the consignment clearly labelled as “Lobster toys”. With the pallet pushed all the way inside the terminal building, Lobster reclaimed his rucksack, finding a wooden bench to call a home for the next few months.

The initial battle had not lasted long, the first aircraft landing twenty minutes before Lobster’s. This time around, however, many of the airport employees were allowed to walk out unharmed, their purpose being to send a message to the Taliban leadership: the black soldiers were back. Lobster pulled out a knife and set about his pallet, his team nearby.

Command on the ground had been allocated to Major Nlobo, known as Mister Lobo by his team. He was an eighteen-year veteran, having started as a regular soldier and worked his way up, and was a Lieutenant the first time he had landed here. He now drew alongside Lobster. ‘They in one piece?’

‘We find out now, sir. But they’re pretty tough.’

‘Give the men in the city an hour to report our presence, then cut all the communications.’

‘Yes, sir. No Baywatch tonight.’

Lobo lifted his eyebrows. 'I don't think the Taliban allow people to watch Baywatch, Sergeant.' Outside, he walked across to the mortar section. 'Ready, Sergeant?'

'Yes, sir. All set up.'

'Wake up the town with six rounds.' He turned and walked back to the terminal, accepting a fresh tea. A dull rumble caused him to lower his tea and exchange a look with his adjutant. With heavy frowns, they returned to the mortar section.

'What the fuck was that?' he barked.

The NCOs had their noses in the mortar crate. 'They be labelled wrong, sir. They be earthquake shells,' a Somali reported.

'I know, I could hear it. So could people in Angola!'

'They all say regular, sir.'

Lobo inspected the crate. 'Who packed these?'

'They come from China, sir. We no see them before.'

'I wanted to wake up the town, not demolish it!'

'Sorry, sir.'

'Try and hit the crossroads to the northeast with them,' Lobo said as he turned, cursing under his breath and shaking his head.

With little to do at the moment, Lobster offered to help the mortar crews, perching himself on the wall with binoculars and compass. 'Bearing zero-four-seven. Laser rangefinder says two thousand two hundred yards. Fire one.'

A shell was lobbed outward.

Lobster watched as a cloud of dust enveloped a large area, several cars in the wrong place at the wrong time and now rolled away like toys. When the dust settled, a large crater was discernable a few yards off the east road. He lifted the radio. 'Close. Fire another.'

This mortar round hit the edge of the road, leaving a crater that cut into the tarmac.

'West one degree. Fire one.'

The local traffic had an odd reaction to the blasts: they speeded up, as if speed was a safety factor during a mortar attack. Three Toyota pickups were on the crossroads when it was hit, all destroyed, a suitable crater left behind.

'OK, it's zeroed on the crossroads, leave that tube.' He swivelled around, facing southwest. 'Bearing one-one-three. Range one thousand two hundred. Fire one.'

With traffic still on the road, the junction blew, a pleasingly large crater left behind, a few Toyota pickups destroyed. Lobster was certain that their presence was now known. Walking back, he approached trucks being examined, and enquired about the contents.

‘It say conc-re-etee.’

‘Concrete,’ Lobster corrected the man. He turned and faced a digger. It had seen better days, but was obviously still in use, and it gave Lobster an idea. He went and found Lobo. ‘Sir, there’s a digger, and a lorry full of concrete.’

‘Really?’ Lobo asked, pleased at the find.

‘We can make a bunker or two, some sleeping quarters at the far end, and repair the walls,’ Lobster suggested.

‘Definitely.’ Lobo pointed at a Captain. ‘You’re assigned to dig slit trenches, to make concrete roofs, and a few bunkers.’

‘And don’t be forgetting the central heating, sir,’ Lobster offered the captain as he left.

An hour later, Lobster lugged a heavy EMP to the north wall, his colleague lugging an even heavier battery pack. They moved the other soldiers back, and struggled up to the top of the wall, Lobster sitting straddle and facing the town, a few kids visible across the stream.

‘No one leaves Baby in the bag,’ Lobster offered his colleague.

‘Baby? This ain’t no baby, it’s the ugly fat sister.’

With the device plugged in, Lobster diligently checked the settings, re-checked the aim, and fired. The green lights turned red. All done.

In Kandahar, radios and phones stopped working. ‘No Baywatch tonight!’ Lobster said as he jumped down.

Collecting two battery grenades, Lobster and his colleague lugged their heavy bits of kit all the way to the south wall, through a hole, and to a flat and open expanse. A well-worn path showed the way, mines still scattered about from the previous incursion. Two hundred yards out, covered by the snipers on the wall, Lobster found a dry streambed. He turned one way, his buddy the other. A hundred paces along they dumped their heavy bits of kit, set the battery grenades for one minute, placed them right inside the devices, pulled the pins – and ran.

They both made it to the wall as the grenades blew, little but scrap metal left of the two secret devices, and that metal was spread far and wide, pieces now raining down on the airfield.

Nightfall saw the intermittent use of a distant DSHK, rounds falling inside the perimeter. On the roof of the terminal building, a captain sat behind a laptop screen, radio in hand, as the software displayed the streaks of incoming rounds and, more importantly, their origins. Mortars were directed, but did not need be accurate;

anyone within sixty yards was killed as earthquake shells flew out after the DHSK.

Five yards from the captain – the man now chilled in a freezing wind, a type of radar detector spun around. Below, in a warm office, another captain sat behind a laptop, keenly observing a map of the area to a distance of twenty miles. On it, coloured markers denoted radio usage, mobile phones or satellite phones. Blips were left on the screen after brief conversations, moving blips tracked, and priority targets could be selected.

Kandahar was quiet, hit with an EMP, but the screen now showed two or more satellite phones and a dozen radios in a convoy. And two separate groups. He twisted his head over his shoulder. ‘Stand to! Stand to!’

Lobo appeared a few seconds later. ‘Are we popular tonight?’

‘Sat phones and radios, two sizeable convoys. First is moving along the main road through Kandahar, west to east, second is southeast of us and approaching.’

‘Introduce them to some mortar fire.’

The captain lifted his radio, changed the settings, and called. ‘Mortar crew?’

‘Here, sir.’

‘Ready all tubes. Target will be both crossroads, wait my signal. Standby ... standby ... north crossroads, fire three rounds only. Standby ... south crossroads, fire three rounds only – wait out.’ He checked his screen, finding little radio chatter or sat phone use. A sat phone came to life near the north crossroads, then nothing.

Lobo returned. ‘Upload the sat phone numbers to the CIA. They may have them logged.’ He turned away.

‘Mister Lobo,’ the captain called. When Lobo turned back, the captain tapped a box on the edge of the screen. ‘That’s an encrypted sat phone, to western intelligence agency standards.’

‘That’s naughty. They didn’t buy that down the local carpet shop.’

Rahman lowered his phone onto a solid marble coffee table and stepped to the window, staring out at the bright lights of Dubai. Jimmy received a call, his interest peaked in that sat phone.

The captain was also interested, because although not in use, that sat phone was giving away its position, now moving northeast at vehicle speed.

Up on the roof, the chilled captain sat observing as his software burst into life, bleeps given and coloured flashes displayed. He grabbed his radio. 'Incoming! Rockets incoming!'

A small rocket hit the runway; no damage and no injuries. He pinpointed its launch position as the Taliban fighters made ready a second rocket under the cover of darkness, and lobbed a mortar onto it, killing the unsuspecting crew.

In the morning, Jimmy called an early household "M" Group meeting, before we left for Washington. 'Last night, an encrypted satellite phone was used in Afghanistan, cheekily bounced off a NATO satellite. It was a stolen handset that had never been disconnected. It is disconnected now, but the interesting fact is that the recipient's sat phone, also stolen, was tracked to Dubai.'

'Can't send in the marines,' I quipped.

'No,' Jimmy agreed. 'Which is something not lost on Rahman.'

'Do we have a fix on his house?' Jack asked.

'No,' Keely reported, the originator of this particular information. 'Just central Dubai.'

'It's confirmed something that I've always believed about Rahman,' Jimmy stated. 'That he's an Arab, and that he's worth a few quid. We also know now that the two convoys that moved to attack Kandahar last night were operating under his direct instructions.'

'What happened to them?' I asked.

'Wiped out.'

'So he'll send more,' I suggested.

'He's not stupid, and he won't repeat a mistake. The Taliban are a bit thick, but al-Qa'eda are switched on, so too the Pakistani fighters, and Rahman is better again. He's a thinker.'

'So are you,' I quipped. 'So out-think him.'

'That's easy, since he has objectives – and not much patience. And he has no idea of the advanced technology at Kandahar. For all he knows, the airfield is full of Somali grunts – an insult to his superior Arab brain.'

'So what's his next move?' I asked.

'You tell me,' Jimmy countered.

'What's his M.O.?' I asked.

'Planes and boats...' Jimmy trailed off. 'If I was him, I'd hijack or steal a plane, and ram it into that airport terminal at Kandahar. But where ... would he get one?'

'Do they have any in Afghanistan?' Jack asked.

‘Yes, in Kabul, but just a few UN flights. I’ll order as many as I can out, the pilots to be armed. Other than UN and NGO flights, nothing else lands there.’

‘Could he obtain one from a neighbouring state?’ Han asked.

‘Pakistani regional airports may be a choice, or somewhere north, the old soviet satellite states.’ Jimmy lifted his own satellite phone and selected a previously used number. ‘It’s me. Warn the team in Kandahar to expect an airliner attack, like Mogadishu. Disperse them. Thanks.’

‘That wouldn’t kill many,’ I said. ‘I’ve seen the layout of that place. Those soldiers are a mile apart!’

‘Command post is in the main terminal,’ Jimmy said, his hands wide.

‘Could he get surface to air missiles?’ Keely asked.

‘Probably,’ Jimmy answered. ‘And yes – he would try and shoot down our re-supply aircraft. So I’ve varied the routes. To see them coming he’d need a localised radar, which we’d detect.’

‘If I was him,’ I began, ‘I’d do the unexpected, and hit Mogadishu again!’

‘And we know he likes to blow up boats. I’ll send Abdi a message to watch the port. Anyway, tomorrow we’ll try a new weapon on Iran.’

‘Iran!’ I challenged, sitting up.

‘Internet weapon,’ Jimmy said with a smile.

The following afternoon, as we were at the “M” Group meeting, we got confirmation from Mossad agents inside Iran that most internet servers were down, even the corner-shop internet cafes were closing up. It had been a successful test, a full denial of internet use for almost six hours achieved.

The Iranians immediately blamed the west, unaware that the re-start of their servers coincided with tens of thousands of software robots trawling for information based on keywords, and emailing the detail out. It took the Iranians three days to discover that, which led to all computers being ordered off, nationally, whilst a few clever young men found a way to remove the robots.

Details of their continuing weapons programme was now out: names, dates, figures - enough information for the Chinese and Russians to know that their earnest diplomatic efforts had achieved little. The UN received the detail, information that the Iranians would find very hard to deny. When I asked Jimmy if the Americans would attack, he simply shrugged. What he did say was, ‘Always release a bad story on a good story day. Or on a very bad story day.’

Cuba

As we landed back in Cuba, it brought back a few bad memories for me, vivid images of Karl's death a contrast to the fine weather and lush green vegetation.

We were booked into three different hotels – just in case, and had made those bookings some three weeks earlier. Cuban agents stood ready at each hotel, and several of Jimmy's gadgets were pulsing away, interfering with bomb timers and oven timers alike. Alarm clocks went crazy and staff slept in.

The hotel we actually chose was a new-build, and owned by Po. I found that fact odd, since it appeared typically Cuban, not typically crazy. Turned out that the Cubans had used a few harsh words towards Po, and then forced a design upon him. I was certain the drawings had no kangaroos in them.

Despite the hotel being Chinese owned, the staff were all locals, polite and friendly. And the notice board declared that tonight was Salsa dancing night. I had to wonder what the hell they did on the other six evenings of the week. That first evening was relaxing, bomb and sniper free, the next day spent with Rescue Force, the camp here now as big as Mawlini, with recruits emanating from all of the South America countries. Hacker was still putting them through their paces, and Hueys buzzed around, the Cuban people now used to them.

On the third day we toured our well-run orphanage in the morning, meeting with the government in the late afternoon. There Jimmy broke the bad news.

'We believe that an earthquake will strike Cuba soon. In four weeks.'

They were mortified, thoughts of Haiti coming to mind. 'How serious an earthquake?'

'Not like Haiti,' Jimmy was keen to emphasise. 'But still quite bad. It will strike in the south east, so we'd like Rescue Force to be ready.'

'Of course, there are many of your people here.'

'We'd like to use additional French and British doctors if that is OK. Some from Africa.'

'You will need many?'

‘Better to have too many, than too few,’ Jimmy told our hosts.

It took a while to reassure the officials, and we moved onto oil, the Cubans allocating us extra concessions. Jimmy then surprised me with a request to open a few factories on the island. The factories would employ local people and be owned and run by CAR, and would make household items. Like washing machines.

Leaving the meeting, Jimmy simply suggested that Cuba needed a boost. Cuba’s relations with the US were now amicable, albeit a frosty kind of amicable, and trade was increasing. What Jimmy now desired was a rapid increase in Cuban GDP, and he handed me the task. As if I didn’t have enough to do already.

An12

In Kabul, Taliban fighters had seized two UN aircraft after gun battles. One aircraft was too badly damaged to take off, the second now pulling away from Kabul and heading southwest. The news reached us in time, a warning given to Kandahar airfield. Lobster took Baby out of the bag and jogged to the north wall.

Meanwhile, a fortuitous turn of events was about to benefit us, not Rahman. With complaints of large-scale civilian deaths already made, TV crews had arrived in Kandahar, even a western crew hoping to get an exclusive, a team of Italians who had been based in Islamabad.

An hour after the alert had been given, with Lobster stood waiting patiently, all eyes now on the dull grey cloud base, a plane could be heard approaching. The An12 broke through the clouds at three thousand feet, turned east and then west, finally figuring out where the airfield was. It nosed down towards Lobster, coming at him head on a mile out.

The EMP had a crude aiming slide, but Lobster waited, just to be sure. Judging the aircraft to now be within a mile, his colleague held the EMP whilst Lobster peered through the slide’s groove. He delicately moved his finger to the release button, just registering its surface texture, and took a half-breath. Exhaling slowly, Lobster took a final aim and pressed gently – so as to not move the EMP.

He lifted up and breathed normally again. Nothing. They waited.

Then the peace of the morning registered with them, a distinct lack of aircraft engines on the breeze. The pilot of the An12,

whoever he was, lost power and momentum quickly, but did the wrong thing by trying to keep the nose up. His airspeed dropped rapidly and he stalled, the aircraft soon nosing down and entering a spiral, unrecoverable without its engines working.

As the soldiers, and the residents of Kandahar observed, the An12 spiralled down into the town's main crossroads, the accidental aim being just about perfect. The blast was huge.

'That was no normal crash,' Lobster realised. 'That plane, it had explosives in the back!'

The TV crews had caught it all, but with no idea that an EMP device had been discharged. It looked, for all intents, that the pilots had deliberately targeted the city centre, the damage extensive, dozens of buildings now on fire. The Taliban leadership had been promised a victory by Rahman, the destruction of the terminal building at the airfield. Now, all the world saw his attack kill innocent civilians through their TV sets.

I watched the images silently, stood in front of the TV in the diner. Turning to Jack, I said, 'He won't try that again.'

Shelly stepped in with a girlfriend from school, and two boys, both of whom were a few years older than her. I headed towards the door, offering polite – yet forced smiles at the lads.

'Good to meet you, Mister Holton,' the first lad offered. 'I read all the books.' The second lad was equally as pleased to meet me. I shook their hands.

'Any chance of a helicopter ride?' the second lad risked.

'I'll leave that to my daughter to arrange,' I said as I left. In the house, I reported the foursome in the diner to Helen.

She made a face. 'At least she brings them back here, where we know where they are. At this age you just need to give them space.'

'Maybe if we injected them again they'd age backwards,' I quipped.

The following Friday evening we flew down to Goma hub, arriving at dawn, soon being whisked toward our new home, Shelly keen to see her designs come to life. Turning south from the airport, we passed the conference centre, the towers of the stock exchange visible in the distance. Beyond them, tall cranes attended new bank headquarters, eight structures being built at once.

Leaving the city, we passed Spiral IV on the right, and turned onto a new road heading towards the lake, its verges being carefully tended by dozens of landscape gardeners. Half a mile along this new road we noticed signs advertising properties for sale off-plan.

Jimmy said, 'We're building these to sell, and Po and Yuri have land at the end of this road.'

The lake came into view, that view soon blocked by a row of tall hedges that had obviously been transplanted from elsewhere; they had not grown to the height that they now reached in this location. Our coach slowed, halting outside large iron gates, affording us our first glimpse of the new house, a pink finish to the walls. It was definitely Miami style. Guards manned the gates, and our coach slowly navigated around a large fountain, space enough for the coach to halt on a gravel forecourt.

Stepping down, I looked up at the mansion, very pleased with it, Shelly and Lucy running forwards. Enclosed on three sides, we stepped towards the main entrance, its grand old wooden doors ajar, a housemaid stood ready. Inside the main door I found a small desk, a bodyguard stood near it. He would be there to police visitors. The main hallway was huge, four sofas facing out from a centre feature of tall green plants. Not rubber, I tested their leaves.

Corridors led off ahead, left and right, the girls running up the marble stairs to find their rooms, our luggage now being brought in. I turned right, finding a large dinning room, then a kind of staff room and cloakroom opposite it. Beyond that I found a lounge as big as those in the UK. Turning left, towards the lake, I noticed a series of offices; high long windows, desks and computers, one of our corporation staff sat behind one.

At the end of that corridor a guard opened a door and I stepped out to a view of the gardens and pool. To the left, in the shelter of the house, sat a huge fountain, colourful goldfish moving sluggishly through the water. Separating the fountain and pond from the pool ran a hedge some five feet tall and neatly trimmed, the other side of which I found neatly mown grass. The grass led to a pool some twenty metres long and ten metres wide, invitingly blue. I ran my fingers though its cool water, checking for crocs.

Beyond the pool I found a large area of grass dotted with round bushes, the view of the lake interrupted. I walked on, noticing a sign: no swimming in lake! It seemed like good advice. I reached the end of our garden and joined a concrete jetty, walking along it some thirty yards into the shallow lake. At the end, I halted next to a red and white buoyancy ring for swimmers in trouble. I had to wonder what use it would be during a croc attack.

The lake was dead calm and quite inviting, despite the sign, the other side of the lake shrouded in haze. I could not see Rwanda. Turning around, I got the full effect; the pool, the garden and the

house. As I stood there, I could not decide if it was more French chateau, or Miami drug dealer's pad. It was, however, utterly stunning, and put Jimmy's house to shame.

Ambling back along the jetty, two bodyguards waiting off to one side, I could see the neighbouring houses under construction. It would be a nice neighbourhood when finished. Re-entering the house, across the pond from where I had joined the garden, I found the indoor pool. Upstairs, I found my room labelled, Helen inspecting wardrobes.

'Palatial,' I said as I entered.

'It's gorgeous,' Helen agreed. 'It'll make going home seem a bit odd.'

I had to wonder what was going through her mind regarding the house in Wales. I stepped into the bathroom, finding a large bathtub, Jacuzzi, walk in shower and large cabinets. Back in the bedroom, I peered through the windows at the garden and pool before unpacking. And those items I now unpacked would be staying here, ready for when we were in attendance.

Later, I poked my head into the girls rooms, loudly asked to "go away", then checked out some of the guest quarters. Upstairs, in the attic section, I met some of the ten permanent staff, discovering the staff kitchen and bar, the small room offering a view of both the gardens, and the front forecourt. I made a point of greeting each member of staff, making them feel welcome, but telling them to get plenty of books to read for when we were not visiting.

That evening we ate in the dinning room, practise for the staff at creating and serving formal meals, five of us around a table big enough for twenty. The following morning I sat next to the pool with a cold beer, laptop under a sunshade, and checked emails as the girls swam, Helen sunning herself. It was just about perfect.

Around noon a speedboat shot past, turned around and tied off on the jetty, Yuri and his latest squeeze walking down to us under the careful eye of the bodyguards. A maid brought them drinks as Jimmy joined us.

'Your boat is not here?' Yuri asked.

'Boat?' I repeated.

'I ordered two speedboats for us, plus two for the bodyguards,' Jimmy explained.

'For us – ours?' I asked, getting back a nod.

Thirty minutes later our peace was disturbed by a speedboat on steroids.

'Now we're definitely Miami drug lords,' I quipped.

We grabbed hats and sunglasses, and the girls, and inspected the speedboats, soon pushing off. I took charge of one, Helen left seat, with Yuri and his lady in the back. Jimmy and the girls took the second speedboat, Shelly driving, our bodyguards in the two chase boats. I was suddenly glad that we didn't have any neighbours yet.

Shelly closed the throttle with a roar, the front of her craft lifting up and flying across the water. I decided not to copy and pulled away gently, soon turning left and heading slowly for the marina as we chatted. Shelly passed us once, roaring past at speed, the bodyguards not trying to follow her.

Approaching the marina entrance we noticed a few other speedboats, plus a handful of sailboats. Unfortunately for them, there was little wind in their sails today. The large sign in the water gave the speed limit, and a severe warning for those who broke the limit, a police officer with binoculars at the end of the marina's long jetty. I steered us inside at a sedate three miles per hour.

Arriving at the main marina I turned left, halting at a quiet spot, a handful of tourists out walking. 'This is the way to get to work,' I said.

Noticing a quiet café, we grabbed seats, the local police soon arriving, but keeping a discrete distance. Half an hour later, Lucy motored slowly towards us, tying off alongside our speedboat and joining us.

When Jimmy sat, I commented, 'These boats will piss off the neighbours.'

'Only if driven like an idiot close to shore,' Jimmy pointed out.

'There was no one on the lake,' Shelly protested.

'There're police patrols now,' Jimmy informed us. 'And gunboats.'

'Gunboats?' I repeated.

'Protect this place from attack across the lake,' Jimmy said.

After a bite to eat we reclaimed the speedboats, chugging along at three miles per hour till beyond the jetty, then opening up. Back at the new mansion, now officially the Governor's Residence, we made ready for our first formal meal, President Errol, the head of the corporation, and a few senior staff invited over. They had admitted to taking a peek at the place before it was completed.

The girls were not due back in school till Wednesday, so on the Monday morning we drove down the new highway, open only for us and the builders, and to the heart of New Kinshasa. Halting at a portakin, we stepped down to find an area devoid of features, flat for at least three miles in all directions. The highway cut through the

wasteland, heading south, branches forking off and heading east, and what looked like a million yellow bulldozers now roared slowly about, flattening the land and digging trenches.

I put a hand over my eyes and scanned the horizon, not seeing any buildings yet standing, a few wooden cabins dotted about. When a man in a yellow hard hat approached, I said, 'You haven't done much yet. When'll it be ready?'

He gave me an exasperated look. 'We have three shifts of eight hours. It's round the clock, sir.'

We examined his drawings, Shelly keen to see the layout, and I tried to imagine what it might look like some day. Back at the house, Yuri brought around a small twenty-foot sailboat, the girls keen to have lessons. That left me by the pool with a cold beer, emails being answered. Jimmy and Helen used the office to catch up, soon ahead enough to warrant a swim.

When the household staff set-up two massage tables I took notice, Helen and Jimmy lying face down and being attended by Chinese ladies. I guess they had caught up on their work. That or they just didn't care. When the girls returned we ate around the pool.

'Sooo much better than Wales,' Shelly suggested.

'In the summer, the flies will be a problem,' Jimmy idly commented. 'Windows and doors will need to be kept shut, flytraps used. It's not all great down here.'

'I had an email from Jordan,' I mentioned. 'They're asking for more desalination, another plant.'

Jimmy thought about that. 'It'll lead to tension with Israel. The West Bank will run low on water soon, and between them and the ocean sits Israel.'

'Anything we can do?'

'No much, not without going head to head with the Israelis - who'll be happy to see the West Bank dry out! Build a desalination plant north of Tel Aviv. If the Israelis have more water, it's less pressure on the Palestinians.'

'Yemen is falling apart,' I ventured.

'That's a Saudi problem - they can pay for it if they want. My next big spend will be North Korea, dragging them from the Stone Age and into a modern era. They have a good chance at developing their GDP and helping the world economy.' He took a breath. 'And, next year, we'll start building properties in Greece, everywhere apart from Athens.'

Helen and I exchanged looks, the girls not following.

'How many ... houses?' I probed.

‘As many as we can afford. If we can build a million, we’ll build a million.’

Sudan

With Helen flying back with the girls, Jimmy and I set off to meet a high-ranking delegation from the Sudanese Government in Nairobi.

Travelling out from Nairobi airport in a coach I could see a few electric scooters, our electric taxis everywhere, and just about every bus seemed to be one of ours. We had commissioned an extra oil-fired power station north of the city, and that cheap electricity now translated into cheap transport for the population. That gave low earners a little extra cash to spend on improving their lives, and it gave the better off money for luxury goods, inevitably imports from the west.

Arriving at the government buildings, we paid our respects to the President, a quick chat before meeting the Sudanese delegation. The Kenyans were happy with the new marina north of River View, Mombassa, and the effect it was having on tourism and property prices. They were even happier with the new F15s and the RAF training squadrons, making me wonder what was truly important to them.

We found the Sudanese sat waiting, a six-man team with translators. After a minute of suitably false diplomatic greetings, with suitably false smiles, we settled opposite each other in a large and quite dark room. At least the air-conditioning worked.

Jimmy began with, ‘Ethiopia has agreed to join our economic cooperation group, and we’ll be test drilling for our own oil there very soon. But that closer association with Ethiopia should not be seen as a worry to anyone in the region, not to Sudan. But we are interested in inviting Southern Sudan into our group.’

That pissed them off greatly, but they controlled it. It also seemed to worry them.

Jimmy continued, ‘We have no intention of taking Southern Sudan by force, and have no intention of creating conflict in the region. We would like to invite Southern Sudan to join our group, but only so long as the rights of North Sudanese businesses and citizens are respected.’

That surprised them.

Jimmy added, 'We would be certain to protect the interests of your citizens, and more than that – we would wish your cooperation on new projects, transport and oil pipelines. We would not move into Southern Sudan unless it's done so with your blessing.'

'What ... type of arrangement are you interested in?' they asked.

'We would develop Southern Sudan as an independent state, but would do so whilst awarding contracts to Sudanese companies. When we improve the roads, and the rail links, your businessmen will benefit from it. We'll build airports, and we'll provide cheap fuel and new power stations in the region. You can be sure that any profit we make would be spent in the region, as we have done here in Kenya, and in the Congo. Our record speaks for itself.'

'And the police and army of Southern Sudan?'

'Would be the same as everywhere else, and under our influence. We would supply them to keep the peace, not to impose a Christian dominance on the region.'

'And the government?'

'After the citizens see what idiots the SLA are, and how inept they are, we'll help to elect a few better politicians.'

That stopped them dead. 'You don't want to see the SLA in power?'

'Former guerrilla fighters do not make for good politicians.'

'The SLA would not be running the region, you would?' they queried.

'The cooperation group of African nations would be running the region,' Jimmy emphasised.

'You could influence the SLA now – and move in now,' they posed.

'We could, but we won't. We wish to only move in with your assistance and cooperation, because that way we could develop the region the fastest. It is about money and development – not politics.'

'We are in agreement,' they stated, and I had to blink, not least because they could not have said that without prior permission.

Jimmy opened his case and handed over documents. 'There is no hidden small print, and we could not hold you to it anyway. These documents detail the military, police and civil structures that you agree with us operating. The SLA have already signed such a document.'

That was news to me; the bugger had kept that quiet. Our guests signed, the Kenyans coming in to witness the signing, photographers and reporters from the African Times allowed in. We stepped

outside as a group, TV cameras waiting, and issued a lengthy statement.

With that done, we thanked the Sudanese, chatting with the Kenyan President again for ten minutes, plans for train links and roads north through Ethiopia. We handed the documents to a senior executive from CAR, telling him to get oil derricks ready. Next came a meeting with Ngomo.

‘Are they keeping you busy?’ I asked.

‘Shuffling the papers, smiling for the cameras,’ he said as we sat.

‘A year from now, step down and run for office,’ Jimmy flatly told him.

Ngomo stared back. ‘A year?’ he finally asked.

‘A year, and destiny calls to a son of Kenya.’

Ngomo nodded his head reluctantly.

‘How’s Kandahar?’ I asked.

‘Surprisingly quiet,’ Ngomo replied. ‘No major attacks.’

‘It’s winter there,’ Jimmy suggested. ‘They don’t like the cold weather. But spring is coming. Anyway, we have a deal with the Sudanese. So I want four thousand Rifles up there on peacekeeping and disarmament patrols. Then I want you to find Rifles near retirement, even if they’re a year or two short, and recruit them to the police for that area. We then want to create a Southern Sudan Rifles, but based in the far south to start with, training in the Congo. Let’s not worry the Sudanese.’

‘I think we could find four hundred police straight away,’ Ngomo put in.

‘They must be willing to travel, and to live up there,’ Jimmy emphasised. ‘Oh, and I want poaching stamped out. I’m going to re-introduce a few animals and open safari tours in the Rift Valley.’

‘I’ll get some men on it. When do we break out of Kandahar?’

‘If no one attacks ... then in four weeks they can go hunting, but the main force will land in May.’

‘How are the western boys doing?’ I asked.

‘They learn very quickly, more than us poor Africa boys,’ Ngomo said with a smile. ‘Now they are fit and strong, and good at the technical exams. They pass quickly.’

‘Do they argue and fight?’ I asked.

‘Yes, but with their own countrymen, not the others. When you see groups going off-duty for a drink, they are mixed. Some stick together, but others are trained in mixed groups – and they drink together.’

‘Will they be ready in time?’ I asked.

‘For the Taliban, yes,’ Ngomo was sure of. ‘The white boys, they only needed to learn to look death in the face and laugh. And they talk like Rifles now.’ He put on a false voice. ‘What do you need a helmet for? Are you planning on letting someone shoot you in the head? Why dig a trench, unless you are planning on being buried in it!’

‘Won’t be easy for them to re-integrate,’ I noted.

‘No,’ Jimmy agreed. ‘But most will stay with the desert brigade, or go into bodyguard work.’

On the way down to Mombassa we enjoyed the benefits of a greatly improved highway, even taking the time to stop at a dodgy burger bar en route. We made record time, pulling into Ebeye with the sun still well above the horizon. Anna’s daughter greeted us, leading us inside to her mum and dad.

‘You don’t work together do you?’ I asked Anna and Cosy. ‘You know what they say about husband and wife teams that work together.’

‘She’s the boss,’ Cosy said, shaking my hand. ‘That makes life easier.’

Anna gave us both hugs before making tea.

‘You trying to do my job for me?’ I asked Anna. ‘You sorted my skills shortage before I did.’

‘It’s all part of the education process,’ Anna said as she sat. ‘If we know what Africa is short of we can teach it at age twelve onwards.’

‘More computer programmers,’ Jimmy suggested. ‘We seriously lack good computer people. More than enough nurses and soldiers.’

‘Should those programmes be scaled back?’ Anna asked.

‘A little, because we should be trying to go high-tech - where we can. Anyway, we have the Southern Sudan deal, so I want three large regional orphanages opened up. I’ll leave the detail to you. Then, in a few years, colleges bolted on.’

‘You’ll develop that region,’ Cosy asked.

Jimmy nodded. ‘It needs it. Badly.’

‘Have you been enjoying the marina?’ I asked.

‘Yes,’ Anna enthused. ‘It’s lovely. We go down there for meals of an evening; it’s closer than Mombassa town. And better, really.’

‘Meet us there tomorrow afternoon at 3pm, I have something you can enjoy of a weekend,’ Jimmy told them.

We booked into the golf hotel, soon in the rooftop bar and enjoying a cold beer, joined by the manager to go through business. Seems that the golf tournaments were well attended, the nearby

hotels all booked solid for those particular weeks, the marina jammed during golf tournaments. Still, it was good for the local community.

We dived off the beach early, the first guests of the scuba centre at 7am, a hearty breakfast enjoyed afterwards at the beach bar. We lazed around for a few hours, cleaning up to head off to the new marina, its facilities completed just six weeks ago and in time for the last golf tournament.

Carrying our jackets over our shoulders, we walked along the back of the beach, across to where I first found the turtle of indeterminate sex, and to the fence. Guards let our party through, and we ambled across a car park to a grassy area the size of a football pitch. At the other side of the park I noticed the backs of bars and cafes.

Reaching those bars and cafes, we entered the marina at the southern end, our field of view blocked by what seemed like a thousand sailboats. This marina was again a horseshoe design, but on a grand scale compared to Gotham City. I figured the water basin to be a third of a mile across.

Turning left, we followed the quayside, slowly navigating through the tourists, many stopping to snap us. The ground level seemed to offer mostly cafes, seats in the sun for their patrons. Above them ran a walkway, backed by what appeared to be mostly restaurants and bars, and above them sat two storeys of apartments.

Jimmy pointed up at the apartments. 'Most of those apartments are short-term rentals for boat crews. This is the best marina for ... well, it's the only decent fucking marina between Suez and Cape Town.'

'Popular then.'

'And it's perfectly suited to reach the Seychelles.'

Jimmy stopped, recognising a boat name. 'Hallo?' he shouted, followed by a sentence in German.

A face peered out from the galley. It became a body, that of an elderly man. 'Mein Gott! Silo.'

'Can we come aboard?'

'Yah, yah.'

We stepped across, two women emerging, and I suddenly had a chill. Jimmy had met these people before, on the Long Voyage to Canada. They had stayed on the Seychelles together, and he had slept with both ladies – as did our IT guy Gareth – only it would never happen now.

'Warmer than Baden Baden,' Jimmy said.

The man stared back. 'I was born there!'

'Good guess,' Jimmy quipped, a glance at me. 'Schnapps?'

'Why not,' the old man replied with a shrug. They fetched glasses and Schnapps, soon telling us of their voyages around the region. We couldn't invite them to our other marina, we explained, since it was bit landlocked. Jimmy did, however, give them permission to drop anchor inside our breakwater at River View instead of paying mooring fees here. They were most grateful, and most surprised.

At 3pm we found Anna, after exchanging positions by phone. Jimmy led us all along a central pontoon and to a yacht, a ninety-foot yacht. The crew welcomed us aboard, cold drinks ready.

In a sumptuous lounge, looking like it was used for filming porn movies, Jimmy said, 'You can use this whenever you like, sleep in it, entertain guests. But the Rescue Force senior staff will also want to use it. There's scuba gear, jet skis, all sorts on it.'

'Could do with this in Goma,' I complained.

'A bit big to transport,' Jimmy sarcastically stated.

'We don't have a lot of free time,' Anna put in.

'Make time,' Jimmy told her. 'Be a director, not a worker.'

'I've said that once of twice,' Cosy echoed, a look exchanged with Anna.

We slipped our moorings and powered slowly out through the breakwaters, turning right and heading south, four bodyguards on the quarterdeck. At River View, we eased through the hook of our own curved breakwaters and into the shallow lagoon, dropping anchor little more than ten yards from swimmers in the surf. Having explored the boat I stripped off and dived in, trunks found in a cabin.

Swimming back I could see the bubbles of divers below us. Climbing aboard, a diver surfaced close by, tearing off his mask and spitting out his regulator. It was Heinz from the dive centre.

'Paul, there's a bomb on your hull!'

I grabbed Anna's daughter, stood close, and threw her unceremoniously over the side. Lifting my head the bodyguards, now curious, I shouted, 'There's a bomb! Jump into the water!'

I could hear several splashes as I ran through the boat. 'Get off the boat! There's a bomb. On the second deck I could see Anna, Cosy, and the crew jumping over the side. Jimmy started the engine.

'Jump off!' I shouted as I neared him.

'Too many people close by,' he said, starting the engine. Scraping the anchor as we turned, he powered up. I had to hang on; this damn thing had more power than our speedboat. At speed, we curved through the breakwater, missing the sides by inches, and out

to sea. I could then see what Jimmy was aiming at, a sailboat a hundred yards ahead. He increased the acceleration, aimed to pass the sailboat, and nudged me towards the side. 'On my mark.'

We passed the sailboat.

'Now!'

I hit the water at thirty miles per hour, a little disorientated under the water, soon treading water as the sailboat appeared alongside me. Jimmy appeared behind me as inflatable rings were thrown out attached to ropes, the boat's mainsail dropped.

'What the hell did you in jump for?' a British man in his fifties asked.

'Bomb on the boat,' I told him.

He stared at me. 'Oh.'

We all stared after the yacht as it powered out to sea.

'Well, if the bomb doesn't go off,' Jimmy began. 'Someone in India will get themselves a nice new yacht.' He checked his watch. 'Five to four.'

'A timer?' I asked.

'Someone knew we'd board it at 3pm, so maybe they allowed an hour for us to be out at sea.'

A Huey passed overhead, an RF Huey heading after the yacht. 'Stupid fucks,' I said. I grabbed the boat's radio and altered the settings to those that I knew were RF Kenya. 'Paul Holton to dozy Huey pilot?'

'Paul, this is Romeo-Tango twelve. We're closing in on you.'

'No you're not, dumb fuck. We're on the sailboat you just passed!'

The Huey turned around. And so did our yacht. I pointed. 'It's turning.'

Jimmy checked his watch. 'One minute to four. That would be a good time to blow it.'

Our yacht was now heading down the coast as the boat crew offered us bottled water, the Huey circling. At two minutes past four the bomb went off, smoke belching from the rear of the yacht as it continued down the coast.

'That wouldn't have killed us,' Jimmy scoffed. 'Aim must have been to sink us at sea. Fucking half arse terrorists. Can't the terrorists these days get anything right?'

The boat's crew were a bit bemused by it all, especially Jimmy's attitude. They set a course for the marina, and I used the radio, asking the Huey to follow our sinking yacht. It wasn't a difficult

task, the damn thing had a smoke stack a mile high already. And my clothes were on board. Bugger.

The marina had been evacuated, flashing blue lights everywhere, soldiers and police officers on the quayside, two Army Hueys overhead. Coastguard boats, heading out, noticed us heading in and followed us. I walked barefoot up onto the quayside in a windcheater that the boat crew had loaned me, and we accepted a lift back to the hotel, finding a damp Anna and family, four damp bodyguards – their suits ruined.

After checking that Anna and her daughter were OK, we led Cosy away. ‘Someone knew I’d be on that boat at 3pm. They set the timer for 4pm, thinking we’d be at sea. It was small device, limpet, and a bit amateurish.’

‘Sudan?’ Cosy asked.

‘I seriously doubt it,’ Jimmy told him. ‘Their delegation came ready to make a deal.’

‘Al-Qa’eda?’ I asked.

‘If it is, then they’re being a bit personal, which is not like them - at all. Plus I think they’d have gone for a better bomb. Cosy, check on divers in the area who are short of cash. Ex-military divers. Make that your top priority.’

A few hours later, the police informed us that they had recovered our yacht. I blinked. Then they explained that it had taken on water, which put out the fire, and hit a beach just a mile away. There it now sat, high and dry, being examined. Another officer appeared with my clothes, and I have to say I was surprised, smiling widely. My wallet was as I left it, my iPhone listing a couple of hundred missed calls.

I walked straight down to reception, drew twenty thousand dollars from the manager, and found Heinz in the beach bar, handing it over. ‘You saved us. Well done.’

‘An honour, sir.’ He offered the money back.

‘Spend it as you see fit, look after the staff.’ I left him to his beer. Back at the golf hotel I found Jimmy stood in front of a TV crew. I joined him.

‘You are OK, Mister Holton?’

‘Yes, fine. I even got my clothes off the yacht, my wallet and phone. No harm done. Now, I would like to apologise to the tourists at the marina who were inconvenienced. When the marina re-opens we’ll be arranging free drinks, so I urge everyone to return tomorrow. We’ll also promise to visit less often, so it’ll be safer in the future. Thank you.’

As we walked off, Jimmy gave me an odd look. 'You're starting to sound like me.'

'So long as I don't start looking like you.'

Anna and her family appeared an hour later, fresh clothes on. They joined us at our table. Cosy said, 'A diver was found dead an hour hours ago.'

Jimmy took a moment. 'Are PACT on it?'

'All over it, fifty men here,' Cosy reported.

Jimmy nodded. 'And this ... individual?'

'Former French military diver, retired down here ten years ago.'

'So, he needed a little money. But there's no way in hell he'd talk to al-Qa'eda.'

'Could this be about Southern Sudan?' I asked.

'That was my first thought,' Jimmy agreed. 'There're many international companies in Southern Sudan, any one of which could be fearful of us moving in. And the Sudanese had this meeting pencilled in two weeks ago.' He faced Anna, and paused. 'Anna, I'm horrified, and mortified, that you and your family were in danger.'

'It would have been more of a loss if you left us,' Anna countered with quickly, her daughter as seemingly devout in her belief in Jimmy, and not reacting to that odd statement from her mother.

'Then we shall all have to be more careful in future. Unfortunately, there are some very difficult years ahead for the world. We will all be tested.'

With Anna and her family gone, I called home a second time, Helen awake. And concerned. After the call I noticed a text message, from NASA of all people. They wished to meet, and invited us over. I found Jimmy in the bar.

'NASA have invited us over,' I puzzled.

'NASA?' Jimmy repeated. 'Wonder who rattled their cage.'

'Not trying to blow us up, are they?' I quipped.

'No, they'd have taken several years to design an elaborate bomb, blown themselves up a few times, but finally perfected it a few years after we had left the yacht. Having missed us, they would have then borrowed a good old fashioned Russian bomb to try and do the job properly.'

'You don't sound at all bitter towards NASA,' I dryly stated.

'We'll pop in the next time we're over there.'

'Do we need to tighten security?' I asked.

'No, because we keep inventing new enemies. Can't stop them all. We'll just have to be ... lucky.'

We drove out at 1am, arriving at Nairobi for an early morning flight back. Was a time when we used to drive ourselves along this route, I reflected. Back then no one knew us, but the mission was just as important. Now we had a small army around us, and everyone knew us.

Lucy was waiting for us at Heathrow, a big hug for her dad, which was nice. I kissed Helen and took a seat, a thoughtful sandwich waiting for me. The two-hour journey gave me time to catch-up on emails, and to gossip with Lucy about Shelly's boyfriends. My elder daughter did, apparently, play the field a bit.

In the weeks that followed, a French oil company was linked to the dead French diver, which was very cheeky given our relationship with the French Government. Jimmy summoned the French Security Minister and offered to EMP Paris – just for starters – if they did not investigate thoroughly.

The DGSE took a quiet and stealthy approach, bugging the phones of those they suspected, and handing the evidence to the French President. He handed it to us, and suggested that the men would be arrested and questioned upon their return to France. Jimmy had other ideas. The men disappeared from Southern Sudan and woke up in Somalia, where they faced unspecified terrorist charges. A military tribunal was hastily arranged, the men hanged in public, much to the consternation of the French Government and the French public, the bodies incinerated instead of returning them to their families. When pressed on the issue by the media, the French Government admitted that the men were under investigation for terrorist offences in Africa.

The Sudanese revoked the company's license to operate in Southern Sudan, and the remaining workers were escorted out, their derricks and equipment bought by CAR at a fair price. In Paris, the chairman resigned, two executives being arrested, the chairman dying from unknown causes the next day.

How many more, I wondered. How many more would try and stop us before they knew who Jimmy was, and what the mission was. I figured there'd be a few.

Cave warfare

In the weeks that followed, the Pathfinders in Kandahar sent out patrols and killed a number of Taliban fighters, but in small groups, being careful to hide the bodies where they could. They would sometimes venture out on three-day patrols, setting ambushes on roads. But so far, no large force was moving their way.

The body count was good, but nothing like the previous incursion. Jimmy upped the stakes, and sent four Mi24s to Kandahar. Their purpose was not to pound the enemy, not yet, but to insert small groups many miles away, up to a hundred miles away. Lobster joined a few missions, using EMPs on nearby towns, few phones or radios now working within a fifty-mile radius. And still no counter-attack.

Lobo then planned an attack on a known training camp, but Jimmy modified the plan before we set off for the States.

Four Mi24s flew out after dark a few days later, landing within ten miles of the training camp that the CIA satellite had highlighted. Without Baby in the bag, Lobster hiked with the twenty-four-man patrol through the night, hiding on a ridge at daylight. The next evening they pushed on, moving to within two miles of the camp.

To this particular north of the camp ran a high ridge that overlooked the valley, a perfect spot from which to observe the camp, or to launch an attack. Ignoring it, the patrol turned south across the valley floor and to a smaller ridge. Hidden away in natural caves, Lobster took out his radio scanner and set-up an observation point. After six hours of scanning the ridge, and rubbing his cold hands, he had detected nothing. He employed a thermal imager, but again found nothing of interest, some movement in the camp in the valley.

But two hours later he picked up a live radio or two, oddly positioned halfway up the ridge. Using his thermal imager at maximum magnification, he could see warm air billowing from a cave. The camp was a trap, the main body of fighters waiting in the caves above. This camp sat only ten miles from the Taliban lines against the Northern Alliance, but who had the trap been set for?

As dusk fell the following evening, a patrol of four men moved out slowly, carrying very little. They took three hours to slowly move towards the camp, placing Good Morning grenades against walls, or under bridges crossing culverts, and withdrew just as stealthily.

At 9am, with fighters going about their business, the first grenade blew, demolishing a building. Fighters in the camp ran about, looking for enemies to shoot at, and eyes peered out from the caves

above. Radio chatter went off the scale, the thermal imager used to pinpoint the caves, Lobster and his colleagues finding no less than twelve of them. His fellow sergeant operated a laptop that scanned the airways and recorded messages for later analysis.

An hour later, the second grenade blew, taking out a bridge over a culvert, the explosion echoing around the ridge several times. Fighters ran about searching, but found nothing. Twenty minutes later, a third grenade took out a building, the fighters now taking heavy casualties.

Lobster's colleague with the laptop reported, 'They think its artillery.'

Six more grenades detonated, the camp devastated, many fighters killed or wounded. But the men in the caves stood firm, figuring the action below a prelude to an attack. And there was no easy way to approach the caves from above or below that was clear to the Pathfinders. As night fell, Pathfinders dropped into the valley and killed goats with silenced pistols, carrying them back to their own deep caves, where they now cooked the animals. Munching on fresh goat meat, Lobster sat staring across at his adversaries. And waited.

Two days later, a patrol of men dropped from a cave, possibly needing supplies, possibly believing that holding out in the caves was folly. The camp below had been evacuated by its survivors, a dozen bodies left lying around, plus body parts. The patrol stepped slowly through the rubble, appearing to look for supplies. Lobster checked his chart, lifted his radio and punched in a four-digit number, pressing the green button.

A battery grenade, fitted with a remote detonator and left behind for this very purpose, exploded, killing the patrol, the blast something of overkill. Faces peeked out from above, but no further patrols dropped to the valley floor. Lobster again waited, a tin of Spam opened.

At noon the next day, the entire force holed up in the caves came out, some sixty men, and moved east whilst avoiding the camp. The Pathfinders packed up quickly and followed behind, locating the patrol through its radio signals, and its thermal image as the sun dropped behind the hills. The patrol of fighters reached a large compound situated on a valley floor, and moved inside.

A single Pathfinder was sent up the ridge with a satellite phone and binoculars, soon reporting that the men were sat about fires and cooking. With the lookout still positioned on the ridge, a single man moved forwards, taking an hour to reach the edge of the valley floor. He took another hour to reach the compound, killing two guards

quietly with dart guns at close range. He placed his bag on the wall, and quietly pulled back. At the road he simply ran, observed from above. The required radio signal was sent, the equivalent of twenty battery grenades detonating simultaneously. The compound disappeared for a full two minutes, shrouded in dust.

When the dust cleared, no one was seen moving around. The pathfinders withdrew, a long walk through the night to the nearest helicopter pickup point, their tally being a good hundred fighters killed. En route they re-visited the caves, finding sounds coming from deep within, as well as cooking smoke. In a coordinated move, ten battery grenades were thrown inside with ten-second timers, giving the occupants a headache at least.

Ten minutes later, and with most of the caves having failed to collapse, dazed fighters were killed silently as they exited, the fighters stunned and deafened, their middle ear balance gone.

Back at Kandahar, Lobster gave a verbal report of the mission, and of the tactics employed.

‘The fighters, they played the spider,’ Lobo pondered. ‘But why would they think we would attack out?’ He put four man teams in the helicopters, and placed them near known training camps, two weeks of passive observations begun.

On the way to the airport, Jimmy took a call. Facing me, he relayed the story of the caves and the camp.

‘Do we have a leak?’ I ventured.

‘First, I only told the “M” Group after the force went in, but the Chinese and Russians knew – and they’re not about to talk to al-Qa’eda. And second, the teams at Kandahar had no intention of attacking outwards, they were ordered to wait and defend, expecting attacks at the airfield.’

‘Rahman?’ I asked.

‘He knows nothing other than a small Somali force landed at Kandahar, expecting them to behave as they did the last time.’

‘So why were they setting traps?’

‘I don’t think they expected the Northern Alliance to attack south, especially not in winter. And the Northern Alliance have been losing ground lately.’

‘Could they know about the invasion?’

‘They could suspect it, since both America and Somali have been threatening to invade. But such an invasion would be high profile, and highly visible; Rahman will be expecting conventional US forces, not Rifles. And he’d have time after they land to organise traps. Besides, he’d figure on American airpower, the camps getting

bombed from the air, so which poor sods would play at being bait for that, their mates snug and cosy in the caves?’

‘Does Rahman know about the Rifles?’

‘Of course, he had a hand in Yemen when the Somalis were there, so he knows their tactics and abilities.’

‘That’s it then. He expected a similar operation.’

‘Why? There’s a handful of Somalis at Kandahar, they had no helicopters to start with, and that camp was sixty miles away. Did he expect the Rifles to walk that far, attack and return? No, never.’

‘Coming back to a leak then?’ I posed.

‘A leak ... telling al-Qa’eda what? About the invasion? That’s due in May, a few cold months in a freezing rock of a cave? If there is a leak, it’s a partial leak. Besides, by time the invasion comes around the fighters will be pissed off with living in the caves and move out. This is premature.’

‘When did you order the attack out?’ I asked.

‘A day before they attacked out!’

‘So if there is a leak, it would be in Kandahar,’ I suggested.

‘If there was a leak in Kandahar, they would have given the plan away and our people would have fallen into a trap, or been attacked at the helicopter landing zone.’

‘Someone watching the airfield?’

‘Lots of people watching the airfield, for all the good it would do them. No, my thoughts come back to Rahman, and how he thinks. He saw the Somalis in Yemen, and he may well believe that this time there’ll be a larger incursion – a second wave, and he advised his buddies accordingly.’

‘Do you think he’s made his way there?’

‘Fingers crossed, but I doubt it. From what I know of him he likes his creature comforts, like Dubai. A cave in a mountain is not his style, unless he’s either running scared, or feels that he needs to show how tough he is to the frontline troops.’

‘He lost face with the Kabul plane hijacks,’ I pointed out, my eyebrows raised.

‘Hopefully, he now thinks that he has something to prove.’

‘I can’t see any of the Rifles leaking info to al-Qa’eda,’ I said, sighing. ‘Or anyone in the “M” Group, not that they knew. Have the Rifles changed tactics?’

‘I told them to throw the manual out the window and to make random moves. Not even *they* know what they’ll do next. And there’s no way that Rahman could know about the advanced weaponry. Some of the gadgets – I haven’t even told the “M” Group

about. He's up against the Rifles, twenty years in the making with a training programme from the future, armed with weapons from 2025.'

'What would have happened ... if the Rifles *had* approached that camp and attacked?'

'They would have still won, but may have taken casualties with some close-up fighting. But the men in the caves were beyond seven hundred metres, they had no sniper rifles or fifty calibres. The Rifles would have set charges and decoys, then picked off the fighters, but might have been surprised from the rear and above.'

'God help whoever gets close up to the Rifles,' I said, and opened my laptop.

The next day, a pleasantly warm day in Houston, Texas, we were transported from the airport to NASA's Johnson Space Centre, a large FBI protection detail. I remembered the film, *Armageddon*, with Bruce Willis; he arrived with an FBI escort, and he was trying to save the world. But I couldn't remember if he survived or not.

Stepping down, an official shook my hand and led us inside.

'The Bruce Willis film –' I began.

'*Armageddon*, I was an extra,' the man excitedly explained.

'Did he die?'

'He did, yes.'

'Bummer. That's the thing about trying to save the world, you get killed for your efforts,' I quipped. That earned a very odd look from our guide as we progressed, almost a saddened look.

Without any prompting, and with me wondering why, they showed us the huge swimming pool for weightless training, a G-force trainer and a few other toys.

I said to Jimmy, 'Are they trying to impress us with all this?'

'They spent a lot of taxpayers dollars on it, so they like to try and justify it. It's in their blood.'

We finally arrived at a guarded room, the title giving it away. It read, 'The Silo silo.'

I stopped and looked up at it. 'You need to get out more often, guys,' I told our keen guide. He lowered his head sheepishly and led us inside. We found a large room full of desks and computers, white boards and slide screens six feet high, charts everywhere, pictures of us two, even of the girls. 'Yep, definitely need to get out more.'

They introduced us to a long line of experts in something or other – I was lost after the first few titles, but at least it was a keen crowd. I had no idea what to expect, but Jimmy seemed to be at ease with our hosts.

The main man, our guide, began with, 'I would like to point out that everyone here is security cleared, and that we know as much as the President knows.'

'Not much them,' I quipped, getting some odd looks and a few smiles. 'And you've already made one mistake.' They seemed collectively mortified. 'Where the fuck's my cup of tea?'

They looked at each other as if each other was to blame for that oversight.

'That's the thing about experts,' Jimmy loudly stated. 'They get the clever stuff right - yet miss the simple stuff. And ... don't worry about the tea, we'll rough it.'

They sat at their desks, a panel of six senior men at the front. 'We'd like to ask some questions and - since you are here - we're guessing that you may answer some of them. Oh, and we thank you for your time. It's a great honour.'

'Fire away,' I said, sitting on a desk.

'The drug. Was it developed for long distance space flight?'

'No,' Jimmy answered, disappointing them.

They decided to be clever. 'Was it developed to withstand the rigours of any type ... of journey?'

'No. It was developed to withstand the rigours of decades of warfare after World War Three,' Jimmy told them. 'And, if I was to hazard a guess, I'd say that many people were experimented upon - quite cruelly - to develop it.'

'Not developed for a long distance Chinese space programme?'

'The Chinese ... now have very little interest in long distance space flight,' Jimmy answered.

'Some argue that you favour the Chinese over others?'

Jimmy made a face. 'They accept my advice and act upon it in a refreshingly timely manner. Americans fold their arms, decide if they believe the advice, then think about how they could use it to their own advantage.'

'Do the Chinese use it to their own advantage?' they risked.

'The Chinese have stuck to every agreement I have ever made with them. If they broke any of those agreements they would not get the same assistance. I like to see things in black and white, in a grey world.'

'Any of you driving electric cars?' I asked. Only two raised their arms. 'Pathetic,' I offered, not pleasing my crowd. 'Are you not interested in saving the planet?'

They shifted in their seats.

'May we ask ... a few direct questions?'

‘You can ask,’ I said. ‘But that doesn’t mean you’ll get an answer.’

‘Then my first question is – is there a great deal more that you know, that the “M” Group doesn’t?’

‘Yes,’ Jimmy answered. ‘A great deal more.’

‘And if something were to happen to you?’ they posed. ‘Like a bomb on a yacht?’

‘Certain documents would be handed over,’ Jimmy told them.

‘And those documents would cover ... everything?’

‘No, they would give you an outline. After that, you’re on your own,’ Jimmy replied.

‘You take a great many risks,’ they posed.

‘What ... like dodging your CIA?’ I snarled. ‘If you want to see us stay alive, ask the other branches of your fucking government to stop screwing with us.’

‘Well, we have no suitable response to that,’ they admitted.

‘The answer to your question,’ Jimmy began, ‘is that we have developed a great many projects in secret over the years, and rightly so, and that *secrecy* has caused both suspicion ... and interest in us, to the point of people shooting at us. It could not have been done any other way.’

‘You are familiar with Colonel Thad Pointer?’

‘He still alive?’ I asked.

‘No, he died a while back. But he more or less proved that key phrases of the Magestic letters were created by him ... for the specific purpose of time travel, and communication between such travellers.’

‘Then why don’t you fully believe him?’ I pointed out.

‘Because if there were time travellers, NASA or Air Force, we don’t think they would behave ... as you do.’

I smiled. ‘What’s wrong with our behaviour?’

‘Well, you take risks for one, and ... enjoy the highlife.’

‘And how would a NASA time traveller behave?’ I pressed, still smiling.

‘They would come in from the cold and debrief.’

Jimmy nodded slowly. ‘And if they had ... *debriefed* and outlined the future, then that information would be available to American Presidents. And, if an incumbent was flagging in the polls he may wish to use that information – on say future gold or stock prices – to boost the economy. And if that incumbent saw a report that stated he was due to leave office with the lowest approval rating of any idiot since records began, he might want to change that. Since he’s the

President, he'd have the right to do so. And, if in the future, a real arsehole gets into power, and sees what the future holds for the planet, he might just consider that the best bet is to fire the nukes now and get it over with, whilst you have an advantage. Bang, we lost the planet.'

They could all see the flaw in their argument.

'What would Nixon have done?' Jimmy asked. 'What would Reagan have done if he knew about the end of the Cold War? Maybe Reagan would not have bothered to make friends with Gorbachev, and maybe the Cold War did not end as it was supposed to. That's the thing about altering a time line, there's an excellent chance of completely fucking screwing it up. If I was a NASA chief, about to send someone back through time, I'd want that person to alter the timeline from the shadows.'

They could now see the logic.

Jimmy added, 'But what do you think would happen if you admitted to be interested in creating a time machine? Surely the Russians and Chinese would want to get there first, because whoever gets there first could alter history. The Russians could go back to 1941 and give the Japanese nuclear weapons. And what would happen at the UN when you admit to wanting to create a time machine? It would be chaos, and global war would be a certainty - to try and stop you. Because if NASA developed a time machine first you'd go back and alter things, sure, but from an American perspective. And, in case you haven't read the newspapers in the last forty years, most other countries don't agree with an American perspective. They would try and stop you.'

'By believing that we're some sort of time travellers, you're spurred on to believe that you could not only develop a time machine, but that you should - in order to complete the circle and avoid a paradox. But by starting to make a time machine you'd open the doors to World War Three. And after World War Three had destroyed the planet, you'd have an increased urgency to finish your time machine - to go back and fix it, to stop World War Three.'

'And then just start the war all over again,' I added.

They were a bit stunned.

'If you want to save this planet, put all ideas about time machines away. If you care about your own children, and the billions that will die, work to debunk time travel,' Jimmy told them. 'Before it's too late.'

They were silent for many seconds.

'How ... how could you break that circle?'

‘You could look at my record to date, and have faith,’ Jimmy told the man. ‘When you step aboard an airliner ... the pilot has your life in his hands, so too the heart surgeon. This, is no different.’

A man raised his hand. ‘What more could we be doing to help you?’

‘Finally, an intelligent question,’ Jimmy stated, pointing at the man. ‘There are areas of research that I could direct you towards, areas that will help various problems this side of 2025 and, assuming the world survives beyond 2025, would help the planet afterwards. Other than that, anyone here who wants to see the blue planet go on – should refuse to work on theoretical time travel, and work on projects to save mankind.’

That caused a few odd looks. We were telling them to give up their favourite pastimes, one that consumed their every waking moment.

‘So,’ I asked. ‘Any other questions? No? Then why don’t we call it a day? I’m sure that you have some proper problems to solve with your expensive NASA slide rules. I hear that the next generation of plasma screens are exciting.’

Jimmy gave me a look, but did so grinning, and we headed to the door, soon being shown out. I would have liked to hear the debate going on after we left. Our escort drove us around to Senator Pedersen’s ranch, he and his wife greeting us. Both had been injected, and looked fit and well. Very well. We chatted for an hour, Pedersen asked to attack any NASA projects that might involve theoretical time travel. That caused him and his wife to stop dead, and to stare.

‘Jimmy, is there something I should know?’

‘No more than you already do. Just fight any wasted NASA budgets on time travel. And quietly.’

‘I sure hope you know what the heck you’re doing, Jimmy.’

‘Me too,’ I quipped.

Pedersen took a moment. ‘That new city coming along?’

‘Yes,’ Jimmy agreed. ‘And your property will be worth ten times what you paid for it. Or more.’

‘Good opportunities in this new place?’

‘Very good, but the original Goma hub will be a rich suburb. Grab some houses off Spiral IV or V.’

‘You gunna float CAR someday?’

‘It was always my intention, and maybe in a year,’ Jimmy revealed. ‘But there are some advantages to keeping a tight control. Anyway, keep beating up the banks, and I know you’re a Texan and

an oil man, but help with the electric cars before your competitors outpace you.'

'Chinese going for this new coal-oil idea?'

'In a big way; if you fall behind you'll never catch up.'

'Interested in that myself, and my associates from Kentucky and Virginia.'

'It's the future,' Jimmy told our host.

With iced teas downed, we rejoined our vans and headed to the airport, to a flight to New York and a TV interview. Make-up on, ties tightened, we stepped out to applause, claiming a sofa at an angle to our host.

'Welcome again, Jimmy and Paul. No Helen?'

'Looking after the kids,' I said.

'And another on the way we hear.'

'Yes, another on the way.'

'Are you happy, or nervous?'

'I'm very happy, because my daughters are a bit too independent these days. They have their friends and their hobbies, and their dad is not cool.'

'So, Jimmy. No plans to marry and have kids?'

'I'm still practising. I have the book and the video, but just can't seem to get it right.'

The audience laughed.

'And yet, a few of our better known models and actresses have helped you to ... practise.'

'They did, and I learnt a thing or two.'

'So, what the hell happened to your new yacht?'

'The yacht was intended for my staff in Kenya, for them to enjoy. We built a new marina, but apparently the mooring fees were too high, disgruntled sailors putting a bomb on our boat.'

'And who was behind it?'

'The counter-terrorism boys say that a French oil company was behind it, a company with interests in Southern Sudan, where we're now active.'

'And why were they mad at you?'

'Because they thought we might grab their business in the region. They thought we might leave the oil profits for the starving millions in Southern Sudan, which we will do, but not to the disadvantage of any oil company or western mining company – their rights will be protected.'

'So you hope to do for that country what you've done elsewhere in Africa?'

‘Yes, we’ll feed the poor, building roads, hospitals and schools. All very subversive ideas to French oil companies.’

‘And you’ve just started to build an entire city – from scratch.’

‘Yes, we aim to move a million people from west Congo to east Congo, where the resources are.’

‘We have a picture here –’ The backing screen came to life. ‘- of the new marina in Goma. Looks great. And this is the golf course, and this is your new house.’

‘My new house,’ I put in. ‘Designed by my daughter, Shelly.’

‘There’ll be many of those built in the near future,’ Jimmy put in. ‘And nice apartment blocks. The area is nicer than most westerners believe, worth a visit, or a new place to live and work, to open a business.’

‘Business conditions are good?’

‘Every factory is at capacity, turning away orders,’ I said. ‘We offer land free to new factories, give grants towards buildings, tax breaks. If you have a factory that makes household goods you can’t go wrong.’

‘A lot of American investment there?’

‘Some, yes, led by Hardon Chase,’ I replied. ‘And a great deal of work now for American companies building the new city. Once it’s finished - or even now, any American can open a business there or work in the region. If you have a job that makes you fifty thousand dollars a year you can live like a king, mansions like mine very cheap. You could buy a five bedroom house for fifty thousand dollars.’

‘And your house?’

‘Cost me less than two hundred thousand dollars to build. Forty bedrooms.’

‘I can build a house like that – for two hundred grand?’

‘Might cost you a bit more - I know the builders. But still cheap.’

‘I’d have valued that house at closer to twenty million.’

‘Over here you would,’ I agreed.

‘So you guys were also caught up in Mogadishu when the terror attacks took place?’

‘Yes,’ Jimmy answered. ‘They were al-Qa’eda attacks, the group from Afghanistan.’

‘And right now there’s some fighting going on over there.’

‘Yes, the Somalis re-took the airfield in Kandahar, intent on fighting back at the terrorist training camps in Afghanistan.’

‘And Hardon Chase is in favour of sending a force to root out those camps.’

‘Well, you can fight them over there, or wait till they arrive over here,’ Jimmy said. ‘They hijack planes, set-off car bombs, and make a happy home in Afghanistan because it’s a lawless country. The terrorist leaders seem to be in Afghanistan, plotting their attacks on the west, and on Africa and the Middle East.’

‘And who is the leader of this bunch of nuts?’

‘Their leader is supposed to be someone called Rahman, a rich Arab,’ Jimmy replied, and I wondered why, because Rahman was not their leader.

‘And what’s his gripe?’

‘No one knows much about him, other than he funds terror attacks against Africa and the west.’

‘Are the Somalis going to invade Afghanistan?’

‘No, definitely not, and I’m doing what I can to try and persuade them against any escalation in the fighting.’

‘Do you think America should be involved over there?’

‘I think it’s probably inevitable, because as time goes on al-Qa’eda will launch more and more attacks, all the time sheltering with the Taliban. If their base of operations was destroyed then they wouldn’t be able to function as well. And I know your own CIA has stopped numerous attacks against American targets in the region. It’s only a matter of time before they bring down an American plane.’

‘You’ll be pleased to know that I have an electric car; they’re now available over here.’

‘About time,’ I said.

‘I’ve charged it once, and had it a month, still on seventy-five percent power. For what I do around New York, I reckon I could go six months between charges.’

‘China, India and Europe are way ahead of you,’ Jimmy pointed out. ‘Most of their buses are electric, and our electric buses are often free to ride on. If you’re not careful, those other countries will reap the benefits for their economies and leave you behind.’

‘Any electric aircraft planned?’

The audience laughed.

‘No, but we are working on a new fuel,’ Jimmy offered. ‘We’ve also developed a converter that turns coal into oil quiet cheaply. It’s being rolled out in Africa, Russia and China.’

‘Why not here?’

‘How long did it take to get the damn electric cars imported!’ I pointed out. ‘Your oil lobby is keeping our toys out of America!’

That wasn’t strictly accurate, but I enjoyed the dig at them.

Jimmy then dropped a bomb. 'I intend to buy up all the old coal seams in Great Britain and re-open them, converting the coal to oil.'

'Is there much coal there?'

'Enough to keep Britain going for a hundred years,' Jimmy answered, and I hid my grin, wondering what the British PM would make of it. But the one thing the British PM could not do now would be to ignore the matter, the British public would not let him.

'They could stop importing oil?'

'They could, although they have some oil in the North Sea.'

'So what are going to invent next?'

'We don't invent things, we find cutting-edge technologies and ideas - and fund them when others wouldn't,' I pointed out.

'So, any new projects?'

'We'll be looking at an aircraft fuel that is safer and more efficient, one that doesn't create any pollutants,' Jimmy suggested.

'We look forward to that. Ladies and gentlemen, Jimmy Silo and Paul Holton.'

Leaving the studio, Jimmy said, 'I had an idea about the bomb on our boat, and the strange tactics employed in Afghanistan. Coal oil may have awoken a potential adversary early.'

'Who?'

'North of Yemen.'

'Ah. They have a lot to lose. More than most.'

Jimmy called Ngomo, and spoke in a native dialect for a few minutes. Lowering his phone, he said, 'We'll play a few games, and see who comes out to play.'

'How could they know about Afghanistan?'

'They have money, lots of money, and that kind of money can buy ex-CIA staff, senior staff, electronics experts, and others. They may have tapped the satellite phones we use somehow.'

'Do they know about the EMPs?'

'Obviously not. So maybe they don't know about the other gadgets. But the one good thing in our favour, is that Rahman hates the Royal House of Saud.'

'Why did you label him as the head of al-Qa'eda?'

'Piss off the real leadership, who might just blow his nuts off.'

Back in London, Sykes met us at the airport. Jimmy told him, 'Assume that the secure satellite phones are not as secure as we may like, that ex-CIA agents may be helping the Saudis, and that the Saudis would rather I not develop oil, and coal-oil technology.'

'Oh dear,' Sykes let out.

‘Go back over the detail of that French oil company, find me a link to the Saudis, and put the Saudis here under surveillance, just in case.’

‘That’ll please the PM no end!’

On the coach, we plotted and schemed against the house of Saud, set a few traps, and planned a few tricks.

Sangin, south central Afghanistan

Lobster dumped the body of an al-Qa’eda fighter, the fourth one. Under cover of darkness he walked to the edge of the poppy field, ducking behind a compound, and remotely detonated a napalm grenade. Jogging along a hard-worn dirt path, he left the compounds behind and entered a dried riverbed, soon two hundred yards away, the locals stirring. Turning, he led his team south at the double, and to the helicopter RV point.

A hundred miles to the east, his colleagues had been busy. As dawn broke on a fine day - after a few days of rain, fighters emerged from their compounds, mounted their Toyota pickups and making the short journey to the Pakistan border. In a line of traffic, the fighters convoy was ripped apart by a Good Morning grenade. Two vehicles, ten miles apart and already across the border, disintegrated in border towns, the death toll high.

Inside Afghanistan, the jeeps of fighters blew up in several places in the eastern valleys.

In the house, in a basement command room, I studied the map. ‘We waking them up?’

‘Hopefully, Rahman will get the message: sit and take it, or fight back. He must know that it’s the Pathfinders, and his policy of sit and wait will be sorely tested by the fighters and the Taliban.’

‘He can’t openly blame the Africans, when there’s no frigging evidence,’ I said. ‘They’ll think it an accident with explosives.’

‘The Pathfinders sent a message about an attack, but did so a full day *after* they had placed a team on a mountaintop. The local fighters were then seen to set traps for them.’

‘So that seals it, they *have* hacked the sat phones. Do we tell anyone?’

‘No, we make use of it. My sat phone calls to Ngomo are on a Chinese satellite – fortunately – but most are routed through an American satellite. Ngomo is now using native dialects to send important messages and get updates, so that’ll fuck over anyone listening in. But, we want them listening in for the moment. A few hours from now a flight of UN aircraft from Djibouti and Cyprus will land reinforcements at Kandahar, at least those listening in will think so. Hopefully, they persuaded their political paymasters.’

All that day I had a Reuters window open on my computer screen, scanning the latest news stories. Finally I noticed a story about a UN flight, forced down over Saudi Arabia, little more detail than that. I rang Jimmy and told him.

‘In some ways it’s good news,’ Jimmy said. ‘But in other ways it’ll be bad all round. I don’t want to do anything to rock the Saudis, and they have a strong influence with America. It’ll need some careful dancing and fancy footwork.’

A second plane was forced down, this one a 737 with UN diplomatic staff on board, and met by Saudi soldiers at the airport. A hell of a row was just about to kick off. Unfortunately for the Saudis, they stated that they believed Somali reinforcements to be on board the aircraft. When he found out, Abdi issued a few words for the Saudis.

I sat with Jimmy later, beers in hand, Jack joining us in a lounge.

‘It’s a mess,’ Jimmy said with sigh. ‘I had expected the Saudis to be difficult, but not quite yet, and not in this fashion. But, since we’ve altered so much, it’s just one more new variable.’

‘Surely the Saudis will lose faith in the intercepts now,’ Jack ventured.

‘Hopefully,’ I agreed.

‘The truth is, coal-oil and electric cars will have an effect, but not that much of an effect,’ Jimmy explained. ‘Emerging markets and a growing global economy will still keep pressure on oil production. And, as people save money from petrol, they’ll spend it on other things that use oil or plastics, or air travel. Someone in Saudi Arabia has his sums wrong, but I doubt we could convince them of it.’

‘Will they try and kill you again?’ Jack asked, clearly concerned.

‘Probably, but next time they’ll be a bit more professional about it. That French oil company had a nudge, and an incentive if they cooperated. They were played, and the bomb was amateur time. Fortunately, the Saudis are not very good at overseas intelligence, they’ve never considered it necessary. Unfortunately, they have a shit load of money to hire good help with.’

Shelly stepped in with her boyfriend, the lad two years older. For a change, they came and sat with us.

‘Hello Mister Silo,’ the lad offered. ‘Mister Holton.’

‘I’m Jack the gardener,’ Jack offered.

‘Your some sort of British agent,’ the lad countered with a smile.

‘You flatter me, young man,’ Jack responded. ‘I’m old and married, with a cat. And Shelly will confirm that I’ve never climbed up the walls, or shot anyone.’

‘That’s true,’ Shelly admitted. ‘Jack is an old pair of slippers.’

‘I prefer your young man’s label,’ Jack told Shelly.

‘Drink?’ Shelly asked her boyfriend.

‘What am I allowed to drink?’ the boy asked Jimmy.

‘You can have a beer,’ Jimmy responded. ‘Better than glue sniffing round the back of the bike shed.’

Shelly fetched two beers, putting me on the spot. Her stems prevented the beer from having much of an effect, but still ... I was dad.

‘Shelly has been injected with the super-drug. Alcohol doesn’t have much of an effect,’ I said defensively. ‘Still, if I see her drinking too often...’

‘A drop of wine at night is good for her,’ Jimmy cut in with. ‘So long as it’s not too much, just the half glass.’

‘What are you planning on doing for your ‘O’ Levels?’ I asked the lad.

‘They’re called GCSEs these days,’ he corrected me, but without trying to be rude. ‘I’ll be studying Russian, French and Economics, hopefully a degree in economics afterwards.’

I was impressed. ‘What does your father do?’

‘He’s a boring old bank manager. Can I try one of your electric cars?’

‘Not with a beer in your hand,’ I said.

‘You can try the cars with supervision,’ Jimmy said. ‘And with Shelly sat next to you. But if you crash - and hurt Shelly, there’ll be nowhere on this planet you could hide from me.’

The lad swallowed, and stared back. ‘Yes, sir.’

I glanced at Jimmy from under my eyebrows, not sure if I approved or not. ‘There are fast electric golf carts if you want race around the grounds. They’re non-lethal.’

‘Can I meet the SAS soldiers here?’ the lad asked.

‘Shelly can introduce you,’ I said. ‘You’ll find some up on the roof. And no, you can’t shoot the squirrels with sniper rifles. If you want to shoot, come out to Africa with us.’

‘I’d love to.’

‘If you behave,’ Shelly told him, holding her look on him, the little bossy-boots dominating the poor lad.

‘Do you ... help Shelly with her homework?’ I idly enquired.

‘Hah!’ Shelly let out, giggling.

‘No,’ he admitted. ‘She helps me. Shells sat the exam for university entrance the other week - and passed!’

‘She takes after me,’ I said.

‘No I don’t,’ Shelly insisted.

‘Who do you take after then?’ Jack asked.

‘I’m a genetic aberration,’ Shelly said, poking her tongue out at Jack. ‘I’m unique. I have mum’s good looks and figure, and someone else’s brains.’

I gave Jimmy a peeved look. ‘There’s gratitude.’

‘She’ll appreciate you more when she has her own children,’ Jimmy suggested.

‘When I’m sixteen,’ Shelly joked, the lad now looking worried.

I focused on him. ‘You want to have kids when you’re older?’

‘No way. Maybe ... like, when I’m thirty or forty. I want to get injected at twenty-five, and stay twenty-five forever.’

‘Not a bad plan,’ Jimmy reflected, staring into his beer. ‘And people will have kids later in life now that the drug is out there.’ He faced Shelly. ‘You’ll live to be around a hundred and fifty at least, and you’ll be able to have kids up to age one hundred. But if you have kids, and they don’t get injected, they’ll end up older than you, going grey when you don’t. And when your first kid is starting university, your dad will look just like he does now.’

‘That’s so cool,’ the lad put in, Shelly deep in thought. To Jimmy he said, ‘You were shot three times and it didn’t kill you.’

‘I was lucky, I’m not immortal.’

‘Most people think your immortal, Mister Silo,’ the lad suggested. ‘And an alien.’

Shelly seemed to have come to a conclusion. ‘I could follow a career till I’m forty, sit another degree, then follow a second and third career.’

‘Yuk,’ her young man said. He lifted up and peered into the large fish tank, now populated with fish instead of jellyfish.

‘My first degree,’ Shelly added, ‘would be just the first.’ She seemed happy with her conclusion.

‘I’m hoping that you’ll help me invent a few things,’ Jimmy told her.

‘The school will let me sit my GCSEs next year,’ Shelly informed me, and for the first time.

‘They will?’

‘Yes. I can then pass a single higher level before I start sixth form, leaving with four, or five maybe – instead of the usual three. And I want to go to university at seventeen.’

‘Good brains should never be slowed down,’ Jimmy said, stopping me from saying what I was about to.

Shelly grabbed her young man and led him out, beers in hand.

‘University at seventeen?’ I softly repeated.

‘I think she’ll take a year out first,’ Jimmy suggested. ‘Concentrate on your baby, not that one; she’s a free spirit.’

Afghan war drums

Three weeks later, lookouts posted on various mountains reported groups of fighters gathering for a chat around the campfire, a few groups moving west, the various movements being keenly collated at Kandahar. There also appeared to be Pakistani fighters amongst the groups.

Lobo looked at his battle board, and said, ‘War drums. They are coming.’

That evening, an AN12 from China touched down, disgorging supplies and a dozen men, Big Paul at the head of the group of British soldiers. Jimmy had altered his plans, and war had been declared.

Big Paul gave Lobo a lazy salute. ‘How’s the weather, sir?’

Lobo returned the salute. ‘Cold and miserable. Have you brought some nice food?’

‘Yep, and some extra ammunition, and earthquake mortar upgrades.’

‘Upgrades?’

‘Greater range; they’ll top out at five miles instead of three,’ Big Paul explained as Lobo led him inside. ‘I’ve got new sat phones for you, boss, and these *are* secure. Use the others when you want to fuck over the Saudis.’

‘Good. And how is Mister Jimmy?’

‘Haven’t seen him for a month or so.’

An hour later, Lobster sat on the perimeter wall, a small crowd gathered below as the new mortars were tested. Using the tube zeroed on the crossroads, a round was lobbed out. Everyone waited, a distance rumble reaching them eight seconds later.

Lobster shouted, 'My laser says seven thousand yards!' He jumped down and approached the senior staff and Big Paul. 'Nowhere near the crossroads, sir. A mile or more beyond it!'

Lobo said, 'Have two tubes set aside, zeroed on the approach roads to the east. And let's label these up properly this time, or we'll miss by a mile. Literally!'

'We've got airburst shells as well,' Big Paul put in. 'They have a white strip around the heads, four second fixed timers unfortunately, maximum range of two thousand yards.'

'Put them to one side,' Lobo asked. His sat phone trilled. Finishing his call, he said, 'We'll have company late tomorrow, so we'll disperse tonight.'

'Jimmy says to expect a clever attack,' Big Paul put in as he followed Lobo to the terminal building.

'What exactly is ... a clever attack?'

'Something other than just driving down that road, as they did last time.'

'Last time, they marshalled within mortar reach, and we hid explosives at the best marshalling areas.'

'So they won't hit time.'

In the command centre, Lobo stood over the map, pointing at it. 'Those are the marshalling areas they used before. We haven't mined them yet.'

'Might be worth a few mines, just in case, but they'll expect that.'

Lobo lifted his head to Big Paul. 'If you were them, how would you attack?'

'First off all, I wouldn't. I'd cut you off and cut your supplies.'

'Fair enough. So they surround us and spread out. But to stop aircraft they need Dushka —'

'Or missiles.'

'There is food in the town that we can steal, goats and sheep nearby,' Lobo thought aloud.

'That's good, but we'll still need ammunition in time. That's their strength ... and our weakness. I'd say we can't afford to just sit here. If they have surface to air missiles, then maybe they have short-range rockets to hit this place with, to wear us down. Those, and the Dushka, will keep our heads down and inflict a casualty or two a day.'

Lobo's phone went. 'Sorry.' He took the call. When done, he said, 'Curious. Fighters bring large lorries, metal covers the windcreens.'

Big Paul smiled widely. 'Lorries full of explosives, suicide driver at the wheel. They'll ram the main entrance.'

Lobo turned to an officer, 'Dig small holes three hundred yards along the access road, and blow a very big hole.' The man ran out.

Another officer said, 'The land to the south is flat and hard, a lorry can cross it.'

'There are mines,' Lobo stated.

'May not stop a lorry,' Big Paul cautioned.

'So, they will be clever in their attack after all.' Lobo faced an officer. 'Walk out there, figure out the best route a lorry will take. Tonight, dig holes and place charges along it, eight or ten.' The man stepped out.

'We'll have to hit those lorries with mortars before they get inside a thousand yards.'

'I've fired a mortar side on,' Lobo said with a grin.

'You have? Jesus. Well, that'll do ... *if* you can hit the lorries.'

Lobo faced a sergeant. 'Take one tube and fix it to the arse of that digger, elevation of fifteen degrees.' The NCO stepped out. 'So, what else will they try?'

'Their best bet is to cut our supplies,' Big Paul insisted. 'Attacking this place is suicide, but they don't know about the special weapons, so their attack will be better than last time - but still not good enough.'

'I do like a confident man,' Lobo quipped.

After dark, teams formed up, heavy backpacks loaded with supplies, extra bags strung between teams of two men. Walking to the east, groups of eight moved out at intervals, a total of a hundred and twenty men. Sixty men were dispatched to the west, two hundred remaining at the airfield. The perimeter walls had been repaired, trenches dug, concrete used to line the trenches and make rocket-proof covers. The men assumed they'd face incoming rounds and rockets, and made ready.

Sat in his room, the officer scanning radio frequencies peered at a large blip to the south. He altered parameters, and expanded the signal. 'Mister Lobo! Sir!' Lobo stepped in. 'Sir, we have a body of at least four hundred due south, twenty miles out.'

'That land is flat,' Lobo pondered. 'They're wide open.'

'We have no spotters there, *because* ... the land is wide open, sir.'

‘Maybe they know that.’ Lobo stepped back into the command centre. ‘Captain, send a patrol of ten men due south, lightly armed and moving fast. Give them a good supply of battery grenades and Good Morning grenades. There’s a large force to the south, but I don’t want them engaged, just harassed and observed.’

‘South?’ Big Paul questioned. ‘It’s wide open.’

‘They are, I believe, doing the exact opposite of what a sane person would do.’

‘They’re being clever. We should pull a patrol off the east and send them to mine that road, stop vehicles where they can.’

Lobo ordered the change, an additional twelve-man patrol turning south. He stared at the map. ‘Twenty miles? They could be here in the morning.’

‘If they drive along that road they’ll be hit by our mortars, and they know we have mortars. So they’ll walk across country in small groups.’

‘Which will waste a great many mortars. When a force is behind you, there is only one thing you want.’

‘A force behind them,’ Big Paul realised.

Lobo faced a captain. ‘I want ten of our best snipers made ready, plenty of ammunition, supplies for two days, camouflage nets.’ He tapped the map. ‘Have them walk out southwest five miles, turning south for ten miles. Then they come back to the east and up behind this force after it has moved. At dawn they should be hidden.’

The patrol was put together.

‘Could hit them now with the Mi24s,’ a man said.

‘They may have missiles,’ Lobo said with a sigh. ‘And they expect just such an attack. They will not *bunch-up* for us, not this time. Contact our spotters in the east, ask how the fighters are travelling.’

The report was not good. ‘They travel with each jeep a hundred yards apart, sir.’

Lobo exchanged a look with Big Paul, ‘Bad sports,’ Lobo quipped. He faced the man. ‘But that’s a mistake on their part. Have them attacked with lasers, darts and silenced pistols. Blow the roads.’

‘Now who’s being a spoil-sport?’ Big Paul asked.

‘When your enemy makes a mistake ... use it! They spread out to avoid the helicopters, but make themselves vulnerable to small group attacks. Besides, I think tomorrow will be ... interesting enough, without letting them all arrive in good order.’

By dawn, the map had been annotated with dozens of red marks denoting planted grenades, all on varying frequencies. Big Paul sat with Lobster, eating Spam and chatting about marinas and boats.

Lobo stepped out to them. 'Radio jammers are in use north of us, and east.'

'That's naughty,' Big Paul said. 'Are we vulnerable?'

'It is a varying frequency disruptor, so radios will be subject to interference, yes. At the moment they're just out of range, but getting closer.'

'Can we pinpoint them for a mortar breakfast?' Big Paul asked.

'We are trying that now, but we cannot pin them down to an area. They are mounted on jeeps, and moving!' Lobo stepped outside and peered up, the dawn crisp and chill, the clouds broken. At the mortar section, he ordered, 'Try and hit the main road through the town with six rounds.'

Back inside, he collected Big Paul and Lobster, a command meeting called, many officers in attendance. 'OK, overnight we saw some action. Convoys of approaching fighters - to the east of here, were attacked in several places, a few dozen jeeps stopped, their fighters killed. Tally was maybe forty killed on the road northeast. East of us, a force of a hundred men were engaged, most killed, some retreating. We picked up a few casualties when random mortar rounds were fired towards our men.

'Mortars?' Big Paul questioned.

'Fitted to the backs of jeeps,' Lobo informed him.

'If they make it here, they'll be hard to hit,' Big Paul warned.

Lobo nodded. 'I have recalled forty men to a position just three miles east, where I think the fighters may marshal. To the west, a large convoy was hit with grenades and dispersed. That convoy has continued towards us this morning - with reinforcements, now northwest of Kandahar.

'To the south, we blew the road in several places and destroyed a dozen jeeps. We placed a patrol close to the main force, but found them very well spread out, fifty yards between jeeps. Good Morning grenades have been used, but not very effectively. And we have a sniper unit moving behind the main force as we speak. They report that the main force is close to a thousand men, and that jeeps have metal armour on them. That main force is moving north slowly.'

'Then they'll attack after dark,' Big Paul suggested. 'And from several directions at once. How many in total are around us?'

'An estimated two thousand.'

'Be a long night then.'

At the house, Jimmy studied the map, and the enemy dispositions. 'Good attack plan,' he commended.

'They're spread out,' I realised. 'Too spread out for mortars and the helicopters.'

'Yes. But being spread out means a low concentration of fire being brought to bear at any one point. Anyway, I've got a surprise for them. Or two. Maybe three. We'll see if Rahman can outwit me.'

In Kandahar, the communications officer stepped into the command meeting. 'Sir, a problem. They're using a device to try and set-off our charges outside. It's stepping through the frequencies.'

'That's naughty,' Big Paul quipped. 'How many digits on your devices?'

'Five,' the communications officer stated. 'They are using four.'

'Take them a while then,' Big Paul noted.

'If they switch to five digits, we'll lose our charges now,' Lobo realised. 'Can you pin down the location of that device?'

'In the houses across the stream, sir.'

Lobo lifted his radio. 'Mortar section: level the houses across the stream. Quickly!' Lobo pointed at the communications officer. 'I want updates every ten minutes.'

A minute later, the rumble could be felt both through the air, and through their feet.

Lobo ordered, 'Ready a squad of ten men to clear that area if the mortars don't work.'

'Try the new anti-personnel rounds,' Big Paul suggested, Lobo ordering them used.

The radio device fell silent ten minutes later, but the communications officer indicated another to the south, and moving closer. Big Paul stepped out to the mortar section, ordering the new rounds selected. He relayed the bearings and range from the communications officer, and fired. Three rounds took the second device off air. Back inside, he said, 'That main force will have more, and maybe five digit.'

'There is nothing we can do,' Lobo admitted. 'Even if we retrieve the charges, they're no good just sat here.'

'Then put out a few other charges on old four digit codes, but further away. When they blow they'll convince the bad guys they have the right frequencies.'

'A splendidly mischievous idea, Mister Paul. You are indeed a sneaky bastard.'

The men laughed, Lobo ordering charges moved further out and reset.

With a grin, Big Paul said, 'I'll dish out the ammo I brought.'

At dusk, the communications officer gave up, putting down his laptop. Finding Lobo, he said, 'Hundreds of signals from all directions. Main force is three miles south and east, moving at walking pace.'

Lobo clambered up to the roof. 'You'll have to go below soon,' he said to the men there.

'We made a hole in the roof, sir. We can drop down.'

'Ah, good. So, what do we have?'

'They're spread out, each ten yards apart - at least. And they seem to be carrying things.'

'What things?'

'Can't make it out, sir.'

A blast caught their attention, on the road south, about two miles distant.

'That'll be a Good Morning grenade, sir,' a man said. 'They go off every now and then.'

A round cracked the air overhead.

'Duska at maximum range, sir.'

'Keep your heads down,' Lobo told them. 'Use your bolt hole when you need to.'

Below, reports of intermittent engagements came in; harassing actions, distant echoes of battery grenades registering in the command post as dull thuds.

Half an hour later, the communications officer reported, 'Main body is two miles, some fighters within five hundred yards.'

Lobo lifted his radio, finding it crackling. Jammed. He called a runner. 'Tell the mortar section to fire south at random, two miles, thirty rounds.'

On the roof, the spotters could see the distant flashes in the south, but then heard outgoing small-arms rifle fire from the north wall. They focused their thermal sights on the compounds across the stream, finding them alive with orange dots that represented the faces of fighters. They sent a man down with the report.

Big Paul heard the report. 'Let me have a crack at them, sir.' He stepped out.

Five minutes later, at the north wall, Big Paul set-up a belt-fed GPMG in the midst of a growing exchange of fire. But this belt of ammo came with yellow tips. 'Cease fire!' he shouted, surprising the men near him. The outgoing fire ceased. He took aim, and fired in

bursts of two or three seconds over a wide arc, soon through a two hundred round belt.

He stopped and waited, the men at the wall now hearing odd “popping” sounds on the breeze as miniature exploding rounds with delayed actions detonated, each deadly for anyone within a few feet, causing injury up to twenty feet away. The incoming fire had also ceased.

He handed the weapon over, directing a soldier to use the belt boxes he had brought over. As he turned away, he could here intermittent “pops” from across the stream.

‘What was that?’ Lobo enquired.

‘Exploding rounds, timed with delays up to fifteen minutes; they catch people from behind and from the side. They’re light rounds, only good for two hundred yards, and tend to bounce and spin when they hit the ground. It’s a bit like a shower of grenades, but when you stop firing the enemy moves forwards, getting splinters.’

‘How much ammo did you bring?’

‘Thirty boxes of two-hundred-round belts; they’ll be useful on the south wall later if the visitors are spread out.’

A man stepped in. ‘Dushkas have our range from the north, sir.’

‘Warn the men, dig in.’

A rocket slammed into the roof, dust falling.

‘Check the men up there!’ Lobo barked.

‘You’re well dug in here,’ Big Paul noted, not too concerned.

‘But the Rifles don’t like to sit and be shot at,’ Lobo reminded Big Paul.

A face appeared around the door. ‘Mortars coming in from the north, just out of range at the moment, sir.’

‘Mobile launchers,’ Big Paul noted. ‘Clever little puppies.’

An officer lowered his sat phone. ‘Large explosions a few miles south, sir.’

The communications officer stepped in, tapping marks on the map. ‘They have reached here.’

Lobo selected the correct code for a radio detonator, handed it to a runner and sent the man to the roof, the resultant blasts registering thirty seconds later. ‘For what it’s worth,’ he sighed. He ordered mortars onto that position, as well as random mortar fire at the town and the crossroads.

‘Two men wounded by incoming, sir,’ an NCO reported.

Lobo said, ‘Get me the southern-most patrol of snipers.’ He was handed a sat phone. ‘Report.’

‘We are behind them, sir. They have lorries with metal grills, jeeps with metal on. A second group is forming at the previous marshalling area, maybe two hundred men.’

‘Move north and attack the rear of the main force. That will confuse both groups. Leave Good Morning grenades behind. Out.’ He faced an officer. ‘The larger patrol we sent south with grenades?’

‘Sergeant Ket’s troop.’ The officer reset the codes and called, handing over the phone.

‘Ket, Lobo. Report.’

‘We are west of the main body, leaving grenades and sniping at them, sir.’

‘Try and split the force, draw them to you. Hit them hard. Out.’

An officer approached the map, the map now being lit by paraffin lamps found in the terminal. He tapped the map. ‘We have three groups to the east of the main force, attacking from the side. East of us we have halted all approaching groups, heavy fighting, some casualties.’

‘North?’ Lobo asked.

‘No eyes-on, sir. And the west is a mess; they circled us.’

‘Bring the team in the west back in at the double.’

‘Lorries approaching!’

‘Battle wagons,’ Big Paul noted.

One of the Mi24 crews stepped in. ‘We’re sitting and taking it, boss,’ a man said in British accent.

‘They have surface to air missiles,’ Lobo answered the man. ‘Maybe many of them. I want you when I can see a bottleneck.’

The pilot shrugged, slapped his thighs and stepped out.

‘Lorries on the main road!’

Lobo ordered the horizontal mortar tube readied, positioned to be facing the main approach road outside the front gate. As soldiers on the wall observed, the lorry – taking fire, trundled on, turning onto the main airport road. It could have done with working headlights, clipping the sides and correcting many times as it progressed, picking up speed.

It hit the first hole, dropping into it and smashing its cab, exploding prematurely at the three hundred yard mark. Ears were ringing, heads shaken at the wall, as the second lorry approached, its engine sounds accurately relaying its position in the dark night as its driver scraped gears. It turned onto the main airport road, benefiting now from the amber glow of what was left of its predecessor. It slowed and eased around the hole, setting off a mine. But it kept coming.

At the gate, the mortar tube's firing pin was pulled back via a wire, a round placed inside and pushed down with a broom handle. Gently. When aligned with the lorry, the mortar sergeant let go the wire, the striker hitting the base of the mortar shell and sending it off. The cabin of the lorry disintegrated, a secondary explosion knocking the mortar crew off their feet, briefly illuminating the fields along the access road.

A Toyota pickup now approached, metal plates welded onto it. On the roof, Big Paul took charge of an M82 fifty calibre, loading a fresh magazine. He turned on the thermal sight, got comfortable, and fired at the engine grill, penetrating it with a Teflon round. The Toyota halted. Big Paul raised his aim, hitting the metal plate across the windscreen, this time with a round that exploded like a grenade inside the vehicle.

Whoever was left alive detonated his own explosives, tearing the white Toyota pickup apart, pieces landing on the terminal building roof. Big Paul slid left, focusing on the south road, three vehicles discernable as orange heat blobs on a green screen, the vehicle's bonnets red hot. Literally. He hit all three in turn, halting the vehicles progress. But none exploded. Deflated, he handed the weapon to a soldier and headed down through the hole.

'Took out the reinforced Toyotas,' he reported. 'Looks like men on foot within five hundred yards.'

'Our snipers report that the men carry shields.'

'Shields? Do they have Salladin with them?' Big Paul asked. 'And siege towers?'

'Metal shields with poles between them, carried by two men,' Lobo explained. 'They resist small arms fire.'

'Clever. Heavy, simplistic, stupid – but clever!'

'Our south wall is now within small-arms range,' Lobo informed Big Paul. 'We're taking fire.'

'Get me your best snipers with M82s up on the roof, I'll grab the rest of Teflon rounds.'

'Do we have a thousand?' Lobo dryly enquired, thumbs in his green webbing belt.

Big Paul let his broad shoulders drop. 'About two hundred, boss.'

Back on the roof, unseen rounds cracked the air overhead. Big Paul handed over magazines, directing fire south. 'Hit the closest targets first.'

Below, he searched through his pallet, dodging incoming rounds, and organised four men to lug ammo boxes. They jumped into one of the buses captured at the airfield, and made the hazardous journey

to the south wall, a window shattering. At the wall, they zeroed in on a GPMG now firing out.

‘Stop!’ Big Paul shouted. ‘Unload!’ He opened a tin, handing up a belt. ‘Aim low, at their feet, spread it around.’ He slammed his back to the wall as the gunner opened up, firing into the dark night.

‘Feels strange, sir.’

‘Lighter rounds, exploding rounds.’

The gunner stood observing a sprinkling of tiny flashes penetrating the darkness, like fireflies in the jungle. He fired left and right, soon a slice of his forward vision filled with small flashes.

‘Aim high,’ Big Paul shouted over the clatter of outgoing fire. ‘Spread it around.’ With his head down, he led his men back onto the bus, and back to the terminal, the bus’s roof punctured twice.

Inside, Lobo commented, ‘They have halted, four hundred yards beyond the south wall.’

‘Picking up small injuries.’

‘As they get close to the wall, we can hit them from the side,’ Lobo mentioned.

‘Sir! The convoys to the east are withdrawing.’

‘Which convoys?’

‘Those ten miles out.’

‘Sir, a strange report. The patrol furthest south, they report fighting further south than they are.’

‘Who do we have down there?’

‘No one, sir.’

‘Are they shooting at shadows?’ Lobo wondered.

‘When the Good Morning grenades go off, they fire at random, that’s all,’ Big Paul suggested.

‘Sir, the front ranks have halted, taking many casualties. They are bunching up at five hundred yards.’

‘Mortar them,’ Lobo ordered. ‘Anti-personnel shells. And put some starburst up there, let’s see them.’

‘Sizeable force in the north, across the stream, sir.’

‘Send twenty men across, try and flank them.’ He attended the map. ‘Blow the remaining charges before they think to do it.’

Ten seconds later, the ground shook, a rumble reverberating through the terminal hall for many seconds, dust falling through the gloomy light.

‘That main force can’t have more than four or five hundred men facing toward us,’ Big Paul thought out loud. ‘They’re engaged on all sides.’ Two of his SAS troopers carried a third in, hit in the leg. ‘How’s he doing?’

‘Stray round over the wall. He’ll live. He won’t be any better looking, but he’ll live.’

Big Paul faced Lobo. ‘If they’re in disarray, then a baby EMP will help.’

Lobo nodded. ‘Lobster?’

Lobster stepped in. ‘Use a baby EMP to the south.’

After an hour of intermittent outgoing mortar fire, the main force in the south began pulling back, the force across the river engaged close up and wiped out. The Rifles across the stream now moved north through the town, street by street.

‘Sir! Report from the south patrol, heavy fighting south of them. They are attacking north, taking ammo off the dead fighters.’

‘Who the fuck ... are the bad guys firing at?’ Big Paul asked. He accepted a coffee and sat with his team. Ten minutes later his sat phone trilled. ‘Yeah, boss?’

‘I landed some Rifles south of you, they’re pushing north.’

‘Ah, fucking wondered what was happening. How many south of us?’

‘Six hundred. Landed another six hundred in the east, and I’ll re-supply you when you’ve secured the area. How’s it going?’

‘We held our own, dealt with the tricks. Could have taken them at dawn I reckon.’

‘Don’t take any prisoners, bury the bastards. Out.’

Big Paul stepped into the command centre. ‘That fighting to the south ... Jimmy landed six hundred Rifles, more in the east.’

‘Bloody hell,’ Lobo let out. He faced his men. ‘Radio our people in the south, tell them to exit to the west and get the hell out of the way. Warn everyone. And drop as many mortars as we can on that group bunched up to the south.’

Lobo’s sat phone trilled. ‘Yes?’

‘Got the kettle on, Samuel?’

‘Joshua?’

‘Who else would rescue your arse?’

‘We’re holding our own, old friend.’

‘Well stop playing with yourself, and expect us around dawn. And don’t shoot at us. Out.’

Lobo smiled. ‘Major Samuel Obantou is here.’

His fellow officers all smiled widely.

At dawn, Big Paul and Lobo stood on the roof in a chill wind, no incoming fire having disturbed their peace for an hour or so. Lifting binoculars, they could see a line of men half a mile across, moving

forwards and firing at bodies. An hour later, with the sun high, the first patrol walked in.

A captain saluted Lobo. 'This where the action is, sir?

'Good to see you, Captain.' They shook.

'We need your bus, sir. Our packs are twenty miles away.'

Lobo ordered the main road cleared, the bus sent out. As that was being organised, a patrol of French soldiers walked in, led by a Rifles NCO, the track through the mines now well defined. Other patrols walked down the main road, past the remains of the lorries and Toyotas.

'Go and steal as many goats as you can from the town,' Lobo told an NCO. 'We have extra mouths to feed.' He faced his adjutant. 'Send men north, find any Duska or missiles within three miles.'

An hour later, Major Obantou walked in, flanked by six men, a handshake for Lobo. 'Nice place you have here.'

'It catches the sun in the mornings,' Lobo commented.

Big Paul asked, 'Any Dushka, Major?'

'Three, that I saw.'

'Missiles?'

'We captured one. Why, are there more?'

'We think they have more,' Lobo explained. 'We kept the helicopters down. Patrols going out now.'

Fresh teas and coffees were issued, the arriving officers handed tinned meat. After all, they had dropped their packs and walked north at the double.

'How did you get here?' Lobo asked.

'Hercules aircraft, from Russia. We circled around you and landed on a road, lighting the road for the next plane. We walked five miles and found the first group of al-Qa'eda sat about campfires eating. Twenty miles to get here, fighting all the way.' He raised a finger. 'And none got away. I think maybe eight hundred dead.'

'Casualties?' Lobo asked.

'Ten dead from stray rounds, twenty wounded. We left them out there and pushed on. Couple of Toyotas have gone back for them.'

'Open field attack,' Lobo reflected. 'Large numbers.'

'We fought like western soldiers,' Obantou noted.

'How many westerners did you bring?'

'Two hundred; French and British. There are Americans in the east and a Russian helicopter squadron, a small Chinese unit moving south from their border, some Rifles with them.'

'So much for a May invasion,' Lobo said.

'We had a leak,' Big Paul put in.

‘A leak?’ Obantou repeated, horrified.

‘Sat phones were intercepted,’ Lobo informed his friend. ‘Intelligence agents working for the Saudis.’

‘Saudis? What’s their interest here?’

‘Their interest,’ Big Paul explained, ‘is in hurting Jimmy, because he’s keeping oil prices down.’

‘Ah.’

Big Paul added, ‘The Saudis wanted this mission to fail, and to expose Jimmy as backing it, which will be impossible now that there are American soldiers here.’

Obantou explained, ‘We have digital cameras and special machines for fingerprints. We are asked to check all the dead to see who they are, and where they came from. Maybe we killed a big fish in the night.’

In Karachi, Rahman lowered his phone, his hand shaking.

In Wales, Jimmy said, ‘Full English breakfast, Cookie. C’mon, get the lead out.’ Lucy eased down opposite, her blue school uniform on. ‘You’re up early babes.’

‘I have a test to study for.’

‘Did you not study last night?’ Jimmy teased.

‘I remember more if I study in the morning.’

‘Then it’s a good job you’re an early riser.’

‘Usual, Luce?’ Cookie asked.

‘Yes, please.’ She faced Jimmy, and took a breath. ‘Uncle Jimmy, I worry about people trying to hurt us.’

‘Don’t, let me do the worrying for you. You’ll get wrinkles.’

‘But many people try and hurt us.’

‘They try and hurt me, not you.’

‘I don’t want anything to happen to you.’

‘I should hope so too, I’m your mostest favourite uncle.’

‘Why do they want to hurt you?’

Jimmy took a moment. ‘Many different people in the world want different things, and ... they all think that they’re right, and that they’re doing what’s best. Others don’t agree, so we see problems. But if I stand up to people, then countries like Africa do better, and the children get fed. And ... it’s a nice feeling, to put yourself in harms way to help others. Its called ... being *public spirited*.

‘And what you’re a bit too young to understand, is why someone might give their life for what they believe in. Now, if someone pulled a gun on you, your father would jump in the way to save you. So would I. But, we could just think of ourselves, run away, have a

good life, even have more kids. So why give ourselves for someone else?’

Lucy considered the concept. ‘To do good?’

‘That’s the act, but what’s the reasoning? Well, the reason ... is that good people are willing to give everything to fight the bad people, even if they’re killed. It’s called ... a sacrifice. To your father, *your* life is more valuable than his, and to stand by and watch you be hurt is too much to bear.’

Suddenly serious, Jimmy sipped his tea, staring into it. ‘But, sometimes ... sometimes we don’t act fast enough, we don’t stand in the way, and we spend a very long time hating ourselves afterwards ... for not doing it.’ He lifted his gaze. ‘You see, sometimes, living with yourself is worse than if you had been killed. And if you have to live with yourself, and feel like a coward, then you’re keen to throw yourself in the way. To ... make amends.’

‘What did daddy do that he is ashamed of?’ Lucy puzzled.

Softly, Jimmy said, ‘It wasn’t your father I was talking about, it was me.’

‘But you’re never afraid,’ Lucy puzzled.

Jimmy ran a finger over an eyebrow. ‘Once, a long time ago, I didn’t do what I should have. And, every day since then I’ve been trying to make up for that.’ He forced a big breath. ‘So, young lady, it doesn’t matter if I die doing good work, because I’m happy to die if it helps to do the good work. So if I’m killed doing this work, don’t be sad for me, OK?’

Lucy reluctantly nodded.

‘Promise?’

‘I’ll try, but I’d miss you.’

‘I should hope so. Who else puts up with you?’

Lucy poked out her tongue as Cookie placed down her toast. ‘I’m the nice daughter.’

‘That you are, Luce,’ Cookie agreed.

‘You called Michelle a Stinky Frog,’ Jimmy pointed out.

‘She’s bossy.’

‘She’s not bossy, she just ... needs my time when you also want my time.’

‘She calls me “child”,’ Lucy complained. ‘Go away *child*.’

‘You are a child,’ Jimmy gently insisted. ‘And don’t be in a hurry to grow up. You’ll be a grown-up a long, long time, so have fun while you can.’

Two hours later, and with the kids off to school – although Jimmy suggested we refer to them as “young adults” now, Sykes

turned up with a British Army officer and an American Colonel, the Colonel looking familiar. Jimmy called me down to the house and we settled our guests in the diner, drinks made, pancakes offered.

Sykes began with, 'These good gentlemen are interested in the night's action in Afghanistan.'

'And quite some action it seems to have been,' the British officer noted.

Jimmy explained, 'Close to two thousand five hundred fighters approached the airfield, and with a good plan of attack. First, they moved under cover of darkness, and well spread out. Unfortunately, they were so spread out – fearing attack by Mi24 and mortars, that they were easier to attack by small groups. That was a mistake on their part.

'Next, they had Dushka and rockets hitting the airfield, keeping the defenders heads down. They employed sophisticated radio jammers – western issue, but their operators were hit with mortars.'

'Earthquake mortars?' the Colonel nudged, Jimmy nodding.

'We then saw lorries packed with explosives and covered in metal plates being used by suicide drivers, an attempt to demolish the front gate and wall. The lorries were hit by earthquake mortars being fired horizontally – a novel approach. We then saw the main advance of fighters, spread out and carrying metal plates between two men as crude body armour. And they worked, 7.62mm rounds bouncing off them.

The Rifles got around them with machinegun-fired exploding rounds, rounds with timers. They lay around under the dirt for anything from ten seconds to five minutes, exploding like a mini grenade and catching people from the side or the rear; not enough to kill, but enough to wound - and to piss off attackers. They're low on momentum and kinetic energy, hardly enough to kill someone.'

The Colonel said, 'The aim being to deny an area to the enemy for fifteen minutes, and wound large numbers.'

Jimmy nodded. 'Effective against people dug in. You simply fire off at thirty degrees and let them gently rain down, some exploding overhead. A jam in the breach can be fun though.'

The Colonel's eyes widened. 'You'd blow yourself up!'

'They tend to explode down the barrel, but you could blow your face off, yes,' Jimmy said with a smile. 'And with the main attacking force all spread out, they were attacked from the rear by a second force that I landed, caught out in the open.'

'And the casualties?' the British officer enquired.

‘On their side there were few survivors, probably two thousand dead.’

‘Jesus,’ Sykes let out.

‘On our side: fourteen dead and thirty-five wounded. They should be flown out today, and no westerners killed yet. And those casualties would have been lower if they hadn’t gone at the enemy the way they did.’

‘Can’t slow down the Rifles,’ I put in.

‘What would have happened without landing the second force?’ the Colonel asked.

‘The airfield would have been surrounded and probed for days, but they would have won out in the end. The front rank of the fighters with metal shields just about reached the minefield as they started to get hit from the sides; they were stopped dead. If they had advanced they would have been massacred.’

‘So why the second force?’ the Colonel asked.

‘Two reasons. First, I wanted the main group of fighters wiped out. Thoroughly ... wiped out. And second, there were western experts helping the fighters attack.’

‘What?’ the Colonel barked. ‘Western soldiers?’

‘No, not on the battlefield, but at the end of a sat phone, working with the Saudis.’

‘Saudis?’ the Colonel repeated. ‘What the fuck have the Saudis got to do with this?’

‘I’ll explain,’ I said. ‘I’ll even go slow.’ The Colonel cocked an indignant eyebrow. ‘We produce a lot of oil, we won’t join OPEC, and now we’re producing coal-oil converters, all hurting the Saudis in the pocket. They wanted the mission in Afghanistan to fail badly, and for us to get the blame.’

Sykes was worried. ‘What will you do?’

‘Nothing,’ Jimmy insisted. ‘Now that there are American forces on the ground the Saudis will have no choice but to back off – and to keep quiet. And for the record, I’m sure that ex-CIA figures were assisting the Saudis to assist al-Qa’eda; our sat phones using American satellites were hacked and intercepted.’

I explained, ‘We planned dummy missions and they took the bait.’

‘Jesus,’ the Colonel blew out. ‘I’ll leave you to report that. So what about the action in the east?’

‘Your main body, three hundred men, went in with two hundred Brits and two hundred French, fifty Russians. They landed on a nice straight road, then split into four groups. One created a command

centre, three attacked out at training camps – which were low on men because of the attack at the airfield. They killed some three hundred - for zero casualties on our side, demolished the camps, blew up some hidden weapons stores, and are now walking back to the command post.

‘That command post is easy to defend, it has some water, and it’ll act like bait for the fighter groups of the east. From it we’ll launch attacks at the fighter’s training camps, but mostly they’ll set traps and sit and wait. The aim is to kill the al-Qa’eda fighters, Taliban fighters that want a go, and Pakistani Taliban fighters. If the force is seen as being too strong or too capable, it’ll be less use as bait.’

‘They’ll just sit there?’ the Colonel questioned.

‘The objective, Colonel, is to attract Arab fighters to Afghanistan, now - and two years from now - and then to kill them. Better do it there than in populated areas. And this year’s young fighters on a pilgrimage to Afghanistan to attack us, are next year’s potential airliner hijackers.’

‘A giant magnet,’ Sykes suggested. ‘As with the Somalis in Lebanon; they draw in the volunteers ... and we shoot them full of holes.’

‘And a Chinese unit, with Rifles and some British, are moving south along the eastern border with Pakistan, killing silently as they go,’ Jimmy added.

The Colonel mentioned, ‘A lot of generals jumping up and down, wanting to get into Afghanistan.’

‘Getting in ... is not the problem. Getting out ... is the problem. If you put a conventional army in you’ll push the fighters over the border, and when you leave they’ll come back. This operation is like drawing puss from an infected wound; you keep drawing till the puss has gone, you don’t just change the dressing to a bigger one. Afghanistan is for Special Forces only, mountain goats and sore feet.’

I kept an eye on Reuters that day, but no news emerged from Afghanistan, some mention of car bombs in the Pakistani tribal areas. Mister Lobo policed up the area, fingerprinting and photographing the dead fighters – some not quite so dead, before burying them. That took all day, and gainfully employed four hundred men. Kandahar town was duly searched, stragglers shot, many residents deciding to leave. Again.

Sniper positions were taken in the taller buildings in the town, patrols set-up around the outskirts. Lobo was still in charge of the airfield, Obantou in charge of mounting attacks in outlying areas, the

airfield now buzzing. Four An12's had landed, free from interference by missiles, and stores were plentiful. Pallets brought large tents, camp beds and stoves. From the town, Lobo liberated concrete, plus a large amount of wood and tools. Small huts were soon being knocked together, concrete bunkers constructed, local carpets used to line damp walls.

Several large animal pens were organised across the airfield, goats and chickens placed in them, now being tended by soldiers who knew a thing or two about animal husbandry from their childhood. A water pipe was laid to the stream and hidden, fresh water pumped, the airfield soon habitable.

Additional aircraft brought more tents, and the first few jeeps, four monster IL76s landing. Long distance patrols would now be easier. Across the stream, the nearest compounds were demolished, a good field of fire created.

The first modest attack came a week after the initial battle, mounted DHSK approaching from the northwest; halting at maximum range, firing and withdrawing. Snipers were duly hidden in the region, picking off the Toyota drivers. Meanwhile, most of the serious fighting was centred in the east, Obantou sending men that way for joint operations.

Eastern units of al-Qa'eda fighters, and the local Taliban, launched well thought out attacks against "Duckland", so named by the American soldiers because they were sitting ducks. The defenders even kept their lights on at night. Their field of fire was little over six hundred yards, but their colleagues were hidden up to three miles out. Columns of determined fighters would approach Duckland along goat trails, attacked silently where possible, often allowed to fire on the base first. That firing allowed those of our troops positioned behind them to pick them off quietly.

Numerous columns of Taliban fighters ventured out through cold nights, but none returned from the spider's web. Supplies for Duckland came in by Mi24 or parachute drop, analogies to Vietnam being made, suitable signs erected: "Kansas: 12,000 miles that way. Keep clicking them heels." One significant difference with the Vietnam operation, was that the soldiers here were all volunteers, and could apply to leave whenever they wished.

Jimmy took a particular interest in Duckland, and often involved himself in the make-up of their supplies, making sure that the men on the ground enjoyed treats, even beer. A selected group of British, American and African officers had been placed at Duckland, their aim to keep the moral high and the teams integrated, whilst dissent

was stamped out. Soldiers who took a dislike to foreign nationals were rotated out, those that integrated well were rewarded with patrols to lead, units to command.

Two British SAS troopers were removed, three Americans, all just a little too rude to either the Somalis or the Chinese. Our own little command centre, in the basement, was now manned by six officers, all of whom were made to wear casual civilian clothes and referred to as “landscape gardeners”. Two extra satellite dishes appeared on the roof, and I stayed in touch with Big Paul by videophone, our part-time bodyguard now at Duckland and organising things for Jimmy. He was, however, now Major Paul O’Brien, British Army; his cover story. Soldiers from Duckland were rotated to Kandahar for a change of scene every few weeks, flown out of Afghanistan by IL76, Pakistani airspace avoided.

The Iranians could not decide if the incursion was a good thing or not, since they were at odds with the Taliban themselves. They didn’t like American soldiers close by, and their media reporting was mixed and contradictory.

Day by day I read reports, glanced at digital images, and read “score cards”, the reports of unit kills to casualties. Our International Rifles were sniping from a distance and killing thirty fighters for every wound received, few fatalities on our side. Duckland, was becoming a duck shoot, strict orders from Jimmy not to take risks or engage enemy fighters close-up.

Olympics

As the summer approached, the London 2012 Olympics drew near, a mad dash to finish off buildings and facilities that should have been completed a year ago. Jimmy had thrown some money at the project in frustration, keen to see London ready.

The biggest single problem was the rail link from central London. It was modern, clean, fast, but could never have handled the size of crowds expected. We brought in thirty electric coaches and painted them in London Olympic Logo colours, aiming to run them free from London to the venue. For the duration, certain speed cameras, round humps and roundabouts had been altered, or they would have

been very slow bus journeys. We also provided free coaches from other cities direct to the venue to ease traffic chaos.

When the PM asked about terror attacks, Jimmy replied, ‘Yes, and no.’

‘Meaning?’ the PM pressed.

‘Yes, there were meant to be some, but I dealt with the people years ago. Then Rahman appeared early, and so I think he’s a threat. Then we moved into Afghanistan early, and so that drew fighters over there. So, I have no idea other than to say that there were supposed to be a few small attacks, and that there may well be.’

‘Great.’

‘The attacks will all be on the tube and rail link, bombs in bags left behind. The bombs will have timers, so simply open them when you find them and turn off the timers.’

Having briefed the PM about the minor nature of the threat, all hell broke loose. Rahman made his move, and did what Jimmy expected, but not what anyone else in the world had expected.

No more than an hour after we left the PM, news came in of hijackings in Oman, Yemen and Pakistan – an obviously coordinated move. An attempted hijacking in Djibouti was thwarted. Kenyan F15s took off ready, screaming north over Somali. But the hijacked planes turned towards Afghanistan, at least that was my initial thought. The Planes from Oman and Yemen moved north, and I suggested we evacuate Kandahar airfield. Jimmy said that he doubted Kandahar the target, and that the airfield was currently fogged in. The hijacked planes would never find it.

The Pakistani plane flew west, not on a course for Kandahar, but not far off, all three planes converging over the Straits of Hormuz, the Iranians launching fighters. The hijackers then radioed to say that they would land in Kuwait and release the hostages, and the three aircraft, each flying at no more than ten thousand feet, headed west.

With the aircraft locations being tracked in the basement command centre, I suddenly held my breath. They all turned south, now on a course for Dubai. And it was too late to do anything about it. The first aircraft, an old TU154, flew straight for the tallest building in Dubai, the world’s tallest building, and missed, clipping a wing. It spiralled down to earth and demolished a residential apartment block, few injuries on the ground.

The second aircraft nosed down into the business district, hitting an office block at ground level and setting it ablaze, the third aircraft hitting the famous Burj al Arab hotel squarely and demolishing it.

Hardon Chase was on the phone. ‘Christ, Jimmy, they just wrecked Dubai!’

‘Rahman used to live there, so I guess he had a few issues, a few disputed parking fines. Anyway, Mister President, I think you should be very loud in your condemnation of al-Qa’eda, of Rahman, and their training camps in Afghanistan – whilst you’re still in office.’

‘I think I should threaten to send more soldiers!’

‘I think you should.’

‘You do?’

‘Yes. Move the rest of the force in, four thousand of the men we’ve been training.’

‘On the back of a wave of support,’ Chase realised.

‘It’s been done before,’ Jimmy noted. ‘Just keep the conventional forces out, because if we screw this up the planet will regret it. This is a pivotal moment for planet earth, Mister Chase, so keep it on a tight leash, stay clam, and pay attention. This is a crossroads; we turn left or right. Make a mistake here and 2025 will be a certainty.’

‘Will there be more hijackings?’

‘A few, but nothing on this scale. And I’m figuring that our programme to install scanners will get a boost. Right now, I’d love to see the looks on the faces of the Saudis!’

‘Jesus, yes. I think they just switched sides!’

‘Some lessons come with a price, often a heavy price.’

‘You knew?’ Chase nudged.

‘We needed the popular support for our soldiers.’

In the days that followed, al-Qa’eda claimed responsibility for the hijackings, detailing Dubai decadence and western ways as the reason for the attack, Rahman fingered as the mastermind. Chase met with his Saudi friends and threatened to send soldiers to Afghanistan as part of a multi-national force, those soldiers filmed arriving at Kandahar airfield a day later, also filmed giving food to local kids.

Six hundred men moved west to create a camp, three thousand east. Duckland II and Duckland III were created, fifty miles apart, Hueys now transported to Kandahar to be utilised for supply runs, and to be filmed dropping food for locals. The PR machine had arrived. Bob Davies asked about sending Rescue Force in, and was threatened with being fired if he ever mentioned that again.

Looking back, I’d say that the Olympics went off OK, but not great, and certainly not as good as the Chinese Olympics. Two small bombs were found and diffused, and our electric buses saved the day

for frustrated tourists. All the visitors had to do was to suffer shit London hotels and expensive restaurants; food served by waiters that spoke little English. Hell, it was cosmopolitan for the visitors, many finding waiters from their home towns for a bit of a chat as they argued over the bill.

During the games, tourists had wandered into the wrong estates in East London, and had been attacked or robbed. People complained about the costs, the bad service and the serious lack of white English people in London. The waiters were all foreign, the hotel workers all Polish, the late night unlicensed minicabs all run by Senegalese who spoke very little English and carried knives. Tourists returning home after the games suggested that London change its name to Nairobi, or Warsaw.

By trying to shove a great many tourists into London for the Olympics, the organisers had accentuated the worst features and characteristics of the city, and then displayed them for all the world's media to see. London was tolerable much of the time, but not when the cramped tubes became even more cramped, when you couldn't get a seat in a restaurant, or even navigate the pavements safely.

All the leaves are brown, and the sky is grey

Autumn brought a change of scenery from my office window, and a change of attitude. The baby was due to be born soon, and we had been spending more and more time in Goma, at our delightful new mansion. Even Jimmy preferred it to Wales, and we would sometimes relocate the entire household "M" Group down there for weeks on end, household "M" Group meetings held around the pool.

The mansions next door to us had been finished, and the owners and occupiers had opted for no high fences, residents sometimes just wandering into each other's gardens for a chat. The road outside had been finished with nice wide pavements either side, and we would often stroll along them after our evening meal. A gate had been placed at the start of the estate, security good, and we made friends with many of the residents.

After our evening meal, we would often walk the four hundred yards down to Po's house, whether he was in or not, and peer at his imported Koi Carp. His garden was larger than ours, and typically

Chinese; quiet areas to sit and contemplate. Next door sat Yuri's house, nice on the outside - drug lair and porn set on the inside, beyond him a house owned by the head of our corporation. That man wasn't a rich individual, but he had split the house building costs with three others, all now enjoying a twenty-bedroom house.

I had commissioned a park at the end of the road, a deep canal from the lake cutting into it and crossed by ornate wooden bridges, many fish available to be studied as they rested in the shade of the bridges. We would often sit on benches as the sun lowered, ambling back as the streetlights began attracting moths.

The girls now had their rooms the way they wanted them, and we dare not even poke our heads in. They kept clothes and possession down here, computers, and often travelled down with just hand luggage. Most of their summer school holidays had been spent in Goma, giving the grown-ups time to tackle the mountain of work that revolved around the new city.

That city was now coming along. The workers camps had evolved into small towns in themselves, restaurants and brothels popping up. The sewer system had been completed, but was yet to carry human effluent to the nearby sewage plant. The roads had all been pegged out, many completed, making the city appear like the drawing of a street map when viewed from the air. I actually had a large aerial photo of the city that I used to plan things on.

Straddling the road leading southwest, twenty apartment blocks had been raised, workers claiming temporary abodes, but many would stay on. Shops had been occupied on the ground floor of the apartments and were kept busy, a clinic and a police station built nearby.

At the heart of the city, massive concrete foundations and walls grew upwards where the main shopping centre would someday stand, the basic outline of the marina complete. The first government building was finished but unoccupied, apartments being finished off nearby. That first building would house the city council, and they'd have a hand in the ongoing construction plans.

The one feature that had been fully completed was the second golf course, and we would often drive down our new - and empty - eight-line highway, passing underneath the concrete monster that was the city centre, progressing another six miles of lonely highway to the course. This new course was now being frequented by those golfers seeking a new challenge, or by those wishing to play a round when a tournament clogged the first golf club. The courses' hotel was just about complete, and would probably see some early trade

from golfers, certainly being used as an overflow hotel when tournaments were on.

The Radisson SAS hotel had been completed in Gotham City, near the exhibition centre, and would be typically rammed during Expo week. Three other hotels had popped up, and each received the same warning from me about filling the rooms – that was their concern, not mine. Spiral III and IV were complete - and all sold off-plan, Spiral V in progress, Hilltops mostly complete and again all sold off-plan. Yuri owned a nice house in Hilltops and we visited often, the property offering a great view over Gotham City, our Russian friend now owning some twenty houses and sixty apartments. Still, with all the steel we were buying off him he had a few quid to spend.

The banking quarter was mostly complete, and from Hilltops it reminded me of Canary Wharf in London, the tall glass office blocks backed by the lake and canals. Casino Row had been completed - and occupied in a millisecond, its apartment balconies facing south to the marina, and I could imagine living in Gotham City full time. Unfortunately, the world would not let me, the future creeping closer, the days being struck off the calendar.

Sat in my office in the UK, I scanned reports of food production, finding them up dramatically across the board, food prices being kept low; we now exported more than half of what we produced. Oil production in the region was up, cheap fuel being sold to those of our neighbours without their own oil, their economies booming. We had even started shipping oil through Angola and selling it on the open market, mostly to South America. Long trains would snake south, some of them seemingly a mile long. They would pass other trains coming in, those trains loaded with materials for the new city, but more often they'd bring in luxury imports for the region; cars and jeeps, the odd boat, TV's, household goods, stereos, even furniture. Our African middle classes were growing, our GDP rising.

Po had constructed a textiles factory, police and army uniforms now being produced in quantity and sent all around Africa. His plastic household goods sold well to Africa housewives, and wood furniture sales were growing. He'd import large batches of unwanted and outdated electronics, build radios and TVs, and sell them easily enough in the region. For people who had never viewed a TV before, an older model was not an issue, not even a black and white set.

Central African TV now enjoyed a regular audience of a hundred million people, and our six o'clock news service was an institution,

not to be missed by African families as they sat down to their evening meal. We even saw our first few white newsreaders appearing. Advertising revenue was high, more than covering the basic running costs, and production of new programmes was cheap enough. Combined with the African Times, we had the media sewn up, opinions influenced, scandals highlighted, dodgy practises put under the spotlight. If a minister's brother had a scam going, then an hour-long programme on it was enough to not only stop the scam, but to remove the minister. Citizens often reacted badly to these programmes, in that they would try and take the law into their own hands, stoning the said minister's house.

Sat checking reports, I noticed the building plans for the various embassies. I called Jimmy as the house. 'Jimmy, the Chinese embassy in New Kinshasa, will it have a pond?'

'Probably.'

'Be a big pond?'

'Maybe.'

'Be twenty-six thousand acres of pond?'

'They're building a ... Chinese quarter. It's officially their land, subject to the same rules as an embassy, but like a mini Hong Kong inside the city.'

'Is that ... wise?'

'They want to try and counterbalance the excesses of Hardon Chase, who thinks he owns New Kinshasa.'

'Again, is this ... wise?' I pressed.

'Let them knock themselves out and compete, it all helps us.'

'Does Chase know?' I teased.

'He has reconnaissance satellites, and a large number of warm bodies in the CIA. So if he doesn't know ... it's his fault.'

I found Helen at home at 5pm, her feet up. 'Suffering, dear?'

'A little. My feet hurt more than the first two times.'

I sat and rubbed her feet. 'Not long now.'

'Could have a "C" Section anytime.'

'Well, whatever you prefer, it's kicking enough. It woke me last night, your bulge in my back.'

'Could be a boy then.' She heaved a breath. 'I'll talk to the doctor today, get him to pencil me in for Saturday Morning. Are your parents coming down?'

'Getting a bit too old to be bothered with such trips. Mum is seventy-two, dad is eighty-four, and they don't like their routines interrupted.'

'Jimmy's mum went into hospital today.'

‘Oh?’

‘She’s seventy-eight and looking frail. Still won’t have the drug, not that Jimmy wants her to.’

‘Long story,’ I sighed.

‘I think I understand some of it,’ Helen mentioned.

‘Saturday then; a new baby to play with. We could give the girls a few rooms in the main house, and wind back the clock a bit.’

‘Should we get Cat back?’ Helen wondered.

‘She has a kid of her own now. Must be ... two years old by now, so she can’t watch ours.’

‘Sharon knows someone, and Jimmy said the woman was OK. And Trish will help out.’

‘Your dear assistant ... does not strike me as the family type,’ I pointed out.

‘I think she made a play for Jimmy a while back, but I haven’t mentioned it.’

‘If he wanted to – he would have – and not cared about hiding it. So he must have told her no.’

‘She had a brief fling with one of the bodyguards.’

‘Yeah, which one?’ I pried.

‘Mark,’ I think. ‘Always see him with Ricky. Doesn’t get on with Rob.’

‘I know him. And she can do better.’

Shelly stepped in, blue school uniform, dumping down her bag. ‘How is it today, mum?’

‘Twins, I think,’ Helen said.

‘I’ve got a book on baby care,’ Shelly informed us. ‘I know it all.’

‘A keen volunteer,’ I noted. ‘Excellent. And good practise for when you have your own ... at sixteen.’ I exchanged a look with Helen as I stood.

Jimmy keenly accompanied us to the private hospital Saturday morning, he and Shelly arguing over who would look after the baby the most. And so far, we had not finalised a name, or even discussed it much, no hints coming from Jimmy.

Two hours later a little pink girl arrived, third in a row, and I held my new daughter for Shelly to study, tiny fingers gripped. I spent the night in Helen’s room, our new arrival a screamer, being picked up at noon the next day.

Everyone at the house had a peek at the new arrival, gifts offered, our new nanny waiting. Ruth, a friend of Sharon’s, and a forty-year-old with two grown daughters, took our bundle as we took a nap.

When I came down later, Ruth was watching Shelly change the nappy. I cracked open a beer and sat watching with an amused grin, turning the TV news on.

When Helen came down, walking slowly, she found our new daughter asleep on the lap of our eldest daughter. Ruth made Helen a tea, and we sat quietly observing Shelly's maternal instincts.

Lucy was interested, but not that interested, and plonked down next me. 'What'll you name her?'

'How about Liz,' Shelly suggested.

'Funny,' Helen said, 'but I was thinking about Liz.'

'It has my vote,' I added. 'Elizabeth Holton.'

Elizabeth Jane Holton was welcomed to the world, and Shelly surprised us all with how good she was with Liz. Boyfriends would be told that she was busy, because it was her turn to watch or feed the baby, and those young men invited around to baby-sit seemed a little put off by both the presence of the baby - and Shelly's fondness for babies. Poor acne-faced lads would flee in the face of early parenting, making me smile. At that age, I would have run as well.

Things were looking good, till Jimmy suggested that next year we may need to voluntarily expose ourselves. I knew it was on the cards, but I was not looking forward to it.

Little more than a week later, the former British Chancellor, a man who had wanted to be Prime Minister before his heart attack, went public. He labelled the existing PM as a puppet controlled by Jimmy, he detailed our ability to predict the future – cleverly not mentioning anyone called Magestic, and that we were preparing the world for a number of future disasters. I sat with the girls, and Ruth the babysitter, and watched the whole interview, all twenty minutes of it.

Ruth finally said, 'If Jimmy was running the bloody country ... he'd do a better job of it!'

The girls asked a few odd questions, so I told them to ask Jimmy, playing the employee card well. We avoided interviews that evening, only to find that the former French President had gone public as well, but specifically mentioning Magestic. The tabloids favourite horoscope reader claimed that he was predicting the future, and the papers that sponsored him made a big deal of it to boost their circulation.

Jimmy was not that bothered, suggesting that he was ready. He admitted to worrying for us and the baby, but did not see any major problems ahead. It was business as usual.

That evening, we invited in a BBC crew, setting up in a lounge. Before the interview, which I figured would be for the both of us, I went for a walk around the grounds. Jimmy had the same idea, and we bumped into each other at Jack's rose garden.

'Nice day for it,' I quipped, the sky overcast.

'You know how long you've been at this? Twenty six years.'

'Jesus, that sounds like a long time. But it doesn't feel like a long time.'

'It never does. We sleep, we wake, and we start the good fight again.'

'Do you know what you'll say?' I asked.

'Why, are you worried?'

'A bit. Back at the start of 2010 I was terrified, less so now; the idiots on this planet can't even join the dots.'

'They got the drug, the electric cars, and people are easily dazzled by shiny trinkets. And those very same people have been wondering about UFOs for fifty years. Some believe, most don't. It's similar; plausible, yet unproven.'

'Can you drag it out?'

He took a moment to study me. 'Do you want me to try?'

'Well, feeling a bit vulnerable now,' I admitted as I pulled leaves off a long-dead rose head.

'Next year, we'll have to make a decision. There're a few nasty earthquakes coming up, plus pandemics. We can either fight those from the shadows, or get the people behind us.'

'You obviously know what happens after exposure, hence this house.' I waited.

'It won't be so different, just that everything you do or say will be reported and scrutinised. If baby Liz does a poo, it'll make the tabloids. Some will think us gods, others will want us dead. Africa will still like us, the Chinese and the Russians will be OK, America mixed – with the Bible belt wanting to belt us. At least we've had six good years of President Chase, that has helped a lot, and he'll look after us.'

'And his replacement?'

'Unknown at the moment, but I do have a candidate or two in the wings. Besides, after exposure we'll get more power and the world leaders get less. People power.'

'Sounds like we should have done it before now.'

'No, I needed to work behind the scenes.' We turned, heading back. 'Grab your family, all of them, dress nice, and we'll do the interview together.'

‘I may have said this before, once or twice, but is that wise?’

‘They’d find out quickly if I revealed anything, so why hide it.’

‘Are you ... going to reveal anything?’

‘Not voluntarily, but the interviewer may tickle me.’

I led the four ladies in my life across to the house, into the lounge and to Jimmy, the interviewer looking a bit put out. Camera angles were altered, microphones made ready. As I made ready, I figured that the interviewer would have no choice but to avoid shitty questions.

We were finally ready, and I heaved a big breath.

‘Thank you all for being here today, and congratulations Paul and Helen.’

So far, baby Liz was behaving, being cradled by Jimmy, but I was kind of hoping she’d burp, or puke on Jimmy’s trouser legs.

‘Thank you,’ I said. ‘But Helen did all the work.’

The interview faced Shelly. ‘And now you have a baby sister. Will you be helping out?’

‘I already change and feed the baby,’ Shelly proudly stated. ‘I want one of my own as soon as I can.’

Jimmy turned his head to her. ‘Don’t you think you should meet a nice guy ... and get married first?’

‘Oh, Jimmy, you’re such an old fuddy-duddy.’

Jimmy gave the camera a peeved look. ‘I think, Shelly, that you should avoid telling nice young men your desire for kids on the first date.’

‘Boys are sooo easy to control.’

Jimmy faced Helen.

‘Don’t look at me, she doesn’t get it from me. I always wanted to be happily married first,’ Helen pointed out. ‘And preferably a rich man that could look after me.’

‘What about you Luce, do you want to have kids?’ Jimmy asked, and I could see the interviewer wanting to jump in.

‘Not till I’m old like mum,’ Lucy said.

‘Thank you, darling,’ Helen quipped.

‘Your mum is not old,’ I told Lucy. ‘And she still looks great. Even after ten kids.’

‘You only have the three,’ Jimmy pointed out.

‘It feels like ten some days,’ I replied, ignoring the interviewer.

‘If you want to give up Lucy - I’ll adopt her,’ Jimmy offered. ‘Save having one of my own.’

‘You’re still practising,’ Lucy told Jimmy.

Jimmy looked into the camera and wiggled his eyebrows. 'Practise is important in many areas of life, but especially when it comes to making a relationship work. I'm not very good with the ladies, so I have to keep practising.'

'The French Finance Minister likes you,' Lucy put in. 'She said you have a good head and figure.'

Helen and I exchanged looks, grins suppressed.

Jimmy explained, 'She said ... that I had a good head *for* figures, Luce. That's not quite the same.'

The interviewer could wait no longer. 'Mister Silo, the recent comments about the influence you have over the Prime Minister -'

'He never brings us anything,' Luce complained. 'Not even on our birthdays.'

Jimmy wagged a finger at the camera. 'Bad Prime Minister, bring some gifts next time, huh.'

'He looks taller on the TV,' Shelly mentioned. 'I'm almost as tall as him.'

Jimmy wagged a finger at the camera. 'Bad Prime Minister, don't be so short. The voters of this country expect you to be taller. Get yourself an inch or two where it matters.'

'On his baldy head,' Luce added, and I was waiting to see just how the hell the interviewer got this back on track, the girls' presence another brilliant move by Jimmy.

'The comments that the former Chancellor made, what do you say in reply?' the interviewer squeezed in before any semblance of his professional pride disappeared.

'What comments were they?' I asked, just to be awkward.

'The former Chancellor claimed that you, Mister Silo, were heavily influencing the Prime Minister.'

'It's never been my policy to interfere in UK domestic politics, which is why I get so many people complaining that all my time and energy is spent on Africa. I have no particular interest in local politics, and I'm hardly ever in this country. I think the former Chancellor is just mad that he never became Prime Minister – and I'm sure that he would have made a very poor Prime Minister.'

'Which one is he?' Lucy asked.

I turned my head. 'He's the fat one who looks like he's had a stroke on both sides of his face.'

Helen bit her lip.

'And the allegations of the ability to predict the future?' the interviewer got in.

Jimmy began with, 'I predict ... that British Rail will still be crap in twenty years, that air travel will still be a chore, that the computer industry will still be led by the gaming industry, that politicians will still be corrupt, and that I'll still be practising.'

'The former French president backed-up the claims –'

'I don't like the French,' Luce put in.

'You like French Brie,' Jimmy reminded her.

'That's nice,' Lucy agreed, the interviewer still frustrated.

'And you liked Paris, the Eiffel Tower,' Jimmy added.

'But not French people,' Lucy complained. 'They wave their arms around a lot.'

'French men are nice,' Shelly put in. 'The French Military Attache was nice.'

Helen turned her head. 'A think he was a little old for you, darling. But he was very charming in his uniform.'

'He was?' I asked my wife. 'May I remind you that you're happily married ... with ten kids.'

She shrugged. 'Men in uniforms.'

'Coming back to the French Military Attache – why was he here?' our interviewer asked.

'I bought coastal patrol craft for Kenya, off the French Navy,' Jimmy explained. 'And afterwards we sat down to plan the domination of the world from a cave in Switzerland.'

Helen said, 'If we carve up the world, I want Switzerland; beautiful country, great people.'

'I want to ban adverts between programmes,' I added, figuring the interviewer would either explode, or give up.

'Mister Silo, what do you say to the charge that you – or the "M" group – are secretly running the world?'

'First, the "M" Group are running the world. They represent more than half of the GDP, and more than half the world's population. And second, if I was running the world, there would be hope for a better future.'

Liz burped, making me smile widely. She had been saving it, and her timing was great. Jimmy handed her over to Helen. Facing the interviewer, he said, 'No more silly question, we have some important family-time things to attend to.'

'We're off air,' a man said a few second later, and only then did I realise we had been live.

Jimmy thanked the poor interviewer and shook his hand, leading us out and around to our house, getting the kettle on.

‘I saw it on the TV,’ Ruth said with a huge smile. ‘That poor interviewer. But the baby came across great, they zoomed on her a few times.’

We settled about the coffee table, Shelly holding the baby.

‘You did well, girls,’ Jimmy told my daughters. ‘That nice man wanted to ask a few difficult questions, but we spoke about nonsense.’

‘Will that deflect them?’ Helen asked, causing me to glance at Ruth.

‘They can think what they like for now,’ Jimmy replied. ‘And, at the end of the day, people just don’t care.’

‘You should be running the world,’ Ruth said. ‘Couldn’t do a worse job of it.’

‘There speaks a member of the public,’ Jimmy pointed out to Helen and me. ‘The public ... crave a better path, a different way.’

Ruth said, ‘Yeah, but the ones in power will never give it up without a fight.’

‘A good point,’ Jimmy noted. ‘So we won’t be trying to take it off them. Not yet.’

‘Well, you got my vote.’ She checked her watch and stood. ‘Best check in on my own brood. See you in the morning, Helen. Bye all.’

‘They’ll keep pressing,’ I suggested.

‘They have no legal right to force us to talk,’ Jimmy reminded me. ‘All we need do is keep reminding everyone how nice we are, how nice we look, and how useful our gadgets are to the world. And you heard Ruth; the people want hope in a difficult world. You’ll be fine.’

‘And the timescale? I asked.

‘Not long. Probably months.’

2013

Lobster had rotated out of Kandahar after three months, four weeks spent with his family, which was about three weeks and a few days too long. He was relieved when he returned. Big Paul was in his element, and sometimes attended patrols out of Duckland. But he also rotated back, providing Jimmy with detailed verbal reports that lasted into the small hours some days. They were plotting and scheming, but very little of it was to do with defeating al-Qa’eda.

Our favourite Rescue Force writer had been allowed into both Kandahar and Duckland, to collect information for a book. That book was actually destined to be five books in four languages as it charted the training and deployment of chosen individuals; British, American, French, Russian and Chinese. A film was also planned, a great amount of detail put on paper by Big Paul and Jimmy. As with the exploits of Rescue Force, Jimmy knew exactly how to reach our target audience.

One day in October, when I wandered down into the basement command room, Jimmy showed me a set of images taken at Duckland. Under a sign that labelled far off cities, their compass bearings and their distances listed, groups of men posed for the photographer.

‘It’s on track, and going well,’ Jimmy enthused, handing me the photograph with a smile.

‘The campaign?’

‘No, dope - the integration.’

I studied the image, that of soldiers from several nations, all happily posing together, a mascot of a rubber duck.

‘That’s Section 112,’ Jimmy said. ‘Russians, Chinese, Americans, Brits and a Frenchman. They’re a distance sniper section; they eat, live and breathe sniper rifles, and they compete for the best kills.’

He handed me a second photograph. ‘Big Paul organised a weekly rotation of cooking duties. That’s the Chinese cooking for the whole camp, special ingredients flown in. They’re the most popular amateur chefs, Chinese night keenly awaited. The Brits do a curry night, which is passable apparently, the French cook the local goats, and the Yanks fly in burgers and hotdogs.

‘The soldiers took over a compound and house, made it as pleasant as they could, put up a large white screen and show films most nights, beer issued. I’m flying in a lot of beer, but the Rifles don’t normally drink unless back at Kandahar. But the African boys love the movies, most of which they’ve never seen – like E.T., or Star Wars!’

‘All the creature comforts,’ I noted. ‘And the success rate?’

‘Slow attrition; we set traps, and they walk into them. Very low casualty rate, but that’s not the point. The bonding between soldiers is working well, and you can hear them criticising their political paymasters. It’s changing attitudes at the lowest level; grunts sharing blood, sweat and tears. I’ll have books written about it and sent everywhere, we’ll fund films about it.’

‘It’s a dry run for 2025,’ I realised.

‘And more than just that, it’s a dry run for future politics.’ He tapped a photograph. ‘That’s Sev, a Russian who carried a wounded Chinese soldier twelve miles. And these two Chinese, they carried an American six miles across a mountain, keeping him alive. The material is great, and I aim to get a dozen books and movies out of it.’

‘It’s not going to stop political attitudes, they’re just grunts.’

‘I told you before: ignore the politicians and deal with the people, especially Hollywood. A few years of movies about Duckland and national attitudes will change a great deal. When you started that combined college you opened the door, and set the politicians thinking. They wanted to be involved for their own selfish reasons, to try and influence the next generation of African leaders. What they didn’t realise ... was that they’d put their instructors in the same room, and then their soldiers. Once that process starts it very difficult to stop. In Duckland, Americans and Russians are eating, living and fighting together.

‘After these soldiers leave the army they’ll meet up, a few working in private security together. You set in motion ... a disease that will infect the world, and one that builds on the student exchanges we started in 1986, and the mixed safaris in Africa; one world, one threat, one cause. Of everything we’ve done, this is the most important part, building that integration up – but not at the political level, at the lowest level; grunts in the field. The “M” Group of leaders are fine, but those faces change – and they can change their minds!’

I took more of an interest in Duckland after that, peering at faces frozen in time in photographs, imagining what they were doing, what they’d be eating tonight. I bought a number of laptops with video cameras and shipped them out, opened up a special account with Skype, and bought some satellite time. Soldiers in Duckland could each have five minutes a day to talk to family, or they could barter their airtime. I even took to chatting to a few, calling at random and asking about conditions.

Shelly joined me once, but that was a mistake, because she got flirty with the soldiers - and I got irate with my little tramp.

As Christmas approached, I organised a lady Santa with large breasts to chat to the boys, and to wiggle her best assets. I sent gifts and booze, silly hats, a few soldiers reprimanded for fighting the Taliban in red Santa hats. My own Christmas was a delight because I had the baby to hold, and I never got fed up with just staring at her.

We enjoyed a traditional Christmas at home, big tree, lots of decorations, Queen's Speech on the TV, then flew down to Goma on the 27th, baby Liz injected by Jimmy just in case.

For the second year running we stayed in Goma for New Year, senior staff invited over, rooms provided for many RF rescuers. We again found ourselves in the Chinese restaurant and watching the fireworks on the lake, the next day spent at Yuri's place in Hilltops. I simply sat in the sun with a cold beer and watched the city, planes coming and going, a dip in the pool when I warmed up.

It was the calm before the storm, and 2013 would change everything, not just US Presidents. I knew that, Jimmy had told me, but I kept it from Helen, hoping to drag out every minute.

Part 14

New Years Day, 2013.

This time last year I was wondering about another baby, and now the little darling was waking us often, more so than my first two daughters. I eased out of bed and lifted the baby out of the cot, bringing her back to the bed. Laying her on my bare skin, she seemed to calm quickly, Helen turning over but not waking. For once, we were a little groggy from interrupted sleep. We didn't feel as bad as those who had not been injected, but we felt it none the less. With the baby on my chest, she settled down.

A long way off, Big Paul, known as Major Paul O'Brien to those who actually believed his cover story, stood in front of a large group of soldiers at Duckland. In a chill wind, he placed on a special set of webbing, followed by a type of helmet straight out of Star Wars. His assistant connected a wire, and Big Paul turned toward the assembled men.

'This, boys and girls, is the future of warfare.' He lowered a curved Perspex flap to cover his left eye. 'What I now have, is a silly hat connected to a battery pack on my webbing. On my head is an EM scanner, a thermal imager, a scanner that tells me if a laser is pointing towards me, a laser range finder, and a laser target illuminator.

'First, the EM scanner. As I look at you, I can see little streaks of blue lightning where your radios are. If I turn and face the valley, I can see small lightning streaks from that patrol approaching, some on the hills. I can also get a tone when a signal is detected.'

He turned back. 'I can also see orange blobs through the green Perspex, showing me your body heat – and that someone has just farted. Again, if I turn and look down the valley I can see the patrol coming in as thermal images.

'If I press the top right button of my nice new helmet, or this button on my webbing, I get figures popping up that tell me that you're six metres away. If I turn and face the hill, I get fifteen hundred metres. If I press a second button and hold it, I can illuminate a target for an air strike.

'If I alter a few settings, I can get a tone for every radio signature nearby. So, if I'm out on patrol in the cold and dark – and it's always cold and fucking dark - and the patrol's radios are off, any bleep in my ear is an enemy radio source close by. Right, we have ten of

these, so the patrols going out tonight can have a play and report back. If you lose one or damage one – don't report back.'

With the baby breast fed, and with me feeling both jealous and hungry, I led Helen to the pool area for breakfast, long before sane and normal people were up and about. The sun threatened to rise.

Jimmy joined us, followed by the girls, and we were soon on our third course of pancakes, Shelly tending the baby. As I watched, Shelly dipped her little finger in syrup and let the baby suck on it.

'Syrup good for babies?' I asked Helen, my wife shrugging.

Jimmy took a call. Lowering his iPhone, he said, 'Someone just hacked an American credit card company, and took sixty million dollars out.'

'If it was a British student,' I began. 'That'll just about cover their tuition fees.'

'Just the start,' Jimmy informed us. 'There'll be more of those.'

'Can you stop them?' Helen asked.

'Some I can, and will, but some are necessary to ... change attitudes and procedures.'

After breakfast, and with late-rising mere mortals commuting to work through Gotham City on our nice electric buses, Jimmy led us to the parliament building. In an empty office we found a large street plan for the new city.

'OK,' he said, taking the baby. 'You can each name a street or two.'

I picked up a pen as the girls studied the myriad of streets. I marked Holton Avenue on a side street. Helen marked Helen Road, coming off Holton Avenue. Around the corner, a giggly Lucy marked Lucy Boulevard, just to be awkward. Shelly marked a cul-de-sac as Silo's End, getting a clipped head from Helen.

Jimmy marked a long street as Mandela Avenue, a second as Kimballa Avenue, a third as Hardon Chase Avenue. Next to the proposed Chinese quarter, Jimmy marked up Wen Street and Po Street. Shelly marked off two streets in Latin, a few in French. Future residents would, I was sure, finally figure out how rude their street names were when translated.

'Don't do the whole damn thing,' Jimmy said. 'We've arrange for people to go online and sponsor a street name. They can buy building names as well.'

Back at the house, our corporation guy brought a fax out to us as we lolled around the pool.

Jimmy faced me after reading it. 'Property prices down five percent in the States, flat in the UK, two US banks stretched, one British bank stretched.'

'We knew we'd get to this point, and we warned them,' I said from behind my sunglasses. 'Will it be a problem?'

'A correction was always inevitable, but this year will see a few other problems as well. And that credit card fraud could take down the credit card company, their parent bank and their insurers – not from the money itself, but from the loss of confidence. Markets will take a hit when they open tomorrow.'

In Duckland, Lobster placed on his new toy, adjusting the straps. Grabbing the rest of his gear, he kicked up dust as he joined his patrol, the evening bitterly cold. Leading from the front, he waved the three men forwards.

Outside of the base's mud walls he lifted and cocked his weapon, the men copying in turn. 'Radio check,' he transmitted.

'Mickey on.'

'Sven on.'

'Yuri on.'

'Use the force, Luke,' came from someone, giggles heard through the dark.

Lobster shook his head, his new headgear a little uncomfortable and his chinstrap rubbing, then put one foot in front of the other and plodded forwards, hoping his quick pace would warm him. A mile down the valley, reaching the last OP, Lobster depressed the radio button for HQ. 'Lobster to Duckland, radio check, over.'

'Loud and clear, Lobster,' crackled back.

'Lobster at the outer limit, southwest valley, back at dawn. Out.'

'Watch out for the Sand People.'

'Who are the Sand People,' Lobster asked, getting giggles back.

'And Imperial storm troopers,' came another voice.

Lobster switched on his new toy, lowering the green Perspex eyepiece. Raising a hand to halt his patrol he swung his head back and forth, finding no EM signatures or thermal images ahead, just a cold rock valley devoid of life. Turning, he could see the thermal images of his team, blue lightning flashes where their radios were located.

He lifted his head to where he knew OP12 was hidden, finding both EM signatures and faint thermal images. He used his radio. 'OP12, this is Lobster in the valley below. Can you use a laser rangefinder towards me, please.'

A few seconds later, his eye display highlighted the laser, a tone given.

‘OP12, the gadget works, your laser set off the warning. What range do you have for me?’

‘We have you at eleven hundred, Lobster.’

‘Mine says that as well. It works! Out.’ Lobster led his men on as it started to rain, the temperature dropping. At the least the damn helmet was warm.

An hour later, trudging along familiar tracks, Lobster noticed a blue flash on his eyepiece. He raised a fist, his team taking cover. Edging forwards for a better view, Lobster could see the blue lightning streak clearly, and clearly labelling a small bush on the opposite side of a track, impossible for anyone to be hidden there, no accompanying thermal image to be found.

Lobster took ten minutes to scan the valley and its hills, his body cooling as he stood still, but finally noticed a faint blue dot on a distant hill. He lifted his eyepiece and fetched out his manual EM scanner. Swinging it around, it confirmed the EM signature coming from the bush, as well as the distant hill. He closed in on his team, leading them to a group of rocks for shelter, the three men nothing but dark outlines.

‘There’s something giving off an EM signature in a bush, a radio signal on the hill.’

‘It’s a trap,’ they agreed.

Sven opened his backpack, taking out a small device and switching it on. He selected ‘0000’ and set it running. Little more than a minute later the bush exploded, showering them with rocks.

Lobster depressed his HQ radio button. ‘Lobster to Duckland, emergency. Receiving, over?’

‘Go ahead, Lobster,’ crackled back.

‘Lobster to Duckland. Enemy placed a radio-controlled bomb on a track, enemy OP in the hill waiting for some trade. Please warn everyone, sir. Out.’

‘All variables, all variables, this is Duckland control. Watch out for radio-controlled booby-traps. Anyone without an EM scanner is to pull back. I repeat, if you don’t have an EM scanner then pull back. Out.’

‘They would have got us,’ Mickey realised, the man only recognised by his voice. ‘So let’s go meet these arseholes.’

‘If we’re quick, we can skirt around, three or four miles, and hit them from the other side,’ Lobster suggested. ‘On me, stay close.’ He lowered his Perspex eyepiece and led the men off at the double.

An hour later, four miles along a parallel valley, the weather was terrible, rain and snow falling, the visibility little more than ten feet. Lobster's face felt red hot, his fingers numb and throbbing with the cold, everything wet through. He could now discern his intended targets as four orange dots producing two blue lightning streaks. Everything else was cold and black.

Lifting the eyepiece, his eyes sore with the cold and rain, he could see nothing in any direction. With the eyepiece lowered, he could see his prey plodding slowly along, their heads down against the wind and rain; the Taliban were just as pissed-off with the weather as he was. What his new eyepiece did give him, in addition to its other features, was a better representation of the contours of the track in front of him. He moved off.

Five minutes later he was to within a hundred yards of the four fighters, normal human eyes not having a hope of spotting the four men, the wind howling past cold ears. Through his eyepiece, he could see the fighters so clearly that he could make-out the men scratching their backsides; he could even see each footfall. He closed to within thirty yards, lifted his rifle and hit all four men using an approximation through the eyepiece. They probably didn't even hear the shots. Stepping slowly forwards, each step measured, he could see the thermal image of one man, still moving, and fired again.

Stood next to the bodies of the fighters, Lobster put two rounds into each thermal image as they lay sprawled, his team checking the bodies close-up with their torches. Radios were removed, papers and personal effects, the bodies covered over with sand and rocks by cold and numb hands.

About to turn back for base, Lobster's eyepiece came to life, a hundred orange dots on the horizon, but no lightning streaks. They were surrounded on three sides. He got on the radio, secure that not even his own men could hear him in this howling wind. 'Lobster to Duckland.'

'Duckland here, go ahead Lobster,' Lobster could just about hear over the roar of the wind.

'Lobster to Duckland, one hundred strong force moving north at grid four-two. They are radio silent and using the storm to approach, sir.'

'Lobster, there's no one near you, pull back, leave grenades, over.'

'Lobster out.' He turned, pulling his team in close enough to talk. They knelt and huddled, faces almost touching. 'There are a hundred

fighters out there, using the storm to advance on the base. We've been ordered back, but in this weather we have the advantage.'

'They're blind!' Sven said, shouting to be heard and squinting against the driving snow. 'They could walk right past us!'

Mickey added, 'In this weather, they'll shoot each other!'

'Then we go down the middle,' Lobster said. 'Yes?'

The men were in agreement, Lobster leading them off as a tight group. Through pitch-blackness, driving rain and snow and a howling wind, Lobster led his team into a gully. His team fixed their thermal sights, took opposite sides of the gully and opened fire, the reports of their outgoing shots hardly registering in the wind. Fighters, walking with their hats held down and leaning against the wind, started to fall.

Ten minutes later fire was returned, cracking overhead or hitting the dirt nearby. It had taken a full ten minutes for the fighters to realise that their colleagues were being shot, literally tripping over the bodies. The main body of fighters halted, now turning inward, and presenting a wall of orange dots on Lobster's eyepiece.

Noticing a group bunched up, Lobster lifted a battery grenade, set it for one minute, and ran forwards. Fifty yards from the approaching group he pulled the pin, threw it a few yards ahead and ran back to the gully, counting as he went. At fifty seconds he shouted, 'Grenade! Cover!' His men slipped lower.

The blast washed over them, rocks raining down, the sensation of sand landing on their cold and exposed skin. Half an hour, and three grenades later, Lobster figured that fifty fighters had been killed or wounded, many from their own indiscriminate crossfire.

Judging the direction of the wind, Lobster and Mickey lowered their weapons and stood in the gully centre. They took out their lipstick grenades, turned dials, banged the grenades against rocks and threw high, with the wind. Thirty grenades were thrown, the results unknown, the wind so strong that they didn't even hear the pops, a few distant flashes noted.

With the fighters scattered, and seemingly walking in random directions, Lobster did the unusual - and led his men further down the valley, between the fighters. Firing as they went, they picked off another twenty surprised fighters, finding a gap in the lines and racing through it. Dropping into a dry gully, Lobster led his team on at a fast pace, sand and gravel crunched under foot, soon well ahead of the main body of fighters and approaching a tightening of the valley sides.

Finding a large compound, the smell of smoke coming from within, Lobster skirted around it and to a ridge, hiding his team whilst observing the distinct blue lightning flashes coming from the compound. The team sat patiently, watching the fighters enter the compound for shelter.

An hour before dawn, the majority of the fighters were now sheltering inside the compound, a few stood guard outside. In total, Lobster figured as many as forty men could now be inside, a few stragglers back along the valley. Chilled, he led his team down. At twenty yards they opened fire, the reports hardly registering in the storm. Lobster set a battery grenade to five seconds, pulled the pin and did what he was taught never to do. He threw it. He threw it as hard as he could, turning and running with his team.

The blast knocked Lobster and his men to the floor, ears ringing, the wind and rain offering no barrier to the blast. Lifting up and turning, Lobster could see no fighters moving, and led his team back to the ridge, two of them now limping. They reclaimed their position behind large boulders. Sven had been hit in the ankle by a flying rock, Mickey hit in the back of the knee by a rock. They had been too close. Huddled in the rocks, they checked ammo.

‘Do we go?’ Sven asked.

‘No, we stay to dawn and finish them off,’ Lobster suggested. ‘No more than ten left walking.’

‘I think my ankle is broken,’ Sven put in. ‘Whatever I do, I do it slowly.’

‘Get some rest,’ Lobster said. ‘We wait. Shiver quietly!’

An hour after dawn the wind eased, the rain falling vertically instead of lashing them sideways, their view nothing but shades of grey as the men controlled their shivers, now wet through. A dull rumble could then be heard by the team, heads turning like radar. The rumble increased, soon clear that the valley was being hit from the air. An Mi24 roared past, the first of four, several passes made.

Lobster eased forwards and used his radio. ‘Lobster to air attack squadron, over.’

‘Lobster, that you? Where are you, buddy?’ crackled back.

‘We’re west of the compound you just hit, in the rocks. Can we have a cas-evac, over?’

‘Main force is north of you, clearing the valley. When they’ve secured the area we’ll come back for you. I’ll give them your position. Out.’

An hour later, Lobster was stood before the CO, American Colonel Nash. ‘Did the new headgear work?’

‘Yes, sir. Without it, we would all be dead.’

‘We found two other roadside devices, so all patrols have signal steppers and jammers now. What happened in that valley?’

‘We ran after the men with the radio detonators, sir. But the weather was so bad, that when we killed them we found that we were surrounded. So we played the Meerkat and the Hawk, sir.’

‘Meerkat and Hawk?’ Nash repeated.

‘We duck down and pop up another place, sir. We moved to the middle and duck down in the gully, firing out. They fire back and shoot each other, sir.’

‘You got them shooting at each other?’

‘Weather very bad, sir, but we can see them. And we use the grenades.’

‘How many men did you kill, sergeant?’

‘Maybe ... seventy, eighty, sir.’

‘Eighty!’

‘They go into the house to be warm, sir, all close together. I throw the grenade, sir.’

‘You threw a battery grenade?’

‘Sorry, sir. We all a bit hurt after.’

Nash glanced at the Rifles Major responsible for Lobster. Facing Lobster, he said, ‘We’ll be giving you a promotion, a field commission.’

Lobster was deflated, letting out an ‘Oh.’

‘Oh?’

‘I like being the sergeant, sir.’

‘Yeah? Well, tough shit. You’re now Second Lieutenant Lobster.’ Nash handed over the shoulder rank. ‘Put them on.’

Lobster put on his new shoulder rank, and returned to being stood at attention.

‘At ease ... Lieutenant.’

Lobster widened his stance, placing his hands behind his back.

‘You have squads Delta three, four and five, mostly Africans. Go and say hello.’

Lobster saluted, turned and left, feeling a little strange. In his old quarters, his team noticed the new rank as Lobster sunk into his bunk.

‘They promoted him,’ Sven said. ‘Bastards!’

‘With success, comes responsibility,’ a Kenyan said, hiding a grin. ‘With a lot of success, comes a lot of responsibility.’

Lobster lay on his bunk, staring at the grubby ceiling, and thinking.

I lay on a sun lounger, wondering if I should reveal to Helen what Jimmy had just revealed me. I decided not to make a decision, not yet, and my guts were turning. Things would change, things would change forever, and I desperately wanted to stop the clock, or to rewind it.

I lay in the sun, but felt chilled - and now afraid, my mind alternating between fear, stoicism, terror, courage and – ultimately - indecision. Jimmy had just informed me that when we finally made a TV broadcast about who he really was, that he'd ask everyone on the planet to watch it at the same time. Everyone. Two o'clock in London, morning in the Americas, late afternoon in Russia and the Middle East, and night in China. Everyone.

Before we left Goma, Jimmy took me around to the airport, to one of the huge maintenance sheds across the airfield. We passed a tight security screen, finding a Central Africa Airways 747 being worked on.

Stood below the huge monster of a plane, Jimmy said, 'US Presidents have Air Force One, we have this. It has EMPs front and back, anti-missile flares, reinforced airframe, EMP proof electronics, parachutes, life rafts, emergency food and water, satellite communications, fuel tanks with self-sealing rubber, the works.'

'Jesus,' I let out, Jimmy leading me inside the 747.

The First Class lounge was similar to other 747s, the Business Class section ripped out, a large wooden conference table in its place, screens on the walls. Behind that I found a dozen small rooms, each with a bed, some with showers. I walked down a central corridor, noting the small rooms off it, finding four small offices beyond the bedrooms. Beyond that I found a section of seats, most arranged like train seats so that passengers would be facing each other across small tables. At the rear was the survival gear and communications equipment.

'Bit of a step up?' I mentioned.

'But necessary. How did you think the world will react to who I am?'

'Well...' I shrugged. 'Kinda hoping we can rewind the clock a bit.'

'Unfortunately we can't, and now comes the hard part. But don't worry, you can always blame me. Play the *employee* card.'

Leaving our new plane, my hand was shaking, and I made a fist.

We flew over to the inauguration of Robert Fitz, the Republican candidate, the man having won by the smallest of margins. It was just as cold as Hardon Chase's inauguration, and we only spoke briefly with President Fitz. He seemed nice enough. He was shorter than Chase, grey hairs over his ears but still black on top, and hailed from Virginia. It wouldn't be difficult for him to pop home and see the folks from the White House.

He would have his security briefing soon enough, followed by one from Jimmy at some point. We said goodbye to Chase, and found the man genuinely moved by all we had done for him.

'I did it,' he said. 'I did a good job, and I leave with my head held high. They're even naming things after me.'

'We'll want you in on the next "M" Group meeting, and to brief the new guy thoroughly, whether he likes it or not,' Jimmy told Chase.

'I'd invite you over,' I said, 'but you bring all those damn bodyguards.'

Chase laughed. 'It's going to be strange, being on the outside.'

'Could go back to the senate,' Jimmy suggested.

'Maybe. Maybe you'll find something for me to do.'

'I have a few ideas already,' Jimmy said with a grin. 'Start with a book on the "M" Group, right from day one.'

'Yes?'

'Yes,' Jimmy confirmed.

The last ever "M" Group meeting

Back in the UK, I allocated many of my tasks to my team, and got to work on Southern Sudan and Cuba. Po helped to organise factories for Cuba, and I met little resistance when I nudged BP and Shell to buy Cuban oil for the North American Market. They would, however, not advertise the fact widely.

As directed by Jimmy, I handed over my projects and responsibilities, taking a back seat to the detail and concentrating on directions. I had a week before the last ever "M" Group meeting, something that was also worrying me. I found myself staring at the baby a lot these days, and taking long walks around the grounds when the weather permitted. In some ways I resented being caught

up in all this, but I also knew that being on the outside would be worse; not knowing what might happen.

Things between Helen and me were fine. If anything, we were closer now that we both feared exposure and the start of the troubles. We had the baby, and Shelly had returned to us, wanting to spend more time with us now the baby was here. If the world would just go away, then things would be perfect.

A day before the next “M” Group meeting, to be held in Berlin, Jimmy called in all of the household staff and guards, local police watching the estate as we met in a lounge, hardly room for everyone. It was crunch time.

The household “M” Group stood off to one side, the security staff at the rear. Sharon, her daughter, Trish and the secretaries sat on the sofa, our IT guy Gareth stood up, his hands in his pockets as usual. The wives of Jack and Keely came in, as well as a few of Jimmy’s relatives, the local police chief attending. The lounge was cosy, to say the least. I stood with Helen, Ruth and the girls, my team behind me.

‘Are we all here?’ Jimmy asked as he entered. ‘If anyone is not here, please raise your hand.’ People laughed. ‘OK, some of you already know who and what I really am, some of you suspect – but don’t say anything, and some of you don’t care so long as you get your beer money.’

Faces turned towards the security staff.

‘In the months ahead, and thereafter in the years ahead, things will get worse – in that security will need to be tighter; you will all need to change your lifestyles a little. In the months ahead, many of you will be allocated bodyguards, some of you will have to avoid certain people, hobbies and trips, and a few of you may even have to give up your jobs in civvy street.

‘You will all need to be more careful about who you talk to, and the chance of being bugged is very real. Bugs these days are very small and very efficient, and many people will try and bug many of you. You will all find that more people will wish to be your friends, trying to get information about me – and my activities. And our security staff will suddenly become more popular with the ladies down the pub.’

‘How much more popular?’ one asked, making us laugh.

‘So popular, that if you talk to the wrong girl I’ll not only sack you, I’ll make sure you spend ten years in a cell. Does that answer your question?’

No one commented.

‘You will all be pumped for information everywhere you go. And you should all assume that your homes and cars will be bugged, trackers fitted to cars. If you’re having an affair – you’ll be caught by the tabloids. If you’re up to something no good, you’ll be found out. Everything you do ... will be put under the spotlight. So, if you have a few skeletons in the closet, best remove them now and be prepared.

‘Now, this has all come about because we’re off to the next “M” Group meeting tomorrow, and a few tough decisions will be made. Following that meeting, there’s every chance that the public will finally realise who I am, and what I’m up to.’

He turned his head. ‘Sharon, you’ve been an excellent secretary for a long time, and you’ve suffered the problems of working here without asking too many questions about me. You deserve a medal.’

To the group he said, ‘You *will not* ... reveal to anyone outside this room what we discuss next, not yet at least, and probably not then.’

Everyone was now listening intently.

‘I’m not an alien, although a few of the girls I have dated believe me to be from another planet. I have no special powers, but my body has been genetically altered, and there are drugs floating around my system that medical science would fail to understand for another twenty years or so. I am ... Jimmy Silo, my parents were my parents, but I’m a time traveller.’

Those that didn’t already know glanced around.

Lucy asked, ‘Can you go back and forth?’

Jimmy took a moment. ‘I can.’

That surprised a few people, even in the “M” Group.

The police chief raised a hand. ‘Might I ask ... why you’re here, exactly?’

‘I was coming to that.’ Jimmy took a breath. ‘In the years ahead there’ll be series of disasters, hundreds of millions of people will die.’ Now he had their attention. ‘There will then be a single disaster that threatens the entire planet. If unchecked, then most of the people on this planet will die. My job ... has been to prepare people, to plan ahead, to inform the world leaders of what’s going to happen. That ... is the function of the “M” Group. I have already averted a few wars, reacted to earthquakes, and helped to bring together the world leaders in a mood of cooperation and peace.

‘Unfortunately, I can no longer work behind the scenes, because the problems that will affect us from next year onwards are too serious for the “M” Group alone. More people will need to be

involved. Now, many of you play a key role in supporting me in what I do, and I not only need that to continue, but I will need more from you. If I'm killed, documents will be released that will help the world to go on, but those documents by themselves are not that much use without me. If I fail ... then just about everyone in this room, and everyone you know, will perish.'

He let us think about, and I looked down at the baby in her cot, suddenly finding a little courage.

Jimmy continued, 'The work that I do is important, and necessary. But I am only human, and I eat, sleep and fart like normal people. So I need your help. Mostly, I simply need you to carry on doing what you've been doing up to now. There will be changes, and it will not be pleasant when the tabloids are going through your bins or sticking a microphone in your faces. Just remember what's at stake. OK, I'm sure that some of you have questions.'

'Will there be a global war?' one of my team asked.

'Yes, there will.'

'Will global warming kill us all off?' another asked.

'No.'

'Will there be pandemics?'

'Yes, a great many. Plus financial crashes, small wars, giant earthquakes, terror attacks, computer viruses, fuel shortages. Unless you plan on living in a self-sufficient cave that's earthquake proof you'll feel some or all of those in the years ahead. Beyond that, don't ask me for specifics, since there's a risk of panic amongst the population.'

'There's a risk of panic in here,' the police chief said.

'Can you fix it?' Helen asked, an odd question from my wife, especially now.

'No, I can't fix it. I can only guide you through as best as possible. Some of the things that lay ahead ... cannot be fixed.' He faced the group. 'Some of you ... will have a hard time dealing with the new reality. But consider this: without my presence here, you'd have faced those problems with no preparation, and mankind would suffer greatly. With my presence here ... comes hope, hope that we can change things, that we can prepare for them, and that the suffering will be limited. It's a fight, and it's a war, and I need my foot soldiers to be strong for the next twenty years. Those of you who have not had the Mason drug, get yourselves injected as soon as you can.'

'That drug comes from the future?' Trish asked.

‘Yes it does, and it’ll be necessary when diseases ravage the population. Now, I would appreciate that you not discuss this too much, not least because you may be overheard. I will, however, be going public in the months ahead. If any of you wish to take a nice holiday now I’ll pay for it.’

‘Can I go to the Seychelles?’ I asked.

‘No.’ Jimmy led my family back to our house, and sat the girls down. ‘Now, you may be a bit afraid –’

‘I’m not,’ Shelly cut in. ‘You can fix anything, you’ll find a way.’

‘That’s a nice vote of confidence, but there are difficult years ahead. I need you two to be strong, to look after your baby sister, and to watch out for people asking you questions. The best way to deal with people like that ... is to tell them lies, anything, just not the truth. Tell them I take my head off when I go to bed.’

‘Can we tell them how many women you’ve slept with?’ Shelly asked, getting a pointed finger from Helen.

‘Make up a figure,’ Jimmy told Shelly.

‘How old are you, Uncle Jimmy?’ Lucy asked.

‘Way over a hundred years old.’

‘But you don’t age because of the drug,’ Shelly stated, Jimmy nodding towards her.

‘Will you be OK, Luce?’ Jimmy asked.

‘Yes, I’m not afraid,’ she bravely stated, but I had to wonder.

We flew off to Berlin the next morning, heading for the last ever “M” Group meeting, the other participants not aware of that fact yet. We booked into the same country retreat outside of Berlin, meeting many of the same old faces around the bar. I was now on first name terms with aides from many countries, some of who seemed to meet-up at the bar to whinge about their political paymasters.

News then reached us of a terror attack, Rahman suspected. An oil tanker had been hijacked in the Red Sea, its tanks opened, the ship deliberately steered close to Sharm-el-Sheik tourist resort and on to Eilat, the oil slick huge. If the aim had been to kill off Egypt’s decadent and western-style holiday resort, it seemed like it would do the trick.

That evening, Jimmy avoided chatting to anyone, telling them to wait to the morning session – even the new US President, Fitz. At that session, Jimmy called order, Chase sat next to his replacement. It did not look like there was any love lost between them. ‘Ladies and gentlemen, politicians, hard-working aides.’ They smiled, Fitz seeming a little lost. ‘This will be the last “M” Group meeting.’

They were shocked, to say the least. Especially Fitz, and this was his first meeting.

‘The last?’ Fitz questioned. ‘I just got here!’

‘You’ll see why later.’ Jimmy collected his thoughts, taking in the faces. ‘Three months from now we’ll meet again in London. At that time I’ll be going public.’

Everyone knew it was on the cards, but they looked just as concerned as I now felt.

‘It would work against us if we prepared for the problems that we’ll face next - in secret. Those problems ... will affect some of the nations here, but will also affect others, and those other nations have the right to know. Not only that, they would be unhappy to have been kept in the dark about problems that faced their countries. Ladies and gentlemen, things are about to change, and in dramatic ways. You must all now prepare for the time when the world knows; when the world knows not only who I am, but what my mission here is. And, for those of you still not bright enough to join the dots, I’m a time traveller, and there is no one called Magestic.’

The Indians and the Germans were genuinely surprised, and I had to wonder if they were paying attention in class. Fitz seemed pleased, as if he had guessed right all along.

‘The others knew?’ the Indians asked.

‘Some knew,’ Jimmy responded. ‘We tried to keep in quiet as long as possible, and to use the Magestic clairvoyant as a decoy as long as possible.’

‘A bunch of NASA scientists walked out and quit,’ Chase put in. ‘After you spoke to them.’

‘Good. And may I have your assurance, Mister Chase – sorry, Mister Fitz, that you will not try and build a time machine.’

‘If we don’t build a time machine, then how come you’re here?’ Fitz countered with, a logical question.

‘There are a great many things that you don’t know, Mister Fitz. And if you spend money on a time machine ... you’ll get nowhere. The time machine that I made use of was developed by a single individual, long after your NASA and Air Force scientists had failed. That individual is now in my safe custody. And, without a vital second piece of information, that individual would have never completed his work. Your Chinese and Russians colleagues have no problem at all with you trying to develop a time machine, and wasting your money, Mister Fitz, but I ask you not to waste the money – or to give the world a false hope that people could travel back to meet loved ones, and Elvis!’

‘You may make the attempt,’ the Chinese offered Fitz, echoed by the Russians.

Fitz was not pleased. ‘Do you know something we don’t?’

‘Yes,’ the Chinese answered, no more forthcoming than that.

‘Moving on,’ Jimmy called, Fitz still focused on the Chinese. ‘I now require that all of you increase your spending on civil defence training and preparation – with the exception of China, who already has the structures necessary. Japan, your civil defence is good, but prepare also for pandemics. Russia, you need a lot of time, money and training to get ready. Mister Fitz, I’d like to see you increase the budget for FEMA considerably, and preparations made for pandemics.

‘India, you’re so far away from being prepared that you’ll need my help and guidance. You, of all the nations here, will be the least prepared for pandemics and other disasters – and also one that suffers the most. Take note: you have one year to get ready. Europe, your people are good, but you need more part-time Rescue Force staff, and a greater spend on civil defence. Same for you, Israel.’

‘Did you develop Rescue Force to assist with pandemics?’ the British PM asked.

‘Only in a small way; they’re there for earthquakes. The best way for you to prepare civil defence staff, is to create training camps along military lines, and to give unemployed people a year’s contract. By time they’ve finished their contract the pandemics will be upon us.’

‘Will the existing vaccines for things like Swine Flu help?’ the British PM asked.

‘They can’t do any harm, but should not be relied upon. The super-drug will help more, but flu viruses are adaptive,’ Jimmy explained. ‘Anyway, you all need to consider public unrest as a potential consequence of full disclosure, you’ll need greater security around all government buildings and establishments, and you need to prepare yourselves for some difficult questions. People will accuse you of keeping secrets, of keeping them in the dark, and there’ll be an issue of trust. Some of that I can diffuse when I make a speech at the next meeting.’

‘You said there would be no more meetings?’ Fitz puzzled.

‘No more in this format, or with these faces, because from the next meeting onwards many other countries will be involved. There’ll be pressure to televise them, which we’ll resist. There will also be protests by all sorts of groups, including individuals who’ll want to know if I knew of certain bus crashes, train crashes – and

could I have saved their loved ones. Many people will try and take legal action against both myself, and some of the people here. The reaction will be ... odd, to say the least.

‘I will be accused of profiting by my knowledge and position, and of failing to save certain people, of failing to intervene in conflicts – of starting other conflicts. The one thing that the people of the world won’t do ... is simply accept it and cooperate.’ He faced the British PM. ‘You’ll need to rush through some legislation to stop anyone from suing me, or I’ll spend the next twenty years in court, answering charges of not preventing deaths where I could.

‘Some countries, especially those around the Middle East, will try and extradite me, or force down planes when I’m on them. The one thing they won’t do ... is fall happily into line. For many parts of the world, and for many individuals, I will not be seen as a saviour, but a prophet of doom. And many people will try and avoid any reality at all ... about facing the future. Better for them to kill me ... and to pretend that the future will never happen.’

‘We are happy to offer you safe living conditions in China,’ the Chinese offered, getting looks from Chase and Fitz.

‘Thank you,’ Jimmy responded. ‘OK, moving on, and into unpleasant waters. Europe, you must start to cut public spending and introduce austerity measures; you must start to build reserves for when things go wrong. That ... applies to all of you, but some are better prepared than others. Stockpile rifles, medical supplies, barbed wire and tinned food.’

They stared back.

‘Europe and America, try and cut personal debt and credit card use – those credit cards that can be trusted, and make ready for a period of turbulence. If you have reserves, you can ride the turbulence better. And all of you need to prepare for imposing Martial Law.’

‘Martial Law?’ the Germans repeated.

‘When the pandemics, and other problems hit, your people will take to the streets, regardless of soothing words from their chosen leaders.’ He faced Fitz. ‘I need you to prepare your military for emergency assistance operations and disasters, either inside the States or in other countries. What you did – what your predecessor did - with Hurricane Katrina, plan on doing it on a larger scale. And, next week, I want you to create Rescue Force America, funded directly from your military budget and under the control of FEMA.’

‘We supposed to get any sleep tonight?’ Chase asked.

‘You’re a long time out of office, Mister Chase. You can sleep now that the man next to you has the ball to run with.’

‘How many rescuers would you like in this new force?’ Fitz asked after a moment.

‘Four hundred to start with, plus good use of part-timers. Allow your firemen to rotate in and out for a year, as well as your military medics. India, kindly increase the size of your own Rescue Force unit, and fund it yourselves. You’ll need them. OK, we’ll now take a thirty minute break, where you can formulate questions.’ Jimmy led Helen and me out.

Fitz and Chase came after us, directing us into a side room. ‘I’m going to have a hell of a job with the public ... if there’s any suggestion that the time machine was not NASA,’ Fitz suggested.

‘NASA scientists had a hand in it, so too your Air Force. That bit’s true, so you can use it.’

‘So why aren’t the Chinese unhappy about us trying to build one?’

‘Because your best brains couldn’t get the damn thing to work. After a few years they gave up, handing the project to someone who trusted me more than them, and he got it working in secret. By time it *was* working, I was President –’

‘President? Of where?’ Fitz asked.

‘Of the world,’ Jimmy answered. ‘Of course, there wasn’t much left of the world at that point. So I took charge of the time machine, and I sent myself through, the door closed behind me. And the only person who could work the buttons was not about to talk.’

‘So it is ours!’ Fitz insisted.

‘America designed and paid for it, but others finished it off and got it working – as with so many inventions on this planet,’ Jimmy quipped. ‘Anyway, make-up whatever you want, I’ll back you.’

Placated, Fitz sloped off followed by Chase. After a bite to eat and a cup of tea we resumed, questions ready for us.

‘Let’s go around the table, shall we,’ Jimmy suggested. He pointed at the Indians, sat on his left.

‘Will there be religious unrest?’

‘A good question. Yes, there will, but not in your country. The Muslim world will want me dead - as a false prophet. There’ll be plenty of Americas who will challenge me as if I was the second coming, and the Pope will not be a big fan of mine. Indonesia will leave Rescue Force.’

‘Ungrateful bastards,’ I put in. ‘After all we’ve done for them!’

Jimmy pointed at the French.

‘Will Europe break up?’

‘Unless we are very, very clever – Greece, Spain and Portugal will leave the Euro, but stay in the European Union. They were not ready to enter the Euro in the first place, and their cultures and economies are too far from the sensible frugidity of the Germans.’

‘Sensible ... frugidity?’ the Germans repeated, Chase and a few others hiding a grin.

‘Did you have a question?’ Jimmy asked the Germans.

‘Many, starting with the greatest threat to Europe.’

‘The greatest threat?’ Jimmy repeated, taking a moment. ‘I suppose, the greatest threat is the rise of The Brotherhood, as it is for all here. Before that, economic problems caused by global conditions will test you sorely, but you’ll do better than most. Push the coal-oil and electric cars, and save money for difficult times.’

He pointed at the Chinese. ‘When OPEC drop the dollar, will America turn aggressive?’

‘A very good question. First, I’m hoping that we can all work together to stop OPEC dropping the dollar, or at least to prepare for it. But, in 2017, a hard-line leader may emerge in America, and the American people may turn aggressive. First, they’ll turn aggressive against their own Hispanic immigrants, a kind of civil war. They’ll then spend so much time fighting each other that they’ll not be much of a threat to other nations. But that is one possible scenario – one which we hope to avoid.’

He pointed at the Russians.

‘Will Russia experience civil unrest?’

‘No, because they have a good and strong leader that the people trust.’

Chase cocked an eyebrow towards me, Fitz studying Jimmy intensely.

Jimmy continued, ‘Your biggest concern will be riding the waves of economic cycles that go on around you. You must not count on stability in western financial markets or economies, and you must try and internalise your markets more. Overall, you’ll do better than most.’

Jimmy pointed at Ben Ares.

‘How do the problems - before 2025 - affect us most?’

‘The pandemics will kill some of your citizens, and both the Palestinians – and the world – will blame you for not helping the Palestinians with vaccines. Water will run short, at least short for the Palestinians, and when the American and world economy crashes

you'll suffer greatly – not much help coming from Uncle Sam. Best save a few Shekels ready.'

Jimmy pointed at Chase, then moved his hand to Fitz.

'Internal American discord; what can be done?' Fitz asked, as if it was a well-worded question that he was pleased with.

'What should have been done, is that you should have policed your border with Mexico when I said. An alternate would be to expel all illegal immigrants now – but that would cause a lot of unrest. The one bright spot on the horizon, if you could call it that, is that immigrants and the poor will perish more than rich white folk when the pandemics hit. Unfortunately, it's not something that the survivors will ever let you forget.'

'And if they all had the super-drug?' Fitz asked.

'That's two questions,' I pointed out, getting a look from Chase, a hint of a smile.

'Let me take a moment to explain the super-drug, and the pandemics,' Jimmy began. 'If the super-drug was used widely now, say ten million die now. But if it was used widely now, a hundred million would die later. If the drug is not used widely now, say that the same ten million die now, but only fifty million die later. It's a numbers game, pure and simple.'

He pointed at the Japanese.

'Our question is the same as the Israeli. What will be the main problems for us before 2025?'

'Pandemics, and riding the economic waves created by various factors. If you lived in isolation you'd not have a problem, but you're dependent on exports. When the world economy catches a cold, you follow.'

Finally, Jimmy pointed at the British PM.

'Will widespread use of coal-oil affect the petrol-dollar level?'

'Another good question. Well, if coal-oil is not used, then oil prices will climb higher before they crash; a steep rise followed by a steep crash. Use of coal-oil helps to smooth out the rise and the fall, and takes money away from the Middle East, which is important.'

'Why is taking money away from the Middle East important?' Ben Ares enquired.

'When The Brotherhood rise, they'll destroy the Middle East – and its financial institutions. So why boost those financial institutions now?'

'Should we warn them?' Fitz asked.

'*Should* ... we warn them?' Jimmy repeated. 'You tell me. Hands up if we should warn the Saudis about the rise of The Brotherhood.'

No one raised their hand, not even Fitz.

‘Would they listen to someone who told them that they’d be destroyed?’ Jimmy asked Fitz directly. ‘Besides, if – in 2025 – the Saudis do fall, you’ll all benefit financially.’

‘You have no love for the Saudis,’ the British PM noted.

‘They’re a one-trick-pony: they make money from oil and keep it.’ He held his hands wide. ‘What have they ever done for the world? What will they do in the future, besides try and kill me?’

‘They’ll attack you, even after exposure?’ Fitz puzzled.

‘Even more so,’ Jimmy emphasized. ‘And the Iranians will declare me the devil, putting a price on my head.’

We broke for lunch, a good two-hour break for the various groups to chat, plot and scheme.

The Japanese came and found us. ‘May we offer a proposal.’ Jimmy kicked out chairs for them. ‘We are conscious of our lack of natural resources. As such, we would like to offer to help where we can, in return for better access to African ore markets.’

‘We could produce more ore, and you could stockpile it,’ Jimmy offered. ‘But in the next few years, North Korea will open up, and they have good resources. Besides, you have coal, and I’m happy to see you convert it to oil.’

‘The quantities would not be sufficient.’

‘They would if you adopted electric cars and buses,’ I pointed out.

‘We are moving quickly in that direction. As for Africa?’

‘There’ll be no shortage of ore on the global markets,’ Jimmy assured them. ‘And we’re about to open up Southern Sudan and Ethiopia.’

‘The Chinese, they will have a ... large area of New Kinshasa,’ the Japanese delicately mentioned.

‘You’re looking in the wrong direction,’ Jimmy told them. ‘Look at the land behind Vladivostok. It has more resources than ... others realise. And make friends with North Korea. Quickly.’

Now curious, the Japanese withdrew.

In the afternoon session, we discussed Afghanistan at length – our aims and objectives, as well as the high Taliban body count. Jimmy reported that he was happy with the campaign, that many fighters were being killed, and that more were pouring over the border to line up and be shot. Somalia was now quiet, free of al-Qa’eda fighters, and Lebanon had quietened down a little. The magnet was working. Sharm-el-Sheik was ruined, Jimmy lamenting its loss, but few others were concerned. Ben Ares was not pleased

about Eilat, but his beaches had escaped the worst excesses of the oil spill. Currents were now pushing the slick down the Saudi side of the Red Sea. The Saudis were getting their oil back, but not as they might have wished for.

We sat down to a sedate evening meal, no one looking forwards to exposure, and broke early in the morning, the meeting just a one-day session this time. The next meeting was set for three months, at which time we'd go public. My fears had now solidified to a date in my iPad.

Coal oil

Poland, Belgium, and a few European other nations wished to buy the coal-oil converters. Jimmy informed them that they could, so long as they informed us of production levels, and if they'd use the resultant oil internally or not. And, after some bullying, they agreed to use the clean version of coal-oil to fuel new power stations, and to increase their use of electric cars. They signed agreements to that effect with the EU commissioner witnessing the deals.

The Germans agreed the deal straight away and moved quickly to build its first coal-oil converter, two refineries already nearing completion in the UK. In the Congo, our first mine was producing coal, and our refinery had been producing oil for a few months. And the resulting petrol was now being tested by local drivers. Most of the coal-oil was destined for our own power station, to power New Kinshasa, which currently had more power than its few residents could utilise in a lifetime.

South Africa agreed the terms for the coal-oil converters, as did North Korea, and the Saudis were worried, planning on cutting back on OPEC production. They petitioned the Americans to influence us, and we continued to ignore invitations to meet with them. I voiced my concerns about antagonising them, but Jimmy held fast in his disdain for them.

America had its first coal-oil refinery under way, its engineers visiting the refinery south of New Kinshasa for comparisons, and for useful tips. Our own refinery was using coal extracted at ten dollars a tonne, and produced coal-oil at twenty dollars a barrel, a small fact that we kept hidden from the world.

With a little arm-twisting, the Chinese invested further in western housing markets, and we prevented property prices from falling further. Things were stable, the days ticking off the calendar, but a few countries had gone over the top with their civil defence preparations, a few budgets being leaked to the press. A CNN special programme joined the dots, and quite accurately claimed that the last “M” Group meeting had spurred the rise in civil defence budgets. We were in trouble, and the public were worried. I had to wonder if we’d get through the three months.

Still, the wonders of coal-oil were cheering stock markets and members of the public alike, and we were popular. OPEC met to cut oil production, something that the people of the world applauded, since it would obviously mean that oil lasted longer. Cuban oil production was increasing rapidly, African oil deliberately cut back for the export market and increasingly used internally.

The net effect of cheap food and cheap oil for Africa was an unprecedented economic boom, as well as a baby boom, both of which we desired in equal measure. The estimated population growth for Africa for the past twenty years had been little more than twenty percent, a great many deaths expected from AIDs. That figure had been revised to an almost one hundred percent increase, the greatest increases witnessed in the Congo and Somalia.

To assist North Korea, I dispatched a ship full of the housewives favourite yellow buckets, stuffed full of useful items. I sent two million, and with sanctions against North Korea lifting I diverted oil tankers that way. Further, I bought wheat from the US and shipped it across, and Po organised cheap radios and electronics, Po himself keen to open up the North Korean market. He’d seen what we had done in Africa, and he fancied himself as something of an entrepreneur on Jimmy’s level.

We persuaded the Chinese that North Korea would be a good investment and they moved in, offers of capital made, requests to build factories and to dig mines. North Korea was the new Klondike of the Far East, Japan also now closely involved.

Someone Stateside then leaked the military’s preparations for disasters, and its budgets, Robert Fitz under pressure early on in his administration. Rescue Force America was widely advertised, and at any other time would not have caused a stir. Britain, France and Germany could all be seen increasing their civil defence budgets, and the public were curious. They were also concerned, the press starting to ask difficult questions.

In the UK, our own security had been beefed up, that fact leaked in a millisecond. We now had more protection than the Prime Minister and the Queen combined, more difficult questions asked by the press. Since we were avoiding interviews, the speculation grew.

Jimmy's mother passed away two days before my father, and on top of everything we endured a round of funerals and wakes, enduring relatives that we'd not seen for many years. Jimmy was oddly relieved, not saddened, clearly indicating that he had seen his mother die before. He called forwards the next "M" Group meeting, the one that would not be an "M" Group meeting. An additional twenty-five countries had been invited, President Errol representing our group of African countries. We did, however, separately invite Ngomo, Abdi, Solomon from Zimbabwe, and ten other senior army officers.

In a separate meeting, Jimmy briefed the senior staff from CAR, and those from our corporation, the men quietly stunned and in need of a drink. We met with the PM and his team later, Jimmy issuing useful advice on what may happen after disclosure.

The former British Chancellor then gave another interview, and repeated his claims that we were preparing the world for a series of disasters. Now, however, he had a ready audience, the British Government moving soldiers around and increasing its civil defence exercises. All police leave was suddenly cancelled, and that sealed it, silly season had begun.

I just wanted it over with now, I was fed up, the number of idiots outside our gates increasing. Even prior to disclosure we had become virtual prisoners, now it was just silly. What I wouldn't have given for a few battery grenades. I now received silly emails from customers and suppliers and locked them out of the system, cancelling contracts when people asked silly questions. Little work was getting done, and I had to wonder how I'd get any done afterwards.

Exposure

15th March, 2013, was a date etched into my heart. My iPad had counted down the days, and now it was here. Zero days to go.

Jimmy had come over to the house the night before and reassured us at length, but we all knew it would be difficult. The girls were

more curious than afraid, Shelly thinking it cool. When her girl friends were at the house they'd all go googly-eyed around Jimmy, blushing.

The big day arrived, and we slipped out at 5am, no nutters cluttering up our gate yet.

Our new coach was bullet and bomb proof, it even had air filters and fire suppression systems. It afforded us a smooth ride, and we glided up to London with a discreet police escort, all five discreet cars. At least they didn't have their lights flashing.

The safest venue we knew for a press conference was our nightclub, and the TV cameras were already set-up as we arrived. There would be six live feeds, each working under the agreement that they would broadcast to anyone around the world who wanted a feed.

Two days ago, the world had stopped to pause when Jimmy requested that everyone in the world watch the address. That piece of news was released around noon, people in offices simply stopping and staring at each other. They already knew that the various world leaders were on their way, and now this request for everyone to watch their TV screens. The tabloids went crazy with speculation, the TV news discussing nothing but the planned meeting. Jimmy had, however, ordered the African times to reserve the front page only, and to keep the rest of the paper as normal.

Yesterday, the day that the leaders left their own capitals to fly off for London, recorded messages were played by the various national leaders, asking their peoples to watch at certain times in certain times zones. The Chinese were asked to stay up late and watch, the Japanese would be up very early, the Americans would catch the feed around 9am on the east coast, earlier on the west coast. Europe and Africa would receive their feed at noon on the day in question, the Russians at 3pm.

When I considered how many billions of people would be watching I had to wonder about Jimmy, since he was just as calm as ever. And, as ever, he had no prepared notes. He spent most of his time reassuring us, and we were not even due to speak.

We booked into our club's hotel, security very tight, many of the original "M" Group leaders already in attendance. At 10.30am we organised a mini "M" Group meeting, our own PM elsewhere.

'So, all ready?' Jimmy cheerfully asked.

The Chinese were fine, so too the Russians, the Indians nervous, the French and Germans clearly ill at ease. Ben Ares seemed to be

happy to be at the centre of things, and the Japanese asked again about African ore – making me smile.

‘What will happen today,’ Jimmy began, ‘will be my big speech. If I get it right, you’ll have less hassle later, and fewer questions hopefully. If I get it wrong, they’ll kill us all.’

‘No pressure then,’ I quipped.

We discussed the format of future meetings, and the greater use of UN structures. I downed a beer in a bar stuffed full of TV crews, ignoring all their questions and pleading ignorance; Jimmy who? I greeted Ngomo, Abdi and Solomon, the men very curious about the meeting. They explained that they had been allocated seats at the back of the Red Room.

Jimmy eventually nudged everyone downstairs, “M” Group leaders sat on the stage behind Jimmy, chairs labelled in advance, translators made ready. Jimmy worked the line, chatting in many languages.

‘Historic moment,’ Fitz commented, but did so as if he didn’t want to be here. ‘And no auto-cue.’

‘I speak from the heart,’ Jimmy said with a smile.

‘The entire world is watching, Jimmy, so I sure as hell hope you know what you’re doing,’ Fitz added.

‘If I don’t, Mister President, then everyone dies.’ He held his gaze on Fitz for a second before testing the microphone atop a podium. ‘Settle down, please,’ he cheekily told the TV crews and invited reporters, numerous national leaders now sat around tables normally used by club diners. He checked his watch, then waved a few people away from the stage, a number of armed officers positioned in the front row. He tapped the microphone ‘Testing, testing. Silo to earth. Come in earth.’

Helen and I exchanged looks, our eyes wide. We were sat just off the stage, and I was thankful to be out of shot. No sooner had I thought that than I noticed several cameras focused on me.

Jimmy checked his watch, conscious of satellite time. ‘Ladies and gentlemen, invited guests, members of the media, world leaders, and those watching this broadcast around the world – welcome to Silo’s nightclub, London, the venue for this meeting today.’

Well, if nothing else, club attendance should be up after this.

‘This meeting, and the statement that I’ll now make, was always planned, and was inevitable. I had expected to make this speech a few years ago, but time has moved on – and it was not necessary till now. Now it is necessary, necessary ... and vital to the future of this planet.

‘There has been much speculation in previous years about things that I’ve done, or who I may really be. Speculation about an ability to predict earthquakes, the release of the super-drug, of electric cars, and of my work in Africa. The people of this planet saw me shot three times, and yet walk out of hospital the next day. Part of my miraculous recovery was down to the Manson drug, part down to advanced genetic modifications made to my body.

‘Ladies and gentlemen, people of the world, there is no easy way to tell you this,’ Jimmy said with a hint of a grin. I held my breath and closed my eyes for a moment. ‘I am more than a hundred years old, and I am a time traveller.’

A chorus of whispered comments shot around the gathered press and guests, the non-“M” Group national leaders all sitting up and checking their translations.

‘Those world leaders that make up the “M” Group have known for many years, some have known for twenty years or more. Our aim ... was never to deceive anyone, or to give any nation an advantage over another. We have worked behind the scenes to develop medicines - vaccines and drugs, as well as future technology that could help the world today. Millions of lives have been saved, oil costs have been kept low, new technologies released to help the world, and further new technologies will be released in the future.

‘Many of you will have questions, the first few being – who invented the time machine, when, and why? The time machine that I made use of was developed by NASA scientists working with the United States Air Force and Army at a future date, after 2030.’

I frowned at that date.

‘It was developed after a global war had destroyed most of this planet, and was a last desperate act, made by desperate people.

‘People have asked me in the past – who sent you? The answer is, I sent myself. When the time machine was completed, most of what was left of the US military was based in Canada, along with refugees from Europe and many other countries. I was the political leader of those refugees, later appointed president of what was left of the western world. I made a choice to send myself back, and to send no one else.

‘I came back through time, the exact mechanism of which will be kept secret to prevent others trying the methods. No one ... should ever again try to develop a time machine, since the good people ranged behind me know what the future holds, and how to avoid the same mistakes. But the people behind me, and the other political leaders of this world, should never be left alone to decide the fate of

the planet. The leaders of this planet ... work for the people. They answer to the people, it's the people that elect the leaders, and it's the people that will suffer the most if past mistakes are repeated.

'In the years ahead there will earthquakes. I know where and when they will occur, and Rescue Force was specifically developed to help with those earthquakes. It has taken me more than twenty-five years to develop Rescue Force, and they will be sorely tested in the years ahead. Theirs ... is an important role.

'In the years ahead there will be outbreaks of disease, and for that I brought back through time the super-drug. Unfortunately, that drug is not enough to defeat every disease, and some diseases are adaptive; I cannot save everyone, I don't have answers to everything. If you expect too much, you will be disappointed.

'In the years ahead there may be wars, terror attacks, and there may be severe economic crashes. We have already smoothed out some of the bumps along the way and prevented many problems – all the while working behind the scenes.

'My being here is a cause for concern, a concern for the disasters that lay ahead. But my being here is also a great benefit, in that I brought with me a route-map for you to navigate the problems of the future. All that's needed is that the people listen – and don't make the same mistake this time around. Unfortunately, in the years ahead, some countries will suffer disasters, whilst others will prosper. If the countries of this world do not cooperate in helping each other, those countries that fail will drag down the others, and they may cause instability leading to war.

'We cannot simply sit back when a country suffers an outbreak of disease, because if that disease is not dealt with in the country of origin it will spread to everyone. We now live in a very inter-connected world, and airliners can transport a disease right around the world in a day. It is not enough to think that someone else's problem will not affect you, but it's easy to be selfish, especially if we were to ask the rich nations to assist the poor nations.

'But if those poor nations were to descend into chaos and anarchy, then they'll produce terrorists, and those terrorists would land on the shores of the rich nations soon enough. And, in the decades ahead, a very great disaster will strike the world, the main reason for me being here. If most of the world's countries were to cooperate with each other between now and then, and cooperated with each other at the time of the disaster, you would have a fifty-fifty chance of surviving that problem.

‘If the countries of this planet fail to cooperate in the years ahead, or fail to cooperate fully in the decades ahead when disasters strike, you will have a very low chance of surviving.’

I could see some of the leaders growing uneasy.

Jimmy continued, ‘What’s in front of you all ... is a test, a test for mankind. Work together, and we all survive. Pull in ten different directions ... and no one survives. I can give you the route map, I can tell you what will happen, but I cannot force you to work together. That part ... is up to the good people sat behind me, and those listening to this broadcast. I’ll supply you with super-drugs, advanced technology, and warnings of upcoming disasters. But that’s not enough to fix the problems that you’ll face.

‘What’s required, is what I don’t have. What’s required ... is someone sat watching this broadcast who may wish to be a politician in the future, and not because that person likes the sound of their own voices, or because they wish to make some money. What’s required, is a few bright young people who wish to be heroes – and to help mother earth.

‘In the years ahead I’ll be creating volunteer programmes, centred in Africa. If you’re a scientist, an engineer, a politician or a thinker, and you’re prepared to work long hours for little pay, then I’ll have some work for you.’

This was all news to me, and I stared up at Jimmy.

Jimmy continued, ‘I have the route map, but I need a little help along the way. I ... am asking for your help, so that I can try – at least – to save everyone.’ He took a breath. ‘The various world leaders of the “M” Group will now speak in sequence while I go for a sandwich. An hour from now I’ll answer questions, so the press should think up a few good probing questions. Thank you for your time.’

Jimmy stepped to me and led me off as President Fitz took the podium. And we did go for a sandwich, as well as a cup of tea and biscuit.

‘Go alright?’ Jimmy asked us.

‘I thought so,’ I offered. ‘Did you appeal to the people to bypass the leaders?’

Jimmy nodded. ‘Never underestimate people power.’

We watched the speeches on a TV set in the computer room, most just waffle about cooperation and planning for the future. Then it was question and answer time. Jimmy led us down, the leaders now off stage, maybe for a sandwich of their own.

Jimmy took the podium. 'I'd just like to say that I did have a sandwich, and a nice cup of tea. I'll make like a US president and point at people who wish to ask questions, so could those with questions please raise a hand, a finger or stand.' He pointed at the first journalist.

'Did you say that you travelled alone?'

'I did. My staff are just that, staff, although I think of Paul and his family as my own family. Next.'

'How old are you exactly?'

'That's a rude question and I'm not saying. Next.'

'What was the global disaster that caused the time machine to be built?'

'After consulting with the various leaders, we've decided not to reveal that yet, since it may actually cause the problem to occur early. If you wish to save your own life, don't push the issue. When you get the answer you'll help to create a paradox – and harm us all. I appreciate that you're a journalist, but deep down you probably do care about your fellow man. Next.'

'How much money have you made for yourself?'

'I've made two hundred billion pounds, of which I have twenty million left in my account, the rest being spent on either Africa or Rescue Force operations. Next.'

'Is the Manson drug a cure for all diseases?'

'No, it's not. Next.'

'Why have you never had a family of your own?'

Jimmy took a moment. 'I had a family once. They all died. Next.'

'Why did you not inject your parents?'

'That was their choice. I would never force the drug on someone unless they were dying, or incapable of making a choice. Next.'

'Were the kids in Ebode orphanage injected?'

'They were, yes, starting in 1987. They were all dying, so I had no problem with injecting them. We've injected half a million African children. Next.'

'Why was the drug not released back then?'

'Because I was trying to work in the shadows for as long as possible. Now that it's out in the open my work will be much harder. If it had remained a secret I would have had a better chance of fixing a few things. Your interest in me will seriously reduce my ability to work. It will cost lives, directly. Next.'

'Why go public now?'

'Too many people leaking information, like that toe-rag of a former Chancellor, and the idiot former French president. The

speculation was making it difficult to work. I'll now try and find new ways to get things done. Next.'

'You said it was fifty-fifty if this global problem could be fixed.'

'Less than fifty-fifty; it'll be fifty-fifty if the various governments work together, less if they don't. Next.'

'What if American, Russian and China fall out?'

'Then most of the people on this planet will die.' Jimmy held his stare on the woman. 'That includes you, and everyone you care about.'

Jesus, I thought. The cameras were all still on.

'Did you trade the stock markets knowing which stocks would do well?'

'I did, yes. What's your point?'

'Is that legal?'

'I don't think it qualifies as insider trading. And the money was used to develop the drug, electric cars and other things. If you're not happy, ask the Africans I saved to give up their lives and to wind back the clock. And if there are any more stupid questions then we'll end this session.'

'Who are you accountable to?'

'A good question. I'm accountable to the people of this planet yet to die, to those who wish me to find cures for diseases and fixes for problems. I'm accountable to those people who'll die in ten years time because I failed to stop a war or a terror attack. But most of all, I'm accountable to the six billion people who died, and to those who put their faith in me in Canada. I brought back the ghosts of six billion people, all wishing me to succeed.'

He pointed at the man who asked the question. 'Do you have a family?'

'Two kids?' the man reluctantly admitted.

'Well, the chances of them growing up and having families of their own is slim, but their chances are better now that I'm here. And now that I am here, idiots like you want to do nothing other than trip me up. In the years ahead ... a number of pandemics will strike, and your children may well die, or they may benefit from a cure I find. So this is what I want you to do. Go home and say to your wife: our kids may die, but at least I had a snipe at the man that may cure them. Then, maybe your wife will stop and ask: why are you sniping at our children's best hope to stay alive?'

'Then, maybe, if you have any lights left on in your soul, you may stop to think about what you're doing. No one voted me into office, no one asked me to come here, no one asked to release the

super-drug – which has saved fifty million people already. I ... made the choice to come back, I ... stepped into the time machine, and I've spent the past twenty seven years fixing things, most of which you don't know about, and may never get to know about. I ... made the choice, and I'll continue trying to fix things whether you like it or not, idiot. And if the people in this country don't like what I'm doing ... I'll move to China, or Russia, or down to my beloved Africa. Because in Africa, they thank people when they receive help.

'In the years ahead, a lot of people are going to die, fewer if you stop to listen. I just hope that it doesn't take the death of one of your children for you to stop being a sniping journalist – and to finally ask for help. The clock ... is ticking.'

He walked off, collecting Helen and me, a hundred questions shouted, cameras flashing. We collected the African army officers and led them upstairs, ordering the press removed from the club. In the Indian restaurant we settled our guests, drinks ordered.

'My god, Jimmy,' Solomon let out.

I told Solomon, 'When you were first in Kenya, working in college, we knew, and helped you.'

'And me, Jimmy,' Abdi began. 'You helped me to be where I am.'

'Of course; I needed good people in place, not fat and corrupt politicians. For you lot, the work is just about to start. There'll be difficult times ahead, and I need strong men, men with courage, not men who want to put money in their pockets. There'll be disease, war, financial problems. For all of you, the real war is just about to start, the battle to save this planet. And in 2025, a full-on war.'

We spoke for forty minutes as we ate, and we had a very loyal bunch of future leaders sat listening attentively. I figured they'd do anything for us. After two beers, our next group of guests arrived, the British newspaper editors and TV chiefs, the PM in on the meeting. We welcomed them all, drinks organised, tables pulled together in a bar.

'First of all, gentlemen, let me re-iterate that I'm flesh and blood, and quite human. As such, if you piss me off I'm going to react to it like a normal person, only a slightly more aggressive one. So let me make myself perfectly fucking clear on a few things.

'If you try and send someone over my fence, or to talk to Paul's girls, or hang about outside my gate, I'm going to get pissed off about it. I'll identify the guilty party, stick you on my shit list, and the next exclusive goes to your competitors. And let's be clear about this: this is the story of the century - you don't want to be left out.

‘Another caution. Don’t ... try and follow us around. If you do that in Russia, China or – god forbid – Africa, they’ll arrest your reporters, or shoot them full of holes. If one of your snappers tries to get close to Paul’s house in Goma he’ll get himself shot. Not because we don’t like you, but because many people try and shoot us, and our guards are twitchy.

‘If you want an interview, email us and we’ll arrange something. If you want to follow us to China, do it officially and we’ll buy your beer for you. Sneak around, and the Chinese will take exception to it. Try and sneak around Africa and your people won’t come back. Ask us nicely and we’ll get you cheap rooms in Goma, we’re not monsters, and we’ve always looked after the hacks in the past.

‘But if I can’t get out of my gate tomorrow for snappers, I’ll identify them and you’ll lose out. Now, if I ask you not to run a story, and you do, there’ll be a penalty. If you run a story about something I ask you not to, you might just crash the stock market, and that’s your pension funds as much as anyone else’s.

‘Now, In the years ahead things are going to get tough, Martial Law is a distinct possibility -’

‘Martial Law? Here?’ they questioned.

‘Yes, here. Pandemics, financial crashes, wars, terror attacks. What I need from you, what this country needs from you, is less of your usual selves, and more Churchill. And I’ll give you one story now that you may not print. There are twelve people sat in front of me. On a simple statistical average, one of you will die, and two of you will probably lose children to disease in the years ahead.

‘The problems that we’ll face in the future will be right up close and personal, right in your own families. When you want to be reporting about some distant war, you’ll be reporting about neighbours and friends. And if things go wrong ... well, you’ve all got fifteen years left to live. Forget your fucking pension funds; if the world at large doesn’t get it together then you’re all dead, your kids, your fucking pet dog!

‘World War Three was due to break out ... oh, in about six months. But because of my work for the past twenty-five years, the Russians, Americans and Chinese are talking to each other. There’ll be no global war in six months.’

‘We’ll be bringing in emergency legislation,’ the PM told our guests. ‘Powers to curb you where necessary, and to stop panic in the streets.’

‘You’ve just worried the whole fucking world on TV,’ a man pointed out.

‘They needed to be woken up,’ Jimmy told him. ‘But from now on I’ll try and play things down. Panic achieves little.’

‘Will the superpowers cooperate?’ a man asked.

Jimmy made a face and shrugged. ‘Based on past experience, I’d say we’re all screwed. But I have a few tricks up my sleeve, like coal-oil and electric cars. A lot of the time I work behind the scenes, which is why I never made it public up to now. In the future I’ll have to hold open meetings and ask people nicely. In the past I threatened, bribed and bullied people into doing the right thing. Now I have to say please and hope for the best.’

‘How much access do we get?’

‘Depends on how you behave; piss me off and I’ll move to Africa and run the show from there. In the meantime, I’ll give joint interviews to you all at the same time and tell my staff to talk to you. That process will go on till you print snaps of my staff’s cleavage, or stories about their teenage years.’ He held his hands wide. ‘It’s all up to you. And please, don’t make tomorrow’s headline The Terminator.’

I laughed. ‘You do look like him.’

‘What’s Paul’s role?’ they asked.

‘Understudy. If I’m killed he gets documents and carries on.’

‘You take a lot of risks, always getting shot at.’

‘Like I said, I was working behind the scenes. People never knew who I was or what motivated me. To one particular leader, about to start a war, I mentioned what I knew about his youth – and he stopped the invasion.’

‘You know what *we* did in our youth?’

‘Yes, I’ve had investigators following you all for twenty years, *and* I know what you’ll do in the future. I have dirt on you all. If you throw mud at me, I’ll throw mud right back, simple as that. I told you, I’m human, and I get pissed off easily enough.’

‘If there was a problem,’ the PM began, ‘the full weight of my government, our intelligence services, and the full weight of the American government would be brought to bear.’

‘Sounds like censorship,’ a man complained.

Jimmy faced me. ‘Do you ever wonder if you getting through?’

‘Let’s just move to Africa,’ I said, and I half meant it.

Jimmy faced the men. ‘Print crap about us, you don’t get to sit in on the press conferences. Simple. It’s up to you. Cooperate, and your people get free trips and good stories.’

Jimmy retrieved a set of CDs, handing them out. ‘On there are digital photos of us, all our businesses around the world, background

notes, contact details for press officers, stories about African development, the works. Now, if you'll excuse us, we have solicitors to chat to.'

'In trouble already, Jimmy?' a man asked with a smile.

I said, 'Prepping them to sue your arses!'

We led the PM out, and to a second bar, twelve solicitors and barristers waiting.

'Fucking hell, Jimmy. Time travel!'

'Yes, time travel, so I need you to stop people suing me for trading the stock markets, and to fend off all the nutcases that will sue me for not saving their pet dog from dying. There'll be a few people wanting to sue me for not warning about certain world disasters; sinking ships, crashing planes.'

'Did you know about them?'

'For the most part, no; I can't remember the whole of human history!'

'I can only say that this is ... unprecedented,' a barrister put in. 'It'll be new territory.'

'Well start planning,' I encouraged them.

'The biggest problems will come when people start dying,' Jimmy told them.

'Dying?' they asked.

'There are a few nasty pandemics around the corner,' Jimmy explained. 'And when people lose their families, they'll try and claim that I could have done more, or sooner.'

'They'd have no precedent,' a man said. 'You're not responsible for the world – although, when you came back through time you did kind of take on that responsibility.'

'I don't like you,' I told the man. 'You're on our side, so start thinking and planning.'

'We'll be rushing through some legislation,' the PM put in. 'Kind of ... *you can't sue Jimmy* ... legislation.'

'Best way to do that,' a solicitor began, 'would be for the UK Government to take all responsibility for Jimmy's actions, as you might for a police officer or soldier.'

'I've seen Jimmy invade countries and topple leaders,' the PM stated. 'So there's no way we're taking responsibility for him!'

We thanked the PM, and left the legal brains to think up precedents, and no doubt charge us a great deal for their time. And claiming the free beer we gave them on expenses. In a quiet bar upstairs, we sat.

'You OK?' Jimmy asked us.

‘So far, so good,’ I said. ‘I could see you losing your rag with the press though. I wanted to hit a few of them.’

‘It’ll be manic,’ Jimmy warned us. ‘But never forget why we’re doing this.’ Ten minutes later, Jimmy headed off to address those world leaders that were not “M” Group.

In our room, I turned on the TV, and we sat on the bed watching the news for hours, flicking channels. The Russian leader was home already and giving interviews, so too the French President and the German leader.

At 5am we raided the mini-bar for chocolates, having to wait for breakfast, and again watched the news. It was Sunday morning, and the BBC were showing the turnout at various churches in Africa, the sermons apparently about us. They cornered a slow moving Kenya housewife in a floral dress, and asked her about Jimmy Silo being a time traveller.

‘We prayed for a miracle, and God sent us Jimmy Silo, saviour of all Africa.’

I smiled. At least some fucker appreciated us. I rang down and asked for the papers, wondering just how long it would be before we got the barristers involved. The broadsheets concentrated on the science and politics a lot, time travel and global wars. The tabloids were mostly “revealed” and “admitted”, and “we knew all along” stories. But the Sun Newspaper was behind us, a wartime headline of “The fight starts today!” and “We take back our planet!” Good old British wartime spirit, I thought, showing Helen.

Then I noticed a sexy image of Shelly, taken by a school friend. ‘Tart!’ I said. I could not decide if I wanted to sue them or not, they had stayed just inside the line, and I could not decide if I was mad at my thirteen year old daughter more than them.

Jimmy sent us back to Wales, staying on in London to give interviews. We didn’t see him for four days, interviews given to just about all of the world’s agencies, Jimmy taking more time with the foreign press than our own.

I then noticed the formal request for help, full page spreads in many papers. The Silo Foundation, the one that ex-President Harvey ran to promote student travel and green issues, was asking for donations, and staff to work cheaply in Africa. It asked for scientists, engineers, researchers, computer experts, microbiologists, the works.

When Jimmy returned, that evening, I asked about the appeal. ‘It may surprise you, but there are millions of people out there who want to help, even to the point of working in Africa for peanuts. We’ll recruit them and put them to work.’

‘Where?’

‘The Congo. Do we ... have anywhere we can build offices, labs and apartments?’ he asked with a grin.

‘You knew, didn’t you.’

‘I knew, but it had to look like your idea.’

‘We’ll house them in New Kinshasa,’ I released.

‘Create an area in the northwest, full of apartments and labs. Oh, and a few churches.’

‘Churches!’

‘Most of the people who come will be Christians.’

‘Oh’, I said after a moment. ‘And...’

‘And ... they’re motivated to help.’

‘Don’t they expect the good lord to provide?’ I teased.

‘Many Christians are more practical than that; they’ll see me as an instrument of The Lord. Get on it quickly, please.’

Praise the Lord!

Things hadn’t changed that much after exposure, people around the estate got used to the idea, and I got back to work. We had enough builders around New Kinshasa to build a city, let alone a research facility, so I diverted resources. Six apartment blocks were started, labs, even the churches, and I figured that they would not take long.

Meanwhile, a team in the Goma Pentagon began checking the CVs of applicants, and sixty kids from Shanghai arrived back in Africa, many earmarked to head-up research projects, most of them already practising Christians. I had to wonder about blinding laser rifles and battery grenades being developed by good Christians.

The police guarding the estate had painted double red lines on the roads outside, and convenient verges on which to stop were blocked off with small wooden fences. Cars that stopped were immediately fined, drivers taken out and questioned. A second offence meant that the car was removed to the police yard, a hefty fine to get it back.

A bus company offered to run tours to us from Cardiff and Bath, but we hit them with an injunction straight away and won the costs, a very expensive fiasco for the company. Powerful video cameras were installed at the gates and photographers and hacks were recorded, all identified. The first paper to annoy us lost all rights to

attend interviews for a year, a fact we made clear to the others, the number of photographers lessening.

Our friendly local farmer drove past at 5am one morning, the police conveniently not about, and spread pig shit over the verge where spectators normally congregated. If they wanted to stand and stare, they could now endure the pong. Two people climbed the outer fence, both getting nipped by the dogs and arrested.

We then employed a useful tactic, that of pre-recorded film of us at certain locations being released. People thought us in Goma when we were at the house, or in London when we were in Cardiff. We were seen landing in Beijing, Hong Kong and New York at the same time. Some poor old hacks had actually flown to those locations, at their expense, which was the whole point.

Our own version of Air Force One was ready, but when being test flown, its defences were unfortunately tested. An F15 flew up behind the 747, tracked on radar by the 747, and hit with an EMP. Scratch one F15, the pilot ejecting and breaking his arms. Next, they fired a modified missile, one with no warhead, and the 747 hit it with an EMP, the F15 this time twenty miles away and taking no chances.

The plane flew up to London overnight, and we met it at Heathrow Airport, twelve journalists invited aboard, a note sent to the paper that pissed us off about their lack of invitation. Two of the journalists were American, the rest from British papers, the BBC planning on meeting us in Goma. Flying down, we enjoyed in-flight beds and showers, the girls exploring the plane at length.

Lucy surprised me by her visit to the cockpit, her hour-long visit. She sat asking difficult questions, and seemed to know the 747 inside out. I spent time with the reporters, but most of them simply wanted to sleep. We landed at Goma hub around 5am, the terminal quiet, and pointed the press towards the airport hotel as we headed the short distance around to my house.

At 6am I plunged into the pool, the perfect antidote to a long flight. I found a very large bug that I couldn't identify, doing breaststroke, and flicked it out. At 10am, and with the press fed and gathered, we showed them around the Pentagon building, allowing them in on a few meetings, projects described. The reactions from the parliament staff there were mixed, some reacting to us just as before – in awe of us – a few just scared rigid as we passed. Jimmy would take time to talk with the security staff, many of who were ex-Rifles, a lapel badge identifying them to other Rifles. Jimmy would enquire about campaigns served in, their home towns and

family. He was now more like Prince Charles than the prince himself.

The press were all bought lunch at the outdoor café, a view of the mini-marina and canal as we ate, before further meetings were tackled. At 4pm we led everyone to the main marina, the Indian restaurant we choose instantly packed out. We eased back with cold beers, answering questions, mostly about Africa.

The attending press were then all handed five hundred pounds worth of casino chips – labelled as a promotional offer, and we bumped into many of them there later. Five different glossy magazines had been invited to the mansion, turning up the next morning, all of us posing for shots, the mansion photographed at length. We hoped it would ease any curiosity in the place.

That afternoon, Po, Yuri and Marko came around for a scheduled meeting, scheduled to be in the sun around the pool with a cold beer. Po was mind-blown by it all, Marko and Yuri coping well enough.

‘Why me, why me?’ Po asked, sat in a little white hat to keep the sun off. ‘You help me.’

‘I knew that you would be a great asset,’ Jimmy began. ‘And your family has a destiny, a part in the battle ahead.’

The little fat Chinaman grew an inch. ‘Destiny,’ he repeated, giving it some thought.

‘And us?’ Yuri asked.

‘I also knew that you would be assist me.’

‘Do you ... want anything from us?’ Yuri asked. ‘Do you need money?’

‘No, I just need you to carry on being yourselves,’ Jimmy replied. ‘But thanks for the offer.’

‘How’re the burger bars?’ I asked.

‘Six thousand are operating,’ Yuri replied. ‘A few more planned.’

‘And the bookshops?’

‘Almost four thousand. Also doing well. We offer incentives and vouchers from bookshop to burger bar to coffee shop.’

‘And the farms?’ I asked.

‘Now the largest privately owned farm in Russia,’ Yuri proudly stated, a finger raised. ‘Millions of tonnes of produce. We aim to start exporting within five years.’

‘But first,’ Jimmy insisted, ‘we’ll make sure that the poorer Russian people have good food.’

‘Da, da.’

With the guests gone, a short walk down to their own houses, Jimmy said, 'Tomorrow I'm taking Air Force One around the world, you stay here and do some work.'

'Helen?'

'Has a baby to watch, so she can help you get things moving along down here, especially Southern Sudan. I marked on the map where to drill, which made the CAR boys laugh.'

'Maybe we'll get lucky and strike oil,' I sarcastically noted.

The next morning we said goodbye to Jimmy, and I opened my office – otherwise known as my laptop by the pool, and sat checking emails. My greatest problem that day was a little sunburn on my feet. We were isolated from the world and enjoying the weather, but not insulated from the world.

The Iranians had branded us a liars and false prophets, some talk of death threats, and Saudi clerics repeated those calls, possibly with a little nudge from the House of Saud. Hezzbolah went so far as to offer money for our deaths, and I had to stop and wonder about their logic, since the Somalis in Southern Lebanon worshiped us, and became more aggressive with their reluctant landlords. The Africans were also in no mood for such threats, and Arab businessmen found Africa an increasingly hard place to do business.

The Sudanese were in a bind, because many of their clerics were vocally opposed to us, yet the Khartoum Government wanted our cooperation in Southern Sudan. And there started the first sparks of a problem, with Sudanese business owners putting up posters about us in full view of heavily armed Kenyan Rifles. The posters were ordered down at gunpoint, windows broken, shopkeepers threatened.

In the two weeks that followed I grew used to the mansion, enjoying the facilities – and the peace and quiet; anyone arriving at the road's outer gate getting a rifle up their nose. New Kinshasa was growing rapidly, some thirty thousand people now gainfully employed, more cranes and bulldozers than anyone in human history had ever seen gathered in one place. Towers grew by a floor every few days, and you could not see across the city any longer.

Sixty of our standard apartment blocks had been raised along the northwest road, stretching out as far as the eye could see. At the end of it, a large compound had been fenced off, a wall now under construction. Inside, the first few buildings were taking shape, as well as a tall apartment block for our volunteer army, and a quick concrete church completed, stained glass windows and all.

With a gentle nudge from senior ministers at the Pentagon, I sanctioned a mother of a cathedral in the city centre, five other

churches to be dotted around. I was sensitive to the local religious beliefs, and had no desire to upset the populace before they even took up residence in their shiny new city.

Our stock exchange was now busy, especially the commodities futures exchange, and futures contracts were traded for raw materials produced right around our region, which now included Ethiopia, Southern Sudan and Angola. It was the single largest dedicated commodities futures exchange, and most days had more hungry mouths than materials to sell. More raw material futures were now traded here than in New York, and several New York firms had moved in. There started another problem.

Some companies would buy up mines, and sell futures against their own holdings, which was not illegal – that's how futures contracts got started. It did, however, lead to some accusations about price fixing and poor disclosure. I kept an eye on it, and when I noticed spikes in materials I ordered their production increased, knocking prices back down. A few greedy fingers got burnt.

Our northern rail link now turned east and moved through Southern Sudan to either Kenya or Ethiopia, on to the port south of Mogadishu. A large railway marshalling yard was created in Southern Sudan to help, and traffic on the northern rail link increased significantly, helping to pay for its expensive creation. You could, if you were daft enough, now board a passenger train near Mogadishu and travel all the way across to Sierra Leone. Ideas about romantic train journeys would not live up to expectations for students, since the scenery often consisted of mines and oilfields.

Steffan Silo was busy on the Angolan line, rail and road link, and had made no mention yet of his brother's time travelling. He was also involved with the mono-rail, which passed close to my mansion, and the first loop was now ready. People could stop at the various stations along the route, the one small problem being that you'd step down into a muddy building site.

For practise, the trains were running, and curious tourists would take the hour-long trip to peer at the new city, the track elevated through most of the monstrous building site. The golf hotel was finished, as was the nearby regional airport, and Dash-7s were moved over from Goma hub airfield, a few 737s as well. People started calling it the Golf Airport, till I pointed out that the other airport was just a stone's throw away from the golf course.

With the girls back in Wales, in school, Helen and I enjoyed the peace of the mansion, just the two of us and the baby. And the twenty household staff. And the twenty guards. I introduced baby

Liz to the pool, and once in she could not get enough, often screaming if I took her out. We had another fish in the family, and I had to wonder about my aquatic genes.

Most days I video-linked to Major Big Paul at Duckland. He was having the time of his life, in the thick of the fighting, Skids and his mate now out there. That pair had gone through the training near Mawlini and in the Somali highlands, got themselves signed off and flew in. They now ran long-range missions on foot, fully kitted out with the latest gadgets. With the body counts produced, I had to wonder if al-Qa'eda had anyone left.

In addition to the four thousand men we had on the ground, we were supplying the Northern Alliance with weapons, nudging them to keep the Taliban at bay in their regions. But a few days after I spoke to Big Paul last, a rocket landed near Duckland, a few minor wounds inflicted. It was a big rocket, a range of thirty miles or more, and could have been made by either the Iranians or Syrians. It was a worrying development, but we were sure that the Taliban could not smuggle many into Afghanistan. Kandahar airfield was then hit, two killed and a dozen wounded.

Majors Lobo and Obantou set-up OPs along western Afghanistan, finding and intercepting a consignment from Iran. I was worried what Jimmy might do. I should have been more worried about Skids and company, because they flew in, grabbed the missiles with a few Russian technicians, drove them to the Iranians border and fired them off into the nearest Iranian border town.

A quick inspection by the Iranians revealed that they had been hit with their own rockets, a bit cheeky, but blamed American warplanes. There were no American jets in Afghanistan, and few commentators believed the Iranians.

When Jimmy had finished his three-week global tour he returned to Goma, arriving with French Michelle. Shelly was much better with Michelle these days, and was known to borrow make-up – and not give it back. Jimmy relaxed around the pool that afternoon, but called a meeting the next day, Ngomo and Abdi in attendance. We placed a map of Afghanistan on a table in the lounge and studied it.

‘The Iranians are now supplying their old enemies the Taliban,’ Jimmy began. ‘For no reason other than to piss off the Americans, and us.’

‘It is a long border,’ Ngomo cautioned.

‘There’s something that we should consider,’ Jimmy told us. ‘The ... big picture. In a few short years the Iranians will move towards completing their first nuclear bomb, and Israel and America will

strike at them. When that happens, there's a good chance of setting the Middle East ablaze.'

I already didn't like where this was going. 'What'll you do?'

'At the moment ... I don't know. There is still pressure from the Russians and Chinese on the Iranians, but that just means the Iranians get better at hiding their nuclear ambitions.'

'We can place men on the border,' Abdi suggested. 'Maybe even a trip or two across the border.'

I liked the sound of that even less.

'That would cause Iranian soldiers to move east, and start a long and drawn out conflict along their border,' Jimmy pointed out. 'It will tie-up their army, but why would it change their minds about nuclear weapons?'

'Will the Iranians try and use nuclear weapons?' I asked.

'No, they're not stupid,' Jimmy responded. 'But the Israelis won't take the chance, they'll strike first, maybe even a nuclear strike. But there is one possible solution.'

'And...' I nudged after a moment.

'An assault, by soldiers, against the leadership, against the Revolutionary Guard,' Jimmy stated.

'How?' I asked.

'An airborne assault into Tehran, radars jammed, EMP used. If enough of the senior commanders were killed it would mean that the entire leadership changes hands.'

'Jesus,' I let out.

'Anyway, I'll discuss it with the Americans and Israelis. It would cause problems, but not as many problems as the Israelis firing nuclear weapons at Iran. That could set the world ablaze.'

I could see Ngomo and Abdi considering the plan. We spoke about Afghanistan and made a few plans, reinforcements sent to the west of Afghanistan to stop convoys.

After just a day in our company, Jimmy took Air Force One on a trip around Africa, returning ten days later. I was up to date on everything, I considered, and handed over to the parliament many of my projects - once I was happy with the direction. We flew back with the same group of reporters, the poor hacks having spent more than three weeks aboard the damn plane. Their seats had their bum outlines permanently marked into them.

The reporters did, however, have a better attitude towards us now, first name terms used both ways. I showed them the baby and allowed snaps to be taken. When chatting, I mentioned the Iranians supplying rockets to the Taliban to fire at US troops. That was kind

of a mistake, but also kind of planned, the US media picking it straight away and jumping up and down. When I told Jimmy what I had done he just made a face, not concerned. He was more concerned that he was not getting enough baby time with Liz.

Back at the house, a senior police officer approached. 'Might I have a word, Mister Holton.'

'Not if you call me Mister Holton. Paul will do.'

'Your daughter took a shine to one of our young officers –'

'Did he ... take a shine to her?' I asked.

'No, he was just being polite. But –'

'But I'll deal with it. She's ... maturing quickly.'

'And looks a lot older than thirteen in make-up,' he felt he had to mention.

In the house, I sat Shelly down. 'Darling, if you get flirty with boys over sixteen – like adult police officers, you'll not baby-sit again. Or come down to Goma with us. Am I being reasonably clear?'

'I wasn't flirting –'

Helen cut her off with a jabbed finger. 'Watch it, missy.'

Ebb and flow

The austerity measures that the European countries were now implementing were not being well received by the public, but they were being solidly counterbalanced by savings in fuel and transport, as well as massive healthcare savings. Coal-oil had everyone excited, and we were doing our best to slow them up, knowing that any surge in cheap oil would be bad all around.

The civil defence planning was picking up a pace, so to the worry about it, men in spacesuits seen walking in and out of inflatable tents. Panic had not gripped the streets yet, but a few headlines could have been better avoided. Stocks of emergency supplies were being piled up ready, and soldiers were being trained in barrier control and riot control. The good news was being counterbalanced by the worry, but at least there was some good news to be had.

More than two thousand electric buses now bumped along British roads, and the Green Party and the environmentalists had nothing to say. Even our oil-fired power stations were green. In the Netherlands, some sixty percent of cars were now electric, Sweden

not far behind, Denmark and Germany introducing the cars in great numbers. BMW and Mercedes were, however, working on electric versions of their basic models. If anything, they stood to make more money than using their usual fossil fuel engines.

One day, Jimmy called me down to the house, sounding excited. 'Pity we could not have finished this when we were in Goma,' he said, showing me photographs of what appeared to be large vats.

'VAT14?' I whispered.

'No.'

'Oh. Then what?'

'The Shanghai kids, now based in Goma, have developed a two part chemical process. They drop coal into a bucket of the stuff, and the next day they add another chemical. Give it a stir, and the next day you have coal-oil.'

'Shit. That should do away with the refineries.'

'You are a dumb fuck sometimes.'

'What?' I protested.

'What are you missing?' he pressed.

I scanned the photographs again. 'Dunno. I give up.'

'What's the most expensive part off the process?'

'Mining,' I confidently stated.

'And so...?'

'And so ... I still don't get it.'

He rolled his eyes. 'They find a coal seam, drill down, make a hole, pump in the first chemical, pump out the liquid, add the second chemical ... and we have oil. No more underground mining.'

'Ah ... that is good. It'll save a lot of money.'

'You're wasted as my assistant, you know that.'

'Yeah, fuck off, grumpy. What'll the unit cost be?'

'Five dollars a barrel.'

'And ... we'll be keeping this very, very quiet, yes?'

'Oh, yes,' Jimmy emphasised. 'Just us, and the Japanese, who may have offered a shit load of money for it.'

'I thought the Chinese would sell them oil.'

'They will, this'll not satisfy the Japanese.'

Helen showed me a newspaper story. Seemed that the Pope had decided he didn't like us very much, and asked his followers not to be fooled by gimmicks. That put him at odds with Roman Catholic bishops in Africa, who dare not speak out against us. I felt a schism coming on.

That following week I Googled us, finding a million entries. I narrowed the search to the US bible belt, and found plenty of

dissenters. Yep, we were, apparently, false prophets, and they prayed that we would repent.

The main house now accommodated four high-ranking officials from the British Government, their aim being to rein us in, or at least to have some input into what we released to the media. Jimmy knew them all and was happy enough to have them around. They were all in their forties, too old for Shelly, so I was happy with them as well. But they had been joined by a senior White House representative. His job was not to replace Keely, but we all knew that it was. Jimmy told the man that Keely stays – or else.

The French, who had sponsored most of the human genome project, created a huge laboratory for the study of the flu family, Jimmy meeting with them to tell them what he knew. The senior research staff were the only ones to know of the numbers that would die, and duly sworn to secrecy. We donated the money we received from the Japanese to the centre, and more than three hundred of the world's best scientists got to work about the beakers and pipettes, their first task being to measure the interaction between the super-drug and the flu family.

The demand for the super-drug spiked, till Jimmy went public and explained that it was best used when someone fell ill, and could be lessened if used years before. People obviously wanted the Manson drug, but were not about to get it, each of the various governments holding out – not least because that was the agreement they had all made with Jimmy.

Days ticked off the calendar and I got used to our new reality. Lucy cried when they ran a story about her, but Shelly loved the publicity, her Facebook site popular. I then pointed out that she was missing a trick. She created her own propriety website, removed the Facebook account, and placed Google Adsense adverts down the side, making a steady income, and buying whatever she wanted online via Paypal. What a difference to when I was a kid. I used to get my pocket money on a Saturday morning, pop around the shop and buy sweets. It was a different world.

Seeing Shelly's pictures on the website, Helen suggested a few professional shots be taken, and a photographer was duly organised. I made sure that there were no sexy snaps, and was amazed with the result. Shelly now looked like her mum, and was becoming a beauty. As well as a minor celebrity in her own right.

The start of summer, 2013, turned out to be warm in the UK, a trip taken up to the castle in Scotland. We let the photographers in on day one, affording them plenty of time, then placed guards on the

hills. A few long distance shots appeared, and I put a gossip magazine on my shit list, banning them from any future press conferences.

Jimmy flew off to North Korea and circled the world in Air Force One, leaving Helen behind with the baby. He took Trish along, causing speculation of an affair, the mile high club joined. Jimmy said no, and he didn't care enough to lie.

During a September meeting with the Americans, held in San Francisco, Jimmy pushed people hard on the austerity measures and pandemic planning. US President Fitz tried to introduce a few initiatives of his own, but got nowhere.

President Fitz also tried to nudge a slow down on oil production, and again pushed for a meeting with the Saudis. We politely refused, and I had to wonder if he was paying attention. He also exhibited less of an interest in Africa than Chase had done, and I got the feeling that we'd be working around him.

Back in the UK, Jimmy sat down and ordered housing projects in Greece, particularly around Thessaloniki. It was all labelled as property investment, and others copied our move – the right thing being done for the wrong reason. The British PM knew about the pending Athens earthquake, but few others. Jimmy had hinted at it during various "M" Group meetings years previously, but no one seemed to be talking about it openly, Jimmy struggling with when to inform the Greek Government.

The argument was simple: tell them, and if it leaks out the Greek economy is ruined overnight. Don't tell them, and be accused of not giving them time to prepare. Being a bit sly, Jimmy planned on releasing the news about Athens when the world was focused on a pandemic. Release a bad news story on a very bad news day, he had once said.

Since Jimmy had informed the world who he was a few dozen lawsuits had appeared, most defended quite easily. Some were easily deflected in the press: your government knew twenty years ago, go talk to them.

October saw Jimmy being moody and distant. One day he simply said, 'It's time.'

He meant the start of the troubles, the start of the end, and worried Helen and me by injecting the girls directly with his own blood, a top up for the baby. He made a statement to the BBC that afternoon, stating that he expected a SARS pandemic to breakout in Asia in the next few weeks, and that the death toll would be high.

Flights to Asia dropped away overnight, and the Asian nations got themselves into a flap. Vials of super-drug were flown out, the Chinese on a charm offensive and either selling the drug cheaply, or making donations.

People in many Asian countries began wearing facemasks, and I started watching the World Health Organisation website for updates. One day there was nothing, the next day a thousand were infected in Singapore, the following day a thousand dead, including a few people who had been injected with the super-drug. Panic spread quickly.

Flights were duly cancelled by the various governments, not that there were many passengers to be carried. I started focusing on the outbreak rather than my work, and that was a mistake. I started feeling that I was on the sidelines instead of being in the mix and helping out.

A few days later, and Hong Kong was seeing fatalities. The disease reached Tokyo, Indonesia, and Malaysia. Jimmy had been waiting, timing his move for optimum use of Rescue Force. On a rainy Wednesday morning we drove over to Mapley and met Bob Davies, our sour mood obvious as soon as we arrived.

‘What we do next ... will cost us fifty lives,’ Jimmy told Bob and myself. ‘But we dare not just sit and do nothing.’

‘Is this going to get out of control?’ Bob asked.

‘It will,’ Jimmy affirmed, no energy in his voice. ‘Call in the communications officer.’

When the man was sat behind his screen, Jimmy said, ‘Set filter to everyone, all reserves and affiliates.’

‘Filter set,’ came back a few seconds later.

‘Sound full emergency recall.’

The man glanced at us, took a breath, then moved his mouse. An alarm sounded, followed by an automated message.

Doc Graham stepped in. ‘SARS?’ he flatly asked.

‘SARS,’ Jimmy confirmed. ‘There’s not much we can do, but we must try. And we must try and reach the villages and towns when their capitals no longer care. You’re in charge of the field deployment, headquarters to be Hong Kong. But keep a good reserve ready to help North Korea; they’ll suffer a lot.’

The PM called after we had returned home, worried that our RF teams may be needed here in the UK. Jimmy assured him that a few hundred people would make no difference here, that they would achieve more in Asia.

At the house, Jimmy led me into the grounds, the rain holding off as we lost the daylight. 'I know I'm doing the right thing,' he began. 'But it still makes me feel like shit. I keep wondering if ... if maybe I could have done more. But all my research has shown the Flu family to be adaptive. The more you hit it, the more it changes. And if you hit it with too much ... you make it much stronger.'

'I think most sensible people will buy that,' I offered, wondering what was going through his mind.

'With all the technology to hand, I keep wondering if I should be focused elsewhere. Truth is, defeating al-Qa'eda is more important than the lives of all the people that will die from diseases. Still, your head tends to argue with itself.'

'If we swamp the world with the drug now it'll be no use later,' I said, repeating Jimmy's own words.

'Let a million die now to save ten million later. Yes, but try and tell that to the families. Try and look them in the eye and say it was necessary.' We walked on. 'It's been easy up to now.'

'Easy for you, maybe; it hasn't been easy for the rest of us.'

'It's been easy for you all ... compared to what happens next.' He sighed. 'I can see the light at the end of the tunnel, it's just the bodies I have to step over to get there that's the problem.'

'When Karl died, I went for a walk, down to the river,' I began. 'And Rob started talking about his dogs. He had buried six old dogs here, but also saw the new pups arrive. Life renewed.'

'A good analogy,' he agreed, managing a forced smile. 'The countries affected will rebuild their populations, but it will take a while. And, in the next few weeks, the world's stock markets will go to shit.'

'Did you ... bet a few quid?' I risked.

'I couldn't take the risk. And I wasn't in the mood.'

That evening I sat with Helen and the girls, and we watched the TV news on our large plasma screen. The Rescue Force deployment got full coverage, more than those victims that they were on their way to help.

The next morning, in my office, I checked the W.H.O. website, finding an estimated five thousand dead in Singapore. I had to check the figures, and then Googled 'SARS death toll'. The total was around twenty-five thousand already around Asia. Fact was, many people had been ill for a week before figures had started to be collated, and those figures were being collated at the morgues. That meant there were more sick people in the hospitals, or in their own homes.

That evening, a British holidaymaker died after his return from Asia, and our health service went on full alert. Police officers were filmed wearing masks on London streets. Mass injections of the Manson drug were carried out around the government, the police and the emergency services.

The next day I again checked the websites that I had tagged, finding an estimated thirty thousand dead. By lunchtime, three more Brits had died, a few Germans, Italians, and I was finding it hard to concentrate. When two people died in Nairobi, I recalled many of our nurses from Africa villages and pointed them towards the cities. The villages were isolated enough, so they'd have to cope. If anything, they were the lucky ones.

Thinking on, I contacted Ngomo and put the Rifles on alert to help out, and to keep the peace if need be, President Errol already in panic mode. I instructed our hospitals to kick out anyone that could be sent home, and to cancel all non-essential operations. There was little more that I could do, and I started pacing up and down, wearing out the carpet.

As I sat down to eat that evening, eleven people had died in the UK, a hundred around Europe, the first few cases appearing in the Americas. The one bright spot was the news story of sick people getting the super-drug and recovering. It lifted my spirits.

Rescue Force were now spread around Asia, but as yet not needed in all of the places they had targeted. In Singapore they were utilised, since the hospitals could not cope with the mass influx. I called Po and asked how Hong Kong was, finding that he had fled with his family to Goma, where they had banned all visitors for the duration. It was not a bad idea.

Australia lost its first few people, New Zealand a handful, mainland China on lockdown after losing a hundred people. Then our IT manager, Gareth fell sick. He had been injected, so it was a mystery – as well as a shock. A bank of tests revealed it to be gastric flu, and unrelated. We all collectively sighed, then shouted at Gareth for worrying us. We took back our grapes, porn magazines and get-well cards.

The British PM was considering closing schools and public places, on the phone to Jimmy most every day, but it was a waiting game, Jimmy unable to give accurate figures till the pandemic took hold. And it wasn't worth destroying the British economy over. Jimmy re-assured the PM, whilst being gloomy with me.

That weekend, I tried not to think of the outside world too much and to spend time with the family, the TV news off. The household

“M” group were all concerned, the mood not good, the harsh reality of 2013 starting to bite. They had known these days would arrive, but problems on paper were just that; intangible and easy not to worry over. Now, reality was here, and biting us on the arse.

Monday morning, I checked the websites and stopped dead. Frozen. Sixty-five thousand people were dead. I made a tea, very slowly, stirring it at length and staring into the brown liquid. I drank the tea, but I didn’t remember even making it and started a fresh one, wondering why the cup was dirty.

I stared out of my office window at the trees bending in the wind, then Googled for African casualties, finding the number at two thousand already, a few hundred in our own region. I emailed the corporation and enquired if anyone we knew had died, shocked to find that one of our housekeepers was dead, another sick, a junior minister dead. I had expected high casualties, but I now felt somehow responsible. More than that, I felt that I would be held responsible by the public: they were dead, and it was my fault.

If I ever had an understanding of what a surgeon felt like after losing a patient, and informing the family, this was it. I told my staff that I was going down to the house, and drove my electric car down past the lake. I was so used to not having to charge it that I was startled when the damn thing started to bleep. ‘Twenty miles to go,’ the digital readout said.

In the main office I found Helen at her screen, the baby in her cot next to Helen’s desk. I slumped down and sighed. ‘Some of our housekeepers in Goma have died. And a minister.’

Jimmy lifted his head for a moment, but said nothing. What was there to say. I sat and stared at baby Liz, the cold harsh reality of life and death all around me now.

Without looking up, I asked, ‘How long will it go on for?’

‘Three months,’ Jimmy softly replied. ‘So if it’s affecting you now, we’ll not get much done.’

‘It’s that feeling of helplessness,’ I said, still focused on baby Liz. ‘Wanting to do more.’

‘Welcome to my life,’ Jimmy said, sighing loudly. He stood and stretched, checking the biscuit tin. Sharon and the others were trying to just knuckle down and get on with it, and I wondered why it was affecting me the more. Perhaps I was used to making calls and fixing things, too used to achieving results.

‘Po’s locked away in his mansion in Goma,’ I mentioned. ‘So much for isolation.’

Jimmy took a call. To no one in particular, he said, 'They estimate around thirty thousand sick in this country.' He knocked the kettle on.

I stood. 'Is there anything more we could do?' I asked in a strong whisper.

Jimmy focused on me for a second, the others watching. 'No. And ... this is just the start. This pandemic hasn't even got started yet, and the next round will be worse. What's important ... is that the tree of mankind survives, the buds, and not all of the leaves. New shoots will come around, new babies will be born, mankind will go on.'

I nodded absently. 'Tourism in Africa will be dead by the end of the week. Couldn't pay people to get on a damn plane.'

'I had the hotel and safari staff sent home on full pay.'

'There's that at least, I suppose. Are the press after you?'

'Fifty emails a second,' Sharon reported from across the room.

'There's not much I can say without making it seem worse,' Jimmy told me, and returned to his screen.

I wandered out, and decided to walk back to my office, the wind fresh on my face.

Two days later we stood at a hundred and fifty thousand dead. According to the graph I was looking at it was slowing, the rate of increase slowing at least. What had been an exponential curve was rapidly becoming a bell curve. There seemed to be some hope. The figures hit a plateau and started to fall, but I was reading the chart wrong. I cursed the stupid website. The chart was of the daily deaths, the final total being the sum of all the days.

After calming down I still took some hope from the graph, since the number dying per day was reducing. I Googled the total, finding it to be just short of eight hundred thousand people dead - so far. In the days that followed, the rate of deaths slowed and I took some comfort from it, even though I knew we had months to go. The stock markets recovered.

Jimmy then gave an interview to the BBC, on condition that any news agency could get a feed. They set-up in the lounge.

'Mister Silo, how has this pandemic played out - compared to how you expected it to.'

'It's the same.'

'How long have you known ... that this would happen?'

'Obviously ... a very long time. It was one of the reasons I came back; to deliver the super-drug.'

'The drug is saving many, but close to a million have still died.'

‘I’ve said this before, many times: the Flu virus family mutates and adapts. The scientists of the future found no cure for all variants of it, and I don’t have a cure for it.’

‘Forgive me for saying this, but you have – in the past – enjoyed life, and lived the high life with a smile –’

‘And I aim to again some day soon.’

‘How do you sleep ... knowing what you know?’

‘When I took the decision to come back, it was after six billion people had died. I’ve seen a lot of death, much of it very close up, and I lost everyone I ever knew or cared about. But when I came back, it was in the knowledge that failure was a certainty, and that any lives I saved were a bonus. I had nothing to lose by coming back, and you ... have everything to gain. You have the benefit of foresight, and with a little luck – and some cooperation – we’ll not see as many people die.’

‘It’s not about trying to save everyone, because I can’t do that, I could never have done that. It’s about finding a million floundering fish on the shore, and picking up as many as I can and putting them back into the ocean. I know I can’t save everyone, but the joy comes in trying and succeeding to save those that I can. If I let it get to me I couldn’t operate, I could not function, and I take pleasure in just seeing people walking about and going about their daily lives, because we should be in the middle of a nuclear war right now – but we’re not.’

‘A million have died from SARS, and to most people that’s a great tragedy. To me it’s a great victory, because six billion are still alive. I work from six billion down to measure my success, you work from the ground up to measure a failure.’

‘Are we through the worst of this pandemic?’

‘No.’

‘No?’

‘No, there’s more to come. And this is first of several pandemics.’

‘How many people do you expect to perish?’

‘I won’t be releasing that figure. Since there’s nothing anyone can do, it’s best to try and enjoy what you have.’

‘I hear that Rescue Force staff have died, even those injected with the drug.’

‘Yes, twenty have died so far,’ Jimmy confirmed. ‘But they helped hundreds, injecting the sick and saving them. And as for the risk, those medics could sit here and wait to fall sick, or they could do something useful – and make a contribution at least. I’d like to

tell the people ... that there are difficult times ahead, but they are nowhere near as difficult as they could have been. Don't be sad if a hundred die, be happy that a thousand are still living, and be happy that there is a route map.'

Having watched the interview, I was in two minds. He had just scared the crap out of the world, and given them hope in equal measure. The PM watched the interview, held a COBRA meeting, and closed all schools, pubs, clubs – anywhere where people could pass on the disease. People were still asked to go to work, but to wear masks on buses and trains.

At my desk, I received an email from Mawlini. Mac had fallen ill for a day and recovered, his young lady dying. It hit me hard. Later that day I received another email, informing me that one of Rudd's kids had died, despite being injected. That hit me harder. I wore down the carpet, rubbing my forehead for an hour, working myself into a spin and not finding any release. I went home early and hugged Helen for what must have been five minutes, both trying to reassure the other.

We managed to have a nice meal, the kids off school till further notice, but at 8pm Shelly took a call, one of her close friends now dead. My daughter lost it, and there was very little we could do in the way of being comforting parents, because we were both a step away from losing it ourselves. With the TV turned down low we just sat there, trying to cheer each other. I felt like running away with my family, but where was safe?

In the week that followed, one of Coup's assistants lost his wife, Bob Davies lost a brother, and the Prime Minister himself lost two relatives. The figures started to rise again on the graph, and the politicians spoke of austerity measures and economic gloom. They had been warned, and I had to wonder if the fuckers were paying attention at all.

Singapore and Hong Kong were hit hard, Shanghai lost many, and North Korea faired badly, four hundred RF staff doing what they could.

Han came up to my office the day I read those figures, just out for a walk to clear his head. A lot of people around the estate were taking those walks these days. 'Am I disturbing you?'

'Not getting much done,' I said. 'We've closed most of the parliament building in Goma and sent people home.'

'And the new city?' Han asked as he sat.

'They're all working on, few falling ill amongst the workers. Seems that dirty hard works helps. What news from China?'

‘Not good, but as expected. Two million sick, half a million dead. It is ... a numbers game.’

‘You’re starting to sound like Jimmy.’

‘If I emulate him in any way, then I will be a very happy man. And sometimes, I envy your position at his side.’

‘It’s not all fun. Some days I resent the responsibility.’

Han nodded. ‘I have known for some time what would happen, but now find the news of it like a house falling on me. Jimmy has known all along, and more, and yet has spoken gently, has encouraged, and has guided others in a way that I would not be able to do, not if I lived to be a hundred.’

‘Was a time when that was a joke. These days most people can live to be a hundred.’

‘Indeed. And my respect for our leader will grow, I’m sure. How he carries in his mind this information, and does not fold, is beyond my comprehension.’

‘He went through a lot, more than I can say.’

‘And yet, he is not certifiable ... and in a rubber room. Our best psychiatrists seem to think such a feat impossible, and yet Jimmy stops to ask if I am coping. I cannot measure, nor do I believe anyone will ever measure, how strong he is, or how valuable his presence here is.’

I took a moment, glancing away. ‘I’ve tried not to use him as a benchmark for myself.’

‘That would not be wise ... for any of us,’ Han noted. ‘I find myself ... angry towards myself sometimes when I look in the mirror. Angry that I am not ... stronger. And true strength, that is in the mind. I have a greater understanding now of your Churchill – I read the book twice. To be under so much pressure, to send so many people to their deaths, to gamble all on your own beliefs.’

‘Takes a certain kind of person,’ I put in.

‘Are you ... that type of person, Paul?’

‘Based on the past few weeks ... no. Jimmy has faith in me, though god knows why.’

‘You have known a lot of information about the future a long time, yet have managed to smile and make jokes on many occasions. I have found this ... inspiring. Either you are stronger than you think ... or a complete fucking idiot.’

I laughed loudly. ‘You’ve been around us Brits too long. Don’t talk like that when you go back China. Please.’

That evening, I borrowed Han’s book about Churchill, and I started to read, even in the office the next day. It was suggested that

Churchill would have a glass or two of Whiskey last thing at night, say “sod ‘em all”, and get into bed. He slept better after he had cursed everyone in general and no one in particular. He also took power naps around 5pm, and swore by them. I, on the other hand, slept very little, and I wondered if that fact made a difference to the human psyche.

Winter closed in, the nights dark, the mood darker. Jimmy took a flight to France, to the lab working on the virus, and was filmed chatting to scientists, even offering in advice. It was an image of hope for people the world over.

Meetings of the world leaders were still on hold, no one keen to fly. Fitz had not been injected, but the White House had a stock of the Manson drug just in case. And the poor old US President; he was new in the job and landed with this. So far, six thousand Americans had died, a small number compared to many other nations. As Jimmy suggested, most of the dead came from poor backgrounds, but so far there was no suggestion that they were denied access to the super-drug.

Jimmy told me the disease was not suppose to ravage the west, just Asia for now, and it seemed that ninety percent of the fatalities were in the Far East.

Christmas came, and few were interested in celebrating, bars still closed. Jimmy toured hospitals as if he was the Prime Minister, trying to cheer staff and patients alike, and gave a rousing speech that I could have seen Churchill making. I could see the politician that he used to be, the refugee commissioner in Canada. He had the knack for the rousing speech alright.

Christmas at home was sombre compared to previous years, but Jimmy insisted that we all eat together and exchange presents, and the bustle of the main house helped a lot. We drank too much, played music and wore silly hats, trying if we could to ignore the outside world, if only for a day.

New Years Eve was spent in the main house again, Cookie making a meal. Jimmy had made another rousing speech - a New Year and new hope, and encouraged people to get drunk and set-off fireworks, but not necessarily at the same time. The Queen had supplemented her Christmas Day speech with a New Year's Eve speech, again calling up the wartime spirit. She did, however, mention the ‘second chance’ that everyone had been given, thanks to the arrival of Jimmy, and concentrated on hope for the future.

New Year's Day saw one of Po's daughters, Ling, fall ill and die, leaving two children behind. The virus was popping up in strange

places, seemingly with no connection, and no way to spread the disease. The one bright spot was the fund Jimmy had launched for the French research centre; the fund was now being donated to in large amounts.

The start of 2014 saw Jimmy considering Greece. He accelerated the building work, and decided to speak to the Greek Ambassador, inviting the man down to the house. After giving the poor man the news we feared for his health, and nudged several whiskeys down him. On top of the pandemic, Greece was now facing complete ruin, an earthquake due to devastate Athens.

The Greeks had a year, and it was as the Queen had mentioned in her speech: there was hope, where there was none before.

2014

It took till February for the SARS pandemic to abate, and by then some five million people were dead, most of the victims to be found in Asia. Jimmy formally announced that the pandemic was over, and encouraged everyone to get on with their lives in a speech:

‘This pandemic ... has caused a lot of suffering and loss, but that suffering should not be made worse by people becoming despondent, by people walking around with their heads low. What’s needed ... is defiance in the face of adversity, the bulldog spirit that the British people had during the war years. Give two fingers to SARS, and say to yourselves – we will not be beaten, we will not give up, we *will* go on.

‘The stock markets have suffered, the economy has suffered, businesses have gone bust, people have lost their jobs. If you mope around feeling sorry for yourselves you’ll make it much worse ... for everyone. Think of your families, think of your children ... and make an effort to cheer them. Take your families out when the weather allows, go and see those relatives you haven’t seen for a while – even the ones you don’t like! Take a weekend break, take a holiday, and spend some money. Put some money back into the economy.

‘I would like to appeal to everyone to hold a small party this weekend, and to invite friends over, or to go out. The pubs are now open, the restaurants, so are the cinemas. If you want to do what’s

best for this country ... get out and enjoy yourself. Draw a line under this experience, learn from it, never forget it, but draw a line and move on.

‘There’ll be other challenges ahead, but life will go on. You can face those challenges head on, or you can sit and worry. Either way, if the diseases want to come and find you they will, the risks are just the same. And never forget, that some countries fared far worse than we did. Some countries in the Far East suffered greatly, and Singapore lost ten percent of its population.

‘Here, fifty thousand people died, many of them elderly and infirmed, those least able to fight back. But of the quarter million people who fell seriously ill ... all were injected, and most made it. That’s a quarter million reasons to celebrate, whilst not forgetting those that died.

‘People of Britain, if you want to do what’s best for yourselves and this country, then get on with your lives, and don’t be ashamed to enjoy yourselves, don’t be ashamed to smile when others have died. This battle is not about how many died, it’s about how many we saved.’

After the speech, people started calling for Jimmy to be Prime Minister, a chorus of approval that would not go away. A Facebook survey put eighty percent of the population backing Jimmy for Prime Minister.

Unfortunately, not everyone in the world was convinced by us. The Iranians issued death threats, and claimed that we had created the virus to make ourselves popular. Other clerics claimed that god was punishing those that believed in the false prophet that was Jimmy Silo. Stateside, the bible belt were also calling it God’s wrath, and a punishment for interfering in the time line. I started watching Fox News on my laptop, since they were actively questioning us now, even some suggestion that we profited from sales of the drug. Basically, Fox News was saying ‘Who the hell do they think they are’.

When they suggested that we could have done more, assuming that we knew all along, I arranged an interview with them via the video conferencing kit we had in the basement. Jimmy must have known, but he didn’t try and stop me.

‘Mister Holton, what do you say to claims that you knew all along and could have done more.’

‘We informed the world leaders twenty years ago, and the CIA had the blood product before that.’

‘Blood product?’

I was just about to stop the world dead.

‘The super-drug and the Manson drug, they’re just varying strengths of Jimmy’s blood.’

‘Of his ... blood?’

‘At first, Jimmy injected people directly with his blood, kids dying from AIDS, health workers. After that we developed ways to reproduce what was in Jimmy’s blood. Basically, anyone injected with the super-drug has been injected with varying strengths of Jimmy’s blood. I was injected directly, so too my family and many others.’

‘Mister Silo ... drew his own blood ... and injected you?’

‘Yes. He didn’t bring any drugs back from the future, he brought himself back. His blood is much stronger than the Manson drug, a lot stronger.’

‘And ... who else did he inject?’

‘We injected all of the African soldiers, the Rifles, and all the children in the orphanages. An injection of his blood cures just about everything, but he only has so much blood.’

‘Well ... that’s incredible ... as well as gross.’

‘Have you been injected?’

The interviewer took a moment. ‘Yes.’

‘Then you have his blood in your system; you’d best hope he knows what he’s doing. And your government and CIA knew twenty years ago. If you got a problem about preparing ahead, you can take it up with them. Fact is, Jimmy’s blood doesn’t cure all SARS variations; they’re adaptive. If you don’t know that word, look it up in the dictionary.’

I realised that I had probably said too much, and cut the interview. Upstairs I informed Jimmy.

‘Most people know, but no one has quite shouted it from the rooftops yet,’ Jimmy said. ‘You’ve got the message across ... loud and clear.’

‘Will it affect things?’

He made a face. ‘I had expected someone to leak it earlier.’

That weekend, the bars and restaurants were packed out, damp British beaches well attended, parks and zoos seeing booming trade. The bulldog spirit was back.

Big Paul returned to us a few days later, the prodigal son returning.

‘Nice holiday?’ I quipped.

‘The breakfast bar was dodgy, the pool dirty, and the locals were not friendly. Exchange rate was good though.’

I fetched him a tea in the diner. 'How's it going out there?'

'Good. Spirits high, body count is good, casualties low.'

'Any more missiles?'

'No, and we fucked off the Iranians by giving the Iranian resistance in the south east of their country some weapons, food and money.'

'Least we could for our Iranian friends,' I quipped. 'How's morale?'

'Solid; no problems. Two Chinese lads died from SARS – that was a blow – a dozen fell ill and recovered. Isolation was a good thing for us I reckon. Couple of the lads lost family back home, but we told them to stay put. A few went all Rambo and shot up the ragheads.'

'What do they think about us?' I broached.

'They love you to bits, especially the African lads. They now call themselves Sons of Silo, and there's a vampire detachment -'

'Vampire?'

'They took Jimmy's blood,' Big Paul said with a grin.

'Not much to do in the evenings ... I'm guessing.'

'Not much; the lads do twenty-four hour patrols just to stay active.'

'Are we winning?' I asked.

'I'd be surprised if there were any of the original fighters still alive. We get a lot of Pakistani Taliban crossing over for a punch – up, and now more Arabs. They come from Yemen, Syria, Saudi, all over. And the Taliban now know that anyone seen carrying a gun is dead meat before he realises it. They drive around with white flags on their cars.'

'And the Northern Alliance?' I asked.

'Lazy bunch of useless fucks. Can't be trusted, and they won't attack the Taliban because they know we're doing their job for them.'

'Lebanon is quiet, and Somalia,' I said. 'All the fighters heading for you.'

'We've buried eleven thousand various fighters,' Big Paul said, a glance over his shoulder. 'They're a dumb bunch. We set traps, and they take the bait. But because no fucker survives, no one across the border knows about the traps. So they keep coming.'

'International cohesion holding up?'

'Fuck, aye. You'll see Americans punching out other Yanks if they insult a Chinese lad in their patrol. They're all tight as fuck, and they all compete to see which patrol can out-do the others. One

team, led by a US Ranger, walked sixty-two miles, shot up forty fighters, and walked back without a break.'

'A bit of dick measuring gong on,' I realised.

'They're soldiers ... and they've been injected,' Big Paul emphasised, his eyebrows raised. 'The Taliban can smell the testosterone miles away. Oh, first group of Germans joined us, took some ribbing about the war – and their late arrival, but they're good lads. All fucking Jimmy's size, so they don't get a lot of shit.'

After the furore of the blood disclosure had ebbed a little, and the weird speculation about Jimmy's body had eased, Fox News were back on the attack. Their latest line was *'Who put Silo in charge? I never voted for him. He says he was leader in the future, but we don't know that. For all we know he could have escaped from a future prison and come back.'*

I liked the last one, it made me smile for a whole day. Jimmy had admitted that he was not supposed to be here, so maybe he had escaped the future like some weird sci-fi movie. I was waiting for Jean Claude Van Dam to appear, to take Jimmy back to the future in cuffs.

The Iranians, and various clerics, were now claiming that Jimmy brought back diseases from the future, accidental or otherwise, and were back to the claim that we were profiting from the sale of the drug. Those calls found a few followers in the west, and Fox News picked up on it, also posing the potential problems of contamination and contagion.

There was one flaw in the argument. If the diseases had been brought back from the future, then they would occur in our future anyway. We could suffer them now and look for a cure, or wait till later. I found myself sat drawing paradoxes until my head hurt.

With the return of Rescue Force there would be no parades, we thought it inappropriate, despite the good work that they had done. We held a ceremony at Mapley and Mawlini for all those who had died, and attended two funerals of senior staff – but only after we had been invited by the family. I had expected a little tension from the relatives, since we had indirectly sent their loved-ones to their deaths, but they were all fine with us.

Jimmy then said that we'd visit Singapore and the Far East after Goma, and we hopped on the plane the same day, the girls back in school.

The girls time off school had not affected them at all. If anything, they admitted to having had more time to study. Shelly was

currently reading a book on microbiology and immunology, and a quick glance at it left me feeling inadequate as a parent. My daughters were way brighter than I was at that age, or ever could be.

On the way down to Goma I chatted to the reporters, many of them, familiar faces, but left them to sleep after eleven o'clock. I woke them as we began our descent into Goma hub, fresh coffees made, doughnuts handed out and gratefully received. At Goma, we kept the press with us, and they joined our coach to Forward Base.

Our first stop was the new officer training college, the recruits turned out ready. Most were now in their second year and old hands at the military life, around a quarter having come from the ranks. The officer cadets were lined up on the parade ground as our coach pulled up, the sky threatening a downpour. As we stepped down, a burly sergeant screamed at them to come to attention, a loud echoing report of their boots hitting the floor.

We waited for the press to assemble, and for TV crews to position themselves. That done, we joined the senior officers and walked forwards, the drill instructor saluting as we passed. Now we really were like Prince Charles.

Jimmy led the way, and to the edge of the front rank. Each recruit offered a nametag on his chest, along with his country of origin, and that made things easier. 'Where are you from in Kenya?' Jimmy asked the third recruit from the edge.

'North of Mombassa, sir.'

'Have you been home lately?'

'Yes, sir. My family is there.'

'Married?'

'Yes, sir. Four children.'

'Then you came from the ranks,' I said.

'Yes, sir, from the Rifles. Twelve years.'

'Have you been to the new marina?' I asked.

'Yes, sir. It's very nice.'

We worked our way along the line, noting recruits from many nations, including now Mozambique. At the end of the line, the senior officers led us off the parade ground and inside a large building, the press in tow. In the first room we stopped to view recruits stripping weapons, men who had not come up through the ranks, their instructors from America, Britain and Kenya. We waited for the press to take snaps or to film, and shuffled along the corridor.

In the next room we found a lecture underway from a white guy in a suit, the fella looking to me like an old professor. Today's

lesson was geography. We stepped in, the recruits scraping their chairs and standing.

Without realising it, I was about to make African TV. Jimmy was on the far side and chatting to recruits when I noticed a familiar face and closed in. 'You look familiar.'

'We fought together at Scorpion Base, sir. From the roof.'

I smiled widely and put out my hand to shake, pulling the man in for a hug and a slap on the back. 'Good to see you're still with us after all this time,' I said, holding onto him. 'And now an officer.'

'I was given a field commission in Afghanistan, sir.'

'Then you know Major Paul O'Brien.'

'I know him from before, sir. Many times. He was at Scorpion Base as well.'

'Married yet? Kids?'

'Yes, sir. Three children. I moved them to here when I came. From Mawlini.'

'Good housing here?'

'Oh, yes, sir. It's a nice apartment.'

'Do you have any pictures of the kids?'

The man took out his wallet and showed me a picture of his girls.

'They're good looking girls. Are you sure that they are yours?'

He laughed. 'Maybe your wife had a good looking lover while you were away, because these girls are too good looking to be yours.' I handed back the snap. 'What's your name?'

'They call me Lobster, sir, because one time I think I ask for Lobster in a café.'

'Good luck with the course. Study hard.' I turned away to the left, unaware that a TV camera had filmed the entire exchange over my shoulder.

Jimmy gave a rousing speech to the recruits, values and virtues, leadership and the future of Africa, before the senior officers led us to the Congolese Rifles base. We toured the ranks, had a go on the range, visited soldiers in hospital with broken legs, and finally returned to Goma around 5pm, the press dumped at the main airport hotel.

Helen and I reclaimed our rooms in our lakeside house, an hour to wash and eat before a series of TV interviews for Central African TV. They went well enough, since we were certain not to be tripped up, and the next day - a Friday, we let the press follow us around the Pentagon building. On the Saturday we simply chilled out around the pool, Yuri dropping in.

He reminded us of the death of Po's daughter, Ling, the body incinerated locally. We had been lovers, and it hit me hard again to be reminded of it. In total, some fifty people had died locally. Russia had fared quite well, only ten thousand dead, a low number for such a large population. That evening, we decided not to be seen out enjoying ourselves, and ate in.

In the morning, Jimmy suggested we crash the opening of the new cathedral in New Kinshasa. I stopped and blinked. The city was still a building site, but some ten thousand people already resided in the city, and many residents from Goma would be travelling down for the ceremony. Helen and I exchanged looks, got dressed up and followed Jimmy down to the cathedral.

The building stood out because of its size, but also because there were few buildings around it yet. We stepped down from the coach and walked forwards, the white marble steps empty, the local worshipers all inside already. I could hear the distorted echo of someone issuing a sermon through a badly tuned speaker system.

Bold as anything, Jimmy led us inside, and he kept going, straight down the aisle, the seats packed on either side, everyone in their Sunday best, ladies in colourful hats. Those who noticed us first all gasped, many standing up. That created a wave of whispers and a Mexican wave of people standing as we walked forwards.

The priest halted his sermon, just as surprised as everyone else, and we closed in on the man. I halted at the altar steps with Helen, feeling awkward and not knowing where to sit, or even whether to sit.

Jimmy stepped up to the priest. 'May I?' he asked, gesturing to the microphone. Wide-eyed, the priest stepped back, Jimmy taking the microphone. 'Please be seated. None of you need stand for me.'

Everyone sat down, and sat quietly stunned. I recognised President Errol in the front row and waved. He quickly made room and we sat, the guards hanging back.

'Some of you will have lost friends and relatives, and people that you know, in the recent outbreak of the SARS virus that swept the world. And how we deal with loss, with adversity and misfortune, says a lot about who we are. A strong community can pull together and help each other, can offer comfort – and even practical help and assistance.

'Countries in the Far East have suffered terrible losses. Compared to them, your suffering here was nothing. What we suffered in Britain was nothing in comparison. Some countries lost a million people, but that is not to lessen any what some of you have suffered.

Our housekeeper died, and our friends in Africa lost loved ones, even children.

‘But what separates a tragedy, from a setback, is how you cope with it afterwards. If you let it ... then this setback will become a tragedy, and you will make things worse for yourselves ... and for Africa. They say ... that if you expect the worst then you cannot be disappointed. Where you now sit ... used to be mud and jungle, a war ground for greedy western mining companies and guerrilla fighters. Now look at it.

‘I did not make this place, I simply showed you the way. All I did was to take the boot of the western mining companies off your necks. You did the rest with your own hard work, and you continue to do it.

‘But there are difficult times ahead for the world, and it will be easy to walk around with your heads low, with no smiles on your faces. You must be defiant in the face of adversity. My friend here, your priest, may advocate prayer – and I will not argue about its benefits. But after prayer comes action, action in the face of adversity, a determination not to give up what you have built.

‘A few days ago I visited the combined officers college here. That college is training soldiers from all over Africa, training them how to be good officers, but also training them how to be good Africans. Kenyans train alongside men from Ghana, Mozambique, Zimbabwe or Angola. In years gone by, the Rifles of many nations have fought side by side, to bring peace to Africa, and now they fight side by side with white soldiers in Afghanistan.

‘In Afghanistan, black soldiers and white soldiers are not equal – because the white soldiers know that they’re not as good as the African Rifles. In that war, black African officers lead white soldiers from Europe. Change ... is possible.

‘Today ... many of you will be feeling saddened by the deaths around the world, and the deaths here. But if you want to triumph over this adversity, then all you need to do is to decide that you will not give in to adversity, that you will not walk around with your heads down, that you will move on with your lives.

‘If you wish to succeed in your hopes for the future, then take your families out and enjoy yourselves, lift your faces from the floor, and don’t think about those that have died – focus on those that are still here. Don’t say that fifty died – and what a shame, say that a million lived – and what a great victory that was. If you want to make me proud then don’t be sad, be defiant in this fight. I thank you for your time.’

He stepped down and collected us, President Errol standing and starting to applaud, the congregation soon joining in as we walked along the isle smiling nicely at the congregation. I hadn't even noticed the cameras in the corner from our own TV station. I as lay around the pool later, our own TV station pumped out the speech to over a hundred million people, followed by my conversation with Lobster.

The next morning we flew down to Harare, Defence Minister Solomon making sure that the trip was leaked. Coming in to land I spotted crowds outside the airport, but I had no idea of what was to come. Stepping down from the plane we boarded two coaches, waiting for the press to get their gear together, and headed out of a side gate, no customs for us or our press corp. I knew the airport authority had scanners inside, lots of them; I had upgraded them a while back.

Outside of the airport I noticed a crowd on the side of the road and waved, smiling genuinely. Africa had always made me feel welcome, and this was a contrast to feeling that certain websites and news stations left me with, that of being pretenders to the throne. We drove on slowly, the roads busy, and the crowds continued as we progressed towards the city.

We slowed at one point, traffic ahead of us, and I noticed what seemed to be an entire school of smartly dressed kids on the side of the road. They even appeared to have been ranked in order of height. 'Driver! Stop here!' I shouted.

Jimmy could see what I could see, and smiled as he followed me up. We stepped down to a field of blue and yellow t-shirts, most of the kids up to my waist, and all waving flags. They were not Zimbabwe flags, so I held one for a look, finding the emblem of our cooperation group, the pentagon shape. I stepped towards the teacher through a sea of waist high yellow and blue, the kids grabbing my hands, touching my arms.

It then struck me, the memory of my first visit to Ebede orphanage. I had held my hands up, as if I might catch something nasty. Now, I moved through the field of children feeling not only completely at ease, but that I wanted to pick them all up and hug them. One girl looked a little lost in the melee, and I dropped down, grabbing her and lifting her up. 'OK, babes?'

She hid her head in my shoulder as I navigated my way through to the teachers. 'You didn't come out just for us, did you?' I asked over the cries.

‘No, we spend a lot of time on the roadside,’ a coloured woman said in a London accent.

I frowned at her. ‘Where you from, love?’

‘Hackney.’

‘What you doing down here?’

‘My church sends groups down. I’m here for a year.’ She lifted her eyebrows and nodded toward the girl I was carrying. ‘You adopting her?’

‘Are they orphans?’ I asked looked around.

‘They’re from a state run orphanage, but Anna from Ebede sponsors us.’

‘They all getting what they need?’

‘They’re all former AIDS kids, so work that out for yourself.’

I lifted the chin of the girl on my shoulder, and pointed to the woman I was speaking with. ‘Is she a bossy-boots?’

The girl nodded, although I doubt she knew what she was nodding about. I turned, looking side on at the heads of hundreds of screaming kids. Jimmy drew close, asking the teachers questions in a dialect. He shook hands with the lady from London.

‘Rose.’

Rose stopped dead, her mouth opening. ‘How the hell do you know my name?’

‘We’ll meet in the future.’

She held a hand to her mouth. ‘God, that is so weird.’

‘Where’s your orphanage?’ I asked her.

She pointed over her shoulder. ‘Just over there.’

‘Drag this lot back there and we’ll meet you there,’ I told her. I stepped away, still with my shy bundle, finding Helen on the steps, the press off the coach and snapping away. Helen took the girl as we boarded the coach for the short trip around the corner, Jimmy walking with the multi-coloured mass of kids. As they progressed, they appeared like blue paint seeping into yellow paint.

At the orphanage, we jumped down again, Helen taking the girl inside, and quite taken with her. The older pupils now came out, more yellow and blue t-shirts, and I followed Jimmy’s large frame as he entered the orphanage clinic, the press hot on our heels.

Upstairs, we found a ward that seemed better than the original at Ebede, but not much better. I drew level with Jimmy as an RF doctor greeted him, a lady from Australia. Pointing at a kid, I asked, ‘Not injected yet?’

‘Just arrived,’ the medic answered.

I gave Jimmy a look, a tip of my head.

Taking off his jacket, he told the medic to get a needle. In full view of the press, and two TV cameras, the lady drew blood and injected the kid directly. Time was such a thing would have horrified the medic and stunned the world. It had stunned me at the time. Now the world had its image, a direct blood transfer, and I figured it would make a few front pages, a few hundred front pages.

‘We best go,’ Jimmy told me. ‘Can’t keep the President waiting.’

Back aboard the coach, I could hear some of the press calling their offices in London, mention of the blood transfer. Our transport trundled slowly on, the citizens of Harare lined up on the sides of the road. But as we advanced, I realised it was just the start, the crowds thickening. Passing what seemed to be an area of parkland I couldn’t see the grass; it was like a rock concert. There had to be ten thousand people in this one section alone.

We snaked through the streets, seemingly everyone giving up work for an hour or two to come out to wave. The city centre was just as bad, the roads cleared of traffic for us. Finally we made the parliament building, the roads lined with soldiers and police, and eased to a halt. Jimmy let the press off first, and when we stepped down they snapped away as we met the waiting ministers, Solomon stood proud, a roar coming from the crowds.

He saluted. ‘Welcome to a free Zimbabwe.’

‘Is the beer free?’ I asked as I shook his hand.

‘It is for you.’

We followed him inside, waving as we went, locals photographing us. In the cool and dark interior we met the President, our host presenting his cabinet; all greeted, hands shaken. The press were asked to wait, and we accepted teas around a large oval table, all sitting down together as if we were about to hold a cabinet meeting.

The president thanked us for all of our assistance, and for finding the only spot of oil in the country, although they now knew how we managed to be so lucky. Ore production was up, cereal crop production growing at a fantastic rate, orphanages packed out. Tourism had been good, but died during the SARS pandemic, now starting to recover a little.

After thirty minutes of general chat, they led us to a second floor balcony, and now I really felt like a rock musician, looking out over more people than I had ever seen before in one place.

‘How many are here?’ I asked over the dull roar created by the crowd, several different groups singing, but badly out of tune with each other.

Solomon said, 'We think maybe a million came out to see you.'

'Why are we so popular?' I asked out the side of my mouth, waving at the crowds.

'The economy, jobs, the soldiers, the orphans, the food. They puff their chests and feel proud of their country, and of Africa.'

The president leant towards me. 'The people have their pride back, and the people have hope. You will hear "one Africa" on many tongues, because it is easy to be nice to your neighbour when your belly is full.'

Jimmy took the microphone and switched it on, issuing a few greetings in a local dialect, as well as Bantu – the Zulu language, getting a loud response.

After five minutes of waving, Jimmy suggesting that any speech would not be heard, we reclaimed our press posse and headed around to the Rifles base. As with the officer's college, the soldiers were turned out smart and lined up ready, and we made like royalty again. I inspected a line, asked questions of deployments and bases visited, getting quite good now at asking innocuous questions.

The press got their fill of us with the soldiers, filmed and snapped before we returned to the airport, a flight up to Nairobi. We touched down at 3pm, another line of coaches waiting, more soldiers and police. I was becoming Churchill.

Outside of the airport, I realised that the Kenyans did not wish to be outdone by the Zimbabwean public. They had all turned out, but this time waving Kenyan flags. The journey to the presidential palace was not long in miles, but it dragged on, everyone waved at. Helen's arm was flagging.

At the palace, the familiar grass verge was lined with Rifles, a funnel made, the politicians waiting at the top, Defence Minister Ngomo in his best uniform. He was no longer a soldier, but a politician who wore a uniform, a subtle change.

I shook his hand. 'Didn't shine them shoes for us, did you?'

'Don't tell anyone, but my wife does a great finish to them.'

Laughing, we stepped into the quieter and cooler interior, a repeat of the previous meeting held, but this time more relaxed, a few rude jokes swapped. I even got a beer. Kenya had lost six hundred dead, but you would not have known it by the mood.

Back outside, the day warm but the heavens threatening to open on the crowd, we took alternate sides of the street and worked our way along, shaking hands and being snapped.

We had built our own hotel down here years ago, but this would be the first time we had ever used it, the upper floors cleared out for

us. Booked in, luggage dumped, I took Helen to the roof as it started to rain. The pool looked good from the doorway.

At 7pm we dressed up, Ruth watching the baby, and descended to the ballroom, the rich and powerful of Kenya and Africa invited. I spent ten minutes with Abdi and his gang, chatted to the Tanzanian Defence Minister, spoke to Ngomo, spoke with a group of Ethiopian ministers, and with senior soldiers from the Congo who were all working at bases in Kenya.

At 8pm, our own team turned up, Rudd taking the smile off my face.

‘How you coping?’ I asked, noting how old Rudd now appeared.

‘We’re adjusting,’ he flatly stated.

‘Anything you need?’

‘It’ll take time, that’s all. As Jimmy said, we count our blessings, not our problems or losses.’

Jimmy closed in and shook Rudd’s hand. ‘If you had told me, I would have flown straight down. I may have been able to save your daughter.’

‘It was very quick,’ Rudd explained. ‘One day a headache and shivers, the next day gone.’

‘If there’s anything you need, let us know,’ Jimmy told him.

‘When you came to me, in 1987, you knew my future,’ our Dutchman asked.

‘Yes, but not about your daughter. I came to change things, not leave them as they were.’

‘I was not suggesting you could have, I was curious about my role, my destiny.’

‘You helped us greatly when we needed it,’ Jimmy told him. ‘You’ve carved your name into the tree of time, and you did a good job, Rudd. But our fight’s not over yet, there’re tough times ahead.’

‘More pandemics?’ Rudd asked.

Jimmy nodded. ‘And worse. Make the most of it now, while you can.’

Anna and Cosy brought us up to date on orphanages and colleges, and I then cornered Mac and Coup.

We shook. ‘You OK, Mac?’

‘Aye, fucking peachy.’

I waited.

‘I was fond of the lass, bit of a blow. Didn’t know how much I missed the lass till she was gone; big empty bed.’

Coup asked, ‘What Jimmy said, about tough times ahead...’

‘It’ll get bad, real bad. Rescue Force was created to be the spearhead, which is why we spent so much time on it.’

‘We expecting the four fucking horsemen of the apocalypse or something?’ Mac asked.

‘Yes,’ I answered. ‘And all that stands between us - and complete fucking disaster - is the big guy.’

‘If anyone can make a difference, he can,’ Coup put in. ‘He’s got my fucking vote.’

‘How’s morale at the base?’ I nudged.

‘Mixed,’ Coup answered. ‘The deaths took an edge off, a few familiar old faces gone.’

‘What’s Tubby doing these days?’ I asked.

‘He ain’t fucking Tubby any more,’ Mac said. ‘Call him Lanky.’

‘He’s lost five stone,’ Coup said with a smile. ‘We preferred him as he was.’

‘You’re the senior staff, so keep an eye on morale, and get ready for another deployment soon enough.’

‘Like the last one?’ Coup asked.

‘Worse,’ I warned. ‘Next few years will be hell on earth. Literally. If you got time to take a holiday and enjoy yourself, take it now.’ I turned my head a notch. ‘Mac, we need that base and region working at a hundred and ten percent efficiency. We need you doing what you’re good at, because we’re going to be knee deep in bodies otherwise.’

Mac took a moment. ‘Good times over, then,’ he sullenly stated.

‘For a while at least. You can take a breather in 2019.’

‘I’ll mark the day in my fucking filofax.’

‘Mac, you used to be a soldier, so start thinking like one again, or the people who depend on you will be under the sand, not in the fucking rooftop bar. You following me, Mac?’

Mac reluctantly nodded.

At midnight, guards carried Mac to his room, drunk despite the stems, and I grabbed stale sandwiches off the buffet as the stragglers were booted out.

In our room, I said to Helen, ‘We’ve come a long way, Jimmy and me, but this feels like the start, but it’s not. 2025 is the start line. When Jimmy came back, he knew that he had all those years to go. The man must have patience.’

Helen opened the mini bar. ‘He told me once that he kept going because he was afraid of failure, which seemed a bit obvious. I think he keeps going because he doesn’t know anything else.’ She opened

a soda. 'He's doing the right thing, passionately, but I wonder if he remembers why, and why he got started.'

'You think he's done this a few times before.'

'How else could he know so much? And he drops hints.'

I sat on the bed and eased off my shoes. 'He said something to me, years ago, about taking over from him. I don't know what he quite expected, but if we screw up 2025 I'm not jumping into some fucking time machine and going back. No fucking way I could re-live forty years, or hold it together.'

'I couldn't,' Helen admitted with a sigh as she sat next to me.

'Don't ever repeat this, but Jimmy once said that he wasn't supposed to be here.'

'Was ... someone else supposed to go back?' Helen puzzled.

'God knows. What I can't figure out, is why others didn't travel back as well, after him.'

'Shelly sent a message.'

'No, he's sure now that it wasn't Shelly. It's related to her, or something she invents, but not sent by her. And if they can send stuff back, why not a laptop full of useful information?'

'You'll give yourself a headache. C'mon, bed, old man. I've already checked in on the baby.'

'I'm fifty years old on my next birthday. God, that sounds a lot. When my dad was fifty he was grey, moving slowly and wearing slippers.' I flopped back and looked up at the brass ceiling fan. 'Fifty years old. Jesus.'

'They had some of my old school friends in the papers, and they did look old. Frightened me when I thought that I should look like that by now.'

'We're Peter Pan and Wendy.'

'Wendy would have grown old normally, she was a child. Besides, I don't think they had kids in the movie, or even dated.'

'Yeah, well it's been forty years since I saw it last. Wasn't Robin Williams Peter Pan?'

'Our girls think Harry Potter is an ancient classic.'

We checked in on the baby in the morning, and enjoyed a quiet day around the pool as Jimmy headed off for meetings and interviews. Baby Liz loved the pool, and her waterproof nappies allowed her to splash about with me. I missed this. I missed this a lot.

Jimmy returned in the evening, the chores done, and we set-off around midnight for Singapore, a direct flight. I sat with the press, baby Liz in hand, and they all made silly noises, taking it in turns to

hold her. The hacks got a good nine hours sleep after a little booze, and we landed in Singapore with the sun shining brightly.

The small island state had been hit hard by SARS, just over one in ten of its small population killed, some eighty percent having fallen sick at one point. We had placed three thousand members of Rescue Force on the densely populated island, including four hundred Chinese medics, and they virtually took over when the hospital staff themselves fell ill.

I had questioned the deployment of the Chinese around the region with Jimmy, since China itself suffered greatly. He said, 'If you and your neighbour are both sick, you achieve little by nursing yourselves, and everything by nursing each other.' It was politics pure and simple, the politics of world peace, and part of the grand scheme.

Cars were waiting at the airport, a coach for the press, and it seemed that everyone had turned out again, the sides of the roads lined from the airport to the city centre. The island's leaders met us outside of the presidential palace, a wonderful whitewashed building with a red roof, gardens and palm trees at the front. There were no crowds here, just the politicians, all of whom now greeted us in turn.

They bestowed upon us the Singapore Honorary Citizen Award in front of a bank of TV cameras, jumping in the cars for a short trip around to a main hospital. The roads had been lined with temporary metal grills, police stood in front of them. In the road itself stood most of those rescuers who had worked down here, all offered a free hotel stay and free flights by the grateful people of Singapore. Dozens of uniform blocks of rescuers stood like soldiers, three deep and twelve wide, the majority Chinese.

We stepped down to a roar of cheers, and I was getting used to the silly royalty bit of waving back. The President led us inside the hospital, and there began a numbing handshake process, all bleeding ten million hospital workers greeted. It felt like it would go on forever. Back outside, Jimmy took the podium, the president waving his hands for the people in the crowds opposite to settle.

'Thank you, Mister President, for your invitation to visit ... and for your warm welcome. Although this is a sad time, with such a great loss of life, the nation of Singapore is secure ... and it will go on. We have very little to celebrate today, but must take comfort from the fact that we saved more than would have otherwise been possible. A great many people were injected with the super-drug, and we managed to save many, thanks in no small part to the

dedicated and hard working Rescue Force personnel we have with us today.

‘Many of those rescuers are Chinese, people who were once seen as a communist enemy. Their own country lost many citizens, more than were lost here, but they sent their medics overseas nonetheless, a show of solidarity with the peoples of Asia. Those people have nothing to fear from China, and your Chinese brothers are not so different to you or I.

‘As I said in Africa recently, the best way forwards for those communities that have suffered is to hold your heads up high, and to move on with determination. You must all be defiant in the face of adversity, you must fight mother nature when she accidentally harms her own creation, and you must resolve to go on.

‘And you will know when you have finally reached the correct decision. You will know ... when you care as much for your fellow citizens as you care for your own family, when you are just as happy to take your neighbour to hospital as you own children. For Singapore to continue, and to thrive during the adversity ahead, you must consider first the good of the nation, and second the good of the individual. It does not matter if the individual falls, so long as the body of the state goes on.

‘The next generation will be born, the green shoots will grow, and they will have a much better chance if the current generation considers that new growth to be more important than the existing forest. There are further adversities ahead, but from what I have seen of your spirit of cooperation I am sure that Singapore will cope well. Thank you for your time here today.’

Jimmy led us forwards and we split up, chatting to the rescuers in a variety of languages, Helen practising her Chinese. I found a few faces I recognised and exchanged a few rude comments with Mawlini veterans, asking others about what had happened here. At the height of the crisis, during one particular week, RF medics accounted for eighty percent of the staff at this hospital and they held the line, many working three days without sleep.

I also learnt of the six pregnancies of local nurses, and four pending marriages to RF staff, determined to keep that out of the press. Dirty buggers.

After an hour of greeting the rescuers, we headed off to a hotel for a clean up before the pre-arranged state dinner, tuxedos hired for the occasion. As we set about the main course, aides ran in, whispering in the ear of the president; a car bomb had gone off

outside our hotel, many citizens and police officers killed. An Indonesian Islamic group had already claimed responsibility.

Rescue Force teams, those staying at our hotel, poured out and dealt with the aftermath, the wounded given the best chance of survival. As they were doing what they were good at, we stepped out to the waiting press and approached a bank of TV cameras.

Jimmy began, 'We are reminded today, that there are those in the world who seek only death and chaos. If the car bomb was from an Indonesian Islamic group – as claimed, then all of Indonesia has been stained with this crime. Rescue Force medics have always been there for Indonesia in her times of need, and now some of those medics lay wounded in hospital, their colleagues helping the innocent citizens of Singapore.

'It is now up to the people on Indonesia to decide if they live with this stain, if they wish to kill and hurt those who help them, and in the name of Islam. If there are citizens of Indonesia watching this who know who the terrorists are, come forwards and inform your police - or hang your heads in shame.'

We turned about as a group and headed back to the same hospital, soon in the waiting room and sat with police officers and civilians with minor wounds, RF medics helping out.

The next morning, as we flew off for Hong Kong, a quarter million people marched through Jakarta, the capital of Indonesia, in protest at the bombing, a few arrests made already, action promised by the Indonesian Government. Helen and I had been a little traumatised by the bomb, since we had driven past the blast point with the baby in the car. It was a sobering reminder of the dangers we faced, and took the edge off my recent optimism. Up to that point it had been a good trip.

'Two steps forwards, one step backwards,' I commented to Helen.

In Hong Kong the security was tight. The police whisked us around to Po's hotel, Po himself greeting us with Marko and Yuri, the trio thick as thieves these days. We left the press to book in, and headed for the Chinese restaurant, opened early for just us.

Over starters, we caught up on gossip and business, the Russians now involved in projects in Hong Kong and mainland China, New Kinshasa going well, house prices rising in Gotham City. The building costs of those houses were, however, going down with a surplus of available builders and suitable materials; mansions were being thrown up all around the place. Builders contracted to work on

New Kinshasa were making good use of their weekends to throw up houses on plots of land that were free.

They informed us that the research centre was just about complete, some six hundred people already in place from a variety of nations. If anything, there would have to be a second centre built to accommodate them all. Wages were low, food costs even lower, and apartments free of charge.

Jimmy had already listed research projects, and the Shanghai brain-trust kids that had returned to Africa were running most of the projects. Some were involved with coal-oil, some working on SARS, a few working on innocuous projects such as concrete supply; cheaper, stronger and quicker.

The one secret project that they were working on, no one other than the autistic kids allowed to touch, was a type of plankton. I knew about it, but was sworn to secrecy, Jimmy not very forthcoming about it.

The Russians updated us on our super-farm south of Moscow, and our coffee shops, the coffee shop chain now something on an institution in Russia. And I still didn't understand why Jimmy had started them.

With Ruth watching the baby, we headed down for a massage, sauna and Jacuzzi, safe in the knowledge that the hotel was secure. Back in our room, I made use of the room's built in dedicated web computer to scan the news, always keen to see what the Americans were saying. CNN reported the massive crowd turnouts in Africa, some detail of the rousing speeches, whilst Fox News questioned our parenting. We did, apparently, leave the kids home alone.

I showed Helen and she was furious, asking if we could sue them. I promised to check with our US lawyers. Thinking laterally, I contacted the house and asked them to invite CNN in, and for CNN to see how the girls live when we're away, including interviews with the girls. Helen was not sure, since Shelly would probably be in make-up and a sexy outfit. She rang our daughter to make sure.

Hancock, still the head of RF Hong Kong, welcomed us to his building the next day, and we dedicated a plaque to those rescuers who had died. RF Hong Kong stood at four hundred rescuers typically, and they had lost twenty-six, a hell of a blow to their ranks.

In the main hall, the teams assembled, Jimmy taking the microphone. 'Some of you have lost loved ones, all of you have lost friends and colleagues, and the casualty rate has been higher than any other deployment that we have ever undertaken. But the

casualties have not finished yet. There are tough times ahead, and more will die. But each of you injected dozens of sick people, maybe even hundreds each, and you saved their lives. On the scorecard, we're doing well enough.

'The work of looking after the sick during pandemics puts you at greater risk, but what would you be doing otherwise? You'd be working in a local hospital, and when the pandemic struck you would have been at just the same level of risk. Or maybe you would have been sat at home, watching a loved one slip away. Yours ... is a simple choice: fight standing up, or wait for death to come calling.

'There will be other disasters in the future, there will be more casualties amongst rescuers, but who here would swap their place on the front line ... for innocent women and children?' He let them think about it.

'You volunteered to risk your lives to save others, and there is no more noble a calling. But you'll all be at greater risk in the future, and each of you should look to your own conscience about whether or not raising your family with a civilian job is more important. I have no problem with anyone who wishes to do so, we have enough people wanting to join to replenish the ranks. Many of you ... have done enough. You've earned your honour, you've put in the years, and no one can take that away from you.

'But make no mistake; in the next ten years you'll see a major deployment every six months. You'll be knee deep in death and destruction, and many of you won't survive. Consider that when planning your future, because in that future you'll be on the front line continuously.'

After that morbid speech we toured local hospitals and chatted to the staff about how they had coped, the former colony having lost three hundred thousand people. Most of the medics here had been injected with the super-drug, but a stronger variation than was typically used, a fact that I had not known. Chinese mainland medics had also received it, their dosages similar to that of the Rifles. Here, doctors worked thirty-six hour shifts and slept for five hours, returning to the wards bright-eyed and bushy tailed after their brief rest.

With the tour complete, we enjoyed a relaxing evening in Po's hotel, insulated from the world, before flying north to Beijing the next morning, the same group of reporters still with us. I had a dig at the American press, and at the suggestion that we were doing a bad job at parenting.

‘I went to boarding school,’ one man said. ‘I saw my parents a few days a year, and that was all.’

I raised a finger. ‘Good point.’

Another hack asked me, ‘What do you say to the growing American argument about your legitimacy?’

‘What argument is that?’ I questioned.

‘That Jimmy has power and influence, but was not elected, or is even subject to scrutiny.’

‘He’s subject to scrutiny all the time. By you lot! As for elected, we could always put it to the vote. How do *you* think the people would vote: keep him ... or send him back?’

‘I guess they’d vote to keep him,’ the man agreed.

‘Sixty percent of the world’s governments are dictators, presidents for life,’ I pointed out. ‘Tell the fucking people to vote on them first. And we’re heading for another dictatorship right now, also known as America’s largest lender.’

‘The pictures of Jimmy injecting that kid in Harare made every front page,’ a woman put in. ‘And fifty reporters are camped outside the orphanage to see how the kid does. So far, the child is up and walking, waving out of the window at them.’

‘You lot been injected?’ I nudged.

They exchanged looks, most admitting to the basic drug.

‘Might make a good story if one of you were injected directly,’ I suggested. ‘You can chart your own transformation.’ I pointed at a portly forty-five year old man. ‘You’d be a good candidate; it would take twenty years off you, mate. And a few stone.’ I could see him considering it.

Landing at Beijing, I should have figured that the Chinese would wish to outdo the Africans and the citizens of Singapore. The well-organised communist super-power had the streets lined with thousands of soldiers, happy smiling citizens stood lined-up behind. It made me wonder if they had been nudged by the party superstructure, or if we were genuinely popular here.

Booked in to Po’s western-style hotel, we boarded a coach, the attendant pressed in a second coach, and headed around to Tiananmen Square through streets lined with orderly citizens.

I turned to Helen. ‘First time I came here I thought they’d lock us up forever. I was terrified. Now we’re posing like politicians, and I’m not sure which I’d prefer. I think being afraid was better than all this nonsense.’

‘Can’t wind back the clock.’

‘Apparently, you can,’ I told my wife, and we exchanged looks.

The square itself was crammed, crammed with orderly and uniform blocks of citizens and children, all waving the Chinese flag; the air was thick with propaganda. We halted at the rear of a large podium, no idea where our press gang had got to, and were led forwards. Up on the podium, I found the Russian President and his Foreign Minister, greetings exchanged in Russian. I greeted the Chinese Premier with a bow and handshake, Jimmy being gestured towards the microphone. He was just about to upset Uncle Sam. Again.

When the crowd had settled, Jimmy began speaking in fluent Chinese, the Russians checking their earpieces. ‘Ladies and gentlemen, thank you all for being here today, and for your warm welcome. I would like to thank the Chinese Government, and the Chinese people, for the contribution that your Rescue Force medics made during the recent SARS pandemic. Despite your own country suffering at the hands of the disease, you generously sent your medics abroad to show solidarity with other nations in this region.

‘Some commentators in the western media, especially in America, criticize your political system, and have criticized the deployment of your medics as propaganda. Well, I don’t care. I’m more than happy with what you did, and who can argue with the method, when the end result is what matters. Your medics saved lives, and many of your medics fell ill and died in the process. They have earned their honour, for themselves and for China.

‘If sending your medics abroad is propaganda, then I hope your leaders adopt a policy of far more propaganda in the future. Because in the future there will be great trials for us all, great adversity, and many challenges. And during that period of adversity you will cope better than the western countries – for the simple reason of your ordered society.

‘When disasters strike in the future, your government will tell you to move, or to do something, and you will do it in a quick and orderly fashion. In the west, and in America, when disasters strike, the government there will ask its citizens to move, but those citizens will dig their heels in defiantly, not least because they don’t trust their own government. When disasters strike in the west, a great many people will die because they do not have your ordered society. They ... are a society of individuals.

‘You may all sleep sound, knowing that when a disaster strikes your government will be well prepared, well organised, and that you and your neighbours will be better off – so long as you listen to what is being asked of you.

‘The next ten years will be very difficult, but you are in a better position than most to cope with the problems that come your way. Over the past fifty years, many in the west have hoped to defeat your communist government, yet now come around with the begging bowl, asking for loans. I, for one, am very glad that you held onto your political system. It may not offer you the same freedoms as some in the west claim that they enjoy, but during the next ten years ... staying alive, warm and fed will be far more important than calls for freedom of speech from the western media.

‘People of China, rejoice in the fact that you think and move as a single body, for you will have the best chance of surviving the trials ahead for mankind.’

I turned to Helen. ‘Oh dear.’

‘Our next stop is the States,’ she whispered.

‘You have to wonder about the timing, don’t you,’ I whispered out the side of my mouth.

Our hosts led us to a meeting room, a mini “M” Group meeting held with just the Russians and Chinese present, sure to upset US President Fitz, if he wasn’t pissed off already. We discussed Afghanistan, Africa, drugs and technology. Then we got onto Iran.

‘Gentlemen,’ Jimmy called. ‘You are all on warning ... that if you cannot persuade Iran to halt its nuclear programme, that I will consider a military option.’ They were shocked. ‘I will do so, because if I don’t then Israel will strike, setting the Middle East ablaze. And if Israel does not strike, America will, also setting the Middle East ablaze and risking the rise of The Brotherhood early. You have less than a year before I strike.’

We left them with that problem to wrestle with, soon heading across the Pacific and to Seattle, the press checking the correct translation of Jimmy’s speech. Our plane had a satellite uplink and messages could be sent out, the laptop connected to it in constant use. Time was when this lot would have used pigeons from the front line, then Morse Code telegrams, then phones, now emails with built-in spell-checkers. Progress.

Our reception at the Boeing Seattle plant was always going to a warm one since we were good customers, and arrived wishing to order more planes, the Boeing technicians interested in the modification made to this aircraft. Therein started a problem, a big one.

A Boeing official told a CNN crew that our plane had advanced defensive systems, future technology, possibly radar jamming. That took a millisecond to reach the news, the American FAA calling for

an inspection to be made, since such technology could be a hazard to other aircraft.

Jimmy took a few calls, refuelled the plane and we left US airspace for the Pacific, Fitz wondering where the hell we were going as we headed south. On a long meandering flight, we crossed Mexican airspace with permission and headed towards Cuba, our meetings with Caterpillar and others cancelled. Touching down in Cuba, the attending press were all curious, and now pissed because they missed their chance to film us around the States. Jimmy was also not a happy bunny, since the USAF had helped with our 747's refit. Fitz knew exactly what was on the plane, and should have dealt with the FAA. Fact was, our 747 *was* a danger to other planes if it wanted to be, and we could jam radars.

We refuelled in Havana, maybe even with fuel from our own oilfield, and set a course for London, calls from Fitz ignored. Back in the UK, we gained permission to land at Cardiff airport, missing the swarms of press at Heathrow, and arrived back to hugs from the girls. They described the interviews they gave, and we had a copy of the interviews on their laptops, our daughters well behaved.

At the house, Jimmy called the household White House aide a few choice names before firing up the video conferencing equipment, CNN selected for the interview.

Settled, the lady interviewer asked, 'What exactly happened?'

'Your aviation authority started asking to inspect my aircraft, as well as suggesting that it should not cross American airspace.'

'Why did they do that, exactly?'

'They believe my aircraft to possess radar jamming that could interfere with other aircraft.'

'And does it have radar jamming?'

'Your military aircraft have had that technology since Vietnam, and your military aircraft have been flying over American airspace ever since. Every day your Air Force planes fly about with the same technology, and your own Air Force helped me to customise my aircraft. Unfortunately, your various government departments don't seem to talk to each other any more. Hardon Chase would never have allowed this to happen, so maybe President Fitz is sleeping on the job.'

Sat off camera, I held my hands to my face.

'Your country will face a great many disasters in the years ahead, so if your government departments don't even coordinate properly on the simple stuff, then a lot of American citizens are going to die because of your government's incompetence.'

‘Have you spoken to the President?’

‘Not yet, I didn’t wish to disturb his sleep – since he seems to spend a lot of time sleeping.’

‘Oooh’, I let out. ‘That’ll hurt in the morning.’

‘What do you say to those who criticize you for favouring the Chinese.’

‘I’d say wait for the next outbreak of SARS, when millions of Americans will fall sick. Let’s see if your wonderful bloody health service copes as well as the Chinese. You may have the cutting-edge technology, but can you nurse the masses and the poor when they fall sick? And fall sick in the millions.’

‘What do you think we could be doing differently?’

‘For one, your government could take its thumb out of its arse.’

I put my hands to my face again.

‘And then you can get FEMA up to speed, before its too late. You have less than a year.’

He cut the interview, and I stood shaking my head at him.

‘Fuck ‘em,’ he said. ‘Fuck ‘em all. I’m sick of trying to force people to do what’s best for them.’

‘I think you got their attention, boss.’

Keely came and found me later, avoiding Jimmy. ‘Fitz has sacked the FAA officials responsible, and he’s feeling the heat. And up to now, Jimmy never put a figure on SARS round two. Stock markets took a hit, lot of difficult questions being asked.’

I sighed. ‘You’re the strongest country, and you have all the technology. You could be doing more to fix this than anyone, and you’re the one that’s always the most difficult to deal with.’

‘A nation of individuals,’ Keely said with a sigh. ‘Chinese can mobilise the masses, but we’d face the lawsuits to stop us trying. Problem is partly a lack of faith in the federal government, partly history. People do their own thing on the farm; towns have mayors, states have governors, and the political pendulum swings back and forth.’

‘You came together for the Second World War, do you think that kind of mobilisation could be done again?’

Keely shrugged, making a face. ‘Be a lot harder now.’

‘And wage freezes, Martial Law, food rationing?’

‘Would not be popular. Black market would take over,’ Keely suggested.

‘Well,’ I sighed. ‘If you lot can’t get it sorted - we’re all screwed.’

‘Need another Pearl Harbour,’ Keely suggested.

‘Got news for you; there’re ten of them around the corner. At what point do you get organised?’

‘Hopefully, after the first one,’ he said as he left me.

Greece

Little more than a week later, someone in Greece leaked the news about the pending earthquake. The Greek bourse dropped like a stone, European bourses following. Jimmy gave an interview in London:

‘The Greek Government were warned in secret at the start of this year, about a future quake that will cause much damage in Greece. It was the decision of the Greek Government to try and make preparations quietly, and to avoid the crash on the stock markets. In preparation for that quake, I’ve been building houses and apartment blocks in Greece, and have encouraged others to do likewise, and for the Greek Government to do likewise.’

‘Why are you building apartments before a quake?’

‘The quake will strike the Athens area. We’ve been building in other areas to try and house people afterwards.’

‘How bad with the quake be?’

Jimmy took a moment. ‘I had hoped that the Greek Government would make an announcement, at a time of their choosing. Athens ...will be completely destroyed. Rescue Force will be deployed, but I would hope that the citizens heed the warning ... and leave in good time. And let me state that Athens *will* be rebuilt, house by house, stone by stone, and I’ll do all that I can to assist in that process.’

‘When will the quake strike?’

‘It’ll strike in January.’

That led to an emergency meeting of the European Union, where formerly secret plans were now unveiled, the saving of the European economy being a big part of those plans. Rebuilding Athens would be a costly project. Coming on top of the SARS pandemic, the mood in Europe slipped a little.

Residents of Athens began moving out, often to relatives in the country. New building work in the city was halted, making many people redundant, but that building work then picked up a pace in Greece’s other principal cities, EU grants awarded.

I had waited for some sort of backlash from the Greek press, but none came; we could not be blamed for the worst ravages of mother

nature. But what we could be blamed for was something that Jimmy had kept to himself. He called me down to the house one day, and said, 'There'll be an outbreak of a disease in Lagos, Nigeria, and we'll take a lot of flack. Well, we'll take a lot of flack from the Nigerians.'

'Why?'

'Because we'll seal their borders with soldiers.'

'What?'

'This disease ... it makes Ebola look like a head cold. The one good thing we have in our favour, is that it needs contact to spread for the most part; touch. I have a team in Lagos looking for the first case, patient zero. And then ... and then we get tough, real tough.'

'How ... tough?'

'Shooting families trying to cross the border. That tough.'

'And if the disease gets out?'

'A lot of Africans will die.'

I went and told Helen, and I had to sit and think about it for a while.

With the summer arriving and the weather improving, I took the family up to Scotland again, enjoying a five-day break, Shelly bringing along her latest boyfriend. At least this one had lasted more than just a few months. She told us he was fifteen, but we figured him to be older, not pushing the matter. We were just glad that she wanted to come with us.

Back from the holiday, Jimmy took a call, the dreaded call. Six people had died in a Lagos clinic, all bleeding out of their eyes and orifices. He rang President Errol and told him to declare a pandemic emergency, and to seal the Nigerian border with soldiers, stopping anyone from leaving. Our good President was stunned.

Jimmy rang Bob Davies at Mapley. 'Bob, Jimmy, get the communications officer ready.'

'Deployment?'

'Hell is about to erupt.'

With the communications officer sat listening, the call now on speakerphone, Jimmy said, 'Set filter to all RF staff worldwide, all supplementals. Set destination to be Goma Hub, and sound full emergency recall. Bob, send Doc Graham down, instructions will be waiting for him.'

Next, we ordered our airline to halt all flights to Nigeria, calling the household "M" group representatives together and giving them the news. Han knew, he had been working on the antidote. Jimmy now ordered that antidote flown to Mawlini.

Within a few hours, all flights to Nigeria had been cancelled the world over, a surprise to the Nigerians. We had set-off for London after the “M” Group meeting, a statement to be made at the club, the world’s press invited. Along with the Nigerian Ambassador. Central African TV was at the centre of the bank of cameras, going live as an emergency broadcast.

Jimmy sat at a desk on the stage, a bank of microphones almost blocking his image. ‘Time is short, and we have to act quickly, so I apologise to the Nigerian Ambassador, but most of all I apologise to the Nigerian people for what is about to happen. And what is about to happen will leave a dark stain in history.

‘I have known for a long time of the outbreak of a disease in the slums of Lagos, a disease similar to the Ebola virus. I have, this year, had doctors working in those slums to see if we could find patient zero, and to contain the disease.’

He took a moment. ‘I have, for a very long time, considered the best approach, the best way of handling this. Warning the people of Lagos would not have seen a change of lifestyle, a clearing of the slums, or a halt to this outbreak. I have wrestled with this for a very long time, and there is no solution other than that which I will now implement. I hope that the world forgives me some day.

‘The one thing in our favour has been my travel through time, and as such I have – after a great deal of research – found a cure for the disease. This cure does not act as a vaccine, but it will cure someone in the early stages of the disease. I will now describe the symptoms.

‘A person will feel sick, lethargic, and will suffer vomiting and liquid stools with a high temperature. That sickness will last four days. If, after four days, the victim bleeds from the eyes and orifices, then they are beyond help. If a sick person is injected on day one, day two, or sometimes day three, they can be saved.

‘I have tens of thousands of the vials on their way to Africa and they will arrive tonight, to be administered by Rescue Force. Rescue Force medics, injected with the Manson drug, will be resistant to this new disease, Lagos Fever, and those medics will fly into Lagos.

‘Despite the availability of that drug, simply injecting those who fall ill will not stem the spread of the disease. The disease ... will run its course.

‘I will now address the leaders of Africa, because it will be the African nations that suffer the most. All of the borders with Nigeria must be closed straight away. People should be allowed to move into Nigeria, but no one should leave. Soldiers must be deployed to the

border, and force used to keep those borders closed. I repeat, force must be used to close the borders.

‘Those countries that are close to Nigeria should arrange for soldiers on the streets, including Kinshasa. Any Nigerian, who has left the country in the past four days, should report to the nearest hospital for a check-up. Anyone in Africa, who knows of a Nigerian who is sick, or someone else who has visited Lagos and is sick, should report that fact to the police straight away. Don’t go near them, and don’t touch them.

‘We are fortunate, in that this disease is primarily spread by touch or body fluid. All doctors, nurses, and medical workers in Africa should wear facemasks and gloves when in contact with any suspected victim, even in reception. I hereby ask for all hospitals in sub-Saharan Africa to be put on an emergency footing. All non-essential procedures should be cancelled, and anyone who can send home should be moved.

‘To the authorities in Nigeria, I have sent detailed emails, but there is little you can do other than allow me to handle this my way. My medics will land in Lagos soon, and they are immune to the disease. They can take over from your other medics, who will certainly die if they come in contact with such people. I have, earlier this year, secretly injected many of your medics with the Manson drug. They know who they are, and they should take the front line in this battle.

‘To the Nigerian authorities, I give the following instructions; fail to follow our procedures ... and you will lose millions of your citizens.’ He took a moment. ‘If you find a patient bleeding from the eyes, terminate their lives immediately, bag the bodies very carefully, and incinerate them safely, perhaps even on the hospital grounds.

‘Close all schools, cinemas, and ask your citizens to stay at home unless their work is important. Mobilize your police and army; you will find masks and gloves that I have secretly stashed in your country. Panic, will be a problem, but reassure your people that they can only get this disease by direct contact. Close all marketplaces, or any place where your citizens may rub up against each other.

‘To the medical community in Nigeria I say this: don’t try and take samples of blood for study, the blood is deadly to workers in laboratories. If you wish to study the disease, be extremely careful, and make use of those injected with the Manson drug. I have arranged for thousands vials of the Manson drug to be flown to

Lagos. The army should take charge of that shipment, since citizens may wish to grab it and inject themselves.

‘On the note of the Manson drug, it will not cure someone is who is already infected. For the Manson drug to be effective, a person would need to be injected months earlier.

‘To the African leaders, I say this. Put soldiers on your borders, look for sick people who may have been to Nigeria, but don’t close your borders or stop people from working. Don’t let this disease harm your economies.

‘To the soldiers on the Nigerian borders, I say this. If you have to, shoot people dead to stop them crossing the border, don’t take bribes. When you hold out your hand to take the money, you’ll be infected and killed yourself. If you see someone sick at the border, shoot them, and burn the bodies without touching them.’

I had been watching the press, most of who were now stunned.

‘To the countries of the west, and all countries outside of Africa, go back through passenger manifests and check new arrivals. Remember, there is an incubation period of four or five days, sickness coming on during the second day. But remember also that the disease is passed by touch and close contact, so don’t panic. If you do find a suitable case, treat as for a highly infectious disease. Do not ... even think about an autopsy. The body fluids of the dead remain contagious even when frozen. Incinerate the bodies as soon as possible, and with minimum contact.

‘Vials of the antidote are being flown to many of the world’s capitals as we speak, so please take charge of them, and use them sparingly. If a health worker feels ill, inject them straight away.

‘Now, the plans that I have enacted are the best plans that *anyone* could come up with. They will probably come in for some criticism, but I don’t care. You’re not in charge of this outbreak, I am, and I’ll do it my way – and history can judge me for what I now set in motion. I take responsibility, because I can’t trust any other group, or group of nations, to work quickly enough.

‘And now is a good time to tell you how I developed the antidote. Almost thirty years ago I injected large numbers of orphans in Africa, orphans dying from AIDS, knowing full well that my blood would cure them, but that my blood would interact with the AIDS virus, causing a mutation.

‘Those kids grew up with that mutation dormant, and had kids of their own, those offspring tested for a special variation of the dormant disease. One in every three hundred children injected, who had kids, went on to create the right antibody, something that I have

been working on in secret year by year. We identified that mutation little more than two years ago, and have slowly produced as much as we can, a slow and difficult process that has taken a great many years.

‘It has only been in the last year that we developed enough of the antidote to be effective. An earlier outbreak would have cost many more lives, so we were very lucky. I’ll now take questions, so wait till I point.’

‘What’ll happen if this gets out of Africa?’

‘Millions will die.’

‘How many will die in Africa?’

‘That’s hard to quantify. If we’re in time, and the antidote works, tens of thousand, no more.’

‘And if it doesn’t work?’

‘Tens of millions.’

‘Could the Nigerians have been warned sooner?’

‘And done what?’ Jimmy posed.

‘Warned their citizens.’

‘And what would they do? The slum dwellers have nowhere to go, no change of employment, no change of sewer system. Nothing would have happened differently.’

‘You said to put people down?’

‘Yes. Delay will cost lives,’ Jimmy answered.

‘And you’re asking for the soldiers to shoot people dead on the border?’

‘Yes, most definitely. If the disease reaches other Africa slums then it’ll put the whole of Africa at risk. Perhaps a hundred million people could die, and that’s not a risk I’ll take. And if it does get out it’ll spread to the west.’

The Nigerian Ambassador had already left by time Jimmy had finished speaking. When the questions got silly, Jimmy cut the press conference and we left, our hopes now in Rescue Force, and the Rifles on the border.

Back at the house, I Googled “Lagos fever case” and found three reported cases in the west; New York, London and Paris. The authorities were taking no chances, medics seen in spaceman suits, inflatable tents set-up outside hospitals, armed police nearby.

That evening, we sat and watched the news as a family, all glued to the TV as images of the Rifles on the Nigerian border appeared, RF medics landing in Lagos, panic in New York and London as suspected cases arrived at hospitals. But the images from Lagos were not good, the streets jammed by people trying to leave, the

exact opposite of what was good for them. The Nigerian police and army had been fully mobilised, masks donned, and the hospitals appeared to be ringed by armed men.

I had to stop and wonder how even years of preparation by the Nigerians could have planned for this. How could anyone plan for a panic?

Rescue Force had been spread around the neighbouring countries, and in particular their border towns and villages. If someone was sick, then Rescue Force were the front line. Other medics, also injected with the Manson drug, spread out around Africa and set-up in hospital waiting areas. Our main task force, Task Force Alpha, made up of some four hundred medics, had flown into Lagos with the antidote, and now had the very unpleasant task of being the first to examine both sick people and potential carriers.

Two days later, after the panic had ebbed and the streets had cleared, the second group, Task Force Bravo, moved across the border in jeeps, Rifles with them for much needed protection. Their task would be to enter the slums, and to spread to out other towns and cities. This group was made up of some three thousand medics, all of who had been injected by Doc Adam a few years back.

I followed the deployment with keen interest, and watched the W.H.O. website with dread. Four cases had been dealt with in New York, all fatalities, two health workers falling sick but surviving after being injected. I caught the same story on the TV news later, the bodies removed in a convoy surrounded by police, streets closed ahead of it. The ambulance used was duly torched by the ambulance staff, whether the health authorities desired that or not, police stood around watching the odd pyre.

In London, eight Nigerians had died, ten injected in time, a single health worker dead. But in the rest of Africa the news was not encouraging, dozens of cases popping up in nearby countries. Senegal, Ghana, Sierra Leone, Liberia, and the DRC. Kinshasa had seen a hundred cases between them, Kimballa in no mood to mess about and burning the bodies before death was pronounced.

The biggest problem was that Africa had plenty of sick people at the best of times, the early stage symptoms of the disease indistinct from many other diseases. In Nigeria, sick slum dwellers were clubbed to death, their shacks set alight. Around the neighbouring states, people falling ill with the right symptoms were injected with the super-drug at the same time as the antidote, hoping to clear up the symptoms of a normal bug in a day or so.

But Nigeria's main border crossings were where the real tragedy was unfolding, as desperate families attempted to flee, cars and lorries stacked high with household goods. Dozens had been shot dead, their bodies left in the road as a reminder to others, the Nigerian border guards long gone. We could only make a guess, but the numbers shot dead on lonely jungle border crossings were in the hundreds, perhaps more.

Where Nigerians did make it to neighbouring states they would often be attacked, stoned, or set on fire. There was no safe haven for them.

On day five, Jimmy organised a massive convoy of food trucks, driven over by RF medics and Rifles, food given out in the streets, especially in the city slums; the last thing we needed was a malnourished populace susceptible to disease. I diverted exports from our region, and in the blink of any eye I had shipped more than enough food.

Having organised the food, I felt a hell of a lot better, and I made sure every press agency knew what I had done, how many thousands of tonnes I had moved. It was the one bright spot, less of a feeling of helplessness. I stood at my office window, knowing that the partially evacuated slums were getting more food now than they had done before.

Day six saw a report from "The Detective Unit". I had to stop and look twice at it. The Detective Unit was made up of a quarter of RF Bravo, and their task was simple enough in theory, damned hard on the ground. They would start with an infected patient, and track back to relatives and friends, screening all of them for symptoms. Then they would check in on neighbours, places of work, or anywhere else that the person could have been.

Several deaths led back to a prostitute, long since dead, her rotting corpse found in a brothel full of her dead colleagues. Since the building stood isolated from the next abode, it was torched after large amounts of wood and oil had been placed about the bodies. Discussing the Detective Unit with Jimmy, he said that they had the best chance of halting the spread, so fingers crossed.

Cases in the west died out, literally, and after ten days no new cases were detected. Containment had worked, and our hard line stance was winning us fans in the media in the States. But then a plane from Spain landed at JFK with three sick passengers, two of them Africans. The plane was isolated, the passengers peering down at armed police, even soldiers.

Jimmy contacted President Fitz and told him firmly to get the passengers and crew onto the tarmac, or they would all get infected. Public opinion, and FEMA, were against that and the poor passengers and crew had to stay aboard, water dumped onto the aircraft steps. Uttering a few harsh words, Jimmy sent a plane from Goma, twenty RF staff with the antidote. They landed in the early hours, walked across the tarmac and boarded the plane, injecting everyone with both the antidote and the super drug. A sick African, already incoherent, was placed in a body bag and allowed to suffocate covered in Lime.

Refuelled, the plane was allowed to leave, this time to Africa, the American passengers protesting at length at not being let off. It landed in Senegal, was refuelled without anyone getting off, and flew on to an isolated airport in our region, a decontamination team waiting. Our other RF medics in New York, forbidden contact with anyone, re-boarded their plane and followed the other aircraft back. The net result of the fiasco was three dead Africans, but a grateful bunch of American and Spanish passengers.

Day fourteen saw two hundred new cases in Lagos, the dead totalling around twelve hundred in the city, so far. All that week I checked the stats, every hour or so, as I managed the food and water deliveries. It was the last thing I did at night, the first thing in the morning, and by the end of the week the number of new cases was down to a hundred a day. Jimmy was optimistic.

On the borders of Nigeria, camps set-up by RF had found and treated around three hundred sick people trying to flee, but ultimately too weak to make the journey. The numbers that they were encountering were also falling.

In the west, there had been no new cases for almost two weeks, and emergency procedures were gradually being relaxed, airport passengers still being screened. A group of people returning from Mexico with upset stomachs were isolated, but at least they were not refused entry this time. The passengers from the first flight to have been stopped had all undergone five days of isolation in the DRC before being flown up to Madrid. There they were again checked, being allowed finally to fly on, lawsuits planned against the US authorities for the passenger's horrific ordeal.

Five weeks after the start of the emergency, Lucy came up to my office and sat with me, wanting to help out. We checked the stats together, finding that the daily death toll was down to just eight people in Lagos, few outside of the affected region. Life was starting to return to normal for Nigeria, but I was still diverting food.

Then, on a Friday morning, no new cases were reported, and I insisted we throw a house party and a celebration. Jimmy invited over a handful of TV crews, and they set-up on the lawn in front of the house.

‘Today, we saw no new cases of the disease in Nigeria, and as far as I know there were no reported cases anywhere else. We have something to be thankful for, very thankful, and that’s Rescue Force. They all stepped into danger, and many of them worked in horrendous conditions, knee deep in dead bodies – infected bodies.

‘Theirs ... was a super-human effort, and one that we can all be proud of. They will remain in Nigeria and the neighbouring states for another few weeks, some longer, to see if any new cases occur.

‘But the greatest tragedy were those killed on the borders, those innocent people – and healthy people – who tried to force their way across the borders, and were killed because of it. We could not take the chance of the disease getting out and infecting the world. If it had, millions may have died around Africa.

‘I would like the people of Africa to make tomorrow, Saturday, a day of celebration. Celebrate our victory over adversity again, look to your families and friends, and hold your heads up high.

‘To the countries outside of Africa, you may need to review your procedures for dealing with these things, especially how you deal with passengers falling sick on long flights. The fiasco in New York should not be repeated, and sick and healthy passengers should not be forced to share the same air in a confined cabin. OK, questions?’

‘Will there be more of these?’

‘Yes there will. But the important thing for the people watching this to know ... is that there’s nothing they can do, and they should try and get on with their lives. Walking around feeling depressed will achieve nothing. When your number’s up, it’s up.’

‘Is Greece the next big deployment of Rescue Force?’

‘It is, but I hope that they get a good rest first. They deserve it.’

‘Have you spoken with the Nigerian Government?’

‘Every day since this started. They were ... very unhappy at the beginning, unhappy at how I organised things, but can now see the wisdom behind it. We all regret the loss of life of innocent citizens, but the borders were legally closed by the neighbouring countries, the Rifles simply enforcing the law of those same neighbouring countries. Those shot dead were trying to break the law.’

‘There have been no “M” Group meetings for many months. Why is that?’

‘I’m in touch with the various governments on a regular basis. The next meeting will be soon, but will incorporate a great many more countries.’

The party went well that night, and we felt that we had achieved something. Even Fox News were off our backs for the moment. I woke feeling good Saturday morning, better than I had for a while, and video-linked to Duckland for an hour, chatting to the troops. I took a walk down to the river, threw sticks for the dogs – which just got chewed instead of retrieved, and filled my lungs with summer air.

That following week, the RF teams started to withdraw, but underwent a strange ceremony. They all made their way to a regional airport in Nigeria, stripped naked and burnt all their kit, walked through showers rigged up, put on boiler suits and flew back. It made me smile, most of the lady doctors very fit, and very tasty with it. Not to mention immodest.

I walked down from the house one day, after a good day’s work, only to find Jimmy holding a young lad by the neck, off his feet and pinned against my house wall, Shelly crying. Jimmy threw the lad to floor and ordered him banned from the estate, the police removing him.

‘What the hell happened?’ I asked as I closed in, Shelly running off.

‘Your dear daughter found herself a nice eighteen year old lad.’

‘Eighteen! Christ.’ I went after Shelly, finding her on a bench by the river. I sat without saying anything. After a full minute, I said, ‘This place is full of police officers. If you date that lad he’ll go to prison. Do you want that?’

She didn’t answer.

‘We want the best for you. Jimmy wants the best for you.’ I sighed. ‘Can you not find a nice lad that’s ... you know, a little younger?’

‘They’re all stupid little boys.’

I nodded slowly. ‘So was I at that age. I would have loved to date a quality bird like yourself.’

She managed a smile.

‘If this was Africa, you’d have been married off by now,’ I added.

‘Maybe I should live there.’

‘Maybe you should just wait. You’re fourteen ... going on thirty-two. School first, exams, then you can go to university and be just as

big a slut as the rest of the girls there. That's what university is there for.'

I took a breath. 'Look, babes, we have a few other things to worry about, and I'd rather not have to worry about you. OK?'

'OK,' she agreed.

'Where do you want to go for the holidays?'

'Goma.'

'Good call. Pack your bucket and spade, and that one-piece bathing suit.'

She laughed. 'You're an old fart, you know that.'

'Pipe and slippers soon, babes.' I studied the side of her head. 'Will you be OK?'

'Can I go to the casino in Goma, drink and gamble?'

'Of course you can, it what's being fourteen is all about. Just don't forget that one-piece bathing suit.'

Part 15

Goma, June, 2014

Both of our girls had elected to spend their school summer holidays with us in Goma, and Helen and I were glad to be “far from the madding crowd”. Here, at our lakeside mansion, we knew that reporters could not reach us. At least not reach us and stay alive.

The house had everything we needed, and I was even getting used to fishing bugs out the pool in the mornings. We used a pool-cleaning lad, but he started at a normal human hour, whereas I liked a dip at 5am. I found a dead snake one morning, figuring that maybe the chlorine killed it.

The guards on night duty offered to check it around 4am, which only left a small window of opportunity for a bug to land, to creep across the grass, or to slither into the pool. So when I found a baby croc I figured it made use of the window of opportunity. That or the guards were taking the piss.

I plunged in, put my goggles on and played with the croc for a while; I swam after it as it tried to get the hell away from me. I eventually caught it and lifted the little snapper out, taking it to the carp pond and dropping it in. It seemed right at home and snapped at a tiny fish within minutes, ignoring the hideously coloured carp and goldfish. Feeling mischievous, I left it in the pond, wondering who’d spot it first, and if it would grow to be huge by snacking on slow moving goldfish.

Lucy spotted it later and was delighted, finding a large plastic plant tray that suited our new family member. She cleaned out the plant tray, added a few rocks and some water, and plonked the smallest family member in. As I sat by the pool observing, she scooped out small fish fry from the lake and carried them back, dropping them in for the snapper. I wandered over.

‘What you planning on doing with it?’ I asked.

‘We’ll keep it till its bigger, and let it go. Could we ... dig a pond for it, put a small fence around it?’ she risked.

‘Sure. Out by the lake.’

By the end of the next day our garden offered a pond lined with tarpaulin, a twelve-inch high fence, water and rocks. And a small croc. Stood looking down at the croc, Lucy thought it needed a mate, and so patrolled the shoreline with a net, brining one back after a few hours. She diligently caught small fish, it wasn’t hard, and dumped them in with the crocs.

She would spend hours sat staring at them, then tried a little smoked salmon on the snappers. The salmon was a big hit, as was the tuna she tried next.

But sat around the pool one day, I asked Lucy, 'At what age do the mummy crocodiles abandon their young?'

'After only a few weeks I think. These are independent.'

'Are you sure?'

'Oh, yes.'

'Are you really, really sure?' I pressed.

'Yes, why?' Lucy asked.

'Oh, it's just that a ten foot croc is coming up the bank.'

Lucy stood, Jimmy following her up and onto the grass. The guards now noticed it, closing it with pistols drawn.

'Don't shoot it,' Jimmy ordered. 'Luce, go get a chicken. Not a frozen one!'

Lucy ran past me as I closed in on the monster. If there was trouble, I was sure that it would go for Jimmy first. I was also sure that I'd push Jimmy towards it if need be; he was the crocodile wrestling type.

Lucy returned, followed by Helen, my dear lady wife wishing to know why our daughter was running through the house with a dead chicken. Jimmy took the chicken and walked forwards, tossing it to the croc. Our garden croc gobbled up the offering.

'It's the same one as in the marina,' Jimmy suggested. 'Not that many around here.' He turned. 'Helen, ask the corporation to put an iron fence across here, with a little gate. Keep the croc out of the lounge.'

The guards kept it under observation as it slid back to the lakeshore, the monster intent on sunning itself for a few hours.

'That's what happens when you feed youngsters,' I said to no one in particular. 'They grow and stop being cute.'

Our fence was installed the next day, and our visitor got a chicken any time he popped in, something of an attraction for our human visitors. When the BBC popped in we made no mention of it, and it took thirty minutes for a presenter to scream and come running.

Jimmy flew off a few times, leaving us to our family peace, and one day I invited around Second Lieutenant Lobster from the officer training college. He turned up in a suit, his family all dressed as if off to church. We found trunks and bathing suits for the kids, nudging them towards the pool as I sat in the shade with Lobster, talking about Afghanistan.

Lucy adopted Lobster's youngest as her own, which pleased me, and they sat chatting for hours as Lobster and I sank a few cold beers. The memories of Scorpion Base came back, of dangerous helicopter stunts, heat and dust and the imagined sound of Hueys. I missed it all.

One of guards, just coming on duty, had to do a double take when he saw Lobster, striding across quickly. Lobster jumped up with a huge smile and hugged our guard, a fellow Rifle of course. I told the guard to sit, and ordered him a beer.

'An officer? No.' The man could not believe Lobster's new status. It seemed as if Lobster had betrayed his fellow grunts.

The following even, I invited Lobster and six of his Rifles buddies out for a drink, our guard off duty and tagging along; this was a boy's night out, no women allowed. We started with a few beers in a loud bar in the marina, broke for an Indian meal, returning to the loud bar afterwards. I was, however, certain that anyone wanting to pick a fight with me would meet some determined resistance.

We reminisced about past adventures, and joked as only soldiers could. A few young stock market traders turned up, and I bought everyone in the bar a drink, soon chatting about derivatives, London, and damp old British weather. It turned out that these guys were making about the same money as they would back London, but costs here were a tenth of those in London.

One trader said, over the music, 'My rent is two hundred pounds a month, my food about twenty quid. I spend more on beer!'

If only I was a young trader again, starting out, and here instead of London in 1980s. Now, the 1980s seemed primitive; no computers worth talking about, few mobile phones. It seemed like a lifetime ago. It was thirty years ago.

I introduced the Rifles to the traders, both social groups being worlds apart, but the traders found the stories from the Rifles fascinating. They were also wary, since the Rifles were not only tall and built like tanks, but their reputation preceded them. Great strapping soldiers adopted the skinny white traders, picking them up off the floor when drunk.

Leaving the bar as a group, desiring some fresh air, a senior army officer seemed to stop and take exception to the men being here, and to their drinking. He had not seen me. I was waved over, enquiring as to what the problem was, the officer apologetic.

'Major,' I said, nudging him away from the main group. 'If these young officers are to understand the western mentality - to work

alongside western soldiers, and possibly work in the west, then they need exposure to us westerners in social settings. If they can't cope with a simple social function, then what good are they on exchange courses?'

'I see your point, sir.'

'How many of your young Rifles officers could work undercover in the west?'

'I don't know, sir.'

'I do: none of them, because they'd stand out in London. Maybe, working undercover abroad is something you should consider, because they're sadly lacking in an ability to blend into western social functions. And besides, I invited them out. If any of these men were to be judged upon being here, I'd get *very* upset about it.' I sent him on his way, the man in no doubt that I meant business.

I collected the gang and we again attended the Indian restaurant, sat under the stars and chatting away. I had not been drinking like this with lads for a while, and these were all lads, some of them half my age. It was a good release. I may have looked thirty, but my mind was approaching fifty.

Back at the house I found Helen sat reading in our room. 'Good night?' she asked.

'It was good to let my hair down without worrying about the fucking world, or the fucking press. But a funny thing happened. This senior army officer came past, and he was horrified that the lads were out drinking. They were dressed smart, behaved, not drunk. But what a difference to the west, when the lads here are treated like second-class citizens in their own bleeding country.'

I sent Ngomo an email: pop in when you're next in Goma. I was going to shake things up.

He dropped in a few days later, on his way to the college of all places. With him was the new head of the Rifles, a Colonel, both of my guests in uniform.

'You look warm in those uniforms,' I said, pointing towards the shade, cold drinks ordered. 'I won't keep you long. Listen, I invited some young officers out the other night –'

'We know,' Ngomo said.

'You do? Was there ... a problem?'

'No, no. It's just that gossip goes around the Rifles faster than official communiqués. If you want something to be told to everyone, you tell your driver ... and ask him to keep it quiet!'

I laughed. 'Anyway, it struck me that your very excellent killing machines had little comprehension of western ways. Surely it's a

gap in their education if they can't talk to western officers, and meet on a social level without feeling like their talking to white colonial masters.'

'They have lessons on etiquette in later years, formal meals,' Ngomo informed me.

'And trips to countries outside Africa?' I nudged.

'Only if they intend killing those they visit,' Ngomo noted.

'Then I want that looked at; a tour of Hong Kong and China, England, America. An education, gentlemen, is as much about experience as exams in the classroom. Do you teach them military history?'

'Yes, of course.'

'Then take them to the battlefields of Europe, and engage them with the westerners down here, small groups out drinking. I want Rifles officers to be able to hold their own in a conversation about world politics with a westerner. We have tourists here, so impress them with your young officers. Use the tourists for practice.'

'I'll arrange it,' Ngomo said, seemingly curious about the outcome.

'What happened to the two British officers that were at the battle at Scorpion Base?'

'One is head of training at Mawlini,' Ngomo informed me. 'The other is head of training here, for the Congolese Rifles.'

'Have the guy who's here put in charge of social training, please. Next, I want you to build a Rifles bar and café in New Kinshasa, a big one, with events and shows. I want one bar for enlisted men, one for sergeants, one for officers – but in different areas. And I'd like to see sergeants and above using the facilities here. I don't want anyone to feel that they're not welcome.'

Two days later, with Jimmy off somewhere, the British PM rang. 'Paul, got a moment?'

'For you, always.'

'Cut the crap. Listen, we're trying to finalise a deal with the Saudis, selling them military hardware, but they're trying to twist our arms about meeting you.'

'Dunno where Jimmy is –'

'Not him, you. They want to make an approach, and thought they'd try you first ... as being the *less violent* option.'

'Oh. Well, Jimmy has never asked me not to speak to them, so send them over, but no large groups, just two of them. And in western clothes.'

'I'll call you back.'

And he did, the gentlemen in question flying down the next day. I asked for ten Pathfinders to be present, fully kitted, just to make a point. I had them remove their shirts - I slapped Shelly for her comments, and had them put their webbing back on. Now they looked extra menacing for my guests.

Gathering my three ladies, I said, 'We have a Saudi prince coming over, and therefore sensitive to our decadent western ways. You can either wear full length burkas, or bikinis, it's up to you.'

I was sitting by the pool when my guests arrived, a cold beer in hand. A maid stepped out and announced their arrival, so I asked for them to be brought out. When the two men in suits drew near I pointed towards chairs, not bothering to stand up. Helen and the girls had elected for bikinis, and my guests glanced their way as they sat.

'Beer?' I asked. Deliberately.

'We do drink, you know,' the first man said. 'A habit many of us pick up at Oxford or Cambridge Universities, in your fine country.'

'I went to Kingston Polytechnic myself. So, cold drinks?'

'Beers will be fine.'

I looked up at the maid and she trotted off. 'So, what can I help you gentlemen with?' I sipped my beer.

'We'd like to see if there is a way of us cooperating, for mutual benefit.'

'Such as...?'

'It may surprise you, but many of our senior figures have been injected with the drug.'

'Your clerics wouldn't like that.'

'Our clerics ... are not running the country, and we're not as backward as you may think.'

'Oh, I don't think you're backward, I just fail to see what use you are to the world ... and to our plans to help the world.'

They stared back. 'There was a time when I would have considered our country as ... players ... in the global economy.'

I took a moment. 'Players? You pressure the British and American governments, and they nag us to play nice with you. But coming back to my last comment: what use are you? What have you ever done for the world, what are you doing for the world, and what will you be doing for the world outside of your own borders - and outside your narrow view of things?'

'I'll admit that we haven't put a man on the moon, nor sailed the seven seas, set-up colonies or invented much. But we have also not invaded anyone, nor do we try and interfere with other nations.'

‘Really? After the Russians left Afghanistan you funded the rise of the Taliban and their extremist religious views. Now, those Taliban, and their al-Qa’eda chums, represent one of the greatest threats to the world.’

They took that in. ‘Given what your Rifles are doing in Afghanistan, our ... miscalculation will be expunged. The stain will be wiped clean.’

‘What is it that you want? Really ... want?’ I rudely asked.

‘As I said, to cooperate, since we’re not going to get anywhere using threats, persuasion or pressure.’

‘Cooperate on ... what? On raising oil prices? We’re keeping oil prices down so that the world economy doesn’t go to shit. And if it does go to shit, oil purchases from you will fall. Damned if we do, damned if you do.’

‘If there is a ... middle road, we’ll look at it. We want eighty dollars a barrel, you want sixty-five. Nudging prices towards seventy would be a ... compromise. CAR would make more, and the world economy would not ... *go to shit*.’

‘CAR is not about profit, it’s about fixing the world. I’m disappointed you haven’t figured that out yet.’

‘With more profit, you can fix many more things.’

‘Take that cynical attitude with me and you’ll be thrown out ... head first.’

‘Sorry,’ the man offered. ‘Since you obviously do care more about fixing things, than money.’ They exchanged looks. ‘We have a few former CIA people working for us, and they seem to think that 2025 will see the rise of a Muslim terror group that threatens the whole planet.’

I took a moment. ‘Around 2025, a disaster will destroy the world economy,’ I said, altering the truth a little. ‘Those economic conditions give rise to a terror group based on al-Qa’eda, and that group will see money – and oil – as the root cause of all evil. They’ll start by blowing up all of your oil wells, tearing down your satellite dishes – so no porn, and then your sparkling cities.’

‘And don’t you think that this a great concern to us?’

‘Guys, you sell oil, you make money, you stick it in the bank to make more money – what is it that you do besides that?’

‘Our job, is the same as for any government: we look after our people.’

‘Your people ... live on a small round planet. If a disease breaks out in Lagos you’re at risk ... just like everyone else. No country on

this planet can ignore the other nations any more, we're all too interconnected.'

'Is our ... isolation a cause of disdain for Mister Silo?'

'It is,' I confirmed.

They exchanged looks. 'Coming back to cooperation. Is there no way that we can combine our resources, given that we are *both* highly motivated *not* to see this terror group rise?'

'Raise your right hand and swear like good little boys that OPEC will not drop the dollar for oil trading.'

'Is that a cause for concern for Mister Silo?'

'Well, let's see. You drop the dollar, US import costs treble overnight, the US economy goes to shit, a hard-line American leader takes office and invades Saudi Arabia to take your oil, sparking a global conflict, which leads to the world economy crashing – and the rise of a terror group in the Middle East. You ... connecting the dots yet, boys?'

'They are connected?'

'It's all connected; a puzzle of a thousand pieces. The world is like ... ten people sat in a canoe. If one stands up, the stability is gone. If one tries to dive in, the rest fall out the other way. But if we all agree to stay sat still and row carefully the canoe keeps going.'

'America made a huge mistake when it got clever ... and got oil traded in dollars; it's printed dollars to keep itself a super-power. Conversely, you dumb fucks have done nothing other than sell oil, and build big cities that could never be supported when oil revenue runs out. You're tied together, and both as daft as each other. When one falls, you both fall.'

'What Jimmy is trying to do is ... to undo the knot in the rope, and to get us all to 2025 in the fucking canoe together. If he fails, you'll be the first to be destroyed, the very first.'

'Then we have much in common, and much to discuss.'

'He's a time traveller, and he's had that conversation with you before,' I said, taking a guess. 'Don't come back unless you truly understand the problem, and you're truly willing to cooperate. Start with your fucking clerics.'

They stood. 'And if we do have solid ideas?'

'Then I'll listen, and be just as charming.'

'We would not wish you to change, Mister Holton,' they said as they left.

Helen came over and sat. In her bikini. 'Well?'

'They know about 2025, but not exactly what. They say they want to cooperate – which means they think we'll keep oil low and

their coffers less full. They may come back, or they may just try and shoot us.'

When Jimmy returned, two days later, I informed him, but he already seemed to know.

'Where you nice and polite?' he asked.

'No.'

'Good.'

'And if they want to play ball?' I pressed.

'Their economy is all oil, nothing else. They're in a bad position and they know it, large modern cities with lights on in the desert, squandering money like it flows out of the ground. When the world economy goes to shit they'll hurt quickly.'

The next day, I received an email from one of the Saudi men I met, asking if there was anything specific he could be looking at. I suggested Yemen, and desalination in Jordan, not knowing what would happen – if anything, and left it at that.

Back to school

We flew back to the UK for the start of the school term in September, and heavily tanned. 'Hello stranger,' we got a lot of around the estate. It felt a little strange to reoccupy the house, but after a day back and we forgot about Goma. It had been a good break, and Jimmy had left us alone for one very good reason: SARS II. He wanted us to have a good break.

A week after we returned, Jimmy emailed the World Health Organisation, asking them to prepare the world for second outbreak of SARS this winter. That evening, the entire country came to a halt, people putting their faces in their hands. The world followed in its despair as the news spread, countries like Singapore traumatised.

Jimmy called a meeting of European Union member representatives, to be held in London, and we journeyed up in the coach a few days later, leaving at 5am. The meeting was held at the club, security tight, the keen police sniffer dogs doing their stuff, noses to the carpet. The ministers arrived in groups for the ten o'clock meeting, drinks and nibbles provided till the latecomers arrived and took their seats in the Red Room.

'Thank you all for coming,' Jimmy began. 'And I won't keep you too long, not unless you have a long list of difficult questions.'

‘First, the second SARS outbreak will not be restricted to Asia. This time it will be well spread right around the world, with no particular centre. Rescue Force personnel will not be dispatched, they’ll be utilised in their own countries, with Rescue Force Europe responding to the Athens earthquake. May I ask the Greek representative just where you are with your principal evacuation plans?’

The man stood. ‘The government and civil servants have moved, as have principal industries and businesses. There are, however, still a quarter of the city’s residents either living in the city, or aiming to stay. They believe that they can sleep outside, protect their properties, and rebuild afterwards. Some people reinforce their houses as we speak, and aim to remain.’

‘And will you force them out?’ Jimmy asked.

‘That ... is an option, but resistance will be stiff. We may well injure and kill people trying to remove them. And maintaining an effective cordon will be hard when that cordon is ten miles out. Some will move back in.’

Jimmy responded, ‘If they sleep outside in tents, then they may well survive. And we’ll have Rescue Force on hand. But there’ll be no sanitation or running water for many months, existing sewers will leak, and the conditions will be poor. That will come on top of a SARS outbreak, so the people living in those poor sanitary conditions will be at an even higher risk.’ He held his hands wide. ‘People who are cold and hungry will be susceptible. If SARS takes hold in that group, it’ll stay – and kill many.’

‘What casualty level are we expecting from SARS?’ a man asked.

Jimmy took a moment. ‘Hard to estimate, but worse than last time. Much worse.’

They glanced at each other, shocked.

‘You’ve all produced more of the super-drug, so use it as before,’ Jimmy told them. ‘And ... as you can appreciate, the economy of the world will suffer. You should all take additional austerity measures now, and expect the worst. Don’t ... be afraid to get tough. Impose wage freezes, or cut wages, raise taxes a little, cut public spending. At the height of the outbreak you can expect at least ten percent of your working population to be off work, a great many man-days of productivity lost.’

‘The Greek economy has already suffered, and will continue to do so. On that subject: after the quake, the hotels in Greece will be filled with the displaced. When summer comes around you’ll want those hotels for much needed tourism. As such, it may be an idea for

other European nations to assist Greek refugees. Spain has a surplus of vacant apartments and houses; they should be considered.

‘There are already many Greeks staying with relatives around Europe, but that number will obviously increase in the months ahead. Such a shortage of accommodation in Europe will help to keep property prices up, an odd benefit. OK, questions?’

They went round and round in circles, as if they could debate the Athens quake or SARS from happening. When frustrated, Jimmy thanked everyone and sent them off, the PM popping in to see us.

‘Do we have everything in place ... that we should have?’ the PM asked, clearly concerned.

‘Do you have a large dose of hope, and a little luck?’ Jimmy asked him.

‘I have a time traveller to guide me. Luck doesn’t come into it,’ the PM insisted.

‘SARS is tricky, and the numbers can vary, not least because I’ve altered a great many things already. Many people received the drug early, so they should resist it, some others more prone to it. It’s a hell of calculation.’

‘And the estimated dead here?’ the PM asked.

‘Given the use of the drug early, I’m hoping to keep it to a quarter million.’

‘Two hundred and fifty thousand dead?’ the PM said in a strong whisper. He rested his elbows on his knees and let his head drop. ‘I thought it was bad last time.’

Jimmy sighed loudly. ‘Yeah, well wait for round three.’

The PM lifted his head. ‘Round ... three?’ he asked in a strained whisper.

‘You’ll hardly catch your breath before 2019,’ Jimmy told him.

We flew off aboard our 747, heading to New York and a scheduled round of meetings, our aircraft now cleared to disturb American skies. The same group of reporters tagged along, familiar seats grabbed, familiar routines entered into. Some had eye covers to sleep under, a few used neck cushions, and some liked a little tipple before bedtime.

SARS II had not broken yet, no one asking about it specifically. Questions were mostly about Greece, plus the usual pumping for information about future disasters. Seems that they were keen to crash the markets and ruin their own pension plans.

We took a hotel room instead of the apartment, and I figured I might sell it. We had left it empty so long we worried about bugs, and not cockroaches in the bath.

Our first meeting was in the UN building, with some of the old “M” Group nations: America, Russian and China. The various leaders greeted each other, a long break between these meetings, but the Russians and Chinese met often, President Fitz not much of a traveller. Settled around a table, Fitz seemed a little distant.

‘Gentlemen, politicians, history makers,’ Jimmy began. ‘We did well during the SARS outbreak, and the Nigerian crisis was ... handled. I would not say that Lagos Fever was handled well, since I traumatised a nation and held them prisoner in their own country. The Nigerians are now grateful for a swift and firm response from me, since they can now see how bad it may have been otherwise.

‘The Greeks are ... where I expected they would be at this time, and casualties will be limited. Some residents will remain in the city, and many will be killed. Others will die from disease by remaining in the city afterwards. Russia, I would appreciate you responding with your Rescue Force unit, a ... show of solidarity with your European partners. OK, coal-oil. May I ask where the Russians are?’

‘We have the first two refineries working well,’ they reported. ‘And we think that we could reduce production costs further.’

‘Given the damage that’s about to be done to the European economy, I would appreciate that your oil and gas prices are ... *helpful* till Europe recovers. Keep your future customers warm this winter. China, where are you with coal-oil?’

‘We have eleven refineries working, and production costs are encouraging,’ they reported.

‘Good. Mister Fitz?’

‘Two refineries are online, but extraction costs are still above where you think we could get them. But, overall, we can produce it cheaper than importing it, so it’s being rolled out in numbers.’

‘OK, moving on to SARS – and round two. This winter will see a second outbreak, basically a slow cooking first round. Russia, you will suffer more than before. America – you’ll take a full-blown pandemic. You’ll need your soldiers ready, national guard, the works.’

‘And the number of dead?’ Fitz asked.

‘As I told the Europeans, it’s hard to pin down, since I’ve altered a great many things. The early use of the drug will help – in most cases. My best guess would put the dead above a million.’

Fitz was shocked, and I wondered about our new President; Hardon Chase knew these figures. I also wondered about how he'd react with the other bad news we had to deliver to him today.

Jimmy informed him, 'The pandemic will last about three months, as before, and your economy will take a hit. Your "M" Group representatives have known about this for many years, so I hope that you're ready. If not, I guess the American people may lower your approval ratings.

'And whilst we're on your approval ratings, Mister President, we have a difficult matter to discuss next.' Jimmy took a moment. 'I warned your predecessors that a disaster would strike America in 2017, and they assumed that maybe an earthquake would hit Los Angeles or San Francisco. That disaster will strike in early 2017, so you have more than a year to enhance your planning.

'Now, if revealed too soon, the markets will crash – but recover. If revealed too late, people will have little time to evacuate. Whichever way we do it, people in the affected areas will wish to take legal action for us not warning them twenty years ago. I could not have done that, and I have deliberately left it this long so that the businesses in the affected area could profit from twenty good years.

'All of you here, and other nations, will be affected by the disaster. Mister Fitz, I will now give you the chance of having the location revealed to you alone, but I *will* warn the others six months from the date. You would have more than six months with that knowledge.'

'Six months will not make much of a difference,' Fitz flatly stated. 'But I might have liked to know when I took office.'

'No ... you wouldn't have,' Jimmy countered. 'You would not have slept much. I took that decision for you, whilst asking for your military to make plans. Might I ask if those plans are ... well advanced?'

'The military seem think so,' Fitz stated, but without sounding confident.

'Do you wish the six months period?' Jimmy repeated.

'If you've held off up to now, then I assume it was for a reason, and ... I'll have to assume that it was a good one.'

'Revealing the disaster, during the SARS outbreak, might be a good idea,' Jimmy suggested. 'That's only six weeks away.'

'OK, let's have it,' Fitz urged, the Chinese and Russians waiting patiently.

'In early 2017, an earthquake will strike Hawaii –'

'Hawaii?' Fitz repeated. 'Not the west coast?'

‘Both,’ Jimmy said. ‘Hawaii will be destroyed, but the resulting tsunami will hit Los Angeles and San Francisco – and points in between. Alaska will be hit, so too Vladivostok, and the Chinese coast.’

‘How much damage?’ the Chinese asked.

‘Extensive in some areas, simply a bad flood in others. Start planning soon. Japan will also be hit, and all islands in the Pacific, New Zealand, Chile and Mexico.’

‘How much damage to Hawaii?’ Fitz asked.

‘When its over, just a few peaks will be left above water,’ Jimmy informed him. ‘Total loss.’

‘Total ... loss?’ Fitz repeated, staring wide-eyed. I had to wonder if the States had the right man for the job.

‘Total loss,’ Jimmy confirmed. ‘With extensive damage to your west coast.’

‘The ... the cost!’ Fitz gasped.

‘The cost ... in human lives ... is the important one,’ Jimmy emphasised. ‘The entire group of islands will need to be evacuated, plus all Pacific Islanders. You’ll also need to evacuate parts of the west coast.’

‘Something like this ... takes years to plan for!’ Fitz protested.

Jimmy slid across a data stick. ‘On there is the plan that you and your military would have come up with ... with years to plan. You’ll find it very detailed. And you’re welcome.’

‘You ... you prepared this?’ Fitz asked as he took the data stick.

‘He’s a time traveller,’ I put in. ‘Go figure.’

‘And after Hawaii?’ Fitz asked, waving the data stick. ‘What else will go wrong?’

‘Lots of things,’ Jimmy said.

‘Did you get an “M” Group briefing?’ I asked Fitz. ‘And, more importantly, were you paying attention?’

Fitz took a moment. ‘It’s one thing to discuss theoretical scenarios –’

‘Just when the fuck were they theoretical?’ I loudly asked. ‘You best get on the case, Mister President, because you’re going to be knee deep in bodies soon enough.’

Jimmy silenced me with a look. Facing Fitz, he said, ‘If you have any doubts, then step down, because I need the man in that seat to be a rod of iron, and so far I’m not seeing that. A great many people have their lives in your hands, and they deserve the best they can get.’

‘I need to think about this,’ Fitz said, standing and leading his team out.

‘Did he just walk out?’ I asked when the room fell quiet again.

Jimmy exchanged uneasy looks with the Russians and Chinese.

‘Was this man not supposed to be President during this period?’ the Chinese asked, Jimmy shaking his head. ‘You did not manoeuvre him, or object?’

‘I knew him as a moderate, and a reasonable man, but not as a president. A great deal has changed.’

‘This is ... so not good,’ I helpfully put in, a look exchanged with Helen.

Jimmy told the others, ‘Stay in town, please, we’ll meet again tomorrow. A day is a long time in politics. And I’ll give your “M” Group representatives details of the measures you can take to prepare for the tsunami.’

Fitz flew straight back to Washington, I caught it on the news, no communication for us. Then the skulduggery started. An admiral popped in to the hotel via the back door, and in civilian clothes.

Sat in Jimmy’s room, the admiral said, ‘We have doubts about Fitz.’

Jimmy and I exchanged looks. I said, ‘It doesn’t appear as if he can handle the pressure. He walked out of the meeting.’

‘He ... walked out?’

‘He walked out of a briefing on the most important things he’ll ever hear,’ I added. ‘A briefing of upcoming disasters to hit the States.’

The admiral looked Jimmy square in the eyes. ‘And if he doesn’t make the right move at the right time?’

‘Then I will,’ Jimmy assured the admiral. ‘But I would do so at the risk of alienating your people and your Congress. I’d have to make the press statements that he should be making.’

The admiral said little more and left us.

‘They going to top him?’ I asked.

‘No,’ Jimmy said, giving me one of his fatherly, disapproving looks.

In the morning, I caught the local TV news, and stood quietly stunned. Fitz had stepped down, his Vice-President taking over. He had quit. I knocked on Jimmy’s room. When inside, I asked, ‘Does this right royally screw things up?’

‘It does,’ Jimmy gloomily stated. ‘The new Vice-President is even more moderate, and even less suitable. He’s a nice guy, he’s been around a long time, but he’s not Hardon Chase.’

The new president, Oliver Samuels, called us inside of an hour and invited us down to Washington. Kind of pronto! We boarded the plane and headed down, avoiding a million difficult questions from the press. On the plane, I got our hacks together.

‘Now listen up, and listen well. There are a few things happening, big things. Fitz has stepped down, and we’re not going to discuss why. If you screw with us you’re off the plane and you’ll never be invited back on. Until I say otherwise you’ll not ask any questions other than about the baby.’ I wagged a warning finger. ‘You each represent your papers and TV channels. Don’t ... fuck with me!’

They used the satellite link, and the whole world was suddenly focused on Washington. We met Samuels in the Oval Office with his Chief of Staff, Samuels already sworn in, Fitz already gone, the former President’s stuff being packed up.

Samuels blew out, long and hard. ‘Whatever you said to him, he decided he didn’t wish to preside over it.’ He appeared as if he was ashamed of his running mate.

‘President Samuels,’ Jimmy began. ‘You’re a good man, and with a lot of experience, but can you ... preside over large-scale disasters? Are you a ... wartime leader, a ... Roosevelt?’

‘I doubt it, but I care deeply about this country, and I have a very strong sense of moral duty. I won’t be quitting.’

‘It’ll be a difficult three years,’ Jimmy warned.

‘I’m a believer in the people, Jimmy. And ... I’m a believer in you. I saw what you did in Nigeria, and I know how much you care about Africans. Can’t have been easy to put soldiers on the borders and order them to shoot; it would have given me a few sleepless nights.’

‘You have my number, and I’m available twenty-four hours a day for the right man,’ Jimmy told Samuels.

Samuels nodded. ‘I’ve given the data stick to the joint chiefs. So, do you want to give me the heart attack now, or after a coffee?’

We gave him the detail.

When done, Samuels stood in the window. ‘I wonder how Roosevelt felt after Pearl Harbour, because right now I have a feeling in my gut that I haven’t felt since I asked my wife out on our first date. I was seventeen, and terrified.’ He sat. ‘Is everything I need on that data stick?’

‘It is, and your military can call if they have a question. May I be so bold ... as to suggest that you invite down the Russian and Chinese leaders, right now, and show a united front; something to

inspire the people. Fitz's sudden departure will leave people wondering.'

'I still don't know what to tell the press,' Samuels admitted.

'Tell them ... that Fitz did not feel that he was suitable for the challenges ahead.'

'They'll tear Fitz apart,' Samuels baulked.

'There's no way we can cover this over,' Jimmy warned. 'He walked out right before a crisis. But, you could say that the cabinet and disaster planning committee had no confidence in him ... and expressed as much.'

'That may be better for the image of the office,' Samuels thought aloud. 'Anyway, I have an emergency disaster planning committee meeting to preside over if you'll excuse me.'

'And the Russians and Chinese?' Jimmy pressed.

'If they can be here this evening, I'll do the photo-opportunity.'

'I'll arrange it,' Jimmy offered. 'And we'll stay the night in a hotel - if you have any questions.'

At 6pm we lined up in front of the White House and forced smiles, Samuels making a statement. It still sounded like Fitz had run off.

At the hotel, I switched on the US news, and it was not pretty, the Democrats calling for an election. Fitz had won with a small majority and mid-term elections were due soon enough, so I suspected trouble ahead. After two beers I called the Democrat leader, Sanchez, and invited him around for a chat. He appeared an hour later, Jimmy coming down to the hotel bar to meet him. Sanchez was tall, as tall as Jimmy, with jet black hair and an intense look. But looked to me more Afro-American than Latino.

'You going to tell me what the hell happened?' Sanchez asked.

'You going to use it?' I asked.

'I'm not about knock the stock markets down even more,' Sanchez angrily replied. 'We have enough problems.'

'If you did, you'd wake to find me at the end of your bed,' Jimmy calmly stated.

Sanchez took a moment. 'I won't be discussing this.'

Jimmy and I exchanged looks. I said, 'We briefed Fitz on the doom and gloom to come, and he bottled it.'

'Before you judge him too harshly,' Jimmy began, 'you should consider that you ... don't know what he knows.'

Sanchez stared into his beer. 'When things get tough, it's the poor that suffer first.'

'Very true,' Jimmy agreed.

Sanchez added, 'It's them I work for, and work for passionately.'

'I know, I know you well,' Jimmy told our guest.

Sanchez stared at him for a moment. 'You going to ask me not to rock the boat?'

'Do you think you can do a better job than Samuels?' I asked him.

'You tell me,' Sanchez countered.

'Your time will come,' Jimmy told him. 'Rush it, or wait. Problem is, we do need stability right now.'

'You'll interfere?' Sanchez asked.

'If I thought you were a bad candidate, or an obstacle to my plans, you would have died in your youth,' Jimmy told Sanchez. 'I won't interfere in simple domestic politics, but I will say this: if you get into office in three years, 2017, you'll preside over the end of the troubles and the start of better times.'

'I'm not looking to be popular and remembered, I'm looking to do what's right now,' Sanchez forcefully stated.

'Then maybe you are the right man,' Jimmy conceded. 'But you'll need to convince the Senate that Samuels can't hold it together, and I think Samuels is good man. But let me give you a good piece of advice: tone it down till February, or it'll look like you're scare mongering and using the crisis for personal gain. And since we both know you're better than that ... you'll take my advice.'

An hour later, Samuels called me, maybe because I had called Sanchez. 'Paul, you had a meet with Sanchez?'

'Yes. He'll not back off.'

'No?'

'No.'

'I'll take a wild guess here, and say that you may know something I can use.'

'We can't be seen to interfere like that. Jimmy says you're a good man, and so is Sanchez. But here's an idea for you: appoint Sanchez to the disaster committee. Hell, put him in charge of it; bi-partisan politics!'

'Paul, you may have just given me a silver bullet. Thanks.'

That worried me, and I went and told Jimmy.

'If Sanchez takes the post it'll tarnish him, even if he does a good job. No one will want to see the doomsayer in office afterwards. People like to put problems behind them, and after the SARS outbreak is over Sanchez may remind them of it too much. Besides, Sanchez would see it as poison chalice. If he takes it, he deserves all he gets.'

Avoiding the press, we flew back, the official line being that the White House Disaster Committee expressed a lack of confidence in Fitz, but no one was buying it, especially not Fox News, who tore into Fitz – leaving a sinking ship. For once I agreed with them.

En route, I asked Jimmy about Fitz.

‘He wasn’t briefed till he won the election, and by then it was too late; the start of the troubles. If you want to be a president or a prime minister, it’s usually because you passionately believe that you can make a difference. On the campaign trail you formulate plans, and you dream about implementing them. To most, being the national leader is similar to what you’ve done with New Kinshasa: it’s about building things, improving things, making people’s lives better. It’s about ... hope for the future.

‘That hope was taken away from him, and he saw nothing ahead of him but disasters, disasters that – even if he handled them well – he’d get no thanks for. His job, now Samuels job, is a thankless task; that of presiding over a country and economy going backwards. Who wants that? Which person, dreaming of creating a New Kinshasa, wants to hear that it’ll be badly damaged in a few years? It would be soul destroying.

‘Fitz wanted his presidency to be like a baby, and to watch it grow and mature. He got a deformed child on life support, and couldn’t handle it. It takes a very special kind of person raise a kid like that, someone with more patience ... and hope, than the rest of us. I took away his hope, and instead of getting angry at Mother Earth and fighting back, he chose the easy option.

‘In some ways, he did the right thing for the wrong reasons. He should have gone before things got tough, but to do that in the right way would have been to recognise his own limitations, not abandon the baby on the church steps. History is unlikely to remember him well.’

Partisans

In the weeks that followed, Sanchez met with Samuels and accepted the post of Joint Disaster Planning Chief. I shook my head. But then Sanchez went public without discussing it first with Samuels, and made a statement.

‘In 2017, a tsunami will strike the Pacific region. Hawaii will be extensively damaged, the west coast of America, South America and Asia. We are now making plans for a mass evacuation.’

I went and found Jimmy, relaying the speech.

‘Not bad,’ Jimmy approved. ‘They can plan openly without revealing the true damage. It’s a good approach. He’ll get some flack for lying, but he’s thinking on his feet.’

We knuckled down and got ready for SARS II, the W.H.O. website permanently open on my xPad. It was basically an A4 type of iPad, and gave the user larger icons to play with, more information displayed. On my office walls I now had three iScreens, A3 size iPadS that were permanently displaying various web feeds, news feeds, or sites that I was interested in; standing-up computing had arrived. People stood in front of A3 screens on the wall, altering the display with a finger touch. Helen had one in the kitchen, and often used it for her baking recipes. Hers was voice activated, so she could instruct ‘Next page’ or ‘Scroll down’ when sticky fingers were best kept away from computer screens.

I sometimes annoyed the girls by using an A3 sized pad to read the newspaper websites. My eyes were fine, but I could get a lot of detail on one page. I just looked a bit silly when sat with the large pad.

In the main office, Jimmy now had six A3 pads on continuous live feeds, and scanned them for breaking news. He looked like a city trader, but was trading ideas and information, not bonds or stocks.

Then, one day in mid-October, a screen bleeped, a set of keywords detected. I stood and walked around to it, facing the iScreen on the wall. ‘First SARS deaths recorded in Asia.’

It had begun.

‘Computer, send message to Silo: It’s begun.’

I could see the little winged message icon flying off before I altered the parameters and removed the current keyword search, altering it to ‘2014 SARS death toll’.

Jimmy held a press conference, and was back to the rousing speeches, as well as a few practical tips. He had arranged for twenty million anti-bacterial soap dispensers to be produced for the UK, plus more than a hundred million packs of anti-bacterial wet-wipes. The hand-washes that normally adorned hospital walls were now to be found in shops, toilets, and even on the tube. A gang of people had been recruited to manage the tubes hygiene, wiping down handrails all day long.

Facemasks were produced in the billions around the world, and the tubes became very impersonal, if they weren't before. Enterprising individuals returned to producing custom masks, packs of a hundred; blue, pink, heart shapes, Playboy logos, or funny lines.

'I'm not worried about germs, just ugly.'

'I have a full-body condom if you're interested.'

'Let's have online sex. It's safe!'

The facemasks then evolved into pictures and graphics. You might see a skin coloured facemask with a beard. When lowered, the man was clean-shaven. Or a woman! Some displayed sharks teeth, others displayed big pink lips. Black masks were available, and Afro-Caribbean's could be seen making a statement about their ethnicity.

One enterprising company accepted digital images of your lower face, and printed the image for you. Mask on, you looked pretty much the same as before.

Jimmy and I visited Mapley and checked on the preparations for Greece, and for RF staff assisting in the UK. We ordered all leave cancelled and a full recall of national units to assist in their home countries. That done, Jimmy said there was little more that we could do.

The girls were a little depressed, the memories of lost friends still fresh, and still painful. I told them to buy anything that they may need, and that we may face a long and difficult winter. We opened up a basement room for planning, but not for SARS. This was for the Pacific evacuation. Emails were sent to all Pacific Islands, informing them to either plan for evacuation, or to move their small populations to mountain peaks on the day in question.

I then noticed that Jimmy had contacted all boat owners in the Pacific, informing them clearly that if they were a mile offshore that they'd be fine during the tsunami. Marinas made plans to empty on that date, and we started hiring every ocean going tub that we could find. Cruise liners were booked, but so were rusted old tubs. If they could transport people across the Pacific we offered to hire them in 2017.

Hawaii supported almost one and half million people, and retirees could now be seen to be returning to the States. Florida was safer. Hotel chains lost trade at first, but then lowered their prices, making good use of the "see if before it's destroyed" tack. Jimmy sent them shitty emails. Inevitably, indigenous peoples dug their heels in, suggesting that they'd take to the hills on the day of the tsunami, and

that their grandparents and ancestors had seen it all before. I checked online, and they had. Just not like this.

Sanchez announced that the island would be evacuated by force of arms, and that led to speculation about just how bad this tsunami could be. But the focus of attention soon shifted when a hundred Japanese tourists on the islands fell sick. A dozen died quickly, and Hawaii lost its tourist trade in a day. Three days later, and many of the Japanese tourists were dead.

China was seeing SARS cases in all provinces, Singapore was doing OK so far, but India was recording an exponential increase in cases. I watched the screens, staring at black figures on a white background ticking over, and returned to feeling useless. By that weekend the world was in panic mode, and those that were not panicking were depressed about it, or falling sick themselves.

The suicide rate was as high as it had been the previous winter, and growing. I sat looking at a morbid website, a graphic of Death with his sickle, the numbers ticking over. Worldwide, an estimated twenty-five thousand SARS related suicides had been recorded, if this site could be believed. From what I read in the local press, they may well have been right.

I busied myself with projects around New Kinshasa, often just staring at aerial views of the new city. There was little I could do to affect things in the world, but I could raise new buildings in Africa.

The following week, all non-essential air travel was banned. Bars and cinemas closed, public meetings now banned. I linked-in to sites that fed me details about Singapore, happy to see that they were not top of the SARS league, the league of deaths as a percentage of population.

Then I found an odd story, that of sailors discovering an island with no one left alive. The indigenous population, some three hundred people, had all died, no drugs available. Standing, I studied the trees outside, grey squirrels sat staring back at me. That feeling of hopelessness was back, and kicking me in the balls.

December was as terrible as the weather outside, the media coverage and the doom and gloom stories worse than reality. Jimmy held a press conference.

‘News media outlets the world over are exaggerating the pandemic, and making it worse than it actually is. Mankind will survive, and so will the vast majority of the people. The governments of each country should try to dampen the morbid fervour in the media, to stop them running away with their fears. The estimated number of people who will die is rubbish.

‘I take this opportunity ... to appeal directly to the people, to stop watching the news and reading the papers, unless those media outlets return to reporting things other than the end of the world. This ... is not the end of the world.’

Two British tabloids took the initiative and moved the gloom off the front pages and returned to smut, sex and political scheming and scandal, as well as stories about women that Jimmy had slept with. Progress.

Christmas Eve, 2014, saw an estimated nine million people dead. Despite that, we closed the doors on the outside world and tried to have some semblance of a Christmas for the sake of the girls. Truth was, we were doing it for ourselves as much as anyone. I woke every day with a bad feeling in my stomach, and went to bed dreading the dawn.

Christmas day saw Jimmy set out for the local hospital without telling anyone where he was going, the press given the slip. He walked into the children’s ward with his security in tow, and enquired about the kids. Eleven were suffering from SARS, had been injected with the super-drug, but were not responding. Jimmy took off his jacket and rolled up his sleeve, demanding the kids be injected. With the parents close by, the doctors were not about to argue unless they wanted to be thumped.

The kids were injected in turn with small doses, Jimmy moving onto the adult ward, a plug still in his arm and taped down. The same doctor identified the worst cases and, with a small crowd observing, injected each in turn. Twenty-five patients later, the medics were concerned for Jimmy; he had donated more than two pints already.

‘Keep going,’ Jimmy insisted.

With another pint extracted, Jimmy sat and ate a meal, drank plenty, and again offered up his arm, a raging debate going on amongst the medics. Jimmy grabbed an empty trolley and lay down, another pint extracted. ‘Wake me in exactly three hours.’

When he was nudged awake they took his blood pressure, finding it low, but not a concern. Another pint was taken, Jimmy closing his eyes again.

Word had leaked, the press labelling it as “The Christmas Miracle”. And the miracle did not stop there. For the next four days, Jimmy stuffed his face with meat, drank a great deal, and slept most of the day, giving blood three times a day. The Prime Minister expressed his concern at the risk to Jimmy’s health, as did many

world leaders, but Jimmy would not budge, even when visited by the girls and me.

On the fifth day he failed to wake, and the Prime Minister flew straight down, taking charge. He laid down the law: if any medic extracted any more blood they'd be arrested. Jimmy slept soundly, pulse and breathing normal - normally low - and the world waited. In Africa, people were traumatised to think that they might lose him, vigils held at many churches. A collective depression swept over the sub-continent.

When the news had reached me I cursed the big fella at length, sending a text message that simply said 'Arsehole!', knowing full well that he couldn't read it yet. I paced up and down, falsely reassured the household staff - which they could see through, then paced some more, wondering just what the hell I would do if he died.

People started calling me instead of Jimmy: matters of intelligence, fighting in Afghanistan, the works. Big Paul discussed a move by the Iranians to put more soldiers on their border with Afghanistan, some suggestion that Iranian aircraft were over-flying Afghan territory, and that they were supplying arms to the Taliban. I gave Big Paul permission to harass them at the border.

President Samuels called, sometimes just to chat, and I think he was looking for a little inspiration as well. I was soon the contact point for all of the world leaders, and starting to realise just how often they called Jimmy. The pressure was mounting, and that feeling in my gut would not go away.

Stood at the window in my office I leant forwards, my forehead against the cold glass, my hands in my pockets. The grass was wet, the leafless trees bending in the wind, the clouds low and angry as they raced past. Death was easy to picture in the wintertime. Fitz came to mind, buckling under the pressure, his hopes dashed. I know found myself feeling sorry for him, and wondering if I had what it took.

When my phone trilled it was Sanchez. I moved away from the window with a damp red mark on my forehead, but at least he couldn't see it. 'What's the time where you are?'

'9am, just about. So what the fuck is Silo up to?'

'I wish I knew, mate. It wasn't planned.'

'He still asleep?'

'Sleeping like a baby, or like someone who just gave ten pints over a few days.'

'Sounds like he's frustrated.'

‘Huh?’ I asked.

‘Desperate act, achieving little,’ Sanchez said. ‘But if I had his blood, and I could save a few more, I’d be doing the same fool thing.’

‘I guess. How’s it over there?’

‘We can put a man on the moon, we have the world’s largest and best military, but can we get health workers in to the projects – no.’

‘Jimmy said the poor would suffer the most.’

‘They are. A few health workers were shot up and robbed, so now they go in with soldiers, and just in daylight. First sign of trouble they leave, and by time they’re back there’s a few more dead.’

‘It’s a big country,’ I said. ‘Spread out.’

‘It is,’ Sanchez agreed. ‘They find bodies in remote cabins days after they died. Probably be a few found in a year or two.’

‘You don’t sound at all bitter,’ I sarcastically noted.

‘I’ve been watching the Chinese on the TV, running around in orderly lines, ticking names off registers, more health workers than sick people in most places.’

‘Careful, Mister Presidential Candidate, your right-wing media may not like such dissent.’

‘Fuck ‘em. What do they know.’

‘The reason Jimmy likes the Chinese system ... is for what you just described. They’re like busy little ants, efficient ants when it comes to stuff like this. Even with all your marvellous technology, right now the average Chinese citizen is better off with communism.’

‘Lot of people over here were pissed when he made that speech in Tiananmen Square. But he knew, he knew what would happen. We’re losing people because we can’t get to them, and they can’t get to hospital. Been a few shootings in public hospitals, a few riots. Could do with Rescue Force and the Rifles.’

‘Again, not something your media should be hearing. You’re the leaders of the free and democratic world, remember.’

‘What’s that word you lot use? Not quite “whatever” and not quite “shit”.’

‘Bollocks?’

‘Yes, *bollocks*,’ Sanchez said.

‘It’s nice to know that us poor Brits can bring something to our colonial cousins.’

‘I’m still going to try and unseat Samuels.’

‘You’re better placed where you are,’ I told him, not sure why I was telling him that. ‘Best of both worlds: you can help, but the blame stays with Samuels.’

‘I’m not worried about blame,’ Sanchez insisted. ‘If you worried about that you’d never get anything done. Too many politicians are about image and popularity rather than making tough decisions.’

‘I’m starting to warm to you, Mister Sanchez. Keep talking like that and you’ll start sounding like Jimmy.’

‘Why’s he not on the campaign trail himself?’

‘Here, in the UK? No way. He’d get more done outside of politics, and be less tarnished. People don’t like you politician types.’

‘He takes to the soap box often enough in the UK.’

‘Been to Hyde Park corner in London?’ I asked.

‘I have, I was a student who flew to Moscow thanks to you pair. So, why isn’t Jimmy involved with UK politics, he gives the Churchill speeches there?’

‘Oh, I’d take a wild guess and say that he’d be right fucking unwelcome by the existing parliamentarians. Not least because he would look so much better than them.’

‘Again, is it about being popular, or making a difference?’ Sanchez argued.

‘Jimmy will only get one chance to piss off the UK and US electorates,’ I cautioned. ‘Things have gone well up to now, and your Hardon Chase was a good ally, but we have our enemies over there, not least Fox News. And who’s to say that the next incumbent will cooperate, rather than want us shot.’

‘Appeal directly to the people,’ Sanchez suggested.

‘Now you are sounding like Jimmy.’

‘Maybe. I want what’s best for the poor in America, he wants what’s best for the poor the world over.’

‘Jimmy once said to me that politicians contain more hope than ability when they start, confusion in the middle, and more ability than hope at the end.’

Sanchez laughed. ‘Maybe.’

‘If you get the hot seat – and something goes wrong – you’ll lose not just America, but the planet. Give that some thought before desiring that cold marble seat in the clouds.’

‘Cold marble seat ... in the clouds? What, you think I want to be Zeus?’

‘Given that a wrong move by a president will end all life on this planet, you need to stop thinking about Alabama, and consider the big picture – or you’re the wrong man for the job.’

‘Cold marble seat in the clouds, eh?’

‘Was a time when I thought that the States should stop wasting US taxpayers dollars on policing the world. Now, some leadership might be a good thing, so long as it is leadership – and not you lot looking out for what’s best for your own taxpayers.’

‘I’ll dig out my soap box and dust it off.’

‘Got any kids?’ I asked when I noticed a picture of the girls on my desk.

‘Two. Six year old, who’s going on twenty, and a three year old Downs.’

‘Downs ... Downs Syndrome?’

‘Yes.’

‘Oh.’

‘What’s ... *oh* supposed to mean?’

‘Something you just reminded me of.’

‘Let me know when Jimmy’s awake and back in the world.’

I went back to the window, thinking about my own abilities. I was a good father, I was certain of that, a good man as far as my aims in saving the world went, but I didn’t handle death of a large scale very well. Jack wasn’t busy, so I summoned him.

‘Jack, you’re up on military history, wartime leaders. And, presumably, the mentality of the leaders.’ I held my hands wide for a moment. ‘I don’t find that I handle all the death and destruction as well as I figure I should.’

‘Well, first of all, you’re comparing yourself to Jimmy, and none of us are going to measure up; we’ve not been through what he has. We don’t even know exactly what he’s been through. Second, you’re not supposed to handle it well; if you did we’d all worry about your sanity. Third, most great leaders were scared shitless and made lots of stupid mistakes, history romantically papering over the cracks for us. Some were brave, some just didn’t understand the dangers, and most were too scared of the populace to reverse a brazen decision.’

‘When I see the stats for the dead...’

‘You, me and the rest of the world. My wife cries herself to sleep or prays, and most sane people lose a lot of sleep. Paul, you’ve done a good job, and your lack of tolerance for large-scale death is a good thing, not a sign of weakness. No point in saving humanity ... just to lose our humanity.’

With Jack gone, I stood in the window again. ‘No point in saving humanity ... only to lose our humanity.’ I needed to fight the war, and come home from it, without the Post Traumatic Stress Syndrome.

Back at the house, I sat and stared down at baby Liz as she slept. ‘Wouldn’t leave you on the church steps. Shelly, maybe, but not you; you’re perfect.’ I stared down, thinking. ‘Who’d want to govern a damaged country? Who’d want to govern a damaged world?’ I adjusted her blanket. ‘Hope’s important, isn’t it, little one.’

‘Who you talking to?’ Helen asked, popping her head in from the kitchen.

‘The baby.’

‘Sounded like you were having a conversation.’

‘She’s the only that doesn’t answer back!’ I stepped into the kitchen and leant against a cabinet. ‘If she had born deformed, what would you have done?’

Helen’s brow pleated, and she stared back at me for several seconds. ‘What’s brought this on?’

‘Something Jimmy said the other day. He likened Fitz leaving, to the birth of a deformed baby.’

‘Why, for God’s sake?’

‘Fitz wanted a good term, he wanted to make a difference, and he inherited a mess, with more mess to come; a no-win scenario, just crisis management of a bad situation. He left the baby on the church steps and fucked off.’

Helen stopped cooking and took a moment. ‘Dependent children have their own attraction. I was in school with a girl who had a Downs daughter, and she was happy enough. But, it would test many people.’

‘I think maybe Jimmy drew the analogy about Fitz, but was thinking about himself. He once admitted that he didn’t think he could fix things, but he obviously came back anyway. Fifty years of trying to fix things, all the while knowing that you’ll probably fail. I couldn’t do it.’

‘Success or failure is not the point, he has to try,’ Helen suggested, attacking a carrot.

I nodded absently to myself. ‘We could try and leave Shelly on the church steps.’

‘I tried. She called a taxi, billed it to us, and came in late.’

New Year, 2015

New Year's day, Jimmy woke and stirred. 'Good sleep,' were his first words. Followed by, 'I feel pretty good. Got the kettle on, love?'

The police escorted him out, under orders to prevent the further giving of blood, and to the helipad, the hospital grounds crammed with people just stood waiting for news. On the raised helipad, Jimmy stopped and stared down at the crowd as they stared back up. He waved. They waved back.

Back at the house, we all had a go at him about trying to donate more blood than was practical.

'I could have given more, I did when you were all hurt by that car bomb at Skids place. Now, stop fussing, children.'

I returned to scanning figures, finding that half a million had died in the States. And, as Jimmy had said, and Sanchez had echoed, the deaths were skewed towards the homeless and the poor. Sanchez, meanwhile, was making a name for himself with his soapbox, shouting his way to better resources for the health workers. He rallied retired nurses and doctors and gave them jobs, organising district clinics in poor areas, dedicated health buses – touring the poor areas, and soup kitchens. The man was growing on me.

The preparations for the evacuation of Athens were going as well as we had expected: not well. The residents had dug their heels in and riots had broken out. Stood in front of the TV I said, 'Go on, set fire to it and break the damn windows, its all coming down anyway.'

Rescue Force Europe was duly mobilised, and moved to Macedonia and Bulgaria, a line of white jeeps ten miles long. Forward units moved into Athens and set-up tents in parks and on football grounds, soon being joined by a few local residents. But if you were not looking for the story you would not have found it, the main news focused on SARS, and the climbing death toll.

With a hundred thousand now dead in the UK, Athens shook and fell, the Acropolis reduced to rubble and dust, the cradle of democracy shaken to its foundations. Rescue Force moved in, searching for some thirty thousand die-hard residents who would not budge, whilst tending small injuries further out from the epicentre, all the while finding and treating people for SARS.

The economy of Greece was in tatters, the economy of the world not far behind. Confidence was gone, retail shopping and the entertainment industry well down and having a knock-on effect. So

far, no country had imposed Martial Law, the worst of the fighting being in the States as injections were requested at gunpoint.

In Africa, three million people were dead, again mostly slum dwellers, Nigeria having not long recovered from Lagos Fever. But since the TV news crews if Africa did not got into the slums much, the ordinary citizens of Africa were getting on with their lives, blissfully ignorant of the parts of their cities that they never visited.

African Rescue Force units were busy in the slums and villages, saving those that they could. Some slums offered hardly a case, others lost tens of thousand of people, ghost towns created. SARS was being indiscriminate. In Gotham City and New Kinshasa, the numbers were relatively low, the areas not densely populated, and the workers in New Kinshasa again faired well.

The city was coming along nicely, several government departments having moved up from old Kinshasa, some sixty thousand people living and working in the city so far. The marina was finished, the shopping centre nearly ready, the first few high-rise buildings finished and occupied. Three buildings under construction would eventually dominate the skyline, each some twenty-five storeys high.

North of the city, new gated-estates were popping up every day, the houses sold as soon as they became available. With the completion of the city's towers, and new areas of apartment blocks, an additional thirty thousand people could move in, a few new ministries moved over. Kimballa himself was due to move his people during May, his Presidential Palace suitably splendid, a house built for him just down the lake from mine.

"Millionaires Row", as it was now officially titled, had been extended by three miles, mansions popping up all along it. They would be built by the corporation for very little, put on the market, and would make a decent profit for the corporation in these troubled times. At least, they were troubled for the outside world. Africa was doing well, internalising its markets, no sign of a slow down at all, only tourism suffering.

The following week, South Africa just suddenly caught a cold all at once, some half a million people dead in a few days. The bug swept around the country in a wave moving anti-clockwise and removed two million citizens before it even paused for breath.

The end of January saw the Indians release provisional figures of five million dead, collation of those figures a month behind. SARS had found a home in the Indian slums and swept through with little

mercy, the slum dwellers not even conscious of where they might find a doctor with a suitable injection for them.

Singapore seemed to have developed an immunity, and only ten thousand had died, but China was hit hard, some six million dead. Their stats were odd, in that rural families tended to die ahead of city dwellers all breathing on each other. Japan lost a million, North Korea again suffering, its peasant farmers suffering. Russia lost half a million, and the Iranians again claimed that we manufactured the disease. And that was after they reported their own cases and we flew them a suitable number of injections.

Meanwhile, on the Iranian/Afghan border, Somali Rifles were sneaking across with Good Morning grenades, hiding them on the dusty tracks used by the Iranian Army, and inflicting high casualties. The Iranians were high on blame, low on evidence, Big Paul taking the “harass” order literally.

The Iranian foot soldiers, taking casualties from invisible weapons, were not keen to go out on patrol. When their barracks blew up, they were not keen to stay either. The provocation eventually worked as Jimmy had desired it would work, and a modest force of Iranian tanks and armour moved across the border in the hope at least of finding and killing someone, or anyone, and gaining evidence of the ghosts that plagued them.

They found nothing, not so much as a track. They were, however, filmed crossing the border and entering Afghanistan. The UN Security Council met, facemasks worn – hands washed after shaking, and condemned the aggressive move.

After four days of driving around and finding nothing to shoot at, the Iranian armour retraced its steps and headed back to the border, running straight into a line of anti-tank mines and losing a dozen tanks before they could react. They manoeuvred around the stricken tanks, only to encounter more mines as nightfall came on. In the morning, they backed up, only to find that the box had been closed, dozens of Good Morning grenades strategically placed.

An entire armoured brigade was lost, the Somalis moving in to finish off the survivors before leaving the area quickly. The carnage was filmed from the air, the Iranians now asking tough questions, and fully believing that American armour was in Afghanistan. Their spies inside the country said otherwise, reporting not so much as an American jeep.

For the Revolutionary Guard it was a setback, and a loss of face, as pictures of the defeat were emailed around Iran, pictures of Somali soldiers stood next to ruined Iranian armour. It would lead to

a little blame setting, and a few meetings of the ruling elite. As had been hoped for. Jimmy made a call, the world preoccupied with SARS, with little care for Iranian border disputes.

Shelly turned fifteen, and dressed like a twenty-five year old for her party, her school friends trying to flirt with me. They also appeared twenty-five, and when one sat on my lap I could see Helen ready to clobber someone, whether it be me or the girl. When I was fifteen, girls certainly didn't look like this.

Despite what was going on with the world outside, the party was not sedate by any means, and I was glad to see Shelly let her hair down. I was concerned at the booze, the make-up and the slutty clothes, the talk of men and of studying abroad. But besides all that, yes, I was happy that she was happy. Mostly.

In our basement, we still had a command centre for the Afghan campaign, officers still present and producing reports, and now we made ready for what Jimmy called the most dangerous and foolhardy adventure so far. We were off to a good start, I thought. Without consulting with the Russians, Chinese, or even President Samuels, Jimmy readied what was labelled as an insert into south-eastern Iran, to supply the anti-Tehran rebels weapons and ammunition.

Six An12's made ready in Kabul, loaded with weapons and supplies, and flew down to Kandahar. At the airfield, the supplies were unloaded, much to the surprise of the pilots, who were escorted off, a wad of dollars for each man. Somali Rifles, trained as pilots, plus a few mercenary Somali pilots, took charge of the aircraft, five hundred Somali Pathfinders boarding the planes after a few extra bits of kit were added to the An12's structure.

At 9pm, the aircraft lifted off in sequence, and Jimmy said, 'This is crazy, irresponsible, and a huge gamble. But ... but I'd don't give a fuck anymore. I can't have the Iranians spoiling my plans between here and 2025, we've achieved too much. So to hell with it; we'll practice a little brinkmanship.'

The aircraft reached the Iranian border little over an hour later, the nearest Iranian military airfields now subject to the kind of radar jamming they could not have allowed for; 2025 technology. Following a course that would cross the least number of towns and cities, the planes pressed on un-harassed, radars returning to an operational state after the aircraft had passed. Sleepy Iranian Air Force operators did not launch fighters.

At 9pm, Iranian time, web servers had been attacked, all soon crashed. The computers at Khatam ol-Anbia missile defence base

had been hacked days before, and now displayed false readings to their operators. All was well in the skies above Iran.

At 10pm, a TU154 aircraft on approach from Armenia, now at eight thousand feet and descending towards Mehr Abad Runway, central Tehran, heading west to east, fired its built-in powerful EMP and took out most of central Tehran, plus its airport. The Tu154 turned northwest, returning to Armenia since radio contact was now not possible with Tehran. And because they had never intended landing.

Two hours later, and with the target airport blacked out, the An12s touched down in sequence, their lights out, advanced night sights employed by the pilots. They landed on full flaps and minimum speed, halting less than halfway down the runway. Free of their cargo of Somali soldiers, they powered up fully and took off again. Inside of nine minutes, five hundred Somalis were on the ground, airport workers hearing the activity, but not seeing it. They were still trying to get their lights back on, nothing now working. Dark shadows bumped into each other in corridors, questions asked, matches lit to inspect faces.

On the runway the weather was terrible, freezing rain falling on patches of snow a few days old. A low cloud cover afforded the Somalis a pitch-black night, the almost perfect darkness aided by a lack of lights coming from the city. And those that did venture out onto the streets wore hats held down on this atrocious night.

In six columns, the Somalis marched unseen into Tehran. Few residents were on the streets at this hour, the city quiet, a sprinkling of motorists cursing their uncooperative cars and walking home. Police officers in the wrong street died quietly, hit by dark shadows, the officer's bodies hidden where possible.

Around Iran, various agencies were now worried, all contact lost with Tehran, something that had never happened before. But the disadvantage of a strong central government was paralysis and confusion. One infantry commander, based just outside of Tehran, was concerned, and sent soldiers off in lorries to see what was wrong. They soon found their path blocked, and peered out through the rain at an oddly darkened city.

The Somalis split into smaller groups at designated points, and within an hour had reached their objectives, moving through the dark to gates manned by cold and confused guards, silenced weapons used to blind or kill. The main parliament building was penetrated, Somalis soon on the roof and planting explosives before withdrawing, some thirty guards killed in the process.

Two Somali groups approached the main barracks used by the Revolutionary Guard commanders when they stayed for meetings, accommodation provided for mostly junior ranks. Lasers, targeted with thermal sights, blinded gate guards sheltering from the rain, darts silently finishing the men off. The first group reached its objective without raising the alarm; an accommodation block. Through the dark and the rain, ghostly shadows of men placed battery grenades around the ground floor, moving onto the next block.

A whistle blew, someone trying to raise the alarm, a silenced shot taking the man down from a hundred yards. But boots could be heard on concrete above the howl of the wind. A line of Somalis knelt down and waited. Some twenty Iranian soldiers, well wrapped up against the cold and rain, ran forwards, not seeing the dark outlines of the Somalis till it was too late. One Iranian soldier managed to fire a burst into the air before falling. If the Iranians who heard the shots could have, they might have turned on the lights.

The Somalis withdrew to a dark corner, and figured that the barracks may empty of its sleeping officers. The Somali officer in charge raised a radio detonator and pressed, the accommodation blocks blowing and collapsing, most of Tehran now registering the blast. The game was up, not that the Somalis cared.

Across the darkened city, senior commanders grew worried, the lack of illumination accentuated by the rumble of distant blasts. They did not have long to wait for their fears to be realised. Three city hotels, favoured by the guard commanders and reserved for the current round of national meetings, imploded and collapsed.

On the edge of the city, smart villas exploded, senior commanders killed, no way for the facts of the emerging crisis to be communicated about the country. In the city centre, a smart apartment block was paid a visit by the Somalis, its address plaque checked with a torch to see that it was the correct apartment block. They shattered the door glass with silenced weapons, moved inside and climbed to the fourth and fifth floors. Door locks were duly shot off, standard grenades tossed in.

After forty minutes of clearing apartments, two Somalis wounded and one killed by a guard commander keen to survive, the Rifles withdrew, panicked residents on the stairs ignored.

After two hours of action, the Somalis jogged back across the city, firing at police and soldiers where they were encountered, Iranian police now making use of torches and lamps, which just quickened their departure by highlighting their positions. The

weather remained dreadful, the Somalis jogging through the driving rain back towards the airfield, some units taking forty minutes to return.

At the airport terminal, the first Somali unit to arrive back crept forwards, picking off Iranian police and soldiers through the dark, before forming a line between the buildings and the runway. A signal was sent. Circling, and maintaining a holding pattern north of the city, the An12s now began their descent and approach, benefiting again by a GPS approach system, but also now benefiting by a two signals from the ground, transmitters placed either end of the runway.

Breaking through the low cloud, pilots with advanced thermal imagers adjusted their track and touched down. The first aircraft was the fuel tanker, its cargo pushed off halfway along the runway and onto the edge of the tarmac by cold wet hands. No longer burdened by its heavy cargo, the An12 powered up and lifted off, heading east through the gloom.

At the airport terminal, people could again hear the aircraft across the darkened airfield, the Somalis with the advantage of being able to both see Iranian staff moving around, and to shoot them effectively from two hundred yards.

With the returning Somali units grouping on the northern side of the runway, the second An12 landed, soon being keenly refuelled in a well-practised routine. With its loading ramp down, a hundred and ten Somalis stepped aboard. Refuelled, it opened the throttles and powered down the runway in almost total darkness, the pilots viewing the runway well enough to see the grass moving in the wind.

When the last aircraft touched down, the Somalis who had been lined up facing the terminal walked backwards, four men left behind till the loading was complete. They then walked backwards when signalled, scanning the airfield and firing at movement. At the aircraft tail, they scanned the airfield one final time, and jumped aboard. Five minutes later they were heading east.

In the morning, the residents of Tehran woke to a silent world; no traffic, no radios, no TV. No irate drivers were tooting horns as they made their way to work – the furry dice swaying, coffee shops were cursing the electricity grid, police officers were kicking uncooperative motorbikes. Residents asked neighbours if their electricity was off as well, and people walked to work, only to find their computers fried. Tehran had been pulsed back into the Stone Age.

At the house, Jimmy called for an “M” Group meeting, but had also called for Israeli New Dave, as well as the Saudi Ambassador. The Whitehall minders were in on the meeting, as was our resident White House representative.

Jimmy began, ‘Last night, Tehran was hit by a powerful EMP blast.’

Our British Government minders were immediately concerned, if not shocked.

New Dave said, ‘We wondered what the hell happened; we lost contact with our people there. And this morning, the entire military is on alert. They can’t talk to each other, but they’re on alert.’

‘You hit Tehran with advanced weapons?’ the Saudi Ambassador asked.

‘I did,’ Jimmy told him. ‘Because otherwise, the Iranians would have tested their first nuclear device within a year, causing the Israelis and the Americans to strike at them. If that had happened, the Iranians would have closed the Straits and blocked all gulf oil. They would then have fired missiles at Israel, and at American bases in the region, the most likely outcome a complete disaster for everyone.’

‘Now, in addition to the EMP device, Somali commandos landed at the airport, undetected after penetrating Iranian radar, and destroyed several barrack blocks housing the Revolutionary Guard. They also demolished a few hotels currently hosting members of the Guard, and destroyed numerous villas and apartments. The loss of life amongst the Revolutionary Guard is high, but the Somalis *did not* target the religious leaders.’

‘The Tehran Government has been set back many years, and they’ll have to recruit a few more officers. They will, however, now realise that they’re vulnerable, that we can reach them if we want to. The religious leaders will realise that we could have taken them out as well. Hopefully.’

‘Ladies and gentlemen, if the Iranians do not halt their nuclear ambitions, then next time I’ll take the gloves off. In the meantime, I would appreciate all of you using what influence you have to play down the Iranian’s complaints, and to keep it out of the media as much as possible. I would, however, expect the Iranians to want to hit back at the Somalis, and to attack the Somalis in Kandahar.’

‘You’ve set a trap,’ the Saudi Ambassador said.

‘If they cross the border they won’t return,’ Jimmy said with a menacing smile. ‘And you, Mister Ambassador, are well aware of

the cost to you of the Iranians closing the Straits, or firing on oil tankers.’

With the guests gone, the “M” Group and the other officials called their national leaders to give the good news. Each “M” Group government registered its protest, but had more pressing problems to deal with. Jimmy had timed it well, and not just a rainy night for the attack in Tehran.

I scanned the media, finding only that commercial aircraft were being turned away from Tehran because of a power outage. The next day the story was similar, no mention of an attack. Could they be trying to cover it up, I thought to myself. On the third day the media was reporting claims of terror attacks in Tehran at the hands of Somali extremists. Begs the question how they got into the country.

A full four days after the attack, Iranian fighters took the skies, screaming towards Kandahar as the weather improved. Twenty miles inside the border, Somalis sat on a line of diesel-powered generators that vibrated and belched smoke, a continuous wave EMP device positioned on a rise a hundred yards away, and pointing east at an angle of forty-five degrees.

With a cold leg of lamb in hand, the Somali officer in charge peered up at con-trails, watching as the neat lines broke into spirals and dissipated. Thirty-five Iranian fighters ploughed into the ground, none closer than twenty miles to Kandahar. A change of plan was called for by the Iranians. In anticipation, the Somalis moved the continuous wave EMP devices, repositioning them as dusk came on, three additional units deployed.

Medium range Iranian rockets were prepared, erected and fired, all slamming into mountains, one landing in Pakistan, one veering towards Kabul. The Somalis in Kandahar went about their business unmolested, the local Taliban reporting no hits by aircraft or rocket.

A second wave of aircraft crossed the border the next morning, screaming low down valleys, banking and turning wildly as they progressed. The last thing the pilots saw was the ground coming up a bit too quickly, twenty aircraft lost.

This led to an odd response from Jimmy. He nudged the Somalis to open indirect talks with the Iranians. The Iranians refused to negotiate.

At the height of the SARS pandemic, the numbers falling sick horrifying, and the world traumatised by the deaths, the Iranians moved tanks towards the Afghanistan border. They crossed unopposed, avoiding the area where their previous tank brigade had been destroyed, and kicked up a dust storm as they trundled east.

Tanks, armoured personnel carriers, attack helicopters; they moved forwards in attack formation, whilst finding nothing worth attacking, penetrating sixty miles by the second day.

Oddly enough, the first shot fired was by a Taliban group not happy to see the Iranians moving across the border. The second shot would come in Tehran, as the parliament finally convened. The Afghan agent in Tehran, a member of the Northern Alliance, lifted his radio detonator as he stood on the roof of an apartment block, and pressed. The roof of the parliament building blew, collapsing the building, no one surviving. The President, his deputies, and the entire congress were all now dead. They should have negotiated.

The Iranian commander leading the tank advance was no fool. He had his force well spread out, and he had scouts up ahead. He even had mine clearing equipment, and they diligently checked the roads ahead as they advanced, adopting a random route and trying to be unpredictable. But on the third day he had to manage an eighty mile supply line back to the border, more again beyond it. Now, as his fuel trucks moved along roads on the Iranian side, they blew up, culverts and bridges along the border also blown. With EMPs fired at the attacking force at the same time, no advance warning of the lack of fuel would be coming.

Within a day of reaching Kandahar, the Iranian commander split his force, determined that some at least would reach Kandahar and attack. He split his force and moved them east into the desert, four prongs heading northeast towards their target. They made good progress and halted at dusk, just ten miles shy of Kandahar, the city lights visible to some units. Planning a combined dawn attack, they made camp, secure in the knowledge that they could see anyone approaching in this barren and flat land.

Corporal Mohamed Aleen, Somali Rifles, lifted his head and thanked Allah. He was under a tank, not under its tracks. At 1am, with the tank crew asleep nearby, he placed his battery grenade under the tank and crawled slowly out to a cold and dark night, no stars visible. Seeing a guard patrolling, he hit the man with a dart, frozen till he was sure that no one heard the man drop. He crawled away whilst covered in a desert coloured camouflage wrap.

Far enough away from the tanks, he lifted up and stepped softly forwards. With his back to the tanks, he switched on three pins of barely discernible green light and ran forwards. Those three lights lit up like a Christmas tree for the night sights watching, and no one fired on him. Seeing a gully, he jumped in, soon aware of other dark shadows moving about.

‘Who are you?’ he whispered.

‘Squad Three.’

‘Where’s Squad Five?’

‘East, half a mile.’

Corporal Aleen lifted up and headed east.

An hour before dawn, the Iranians were awake and moving, flysheets torn down, coffee made, tanks mounted. Then the first bodies were found, the alarm given. A mad scramble was made for tanks and armoured personnel carriers, whistles blown. It was too late.

Radio signals were sent, tanks blown apart, nearby soldiers killed or wounded, the battery grenades enough to lift a tank and drop it. Corporal Aleen peered through his binoculars, acting as spotter for a sniper with an M82 fifty calibre.

‘Officer, right of the two burning tanks. The man waving his arms.’

Their forward view was obscured as sand lifted from the muzzle blast, a chorus of reports now registering as other snipers engaged targets. From behind him, the corporal could hear mortar crews opening up, wondering if the Iranians knew that they were surrounded on all sides, and that six thousand Somalis held the land that they had made a happy camp in.

The battle raged till noon, many tanks firing at shadows and gullies, but rarely hitting anything worthwhile. Anti-tank RPGs, improved by the Shanghai kids, tore off tracks and immobilised tanks, the crews picked off when they emerged. By 3pm, the clouds clearing and the desert warming, no resistance was left, isolated pockets of Iranians firing outward with small arms and being picked off by snipers crawling forwards, their shrouds the colour of the sand.

At nightfall the Somalis pulled back, teams with thermal imagers moving forwards to find hidden individuals. By dawn it was all over, the Somalis marching back toward Kandahar, thirty killed, fifty wounded, quite a few men lost under tank tracks.

The Iranians got the message, although I wasn’t sure if they would try and strike back all the more once they had recovered. They knew for certain that no force, and no aircraft, would return from Afghanistan.

Little in the way of public condemnation of the events made it to the western media, but Pakistan seemed very loud in its condemnation of the “terror” attack on Iran. The rest of the world found it odd that the Iranians, of all people, were claiming to be

subject to terror attacks. And by the Somalis of all people. Inside Iran, the super Persian psyche also had a hard time with that claim.

Aftermath

March, 2015, offered us a false hope as the number of new SARS cases fell. They continued to fall for a whole ten days, then shot back up. It was as if someone was not counting properly, and catching up later.

Oddly enough, people got used to the new reality. They went to work, delivered babies, threw parties, and hoped for the best. Life trundled on. The girls did not seem to be as badly affected as the first time, and some of the kids that the girls hung around with even made jokes about the pandemic.

The TV news had stopped counting the dead, and had modified their programming as their viewer audience fell off; people got fed up with the doom and gloom and so avoided the news, favouring soaps and movies. Jimmy made noises to that effect, encouraging people to just get on with their lives. He flew over to Greece and toured the ruins - hard to tell now which were ancient ruins and which were more recent. Tented communities had sprung up, and people had started to rebuild their shattered homes, the Athenians proving resilient. TV interviews, of retired Greek couples, displayed their defiance in the face of adversity. 'The quake could not get us out of our house, and neither will SARS.' It made me smile.

The economy was a worry, because the retail sector was hurting, hotels, airlines and holiday companies failing by the day. They reached a low and bounced off the bottom, getting used to their new reality.

March was the worse month, but when the number of new cases fell in April, Jimmy said that it was probably over. I watched the figures fall, or rather saw the rate of increase fall, and took hope by it. In truth, all of us had hardened to it, that human ability to get used to a new reality, as people did during the six years of the Second World War.

During it all, Liz learnt to toddle, Lucy great with her younger sister, and getting more baby-time than Shelly these days since Shelly had boyfriends to see. Shelly pretended that she was seeing the same lad, but the security informed us about three different lads.

My daughter was something of a puzzle to me, because she was extremely bright, easily qualifying as a nerd, her room was immaculate, nothing out of place, and she was never late for anything except getting home.

Yet she had this cavalier attitude to boys, Lucy reporting to us that Shelly would always ask the boy out, set the dates, and be a right bossy-boots with her boyfriends. If they wanted an extra date she would stop seeing them. If they couldn't make a date she'd stop seeing them. Basically, the poor lad would have to wait by the phone and do as he was told. It wasn't even as if we could tell her that her studies would suffer, since she was a good three years above the brightest kid in school.

By May, things were improving, the weather putting a smile on people's faces, the number of new cases falling off rapidly. Jimmy made a speech.

'If you want to help yourselves, then help the British and European economies. Go to the coast, start going out again, take a holiday, especially in Greece. The best thing that you can do to help the people of Greece, is to take a holiday there this summer. I appeal to all of the peoples of northern Europe to take a break if you can, and to visit Greece if you can.'

It made him popular in Greece, his approval rating in the UK still around ninety percent. Bits and pieces of the attack on Tehran hit the papers, but no one really cared, the Iranians now consolidating, and quietly ignoring Afghanistan and the Somalis. I asked Jimmy about them.

'Their gut instinct is to fight, but they can see their losses, and so can the populace. If they lose more soldiers or planes, or suffer another EMP, the people will be well pissed off at them. They may not be elected, but they still need support.

'The attack was a hell of a trauma for them, and for a few other nations as well. People now know that we can fly over their airspace undetected, taking out their cities, and the cost to the Iranians has been huge. I sent messages through third parties, and suggested that if they give up their nuclear programme we'll drop sanctions. They have a new President – well, they have a new everybody in government – and the new guys must be thinking that the same could happen to them.

'But the truth is, I don't know how they'll react in the long term. If they push ahead with a weapons programme I'll hit their major cities, and EMP them back into the Stone Age. It's either that, or America strikes, and that's best avoided.'

‘Where are we, exactly, in the grand scheme of things?’ I asked.

‘Hardon Chase, or his equivalent, was supposed to be at our throats for eight years. What happened instead, was that Hardon Chase assisted us more than I could have ever hoped for, so we’re we’ll ahead in many areas. My original route-map was what would have happened without any interference, with a few possible permutations and offshoots.

‘We’ve passed through SARS I and SARS II, Lagos Fever and the Greek quake, and now we have the Hawaii quake on the horizon. Sanchez is doing far better than expected, and we might get away with minimal backlash.’

‘Backlash?’ I queried.

‘Well, it could be argued that if I told businesses on the Hawaiian Islands twenty years ago what I know, then they’d not have built premises or hotels. There’ll be legal action, or attempts at it, plenty of complaints; as much from the indigenous islanders as anyone else.’

‘You didn’t cause the damn quake.’

‘No, but some may argue that I should have warned them sooner.’

‘No one would have believed you back then,’ I pointed out.

‘Which will be my defence. Anyway, couple of weeks from now we’ll need to get on the plane and go rally the populations, see if we can’t kick start the world economy. We’ll start by subsidising holidays to Africa.’

At my desk, I opened an email from Bob Davies and clicked on the link it offered. A website listed the total number of people injected, and the resultant survival rates. It pinned the survival rate at over ninety-five percent, and the number of people injected at just over two hundred million. With a finger on the screen, I doubled-checked the digits. Twice. I re-read Bob’s note: ‘Paul, you just saved almost two hundred million people. Not a bad day’s work!’

The screen remained in focus, but everything outside of that narrow view seemed oddly distorted for a while. With my face feeling a little flush, I slowly stood, turning towards the window, an image of the Alsatians chasing squirrels up the trees. Thirty-five million people had died worldwide, most never having been injected, and most had passed away unnoticed in the world’s slums. That was the figure I was concentrating on, and I now cursed myself for not listening to Jimmy’s boring and repetitive speeches, the one’s about concentrating on the survivors and not dwelling on the dead.

Putting my hands in my pockets, I stared out of the window, feeling pretty damn good about things all of a sudden. And proud of Jimmy, a strange new feeling for me. It wasn't that I wasn't proud of the big fella, but I just never thought of him in those terms; he wasn't the kind of person you patted on the back.

If nothing else, no one could take this away from him. I told my secretary that I was popping down to the house, and I walked past the lake, one of the guards fishing. I waved, he waved; it was that kind of day.

At the main office, I said, 'A website is claiming that two hundred million were injected, and saved by the drug.'

Jimmy eased back from his screen. 'About right.'

'About right? Is that all you have to say? You saved a quarter billion people!'

Everyone was now focused on Jimmy. He eased up and checked the biscuit tin, saying, 'What do you expect me to say?'

'How about seeming pleased, ya big ugly lump.'

'I am pleased, but there's more work to do.'

'I think I can honestly say ... that I speak for the planet when I say ... you've earned a day off.'

'Day off? Can't even get decent biscuits in here,' Jimmy quipped.

'Because you eat them all before lunch!' Sharon complained.

'I'm a growing boy,' Jimmy said mock defensively.

I threw my hands in the air and let out a sigh, a look exchanged with Helen. Back in my office, I searched on the kind of stats that the website had displayed, finding many links to it, and comments about it. It seems that we'd never pay for a drink again in several countries. I rang the Prime Minister and discussed the figures, our PM having his own UK stats, and I hinted that he say something nice about Jimmy. A firm hint. No sooner had I lowered my phone than Jimmy walked in, a rare visitor to my office. He walked around my desk without saying anything and peered out of the window.

'No biscuits up here either, we hide them from you!' I told him.

He nodded absently. 'It's good to save lives, which sounds a bit obvious and a bit naff, but I look at 2025 and see the ... waste of it all; to save so many now, and to risk them all later. It ... takes the edge off the excitement.'

'We saved a quarter billion people for fucks sake. If we can do that, why can't we fix 2025?'

He stared out of the window. 'Some days I hate myself.'

I frowned hard. 'What? What the fuck for?'

He heaved a big breath, putting his hands in his pockets, still staring out of the window. 'None of us can detach ourselves from our memories, things we've done in the past, things we allowed to happen. If I was a robot it would be better, but my path to this point has been littered with death and destruction, and misery.

'I can see their faces, I can see the bodies, and part of me is angry for running out on them to come back through time. These people - the people here - they're not really *my people*. My people ... are the cold and dishevelled people in post-apocalyptic Canada. That's the real place, this is the ... other place; warm showers and full bellies. What happened back there ... that'll never go away, no matter how long I live.'

'But ... aren't you doing it for those people?'

'There's more to it than that, it's not so simple. There's a lot you don't know yet.' He turned. 'And, hopefully, you'll be there to save me at the end.'

'Save ... you? At the end of what? 2025?'

'No. When you know ... you'll know; 2025 is not the final battle. 2025 is ... D-Day 1944; a gamble, strategy, an all or nothing fight that could go either way depending on the weather. And get some biscuits in for me next time, you earn enough.'

The British elections had been delayed due to SARS, the opposition parties not kicking up a fuss, but Jimmy gave the PM a nudge in June to call a snap election, a few weeks of sedate campaigning endured by the British public. The opposition parties were in disarray, not least because the existing PM had done a good job during the winter crisis.

The existing PM again wished to step down, by Jimmy encouraged him to keep going, even using phrases like 'the country needs you', guaranteed to tug a few patriotic heart strings. The PM won by a reasonable majority, now entering his fifth term as one of the longest serving elected heads of state.

Summertime

The improving weather lifted spirits, and not just in the UK. In the UK, people took Jimmy's advice and went to the coast, all hotels fully booked, zoos and parks jammed by long lines. The northern

Europeans flew down to Greece, many Greeks sleeping in tents to free up hotel rooms occupied by displaced families; the tourist revenue was more important.

We offered subsidised flights down to Goma and the world got on a plane, the collective sigh of relief being huge. The lodges in Africa filled up, and the animals of the savannah once again stared back at the strange pink animals in green jeeps staring at them.

Jimmy and I went around the world in Air Force One, now officially called Silo One, and were greeted by huge crowds wherever we landed. Even the Pope had changed his tone, the American Bible Belt having belted up.

The reporters that flew with us were still friendly, but now it was a different kind of friendly. The world had been curious about us for a long time, and we had achieved celebrity status long before exposure. After exposure, people had been stunned to find new possibilities in space and time, had opened up to new ideas and radical thinking, and most had been in awe of Jimmy. Now, having been to the edge of destruction and back, the people were on our side fully, and for the most part grateful. Now, the people had a firm hope.

I worried about that hope, because I knew Jimmy's reservations about 2025 and beyond. I worried that the hope placed in us would be dashed in the years ahead. The new kind of friendliness displayed by the press was one where they stopped being hacks and regained their humanity, often listening to us talking without trying to write it down.

It was a good summer, marred only by a few bombs going off courtesy of the Iranians. Jimmy had been pressing the Iranians to talk, and they finally agreed after a few threats were made. They came to London and we greeted them at the club. Given that they had set-off bombs in Africa, I was in two minds about whether or not to shake hands, or smack them in the face. Still, we had hurt them first.

Settled around a table in the computer room of the club, Jimmy began with, 'I regret the attack on you by the Somali Rifles, despite what you may think. And I regret giving the Somalis advanced weaponry.'

That was stretching the truth a bit.

'This has all come about because of – in simple terms - your long standing disputes with Israel, America and the west – a clash of cultures since your revolution. It has also come about because of al-Qa'eda's attacks on Somalia, the Somali incursions into

Afghanistan, and the huge mistake you made by supplying your otherwise adversaries – the Taliban – with weapons to hit Somali and western forces in Afghanistan.

‘Following the supply of rockets to the Taliban, which you may obviously try and deny, I became more involved. But that involvement was not the main reason I supplied the Somalis with weapons, it was not even your nuclear weapons programme. It was because I knew for definite that Israel and America would soon attack you, bombing your nuclear reactors and development facilities, and that the resulting conflict would have led to a Middle East war, the closing of the Straits, the destruction of the world economy ... and may have led directly to a global conflict.’

They sat looking stony-faced, but listening intently.

‘I am, as you are aware, a time traveller. If you don’t believe that, you must ask yourself where the advanced technology came from; the technology that defeated your radars and crippled your capital. If you believe with your own eyes the damage done, then you should also believe that I’m a time traveller, and that I possess future technology and weapons.

‘Now, we’re here to try and solve this problem, gentlemen, not to escalate it. And I’m willing to negotiate, to compromise, and to offer incentives. I won’t insult your intelligence by doing anything other than talking directly. If you give up your nuclear weapons ambitions and ease off on supporting Hezzbolah, we’ll not only leave you alone, we’ll lift sanctions and try and help your economy. That, gentlemen, is the crux of this meeting.

‘Now, I know you have the right to self-defence, and that Israel has nuclear weapons, and that it’s an imperfect world. However we got to this point, we are at this point, and if you fine gentlemen continue to set off bombs, and continue with your nuclear ambitions, then what happened to Tehran will happen to every Iranian town and city. You’ll go back to the Stone Age. If that doesn’t work, then I’ll supply the Somalis with weapons that will kill every last one of your leaders, and we’ll keep doing that till the tea boy or the gardener is running your country.’ He eased back and waited.

The lead man glanced at his colleagues. ‘First, Mister Silo, we are grateful that you sent us the super-drug. Despite our clerics condemnation of you and the drug, it was widely used and saved a hundred thousand lives, my own family included. And may I say that since the politicians of our nation ... perished, along with many of the Revolutionary Guards, there has been a ... shift of policy. Some elements remain ... outside of direct control, but attitudes that

had hardened are becoming ... more pragmatic in their approach. We are ... obviously ... sat here, willing an end to hostilities.'

'At what price?' I asked.

'The lifting of sanctions would be an obvious starting point, access to advanced medicines a second point.'

That made me stop and think. And puzzle the point.

The man continued, 'And ... knowledge of the future.'

'Knowledge of the future?' I repeated.

The man addressed Jimmy. 'You could have sat back and let the Americans attack us, and allowed us all to sleep walk into a wider conflict. Instead, you tapped us on the shoulder. A hard tap, but still a tap on the shoulder. Your demonstration in Afghanistan was ... most spectacular, and some in my land believe that we would be unable to resist and invasion of African soldiers armed with weapons from the future.'

'You stopped short of that to ... let us fall on our swords by way of example, and we are not the mindless barbarians that your media portrays us to be. We sat and thought about it, those of us that were left, as we battled SARS with your drug. By the way, a surplus of the drug was used to cure cancer, and a variety of other ailments, a groundswell of ... murmurings created as a result. Those murmurings have continued to grow, and to open people's eyes to the wonders of the future, not the dangers that it may throw up.'

'The opposition movement has gained strength, and our leaders are listening to the hearts of the people. There is no greater lesson ... than that which unfolds before your very eyes.'

'And your nuclear programme?' I nudged.

'Could be negotiated away, although it would never be admitted to in public, or to our people. It would be sidelined as an ... unnecessary expense at a time of great shortages. Any suggestion by the western media that we are even negotiating would call a halt to such discussions.'

'That's fine by us,' Jimmy suggested.

'And the knowledge of the future, Mister Silo,' the man nudged.

'The future, your future, is dangerously close at hand, and very dangerous. My aim ... is to save the planet, and if I have to destroy your country to do that ... then I'll do so.' He let them think about it. 'The Americans and Israelis were, and are, well advanced in their planning and determination to attack your nuclear facilities. That would have led to a wider war, economic collapse, global war and the rise of various ... barbarian groups, groups intent on returning us

to a simpler way of life, such as the abolition of money and oil. The world, their world, would not be a nice place to raise your kids in.

‘My mission here is to stop that from happening, and a Middle East conflict is the most likely trigger point. I will go to any lengths to stop a global conflict, so I need to stop a Middle East conflict first, and therefore we’ll need to stop the Americans attacking you. To do that ... you’ll need to halt your nuclear weapons programme. In return, we’ll lift sanctions and readily assist you with drugs and technology.’

‘May we meet again in a week’s time?’ they asked.

‘I’ll make myself available for you at a moment’s notice,’ Jimmy offered them. ‘And, for what its worth, I apologise for the loss of life, and the damage done to your country.’

‘For what it’s worth, Mister Silo, I believe you to be sincere,’ the head negotiator said before we ended the session.

A week later they were back, no bombs having gone off in the mean time, the same team of four men arriving. The media had asked about the visits, and were told that we were trying to negotiate a peace in Afghanistan.

‘Welcome back,’ I offered, a handshake initiated.

After they had settled, the lead man began with, ‘Thank you for the supply of drugs. You sent them despite us having an agreement in place.’

‘I would have sent them with no agreement in place,’ Jimmy commented. ‘It’s not your people that I have a problem with.’

‘We will halt the nuclear development programme and, since you seem to be able to hack our computers at will, I believe that you will be able to monitor the situation.’

‘I will,’ Jimmy told them.

‘We will play no further role in Afghanistan, and ask that you do not supply the dissident group in our southeast with weapons.’

‘Agreed.’

‘You’ll ask the Americans to lift sanctions?’

‘I’ll ask the Americans to turn a blind eye to people breaking the sanctions, whilst slowly unwinding the sanctions. It must be seen to be a long and negotiated process. In a week, an American team will visit you and start the negotiations as if from the start. They, will be the public face of the negotiations that we have, and that team will need to seem to be successful; step by step, inch by inch.’

‘Of course,’ they agreed with diplomatic smiles. ‘And may we enquire about the coal-oil converting technology.’

‘You have half the world’s oil,’ I puzzled.

‘Which is needed for valuable export revenue,’ they explained. ‘We’d like clean oil-powered electricity generation in our country. And it may surprise you to know that we got hold of your electric cars early on.’

‘Iranians ... driving electric cars?’ I puzzled. ‘Seems wrong somehow.’

‘There are a great many things about us that you may not fully understand, Mister Holton. We are hoping to obtain electric buses as well.’

‘I’ll sanction the Chinese selling them to you,’ Jimmy offered. ‘And subsidised.’

‘We are most grateful. And what are your thoughts about sharing your knowledge of the future?’

‘There are a few things that will affect you, that I could not disclose without others ... taking an advantage of. For your sake, I will keep them quiet for now.’

‘And future pandemics?’

‘You’ll be warned, advised, and given all the drugs you need – provided that you stick to the agreement we have. I won’t interfere with your internal politics, nor will I ask that you give up your Islamic Revolutionary ideology, nor try and shape your future. I will, however, stop you interfering with other nations.

‘I do not ask that you kiss and make-up with the Americans or the Israelis, or rescue cats from trees. I ask only that you give the Americans no excuse to attack you, because you can be certain that any wider Middle East conflict will result in Tehran being hit by nuclear weapons. You don’t want that, and I don’t want that.’

‘May I ask, if Israeli and America had been furnished with advanced weapons?’

‘No. Most of the advanced weapons I possess I leave with the Chinese for safe keeping, since I know they’ll not be tempted to use them. The Americans and Israelis have advanced infantry weapons only.’

‘Could you bring down a ballistic missile?’ they risked, and odd question.

‘I could. But such missiles were designed during the cold war, and were designed to be EMP proof, so I would only be partly successful.’

Following the meeting, we met with the household “M” Group and gave them the good news, Samuels readying a team to “pretend” to negotiate for the folks back home.

New Kinshasa

With our absence over the winter, New Kinshasa had grown considerably, a formal ceremony marking the move by Kimballa's government due soon. We flew down, reclaiming the lakeside mansion, and I found that I had missed the place. I also found the crocs missing. They had apparently, got a bit big and had been let go. Let go was something of an overstatement, because the two crocs would, apparently, pop back every few days for a free feed. Kids eh, you try and get rid of them but they just keep coming back.

After my first 5am swim I wandered to the lakeside, finding the monster croc on the grass the other side of the fence, two smaller crocs near the water's edge. I fetched a chicken and tossed it to the monster, two lumps of ham for the youngsters, whilst wondering if this was wise.

Thinking about it, I called the zoo and asked them to catch the monster, for the zoo to give it a happy home and possibly a mate. That led to gentle complaints from the marina business association, who saw the croc as part of the attraction. I relented, having a grill fixed into the waterfront. It prevented the monster from landing on our garden, but let through the little snappers. That led to the monster beaching itself three doors down, killing and eating their dog, some of the fish in their pond, and another grill being fitted.

Figuring that I was partly responsible, I commissioned a grill all the way along the row of houses. That led to the monster coming ashore in the park, where people tossed it chickens. I fenced off the park, and peace was reclaimed, the monster returning to being a water-hazard for boats in the marina.

As Helen and I relaxed at the mansion of an evening, Shelly and Lucy perfected their card counting skills at the casino. The croupiers knew they were both card counting, but also knew that they could not be banned, the girl's winnings modest. Besides, they were a tourist attraction in themselves, my daughters both as tall as Helen now, 5'10", and very popular with the young traders in Gotham City. I made it known that they were underage, and the local men were wary of long jail terms. Or being fed to the croc by me.

After four days of simply relaxing in the sun, we drove down to New Kinshasa, amazed by the city's transformation. Tall apartment blocks cut into the skyline on all sides of the main road south, the

shopping centre and restaurant district finished and in use, the daily spend by shoppers growing week by week. First, we formally opened the marina, a giant horseshoe a third of a mile across and backed by cafes on the ground level. I noticed bars above the cafes, restaurants above those, with apartments rising up another six storeys, each abode offering a balcony facing the water.

The pontoons were half full, many boats moving down from Gotham City, getting boats into the country was still a costly and difficult affair. I cut a large red ribbon in front of a crowd, even though most of the facilities had been open for weeks. Having been photographed, and a quick interview given, we moved as a group through to the shopping centre, Shelly happy to be centre stage, as well looking forwards to some good shopping with Helen, their clothes and shoes now interchangeable.

We entered at the ground floor, finding eggshell coloured marble floor and walls, and we lost Shelly and Lucy in the first shop. Pressing on, we found a large central atrium, four glass lifts taking keen shoppers up a total of six floors, circular balconies above us. Following Jimmy, we took the lift to the top floor, and found bars and cafes, plus restaurants that were obviously targeted at the lunchtime crowd. At the railing, we peered down at the six floors.

‘Very nice,’ I said. ‘Be an attraction in itself.’

‘It is,’ Jimmy confirmed. ‘Tourists pop down.’

I pointed. ‘From the first floor you can walk out to the mono-rail, from the second floor you can walk out to bars and restaurants, and from the forth level upwards you can join apartment blocks and offices. So, if you don’t like the rain, or the bright sunshine, you could spend all of your time indoors; office, apartment, shopping.’

We took the stairs down, ambling through the café quarter and finding a wide assortment of restaurants and bars, all enclosed and protected from the elements. At the end of the row of bars we continued on, seeing now that we crossed the main road through the city, and passed more shops. Talking the lift down to the first floor we walked on as a group, finding the walkway lined with businesses; solicitors, accountants, and a Chinese acupuncture centre amongst them.

Walking on a good three hundred yards further, people stopping to photograph us as our party proceeded, we eventually reached daylight, a glass ceiling covering the walkway as it split into three directions. We turned north, the signs above our heads labelling the walkway as ‘Government Offices.’

The start of those offices was reached after another hundred yards of enclosed business fronts. A huge open courtyard revealed itself, a glass enclosed walkway right around the first floor, gardens and ponds at the centre. We passed through security checks, and followed the walkway around, glancing down at people in suits glancing up at us, and eventually found the main parliament building. Kimballa's government were waiting for us inside, a rapturous applause given as we entered.

The large room reminded me of many of parliaments the world over, rows of concentric wooden seats in a horseshoe facing the speaker. These seats, however, looked brand new, and none of the children had carved anything into them yet.

Jimmy took the podium, Kimballa stood applauding off to the side. 'I thought this was the Chinese restaurant,' Jimmy said. 'Got lost in those walkways.'

Smiling and chuckling, the smartly dressed members of parliament took their seats, many now missing because of the SARS outbreak. Truth was, Unit 402 had taken the opportunity to inject some of the more corrupt elements of the ruling class with a drug that produced symptoms similar to SARS. Very sad, they will be missed.

'This day ... has taken a long time to arrive,' Jimmy said. 'A united and prosperous Democratic Republic of Congo.' They applauded. 'There was a time when few people would wish to venture into these lands, now tourists fly here from Europe and America. Progress, ladies and gentlemen.'

They applauded again.

'The people of the Congo now have a beautiful modern city, they have peace, jobs, cheap food, and good health care. For my next trick, I'll make husbands and wives get along with each other.'

Everyone laughed, and I noticed now the TV cameras at the back.

'But with this new city comes new responsibility, a responsibility to improve standards, to maintain the standards achieved, and for citizens to get along with each other in a law abiding and polite manner. But more than that, there comes a responsibility for the government and citizens of this new city ... to recognise the international cooperation that went into it, and to open its doors to citizens of all nations and colours, and Africans of all nations and tribes that may wish to work here or run a business.

'That does not mean that just anyone who turns up is allowed to live and work here, since we will be imposing tight controls. But it does mean that we expect to see the English and the French working

alongside Congolese, that we expect to see Russians and Chinese working alongside Kenyans, that we expect to see students here from around Africa.

‘This city lies at the geographical heart of Africa, and we must make sure that it is at the heart of African prosperity in the future, but – and most importantly – at the heart of African cooperation. This city ... should be an example for Africa, a beacon at the centre of Africa, an example of what can be achieved in these lands. Africa has the resources under the ground, but also has the resources above the ground in its people. If the people don’t fight each other, if tribalism is reduced, if corruption is stamped out, then prosperity is there for the taking for future generations.

‘I have put almost thirty years into Africa, and I have put my own blood into Africa. Now I ask that you do not let me down, that you do not let down the next generation, that you build on what I have started and move forwards. If you wish my legacy to be fulfilled, give more power to the pan-African cooperation group, and start living like neighbours, not rivals. Your children are sat watching, and they expect from this current generation ... to grow up in an Africa of opportunity, not warfare and poverty.

‘You have been shown the way back to the Garden of Eden, what you do with it is up to you. Thank you for your time today.’

They all stood and applauded, Jimmy waving as Kimballa led us out and through to his splendid office, his desk offering a view of the massive internal courtyard.

‘A rousing speech, Jimmy,’ Kimballa offered as he poured drinks. ‘You must run for office yourself.’

‘I have enough power as it is,’ Jimmy replied. ‘Any more and it may corrupt me.’

I cocked an eyebrow without Kimballa noticing, sitting with my drink. ‘All moved in?’ I asked our illustrious president.

‘Yes, I have moved home, family, and office here. The house by the lake is most magnificent, the southern golf course most distracting. My wife and daughters shop in the new centre, for which I curse you for placing that temptation before them. They are spending faster than the IMF could replenish it.’

‘It all goes back into the economy,’ I said.

‘Indeed. And that economy is internalising fast, exports slowing.’ He waited.

‘That’s intentional, since the outside world will suffer economic problems of its own in the years ahead,’ I informed our gracious host.

‘And you would know better than most what lies ahead,’ Kimballa noted. ‘The Angola road and rail line is working well, quite congested, and the northern rail line is at capacity. But will your operations in Southern Sudan and Ethiopia not take business away from us ... here?’

‘What’s the hurry?’ Jimmy asked. ‘Leave some resources under the ground for the next generation.’

‘Indeed, yes. It’s only a matter of observation.’

‘We aim to fix many countries,’ I put in. ‘And have them trading; things made here being sold in Sudan and Ethiopia.’

‘Indeed, yes.’ He raised a finger. ‘The new football stadium will be ready soon, maybe to host the African Games or World Cup some day.’

‘World Cup cities always lose money,’ Jimmy suggested. ‘It’s not worth it. Same for the Olympics. But African football tournaments would be a good idea, Mister President.’

‘When you call me Mister President ... it somehow seems odd, since we both know who wields the real power.’

‘Real power comes from persuasion, from finding common interests and developing them,’ Jimmy told Mister President. He took a moment. ‘How do you see yourself being remembered after you retire? What will the plaque on the statue say?’

‘I am wondering if you already know that,’ Kimballa replied.

‘The future can be altered, obviously. But, but I would hope that it may say that you presided over a new city, a new country, and a new kind of cooperation between not only Africans, but between many nations. I would hope ... that you see your job more as ... host of the party ... than anything else, your job being to make sure that the guests are happy - happy with their surroundings, and happy to do business here. You see, you need only lay the carpet for the trading to begin ... and to benefit us all.’

‘Host of the party, eh?’ Kimballa repeated. ‘And the plaque under my statue?’

‘Would label you as a great reformer of attitudes, and the father of modern Africa.’

‘And would my statue ever see the light of day next to yours?’ Kimballa posed.

‘That, Mister President, depends entirely on the kind of party you throw.’

Kimballa became serious. ‘I am conscious, Mister Jimmy, of your ability to see the future, and I am conscious of what you did with my father, and with myself. The wealth that we have enjoyed, and the

status that I have enjoyed with your guidance, will probably never be fully appreciated by those outside of a small circle. Whilst living in your shadow, I have enjoyed a status that I was not worthy of, and sometimes I feel that I have been ... hanging onto the coattails of true greatness.

‘I want you to know that I appreciate all that you have done, for both myself and the country, I just wish that I could have done it alone. I wish ... that with hindsight, I could see what you see. Once shown, many things are simple, yet hard to conceive of without that initial ... nudge. Many days, Mister Jimmy, I curse your name for the mirror you put in front of me, the one that makes me look so small.

‘But it is not you that I am mad at, it’s the small man in the mirror who accepts the help, when it was he who should have been the better man.’

‘It’s not too late, Mister President,’ Jimmy told him. ‘You have the city, and you have the cooperation group, and you have all the cards to play. You need only leave a mark in history, and to do that you need to be less like the African leaders of the past, and more like me. Welcome foreigners to this city, and create a Garden of Eden in the heart of Africa, and you’ll have a few good words on your statue.’

‘We’ll even keep the pigeons off it,’ I offered, making Kimballa laugh.

We left Kimballa to order cheese on sticks for the party, and boarded a coach, soon driving around the city, glancing at up buildings. Shelly and Lucy got back to the house with arms full of shopping, guards carrying the rest of the girls’ purchases. I guessed my daughters had won plenty on the card tables, but Helen informed my that a few shops would pay them to be photographed within, or to return and be seen at certain times. It was exploitation, pure and simple, underage exploitation; my card-shark daughters were exploiting the poor shops.

With Helen and the girls trying on some of the things that they had bought, I wandered down the garden and to a lonely young croc. ‘Just you an me kid,’ I told it. ‘The women folk are trying on shoes made out of your parents.’

Sanchez called.

‘Is it early or late where you are?’

‘Middle of the night in Hawaii.’

‘How’s it going?’ I enquired.

‘They’d rather lynch us than move out.’

‘That good, eh. Would it help if we had a word?’

‘It may do, but we’ll be enacting emergency powers next year, forcing people out. Problem is, they think a ten-foot wave is going to hit, and they’re all surfers looking forwards to it!’

‘Tell them its a hundred foot wave,’ I suggested.

‘The economy is helping; it’s helping by dying. Businesses are relocating, tourism is down, and our military bases are scaling back or moving out. Navy is a big employer here and they’re moving out, so people are starting to get the message. Now we have a few states competing to see who can get the navy jobs.’

‘Doesn’t your Pacific fleet need to be ... in the Pacific?’

‘Yes, so San Diego is a choice, but we know it’ll be hit as well. Might have a few temporary headquarters till its over,’ Sanchez mentioned.

‘You playing nice with Samuels?’ I nudged, the croc staring up at me.

‘I like the man more than the party, and the party politics; we get on fine.’

‘Could this be the start of bi-partisan politics, a wartime coalition in the face of danger?’

‘Take more than this for the Democrats and Republicans to get together,’ Sanchez baulked.

‘Maybe you could do something about that, Mister candidate. And maybe we’d support your efforts. Because in years to come an emergency may need a coalition of the good, the bad and the ugly.’

‘Which one am I?’

‘You’re the bit-part Latino supporting actor, for now. And in case your calendar is not already saying it loud and clear, the next brave soul to take-up office the White House will be inaugurated right in the middle of your largest disaster to date. He, or she, will inherit a mess of biblical proportions.’

‘That fight interests me more than anything else about the job,’ Sanchez suggested. ‘If Samuels wins he’ll keep me on as disaster coordinator – he’s already made that commitment. And if I win I’ll be doing the same job. Either way I’ll be the point man for the disaster, and the aftermath!’

‘Your economy recovering?’ I asked.

‘We’re getting Cuban oil, and coal-oil is starting to make a difference; plenty of optimism around after the winter. If SARS comes back next winter, well...’

‘It’ll be tough, yes. But Jimmy says that it will just be a small outbreak this winter. You have enough ships and planes to move everyone?’

‘In theory. Plan is to tell the truth three months prior to the event and fly most of them out, cargo containers for personal belongings. We’ve started to offer low-income families relocation grants to the mainland, some moving, a few homes boarded up. Property prices crashed, no one can sell, so a lot of claims against the government.’

‘You’re not to blame for an act of God.’

‘We are if we give advance warning, it seems. Compensation will be huge, same on the west coast.’

‘There’s no pleasing some people,’ I quipped. ‘Anyway, pop down here with the family, get yourself seen, widen your horizons, have a look at New Kinshasa and the voluntary workers.’

‘Actually, I was thinking of making the trip.’

‘Put it on expenses.’

A few days later we entertained Rudd and his family, his kids mostly grown up and working now. We had a pool full of people, baby Liz fascinated by the new faces, and new people to splash around the pool with. They were joined a day later by Anna, Cosy, and their grown daughters, the house now buzzing. The small crocs were a big hit, scraps tossed, the monster sometimes spotted from the jetty. Swimming in the lake was definitely out, not that the murky lake water was very inviting.

Of an evening, we would frequent the marina and casino, and my girls took to Anna’s young ladies. We tried the restaurant strip in New Kinshasa, but just caused a crowd of people to follow us, so ruled that out in future. We did, however, make good use of an up-market restaurant overlooking the marina in New Kinshasa, the select few patrons being just those that could afford the pricey offerings.

With Rudd, Cosy and their families gone, we welcomed Sanchez and his family, his wife quite a dusky looker. His elder daughter was now six, the Downs Syndrome daughter three. I had wondered how my girls would react to the Downs kid, but I also wondered how I’d react myself.

Shelly asked medical questions and spouted off the current genetic theory, Lucy offering to take the girl swimming. With Helen showing Sanchez’s wife around the house, something that my dear lady wife never tired of, I led Sanchez to the poolside shade and ordered cold beers.

‘Nice place,’ Sanchez offered as he stretched out his legs. ‘Very nice.’

‘A lot of the time we’re virtual prisoners, so this helps.’

We accepted cold beers off a maid.

‘And you’ve been building this up for twenty-five years,’ Sanchez noted. ‘Part of the grand scheme of things?’

‘Have you had a full security briefing?’ I asked.

‘No, I’m just the disaster coordinator. Why?’

I called Jimmy, now in Nairobi. ‘Is Sanchez supposed to know about other stuff?’

‘Yes, brief him, but call Samuels first.’

I hung up. ‘I have to call your boss first.’ I checked my watch and called Samuels. ‘Mister President, do you have any particular objection to Sanchez knowing a bit more about us and the future?’

‘Not if you don’t. I guess it’s your call more than mine.’

After the call, I faced Sanchez. ‘You’re allowed to know.’

‘Know ... what?’

I considered my words, and took a breath. ‘In 2025, a ... disaster leads to world economic ruin, and that gives rise to a Middle East terror group who’s only aim is to stop oil flowing, close banks, and generally march us all back towards the Stone Age. They’ll find a lot of converts and take over the Middle East and North Africa, attacking Israel and Europe. But, because no government supports them, there’s no one to attack or nuke; they’ll all be spread out. If unchecked, they’ll take down the whole world.’

‘Jesus,’ Sanchez let out, shaking his head.

‘We built up Africa, because the first place they would have attacked would have been here. Now, with the Rifles built up, we can not only hold the line, but probably take North Africa, if not a large part of the Middle East. If this place stays strong, we can deny North Africa to the terrorists.’

‘And this ... disaster?’

‘Your worst nightmare come true. But it’s so secret that I don’t even know yet, very few do ... in case it leaks.’

‘And the world economy is hit?’

‘Yes, and no. What we’ve been doing for the past twenty-five years is massaging the economy, introducing electric cars, coal-oil, the works. The aim is to be in a good shape for 2025.’

Sanchez gave me a look over his sunglasses. ‘After 2017, it’ll take a decade to recover!’

‘Less if we employ advanced technology,’ I assured him.

‘And the most likely outcome for 2025?’

‘A full-on global conflict.’

Sanchez took in the pool, and his daughters swimming, sipping his beer. ‘If I served two terms, I could make a difference, and be there for the disaster.’

‘You must like stress a lot,’ I suggested. ‘That’s a hell of a challenge to take on board.’

‘I’ve taken on board more,’ Sanchez insisted, and I wondered about his Downs daughter.

I called for a Huey, the helicopter landing in the park at the end of the road, and I showed Sanchez the sights from the air, Gotham City and New Kinshasa. He was blown away.

‘You built all this, with your own money?’ he asked through the headset.

‘Yep. Like it?’

‘Like it? It’s amazing.’

‘There’s a lot more we’ve built that you can’t see, in Kenya and Somalia, and now Southern Sudan. We’re busy little bees when we get going.’

‘How many people live here?’

‘So far, four hundred thousand, but more are arriving all the time.’ I directed the Huey to the volunteer’s compound, landing on the grass outside, two Pathfinders stepping down from the Huey with us, gate guards running across. I knew the layout, and where most of the labs were, and directed Sanchez forwards, passing smiling faces as we progressed.

Choosing a lab at random, we pushed open the doors and stepped in, everyone looking up from their computers and microscopes.

‘And these are all volunteers?’ Sanchez asked.

‘Low pay, but free food and accommodation. Most are Christians.’

The senior man in the lab, a doctor in a white lab coat, walked up and keenly shook our hands.

‘What are you working on?’ Sanchez asked him.

‘In here we’re mostly interested in the interactions between the super-drug and various diseases. Some SARS work. We cooperate with the unit in France.’

‘Is it all medical?’ Sanchez asked.

‘Oh, no, all sorts. Even have some military work.’

‘Military?’ Sanchez queried.

‘For the Rifles. New kit, scanners, all sorts.’

‘And ... you don’t mind working on military hardware?’ Sanchez posed.

‘Jimmy knows what he’d doing. If we didn’t believe that, then we’d not be here,’ the doctor firmly replied. ‘He’s developed weapons that stop vehicles, but don’t harm the occupants.’

‘Would you like to show us around?’ I asked the medic, the man keen to lead us to the other labs.

After thirty minutes of introductions, handshakes and project descriptions, we came across a large lab with a huge pool of water.

‘Sea water,’ the medic explained. ‘They’re doing something with plankton and algae.’

I glanced left and found a row of large glass tanks, each labelled in sequence, and each labelled as a “vat”. ‘What are the vats for?’ I asked, a volunteer stepping up to me.

‘We’re experimenting on algae for Jimmy, some odd requests and directions that we don’t fully understand.’

‘Algae,’ I repeated, and I thought of a remark that the Japanese had made when they first came to the house to confront us.

‘Do the Japanese experiment with algae?’ I asked.

‘I think they do, edible algae, as well as some with medicinal properties.’

‘How many vats do you have?’

‘Twelve.’

I led Sanchez out, back to the helicopter. Flying back, he asked, ‘How many volunteers are there?’

‘We’ve taken on board nine thousand, but more want to join, a lot more, so we let them run crèches, do shopping and laundry, stuff like that. A second compound is being built to accommodate more. A total of sixty thousand applied.’

‘Sixty thousand? Scientists? There must be more good will on the planet than I realised.’

‘Very few Americans,’ I added. ‘Four hundred. The volunteers are mostly Europeans and Asians.’

‘Sounds about right,’ Sanchez complained. ‘College buddy of mine went to France to work on the human genome project, the research available to everyone. The American labs patented what they found.’

‘You’re a bit of a socialist, my friend. How will that sit with the right wing media when you’re in office.’

‘Is Jimmy a socialist?’ Sanchez asked, an odd question.

‘He’s tough when he needs to be, but socialist at heart. He likes the Chinese ordered society, and clean streets, law and order. He once told me: he wants the children to play nice together. I guess that sums him up.’

‘Will he back me?’

‘Do you want him to?’ I countered.

Sanchez shrugged. ‘I’d tell you that I know I can do the job, but he knows if I can or not for definite. Besides, if I was reckless he’d trip me up with a sentence. But I don’t want to take office if it’s a hope rather than a reality; I don’t want to be there if I’m going to make things worse. I’m not going to put my belief in myself ahead of the nation, or the world.’

‘For most presidents, that’s all they have; a belief that they’ll do a good job.’

‘Yeah, well Nixon thought that, and probably half the dictators in Africa as well. If so much is at stake, I don’t want to just give it a go, not if Jimmy knows otherwise.’

‘Don’t repeat this, but when Fitz walked out, Jimmy said that Fitz had been handed a deformed child, and left it on the church steps.’

Sanchez studied me for several seconds. Turning away, he said, ‘He couldn’t face it.’

‘He’d preside over a mess, with the prospect of a bigger mess to follow. He had no hope of making things better, just of lessening the suffering. If you get in, you can’t fix it, but you can lessen the suffering – whilst probably not getting any thanks for it.’

Sanchez took a moment. ‘It’s still worth trying.’

‘Then you’ve got my vote. I like Samuels, but he doesn’t shout enough. He’ll need to kick some doors in, not ask nicely.’

Back at the house we greeted our abandoned wives, drinks around the pool before a night out in the marina. In the days that followed I spent a lot of time with Sanchez, showing him around Gotham City and New Kinshasa, Jimmy returning and chatting with Sanchez at length, long into the night.

With Sanchez on a plane home, the US news media labelled him as “king in waiting” and “approved by Silo”. That annoyed Samuels, who called me, and I explained that we were just being friendly, and that no formal endorsements had been given – or would be.

A week before we were due to leave Goma, the Saudis asked to meet again, the same two men. I agreed the meeting without even discussing it with Jimmy first, but checked online to see what they had been up to in Yemen. I found a number of projects that they had started, projects designed to employ the most people for the least money, another desalination plant, and a few mining projects. They had kept to their side of things, more or less.

Jimmy then agreed to meet with them, and we greeted our guests by again being sat down with beers when they arrived.

I pointed them to chairs. 'Beer?'

'Please.'

A maid brought two beers over as the first Saudi said, 'Would you like us to create a Rescue Force unit in the kingdom?'

'No,' Jimmy flatly stated. 'But if you feel you need one for your own people, then by all means create a similar body.'

'We have assisted Yemen ... as you suggested,' they pointed out. 'Certainly a sign of good faith.'

'And does a stable Yemen benefit us ... or you?' Jimmy posed.

'It would benefit us first,' they admitted. 'But you did ask.'

'Asked you ... to do what benefits you,' Jimmy thought aloud. 'Hmmm. If I ask you to drink water when you're thirsty, will it signal that we'll soon start taking long hot showers together.'

I bit my lip as they exchanged looks.

'There is one thing that you could do,' Jimmy suddenly said. 'You could adopt Djibouti and Eritrea, your objective being ... peace, stability, law and order, perhaps a few jobs.'

'And in return?' they cheekily asked, getting a look from Jimmy.

'What do you want?' I asked them.

'How about we start simple, with say ... advanced solar panels.'

Jimmy smiled. 'It's a better request than I would have figured. OK, if you help Djibouti and Eritrea we'll talk about advanced solar technology.'

'Every great journey starts with a step in the right direction,' one of the Saudi's said as he stood. 'And coming down here to ... chat, affords us the time to visit the facilities here, which are most excellent.' They paused. 'And if we desired to build a hotel here?'

'You'd be welcome to do so,' Jimmy told them, surprising me. 'Liase with Paul. Good day, gentlemen.'

With our Saudi guests gone, presumably off to the casino, I asked, 'You warming to them?'

'Maybe they realise what they didn't before. I could just tell them what'll happen, but they'd not believe it. They need to prise it out of me for it to be ... valuable to their noble Arabic heads.'

A few days later, Jimmy surprised me with a meeting of leaders from some of the North African states, the French in on the meeting at our conference centre. I found that we were being graced by representatives of Morocco, Western Sahara, Algeria, Mauritania, Mali and Niger. PACT, and the Rifles senior officers, were waiting at the back, so I had an inkling as to what this was about.

Jimmy took the podium. ‘Gentlemen, you all suffer at the hands of dissident groups and terrorists. I will now offer you all the use of the Rifles to ... remove, arrest, or quell those dissident groups.’

‘Where do we sign?’ they asked after a small stampede, the French Foreign Legion now relieved of assisting with that problem.

Within a few days, groups of Rifles drove into the desert, troublesome tribesmen and al-Qa’eda cells alike having no idea what was heading their way. The orders given to the Rifles were simple: no evidence, no bodies.

Autumn

After a good break in Gotham City, we returned to the chill winds of Britain and reclaimed our house. The girls got themselves ready for school, which took an hour, and I knuckled down to some work, free from any pending doom.

The world had lifted its head and adopted a reluctant smile, the economy moving in the right direction. In the DRC, we had expanded our coal-oil converters, the cheap ones, and now gave away fuel oil like it flowed out of the ground. Additional power stations were built at the edges of our region, the aim being to sell cheap electricity across our borders.

Despite the cheap oil, our German friends had been busy in the mountains to the west of our region and in northern Zambia, hydroelectric turbines lighting towns and villages, the fishing industry booming. And when I told Helen it was booming, I meant spawning. A group of the brain-trust kids had been let loose with a few tanks full of catfish. They picked out the largest specimens and bred them, selecting the fastest growing offspring for a breeding programme, making sure that the resultant eggs had a high maturity rate.

Not to be wasteful, surplus small fry, literally, were transported to the dammed sections of the rivers and let loose. Those that remained were monsters. The kids then got the microbiologists and researchers involved, and between them developed a boost to the fish’s appetite, reproductive cycle and natural growth hormone. They were tampering with nature, Silo style, the chief mad scientist having spent twelve years studying Jimmy’s blood properties.

They produced catfish big enough to eat people, but the fish did not do well in the wild. Their supply of food was limited, their mouths bigger than their prey, which might just swim out of their gills. Not to be disheartened, they simply told the fish farmers to cull any fish over two metres, and instead concentrated on fish numbers, the rivers of the region soon swarming with fish, their growth aided by a supplement that was dropped into the water on a regular basis. Congo catfish became a staple diet for Africans.

In Zimbabwe, another group of our volunteers worked on wheat and corn, soon improving the yields. The greenhouses had spread out across our region and into neighbouring states, tomatoes now common, melons, all sorts. Much of my surplus produce journeyed north by train to Chad or Southern Sudan, those regions improving. Apartments were popping up, roads were stretching out; our police patrolled the towns, our soldiers patrolled the countryside.

We had respected the rights of the businessmen from Sudan, and law and order prevailed, justice swift and final. The existing scattering of mining and oil companies were given the benefit of a better infrastructure, but we sunk our own wells and opened our own mines, doing well from the start. The first few safari lodges had been built on land previously the domain of dangerous guerrilla fighters more than dangerous lions. Fences were put up, signs erected, poachers shot dead on sight. And our zoo in Goma ran the breeding programme, soon a few prides of lions panting in the midday heat, available to be glimpsed by tourists.

A large central airport was taking shape in Southern Sudan, our airline dominating the available slots. But our move into Chad was not really a move, certainly not an organised one. I sent the Government there a note to say what I was doing in their country, and they acknowledged it. In southeast Chad, and southwest Southern Sudan, national Rifles bases had been duly constructed, young recruits put through their paces, many now in their second year – and glad of the steady pay.

Steffan Silo had surprised me in an email, since he emailed me after he had finished a project, not at the start, and not asking for permission. He converted some of our electric coaches to have fewer seats and more toilets, plus an in-bus mini-shop and stewardess. The coaches had then been made available to a tour company for students, many of who now joined the coaches in Mombassa to journey right across central Africa to Sierra Leone. Several routes were available, some heading down to Angola, and the coaches

stopped at safari lodges for meals and showers – plus a view of cute animals.

Having launched the service for students, and advertised it, the trips were packed out, extra coaches now being converted. The drivers were mostly ex-Rifles, and they carried pistols in case lions got too close, or bandits – which were as much of an endangered species as the highland gorillas these days. We still hung ‘em high.

At my desk, I felt a hell of a lot better than I had for a long time, free at last to just build things, to move things around or to start projects. The internalisation of the markets was working well, the population growing, GDP growing, imports growing. Inflation was not a problem yet because we enjoyed an odd skew to things in the region; wages were rising, but food and fuel costs were falling. People had extra cash and bought luxury goods from the west, our intention and desire all along.

By October, I had filled our planes and even laid on a few extra 747s, the lodges full of people just glad to be alive. First time visitors to Gotham City were amazed, all making trips down to New Kinshasa to have a look around. The tourist dollar had suffered during SARS, but we were catching up.

Our commodities exchange was stable, and stably making us good money. Foreign banks had moved in, offering finance to mines and other businesses, and we did not try and compete; we wanted them here. New Kinshasa offered large showrooms for furniture, the sofas on display being made in local factories, the raw materials imported from around the region, the finance sometimes coming from foreign banks.

Nice cars could be seen around New Kinshasa and Gotham City, even a few Jaguars and Bentleys. BMW and Mercedes built showrooms in the city, Toyota, GM, all sorts. But of all the world’s capitals, this was the cheapest to live in, and I smiled when a magazine ran a comparison of capitals. A nice apartment in Tokyo was a about a million quid, New York was expensive, even Moscow. The same apartment in New Kinshasa was forty thousand pounds. They compared access to golf courses, bars and restaurants, health spas, also measuring congestion and journey times. New Kinshasa beat them all hands down, and we started to see the rich young men move our way.

Young traders from the exchanges lived in ostentatious ten bedroom houses, fully serviced by three maids, and they enjoyed their own chauffeurs. They played golf, used the hotel spas, and drank in the marina. They didn’t bother to view the savannah and the

lions, they were in New Kinshasa for the amenities; nightlife was more important than cute balls of fur, flies and heat.

For those returning to the west, adjustment was a shock; expensive apartments, steep rent, rude taxi drivers, congestion, and doing your own clothes washing. Many returned to us, starting their own businesses.

I opened a college as planned and offered evening classes. That led to a small riot, and I was stunned. What was the problem? Thirty thousand people had applied to study there. I shook my head and stared at the email. After recovering my initial shock, I ordered buildings grabbed and used, the college to be expanded ten fold. Seemed that the Congolese all wanted English lessons, computer lessons, maths lessons, all sorts. I advertised for teachers and hired an extra two hundred straight away, even making use of some of the volunteer army – who were keen to teach Africans.

I opened up the universities in the evenings, teachers making extra money, and the classes were packed out. Learning, it seemed, was a growth industry.

Lucy came up to the office one day at 4pm, back from school, and showed me an exam paper. She had scored ninety-eight percent on a maths paper for eighteen year olds.

‘Wow, babes; you’re not just a pretty face. Did you ... want a small reward?’

‘Well ... maybe a little something.’

‘Such as...?’ I waited.

‘Flying lessons.’

‘Flying lessons? You want to take after your old man, eh. Thing is, babes, we love you to bits, and flying is dangerous, especially small aircraft and helicopters.’

‘I was more interested in airliners.’

I sat staring, wide eyed. ‘You want to learn to fly ... airliners?’

‘I’m not old enough, obviously, but I can still learn.’

‘You already have Microsoft Flight Simulator, so I’d guess you already know how to fly,’ I said.

‘It’s not the same. So...?’

‘So, I’ll ... pull a few strings and see what I can arrange. Doing it in Goma Hub would not be a problem, but up here they have rules about fourteen year olds flying 747s. They have to give them cushions to sit on, and the passengers get twitchy.’

‘Our 747s fly down overnight on a Friday, the crews stay in the hotel, and fly back the next day.’

‘And...?’ I nudged.

‘There’s a spare seat in the cockpit. I could observe.’

‘If you went alone, we’d get some criticism from the authorities and the press.’

She shook her head. ‘International aviation law allows minors to fly if they’re due to be met at the destination. And the security staff would go with me.’

I smiled. ‘I’ll arrange it. Stay at the house when you’re down there, and behave.’

‘What can I do with four bodyguards around?’ she teased.

‘You’re expert and giving them the slip, young lady, so don’t worry me. Does your mum know?’

‘She said yes, but to come and see you because you wear the trousers.’

I stood, Lucy running out before I could slap her.

The following Friday she flew down to Goma hub, observing the pilots and asking questions, reading the manuals in the First Class lounge, then asking more questions. That led to her first attempt in the simulator, a simulated 737 flight that could not kill the imaginary passengers. That led to some expensive equipment in a room in the basement of the main house, three powerful computers linked together, a chair and joystick, three A3 screens simulating controls and forward view.

Lucy would disappear on a Friday around 6pm and emerge at dawn, having flown a 737 or similar on a long flight. She even had a headset, voice recognition software and tower interaction. Could have been worse, she could be interested in boys.

In the mornings, the security staff would ask of her, ‘Where did you go, Luce?’

‘Just down to Cairo and back,’ she’d respond.

A British Airways captain turned up one day, in his uniform, and sat with Lucy for many hours, simulating emergencies. The same man got her onto a 757 simulator, and I had him checked out.

Sykes called me back. ‘Lucy was a bit cheeky in asking him for help, but I think she read an article on the guy; his wife had cancer six years back, your drug cured her. Wife went on to have a baby.’

‘Ah, she played on his good will. Little minx.’

‘He treats her like a daughter, and Lucy’s fond of the man’s two year old daughter. Besides, pilots love talking shop, so he finds her pilots with downtime and they sit her in the aircraft on the tarmac. She’s already found a few mistakes in the manual, and Shelly ran the maths on something the other week, proved the manual wrong.’

I laughed. ‘Yep, that’s them. They don’t get it from me!’

‘Iranians are quiet. Too quiet.’
‘You think they’re up to anything?’ I asked.
‘Your smart lads hacked their computers, and they say no. Satellites say no. Even the Israelis say no.’
‘You’re just an old sceptic, Mister Sykes.’
‘Let’s hope so.’
‘Any word on Rahman?’
‘Gone quiet as well. Last heard of in Karachi almost two years ago.’
‘If he crossed into Afghanistan, then he’s dead meat.’
‘Hope so,’ Sykes said.

As the winter approached, very few SARS cases were reported, and Jimmy told the world that he did not expect a pandemic this winter. The joy was palpable the world over.

Christmas neared, and the worst we had to endure was weeks of Christmas shopping adverts on the TV, and Christmas songs from the seventies. Optimism had returned, as well as people buying crap for other people that they didn’t really like. Pubs and restaurants did good business, and our illustrious PM lowered fuel taxes, people finding that they had a bit more money in their pockets. Coal-oil was making a difference, and was being employed as an effective economic tool. Electric buses and cars were common, and progress was being made.

Jimmy made a speech in early December, encouraging everyone to get out and enjoy Christmas, and many people took it as a command. They jumped onto flights to Cuba as well as Africa, our Cuban hotels subsidised to encourage pale Brits to sample the island. Americans could now holiday in Cuba legally, and the Cuban tourist dollar was growing rapidly. A full US embassy was now open, finally, relations improving month by month, Samuels nudged by Jimmy on a regular basis.

Senator Sanchez visited Cuba, leading a team of Democrats, and was impressing me with his attitude. We spoke almost every week, and he’d often sound me out on ideas, hoping I’d sound them out on Jimmy. Samuels, on the other hand, called Jimmy once a week or more, even asking questions of domestic policy – but not party politics.

Christmas came, and I took Helen out when I could, booking an entire restaurant for an evening and taking the household gang and “M” Group. I used the gym more often, a spring in my step, and downloaded ebooks to my iPad, reading things that I would not have

normally bothered to tackle. I liked reading about the great leaders of the past, autobiographical accounts.

Big Paul returned to us a week before Christmas, drunk that first night back, his heavy carcass carried to his house. I caught up with him the next evening, a meal at a curry house, gossip and tales of battles in Afghanistan, our boys now sneaking across the Pakistani border on occasion.

Despite my elder daughter's maturity, my house was full of decorations, a large tree adorned with flashing lights, baby Liz enjoying all the pretty colours and now uttering a few words. It would be a proper family Christmas, free from worry.

With the women folk out shopping, Jimmy popped around on the 23rd, lifting up Liz and asking Ruth to give us a moment.

'All OK?' I asked.

'Fine, no problems on the horizon ... for now. But it was this little lady I wanted to talk about.'

'If she crashed one of the cars ... I'm not responsible.'

Jimmy smiled. 'I don't know what this little lady will do when she grows up. But I do know why she's here.'

'Liz ... has a destiny?' I puzzled.

'No.' He took a moment, letting Liz pull at his hair. 'You remember that talk we had, about your dear lady wife and ... her wanting to leave.'

'Seems you were ... wrong.'

'No, I'm never wrong. I ... took action to assist you.'

'You ... spoke to her?'

'No, I spoke to Mister Sykes and his medical team, and they doctored Helen's quarterly contraceptive injection. And, as such, we now have this little chubby lump.' He looked up. 'I hope you're not mad at me, but I ... desired that you be spared the disruption and heartache. I knew Helen would never think to leave with a baby.'

I wasn't sure how I felt; I wouldn't have swapped Liz for anything. And Jimmy knew Helen well. I blew out. 'Wow. And ... the future?'

'Is up to you two, but my guess is that you're beyond the itch. If not, you may just end up with six kids. You know, after you split up with Helen, years later she would have adopted.'

'Adopted?' I repeated.

'That gave me the idea. You see, Shelly and Luce are not around much, and having time to dwell is not good for Helen. She needed, and needs, this little lady to occupy her time.'

'She would have adopted,' I repeated, thinking about Helen.

‘And Shelly has asked about a room in the main house, or even her own house. So I’m thinking about a cottage for her in the grounds.’

‘A cottage? Where?’

‘Just next to the other houses, thirty yards from your back door; she’ll still be able to pinch a bag of sugar. She likes cottages.’

‘Oh. And if I try and put my foot down with her?’

‘She’ll stay in the main house anyway, then go off to university in a year or so. Best not give her a reason to be ... distant.’

‘She’s distant enough now!’

‘No, she’s just a twenty-five year old Phd graduate in the body of a fifteen year old girl, soon to be sixteen. Give her the space she needs and let her come to you.’

‘Lucy is getting distant as well,’ I noted.

‘No, you’ll need to boot her out. Flying is a phase, and she’ll have many.’

Liz screamed loudly, a shrill piercing sound of joy.

‘Ouch, young lady. Quieten down,’ Jimmy told her.

‘Good luck with that. She listens as well as her sisters.’

Christmas Eve went well, Shelly bringing a boyfriend around, although we had stopped asking for names, and Lucy brought a male friend over, a joint interest in aircraft. Christmas day was a family affair, a huge lunch, followed by watching the TV and the Queen’s speech, followed by a huge dinner, then lots of booze.

On the 27th, an Iranian official called me directly. ‘Mister Paul, we can’t reach Mister Silo, and this is an important matter.’

‘How can I help?’

‘We are now certain that a group within our country has taken low grade uranium.’

‘Taken it ... where?’

‘We don’t know, but overseas.’

‘And this group...?’

‘Seek revenge, Mister Paul.’

‘I’d appreciate an email with a few names, pictures, whatever you have.’

‘We will cooperate; we want no part of this.’

‘Thank you.’ I rang Sykes. ‘Listen, Iranians have just been on. One of their splinter groups has grabbed low-grade uranium and skipped the country. Alert everyone, everywhere.’

I called PACT and gave the same message, ordering Geiger counters bought and used at all ports.

In the days that followed, nothing happened, Jimmy not too fussed oddly enough. New Years Eve went well, many of the staff up from Mawlini or Mapley, Anna and family, Rudd and family. Mac had a new young lady, and she was a young lady, and Anna had adopted a baby, an orphan, bringing the boy with her.

‘Don’t you see enough babies at work?’ I asked her, taking the child.

‘It’s not the same. And now my girls have moved out.’

I took a moment to think about Helen. ‘Big empty house with no screaming kids, eh. Doesn’t Cosy need looking after?’

‘He travels a lot.’

‘Lucy flies all around the world now,’ I mentioned.

Anna seemed worried. ‘Why?’

I smiled. ‘She has a sophisticated flight simulator in the basement, on it all night sometimes.’

‘Ah. I heard she takes flights down and back. They’re both very bright.’

‘They’re ... almost Shanghai worthy,’ I knowingly reported. ‘Yours?’

‘Average bright, but not ... you know.’

‘A fluke then ... with us.’

‘And the baby?’ Anna asked.

‘Unexpected, even by Jimmy,’ I said.

We entered 2016 gently, no bumps in the road ahead, just Hawaii to plan for, and a few things that Jimmy was keeping to himself.

Rahman

We had spoken too soon about Rahman, and he reared up with a vengeance in February.

Sharm-el-Sheik had been cleared of oil, eventually, and stretches of it were open for business, the Egyptians in need of the tourist dollar. In their case, mostly in need of the tourist Euro. Europeans and Russians returned to the area, scuba diving in the crystal clear waters and finding little damage to the coral from the oil. Nature had adapted.

But tourists returning home from the desert resort had felt ill, some very ill. Soon, some six hundred were known to be sick, food poisoning suspected. The doctors soon ruled that out, and tested for

heavy metals poisoning. That led one doctor to test for radiation when strange symptoms presented themselves.

The news burst onto our TV screens, panic and flashing blue lights glimpsed around the world. I went and found Jimmy after I heard.

‘No big deal,’ he said.

‘No big deal? We have thousands of people contaminated, and it’s the Iranian uranium! Rahman is claiming responsibility.’

‘First, make a statement. And second, do you know why the US Army developed the Manson drug?’

I waited.

‘To help soldiers deal with low-level radiation. It cures radiation sickness better than ... anything you could hope for. Those suffering just need a single injection of the drug, and some protein.’

I made a statement, asking for all people suffering the ill effects to be injected. And to be fed a good steak dinner! Patients recovered quickly, the Egyptians nursing an empty airport, a resort with no holidaymakers. Again. They found the uranium in the main water supply; tourists had been showering in it, the Egyptians now just a little mad at Rahman.

Unfortunately for the Egyptians they would have to rip up miles of piping, steel piping, a costly exercise. Still, they were unencumbered by tourists, the roads nice and quiet.

The Saudis, and many Middle East countries, put Rahman on their most wanted list, and now the Iranians wanted him as well. We met with the Iranians in London, and they apologised, Jimmy warning of consequences for further leaks of fissile material. But we did thank them for the timely warning, and left it at that, Jimmy reasonably sure that they didn’t have a hand in it.

With that minor concern dealt with, the people of the world now tougher and used to worse threats, Jimmy issued warnings about the banks, and declared that it was time to break them up. Retail arms should be separate, he stated, market makers should not have investment arms, and sizes should be restricted. If not, the consequences would be worse than SARS.

The people sat up and took notice now, more so than they would have done back in 2013 or earlier, and people pressure meant that the leaders were under pressure. Jimmy then suggested that if the banking reforms were not enacted, he’d give a list of safe banks for people to use, and a blacklist of those to avoid. Such a move would have been a death blow for a western bank. They knew it, we knew it, and the European Union enacted a piece of legislation to break up

the European banks by function. That included separate offices, boards, and directors, so that the banks could not cheat.

British banks began the process quite quickly, the US banks not so impressed and giving Samuels a hard time. Jimmy made a statement, suggesting that large-scale bank failures were a possibility, and that savers could lose money in certain banks – without naming them yet. He also publicly stated that a banking crash was on the cards if the banks were not reined in, and warned of dire economic woes for the world.

The economies of the world had taken a hit during the SARS years, and the austerity measures adopted by some countries had kept them afloat. Property prices had been volatile during the SARS years, falling in many western countries, but the public's lack of interest in moving house during those years kept prices high from a lack of available stock. Overall, western property prices had been static from 2013 till now.

The problem that Jimmy described, was one of the banks trying to squeeze large profits out of small markets by using high leverage. Many US banks had invested in the Chinese property market because it was still growing, and had been burnt, holding onto losses that would be recouped when Chinese residential and commercial prices recovered. The banks now sought new ways to make money, and that led to greater risk, hence Jimmy's desire to see a split-up of the banks. Samuels was under pressure, Sanchez very vocal in his condemnation of the big banks.

Spring

Spring brought heightened tensions in the long running Israeli-Palestinian saga, water shortages key to the issue. Israeli settlements had continued to creep over the years, and Palestinian families – with no legal or paper proof of home ownership, despite several generations of occupation - were moved out. Some went to apartments that we had funded in the east of the West Bank, others simply moved just a few miles, feeling the ever encroaching Israeli colony just a few years later.

Water grew short in the land of milk and honey, and was primarily diverted towards Israeli settlements. Desalination plants helped with drinking water for thirsty Dead Sea pedestrians, plastic

bottles supplied by us, but farmland was an issue. Palestinian crops failed.

The UN accused the Israelis of trying to starve out the Palestinians, but proposed UN resolutions were either blocked by the States or ignored by Israel, Jimmy not getting involved.

The crisis reached boiling point in March, widespread fighting breaking out in both the West Bank and Gaza, Gaza also now suffering water shortages.

Jimmy had given the Saudis a gentle nudge back in October, and suggested a seawater pipe up from Aqaba to the Dead Sea. It would pump in salt water, which would not make much of a difference to the tourists desire to float in salty water for its claimed medicinal benefits. That salty water could then be pumped to a desalination plant north of the Dead Sea, the fresh water produced being pumped to a point near Nablus.

The Israelis objected, since the slight changes in salinity could affect their very, very small tourist trade in the area, a trade that had died during the SARS years.

It was an expensive project, but not that expensive. And, if it eased tensions, could a great benefit. President Samuels had gotten involved for the simple reason that we had not asked him to, and a joint US/Saudi pipeline was considered. A pipeline directly across Israel would have been a shorter route, but getting planning permission to cross the land would have taken forever, not least because no one on the Israeli side wished to help Palestinian farmers.

The Jordanians had then asked if the project could be extended, and to fork into Jordan, just north of the Dead Sea. Jimmy said that was a good idea, and went so far as to say that the Jordanian branch should be built first. That branch of pipe, on Jordanian land, and not dumping salty water into the salty Dead Sea, and paid for by Saudi Arabia and America, eventually reached a desalination plant on the Jordanian side of the Dead Sea valley.

We had a hand in the desalination plant, and used oil-power instead of osmosis or slow evaporation. It pumped out water that was suitable for crops, yet a little brackish for human taste. With the Israelis still arguing over the pipe in the West Bank, the Jordanian pipe brought forth life to parched and dusty crops, any surplus water being piped further north and dumped into the Jordan River. That water, the river water, could be accessed by the Palestinians, which was what Jimmy wanted all along, knowing that the Israelis would

drag their feet whilst hoping the Palestinians would dry up and blow away into the desert.

On the Gaza side, we sponsored a pipe that drained fresh water from the Nile tributaries before they entered the Mediterranean, and therefore no one to object about it, and pumped water to a bottling plant on the Egyptian side. That plant cleaned the water, selling the bottled produce to both local Egyptians and to the citizens of Gaza – when the border was open. Otherwise, deep tunnels would be used to lug water. Those tunnelling under the border then hit upon the idea of a long rubber hose, and pumped water directly into the large outdoor prison that was Gaza.

When the media latched onto the pipeline - and Jimmy described it as ‘shameful’ that the citizens of Gaza were dying of thirst, the Israelis relented and allowed a pipeline to be built, but of a fixed bore and pressure. I had to wonder about the stipulations. They were irrelevant, bureaucratic, but stamped Israeli authority on the project.

Yemen also suffered a lack of water, despite Saudi assistance, and jobs were hard to come by. Old men would sit in the cafes, lamenting about the formerly great port of Aden and it’s servicing of the ships passing through the canal in days gone by. The Saudis had invested in the port, but ships passed by it, port costs an important factor on long sea voyages.

At the house, Shelly’s cottage had been built, conveniently labelled as a birthday gift. Helen wasn’t pleased, but these days Shelly was more like a friend to her, and no longer a daughter. They swapped clothes, make-up and recipes, and in many ways became closer because of it.

Shelly was due to finish school soon, having already passed five higher grades, and would take a year out before going to university. As Jimmy had suggested, she was already thinking of California, tsunami or not. I concentrated on Lucy and Liz, quietly pleased with what a woman Shelly had become, and having to constantly remind myself that she was sixteen.

We never just popped into Shelly’s cottage, we waited to be invited, and our daughter kept the place immaculate and well ordered. Lucy was a regular visitor to the cottage, when she was not flying off somewhere, and kept us up on the gossip. Helen would be called across the short distance to the Shelly’s new abode on occasion to help with cooking. Not tins of beans cooking, but something so complex that professional chefs would sensibly avoid the weird concoctions.

My daughter cooked for us on occasion, inviting us across for a meal, often a few others from the house for a party. And I had to stop and think what things would have been like between Helen and myself now without baby Liz. Shelly would be gone, Lucy off flying or sat behind a simulator, and it would be just the two of us in front on the TV with the one remaining cat – the other having adopted Jack and his wife in preference to us. Or we'd sit reading, or doing a little work, or cooking and entertaining guests.

Instead, we were often on the floor and playing with toys, constantly running around after Liz and grateful when she was asleep. Were we beyond the itch, I had to consider, and were we defined by our kids?

I had spoken to Sanchez about his own early years with his wife. He had said, 'We both came in so damn tired that we had a quick bite to eat, made love and went to bed at 9pm. We stayed together because we helped each other, and because we were too damn tired to date anyone else.'

Other couples I had spoken to enjoyed energetic lives together; badminton, mountain biking, trips around the country. We were virtual prisoners, and such a life would not have been possible for us. We had the house and the facilities, but after fifteen years they grew a bit old. No, we had our work, and we had the family, and we had each other.

June saw the start of unrest in America, as people started to question what was going to happen in early 2017. Large parts of the west coast, those just above sea level, had been earmarked for abandonment. Not evacuation and return, but abandonment. Conspiracy theories abounded, and the public disquiet grew. I chatted to Sanchez, Jimmy chatted to President Samuels, and we decided to fly over and make a speech.

Silo One, which I still called Air Force One, filled up with hacks and snappers, many of them familiar faces, and we set off across the pond, our first stop being Washington. We shook hands and accepted lukewarm coffee from the Disaster Committee, the Joint Chiefs, and then decided to put some of the blame for non-disclosure on our shoulders.

In the White House briefing room we stood with Sanchez and Samuels, Jimmy taking the microphone.

'Ladies and gentlemen, people of America, concerned citizens,' Jimmy began. '2017 is approaching rapidly, and tensions are rising, as you might expect. But the full story of what will happen in 2017

has been kept secret ... in the best interests of this nation, its economy, and its security.

‘Let me be quite clear, in stating that I advised the good gentlemen behind me not to reveal the full details. That was my decision, and taken because I knew what the result of early disclosure would be.

‘In January, an earthquake will shake Hawaii, and the Hawaiian Islands will be *completely destroyed*. Anyone remaining on the islands will be killed, that ... is a certainty.’ He paused, maybe for dramatic effect. ‘Those islanders who believe that they can climb the mountain peaks and survive ... will find those peaks crumbling around them.

‘The resulting tsunami will destroy most of the Pacific islands, waves up to fifty feet high slamming into shorelines. Some islands, the coral atolls, will find themselves briefly beneath thirty feet of water. Unless you have gills, you’ll die.

‘The east coast of Russia will be hit, Alaska, China and Japan. All hit with devastating tsunamis. As far away as New Zealand and Australia, the wave will come ashore. Peru, Chile, Ecuador, Mexico ... they will all be hit, varying degrees of damage. Coastal communities will be destroyed.

‘Here, in America, the west coast will be badly hit, low-lying areas affected. Water will reach Sunset Boulevard. Those houses that sit on land above fifty feet will be secure, although some of those perched on cliffs at the coast will be damaged. Seattle and Vancouver will suffer damage, San Francisco, and San Diego. Some coastal communities will be completely destroyed.

‘To the people of Hawaii, and the Pacific Islanders, I say this: make your plans to move out now. If you’re at sea, and offshore when the tsunami strikes, you’ll be fine. Boats will not be sunk, they’ll rise up and down with the wave. Even if you’re in a canoe, and a mile offshore, you’ll be OK.

‘Ocean going liners, used for the evacuation, will be safe so long as they’re not in shallow water ... or in port at the time. Following the tsunami, many islands will be habitable afterwards, but only with a great deal of rebuilding. Pacific islands more than five hundred miles from Hawaii, with tall mountains, will be fine to remain on, so long as you’re higher than a hundred metres when the wave strikes.

‘All nations around the Pacific Rim need to start making plans, and you have eight months. President Samuels, and his Disaster Committee, have detailed plans for dealing with the disaster, as well as plans to assist with other nations, and I’m confident that the plans

are suitable. I am also certain that some people will try and remain in their homes before the quake and tsunami hits, and that thousands will be killed.

‘Following the quake, there will be adjustments to be made, here in the States. Displaced persons will need to get used to the new reality, the reality of living in a different place, and for some they’ll be giving up homes that they were born in, or have spent their whole lives in. California will need federal aid, since California’s economy has already been hit by the downturn in the global economy during the SARS pandemics. If not managed properly, a problem will become a crisis.

‘I will assist all that I can in the period leading up to the disaster, and afterwards. And I can help in my own unique fashion afterwards - with advanced technology to save costs, and to help the economies of both California and America. On that note, you are just one small step away from a huge banking crisis, some of your banks behaving irresponsibly and gambling with trillions. If those banks fold after the disaster, America will suffer greatly.

‘You have all known for a long time of the damage to the economy that SARS has brought, and you all know of the damage to the economy that will be caused by the tsunami. You need to act now, and you need to act decisively, and I’m not talking about the American Government. I’m talking about the banks and the corporations, and about individuals.

‘If you’re in an abandonment zone you can expect your house to be destroyed, or to be badly damaged at the very least. Remaining will achieve nothing, but you will have the right to return to your property when the areas have been made safe. Sanitation, water and electricity will be out for a long time, roads damaged. Do not ... expect a quick return.

‘Some of the small fishing communities and estuary towns in California will suffer a wave that is funnelled and multiplied. That wave could reach a hundred feet high, and slam into your communities at a hundred miles an hour. Some of the communities that will be affected will be a hundred miles up the inlets and estuaries, especially in Alaska.

‘The cost will be great, the clean-up will take years, but you all have the chance to save your lives, and the lives of your families. Without the warning that you’re now benefiting from, the loss of life would be over six million people. This disaster would have struck ... with or without effective planning by your government. Please be grateful that your government is doing all that it can.’

Jimmy stepped to the side, Samuels stepping up to take questions. He pointed at the first person.

‘Mister President, what will be the economic cost?’

‘The cost will be great, but I won’t give you a figure. A bill will be presented soon regarding federal funds to be earmarked for the disaster.’

He pointed.

‘Has special provision been made for California?’

‘It has, since California will take the brunt.’

He pointed.

‘Is the US assisting Pacific nations financially?’

‘We’re looking at assisting with evacuation and relocation, as well as reconstruction.’

He pointed.

‘And should that money not be spent here?’

‘Assisting the economies of the smaller Pacific nations will be helping our economy, since they’re trading partners.’

‘Many indigenous Hawaiians are refusing to leave. What will you do?’

‘We’ll evacuate all those we can, the Army then trying to remove the rest, but we’ll not use lethal force, nor will I allow the soldiers to be endangered. They’ll leave a full two days before the quake.’

‘You’ll leave people there?’

‘It’ll be very difficult to arrest that many people, especially in remote areas, or if they take to small boats. If they do take to small boats they should survive, and we’ll have the Navy close by to try and assist afterwards.’

‘Did you get enough warning?’

I thought that was a bit cheeky.

‘We have more than enough time to evacuate the islands,’ Samuels insisted.

‘When was this first known?’

‘It was first made clear to me when I took over from President Fitz.’

‘Mister Silo, when did you first know?’

Jimmy stepped forwards. ‘A very long time ago; I witnessed it happen. What’s your point?’

‘Could you have warned people sooner?’

‘And what would they have done ... sooner?’

‘They had a right to know. People moved there to retire.’

‘Up until a few years ago, your CIA tried to kill me on a regular basis, because I gave your leaders information about the future,

information that made the CIA a little redundant. I informed Hardon Chase of the disaster, in general terms, early on in his first term and he made plans for it, the benefit of which you're now receiving. And if you had known twenty years ago, Hawaii would have suffered twenty years of a poor economy – or you would have simply chosen not to believe it.

‘What I do, everything I do, is done according to a detailed plan; the right move at the right time, the correct release of information. There are still a great many things that you don't know, and I'll take the decision to tell you what you need to know, when you need to know it. You saw with Lagos fever that I will wait for the right moment, that I will act decisively and harshly if I need to. That is for the good of all of the peoples of this planet.’

‘Do we not have a right to know?’ someone asked.

‘Your elected government has a right to know, and has known for a long time. You don't have the right to know, because you're a journalist. Because if I told you the world was coming to an end tomorrow you'd try and make a story out of it. You'd try and sensationalise it, you'd try and frighten people, and you'd harm your own economy and your own future. Journalists, especially American journalists, are like drug addicts: you're constantly looking for that next fix, that next big story, regardless of the damage that you may do to people's lives, or to your own economy.

‘So let me make myself clear to you, and all the other journalists. If you had tripped across my identity earlier, if I had been exposed, shot or imprisoned, then no drug would have been available to fight SARS, no drug available to fight Lagos Fever, and by now you would all be in a global nuclear war. If you had done your jobs properly and exposed me early on, then you'd all be dead right now.

‘This disaster ... is not the worst problem that America will face in the years ahead. You can trust my judgement, the judgement to keep those future problems quiet - and dealt with by your leaders, or you can try and print the detail of those future problems, secure in the knowledge that your enemies around the world will take great heart from your problems, and plan on attacking you economically and in other ways.

‘America's strength - is in its strength, and if the people of the world believed that America will fall, economically or militarily, then that process would become a self-fulfilling prophecy. If you print a story that suggests there are tough times ahead for the American economy, then investors and businesses will go elsewhere, maybe to China. If you print a half-truth, or a downright

lie, about future disasters, or exaggerate them, then the American economy will suffer, Americans will lose jobs, and you'll spiral out of control.

‘What’s needed, is a new code of conduct for responsible journalism, and legal action against the traitors ... and the unpatriotic individuals who seek to justify their own salaries by harming the future this country. It’s the job of every journalist to seek the truth, but by seeking the truth about the future you’ll destroy yourselves.

‘The coverage of the Hawaiian quake has already been distorted and exaggerated, the US economy harmed, the dollar value harmed. You will survive this disaster without much effort, because there are more people willing to help than you realise, and - as with SARS – a year after the disaster it will be a memory. You will go on, and you have the potential to go on and be just as strong as before. Your economy will recover, you will rebuild the damaged areas, and greatest thing you have to conquer ... is your fear of the unknown.

‘But that’s why I’m here, to shine a torch into the unknown and to guide you. NASA, the United States Air Force, and the best brains you had built the time machine. You need to have a little more faith in them, and less faith in the crap reported by the media, crap reported by small people who see nothing other than the next headline when they should be looking at the next twenty years. Does that answer your question, dumb fuck?’

I blinked, so did everyone else, and I wondered if we were live, certain that we were.

Samuels led us out, and a good thing too. ‘Jesus, Jimmy,’ Samuels uttered as we walked along the corridor.

‘I can see that I’ll need to be more involved,’ Jimmy said.

And more involved was an understatement.

Volunteers

Over the years, the amount of gold that we had mined and refined in our region of the DRC had grown, but we had stockpiled much of it in our vaults. Those vaults had been expanded, and now a shit load of gold ingots sat shining in neat blocks, the exact amount known only to a few. Part of the reason for keeping it in reserve was to keep

gold prices stable, and part was to build a reserve for our bank, someday destined to be the Central Bank of Africa.

In addition to the gold, we had hoarded diamonds, only selling what the Jewish brokers thought appropriate. That meant we kept back eighty percent of what we mined. Building New Kinshasa had used up all of the money that we had made from selling the drug, electric cars and other things, but coal-oil had filled in that hole. CAR, with a major stake in the Zanzibar oilfield, had also made a great deal of money in the meantime, and our monthly oil cheque from the Chinese and others was huge, an obscene amount of money.

Before our trip to Washington, Jimmy had showed me the figures, and I had to use a pen to work out the billions. We couldn't sell the gold or the diamonds without lowering prices, but with gold now at two thousand dollars an ounce we sat on a hugely valuable lump of metal.

Jimmy had told me to re-work African debt, to pay off western banks and to make us the lender of first choice for the African Governments. I instructed our bank through my team, and high interest loans were duly re-worked to low interest loans, and we did nothing other than move digits around in computers. The western banks and governments, that we now owed the money to, had a block of gold in our vaults in their name. That could be used to buy oil from us, ore from us, or property in Africa from us. The blocks of gold changed ownership, and the poor old ingots didn't even know how rudely they were being passed around.

Within a few days I had re-worked half the debt in our region, and we were now the Central Bank of Africa in deed, if not in name yet. Our corporation, wishing to reduce our debt, simply swapped the debt for land and businesses, concessions and rights. The African nations had reduced their debt by selling their assets, which we would operate for them to their benefit.

A massive amount of debt had been wiped out, the net effect being that our cooperation group and corporation now owned a large part of Africa, which everyone in Africa was happy with. Very happy with.

Following the 'dumb fuck' comment, and the minor fall-out with the media, Jimmy had looked at the dollar level, and began using some of the gold to buy dollars from European nations, in particular those countries that were switching to electric cars and coal-oil. The dollar ticked up a few points. We needed the dollars anyway, to pay

wages in our region, but had no desire to see the Fed simply print them.

Back at our hotel, following the now infamous ‘dumb fuck’ comment, which went right around the world, Jimmy said, ‘The volunteers in New Kinshasa – how many are there?’

‘About six thousand official helpers, three thousand unofficial,’ I replied.

‘Create a command structure: worker, assistant, team leader, manager, director. Six workers to an assistant, ten assistants to a team leader, ten team leaders to a manager, six managers to a director. And do it today. Then I want the Silo Foundation, using the volunteers, to open offices in the UK, France, and here in the States, one office in every city in California, one in New York and one in Washington. C’mon, lad, chop, chop.’

I got to work and sent a dozen emails, made two-dozen calls, and took a few calls back, before we flew across America from Washington to San Francisco, booking into a hotel.

The next morning, we jumped into our vans with our security and set-off on a magical mystery tour, the first aim being to lose the press. We drove into a factory complex, then cheekily just drove out the other side, the press stuck at the first gate. An hour later we were at a small fishing hamlet north of San Francisco, pulling up at a secluded house. Jumping down, the security spread out as if we were going to storm the property, and we walked up the path.

A woman in her late forties appeared behind a screen door. She opened it with a squeak and met us on the porch.

‘Doris,’ Jimmy said, offered her a hand.

‘Silo and Holton. Or is it Batman and Robin?’ she said.

‘Organ grinder and monkey is how we prefer to be called,’ I told her.

‘Brad at home?’ Jimmy asked her.

Doris took a moment. ‘Working, he *is* the mayor.’

‘I know,’ Jimmy said. ‘Could you call him home for a quick chat. It is ... very important.’

She took a moment. ‘This something about the future?’

‘It is,’ Jimmy replied.

She let us in and called her husband, Brad Sullivan, who turned up after a pleasant coffee and a pleasant chat about the rare birds that Doris kept.

Brad was tall, almost six foot, silver haired, but fit looking. He walked with a confidence, no fear or surprise. He shook our hands

without saying anything, studying us carefully with an intrigued look, then sat opposite.

‘Paul, this is Brad. Brad, you know who we are.’

‘But not why you’re here,’ Brad put in.

‘We’re here to give you a job,’ Jimmy began. ‘It’ll not only be the most important job you’ve ever held, or will ever hold, but it’ll be the most important job in California in the future, sometime later one of the most important jobs in the States.’

Brad exchanged a look with his wife. ‘And this ... job?’

‘Would require some discretion, a lot of hard work, some trust that I know what I’m doing, a belief in time travel ... and a belief in the fact that I know what you’re capable of in the future. You see, Brad, this community will be hit hard by the tsunami, and you’ll do a good job at rallying the community, and then rallying the county, then organising self-help groups to rebuild when you get just a little irate with the federal authorities.’

Brad turned to his wife, both faces lighting up. ‘I’d ask you if you had a crystal ball, but I guess you do have a time machine. We’ve been discussing that recently, my church group are preparing to help those that will be affected.’

‘And if I gave you ten thousand willing volunteers, and a billion dollar budget, what could you do then, Brad?’

‘I ... could do a hell of a lot,’ Brad assured us.

‘I know you can,’ Jimmy confidently stated. ‘And this morning I transferred ten million dollars to the town account to help with disaster planning. I’ll need you to quit your job in a month, and then ... and then I simply need you to do whatever your heart tells you to do, Brad. Every time you make a request to the Silo foundation for funds they’ll be met.’

Jimmy handed over a card. ‘My personal number is on there. Don’t be afraid to call if you have questions, I’m just an ordinary guy, and I’ll have a lot of time for you in the future.’

We stood.

‘Welcome to the team,’ Jimmy offered. ‘Oh, and if you create a group or body, call it ... The Ark.’

‘The Ark?’ Brad repeated.

‘All of the creatures, and all the people, came in to escape the flood,’ Jimmy said with a smile.

We left the stunned couple and headed back, soon in New York. Not done with attacking journalism, Jimmy made another speech.

‘There was a time when journalism was a skilled and honourable profession. Sadly, those days have gone. The pursuit of the truth is

secondary to the pursuit of ratings, or the spin put on a story to suit the political paymasters of the newscasters. Papers, and TV stations, are now owned by corporations that are in bed with politicians, and the truth is coloured to suit the political and business aims of the owners.

‘But that political propaganda, which now dominates American news broadcasting, is supplemented by the increased use of internet news, which now accounts for more than fifty percent of the news platforms for most people. Some internet news outlets are simply reflections of TV or newspaper outlets, but many are from private bodies or companies that are not even registered as news agencies. And they certainly do not employ skilled journalists.

‘Blogs, comments, and the websites of individuals all give out information, and most of that information is believed, or has an influence. There was a time when only the newspapers had that influence. They were followed by the TV news, by radio, and we soon came to the TV news shows that were more show - and less news. Controversy, and political spin, became the norm, the actual news lost in the detail.

‘Now, we see that people get their news and their opinions from the internet. Anyone can create a website, and anyone can post a blog, and anyone can influence the public. As such, we have a great deal of crap flying around about all subjects, and the paid journalists compete with the blogger sat at home - who makes a little money from advertising banners. The money put into news research has died, and the salaries of good journalists are under pressure, as well as their numbers.

‘The news has become less about the truth, and more about popularity, people wanting to read stories with a political spin that suits their own politics, rather than facing the cold hard reality of the truth. If unchecked, the world faces a crisis of its own making, and that will be the loss of truth and perspective in our media. People believe what they read, but what they read is no longer produced by responsible and regulated outlets, it can be produced by anyone – by a teenager in his bedroom.

‘If that acne-faced teenager approached you in the street and tried to tell you something, something about an important topic, you’d not listen. But when that teenager produces a respectable looking website, people read it and are influenced. Wrongly influenced.

‘America faces a threat, a very great threat, and that is the dumbing down of the news, and of your knowledge of the world around you. In case you hadn’t noticed, your enemies don’t allow

the same misinformation, and your enemies benefit from your internal dissent and confusion. And in case you haven't noticed yet, most of the world's countries are growing their economies faster than America; the outside world is creeping closer to your shores.

'You can bury your heads in the crap that you hear and see through your media outlets, or you can peek over the wall to see what's really going on in the world ... before it's too late. America, your enemies are delighting in your infighting and confusion.'

We left the good citizens of the States with that thought and flew back.

Back at my desk, I was pointed towards a website – hopefully an accurate one – that detailed the growing rise in financial fraud. It seemed that much of this detail had escaped the mainstream press, possibly during the SARS pandemics.

A disgruntled young trader at an American bank had bet the wrong side of the market deliberately - because he had not been promoted. The bank lost over four hundred million dollars. Another trader had lost money to a friend at a bank in Israel, and then skipped to Israel – who can't extradite its own citizens abroad, not even to the States. A third man, an investment adviser, took two hundred million dollars and skipped to Israel, quite safe from prosecution.

A worker at a credit card company managed to take a hundred and fifty million dollars before skipping to South America, and a US investment bank went bust owing six billion dollars to its investors, the directors of the company believed to be in Israel, the money in an Israeli bank. I could see a pattern emerging, and discussed it with Jimmy.

Jimmy said, 'I warned them a long time ago, but some people never listen. It'll tarnish Israel at a time when they need US support the most. They won't extradite citizens, and their banking laws make Switzerland look transparent. If you really want to launder or hide some money, try an Israeli bank.'

I contacted the hacks that I was friendly with and gave them a nudge, sending them the website link. That following week, Israel was under the spotlight for all the wrong reasons, coming in for some harsh criticism from Sanchez – which was probably not a good move politically.

Gold fingers

We holidayed in Goma again, possibly the last time that Shelly would be with us, and my crocs were almost too big to get through the railing. The monster croc, however, was looking a bit worse for wear these days, having been hit by many boats, and chewed by propellers. He had one good eye, a front leg missing and the end of his tail gone, numerous marks across his back scribed by propellers. Still, it gained him sympathy, and plenty of food.

Figuring that I should do something, I ordered a zoo style pit and pond to be dug in the marina park, a fence erected, a grilled tunnel to the main canal. We tempted the croc in, closed the grill, and our attraction was now safe from propellers. All he had to do was sun himself, eat and sleep.

Back at the mansion, I sunned myself, ate and slept, doing some work when it was cool. And I safely avoided propellers in the pool. I continued to reschedule African debt in my round about sort of way, and we soon owned large parts of Africa, that ownership in the trust of the cooperation group. The African media reported it widely, "Free from debt" the headline that had caught everyone's attention.

New Kinshasa continued to grow, the sewers now functioning as intended and with worthwhile quantities to pump, the phone lines busy, the buses full much of the time. The police patrolled the streets, and anyone who had just wandered into the city with their belongings was picked up, given a free ride back to wherever they came from, a little food, and some money. And a warning not to come back. Poor Congolese citizens, from other towns, tried to set-up shanty camps, but they lasted no more than a few hours.

In the city centre, more armed police patrolled than in any other of the world's capitals. They were courteous, polite, helpful, but ex-Rifles, and if you pissed them off you were in trouble. Drunken white folk were treated with kid gloves, helped home or to the police station, fifty dollar fines issued and a ride home given. It became known as "taking a police taxi".

'Don't drink too much, you'll get a police taxi ride home.'

The main problem for the city police were the Russians, all of who seemed to be out to prove how much they could drink, and how tough they were. Jimmy's instructions to the police were simple: if they hit you, hit them back, but harder. Russian traders and businessmen would get asked nicely to go home, resist, and get clobbered by the Rifles, heavy fines imposed. And when the Russians tried to complain about their harsh treatment, they were

offered a line-up of black officers in order to try and identify the officer involved.

‘They all look alike,’ was often heard in a Russian accent, the officer known to have hit them not even in the line-up.

A week into the holiday, Shelly sat us down and told us what she had planned. We didn’t have a say in it, we were just the parents who raised her. She would stay here with us for four weeks, then tour China and Japan – she had already arranged security with the ambassadors directly, then spend a little time in New Zealand and Australia, visiting their oceanography centres, before checking out the oceanography centres in California after the tsunami.

There was little we could do to slow her down, and she had already been accepted to several foreign universities, not having decided on which one yet. We were not unhappy, our daughter was very bright, and we knew that she would go off to university, just at eighteen and not sixteen.

We had Lucy, and we had the rapidly growing Liz; now walking and talking, and due to be tall like her sisters. She could already swim lengths underwater, and I had to wonder if I was descended from the people of Atlantis.

I entered into email correspondence with Brad in California, his email signature having a Christian symbol of the fish, an alternating quote of the day underneath. He had created an office and advertised for volunteer helpers, very low wages offered, but transport and food thrown in. That office had been too small, so he found a larger one and took on several part-time helpers just to administer the volunteers. He soon had an army of some three thousand volunteers, but had used up just twenty thousand dollars.

As I sat in the sun, growing African GDP, Brad grew his volunteer army. Three thousand became six, six became twelve, and by the end of August he had topped out twenty-five thousand. They had adopted the ranking system of our volunteers, and the higher echelons were paid proper salaries. Offices appeared all along the California coastline, and The Ark moved into Alaska.

For my part, I bought them a hundred electric cars and thirty electric coaches; Alaska was a long way from Los Angeles. The name, the Ark, was painted onto the cars and buses, soon appearing on the vehicles of volunteers. I sent Brad an email saying ‘Spend some money!’

He gave it some thought, then bought four second-hand Hueys with winches, figuring they’d be needed at the time of the tsunami.

After that purchase, he created twenty regional distribution sites, and stuffed them full of tinned meat and bottled water, tents and camping stoves. People would find themselves homeless.

That led to volunteers creating storage sheds in their gardens, emergency rations being stored for local use by the homeless after the wave had hit. I emailed him to sanction an extra fifty million dollars for that very project, an additional fifty million for the regional stores.

Meanwhile, the US military had created their own stores, but well back from the coast and in just three places. Military aircraft and helicopters were available for distribution, as well as rescue at the time of the wave, and soldiers would be on hand. But what Brad was doing was on a different level, the local level, where isolated communities of just a few hundred people produced a handful of volunteers each.

That led to an operation that was parallel to the government's own efforts, that of a census of those properties and families at risk. That project, in turn, led to a website called The Ark, which listed each community and each house that was at risk. Anyone could go online and register their property, or indicate someone else's property that may be at risk. Letters went out, and the website grew into a self-help site.

It also trebled the volunteer army in a week, the numbers now approaching a hundred thousand people. By time I returned home from Goma there were a hundred and twenty-five thousand volunteers listed, some given rank and responsibility if they were from a suitable background. Local sheriffs would ignore the official government or state websites to concentrate on The Ark website, visiting those local residents listed as in the danger zone, most in out of the way locations, some on islands.

Another California website sought all the world's yacht sailors, and asked them to come to either California or Alaska. Their task would be simple: they'd get free food and a few dollars, in some cases quite a few dollars, to take yachts to sea on the day in question. And, hopefully, the marinas and berths would still be there for them to return to. Some twenty thousand people were seeking yacht crews, many boat owners planning on taking their own boats out that day.

It seemed that preparations were well advanced, right up till two major US banks filed for bankruptcy. They took down twenty-six smaller banks in California, and things started to look ugly. The banks had not been hurt by the recession, but from taking risks and

trying to maximise profits in a market where US house prices were falling, especially in California.

Those falling house prices were skewed, because following the tsunami there would be a hundred thousand people looking for new homes. Problem was, their old homes were worthless, and their insurance could not be settled till after the tsunami, a hundred insurance companies going bust in advance of the predicted claims. Sixty percent of all household claims were now on the shoulders of the State and Federal Government Emergency Aid Package, where the average householder would likely receive twenty-five cents on the dollar, and then years after the claims had been made.

I had a bad feeling where this was going. Jimmy was up to something, and I went and confronted him. Actually, I walked out to where he sat in the sun and grabbed a cold beer. Stretching out, I began, 'The US Federal Government, they'll come in for some criticism for paying out late on homes damaged by the tsunami, and then only twenty-five cents on the dollar.'

'Since many of the insurance companies have gone bust, they could argue that they don't even need to pay that amount.'

'And won't that piss off a lot of people?'

'It'll piss off those who used to live on the islands, and those who lost properties.'

'Around two million pissed off people,' I noted. 'Is President Samuels ... thinking along those lines?'

'I doubt it, but he's not stupid.'

'And The Ark?' I nudged.

'Will be popular –'

'Whilst the Federal Government is not,' I finished off. 'Is there something I'm missing?'

'What do *you* think?'

'I think ... that you should be pushing Samuels harder to do something now.'

'There's little he can do; the claims will need to be processed. Many will be inflated, many fraudulent, and now we see people buying land on the coast for next to nothing, putting up a few wooden planks and hoping to claim a million dollars. The American criminal class are nothing, if not inventive.'

'You're up to something,' I suggested.

'While I remember, create apartment blocks in new Kinshasa for an extra ten thousand people, because after the tsunami we'll be offering those that lost their homes in California a new deal here. A kind of ... new Klondike.'

‘OK, coming back to the part about you being up to something.’

‘And increase the budget for Brad at The Ark.’

‘If I have to, I’ll beat it out of you,’ I threatened.

He gave me a look. ‘I aim to make good use of a ... natural disquiet with the Federal Government to ... increase my influence. And for that I’ll need an opportunity, some money, and some willing volunteers. An ... *army* of willing volunteers.’

‘You ... planning on running for office?’ I asked.

‘No, nothing so simple; my plan is far more complex than simply running for office. Besides, I’m not a US citizen.’

I sipped my beer. ‘What’s Samuels doing about NASA?’

‘Well, following the Russian, Chinese and Indian decisions to abandon anything beyond simple satellite launching, he’s been under pressure to do likewise. Fact is, they’ve delayed the next Space Shuttle for so long that most of the skilled people have left. He’ll delay it again and again, especially after the tsunami. The Democrats don’t want the money spent, and I’ve been influencing people against it.

‘Besides, NASA knows there are ways of reaching other worlds without rockets, so they’re not too vocal about it either. There’re thirty NASA scientists working here. No, the space race is well and truly over, and NASA will be buying rocket engines off the Russians for some time to come.’

‘Those coffee shops in Russia...?’

‘Will be used in the years to come. And then you’ll see. Maybe.’

Part 16

Plotting and scheming

From our mansion in Goma, we said goodbye to Shelly as she set off on her travels, a kind of student gap year - only with four bodyguards, one nominated as temporary guardian. Helen and I were both a little saddened at our daughter's departure, a little miffed at the cheek of it and the lack of our input, but turned inward and concentrated on young Liz.

Jimmy assured us that Shelly would be fine, but then qualified that by saying that her antics should be ignored, and that we should welcome her back when she was twenty-one. I questioned the 'antics', but just got a lot of shrugging out of Jimmy. I returned to my routine of checking emails in the sun.

Two weeks after Shelly had left us, off to Singapore, Jimmy said that it was time for me to be let in on a few secrets. We boarded a Huey one morning, the Army bird cheekily picking us up in the park at the end of our street, and set off for a mine. We actually set off for the regional airstrip south of New Kinshasa, grabbing a Dash-7 for a two-hour flight to the aforementioned mine.

For half an hour I sat up front, re-acquainting myself with the controls and chatting away to the pilot. It turned out that he was from Canada, and that his grandfather flew Mosquito aircraft for the RAF during the war, which his great uncle had helped to design at de Havilland. His wife was French, and her grandfather had been a member of the French Resistance, and who had escaped a prison in northern France bombed by Mosquito aircraft – something of a paradox worthy of Jimmy himself. Landing at a small airstrip, we were met by three Army Hueys.

After a pleasant ten-minute flight in the Huey, we landed at a mine, fifty Rifles stood waiting for us since the mine was a bit out of the way. Boarding jeeps, we made our way around to the mine shaft itself. Hard hats were issued, lights switched on, and we descended almost six hundred feet into the dark, clanking all the way down.

'No music in the lift?' I asked the lift operator, causing a concerned and puzzled frown. 'You know, elevator music – Girl from Ipanema?'

At the end of our long descent the metal doors clanked open, a group of managers keenly waiting for us and leading us onwards. 'Welcome to Nhebou mine,' the first man said.

‘What do you mine here?’ I asked, getting a lung full of warm and pungent air.

They shot Jimmy a look, saying, ‘Gold, sir.’

‘A secret is for keeping,’ Jimmy told the managers as we progressed along an uneven surface, a pearl-string of lights strung out overhead, pipes running along the walls, one hissing water. We stepped around the puddle it was creating.

A hundred yards in we took a left fork, halting at a seam that was currently being worked on. At least it would have been worked on if they had not downed-tools for us. It also looked like they had all scrubbed-up for our visit, very clean miners stood smiling next to very clean mining equipment.

Without any further assistance from the managers, or Jimmy, I approached the wall and pointed at the shiny yellow seam. ‘Gold.’

‘Solid gold, sir. Not ore.’

‘Not ... ore?’ I queried.

‘No, sir. It requires little processing. Smelting, yes, but not as much processing as ore that contains little actual gold.’

I scanned the seam, which seemed to be around six feet high and thirty yards long. ‘So how much is this bit worth?’ I asked, pointing along its length.

‘Two thousand dollars an ounce,’ a man informed me. ‘And in front of you, perhaps eighty or ninety tonnes.’

‘I hope your maths is better than mine,’ I told the man.

‘Roughly ... six billion dollars right there,’ the man said.

I took a long moment, putting my hands in my pockets. ‘Oh.’ I faced Jimmy, and waited.

‘They’ve been mining here for twenty years,’ Jimmy told me. ‘And I tucked away the gold for a rainy day. This seam would have been discovered in 2024 with some clever equipment.’

‘So you got in here first,’ I noted.

‘It’s the world’s richest gold seam, sir,’ a man volunteered.

Jimmy led me back up to the surface after we thanked the very clean managers, and the very clean miners.

‘So why keep it secret?’ I asked as we clanked slowly upwards, still no music in the lift. ‘People know we have gold mines here.’

‘Price,’ Jimmy said.

I took a moment. ‘If people know that it’s not quite so precious ... it’ll lower the value, and if we sell too much ... we’ll lower the value ourselves,’ I figured.

‘Now that the world economy is suffering, people are switching out of stocks and into gold, so I’m selling more – but discretely.’

‘And the total reserve?’ I nudged.

‘Is a paper figure, because if we tried to sell it ... then it would be worth a hell of a lot less,’ Jimmy told me.

At the surface, we gave back the hard hats and greeted a few more of the mine team, and I could see now the extra security that this place offered; there had to be a couple of hundred Rifles here, pillboxes, machinegun towers, the works. I also noticed armoured personnel carriers and armoured trucks for transporting the gold.

In the Huey, I placed on a headset and asked Jimmy, ‘What will you do with it all?’

‘The next year or so will see the stock markets down, gold up, so I’ll offload what I can and buy dollars for the region, but not from the Fed. We should be able to keep gold prices stable, or even knock them back a bit by selling. And I’ll use it to manipulate the US stock markets.’

‘There’ve been many things that we could have used this for in the past. But we sold stuff instead,’ I said through the headsets.

‘I had to play the role, and not let on what we really have to play with. Besides, people already accuse me of profiting from my knowledge of the future. At least this is ring-fenced, falling under the region’s mining operations.’

‘If you use the gold to buy dollars from third parties, you’ll prop up the dollar.’

‘Yes, that’s one aspect. And one that the Chinese and Russians don’t need to know about yet.’ He held his look on me.

‘And if you don’t help to prop it up?’ I nudged.

‘OPEC gets twitchy next year, when Hawaii knocks the markets down.’

‘I always figured they would try and drop the dollar because of the surplus of dollars sloshing around.’

‘That’s a factor, the US economy is another; it’s a case of bad timing and coincidence. When things go wrong around the world, people typically buy dollars as a safe haven. But when the thing going wrong is in America itself ... it’s a different case.’

Landing at the airstrip, we reclaimed our Dash after an oddly short visit, and returned to New Kinshasa. There, we boarded a Huey, but headed to Forward Base, landing at the huge Congo Rifles camp. A detail met us, jeeps taking us around to a part of the camp that I had not visited before. We passed through several high fences, all well manned, and to a large building that appeared to be just an admin block. Inside, Jimmy led me down a few steps. Then down a few more, security tight at each turn.

We eventually came to a vault door, open ready, bank staff waiting for us. Jimmy greeted them and shook hands, stepping inside. There we found a very long room, the central corridor separated from the blocks of gold by strong metal grills, several forklifts dotted about.

‘It’s a shit load of gold,’ I said to no one in particular, my words echoing a little.

‘And if the British Prime Minister knew about it he might suggest that we aid the UK economy.’

‘Why don’t we?’ I posed.

‘Because the UK is not the biggest kid in the classroom, or about to throw a temper tantrum.’

I took in the gold ingots. ‘Do we have more money than God?’

‘Not far off it; this could make a serious dent into any project we choose. But, as I said, knowledge of it would knock prices down before we could sell.’

‘Like the diamonds,’ I noted.

‘Yep. And we have a shit load more of those than we declare.’

‘Was this the main reason for moving into the Congo?’

‘No, but a factor. My move here was to make money to fund the Rifles, and to sustain them.’

‘Why show me now?’ I asked.

‘Because in the months ahead we’ll spend more than we seem to have, and you would have asked questions.’

‘Will this lot be shipped out and sold?’

‘Some will, but most will sit in the main bank vault. The way it works - the gold in that vault is used to get us dollars, so the ownership of it changes hands in a computer, it doesn’t actually go anywhere. People then buy oil and ore from us, or land and property, and the ownership comes back to us.’

‘Do they check that it was there in the first place?’ I teased.

‘We get inspections, but they can only verify that the physical gold that they own is there, and that its tagged; the bars have numbers. And if they ask for it, we can ship it out. We also have a declared and monitored reserve that they can inspect, and that’s always more than enough to cover the gold that they lodge with us.’

‘Is this gold ... in line with what you expected?’

Jimmy took a moment. ‘No, it’s more, and we can do more with it. I could have helped various markets and economies in recent years, but I didn’t on purpose. I want the US to feel the pinch so that I can look good when we help, get the people on our side.’

I lifted my eyebrows. ‘Sure you’re not running for office?’

‘I am ... kind of.’

Back at the mansion, he gave me a figure to spend, so long as it was in the States. I asked for a hint as to what exactly I should buy, to which he just shrugged and went for a swim.

I sat with Helen and grabbed a cold beer. ‘Got a slightly bigger budget to buy things with, but from the States only. To both help here, and there.’

Helen considered it. ‘Boeing is in Seattle, west coast, and they’re bound to be hit by the tsunami. I mean, the region will be hit.’

I raised a finger. ‘Good idea.’ I called my contact in Boeing, waking him. ‘It’s Paul Holton. How you doing, mate. Listen, how quickly could you get me another ten 747s?’

‘Ten. New?’

‘Brand new, yes.’

‘They’d have to be slotted in and made. We could find you ten surplus -’

‘No, no, I want them new. Consider this a firm order and ... you know, get the slide rule out and lathe working. What about 767s?’

‘Could let you have six that were cancelled...’

‘I’ll take them, send me the paperwork, thanks.’ I hung up and faced Helen. ‘That’ll keep the locals around the lathe for a while. What else does California and the west coast produce?’

‘Films.’

‘Can’t buy those.’

‘You can offer film finance,’ she posed.

‘Films ... about things that we like; Africa, Rescue Force.’ I called Oliver Standish at Pineapple Music, knowing that he lived and worked in Los Angeles now. ‘Oliver, did I wake you?’

‘Yes!’

‘Sorry. Listen, do you know anyone in the movie business, you know, movie funding.’

‘We do a little of that ourselves if our artists are involved. Katie Joe just made a movie.’

‘She did?’

‘She starred in it.’

‘If I sent you some money, could you get me a list of films, you know – scripts, and let me choose some to fund through you, to help the local economy over there.’

‘Sure.’

‘Let people know that we’ve more money than sense, but are interested in films about Africa, Rescue Force, stuff like that.’

‘There’s a pile in my office, and some of them are disaster movies; they’re popular for writers these days thanks to you.’

Smiling, I said, ‘I want summaries, and I’d like them soon. We’re going to loan your company a billion dollars to start with. What’s a film cost?’

‘Anything up to two hundred million with special effects.’

‘In that case, make it five billion.’

‘You serious?’ Oliver asked in a hoarse whisper.

‘Very serious. Be a love and help out an old mate, eh?’ I hung up. ‘What else, babes?’

‘Electronics in Silicon Valley,’ she suggested.

I Googled the west coast’s exports, but found out that aircraft made up the largest part of its exports. Sat there for an hour, I ordered up sixty small aircraft from a variety of manufacturers, two-dozen helicopters, and ten luxury jets. Hell, there were enough rich people around New Kinshasa to utilize them.

But it still didn’t seem to add up to much, not compared with the money I had to play with. Thinking about a recent air crash in Russia, I called the boss of Boeing, pulling him out of a breakfast meeting. ‘Listen, if I ordered up some aircraft for countries and airlines other than ours, could you ... well, make it look like they paid for them instead of us.’

‘I ... suppose we could if the State department helped. Why?’

‘Well, in simple terms – and just between us – we want to help the aircraft industry there, but have enough aircraft for our own airline.’

‘That’s ... odd, but given that its you, not so odd.’

‘So, could we do it?’ I asked, puzzling his last statement.

‘Send you the bill, sure. Keep it quiet? I’m no secret agent, Paul. The President may be able to help.’

‘Is there any way that you can think of to do it?’ I pressed.

‘Can’t you give the other people the money, and ask *them* to buy from us?’

‘That ... may be an idea, actually. Keep this between us.’

‘How many aircraft are you figuring on sponsoring, Paul?’

‘Don’t know yet, we’ll see how it goes. Thirty, forty, maybe more.’

‘My team will be with you in the morning. You still in Goma?’

‘Yep. I’ll get the kettle on.’ I hung up and dialled Han. ‘Han, you awake?’

‘First, it is the same time here as Goma. Second, I have been injected, and sleep three hours a night – as do many.’

‘Good. Listen, I want you to do me a favour. Ask your government to nudge your state airline to buy ten new 747s from Boeing, and ten 757s. We’ll pay you in gold down here.’

‘That is ... most generous. And may I assume that you are attempting to fill the order books of Boeing to assist the west coast economy after the tsunami.’

‘You’re not daft are you. Will you do it?’

‘As I heard recently ... I am not seeing the downside.’

I laughed and hung up, calling Yuri. ‘Yuri, you awake?’

‘I’m down the road. What time do you have in your house?’

‘I thought you might have been in Russia. Anyway, need a favour. I want you to buy ten 747s off Boeing, and ten 757s, and somehow donate them to a Russian carrier, and we’ll pay you in gold down here.’

‘I was thinking of starting my own airline.’

‘Do it quickly, you’ll have twenty aircraft.’

‘And the reason for this very generous offer?’ Yuri asked.

‘The economy of the American west coast will be hit after the tsunami, so we’re doing what we can ... in our own small way.’

‘I see.’

‘Go start an airline, Yuri. But I want the planes ordered soon.’

I stripped off and took a cool dip, thinking on. Boeing made planes, and the parts came from all around the west coast and the States; there would be a knock on effect to suppliers down the chain.

President Samuels rang at 9pm that evening. ‘Paul, you’re spending a lot in California, and with Boeing. Is the reason what I think it is?’

‘It is. And ... you’re welcome.’

‘Good of you, Paul. You’ve been buying dollars as well, so you have deeper pockets that we realised.’

‘Something about gift horses comes to mind...’

‘Not complaining, just that the folks over here watch you like hawks, and try and figure your every move.’

‘Well, we’re up to no good as usual ... making money to buy stuff from your west coast, and not just oranges.’

‘It was clever of you to have your own region and a friendly government; you can do what you like without a government going through your finances. You know, a lot of folk have tried to get through Kimballa, but the man spouts the bible to them, and mentions what will be on his statue after he’s dead.’

‘He’s thinking about his legacy. What will yours be?’

‘I’d hope it will be a good one; we’re on top of the disaster planning.’

‘And the nice man running against you?’ I nudged.

‘We don’t attack each other in our speeches, too much. I still like Sanchez, and we work well together. He has a passion for helping the poor, and some of it is rubbing off on me.’

‘That’s an odd admission, from the man who represents *all* of the American people.’

‘I didn’t mean it like that. I meant his socialist agenda.’

‘And your Republican Senate?’

‘Would like to see Sanchez strung up.’

‘Then I guess you’re a bigger man than your senators. And before you ask, we don’t know who’ll win, because neither of you were supposed to be in the running. It’s all new.’

‘Well, its neck and neck at the moment, mostly on Sanchez’s strength of personality,’ Samuels admitted.

‘We love you both equally, you know that; equal presents at Christmas!’

‘Senate is pressuring me to get you to address the new Time Travel committee.’

‘They have a Time Travel committee?’

‘Yes. You’re not obliged to appear...’

‘But?’

‘But it may help if you answer a few questions.’

‘I’ll ask the big guy,’ I offered. ‘Anyway, off for a meal, and a walk, and a drink in our glorious creation.’

‘Have a good evening, and thanks for Boeing.’

That following week, I thought of things to buy from California and Washington State, ordering tens of thousands of copies of Microsoft products; legitimately licensed copies. Africa tended to be five or ten years behind the rest of the world, and in some areas this new fangled Windows Operating System was still an idea. They were looking forward to the delivery of Windows 3.11. On the news I saw that Boeing had announced a full order book, and reassured many workers about their employment for the next few years or so.

I had mentioned the Senate committee hearing to Jimmy, and he just made a face, saying it was too soon. We returned to the UK in September, Lucy off to school, and Liz toddling about quite happily. Liz was talking ahead of her years, and we figured we had another genius in the family, neither of us knowing where it came from.

Brad from The Ark kept me informed of everything he was doing, and I urged him to spend more money. He then received a little help from the American branch of our volunteer group, and the two groups started to merge in places. I gave the volunteers a good budget and sent them off to assist Brad, our own volunteers less worried about wasting my money.

October saw the stock markets fall further, the price of gold rising. Sat behind my screen, I said, 'Fuck it.' I called the bank in Goma and told them to sell more gold and to buy US stocks, figuring it would be a good investment anyway. In just a few days we had knocked gold down sixty dollars and the markets up a few points. I increased the gold sales, and took another fifty dollars off the price of an ounce, firming US stocks.

Jimmy then popped up to my office. This time, I had biscuits.

He sat on the windowsill behind me. 'You know what you're doing?'

It was not so much as question, as a 'Do you realise what your doing,' type of statement.

'Selling gold and buying stocks when every other fucker is selling stocks and buying gold?'

'You ... we, are helping to prop-up the US stock markets; little old us two. If I had mentioned that in 1986 -'

'I would have thought you crazy. Yes, we have advanced along the road a bit.'

'Quite a bit,' Jimmy emphasised. 'And one of your abilities is to see complex things in their simple forms, their basic elements.'

'Maybe I'm just thick.'

'You're sarcastic, and that helps.'

'I studied sarcasm in Kingston Polytechnic. It was supposed to have been economics, but I slept in class. So, how much more money can we throw at the US markets?'

'It's not the money, so much as the timing and application. Choose a day when there's bad news and the markets are falling, so that the market makers are short, then buy heavily. It'll catch them out and cause a good upward move as they scramble around to cover their short positions. You know the four banks we don't like, so bust them up. And never forget that America is a free country, and a commercially minded country. Power is in money, not in the government.'

I took receipt of a new bit of trading software from Jimmy, a program written by the brain-trust kids, and it allowed me to place bets across a thousand accounts, all open with the four US banks we

didn't like. The money was routed through various offshore tax havens, through Switzerland, and ultimately down to our bank. I transferred five billion dollars and got to work. Since I wanted the stock anyway, for the long term, I couldn't lose.

That following week I watched the screens, buying a few stocks that had tumbled and introducing a hell of a volatility spike to them. The individual stocks would drop three percent before rallying ten percent with my order, only to fall back a few days later.

When Samuels announced additional budget cuts, the tickers turned red, and I was sat waiting. Around 6pm GMT, 2pm EST, I stacked the deck and let rip with a cool three billion dollars worth of small and medium sized orders. At first my trades were being absorbed by the sellers in the market, but the market makers were soon caught short, unable to fill my orders. Tickers started turning blue for no reason other than a shortage of stock held by the market makers, the traders that I was targeting wondering just who the hell was buying. And buying so much.

I left the markets alone the following day, US financial commentators scratching their heads at the previous day's sudden buying. Prices dropped back, and the next day dipped lower, so I again ordered up two billion dollars worth of small and medium sized blocks, guaranteed to annoy the pit traders – as well as keep them busy.

Time Travel Committee

In early October, Jimmy said that it was time, time to face the Senate committee as guests, since our foreign nationality and diplomatic status prevented us being summoned. We flew over to Washington without announcing the committee appearance to the press, but it had leaked on the US side. We left the terminal from a side entrance.

We were soon 'on the hill', being shown to a waiting room till being called, the Secret Service keeping us company. Once in the Senate hearing room, they naturally asked us to swear to tell the truth. We both refused right off, which caused a little head scratching from the chairman. We sat without being invited to.

Jimmy began, 'I do not ... offer to answer all of your questions, and I do intend to keep some things vague, since what I say may

have a direct bearing on the stock markets, and on people's lives. If that's a problem, then we can call a halt to this right now.'

'We'd like to proceed, since we may not get another chance at this, Mister Silo,' the chairman suggested.

'We're not going anywhere,' I told him. 'We'll still be around next year.'

'We can only hope so,' the chairman said with a false smile, and I had to wonder what the committee was about. I decided to be bold.

'May I ask you a question, under oath or not,' I asked.

'Well, that's not normally how these hearings work.'

'Yes or no?' I pressed.

'Ask your question,' the chairman offered after a glance at his colleagues.

'What's the remit of this committee, its stated function?'

'This committee was set-up to explore and debate all things temporal.'

'Was it set-up to debunk ... all things temporal, like Scully on the X-Files?'

Jimmy gave me a look, a few sniggers coming from behind me.

'We're here to investigate, and then to draw conclusions and make recommendations.'

'Fire away,' I said, easing back.

'Well, let's start at the beginning. Mister Silo, what was *your* remit ... in coming back through time?'

'That's an easy question for me to answer, but not so easy for you to grasp the reality of. I came back thinking that you were all doomed, and that anything I did could not make it worse, but could only make things better. If, at any point during the past thirty years, I had made a mistake, it may have been tragic, but it would not have been such a catastrophic loss as you may think from where you're sat ... since I come from a place in time with very little hope.

'My remit, my objective, was to warn the various leaders about what would happen, and then to try as best I could in steering the world away from disaster.'

'And you felt that the best way to do that was in secret?' the chairman asked.

'Most definitely. I considered, most strongly, that if I made my identity clear to any government other than the British, that I would be locked up and used to the sole advantage of that nation, especially you lot.'

'Would you like to ... expand upon that?'

‘I firmly believed that the CIA would try and identify me - and to grab me, which they did over a great many years. Fortunately, I had the assistance of the UK Government to stop such attempts. Thirty years ago, the CIA were aware of my ability to predict the future, and made efforts to grab me and to kill me.’

‘To kill you?’

‘Yes, numerous attempts were made to kill me, as well as attempts to bribe me or to force me to work for the CIA, and to the advantage of individuals – for their own financial gain – or to the sole advantage of the States.’

‘You have admitted, publicly, that NASA and our military built the time machine. Would you not have been obliged to debrief with NASA?’

‘No, since you could never be trusted, and still can’t be trusted.’

That wrangled them a little. ‘*We* ... could not be trusted?’

‘Those who built the time machine ... knew that the people here would probably not accept or understand the depth of destruction and despair that led to the time machine being built. Although they wished to warn you, they also knew that such information could be used for the advantage of unscrupulous American politicians. Which I guess covers most of you.’

I hid a smile, badly.

‘You don’t trust our government?’

‘I trust certain individuals, those whose pedigree I know for definite. I trust the good man to your left, and the very good man on your far right. I trust Samuels and Sanchez, and a few others.’

‘I see,’ the chairman said, his pride obviously hurt. He passed the questioning to the second man. That man thanked the chairman – at length, and changed tack. ‘The American people are being expected to place a great deal of trust in you –’

‘They don’t have to. They can sit on the beach on the day of the tsunami and tell themselves that I’m wrong.’

‘And would you allow people to die like that?’

‘Like what? Like fools? I’ll help those that want my help, and those that need my help, and those that deserve my help. But I won’t stand in the way of a fool that wishes to end his life. Besides, your citizens are your concern. I notify your government, and they handle their own people as they see fit. I’m not a politician.’

‘And are there things that you know, that you’ve not told the President?’

‘A great many things.’

‘And if they affect us, do we not have a right to know?’

‘No, you don’t, because you’re bunch of children still trying to figure it all out. You care more about your own ratings than saving lives or doing what’s right.’

‘You see us as children? I’ve been in the Senate for more than thirty years -’

‘And I’m a great deal older than you, a great deal wiser, and a great deal more experienced. And then some.’

‘Well, that’s your opinion –’

‘His approval rating is higher as well!’ I put in with a grin.

A third man took over after a nod. ‘Mister Silo, we only have your word as to who you really are ... and your real motives,’ one of the panel posed.

‘And it’s that scepticism that betrays both your youth, and your lack of qualification to be sat there. Your government, and the people of this world, have had thirty years to judge my motives. If you haven’t got it all figured out by now then you have a problem, not least in your own lack of abilities. But you’re under no obligation to listen to me. Others ... do.’

‘You have been accused of favouring the Chinese and Russians.’

‘I favour anyone who listens and acts. They listen, and they act - you don’t. When I tell your people about the future, they sit back and fold their arms, expecting me to try and prove what I say. Then they see how they could use that information for the benefit of this country.’

‘Since they work for this country, and are paid by this country, they *should* be looking out for its best interests.’

Jimmy slowly nodded. ‘And there lies the problem at the heart of this, and there lies the reason why I don’t trust you, nor will ever give you a full picture. You *are* children, and you don’t understand, so I’ll explain it for you. I’ll even go slow.

‘There are two concepts, both of which you still fail to understand. First, it matters not to me, or to any truly enlightened person, which country prospers or fails, survives or dies. It matters ... that mankind survives. But you will, I’m sure, find many people in this country, and especially in your government, who are determined to keep America on top – no matter what it takes, even if you decide to fire your nukes at other nations. There are people in this country who consider that America must survive, even if it’s to the detriment of all other nations.

‘Second, the challenges ahead can only be tackled by everyone pulling together. To give you an analogy, one mentioned recently,

we are all in a canoe together. If one nation gets up and rocks the boat we all sink. Only through global cooperation will we succeed.

‘You, sir, don’t understand either concept, which is why I have nothing but contempt for you, and for some of your colleagues. I’ve told you before, and I’ll state it again: if the countries on this planet fail to work together in the years ahead, they all fail. You’ve had SARS, quakes, Lagos Fever, and now an economic downturn. But that’s nothing compared to what lies ahead; that’s a stubbed toe. What lies ahead will be like a house falling on you.

‘And the reason I work in secret, and the reason I work around people like you, is that you don’t even accept the dangers, let alone try to get the people of America ready for them. Russia and China will fare well because they listen, and they’re preparing. You’re still deciding if you believe me, when China is ten years ahead in detailed planning. You haven’t even got off the drawing board yet. America is so far behind in planning and changing that you’ll probably never catch up.

‘You’re sat there with your stupid questions about my ability to captain the boat, when the boat sailed ten years ago. You’re discussing a Sunday afternoon stroll when you should be at home building a shelter and stacking the tins and water. Do you think you represent the American people? We’re in the last quarter, and you haven’t even found the football field yet.’

They took a moment, the room deathly quiet.

‘You’re saying that President Samuels has not listened?’

‘He’s listening, but he can only do so much. The rest is down to businesses, to the institutions, and the people. And it’s the people who will ultimately change things. In Africa, in New Kinshasa, we have thousands of American volunteers giving their time for food and board, to work on projects I give them, research to tackle future problems.

‘They’re prepared to sacrifice their homes and their careers to help me. They’re not there to help their native America - their homeland, they’re there to help the planet. And the first concept they deal with when arriving ... is that we’re all in this together, and that no nation has more of a claim than another.

‘Whilst on that topic, we’ll be offering some of the people of Hawaii and your west coast a new home and a job in New Kinshasa, to do what we can to help them. People in the abandonment zones can petition us for a place in Africa.’

‘In Africa?’

‘It’s a vibrant and modern city, with plenty of jobs. And if they’re not happy they can always return home,’ I said. ‘We’ll also be spending what money we can on helping the displaced.’

‘And that money, it came from your knowledge of the future?’

Jimmy said, ‘No, it came from our belief in Africa. But if you’re not happy with that then we’ll not spend any money to help the displaced people. What would you like us to do, Senator; help them or not?’

‘I don’t think you should be profiting from your knowledge of the future.’

‘If we’re profiting from the knowledge,’ I posed. ‘Then the knowledge must be true. And if it’s true, then why are you still a pain in the backside?’

Jimmy gave me a look as he stood. ‘We’re done wasting our time with you. Do what you want, and we’ll help the displaced of America whether you like it or not.’

We left, being snapped by the photographers. Samuels was on the phone straight away, mad as hell; the hearing had gone out live. We were summoned to the White House like naughty schoolboys.

Samuels and his team were waiting, and all a little sour faced. ‘You want to explain some of that attack on us!’ Samuels loudly asked.

‘It’s not so much about you, as ... those that may follow you,’ Jimmy said.

‘Follow me?’

‘Other Presidents and political leaders. Besides, I need the people on my side to help you, just in a roundabout sort of way, and yes – I move in mysterious ways – and no, I won’t explain why all the time.’

‘You said we’re ten years behind the Chinese!’

‘You are. Their electric vehicle usage and coal-oil expansion could push their GDP up twenty percent from the ten its at now. And now that I’ve worried the people, you can try and enact more austerity measures and get more bills passed, especially if the Democrats take a few seats off you.’

‘You gave Sanchez ammunition!’

‘If he tries to use it I’ll stop him. And he will listen,’ Jimmy insisted.

The Chief of Staff said, ‘You showed nothing but contempt for the panel.’

‘Did they deserve otherwise?’ I asked.

Jimmy explained, 'Today's rant ... puts me in tune with the little guy in small town America, and will strike a chord after the tsunami, because no matter what the federal government does to try and to help people - they'll not be appreciated. After the tsunami, people's trust in the federal government will fall, and there's nothing you can do. But, if I'm seen more as a people's champion, I can give you a good write up.'

'Nothing I do ... is accidental, or emotional. There are things that you guys can do, and there are things that require people power - plus a change of attitude in the populace. My aim, was to install a feeling of urgency, and that will help.'

I said, 'And it's still fucking ridiculous that your senators still don't trust us or know what we're about.'

'You've been buying dollars,' a man noted, directing his comment to me.

'Yes. What's your point?' I curtly asked.

'Just wondering ... why?'

'To prop up the dollar,' I carefully mouthed.

'And yet you just lambasted our political system on national television.'

'Which you obviously weren't watching closely, or not paying attention,' Jimmy said. 'It's about saving everyone. You included!'

'You have deeper pockets than we calculated,' the same man said.

'The GDP of our region is higher than we report,' I said. 'Much higher. We're buying dollars off Europeans and others and paying the staff in dollars - which helps you lot.'

'And you just ordered enough planes to keep Boeing busy for a decade,' Samuels noted. 'For which we're grateful,' he quickly added.

'We're using spare cash to buy anything produced on the west coast,' I informed them. 'It all helps.'

'Not sure I understood ... about offering our citizens homes and jobs in Africa,' Samuels began. 'It makes us look ... less powerful in the world.'

'For the next ten years, the name of the game is integration,' Jimmy told him. 'I'll be pressuring you to accept more Chinese and Russian tourists, and closer ties. Before 2025 you need to be closely linked, because we don't want any nation to say that they're doing more than another. That ... tension, could cause a fatal split. And, in case you bright gentlemen haven't figured it out yet, New Kinshasa

is a melting pot for nations. From it, I expect new companies to grow, with directors from many nations on the board, as with CAR.'

'Could we get some warning about shows like that in future?' Samuels asked. 'Maybe some input?'

'No. What I do is beyond your time in office, and beyond the life spans of all of you,' Jimmy stated, and I had to puzzle the odd remark. So did the others. 'There's still a lot you don't know. And, when you understand ... you'll understand.'

They glanced at each other.

'Might we know how much you intend to spend – as a private individual – on helping after the tsunami?' the Chief asked.

'Why?' I cut in with.

'It may make us look bad.'

'Again, why?' I asked. 'If we help ... you waste less tax payer's money.'

'And that makes *you two* look good,' a man noted.

'Which is part of the aim,' Jimmy pointed out. 'Unless you feel that my task would be easier ... if I were less popular?'

'Should our efforts not be coordinated?' the Chief asked.

'They will be,' Jimmy insisted. 'But I can't be seen to *sit by* when people know that I have ... *deep pockets*.'

'Could you put a figure on it,' the Chief nudged.

'Approximately fifty billion dollars.'

That had an effect. They exchanged shocked looks.

'And don't you think that may make us look bad?' Samuels asked.

'No. You're trying to spend the appropriate amount, and trying not to waste taxpayer's money,' Jimmy told them. 'Besides, you're spending a hell of a lot more.'

'Which will be lost in the detail,' the Chief said.

'Would you like us to spend less?' I asked.

No one answered, they didn't dare. We went around in circles for a while, the ruling elite worried that we were up to something – which we were – they just couldn't figure it out. And, with an election just weeks away, they were all twitchy, seeing our attack on the senate committee as an attack on them.

We reassured the most powerful men in the world, and I felt a bit odd, sat there watching how the most powerful men in the world were reacting to us.

Jumping back aboard Silo One, we flew off to Seattle, landing at Boeing's own airfield. The last time we landed here we had to leave US airspace and skirt around it, now I felt a little more welcome, if

only by Boeing. The senior executives met us as honoured guests, even though it was now 8pm and dark, and drove us to the home of one of the board members, a suitably large and secure estate. They even had accommodation for some of our security detail, the rest having to book into a motel just down the road.

Dinner was ready as soon as we had arrived, and we settled about a large table, being waited on by three wives and two maids. It wasn't long before we got into talking aircraft sales; they certainly weren't bashful. They raised the issue of payment on account, since we were ordering a great many aircraft. Our credit was good, very good, but they wished to re-hire a few people they had laid off recently, both in their own plants and in subsidiaries.

'We can pay your Fed, but in our region, and they can pay you,' I suggested. 'We're trying to hang onto our dollars to pay the workers in our region.'

'How much would you like?' Jimmy asked.

'However much we can get away with,' they joked. 'And, we'd sweeten the price for a good upfront payment.'

'Again, how much would you like?' Jimmy pressed.

They exchanged looks. 'One point five?'

The man meant billions, each 747 topping out at one hundred and eighty-five million dollars these days, without the extras.

'Let's call it two point five, to ease your cash flow,' Jimmy offered.

They exchanged looks. 'You serious, Jimmy?' the main man asked.

Jimmy nodded. 'The west coast will need jobs after the tsunami. Hell, it needs jobs now. The money would be a zero percent loan, and when you deliver the aircraft you can bill us and adjust it.'

'Well, I wasn't going to offer you the good desserts,' the main man joked. 'But now you can have ice cream.'

After the lengthy meal we sat about an artificial log fire, many of the men off to wives and families. We sat drinking, and chatting about the development of Boeing aircraft. I mentioned Lucy's flying and they were impressed, offering her the use of their simulator if she ever visited. I made a mental note not to tell her; she would have probably asked me to fly her over straight away. And we had already lost one daughter.

In my allocated guest room I fired up my laptop and loaded the communications software, dialling Helen. The screen came to life a few seconds later, a view of her elbow. 'Can you hear me?'

‘Yes, just picking chocolate out of Liz’s hair,’ Helen informed me.

A shrill cry suggested that a little more soap was needed, and a little less tugging.

Exasperated, Helen lifted Liz to her knee and faced her laptop, the backdrop being our lounge. I could now see brown chocolate in Liz’s blonde hair.

‘Hey, baby. You been eating chocolate?’

‘No, it wasn’t me,’ came back, a shake of the head.

‘How’s it going?’ Helen asked.

‘Samuels was pissed at the way Jimmy spoke to the senate committee, he’s worried about the election. Now we’re in the house of one of the guys from Boeing; had a meal and a few drinks, just settling down. How was your day, babes?’

‘I’ve been handling projects for the volunteers, for Jimmy. We’ve got more volunteers now than projects, and more applying all the time. The corporation are building more apartments for them all. Oh, and Lucy has a boyfriend.’

‘*Boyfriend*, boyfriend?’

‘I saw them kissing out the window.’

‘How old is he?’ I asked.

‘Same age.’

‘Well, we’ve got that to be thankful for.’

‘She’s going for the intellectual type.’

‘Where are you, daddy?’ Liz asked, puzzling the laptop image.

‘I’m in another country, a place called America.’

‘Are you up in the airy-plane?’

‘No, babes, but I will be tomorrow.’

‘Down to L.A.?’ Helen asked.

‘Yep. See Oliver Standish about making a few films.’

‘Will you see Brad?’ Helen asked.

‘No, keeping a low profile as far as he’s concerned. For the moment at least.’

‘Right, well I’ve got a shower to put this young lady under.’

‘Say hello to Lucy for me. By Liz.’

She shrieked and struggled before the screen went blank, and I didn’t envy Helen’s task. Liz was a toddler, but she ran faster than we did, and could get down the stairs on her bum in a flash and outpace us.

I opened my emails and began at the top.

Our coal-oil refineries had grown to six facilities, output up thirty percent. I marked it as read and moved on. Next, I discovered that

the various governments involved with the next generation nuclear plant in Somalia were arguing about further funding. I simply ordered the corporation to send money over.

My phone beeped. Lifting it, I could see Shelly's cartoon image waving. I touched the screen and a real image of Shelly appeared.

'Hey, dad, you with Boeing?'

'Just had a meal with them. Is it on the news?'

'No, silly; I check your itinerary with Sharon at the house.'

'Where are you?'

'Los Angeles.'

'We're there tomorrow.'

'Duh, I know,' came back. 'I'll want a lift.'

'A lift?'

'To Hawaii and New Zealand.'

'We're going to New Zealand?' I asked.

'It's suppose to be secret, but Sharon told me.'

'You know more than me, babes.'

'Always, daddy. Always.'

'So ... what you been up to?'

'Had a look around three universities here.'

'Any you like?' I asked, knowing more than she did about her future.

'Yes, I like the marine biology course here. But I might try and add microbiology to it.'

'So, what do you want to be when you grow up?'

She smiled. 'We'll see. Oh, in case you see it, I've done some modelling work; clothes, watches, jewellery.'

'Making a buck?'

'I made three million bucks actually.'

'Well don't forget me, I may be poor some day.'

'Hah! Jimmy will never be poor. I'll see you tomorrow at Oliver's house. Night.'

Her image disappeared, and I returned to my emails.

In the morning we flew down the coast, a coast that was soon to be devastated. En route, I read a paper that one of the security guys had brought with him, a story about a clever bit of software that worked out which areas would be hit, and how badly. Some coastal towns would be completely spared, others destroyed, and a few towns ten miles inland would be badly hit after water had funnelled up their estuaries.

At the bottom of the article was a picture of Brad, and I read on, seeing that he was using the software to warn people, and to set-up shelters for the homeless near the areas that would be affected, even soups kitchens. It gave me an idea. I fired up my laptop and composed an email for him.

‘Brad, don’t re-invent the wheel. Work a deal with McDonalds, KFC, and others. Print up vouchers and give them to people already on welfare as a test. After the tsunami, give vouchers to those that lose their homes, one free meal a day at least. Thinking on, if you can find some way of doing that - but in a little more low-fat and healthy kind of way, that might be good as well. We’ll fund it, you go talk to the companies.’

Returning to my paper, after staring out the window and down at the coast in question for a while, I read an economic forecast for the States that was all doom and gloom. Not only that, they seemed to be constantly referring to “when” it happens and “after” it happens. I had to wonder if they were paying attention.

At Oliver’s house, we informed our security detail that there were no spare rooms, and they set-up a rota system, booking into a local hotel. Oliver and his wife greeted us, Shelly giving me a kiss on the cheek, but hugging Jimmy.

My dear daughter was now taller than me, and more like her mother every day. With sunglasses on, I had to look twice. Settled around the dinning room table, and tucking in to some tasty ribs, we got down to business.

‘What’s the progress with the film scripts?’ I asked Oliver.

‘There are fifty-two in a box ready for you,’ he said with a smirk. ‘In addition to the ones I sent you.’

‘Fifty-two?’ I queried. ‘If they’re anything like the last lot, we’ll be at this a while.’

‘No shortage of scripts around here,’ Oliver pointed out. ‘Every waitress and limo driver has a script.’

‘And this batch ... they’re all suitable?’ I asked.

‘Most are disaster movies, and most have Rescue Force in them. Some are about Africa, some about time travel, and many about future calamities.’

I faced Jimmy. ‘You’d best check the shortlist as well.’

Jimmy nodded. ‘Leave a box here for Shelly to go through. It’ll give her something to do, and make her even more popular in movie circles.’

I faced Shelly. ‘You’re popular in movie circles?’

‘I have friends in the business,’ she coyly admitted.

‘You make friends quickly,’ I quipped, getting a look from her. ‘But don’t they have strict rules over here about drinking and ID cards?’

‘They do,’ Oliver said after Shelly sat staring back at me. ‘And, thanks to the papers, all the bar staff know how old Shelly is.’

‘I only drink occasionally, and in private,’ Shelly stated.

‘Cutting down then,’ I noted.

‘You don’t need to worry about her,’ Jimmy told me. ‘Because the first time she causes us any bad publicity I’ll have her returned to the UK in handcuffs.’

Shelly now shot Jimmy a look. He slowly turned his head to her. ‘Toy with me, young lady, and I’ll take all of your toys off you.’

She lowered her gaze after being stared at, an awkward silence created.

I faced Oliver. ‘I’ll go through the scripts on the plane, and tell you which one’s I like – if any. Those that Shelly likes, send me copies to have a nose at.’

‘There’s a script that I’ve brought,’ Jimmy told Oliver. ‘Which is more like four scripts in one. It’s about the soldiers who went to Afghanistan, to fight in the integrated units. That one is your priority, and we’ll want it made in English, French, Russian and Chinese. The military staff in Kenya will cooperate, and you can shoot on location in the Somali or Ethiopian highlands.’

‘I’ve got all the studios chasing me,’ Oliver said with a smile. ‘Even had a few celebs drop by and ask for work.’

‘Quite a few,’ Oliver’s wife added.

‘Will L.A. be hit badly in January?’ Oliver asked a while later.

‘Some areas,’ Jimmy replied. ‘Fortunately, you have a built up area that will act like a dam to the wave; the buildings will act like breakers. The authorities will dig trenches in the sand, and that will disrupt the wave, and they’ll place concrete blocks across streets. The water will seep inland a fair way, but the brunt of the damage will be taken by the first block or two.

‘The Venice Beach area will be less of a beach and more exposed rock, the sand will be in-land in peoples bedrooms; six feet high. The marinas will be flooded, but mostly undamaged. San Francisco will miss most of it, but the towns further up the estuary will be badly affected; tsunamis like shallow water and funnels. Then they rear up and do the damage.’

I faced Shelly. ‘Are you planning on being here when the wave hits?’

‘No, I wanted to have a look around the Caribbean this winter.’

‘And New Zealand?’ I added.

‘They have an oceanography course that I wanted to look at.’

‘Don’t they produce a prospectus?’ Oliver asked.

‘Yes, but I want to see the facilities and the local town. Oceanography courses have a lot of practical elements.’

‘Time at sea aboard ship,’ I put in without looking up.

In the morning we reclaimed our aircraft, several of the security staff having remained onboard overnight, and I started on the scripts as we climbed away from Los Angeles, heading for Hawaii.

One of the scripts had a character called Paul Hilton, and he was a bit of an effeminate sidekick to Ricky Stone, a time travelling super-hero. It got a big red cross on the front page. Cheeky bastards.

En route, I sat and had a beer with Jimmy, Shelly reading a book on microbiology opposite us. ‘The newspapers seem to think that the tsunami will knock the US economy down.’

‘It will.’

‘So ... why don’t they factor that in now?’

‘They have, to some degree, but there’s a big difference between being diagnosed with cancer, and one day finding your hair in the sink. They still think there’s hope, and no ... they haven’t quite grasped it. Oh, Sanchez will be meeting us there.’

‘Is he electioneering?’

‘No, we have to break some bad news to the islanders, a sizeable number of who aim to remain and to take to the hills; there could be a hundred and fifty thousand staying behind. But ... but tomorrow around noon they’ll get a wake up call, courtesy of Mother Nature.’

‘A quake?’ I asked, wide-eyed, Shelly looking up.

‘A modest one. It’s the timing signal, and it’ll fix the exact time of the main quake, just in case my memory is not what it should be. There’ll be three more between now and the big one.’

‘If Sanchez wins, he’ll be inheriting a crisis, since they don’t seem to be prepared.’

‘Samuels is prepared, but I haven’t pushed him as much as I should have.’

‘You want the people to bash the federal emergency package,’ I noted.

‘Has to be done, I’m afraid. You see, no matter how hard we try, we could never get the government to do what we want, because it’s not a united government. You have a president, a congress, a senate, powerful lobbyists, and a politically biased media. You also have the Pentagon and other interested groups, and they all pull in different

directions, making it near impossible for the President to get anything done.

‘Whoever wins next month their majority will be small, and so far it looks fifty-fifty. So there could be a president with a small majority in congress, and maybe a minority in the senate. It’ll be a disaster; the main emergency bill will never get passed.’

‘And we’ll help in the meantime,’ I noted.

‘If the bill isn’t passed, Wall Street will crash, and financial liquidity will be squeezed further, causing a genuine recession.’

‘How much of that gold will we use?’

‘A lot of it.’

‘If it was used to develop Africa...’ I posed.

‘Yes, it would be a super-power in itself. But if America descends into a full-blown recession, then right-wing elements will surface - strong nationalist leaders, and they’ll think about aggressive moves - starting by not paying creditors like the Chinese.’

‘They’ll default?’ I puzzled.

‘Deliberately. The Fed will print dollars and hyperinflation will take over, because with a US recession comes global recession, and oil sales dry up; those holding dollars would sell them.’

‘And the value of the dollar drops, the costs of imports rise and makes the recession worse,’ I thought out loud. ‘A double effect.’

‘It’s an integrated global economy,’ Jimmy said. ‘When the biggest kid on the block falls, they all fall. That in turn makes the biggest kid on the block a big hungry grizzly bear with an empty belly - and sharp claws.’

‘Bring back Hardon Chase,’ I quipped.

‘Funny you should say that...’

‘What?’ I asked after a moment.

‘I’ve got him together with Brad.’

‘Chase can’t be the President again.’

‘No, but he can advise Brad,’ Jimmy said.

‘Brad...? President Brad?’ I glanced out the window. ‘You crafty old sod.’

In Honolulu, security was tight, something of a protest going on outside, a protest about our visit. That angered me greatly; we weren’t about to cause the damn quake, we were just the messengers.

We left the airport via a side entrance, an army escort provided since there were tens of thousands of soldiers already on the island. We met Sanchez at a hotel, a well-guarded hotel, and he joined us as

we travelled around to a meeting of the local politicians and community representatives. The police had barricades out, soldiers on duty, the crowds kept back. And this lot did not want our autographs.

I struggled to understand their attitude. It was a natural disaster, and they'd be alive afterwards, not dead. I could understand complaints about compensation, but what could anyone do. Some of the placards I noticed said 'We will not give up our homes!', and I had to wonder what the hell was going through their minds.

Moving through the government offices, Jimmy checked his watch, asking for a room where we could talk with Sanchez. They found us a room, even cold drinks, and we sat with Sanchez and his party, his disaster team, which included a number of senior military officers.

Jimmy asked for a quick briefing on where we were with preparations, and the military detailed their plans, some of which shocked me. Jimmy indicated to Sanchez how we would help the people after the quake, before leading us toward the arranged meeting.

Entering a large room, we found a dozen desks pushed together, fifty people sat around them, many being ancestral Hawaiians, only two women present. Police stood off to one side, making me think about how friendly this crowd was going to be. Jimmy checked his phone, noting the time. We sat facing our inquisitors, most of them offering us stony-glances or folded arms.

Jimmy then offered one particular man a long sentence in what I presumed was a native tongue. The man stared back for a moment, unfolded his arms and replied, he and Jimmy entering into something of a conversation. Jimmy finally broke to English. 'It would be rude for us not to converse in English, since there are many *white folk* here.'

He reached into his jacket pocket and produced a glass sand-timer. Turning it so that the majority of the sand was at the top, he placed it in the middle of the table, everyone focusing on it as the sand started to run out.

'First, let's get the bad news out of the way,' Jimmy said. He faced Sanchez. 'If I may?' Sanchez nodded. Jimmy faced the men arranged opposite us. 'In a week's time, all oil and fuel will be cut, no more deliveries will be made.'

The assembled locals glanced at each other, shocked. And angered.

‘On the 12th of December, the last food ship will arrive. After it, no more will come. On the 6th of January, all power and phone lines will be cut.’

A chorus of indignant comments rose up, which soon led to raised voices and a few fists banging the table. Meanwhile, Jimmy leant forwards and rested on his arms, studying the sand-timer, and seemingly ignoring the melee around him. I focused on it as well, so did a curious Sanchez.

With most of the sand out of the timer, and a few of the rowdy locals also now focused on it, the building shook, ceiling panels and dust falling. Everyone apart from Jimmy looked up, the police wanting to evacuate us. Jimmy quietly told Sanchez that we were safe, and Sanchez loudly told everyone to settle down as Jimmy turned the sand-timer over.

When the overlapping conversations had eased a little, Jimmy said, ‘Where were we? Ah, yes, you were about to tell me that you’ll stay in your homes. Well, ladies and gentlemen, you can stay in your homes if you wish. But I ask that your children be put aboard boats and allowed to be a mile offshore. That, is not much to ask, and they can return to your homes afterwards; after ... nothing happens.’

He again focused on the sand-timer, and so did everyone else now. ‘The sand runs out of the timer. It feels nothing; no pain, nor joy, no sorrow. It simply runs out of the timer.’

With the sand just about out of the upper capsule, another quake struck, louder this time, more dust falling from the ceiling. Jimmy sat calmly, Sanchez and his party exchanging looks, and looking like they wanted to be the hell outside.

Jimmy turned the sand-time on its side and broke it with the side of a fist. Making eye contact with the indigenous man he had spoken to previously, he said, ‘Only I can stop the timer. You, my friend, will perish in ignorance.’

He eased back. ‘Your ancestors had a better appreciation of Mother Nature, and of her fickle moods. I’m sure that there were many times when your people felt the earth shake, and witnessed volcanoes exploding. And, I’m sure, that those things had an effect on their desire to get into a canoe and move on. You landed here around the time of Christ, but now it’s time to move again, and some of you will go back to Polynesia with my help and my money.

‘Some will go to America, to Los Angeles, and I will again help with money. Some will also accept my invitation to come and live in Africa, and to help my cause. Those that remain will become legend, joining their ancestors a little too soon.’

He stood, the police still fussing and wanting to move us out. Pointing at the timer, he said, 'I can fix the timer, and I can make the sand go back up. I ... can wind back time, you ... cannot. If you think you can, the timer is there.'

He nodded at Sanchez and his party, and we led a relieved group out. Oddly enough, the protestors outside had dispersed.

On the coach, Sanchez said, 'That was a hell of a parlour trick.'

'I knew the date and time of the quakes,' Jimmy informed Sanchez. 'And I knew it would have more of an effect than just words.'

At Sanchez's hotel, we settled around the bar, the residents being allowed back in, not least because Jimmy said there would be no more quakes today.

'Samuels is pissed at you,' Sanchez noted, an invite to explain the situation.

'He saw my attack on the senate committee as an attack on the government,' Jimmy explained.

'Was it?' Sanchez asked.

'No,' Jimmy insisted. 'Besides, you may be in that government soon enough. Then you'll see just how little power you really have, especially with a small margin.'

'And the economy?' Sanchez nudged.

'Whoever gets in will preside over a mess,' Jimmy said.

'I won't be leaving the baby on the church steps,' Sanchez carefully mouthed. 'I expect it to be hard, that's why I'm doing it.'

'You'll have our support,' Jimmy assured him. 'But there's no quick fix.'

Sanchez eased back. 'We've moved out a million people already. The retirees were easy enough to move, the military, federal employees. Businessmen and the rich have all gone.'

'Leaving the poor ... and the ancestral Hawaiians,' Jimmy noted.

'The poor are being offered accommodation across the States, fifty thousand a week moving out. Money that we earmarked to move the better-off is being used as incentives for the poor, grants and loans.'

'I think you'll find them a little more willing to move after today,' I told Sanchez.

He lifted his eyebrows and nodded. 'Biggest problems are the smaller islands.'

'Don't be soft with them,' Jimmy urged. 'Use the military. Cut power sooner; water and phones. Tear down schools and hospitals, sports centres. Those homes that are empty, torch them. You have to

move them away from a normal and tranquil lifestyle and ram home the reality.'

'Cruel to be kind,' I softly added. 'And we'll be offering money for the displaced, a lot of money. That should help.'

'I have people arriving here in a few days,' Jimmy told Sanchez. 'They'll offer homes in Africa and other places. We'll see if we can't move a few people out for you.'

Back on the plane, Shelly was still reading her book. 'I thought the quake was early for a minute there,' she said, marking her page.

'Just the foreshocks,' I told her. 'Jimmy just scared the crap out of the locals. He timed the meeting.'

'We off now?' she asked.

'Yes, Auckland, New Zealand.'

After take-off I opened the newspaper again and started to read.

Landing in Auckland after midnight, and worried that we seemed to be landing on the water of the bay before finding the runway, we found that there were no angry crowds to meet us, no crowds at all. We elected to stay on the plane and catch some sleep.

At 8am we ventured out, a few reporters observing our coach leave the airport, and made a very short journey to the New Zealand Housing Association buildings, where the Prime Minister and his colleagues awaited us. Shelly came along, wishing to meet the Prime Minister. I had my suspicions as to why, and the man thought that she was Helen. Shelly was not best pleased to be mistaken for her mum, but it brought a smile to my face.

The Prime Minister walked us inside, chatting about the flight and our specialised aircraft. I suspected he was a little jealous. In a meeting room, we settled about an oval table, pictures on the walls of Captain Cook, of old sail boats and indigenous peoples in traditional dress, whaling boats with harpoons.

'Something of a mystery, this meeting,' the Prime Minister noted. 'And we were asked to keep it quiet.' He held his hands wide. 'We're all intrigued.'

'Then I'll get to the point,' Jimmy said. 'If you were given financial assistance, would you take a few Hawaiian families?'

They glanced at each other.

'Well, how many?' the Prime Minister asked.

'How much ... would a house cost to build?' Jimmy asked. 'And what would be the burden on social services in the years after their arrival?'

‘Property around Auckland is high, cheaper further out. A three bed house would be around a hundred and twenty thousand English pounds, but cheaper further out.’

‘How much cheaper?’ Jimmy nudged.

‘Down to forty thousand for single story starter units,’ they explained.

‘OK, I’ll make this simple. First, are you happy to accept Hawaiians?’

‘We’ve already discussed it, and a few have settled here already,’ they explained. ‘So we have no particular objections about taking a few, other than the cost - and the current state of our economy.’

‘And if I asked you to take more than just a few?’ Jimmy nudged.

‘It would have to be put to the people, but the social burden would be the issue.’

‘And if I paid local companies to build new apartment blocks, thereby helping with employment.’

‘That would be an incentive, yes.’

‘And if I gave you five billion pounds towards the social burden?’

They blinked.

‘Well, we could take quite a few.’

‘Could you do something for me as we break for a cup of tea: work out a unit cost to build a basic apartment, and factor in the school, medical and welfare costs of a typical family. Then tell me what ten thousand migrant families would cost you. And I would appreciate a rough figure today.’

They blinked again, but got on it, paper and pens out as we stood and looked at the pictures on the walls, Shelly introducing herself to the Prime Minister and mentioning that she may wish to study here. I shook my head, not knowing who she got the cheeky nature from.

They came back with a figure, little more than a hundred thousand pounds per family, allowing for a social burden of six years.

‘Fine,’ Jimmy told them. ‘I’ll be flying over five billion in gold, and I’d like you to take on board as many families as you can – but primarily ancestral Hawaiians. You’ll also be able to claim some money from the American Government for the families – but that will take a year or two.’

Back at the plane, I cornered the head of Shelly’s security detail. ‘So, what’s the little darling been up to?’

‘I’m under orders from Jimmy not to say, sorry, you’ll have to ask him.’

I moved closer. 'She's my frigging daughter, not his!'

'Yes, sir, but he pays my wages, and he'd pull my head out the socket. Sorry, boss. But Jimmy does keep a careful eye on her, and ... interferes if he thinks it necessary.'

'Such as?' I probed.

'One young actor, twenty-five, took a shine to her. Jimmy rang him, and the lad stopped taking her calls.'

'Oh,' I said after a moment.

'I speak to Jimmy about her almost every day,' the man offered. 'She's quite sensible really, she studies and reads a lot, she's never falling down drunk or making a scene. And if the men get pushy she decks them.'

'She's decked a few men?'

The man nodded.

'Takes after her mum,' I noted.

'In Singapore she visited the hospitals, the children's wards. Flies the flag for you.'

'She does?'

'She visits the Rescue Force units as well. Embarrassed the Chinese Premier though; he offered a hand to shake and she kissed and hugged him.'

I smiled. 'Take care of her.'

We left Shelly in New Zealand, with her security detail, the poor young men of Auckland about to feel a right hook, and headed towards Goma and a surprise meeting of certain world leaders. I found out en route and was concerned, since the Russians, Chinese and Japanese were involved, but not the British or Americans. It was bound to get out, and our dear Prime Minister would be asking questions.

He had recently stated that he would not serve another term, and even hinted at stepping down sooner, possibly in the spring. I guess he had enough. Finally.

Arriving at the mansion in Goma I found Helen and Liz, quite expecting them to be there to surprise me, Lucy in school. I kissed Helen and grabbed Liz, the little lady struggling to get away and get back to some serious face stuffing. It was almost 5am, and I chose a quick dip as a way of fixing the jetlag, the duty guards saying hello.

I was soon fresh and awake, and chasing Liz around the house. I didn't know about swimming, this little lady was a sprinter. Catching her, I put her over my shoulder and carried her to the pool, threatening to drop her in and waking the neighbours with her shrill

calls. When I placed her down she dived in anyway, surfacing and giggling.

‘You change her!’ came from a window above me.

I dipped back in the pool, soon joined by Jimmy, a rare partaker of early dips.

‘Can’t be bugged here,’ he said.

‘Problems?’ I asked, keeping an eye on Liz.

‘Not really, but we’re dealing with paranoid people, and in a recession.’

‘Samuels will be on the phone as soon as he knows about the others coming here.’

‘They’re here for the opening of their embassies.’

‘They’ve been open a while,’ I puzzled.

‘Official opening,’ Jimmy suggested, making a face.

‘And this meeting?’

‘A new world order,’ Jimmy enthusiastically stated. ‘I let Han know how much gold we have, since it alters the playing field, and the Russians have had a hint. They can also see the GDP of our region growing faster than they have a graph to put it on. Some analysts have our region becoming a super-power in its own right in a decade.’

‘Will it?’

‘That’s not the plan. Plan is to prop-up the Americans.’

‘And Russia and China might like to see America diminished a tad.’

‘Old ideas and prejudices are hard to remove. We’ve made a lot of progress, but...’

‘We need Russia and China to be nice to the States for a few years, and that means they take a few points off their chart. Should be an interesting meeting; we’ll need our poker faces on.’

‘We can exaggerate the gold and diamonds a bit –’

‘Don’t frigging need to!’ I pointed out. ‘I’ve been checking on national gold reserves, and we’ve enough to worry the IMF!’

‘Which is why we keep it quiet. There’s also the question of the African people not wanting to share it, so we have to make it look like we’re benefiting the African people as investors – more than assisting the US. And that gold mine – I’ve wiped the records several times, so no one quite knows how much was produced, and the managers are all hand-picked men who believe that things like our imports cost more than they do. They’ll also soon think that I’m lodging gold overseas for African credit.’

I did change Liz myself, after she had run through the house wet and left a soggy trail, and sat down to breakfast around the pool with Helen and the toddler. Liz was, as her sisters had been, well behaved and quietly attentive when there was food about. The arrival of sustenance was reverently anticipated before being savagely devoured.

I informed Helen of some of the gossip about Shelly, and Jimmy's interference, but she seemed to know. She certainly didn't react to it. We enjoyed a quiet day, Liz happy to slosh around the pool with our African nanny, and we dined out at the Gotham City marina that evening.

The next morning we met the Russians, Chinese and Japanese delegations at the conference centre, in a room above the main hall, familiar old faces greeted, a new Chinese Premier welcomed. The former Chinese Finance Minister and Foreign Minister were in on the meeting, as were Han and Ivan. When everyone finally settled, and it took twenty minutes, Jimmy kicked off the meeting.

'Ladies and gentlemen, communist dictators, hard-working aides.'

I smiled, the new Chinese Premier not quite knowing how to take the salutation.

'We've asked you here today ... for a private meeting about an important topic, although I'm sure that the opening of your embassies is more important than my ramblings.

'In just a few short weeks we'll have a new American president-elect, who may well be the old president. Both men ... are good men, and I can work with either. But whoever wins will face a greater problem than they realise. They have not prepared as well as they should have for the Hawaiian quake, and the federal aid package will take time to get through Congress.

'The election will be a close-fought thing, and as such there will be no clear majority in either house. That means ... that the aid package may take many months to agree to, longer to implement. That will lead to ... unrest, in some quarters. The American people will also react badly to the damage caused by the tsunami - worse than may be expected.

'I expect the US markets to crash, and I expect the US banks to deliberately try and make that crash worse to make themselves some money. The markets will be volatile and down, and bank liquidity will be affected. The knock-on effect will hit European bourses and the other markets. Within three months, the global recession will

bite, and will affect us all. Well, it won't affect Africa too much - we're internalising our markets and using our own mined products.

'It is my aim, as far as Africa is concerned, to absorb excess materials - and to use them internally for a year or two - returning to a fuller export order book afterwards. I don't anticipate a fall in GDP, rather a rise of at least fifteen percent.

'But we're here to discuss America, and what we can do - and will do, to assist the American economy, because great dangers lay ahead. If the US economy falls to where I expect it to, we can expect a global recession. If they fall just a few points lower we can expect the rise of protectionism, and then national unrest leading to the rise of nationalism; hard liners taking office is a definite possibility.'

'They will become aggressive?' the Chinese asked.

'We have always known that they would, if a certain set of factors was in place, conditions reached. If they do become aggressive, then all is lost. Because if they do become aggressive, then the global recession will become much worse, and unity at 2025 will be extremely unlikely. With no unity at 2025, the chances of defeating The Brotherhood are slim.

'Ladies and gentlemen, we started these meetings - many years ago - with this detail before us. Since then we have all enjoyed cordial relations, and we have all prospered. But we all knew this day would come. Well, the day is here, and we need to make plans. My plan, is to prop-up the US economy as much as I can over the next one to two years, even if that is done to the detriment of others. Doing nothing ... is not an option.

'There will now be a ten minute break for tea, and for questions and proposals to be formulated. Thank you.' Jimmy stood and led me towards the refreshments, chatting innocuously about boats on the lake.

When we reconvened, Jimmy began with, 'It is my aim to formally ask all of your three nations to do what you can to assist the US economy in the short-term, whether you like the proposition or not. I have, in years gone by, provided you with coal-oil technology and the super-drug, which has boosted your economies. Kindly keep that in mind. First, let's take questions. China?'

Han asked, 'Given your financial strength in Africa, and your reserves, would not the development of Africa as a super-power counterbalance The Brotherhood.'

'A good question. What would happen, is that the Brotherhood would find it difficult to attack Africa, and so would be inclined to attack Europe and Russia instead. If there was no unity in place in

2025, I would leave the African armies here to defend their homelands. They would not be deployed to work alone.

‘Now, given the situation in Africa – which is far better than I had anticipated – Africa and South America would do well after the rise of the Brotherhood. You ... would not fare as well. Russia?’

‘If the three of us worked together, could we not quell the Brotherhood?’

‘Yes, certainly, for a time at least. That would leave the three of us exhausted and broke, America building up its strength and separated by a nice big ocean. And, following the destruction of the Middle East, America may consider it had more to gain by a fight with you in your weakened states.’

They didn’t seem to like that scenario.

‘What say the Japanese?’ Jimmy asked.

‘You ask that we attempt to assist the US economy ... out of fear of bullying?’

‘Yes. And bullying is a good way to describe how your future relationship with a hard-line American leader may go. Trust me, I know.’

Han said, ‘You are asking that we assist economically the richest nation.’

‘I’m asking that you assist the country with the largest army, a willingness to use it, and nationalist leaders waiting in the wings. If you don’t assist, and those nationalist leaders rise, you’ll be looking at a global conflict in parallel to the fight against The Brotherhood. I said it at the start, and I’ll say it again: taking on The Brotherhood will require global cooperation, or failure is a certainty. Trust me, I know for definite; as much as I know the detail of the quake about to hit. But when the American political quake hits, it will do you all far more damage.’

‘What did you have in mind?’ Han asked.

‘That you adjust your import/export ratios a few percent points in favour of the US. If that’s successful, then I’ll try and redress the balance afterwards. I will also provide you with additional information and technology.’

‘You will use your reserves to assist the US economy?’ Han asked.

‘If necessary, I’ll use all of my reserves, leaving Africa exhausted and weakened.’

Han nudged, ‘That will leave the African armies with less of a chance to fight The Brotherhood.’

‘If America sees the rise of nationalism, it won’t matter a damn.’

‘Do you have figures?’ the Chinese asked.

‘No,’ Jimmy told them. ‘I ask this: that you assist as much as is practical, that you record the steps that you take, and – if successful – we will try and square the books afterwards. And, if not successful, you’ll all be dead anyway. I will leave the percentages up to you, but they will colour the nature of my assistance to you in the future. Fail to help, and we will have nothing much to say to each other till 2025.’

‘If, in the meantime, you enter into a conflict with America, I’ll develop Africa as the world’s remaining super-power, and hold off against the Brotherhood as long as possible. We’ll now take a two-hour break. Thank you.’

Jimmy led Helen and myself back to the house for a bite to eat.

I nudged Jimmy towards the pool. ‘If a nationalistic leader gets into the White House, he’ll have a hard time up against the blacks and Hispanics in America.’

Jimmy nodded, and waited.

‘What, civil unrest? Civil war?’

‘Ninety-five percent of American power and wealth is in the hands of less than five percent of the people, and they’re white folk. In the last two decades, the rich have gotten much richer and the poor have stood still. That gap will cause problems, but the police will want their bellies filled by those who can pay. Poor Hispanics can’t pay.’

‘If Sanchez wins –’

‘He’ll get the blame for the economic tumble, and be ousted before his term is up. The big banks influence the Fed, and they’ll make his policies look bad. They’ll trip him up.’

‘I sometimes wonder if the elite few know what they’re doing,’ I grumbled.

‘You and me both. They’ll collect all the money in America and live in gated complexes, the top one hundred richest people, unable to venture into the wilderness outside. If they knew the world was ending tomorrow, they’d raid their own banks and take the customer’s cash home, just to be the richest at the end.’

‘We should bust them up a bit more.’

‘Unfortunately, the Fed would then step in and help. And most people working in the Fed used to work in the big banks. They’re all dinner buddies; poacher and gamekeeper at the same table.’

‘And Brad?’ I asked.

‘A rare thing; a man who cares more for his fellow man than himself.’

‘Present company excepted.’

Jimmy smiled. ‘Maybe.’

‘So Brad will counter-balance the nationalists?’

‘And the banks.’

‘Could just hit them with an EMP,’ I suggested.

‘The thought had crossed my mind once or twice. But we’d hurt the small investors. Still, two of the big banks will get a wake-up call the day after the election; I have the autistic kids in there right now, having a look around the bank’s computer systems.’

‘That’ll hurt.’

Back in the meeting, we gathered our thoughts and waited for everyone to settle.

‘What say the Chinese?’ Jimmy asked.

‘We will work out a percentage and discuss it with you.’

‘That change, in your financial relationship with America, will need to take effect in February. Long-term changes are of little use. What say Russia?’

‘We will put together a package that may assist the dollar, but our own economy is suffering already.’

‘It will suffer a great deal more in February, and you must move quickly to lower the living costs of your own citizens. You have coal-oil, and you have my farms. If you assist enough, I will show you a way of producing coal-oil at ten dollars a barrel.’

That interested the Russians, the Chinese as well.

Jimmy began, ‘If we work together, we can dampen the worst effects. And, if my strategy works well enough in the next month, there’ll be less for us all to do. Kindly consider any additional questions, and have your aides come to the house. Thank you all for attending, and enjoy the facilities in New Kinshasa.’

‘Oh, almost forgot. I’ve greatly extended the facilities at the naval base in northern Somalia. There’s now a hostel, hotel and bars and restaurants. I would like to see both Russian and Chinese ships docking and using the facilities, the aim being to make friends with your potential adversaries. And ... let’s hope that drunken sailors don’t start a war.’

Back at the house, I stripped off and dived into the pool to join Liz, but my mind was on all things American; the biggest kid in the classroom.

Spaghetti western

A month later, Sanchez won the election by two states. Samuels would soon be just a memory, my good buddy Sanchez in power. But in the weeks that followed he rang less, which was disappointing.

With the election out of the way, Jimmy let loose the dogs of war. Money disappeared from a major bank, turning up in the Cayman Islands in the name of one of its directors, the details leaked. The FBI arrested the man at dawn one day, the news full of it.

An email then surfaced, allegedly from the outgoing chief of the Fed. It stated that he would 'work his magic' and get the charges dropped, but hinted at a good job for his efforts. He was fired straight away, and I doubted that he would get a good job for his efforts.

Our least favourite bank then lost a few hundred million on an up-bet when the markets were falling. Thing was, no one in the bank could remember making the trade. That was followed by the leaking of a series of faked emails. Since the emails were in the bank's own system, they appeared completely genuine. They gave a damning picture of what Jimmy knew would happen, but could not prove. One email read:

'When the tsunami hits, they'll be a great opportunity to short the market and sell the upside to our customers. We'll blame the tsunami, it's not our fault.'

Another said: 'If we shake the markets down enough, we'll get rid of that fucking spic immigrant Sanchez the day he takes office.' And that was from the CEO of the bank we didn't like.

Jimmy went public and condemned the men, suggesting that short selling should be banned when the tsunami strikes. The media were mixed, some still supporting the banks, who must have been wondering what the hell was happening.

The next email suggested that the senior figures in three banks were colluding to collapse the markets, both to make money and to 'get rid' of Sanchez. The detail was confirmed by two traders who turned themselves in to the FBI and SEC, confessing all. They did, however, confess to the New York Post first, and Jimmy confessed to having bribed them; as well as having put the men in place twenty years ago.

The banks were reeling, and the people were angry, Sanchez livid before he even took office. Jimmy sent Samuels an email: 'Take swift action now, or I will. And you won't like what I do.'

The Fed, the FBI and the SEC met with Samuels, and conspiracy charges were brought, although Jimmy was doubtful if they would stick. Samuels publicly condemned the banks in question, as did Sanchez. Jimmy suggested to the media that no down bets be allowed for a week either side of the tsunami, but no one stateside was happy with it.

The banks professed their innocence, but a week later another series of emails came out, traders confirming the intention to place down bets overseas. The public and the media were now actively debating the role of the banks and market makers, and a third trader stood up to confess all, detailing down bets made overseas and ready for the tsunami. He publicly stated that the banks aimed to wipe twenty percent off stocks, and then to buy the shares for themselves after the fall, to make a profit on the rebound.

Christmas approached, and Samuels was receiving more heat than his entire term in office combined had produced. He would be glad to be going. We enjoyed a family Christmas, Shelly flying back in to join us, Bob Davies and his wife coming over as well.

Rescue Force was put on notice, to be ready on the second of January, all leave cancelled and all training exercises cancelled. All Rescuers were told to have a good Christmas, because they would be away a long time. Cuba would lead the South American teams, spreading out along Chile, Ecuador, Colombia, and the Central American states up to Mexico. The Europeans would be spread around the Pacific, New Guinea and the Australian coast.

The Chinese and Russians would be taking care of their own coastlines, and the Africans would join the Europeans around Polynesia, ships with temporary helicopter decks being utilised. That left the considerable and capable US military to assist the west coast of America, since foreign assistance would not look good for the world's greatest super-power.

Then there was Brad, and his own army, an army of volunteers now some hundred thousand strong. In some small towns, just about everyone had signed up, even some of those who would be flooded themselves. Despite the US military build-up and planning, Jimmy insisted that Brad would do a better job of it.

He said, 'The military and civilians don't mix, especially not in America. For a soldier to tell a civilian to "*move along there*" is like striking a match over petrol.'

Christmas went well, a few SARS cases noted, but no panic in the media. For many, this would be the first peaceful Christmas for a

while. Shelly flew off on the 27th, heading to Barbados, and we flew down to Goma for New Year's Eve.

New Year's Day, Jimmy called Bob at Mapley from beside the pool. 'Bob, you awake?'

'Sat ready.'

'Send to all Rescue Force units: recall, form up on the morning of the 2nd. Expect earthquake at 06.25 on the 15th, tsunami to hit Pacific Rim four hours later. Full kit check tomorrow, unit formations, deployment the next day.'

'Got that.'

'Hueys?'

'On their way already, aboard the ships they'll operate from,' Bob confirmed.

'National civil defence readiness?'

'All reporting ready.'

'Passenger ships?'

'If it floats, it's heading to the Pacific.'

'And Hawaii?' Jimmy asked.

'They reckon that there's less than two hundred thousand left, and the army goes in tomorrow.'

'Any hiccups?'

'More people on mountain tops than I'd like, a few killed trying to get up the damn mountains.'

'Thank you, Bob. And ... good luck.'

'We've had twenty five years, so we should know it by now!'

With the call ended, I asked, 'Do we do anything now ... to assist the US economy? I mean, ahead of time?'

'No, because the markets *will* fall, even without the manipulation. Still, the Chinese have said that they'll buy stock that day, the Russians will buy some, and we'll buy a shit load.'

'There's a gold audit at the bank by the IMF tomorrow,' I pointed out.

'Yes, that should be ... interesting,' Jimmy said with a smile.

The next day, after the IMF had been to count our gold ingots, the British Prime Minister called. 'Jimmy, the IMF had you down as having more gold than China.'

'We mined up a bit more lately,' Jimmy responded.

'A bit more? You've increased your deposit ten fold!'

'And we'll need it to help the global economy in the years ahead.'

'And the British economy?'

‘You’re not about to fall apart. Others ... are.’

‘Oh,’ the PM said after a moment. ‘Need a word as soon as you’re back.’

‘You are always upper-most in my mind.’

‘Cut the crap.’

The French came on next, the Germans, and even the Indians. We were popular for all the wrong reasons. I decided to be cheeky, and offered substantial loans at great rates to various African governments, so long as they bought US goods with the money. I had six willing takers.

Another Wall Street bank trader gave himself up to the FBI the next day, another Silo plant that had been paid off, and the US disquiet with the banks grew. We were also seeing problems with the residents of the abandonment zones, police and soldiers used to move the people out - and to keep them out.

As with Hawaii, power and telephone lines were cut, roads blocked; gentle nudges to get people to move. Brad had set-up thousands of mobile homes with the money we had allocated him, many more being rented for just a month or two. When Jimmy saw the detail, he said that they’d still be in those mobile homes five years from now.

The big day

On the afternoon of the fourteenth we drove over to Mapley and claimed the apartments, the time difference to Hawaii being eleven hours.

The US military had collected what they claimed were the last two hundred thousand residents, but Jimmy had his doubts. The TV news was full of the boats around Hawaii, some quite small and looking flimsy for the sea conditions; they were dwarfed by the few remaining ocean liners, the medical ships and the US Naval vessels.

The cameras then focused on downtown Honolulu, fires raging in many buildings, the towers set alight by people either remaining, or by the last few to leave. Tall columns of black smoke rose high into the sky, a clear sky laid on for this spectacle of Mother Nature.

CNN was now showing images from Los Angeles, of surfers in the water, the coastguard trying to scoop them up. There were even people on the sand being chased by the police. On the hills along the Pacific west coast of America, millions stood waiting and watching,

something of a party atmosphere, more than a few barbeques going. The clock counted down to 06.25 local Hawaiian time, remote cameras having been placed on the hills of Hawaii and now feeding back live images via expensive satellite links.

‘Hope I got the day right,’ Jimmy said.

‘We’ll be in trouble if there’s no quake,’ I quipped.

At 06.23, the cameras placed on the island all shook, and all stopped working twenty seconds later, the TV stations switching quickly to views from the nearby ships, or from 747s circling overhead. I had to wonder about the aircraft, because they’d have nowhere to land if they had a problem.

Images of the burning towers appeared, the towers crumbling and collapsing. It was like a Charlton Heston disaster movie, only with better special effects. The next shot was of a hill on the island, the tallest hill. As we watched, it slid down into the water, the start of the tsunami, a giant boiling mass of white water spreading outwards.

‘Is that the thing that causes the tsunami?’ I asked, pointing.

‘Part of it. Mostly, the underwater range collapses and creates the main tsunami.’

Boats could be seen rising and falling sixty feet as a smooth and rounded wave passed them, an ocean liner getting its lowest decks damp. Jimmy walked out, and up to the roof, the rain holding off.

I followed him. ‘Don’t like the movie?’

‘Seen it, know how it ends,’ he said without turning, taking in the airfield.

‘And the casualties?’

‘I reckon there’s at least thirty thousand still on the islands. Waste of good life.’

Back inside, we sat and ate a meal, not much said, and returned to the control room after. A wave had just slammed into an island, sweeping people into the sea. Jimmy uttered a few rude words and stepped out again. I sat watching as island after island was hit in turn, quite a few people not high enough in their observation platforms. One island was filmed from a hilltop, the wave sweeping the houses below away as if they were toys. When the wave had passed and the water level fallen, nothing remained, not a building or a single tree.

Images of Rescue Force Hueys appeared, winching people from the water or from trees and roofs. It was frustrating to say the least, since everyone had been given plenty of warning. Still, people remained with their homes and ended up being killed, or needing rescuing.

I paced up and down for a while, but was always drawn back to the news with a morbid fascination. When the wave hit Los Angeles I was on my feet along with everyone else, witnessing an angry boiling monster coming ashore, more sand than water. The authorities had dug deep channels in the sand, and that seemed to be slowing the monster, but also making it angrier. It slammed into the houses and flattened them, aerial views showing the water slowly advancing inland.

Inland, the damage was being done by the presence of the water, not the force of the water, and the first block of houses seemed to have taken the brunt. Rows of concrete blocks seemed to have slowed the water, churning it. Problem was, it kept coming over the tops of the barriers.

They switched to a town up the coast from L.A., a town on an estuary, a wall of water over fifty feet high rearing up and smashing houses aside. Japan was shown next, one area particularly badly hit. Luckily, the first row of high apartment blocks took the brunt and slowed the water. Auckland was hit, moderate damage caused, and northern Australia suffered wide areas of flooding.

When the wave came ashore in Chile it found several estuaries that had been perfectly unlucky in the shape and depth. One such estuary head was filled from the side, a wall of water almost a hundred feet high being squeezed from the sides as it advanced. It enveloped a town of what appeared to be wooden houses, a view of locals on a hill. As I watched, my hands to my cheeks, the brown muddy water reached out and grabbed hundreds of people off the hillside.

The Rescue Force managers were despondent, images of spectators in many areas coming in, and hundreds being swept away.

What struck me most was the cost of the damage, not just the loss of life and the human suffering. Everyone had been given a warning and should have been evacuated, but you could not move their houses, and around the Pacific Rim I figured on a trillion dollars of damage.

When I had seen enough damage for one day, I checked the DOW Jones, finding it falling sharply, already down four percent. I shook my head, walking out to find Jimmy. Joining him in the canteen, I mentioned the drop on the DOW.

He nodded absently for a moment. 'I've arrange a few more emails for the next few days. It'll put the people at odds with the banks. And I sent Brad another two billion dollars towards food. Oh, and vouchers for MacDonalds – a good idea of yours.'

‘Sanchez will be sworn in in a couple of days,’ I mentioned. ‘Hell of a start for him.’

‘He won’t have many people appointed, so the disaster plan will suffer,’ Jimmy softly noted. He checked his watch, and lifted his phone. ‘Begin,’ he told someone.

When he lowered his phone, I asked, ‘Stock buying?’

He nodded. ‘Catch the short sellers, because they’re shorting the stock without holding any.’

After a cup of tea I went back to my laptop and focused on the Dow Jones, starting to witness a few wild spikes, blue tickers amongst the red. Within twenty minutes the index was showing signs of recovering, blue squares across my screen, and within an hour the DOW was above it’s opening, making me smile. The market makers had tried to short the stocks, even with the exposure they had received, and we’re now caught on the wrong side of the action, scrambling around to cover the sales of stock that they never had in the first place. Team Silo had just taught them a painful lesson.

Driving back at midnight I was despondent, but I couldn’t quite work out why. It wasn’t the loss of life – I was angry at the people for staying in their homes. It wasn’t the damage either, not in itself, it was just the waste of it all. I was so used to building things around Africa, that destruction on this scale upset me.

Getting into bed, and cuddling up to Helen, I said, ‘What a waste.’

‘Waste?’

‘All that damage.’

‘It was a act of nature.’

‘I think ... I think I understand the big guy a bit better now. For him to see things like this, or worse, to see it all washed away, and knowing that the whole damn planet may be washed away – it must affect him.’

‘He can picture 2025, we can’t, no matter how often he describes it. It’s not real till it hits you in the face, till the water comes through your lounge,’ Helen said.

‘And that’s the problem with the leaders; he gives the warning, but how many really listen. I think we’ll get to 2025 ... and people will still be surprised by it. Crisis? What crisis?’

The next day, Jimmy occupied his mind with work and Africa, and ignored the damage done around the Pacific Rim. He called me down, and we video-linked to the Prime Minister.

‘How’s it going?’ the PM asked, meaning the efforts of Rescue Force.

‘It’s not that I wanted to talk about,’ Jimmy bluntly told him, sounding tired. ‘I need a favour, and saying no would upset me.’

‘Oh,’ the PM said with a quizzical frown.

‘I’d like Russian long-range bombers to land at our RAF bases in Scotland, unarmed bombers of course, and I’d like Russian ships to dock at Falmouth and Plymouth on a regular basis, your naval vessels docking in Murmansk and Sebastopol, as well as in China. I want your ships docking at the naval base in northern Somalia as well. And the new docks in Liberia; I want Royal Navy ships there on a regular basis when they’re passing.’

‘And the Russians and Chinese?’ the PM asked.

‘Will be happy to cooperate.’

‘And the reason for this show of friendliness?’

‘World peace. For which I expect you to play a large part, given the calibre of man that you are. You can get the French to cooperate as well.’

‘And in the grand scheme of things...?’ the PM asked.

‘We’ll have a recession to deal with for a while, then we start work on global cohesion geared towards 2025,’ Jimmy told him. ‘That means that you’ll be at the front of those calling for closer ties and greater cooperation, earning yourself a few extra pages in the history of the planet.’

‘I’ll step down in a year, I promised my wife.’

‘Pipe and slippers?’ I asked.

‘A damned good rest,’ the PM stated.

‘And when do I rest?’ Jimmy asked him. He waited.

The PM took a moment. ‘I’m not you, Jimmy, and I have no idea how you keep going; try not to judge others by your own high standards. I’m quitting while I have a family left, and hoping to see more of them.’

‘You’ve done enough,’ Jimmy told him. ‘Sorry if I sounded ungrateful for your efforts; I must be getting old and cranky.’

With the video cut, Jimmy said, ‘States. Monday.’

Back in my office, I received an urgent email from the corporation in Goma. Someone had told Kimballa that our African reserves would be used to help America, and that he had asked about it. I threw my hands up in the air and cursed. Not wanting to bother Jimmy with it, I booked a Friday night flight down to Goma hub, only to find Lucy tagging along; sat in the cockpit and tagging along.

I settled down to a little light reading until I needed a nap, catching four hours. We landed at 5am, and I took Lucy around to the mansion, chatting about things aeronautical, and we enjoyed a dip together as the sun put in an appearance. Waiting till 8am, I called Kimballa, inviting him around to the house. He arrived at 9am and found me on the patio, pancakes ready.

Once seated, I said to him, 'Can we have a private talk?'

He dismissed his aides.

'Mr President, you've been asking questions about our gold reserves, and the idea that we'll use them to help America.'

'And was I not supposed to?'

'It's your country, Mister President, you are allowed to, but it may have saved some time if you simply called us. We are, after all, old friends.'

'Indeed, yes. So why the secrecy surrounding this gold?' Kimballa asked.

'There's secrecy around a lot of what we do, and justifiably so. As for the gold, we've hidden it to keep gold prices up. If people think it lays on the ground here, the price will fall.'

'And that will be bad for our gold exports.'

'It would,' I confirmed.

'And this talk of helping the Americans?' Kimballa asked.

'May I ask where that information came from?'

'An officious looking letter arrived anonymously.'

I took a moment, sipping my drink. 'Someone wishes a division between us.'

'Many have tried, but none successfully. Besides, the people don't love me as they love Jimmy. I am not about to offer a contest.'

'Jimmy knows the future, and in the future – if we don't act – America may elect right wing leaders. Those leaders will wish to use America's strength to secure resources ... such as oil and ore.'

'Of which we have plenty,' Kimballa noted. 'They would be aggressive?'

'How do you treat a lion with an empty stomach?'

'You throw it some food, and run like hell the other way! You are saying, that we give the lion some food to stop it from eating us?'

'I am. But it's not us ... that would be the first target, and any aggressive move would destroy the world economy.'

'No one would buy our oil and ore then,' Kimballa noted.

'Mr President, the Americans have been sending money to Africa for fifty years, giving a little back is not so unjust.'

‘Indeed no, and it would make for a very strange newspaper headline.’

‘Which is why we’ll make sure that it doesn’t reach the newspaper headlines, unless to say that we are investing in America for future generations of Africans.’

‘Future generations ... who don’t want to be eaten by the lion. Do not worry, Mister Paul. Before you came, this region was the devil’s own playground. Now it is Eden, and how do you say – centre stage, yes?’

‘Centre stage,’ I confirmed with a smile. ‘And you, sir, can see the big picture I’m sure, and appreciate world politics.’

‘World politics is simply a larger version of Africa politics, and my father was well used to neighbours with hungry bellies and sharp claws. We were raped every day, but far enough away in Kinshasa not to care.’ He sipped his drink. ‘Am I allowed to know – as a good friend – what the future holds?’

‘Many of the worst problems have been dealt with,’ I told him. ‘The next big headache is America, and the global economy. That’s a two-year problem. After that, we need a much greater integration between the various nations, and some global cooperation, to face a challenge in 2025. If that challenge isn’t dealt with, we lose the planet. And all this, this will all be gone.’

‘This city will be destroyed?’ Kimballa asked, horrified.

‘Africa would be invaded and enslaved after 2025, that’s why we built up the Rifles. If Jimmy can’t figure a way through, all of Africa will be destroyed, and all the world.’

Kimballa gulped his drink. ‘I watched the TV when the earthquake struck. When the clock said the time, I was both very pleased that Mister Jimmy can say these things, but horrified at the destruction. And now you say that in less than ten years we may lose everything we have built.’ He shook his head. Facing me, he said, ‘Is there more that we can be doing?’

‘Just support us when we need it, and help us when we ask. Throw a good party, Mister President, and get the nations cooperating as much as you can around the city. And next time you get an anonymous letter about us, just pick up the phone, day or night.’

I enjoyed a day around the pool, Lucy sat reading, and we headed to the airport around 9pm for the last flight out. Boarding the flight, Lucy went back up to the flight deck and strapped in, helping with the pre-flight checks.

On Monday morning we took Silo One across the pond to New York, re-fuelling and heading straight on to San Francisco for a series of TV interviews – and not down to the inauguration of Sanchez. Booked in to our hotel, the first duty was the tour of a neighbourhood that had suffered damage at the hands of the tsunami, an unfortunate shape under the water causing a funnelling of the tsunami as it neared. The tsunami had passed under the Golden Gate Bridge as a twelve-inch high ripple, rearing up in a few places before gathering height inland and causing a great deal of damage.

As we stepped down, well wrapped up against the cold, Brad navigated his way through the local government officials, past fire chiefs and army officers, and shook my hand.

‘I had almost forgotten what you look like,’ I told him.

‘A lot’s happened since that brief first meeting,’ he said with a smile. He shook Jimmy’s hand. ‘No one is going to forget what *you* look like.’

Brad introduced us to the dignitaries, fire chiefs and army officers, all of who had a role to play in the disaster planning. That led to individual fireman and police officers, all with a tale to tell of dramatic rescues. Seems that a lot of people had collected on the shore in the hope of seeing the tsunami, and saw a little too much of it.

A few families were presented to us, people who had moved out in advance of the wave and were now trying to dry-out their sodden properties. Since those properties were constructed mostly of wood, I had to puzzle how the hell the people would ever reclaim their homes.

Jimmy then took the microphone, the assembled dignitaries assembled behind him, a crowd of spectators in front, the press off to one side. ‘People of San Francisco, thank you for inviting us here today. The metropolitan area was unaffected by the tsunami, so now you can’t complain about all those damn hills.’

People in the crowd laughed.

‘But a few areas were subjected to water damage, the damage upstream being considerable. Brad here –’ He pointed. ‘- of The Ark Christian charity group, and in conjunction with the Silo Foundation, has been planning for this disaster for six months, and is well prepared to help the homeless, and is already doing so with an army of willing volunteers.’

‘I would like to take this opportunity to thank Brad for his leadership, and for his unswerving belief in the importance of his task, as well as his faith in me. I would like to appeal to all of the

people of San Francisco who were unaffected, to spare a thought for those who lost their homes, and to donate clothing, food or money to The Ark, and other bodies working to help the displaced. If you live in this city, and park at a steep angle, be glad – but then be generous.

‘Now, I’d like to take a moment to look at the bigger picture here. I warned you, all of you, about the earthquake and the resulting tsunami. I warned you ... of the timing to the minute, yet many still did not believe, some chose not to believe, and some did not wish to believe. People died on the islands, and people died here.

‘You Americans have a saying: wake up and smell the coffee. Here’s a Jimmy Silo saying for you: wake up and pay attention - or you will die.

‘NASA, and your military, spent a great deal of time, effort and money to build the time machine, and some of you just don’t get it. It was made by you, for you, to help you – and you’re still not paying attention.

‘The pandemics are mostly over, you’re all through the worst of it, the worst quakes behind us – for the moment. The next three years will see little in the way of disasters; it will be a period of consolidation, but we have deep economic problems to face.

‘Those economic problems ... are mostly to do with a simple lack of confidence - and a lack of bank liquidity available for business finance - because of the stupidity and greed of Wall Street bankers. As the earthquake was destroying Hawaii, your bankers were trying to crash the stock markets so that they could make a killing. As the dying was going on out here, the scum of the earth were trying to make a killing on the stock markets. If your bankers could sell the dead bodies of the victims to make a buck, I’m sure they would try.

‘Write to your congressman, and your senator, and make your voices heard: banking reform is needed. And it’s needed before your banks bring down the whole damn country.

‘People of San Francisco, people of America: you are through the worst of it. Go out and get on with your lives, hold your heads up high, go to the bars and nightclubs, and celebrate what you have left, not what you’ve lost. Put money back into the economy, start a new business venture. President Sanchez is a good man, but he needs your help, and he needs the congress behind him.

‘In the weeks and months ahead ... I’ll be organising meetings of the world leaders, and I’ll be more involved with things over here. I’ve just appointed former President Hardon Chase to the Silo Foundation; a man I can trust, and a man that you can all trust. He’ll

be working with Brad, and I'm sure that they'll do a great job together to help the victims.

'And let me take this opportunity to point out to the people of America, that most of Brad's people are unpaid volunteers, willing to help their fellow Americans – to help complete strangers. One of the basic tenets of Christianity is missionary work, spreading the word through good deeds and actions, leading by example.

'Brad's people are not judgemental, they're not from the whites-only churches of the Bible Belt - people who claim to be Christians whilst holding right-wing political views. Brad's people don't wear a badge that proclaims their faith, and they don't try and sing loudest in church in Sunday. They demonstrate their faith in actions, the action of helping those less fortunate.

'Brad's Christians don't need a merit badge or a pat on the back. For them, it's not about how others see them, or how others judge them; it's about how they see and judge themselves. In Africa, in New Kinshasa, there are almost five thousand American volunteers. They receive less than nine thousand dollars a year, food and lodging, and they work on projects for me when they could be here making two hundred thousand a year.

'In the decade ahead, there will be great tests and trials for the people of this planet. The best hope you have ... is from people like those volunteers, who will say that until the planet is safe, until the disasters have been dealt with, they'll put their lives on hold and help out.

'How do they compare to the bankers who bet the market would fall? There are some very rich people in this country, but they make less than nine thousand dollars a year, and they move unseen, and mostly without thanks. But they know that I appreciate them, at least I hope they do. Thank you for your time, it's cold, so go home please.'

Brad led us away. 'Had you down as a non-believer, Jimmy.'

'I am.'

'You do a sermon better than any preacher I ever met.'

Back at the hotel, Hardon Chase was waiting. We had booked a meeting room and now filled it with Brad's people, Silo Foundation staff and American volunteers from Africa. We hung up our warm coats and sat around several tables pushed together, a group of hotel waitresses serving us coffee.

Brad made use of a white board and map, outlining his operations with military precision. I was handed food vouchers and examined

them, noting that “The Silo Foundation” was printed at the bottom. Each voucher was valued at seven dollars.

When Brad was done, Jimmy stood up. ‘We’ve got Hardon Chase on board, and he loves the sound of his own voice.’ They laughed. ‘So I want Mister Chase fronting the appeals, and to doing most of the speeches. Town by town, Hardon, just like electioneering, but please – don’t kiss any babies.’ They all laughed again.

‘We have the food vouchers, so start giving them out in metropolitan areas. Brad, I’ve added an extra two billion to the account, so use it.’

Brad’s people glanced at each other, seemingly shocked at the amount. Brad said, ‘We’ve raised two hundred million already, and we have clothes and shoes by the tonne.’

‘And mobile homes?’ I asked.

‘About twenty thousand,’ Brad responded. ‘But we have tensions when the Hawaiian refugees take them.’

‘Where’re they settling?’ I asked.

‘All over, but mostly southern California.’

‘I’ll earmark an extra two billion just for the homes,’ Jimmy told him. ‘So go out and buy some more mobile homes. Now, what’s needed ... is swiftness more than completeness. In order to stabilise the population and the economy, we need the next six months to count, not the next six years. And we need the next month to count more than the next six months.’

‘The longer the homeless struggle, the more disquiet, the more unemployment. Brad, make a plan to try and spend as much as possible in the near future; don’t even think of pacing yourself. Get the food vouchers out there, the clothes, and the homes ordered.’

‘Mister Chase, there are a great many run-down areas in California, and those empty houses could be grabbed. Talk to the governor, shout, and make him listen. You have the budget I gave you, so use it to refurbish old properties and to move families in. If you can employ local people to do the work then all the better.’

‘Second, Mister Chase, employ those out of work on the clean-up details. We want a great many people being paid low wages to shift sand and debris. Brad, use money to pay local skilled workers to clean up; it’ll put money back into the economy. And both of you, get on the plane to Alaska and make them feel a part of this. OK, where are we seeing problems?’

Hardon Chase began, ‘The Hawaiians are mostly trying to settle in either Los Angeles or south towards San Diego. It’s causing tensions in some neighbourhoods.’

‘Then you need to make a speech or two, Mister Chase, and point out that Americans come in all shapes, sizes and colours. OK, what else?’

Brad put in, ‘We get a lot of complaints from people unable to go near their land because it’s still taped off, roads closed, soldiers stood there doing nothing.’

‘Again, get Mister Chase on it,’ Jimmy said. ‘And let the press know.’

‘How many have applied to come to Africa?’ I asked.

‘About four thousand,’ Brad replied.

‘Then your people are not selling the proposition well enough,’ Jimmy told him. ‘I want twenty thousand, and inside a month.’

‘It’s a small fraction of the homeless,’ Chase wondered.

‘Once they’re settled, they’ll attract more,’ Jimmy replied.

The group discussed strategies for forty minutes, and we left them to it, heading to the restaurant. No sooner had we sat down than Sanchez’s new housing chief walked over. He sat without being asked, and took a moment to stare at us.

‘Problem?’ Jimmy asked, seeming none too concerned.

‘The President is concerned, and he’s been in office a day.’

‘I believe his concerns started long before he entered office,’ Jimmy responded. ‘How can we help?’

‘You seem to be undermining our efforts by helping directly, and working around our people.’

‘Your people, are federal government people, and as such will move slowly due to the constraints placed upon them,’ Jimmy told the man. ‘And ... and I think the bill your trying to pass will be delayed and blocked.’

‘You think that, or you know that?’

‘I think it, since Sanchez was not supposed to be in that seat right now. The Republicans will try and trip him up, and they won’t want to spend so much on horrid poor people.’

‘We have a majority.’

‘A slim majority, and some of your east coast Democrats don’t want the poor folk on the west coast benefiting too much.’

The man eased back. ‘You think it’ll be blocked till its lower.’

‘I think ... that the longer its blocked, the more pressure on Sanchez, the more disquiet and unrest, and that will help the Republicans in the mid-terms. And, I think you know that as well. So, in the meantime, I’ll try and help as best I can, so that the *disquiet* is ... quieter.’

‘The Chinese are suddenly very cooperative on trade deals and quotas. Your doing?’

Jimmy nodded. ‘And ... there’ll more like that to come, because if the disquiet reaches a certain level, it will become civil unrest, rioting, and state martial law, unscrupulous politicians using the opportunity to their own benefits, which will just make it worse. Tip over the edge, and you’ll drop a long way before you come back.’

‘Will you pop into Washington on your way back?’

‘Do you want us to?’ Jimmy posed.

‘Yes,’ the man said as he stood. ‘And some are saying you snubbed the inauguration.’

I commented, ‘Whenever we go to inaugurations, we stand around for hours in the cold and then only get to chat to the new president for five minutes.’

‘Some things are more important than they appear,’ Jimmy enigmatically told the man.

With our guest departed, I asked, ‘Are we really helping Sanchez this way?’

‘I had expected a Republican administration, and that we’d be at odds with them. I don’t want to upset Sanchez, but he has his hands tied. Most powerful man in the world? Hah! He won’t even get a bill passed. And that bill should have been passed months ago.’

‘You didn’t nudge them,’ I pointed out.

‘No, because I wanted to be at odds with the US Government, it’s just unfortunate that Sanchez is in the hot seat.’

‘There another way?’ I pressed.

‘It’s not Sanchez, it’s the US system: President, Congress, Senate, lobbyists and the media; plus a rigid two party system. A good dictator is so much better than a weak democracy, and the US system is weaker than the British system. No,’ he sighed. ‘Whichever way I look at it, paralysis is the name of the game.’

We gave a chat-show interview that evening, and again attacked the people for not listening, whilst making it appear that the Federal Government was not listening – but subtly. In the morning we headed down to Los Angeles, Brad and Chase onboard, and were whisked straight around to a housing development.

Using our money, Hawaiians were renovating an old apartment block that they would then occupy. Jimmy greeted the lead builder in a dialect, and we made like electioneering politicians again. They showed us the progress, we asked questions, and outside made a statement. Overnight, someone had leaked the amount of money we had allocated to Brad, and a lady reporter asked about it.

‘We will spend as much money as we can afford to spend ... to help the homeless of Hawaii and the west coast,’ Jimmy told her. ‘America has been a great supporter of our efforts in Africa, and a great investor in Africa. It’s only right that we try and spend some of the money we’ve earned in Africa ... on American taxpayers.’

Speech made, we led the team to the governor’s office, where a planning session was held. Brad and Chase raised their voices, and tables were thumped with fists in a heated session. Jimmy played the role of honest broker and calmed all sides, but he himself had a go at the governor for not emphasising enough the racial mix already in place, or doing enough to integrate the newcomers.

Outside, the press were waiting, another speech planned. But when a member of the press asked about investments made in movies, Jimmy had the cue he wanted. ‘We’ve been trying to think of ways of investing money in California to create jobs. One way is to sponsor films, since the film industry employs a great many people around here. We’ll be funding around twenty film projects in the near future, and we hope that it will stimulate the local economy and help with jobs.’

Leaving an exasperated governor behind, we rejoined the plane with the team and headed down to San Diego, Jimmy giving Brad plenty of his time, and plenty of advice on how to handle the support mission. In San Diego, we again visited a housing project that we had funded, made another speech – a very similar speech, before retiring to a hotel near the airport.

After a working meal, we sat the team down and went through strategy in great detail: who was going to do what. Chase had his itinerary, and was revelling at in being back in the limelight. Brad was more down to earth. He shunned the press and just wanted to get on with it, Jimmy encouraging him to be more vocal, and to use the press for his means.

Leaving the team in the morning, we flew direct to Washington, to the chill weather, and to a chilly reception.

‘All moved in?’ I asked Sanchez in the oval office, shaking his hand.

‘Just about,’ he responded, sounding tired.

Jimmy shook his hand. ‘Did Samuels leave you a “good luck” note on the desk?’

Sanchez nodded, gesturing us to seats, his Chief of Staff in on the meeting. ‘So, you think I’m a lame duck President already.’

We were off to a good start.

‘Prove otherwise,’ Jimmy challenged.

Sanchez stared back for several seconds. 'I figured you'd be a bit more supportive.'

'Here's how it works,' Jimmy began. 'Pay attention, and I'll go slow.' Sanchez cocked an eyebrow. 'You call and ask a question - I'll answer it. If you busy yourself playing at being President, I'll work around you. If you do something I don't like ... I'll pull the rug out from under you.'

The temperature in the room dropped a few degrees.

Jimmy continued, 'The problems that you'll face are mostly down to the system, the fine system of American democracy - that is anything other than democratic. You have a small majority, you have the lobbyists up your backside already, and the banks are trying to trip you up before you start. Your own east coast elected representatives - those that there are, don't want the added social burden of extra homeless in their states, and will vote against shifting people east from California - which is bursting at the seams and collapsing under the weight. Get a bill passed inside six months and I'll run around this building naked.'

'That could boost tourism to the capital,' I quipped.

Jimmy told Sanchez, 'You can start a war, nuke the world, but you can't get around a two-party system, and a two-house system, neither of which really benefits the American people. So here's what I'll do. I'll fix the homeless as best as I can, so that the Republicans can't use them as a stick to beat you with. That will take some of the pressure off. I'll also make the speeches that back you up, and I'll condemn the east coast senators who don't want Hawaiians in their back gardens and garden states.'

'And, as you're already aware, I've nudged the Chinese, Russians and Japanese to assist the dollar and your economy. Take away all of what I just said and you'd have a full-blown recession and civil unrest in months, the rise of nationalistic leaders following soon after. Right now, you have all the right conditions for the rise of fascism.'

'Fascism?' the Chief repeated.

'Hard line right wing politicians ... who will want the land of the free for the rich catholic white folk,' Jimmy carefully mouthed. 'They'll even attack the Hawaiians as not being ... proper Americans - if you let them.'

'You're making me feel pretty damned useless,' Sanchez noted.

'It's not you, it's the system,' I told him. 'Ten different groups pulling in ten different directions. If you want to make a difference,

put a sign on your desk: do what's right, not what's popular, and to hell with being re-elected.'

Jimmy gave me an approving nod. 'I think every politician should have one of those.' He faced Sanchez. 'Problem is, you'll need to horse trade away your soul to get the aid package passed. And, you've already spent money on bailing out certain banks, and more will be needed to help liquidity. Passing the aid package that you want will be a miracle. So, leave the homeless to me, and do what you can – without selling your soul.'

Sanchez stood up and walked to the window. 'I never figured I'd be trying to swim upstream with my hands tied.' He coughed out a laugh. 'No, that's not true. I figured that a small majority would cripple me.' He turned. 'And the banks and other institutions don't want a Democrat - or an Hispanic - in the White House.'

'Realising that is half the problem,' Jimmy said. 'Getting angry about it, and doing something about it, is the other half. Investigate the banks, attack the banks, and break them up. Use the tools to hand, such as the FBI and SEC. Shout at them, and employ a few hard-asses.'

Sanchez sat. 'OK, Mister Silo. I'm open to suggestions.'

'First, have your navy dock its ships in Russia and China, and allow those nation's ships to visit here. Give the world a peace dividend, and I'll make sure that you're seen as the peacemaker. Go visit a coalmine and look at coal-oil, giving it a big push. The oil industry won't like that, but fuck 'em. Increase your output of coal-oil. Commit to it first, publicly, then do the paperwork afterwards.

'Make the Chinese deal look like your own; the Chinese will back that. Visit China and Russia, and come away with deals. Visit Goma, and come away with deals, deals that mean jobs for Americans – and shout it loudly. I'll shout it loudly for you as well. Be seen ... to be doing all you can to sell brand America, whilst leaving Congress to argue amongst themselves and look small.

'Next, we're going to expand upon G8 and G20 and create a body called the World Financial Cooperation Group, with a permanent staff. It will work in a similar way to the old "M" Group, and I'll have a hand in it. A kind of ... *hand out the sweets if you behave* kind of hand in it. The first meeting will be in a month, in New York, and it will go some way to assisting the US economy and, hopefully, the world economy. Pick a senior figure to represent you on its permanent panel.

'That meeting ... will cover more than just bank interest rates and currency levels, there'll a whole host of other things that are

essential for the development of global cooperation between now and 2025. This, is the start point of the endgame.’ Jimmy took a sheet of paper from his pocket. ‘A speech for you to give today.’

‘I have a speechwriter,’ Sanchez quipped as he read it. We waited. Sanchez finally lifted his head. ‘And the other nations will back me on all this?’

‘They will, or they’ll feel my toe up their arses,’ Jimmy firmly stated.

They made us lunch as Sanchez studied the speech, he even made a few alterations. In the press briefing room, we stood behind Sanchez as he delivered the speech, plenty of fire in his words. He took questions about what he hoped to achieve from the meetings, before inviting Jimmy forwards.

Jimmy held up his hands to stop questions. ‘First of all, let me say how appalled I am ... at some east coast politicians and governors, who see the homeless of Hawaii as not being proper Americans. The quake struck Hawaii, an American state that you all loved well enough for a good holiday. Hawaii was destroyed, the west coast damaged, and now America has decided that it’s not a whole country, but divided by states, with some states wishing that the homeless of the west coast - and the Hawaiians, are restricted to California.

‘On the west coast, Brad and The Ark have raised a team of a hundred thousand Christian volunteers to give their time to help in their communities, to help those that lost their homes. Seems that the people of the west coast are far better than the people here. So let me be clear: I am ashamed of the so-called Christian communities of America, and so should you all be. The Ark are carrying you all on their backs, and they’re putting you all to shame.

‘Some east coast politicians have even doubted the right of the Hawaiians to settle here in such large numbers. Well, your rich white folk never had a problem retiring to Hawaii. The ancestral Hawaiians didn’t like it when you tore down the countryside and raised condos and hotels, but you did it anyway. You raped their land, and now they ask for a home in return – which is only fair.

‘America was founded by immigrants, whether they be African slaves or Jews escaping the Nazi in Europe. The Hawaiians are not immigrants, they’re Americans, and they *are* Americans because you took their lands in the first place, as you took this land from the red Indians. Fail to make them welcome and it will be a stain on the reputation of America for centuries to come. Thank you, and no questions.’

Financial cooperation group

A month later we were back, many of the world leaders gathered in the UN building. The G20 countries gathered, along with the IMF, our African finance minister and us. And, as ever, the coffee was lukewarm and from a plastic urn. The UN's catering had not improved any.

Helen sat behind me, Sanchez and his team to my right, Jimmy to my left.

Jimmy began, 'Thank you all for attending here today, the first meeting of a group that will become very important in the years ahead. As most of you know, a problem will strike in 2025, and that problem will need a great deal of cooperation from the various nations if it is to be dealt with.

'First, let me state that the problems between now and 2025 are mostly economic and political. That means, in simple terms, that war is still a possibility, but only if economic hardship leads to civil unrest followed by political miscalculations, protectionism and nationalism.

'As we sit here today, the world is far more interconnected than at any time in history. The financial markets are connected and, unfortunately, when one sneezes they all catch a cold. America leads those financial markets, and it now has a head cold. Without going into detail, let me explain the consequences of an American recession.

'First, it would lead to civil unrest in America because of the displaced peoples of Hawaii and the west coast. Second, it would lead to the rise of nationalistic politicians and the idea of economic protectionism. That will have a knock on effect around the world.

'The place to discuss trade tariffs and currency rates is here, not in the media, and not shouting at each other. And let me also be clear that I will reward those nations that cooperate, and deliberately fail to assist those that do not cooperate. If you think that a threat, you'd be correct, and you can have it in writing if you like.

'There are twenty nations assembled here today, the world's largest economies. If I see twenty building blocks on the table, I can build a solution to the 2025 problem. If I see only seventeen, I still have a chance. If there are ten, we have no chance ... and you all

face a global catastrophe. The people around this table will need to put in the building blocks pro-rata, but that is an over-simplification. If one nation here is suffering, the others should compensate through larger building blocks. That may reverse itself a year later, or five years later – and we will keep score.

‘This group is about fairness, it’s not about rewarding lazy countries or tolerating idiotic spending plans. If someone here ignores the advice of the group, then I expect the group to act to economically punish that nation, to bring them back into line. That may sound harsh, but we’re talking about the future of the planet, so I don’t care.

‘Now, some nations here will wish to go over old ground, and say that the developed nations have the advantage, and that the developing nations have the right to grow. You do have the right to grow, you also have the danger of being completely wiped out in 2025. So give some consideration to the fact that assisting your economies between now and then may be in vain. Your countries may be completely destroyed.

‘India, Saudi Arabia, Turkey – you would be destroyed early on during troubles in 2025. All of you would have your economies ruined in a day, followed by civil unrest and martial law. South America, you would fair better than most, and Africa would do well to start with.

‘If the nations here are not cooperating – to my satisfaction - in 2025, the complete destruction of our civilisation is assured, just as the destruction of Hawaii was assured.

‘Now, leaving aside the doom and gloom, let’s get onto a few practical steps. First, I would like the finance ministers of each of the nations and groups represented here today, to meet every three months, right here. Second, we all have the chance at a peace dividend, and as such I want all of you to look at cooperating in the reduction of certain types of weapons. India, I will be asking all nations here to put pressure on you to sit down with Pakistan and reduce your military expenditures. There will be incentives offered, penalties for dragging your feet.

‘American, Russian and China, you know what weapons systems will be of no use in 2025, and can adjust accordingly; give the people of the world a peace dividend, and some hope. Europe, you need to be less mechanised and more mobile. Think infantry. South America, you need to develop your naval power more than land-based forces.

‘Next, economics. You all need to draw a line from here to 2025, and make a seven-year financial plan, the aim being to avoid the boom and bust cycles and bubbles. America and Europe, you need to rein in the banks and restructure them, or they will drag you down. Russia, you need to loosen your banking regulations and provide more loans to entrepreneurs. You also need to consider breaking up some of the larger privately owned companies, especially if they have a monopoly. Be tough with them; the profits sat in western banks belonging to rich Russians benefits no one.

‘Next. Mexico and Brazil: I will offer to assist you to set-up police and army special units to help deal with crime and drugs. Mexico, you’re one step away from disaster, so kindly take-up my offer. Brazil, as the most responsible country in South America, I offer to help you raise a Rifles regiment. After 2025 you’ll need them.

‘Saudi Arabia - I don’t like you very much.’ They blinked. ‘So how you conduct yourself here may help that prejudice. I would like to see you cut back production, and to coordinate that production not just with OPEC, but with those nations producing coal-oil.

‘OK, there’ll now be a one hour break as private side meetings are held. Thank you all.’

Sanchez led his team to a room, joined by the Chinese for a bargaining session. The Brazilians wanted a private chat to Jimmy, and the Saudis wanted to talk with me. I led the Saudi team to a side room, the same Prince I had met in Goma shaking my hand. We ended up with just myself facing eight of them.

‘Mister Holton,’ the Prince began. ‘We are asking questions about 2025, but are not finding answers.’

‘Will you cut production?’ I immediately tabled.

‘We will cut production soon ... because it is prudent to do so. If you require a few extra percentage points, I’m sure that it could be arranged.’

‘Good,’ I said, offering my best attempts at a diplomatic smile.

‘There has been mention that we would be completely destroyed, something that is not good for business –’

‘Should we have lied to Hawaii?’

‘No,’ the man said after a moment. ‘And we fear a similar fate.’

‘Who would take your people?’ I asked, but I should not have.

‘That, is something of a taboo subject, and one which causes us great pains.’

My mouth was moving faster than my brain. I was about to say something that I didn’t think through. But, looking back, maybe I

was thinking clearer than I had ever done before. 'Perhaps, it would have been wise for the Hawaiians to find a new home years earlier. Perhaps, you should buy a few villas around the world ready.'

'Such a ... Diaspora, would mean life for the people, but not life for the nation. The nation would have no centre or soul.'

I eased back. 'Africa has a great many wide open spaces, with no people. Perhaps you could buy a small country,' I joked.

'Perhaps we could.'

I stopped smiling. 'Listen, guys. You drill oil using foreign labour, you don't like getting your own hands dirty. What would you do in a region with no oil?'

'Perhaps we could be more involved in a region *with* oil. We have the money to invest in rigs, refineries and infrastructure.'

'Such regions are in the north, and those regions would be ... the front line after 2025. Your new happy home would not last long.'

'If Mister Silo is aware of ... shall we say, untapped oil in a suitable location, then we could come to an agreement.'

I stared back. 'You serious?'

'We all sat up late at night and watched Hawaii disappear. It had ... an effect. We are now very serious.'

'Stay there,' I said as I stood. I found Jimmy and dragged him out to the corridor, relaying the Saudi request, and trying to sell the idea.

He stood staring down the corridor, hands in pockets. 'I had planned on just letting them go. Because even if they relocate, some of their people will always want to set off bombs.'

'Surely they could be ring-fenced somewhere? Look, you said they'd be destroyed, all the time and money wasted. If they relocate, then that working capital could be used now, this frigging year!'

'Wherever they go, they risk the Brotherhood rising from within their own people.'

'If they're in Africa, they'll be stopped very damn quickly!' I insisted. 'We'll ring-fence them.'

'They could live on an island,' Jimmy thought out loud. 'And the investment capital would be useful.' He sighed, informing his group that he would be back in five minutes, leading me to the Saudis.

Sitting, we faced the Saudi team. 'How many people would you wish relocate, of your twenty million?' Jimmy asked.

'An overseas colony would have no more than a million people, but ... room for rapid expansion,' the Prince told us.

'There's an untapped oilfield off Mozambique, another off Madagascar,' Jimmy informed them. 'But persuading the countries would be tricky.'

‘Not for you, we suspect.’

‘You’d have a fenced-off colony, a formal border, a port built for your needs?’ Jimmy asked.

‘A self-sufficient unit, yes, but with purchases of local food,’ the Prince explained. ‘And, perhaps, a skyscraper or two in New Kinshasa, a hotel or two. A tower in Nairobi.’

Jimmy slowly nodded. ‘Make your peace with the Somalis, and quickly.’ He stood. ‘I’ll discuss your proposal with the Africans. And I’d like to see you more involved with Pakistan. Help their economy, help them fight extremism, help with peace towards India.’

With Jimmy gone, the Prince commented, ‘He is suddenly being ... very accommodating?’

‘Maybe you asked the right question,’ I told them. ‘And, he may not like you, but he has no desire to see you all killed.’

Back in the formal meeting, America announced a deal with China, Russia making concessions, the Saudis cutting production. That cut in oil was not to keep oil prices high especially, as to make coal-oil more attractive to certain nations. And a collapse in oil prices would affect the dollar.

After thirty minutes, a number of deals had been outlined and discussed, a break for lunch called, time to let the aides scurry around and work more deals, especially arms reductions. We joined Sanchez and his team for a bite to eat, discussing the Saudis, the Americans amazed by the Saudi suggestion.

In the afternoon session, Brazil rejected the idea of an Africa style Rifles regiment, for now, but agreed to look at increasing the size of its navy. The Mexicans agreed to the training of its soldiers and paramilitary units, but then surprised us with a request to place African Rifles on their America border as a trial. Sanchez, of all people, was not so keen about that. Not because he wanted immigrants to cross the border unhindered, but because it made the US look bad; unable to police its own border.

We declined the Rifles for Mexico, to appease Sanchez – he had enough problems on his plate, but suggested that a specialised American unit could be made up, and part funded by us to skirt around the federal budget constraints, and the budget constraints of individual states. It would also employ quite a few people, up to ten thousand. Sanchez asked to discuss it later, and we moved on.

A communiqué was produced for the people of the world, deliberately upbeat language, and detailed several agreements, hinting at others. A new three-way disarmament conference would

take place, NATO, Russia and China to sit down and discuss ways of saving money.

With Sanchez delivering the joint communiqué, we met with the Russian team.

‘Your economy is suffering because of the US and global economy, unemployment rising,’ Jimmy began. ‘I would like to make use of the farm profits, and the coffee shops.’

I was suddenly all ears.

Jimmy continued, ‘If it is OK with you, then all profits for this year, and accumulated profits from last year, will go towards a voucher system and free meals for the unemployed, free meals at our burger bars and coffee shops. They are part owned by you, so it will make you look like a kind and caring government.’

They collectively shrugged, no particular objections, a verbal agreement made.

Leaving the building, I asked, ‘Did the Russian Government just make a mistake?’

‘They did.’

‘And the vouchers, people will think them from us?’

‘They will.’

‘And we’ll add some money to the pot to make sure this is extended and widely published.’

‘We will. And now, we’ll see what the news is saying about certain banks, members of the Fed, and certain Republican Senators.’

‘Should be interesting, but I guess you already know.’

He did already know, he had scripted it. Rather, he had the brain trust kids hack the email accounts of certain people and send realistic emails back and forth before leaking them to CNN and the New York Post.

At our hotel, we sat in the bar under a TV screen, beer and burgers ordered, the news not pretty. Two senior members of the Fed, three Republican Senators and two large banks were under the spotlight, suggestion of nothing short of a conspiracy to unseat Sanchez and block the aid package for the homeless. Even the men of our security detail were vocal in their condemnation of the conspirators.

After we had munched on the burgers, we drove straight around to the CNN offices and offered an interview. We labelled the leaked emails as a plot that deserved investigation by the FBI, as a threat to national security – nothing short of terrorism – and encouraged the people of America not to use the banks in question. This was our

strongest attack yet on the two banks, and we labelled the Senators as traitors to democracy, and as terrorists, the members of the Fed labelled as being part of organised crime.

The FBI moved before Sanchez had even nudged them, all of the Fed staff in question and the bank CEO's picked up for questioning. Unfortunately, they could not touch the Senators, because such conspiracy was normal everyday plotting and scheming for them.

Flying out that evening, we left behind good news and bad news. The good news was the America-China deal, arms reductions and other agreed pieces of cooperation. The bad news was the conspiracy, because it took three percent off the DOW.

Land grab

The Mozambique President had flown up to London with the leaders of Madagascar, and I had to admit that a few million would have bought-off either of them. When we told them our suggestion, they just stared back, stunned.

‘We would sell a part of our land?’ they repeated.

‘Yes, and it would become sovereign Saudi territory for all time,’ Jimmy told them. ‘It would be fenced off, but they would buy things from you, as well as move oil across your lands.’

‘They ... will pay for oil exploration near our coast?’

‘They would,’ Jimmy confirmed. ‘Plus a down payment of many billions of dollars for the land. Both of your countries would be significantly boosted.’

‘And ... do you think it is a good idea, something we are supposed to do?’ they asked.

‘I think it will boost your economies greatly. How else will you get so much money for just barren land? You will also get a cut of the oil revenue if they find oil, but they are not doing this to search for oil. They are doing this because their country may suffer a disaster in the future, a ... lack of water and natural resources,’ Jimmy lied. ‘They wish to have small colonies outside of Saudi Arabia.’

‘How much land?’

‘A coastal strip, twenty miles long and five miles deep, little more,’ Jimmy told them. ‘They would build port facilities, and you would benefit from them.’

‘The land is nothing,’ they pointed out, shrugging. ‘Maybe to move some villages.’

They were finally in agreement, offering to discuss it with their cabinets and parliaments straight away, and to get back to us. I figured it was a done deal then, the money too good to refuse for a strip of mosquito infested marsh coastline where no one lived. I emailed the Prince and gave him the news.

Back at the house, Big Paul had returned from Afghanistan, now more soldier than bodyguard. He had lost weight, and appeared more weather-beaten, but was enjoying the Afghan campaign.

‘Had a large group of Arabs come over the border from Pakistan the other week, maybe eighty in total. Gave us something to do, people falling over themselves to be the ones to get in and mix it up.’

‘And the Iranians?’

‘Quiet now, not a peep out of them. We allowed them in to collect their dead, we even helped them. Only problem we had was with some of the drug lords.’

‘How so?’ I probed.

‘We have outposts on the borders, and they see and stop the drug mules in case they’re Taliban drugs. Drug lords didn’t like that, so they all met up to discuss kicking us out. Two hundred of them met in a house in the central region, and ... boom! Wiped them all out in one go.

‘The survivors got pissy, so we bombed the hell out of the poppy fields, and sprayed them with a chemical. Fuck all growing there now that we can see.’

‘And the Northern Alliance?’

‘Useless bunch of corrupt fuckers; we killed a few. They can’t be trusted, and you can’t work with them. You give them money, make a deal to repair a road, but they go home, get drugged up, have sex with young boys and fall asleep. And that’s on a good day.’

With Big Paul off to his seldom-used house, Han joined me. ‘Do you have a moment?’

‘For you, always.’

‘May I enquire ... as to the Saudi role in things?’ Han asked.

I shrugged and made a face. ‘The original plan, Jimmy’s plan, was to just ignore them and let them be destroyed.’

‘He has no love for them. And now?’

‘Well, they want land in Africa – sovereign Saudi land, and they’ll pay a lot for it. So, if their capital can be used up before they’re destroyed, all the better.’

‘And if my government wished a port and inland area for ourselves, as sovereign territory?’

‘I’d see no problem with that. You’re already in New Kinshasa. Where were you thinking?’

‘On the Kenyan coast, close to the Somali border.’

‘I’ll chat to Jimmy and the Kenyans for you.’

‘Thank you, Paul.’

When I told Jimmy, he said it was few years ahead of schedule, but anticipated, and that it was my deal. That Friday I joined Lucy on a flight down, Helen and Liz along, and flew over to Nairobi as the ladies of the family enjoyed the mansion. The Kenyans were intrigued, as well as bemused.

‘Sovereign land?’

‘Listen, I worked the deal your way, or the Somalis would have got it,’ I lied. ‘You sell a strip of land, three miles long and five miles deep. It would be fenced off; passports shown at the border. Inside, the Chinese build a colony like Hong Kong, and it greatly boosts the local area. They’ll build a port facility, an airport, and employ local people.’

‘But if you have any concerns, that’s not a problem, Somali has a lot of spare coastal land, so too Tanzania -’

‘We did not say that we were not interested, we just need a little time to discuss it.’

‘Of course.’

‘And ... they would pay for the land.’

I nodded. ‘An agreed sum. But the main advantage would be the increased trade.’

‘If you say that this is good for us –’

‘It’s a piece of dry and dusty land where no one lives. What’s there to lose?’ I held my hands wide, then pulled out a map. I showed them a spot I thought might be good, and drew the enclave to scale. It looked tiny compared to the overall country. ‘Have a think, but don’t take too long; others are interested.’

I flew back to Goma and joined the ladies, a meal at the house that evening, Yuri and Po around. Well, they didn’t have far to walk.

Po was now just about the richest man in Hong Kong. His family had been wealthy to start with, and the trading advice we had furnished him with had boosted that wealth. His oil and ore interests, those which we had handed him, had made him an extra fortune on top of his other two fortunes. Jimmy had said that Po would be one of the richest men in China, and now I was sure that our little chubby friend was just that.

When I told him about the Chinese Government's interest in coastal land, he went quiet, his grey matter firing up. I mentioned the Saudis, and he was not just fired up, he was down right put out by it. If it was a good deal, why was he not in on it?

'The Saudis want new land because they risk being destroyed in 2025,' I explained. 'It's not about money, they just need a place to live. And as for your government, you'd best ask them. I don't know why they want a port and land, unless they just wish to create an export hub. There's no oil or ore on the land, just swamp.'

'Maybe for a naval port in Africa,' Po suggested. Now it was Yuri's turn to be put out, and I wondered how long it would be till they were asking difficult questions of Jimmy – and then he'd be put out.

Yuri had created his own airline by purchasing an existing airline, and would accept our 747s and 757s as soon as they were delivered. I offered him a slot from Moscow to Goma hub, which he readily accepted. Two hours later, Po and Yuri walked off arguing about coastal land and its benefits, so I figured I best call the boss man.

'Jimmy, Po and Yuri know about the Saudi land down here, and now the Chinese land down here, and I suspect they're plotting and scheming.'

'It's a few years ahead of schedule. We're in a recession, so it's not a good time to be expanding facilities, but it would have happened anyway – that was the idea with New Kinshasa. You're doing it arse about face. We should have had them all cooperating around new Kinshasa first, then buying more African land.'

'Do the Chinese want a naval presence here?'

'Yes.'

'That'll please the Americans,' I quipped.

'It was the Americans that suggested that Russian and China take more of a lead in the fight against The Brotherhood! Including naval firepower. So they can't argue the point.'

'And the Russians?' I asked.

'Might be feeling a little left out, and want their own warm-water port down there. I've expanded the facility in northern Somalia, and there's a new pier just for them, one for the Chinese.'

'So what are the Chinese up to?' I puzzled.

'The same as for New Kinshasa: proximity and influence, commerce and trade. The key decision makers can be closer at hand. Oh, while you're down there, go see the volunteers and thank them all, look over the projects and make them all feel appreciated.'

The next day I sat down with an A3 iPad and launched a bit of software that allowed me to draw with a special pen, and to have the drawings turned into diagrams with square edges. I drew an oblong and dimensioned it as five miles by three. The port was easy enough to position, but then I consider a marina, and so moved the port. Behind the port I positioned a container yard, a railway marshalling yard, and track leading off towards the northwest.

At the far left of the oblong, the northwest, I positioned the airport, also with cargo facilities, but repositioned it to be next to the port. The idea was that the nice houses would be inland, all the noise and pollutants close to the coast. I figured that an industrial area would come next, behind the container port, followed by the business district, which led to the shopping and nightlife district, residential apartments, smaller apartments, then houses and mansions towards the rear.

I based the marina on Shelly's design, added restaurants and bars, and a government quarter. That done, I attached it to an email and send it to Shelly: "see what you can do with this".

The next day, Helen and I dressed smart, Lucy deciding to come along with us and to skip school. We drove into the city, and west to the volunteer's compounds and research facilities, two large university-like compounds either side of a main road.

The chief of the volunteers was a former head of the International Red Cross, his deputy a former Mayor of Philadelphia – an unlikely couple. They greeted us off the coach and showed us around, a thousand handshakes given, microscopes peered down, computer simulations observed. Two hours in and my hand was sore, being led now to a closely guarded area. I cocked an eyebrow at the armed guards, exchanging a look with Helen. This place was guarded better than our bank.

Inside, we found laboratories leading to huge water tanks, all filled with seawater.

'What goes on here?' I asked.

'It's a project to assist with global warming,' they explained.

'Global warming?' I puzzled.

'The world's oceans are the greatest carbon sink. Plankton absorb carbon, and when they die it falls to the ocean floor; from gaseous form to a harmless solid. The dream of many scientists has been to develop short-lived plankton in a laboratory that could be seeded in the oceans, thereby controlling the spread of them. Problem is, they use up the ocean's oxygen and produce methane, so we're trying to breed those characteristics away, or at least to minimise them.'

They led us to a large vat, VAT14 stencilled on its side. I faced Helen and pointed at it, her eyes now wide.

‘VAT14, JDI,’ Helen whispered.

‘What’s so special about this vat?’ I asked.

‘It’s our best hope, and shows great potential,’ they enthused.

I stared at the green liquid. ‘But this is not good enough to help?’

‘No, unfortunately; it’s below the threshold that Jimmy set. We think we can possibly extract some of the DNA and alter it, add a protein marker or two.’

‘What would the protein marker for algae have to do with this?’ I asked, still staring at the green water.

‘You know your stuff, obviously. We’ve been theorising that it could alter the metabolic process; less methane.’

I slowly nodded to myself. Turning, I said, ‘When Jimmy stepped back through time he came with the protein marker for an algae in his blood.’

Our hosts looked like they had seen a ghost. Or two.

‘Do you have a sample of his blood?’ I asked.

‘Yes.’

‘Then I guess your mad scientists know where to find the marker.’

Two men rushed off without a word.

‘Do you know what this means?’ the chief asked, looking like he was about to explode.

‘Not a clue,’ I offered.

‘If it works, we can seed the oceans and grab the carbon!’

‘Will that stop global warming?’ Helen asked.

‘We don’t know, we’re still trying to calculate the effects.’

‘When will you have the result –’

‘In a few hours; I’ll call you.’ He turned and walked quickly away.

‘I guess we’d best leave the mad scientists to it. Which is the way out?’

On the way out, I called Jimmy and gave him the story. He said, ‘You have a bad habit of doing things a few years early, young man. Learn some patience.’

‘So I was right then?’

‘Yes. And by tomorrow they’ll have reached my threshold, and ten minutes later they’ll tell everyone in the world.’

‘You want me to slow them down?’

‘Slow them down? Right now they’re all having brain-sex. No, let it run its course. But give them a good budget to build a facility on the coast of Somalia, a ship or two – research vessels.’

‘Will it stop global warming?’

‘Not completely, but it will give everyone an excuse to keep their economies going at full pelt, which is what the Americans and Chinese want anyway. With this news, they’ll increase their carbon footprints and negate the benefits.’

Two days later the news hit, every TV channel showing the same thing: Silo fixes global warming. Hell, at least we were popular. But that next week came cautionary tales from various scientists who suggested that the release of the plankton could harm the oceans ecosystems, and a sometimes violent debate broke out amongst the world’s academics.

‘JDI,’ I told Helen. ‘Just do it. Jimmy will seed the oceans regardless.’

A dark day

I kept in touch with Brad, and he seemed to be making a difference, he certainly seemed to be making a name for himself. He had spent most of the allocated money, had fixed tens of thousand of properties, and was to be glimpsed on the west coast news most every night.

Sanchez’s bill failed on its first attempt, and Jimmy waded in, criticising Congress. The FBI had dropped its conspiracy charges, since the email senders could not be proven to be sat at their desks at the time, and the mood stateside soured.

Unknown to me, Sanchez had been invited to Israel, never having visited. Also unknown to me, was a demand by Sanchez that Israel halt its settlement building, and that they assist with the West Bank water pipe - still awaiting planning permission. Sanchez then cut the US aid package to Israeli by ten percent, referring Israel’s aid package back to Congress to be ratified.

We flew over a month later for another meeting at the UN building, a dark and rainy day. Arriving, the area outside the UN building was a sea of flashing blue lights. Our security detail got jumpy and sped off, taking us back around to our hotel. There, on the news, they were reporting that a junior Israeli diplomat had shot dead Sanchez.

Jimmy and I slumped into chairs, devastated. From the look on Jimmy's face, I could tell this was totally unexpected; as well as a serious setback. After a minute of saying nothing, Jimmy mentioned, 'The UN don't check diplomats for guns.'

The TV news kept our attention for fifteen minutes. When the phone went, it was the Vice President, Harvey Blake, a fifty-eight year old veteran Democrat, and now in the hot seat.

'Jimmy, it's Harvey Blake. Sanchez didn't make it. And right now I could do with some god damn advice about what to do.'

'I don't think the Israeli Government had a hand in it, no matter how much Sanchez upset them. Blame the individual, not the country, call for calm. I'll be around for a few days, call me anytime.'

The next call was Ben Ares. 'Jimmy, how the hell did you not see this!' he barked.

'It wasn't supposed to happen, and Sanchez was never supposed to be President. We've altered a lot. Quakes don't change, but people and politics do.'

'Is there anything you can do?' Ben asked, sounding terrified.

'Make a statement, Ben, blame the individual and condemn it. Wave diplomatic rights and allow him to be tried here. After that, well ... after that it's a disaster for you either way. I'll do what I can, which will not be much in this case.'

After hanging up, Jimmy faced me. And waited.

'Does this alter the build-up to 2025?' I asked.

'Only as far as Israel goes, and they were never key. Key to the start of the trouble by physical location, key to American aims to defend them, but not key to global cohesion.'

'Will the Arabs try and make use of this?'

'There was a time when they would, but Iran is not in the mood, Iraq is quiet, Jordan timid, and Hezzbolah have lost a lot of men. So, no, I don't think the Arabs will try and use it. But there'll be dancing in the streets of the Gaza Strip tonight.'

'Will the Israeli-US relationship hold?'

'Yes, because that's done at a political level, behind closed doors; the American people don't get to see the money spent – which is way more than that declared. But the American people are the problem, in that they'll be the ones upset, not the establishment. And right now I don't want to say anything to help the Israelis if it puts me at odds with the people. The voters.'

'Ben will expect you to support him –'

‘How can I? How can we defend this? The politicians will blame the individual, the people will blame the Israelis, and the press are largely Jewish-controlled ... so they’ll try and play it down.’

That evening we avoided the press, watching events unfold on the TV, Harvey Blake sworn-in the next morning in a quick ceremony. I was amazed to find comments from Israelis like “Sanchez was no friend of Israel”. Jesus, I thought. How much worse did they wish to make it?

Ben Ares then shocked me by demanding that the diplomat be returned to stand trial in Israel, because he would not get a fair trial in America. What was there to debate in a court? He shot the President dead in front of fifty witnesses. Were they going to call for proof, for forensics, CCTV images? For an autopsy of the President and the slugs matched to the gun?

This was a low point, after things had started to look better. We flew down to Washington, avoiding the press, no press aboard the plane, and met with President Harvey Blake. He struck me as a good man, but he seemed to be a Samuels mark two. He was no charismatic leader, and he had no energy or passion, not like Sanchez. We went around in circles for an hour and got nowhere, no firm movement backwards or forwards, Blake in favour of sending the diplomat home rather than a public trial in the US.

A call then came in, a prison guard having killed the diplomat. That closed that debate, and was probably a good outcome. Either way, a trial would have dragged it out and made it worse.

Both mentally exhausted, we chose to fly straight back without even issuing a press statement. Before we took off I scanned the US news, finding that the media were condemning verbal attacks on Israel. The anger of the people would never be heard through the media, as Jimmy had suggested. I wasn’t in favour of attacking Israel, but I was also disappointed that the American media had closed ranks. Truth was indeed the first casualty in this small war.

In London, we held a press conference. Jimmy said, ‘Israel is a friend, America is a friend, it’s a terrible business, and a terrible waste of a human life. Sanchez was a great leader, and would have gone on to do well, I’m sure of it. The people of America should not blame Israel, since the Israeli Government did not ask the diplomat to shoot the President - it was the depraved act of a lone individual, who may have had problems and issues.

‘We have all achieved a great deal in the past few months, and I hope that we can move on from this unfortunate incident, and continue building – not moving backwards.’

The journey home in the coach was sombre, emails checked and replied to. At the house, we found Shelly, a pleasant surprise, and she had some drawings for me, drawings of the planned Chinese enclave in Kenya. Han had already received a copy.

We tried to talk about anything other than Sanchez, and caught up on where Shelly had been, what she had been up to. She had become very interested in the plankton, and was heading down to Goma to spend a month or two working on it. We'd see a bit more of her.

Brad sent me an email a few days later; he was going to run for Congress during the mid-terms, as an independent. I emailed back, 'Good. You'll do a good job. We can't be seen to endorse you – too much. And its almost two years away!'

When I mentioned it to Jimmy, he sent Brad an email suggesting that he go for Governor of California in two years; a firm hint about destiny.

In the weeks that followed, very few US commentators were lamenting the loss of Sanchez, and that angered me. They were sweeping it under the carpet, and it was business as usual. As for the aid package, I was starting to wonder if new President Blake was awake and on the job. I totalled up what we had spent so far, dispatched another three point five billion dollars, and told Brad to leak the figures. I was angry, and it was time to shake the tree.

The news hit the next day, west coast commentators mentioning the sum of ten billion dollars having been spent on the homeless. Jimmy made no comment, and I didn't care, my blood was boiling. Twenty-four hours later, the commentator asked why more money had come from us than so far released through the federal aid package. Minor protests took place in northern California.

Blake called me, unable to reach Jimmy. 'Paul, I was after Jimmy. Just ... wondered if there was a way to channel your ... generous support, through federal outlets. A ... unified approach.'

'If those federal outlets will be feeding the homeless tomorrow, yes we could. Any delay would not be acceptable; people are cold and hungry now.'

'Well, we're doing what we can –'

'No, you're not. You should have tried to pass the bill before the quake, and now the Republicans are stonewalling it. If we wait till you get a bill passed it'll be next fucking spring!'

I hung up, and stood staring out of my office window. With my hands in my pockets I watched the trees swaying in the wind, the poor old squirrels probably somewhere nice and warm. I called Brad.

‘Paul? You woke me.’

‘Sorry. Look, the President is asking that we fund you through his office.’

‘What? We’d never get anything done.’

‘Exactly, so I want you to squeeze his balls. Get angry Brad, and get vocal. I know you’re a Christian, but fight the good fight, eh. And loudly!’

Brad went too far, and Jimmy shook his head at me the next day. Brad had openly stated that President Blake had tried to stop our payments to the poor and homeless. That led to more protests on the streets, placard-waving volunteers from The Ark taking to the streets, many of them white middle-class Republicans. They were joined by those they were trying to help; the poor and displaced. Even the Hawaiians took to the streets.

A poll in California then put the Governor as having a less than ten percent confidence rating from the people. Since there was just about a million new people in the state, it was not surprising. Those with homes were unhappy at the newcomers, and those without proper homes were unhappy at everyone else.

The Governor made a speech, saying that his hands were tied by the lack of federal support, but was booed by a crowd. The next day he tried to visit a housing project, but was smashed about the head by a worker, the governor ending up comatose and on life support. His deputy took over, but did the wise thing and called an election, the man wisely not wishing to remain in office.

There was some debate as to the legal status of the old governor, since he may have survived. The doctors said he could be back in work in two months, or comatose for two years. The unconscious man’s wife then came forwards and suggested that he was thinking of stepping down, and that sealed it; there’d be an election in California.

A week later, Brad put his name forwards and announced that he would be running, very few of the serious contenders wanting the job, not at the moment. Jimmy explained to me that people he knew in California would arrange cash for Brad’s campaign. I rang our media mogul in the States, the Blake Carrington look-a-like, and dropped a big hint: we like Brad for governor. Or else!

Oliver at Pineapple Music came out in favour of Brad straight away, as did many of the musicians and actors, even without my prompting. Jimmy arranged a bunch of experts, and they flew over to see Brad, training him on the Q&A, and how to handle interviews.

I asked Jimmy if we would be seen as interfering, and he said, 'Fuck it. Book the plane.' We were on the campaign trail, and on the warpath.

First stop, New York. Jimmy told the press, 'If the aid package is not passed, then America will spiral out of control and descend into civil unrest. Your recession will become a crash, and you'll take years to recover. This should have all been planned for a year before the Hawaii quake, when your government first knew about it. Now you're running the risk of falling into chaos.'

'Are you endorsing Brad Sullivan?' they asked.

'That's a very difficult question. In a previous time, Brad was a national leader of America after a great disaster. I knew him then. This time around, he's applying for office when there's no disaster, at least not an apocalypse. It's never been my aim to interfere in politics, but I can't help liking Brad, and knowing that he's a great leader in a time of crisis. I can't unwind what I witnessed in the future.'

I hid a smile. Just who the hell was going to stand against Brad now?

Flying down to Washington, I caught the news on my laptop, a million reporters camped outside Brad's house. President Blake was not happy, but he also seemed to be a weakling and incapable of expressing his feelings well.

'You just gave the Governorship of California to Brad,' Blake noted as we sat in the Oval Office.

'As I spoke the truth about the tsunami, so I spoke the truth about Brad,' Jimmy carefully mouthed. 'I didn't make the world the way it is, or the past.'

'You've got everyone worried about passing this bill,' Blake mentioned, a glance at his team.

'Obviously not,' I said. 'Or they might have passed it by now.'

'You need to start planning for civil unrest,' Jimmy told Blake. 'Because I'm just not sure if you're going to tip over the edge or not. Unemployment is still rising, confidence is falling, and bank liquidity is still poor. One good push and the Republicans will get their wish; chaos. They'll try and unseat your government, and that will be followed by hardliners taking office. When that happens, you can kiss your arse goodbye, because I'll be gone - and not back till 2025.'

'And Chinese support with it, no doubt,' Blake suggested.

'Chinese? Every nation in the world will turn against you,' Jimmy informed the President. 'Your economy will go to shit,

unemployment at sixty percent. After a year or two, militias will rise up and Texas will try and declare independence. Middle America will be like Somalia used to be, only worse.'

The Chairman of the Joint Chiefs was in on the meeting, and sat looking sour faced.

Jimmy added, 'If that happens, and the man who I think will get in – gets in, then he'll think up a reason to go to war with China. Then you're looking at a global nuclear conflict, followed by the rise of The Brotherhood within a year. I gave you the tsunami to the minute, and I can map this out for you blow by blow. Screw this up, and you lose the planet.'

Blake looked lost, and I was sure that we had the wrong man in the seat again. He promised faithfully to try and push the bill through.

The Chairman of the Joint Chiefs then said, 'There's emergency military funds that could be used without Congress's approval. But it would need a State of Emergency, at least in California.'

'That's a paper exercise,' Jimmy said. 'The Governor can call one of those when there's a bush fire. It just releases certain federal funds.'

'How much?' Blake asked the general.

'We could find you sixty billion dollars straight away,' the general stated. 'Probably twice that. Hardon Chase set-up the fund after Hurricane Katrina and kept it quiet.'

'And I could add another twenty, plus fifty Chinese. That's probably enough to turn the corner. And, the bill being asked to pass ... would be to back-up the US military and replenish their emergency funds.'

'The people won't like us leaving the military short,' Blake noted.

'I'll deal with the people,' Jimmy offered.

'And the military will back you,' the general told Jimmy, getting a look from Blake.

We were making progress.

'When the money is released, don't spend it all on California,' Jimmy told Blake. 'Use around seventy-five percent on the west coast, the rest going to other states that need it. Don't tell anyone, just allocate it, and let history judge you.'

Blake took a breath, and lifted the phone. 'Get me the Lieutenant Governor of California, wake him if you have to.'

Ten minutes later we had a state of emergency, and we headed towards that emergency in the plane. Landing, the news of the

release of the money broke. Jimmy had transferred twenty billion directly to the fund, the Chinese waiting ready – on the understanding that it was a loan. We headed straight for a press conference as the sun set.

‘Ladies and gentlemen, people of California, people of America. Today, a State of Emergency was declared in California, simply to enable the President to release additional emergency funding from a military reserve. That was done with the full support of the Joint Chiefs. I have added an additional twenty billion dollars to the fund, and loans from overseas have also been made.

‘I now believe that there are sufficient funds to help the homeless, to rebuild, and to stave off recession in California. Some of that money will be used here, some in other states. This move has come about ... as a need to circumvent those conspirators in the Congress and the Senate who wish to see a nationwide collapse and a state of emergency for their own aims. They are playing with the future of America ... and the world.

‘There are people in the Senate today who wish to see riots on the streets, people going hungry, martial law declared – all so that they can unseat this democratically elected government. They would like to see a right-wing government in place, power in the hands of the few, and the poor kept down.

‘I have sat back and tried not to get involved in internal American politics, but you are risking the very future of this planet with your greed and stupidity. I will now take a more active role, but so long as the American people back me –and so long as they wish me to help. I can tell you what the future holds, or I can lead you along the right path.

‘People of America, you stand on the edge of disaster, and for no reason other than your own unscrupulous politicians. To save yourselves, you need only decide to vote for decent politicians, not the snakes that you seem to like electing. The people who voted against the aid package are known to you, they are listed. If one of those congressmen or senators is your congressman or senator, tell them what you think about it.

‘And I would like to appeal to every US citizen that has an ounce of dignity left, to stop using B.N.K. Banking Group. They are acting against the interests of your own democracy, profiting from your suffering and sneering down at you.

‘People of America, I warned you about the tsunami, and some did not listen. I warn you again now of an even greater risk. If the aid package for the homeless is not secured, if the people are left

adrift, then you'll face the disintegration of America. You will all lose your jobs, your savings, and your pensions. Don't let that happen; stand up and be counted!

'And to the well-off and to the rich, I say this. You cannot live behind high walls with guards and dogs, you have to drive to work. And if that drive to work is littered with the desperate and hungry, you'll need an armoured car. No one can live in isolation. Those of you with millions in the banks, and millions in shares: your paper money will lose ninety percent of its value. Then you won't be able to afford those high walls and guard dogs.

'There will be a vote in congress in a week, and that week will be a long time for some. For the country that used to be called the *land of the free*, it may be the last week some of you ever enjoy. Give some thought to what you'll do when you can't feed your children.'

He turned and led me away, the press a bit stunned. So was I.

'Jesus, you laid that on thick. You trying to scare them to death? The markets will drop like a stone.'

'And investors will switch to gold,' Jimmy mentioned as we walked.

'Which we have a bit of,' I realised as we headed back into the vans.

In the days that followed, the emergency money was released. The Joint Chiefs then took the very unusual step of publicly stating their backing for Jimmy. Five Congressmen and three Senators stood down straight away, one was shot and wounded – by his wife of all people. B.N.K. went into freefall, and Blake refused to bail them out; there was nothing left to bail out.

Gold topped twenty-six hundred dollars an ounce within days, and we sold heavily, moving gold out of our region by 747 cargo plane, twelve tonnes or more on each flight. Jimmy had warned just about everyone, apart from the Americans, not to buy gold, and they heeded the warning.

'Redistribution of wealth,' Jimmy had commented. 'Those buying gold have the spare cash; they're the rich. We'll sell a lot of gold, make a lot of money, and use it to help the homeless in America through direct loans to the various states - and at great rates. Gold will fall back to around eighteen hundred afterwards, and the rich will have a dent in their savings.

'I'm going to take a trillion off the top earners and spread it around. A ... modern day Robin Hood; not because I'm a socialist, but because if the process had continued then the rich-poor gap in

the states would have widened to the point where it could never have been closed. The elite would have controlled everything, and they would have gotten away with murder.'

Brad went on to win the election by the largest recorded margin in US history, and congress voted to pass the aid package. We loaned the state of California an extra hundred and twenty billion, in gold, and at a good rate of interest.

When US stocks had plummeted, our friends in places high and low were waiting, and all bought stock, the DOW recovering in days. The rich of America had been 'shaken out', as the market makers had done to so many others so many times before; the Top 500 rich list having to be adjusted. Jimmy and I were number one and two, with an 'Unknown, but estimated two hundred billion dollars' tag. It was way too low.

By the spring, things had turned around; the markets up, jobless totals down, homeless totals down. American had undergone a change, and it had needed the pressure cooker to do so. It also needed us, and our gold, and good timing afforded by a time traveller.

Brad benefited by many visits from us, and benefited from Jimmy's guidance – and detailed knowledge of the finances of California. We sponsored films, we bought Boeings, and we rallied an army of some two hundred thousand volunteers. And to top it all, the ocean was a terrible green colour off Somalia, a huge plume of plankton photosynthesising, a few research ships monitoring the carbon biological pump. Initial research was promising, Shelly aboard one of the research vessels.

When she came off ship, and to the mansion in June, Jimmy slapped her hard.

'What the hell did you do that for!' she protested, rubbing her head. We wanted to know that as well, figuring Shelly had done something terribly wrong.

'That's for stabbing me in the arse,' Jimmy told her.

'I never!'

'You stabbed him in arse?' I repeated.

'I didn't!' she protested.

'You did, just before I jumped through time. With a syringe.'

'I stabbed you ... in the future?' she puzzled.

'What did you stab him in the future for?' I asked her.

'How the hell would I know!' she protested.

'You injected me in the arse with algae protein,' Jimmy told her.

'I did?' she puzzled.

‘You discovered it just before I left,’ Jimmy told her.

‘I hope it bloody hurt!’ she said.

‘It did. I had a sore bum for days.’

I wagged a finger at Shelly. ‘Don’t stab people in the arse with algae. How many times have me and your mother told you about that.’

She put her fists on her hips and gave me a look. Since I got those from Helen, I cowed away, and returned to my beer and my never-ending emails.

Based in the mansion, I travelled around to the volunteers often, Shelly to be seen in a white lab coat when not on a ship. The weekends were busy, because that was when the grown-up brain-trust kids came in. They mostly held down proper jobs during the week, and they all had families, but gave up time on the weekends to help out.

That help translated into some amazing projects. One group had taken the German hydroelectric turbines and modified them. Using some of the electricity produced by the turbine, they had created filters in the feeder pipe itself, zapping bacteria somehow. When the water emerged from the turbine it could be drunk safely by the locals.

Another group had spent a lot of money on a new type of electric motor. It looked like a giant metal disk, a leaden grey colour, surrounded by thick metal walls. Peering down at it, they invited me to step onto the metal disk, ten yards in diameter. I stepped onto it and wobbled, the heavy disk floating on magnets and not making contact with either the floor or the sides. Stepping off, they set it spinning by a fan underneath, turned by a water turbine.

The disk eventually reached a good speed and the instrumentation to one side gave readouts as to the electricity generated, generated by the interaction of magnets in the edge of the disk on the coils in the surrounding walls. Friction for the disk was just about zero, and its own weight and momentum both helped to stabilise it and keep it going.

They were planning a much larger version, and planning on powering a small town with it. That led to an electric bus that just took the piss out of the laws of physics. It was also a bit ugly. The bus, a standard electric bus, held advanced solar panels on the roof, capturing enough energy to partly recharge the bus as it drove around. Above the solar panels sat two small wind turbines, technology similar to the free-floating disk, and they collected extra

energy, but not from forwards motion – that would have created drag.

They explained, ‘When the wind is from the side or rear, the wind turbines collect a significant amount of energy. This bus can travel two thousand miles on a single charge. On a clear day with a stiff side breeze, it can replenish seventy-five percent of its power usage in four hours.’

Next, they took me to a large driving circuit, where standard electric taxis were simply going around and around in circles. They pointed. ‘Under the road surface are two parallel sets of coils, powered by the city’s electricity grid. Under the car are magnets and coils. One side of the vehicle interacts with coils on the left, one on the right. You have to drive in the right lane for it to work.’

‘So it gets energy as it drives?’

‘It gets seventy-five percent of the energy as it drives, but you must drive over twenty miles per hour and less than forty. When not on a road with coils, the battery is used as normal.’

‘Cool,’ I said.

Next came a windmill farm, miniature windmills that sat atop a house and would power the house so long as it was breezy. Keen to show me a live example, we journeyed north to Spiral Five and to a house where some of the team lived. From the outside, I could see three small wind turbines and a mass of solar panels.

Inside, they ran the hot and cold water taps. The hot water was boiling hot, and the cold was well below normal temperature.

‘This house costs nothing to heat, or to power, or to keep cool. It’s not even connected to the local grid any more. The only cost is the capital cost of the equipment.’

‘I’ve seen this technology before, so what’s the angle?’ I puzzled.

‘We are looking at greater power for a smaller footprint and lower costs. It’s a never-ending battle to shave a few dollars off the cost, or to boost the power. The wind turbines, they are sixty dollars each, the solar panels – they are two hundred and fifty dollars for a six foot panel. The trick ... is to try and get those figures down.’

‘How many turbines have you sold?’ I asked.

‘We’ve made more than a hundred thousand of the latest specification. They mostly go to remote villages where you have built schools, but here in the Spirals we have them on every roof. They also power pool filters. My pool, you could drink the water.’ We didn’t test the theory.

That evening, we all dressed smart to attend a function, Lucy and Shelly looking gorgeous, and virtually no difference now between

them and their mum. In New Kinshasa, at a hotel, we stepped into the function, the local business leaders charitable ball. Many familiar faces greeted us, and I found Steffan Silo in an ill-fitting tuxedo, looking a little lost.

‘You enjoying yourself?’ I asked, stood with a drink in my hand.

He shrugged. ‘Part of the work, chat to people about projects.’

‘How’s the Angolan route?’

‘Very efficient; road and rail. And that port is doubling in size every six months.’

‘You involved in Southern Sudan?’

‘I designed a re-work of their rail links and yards. It’s almost finished.’

‘Did I read that the link to Zimbabwe is better?’

He nodded. ‘From here, the main highway goes south, and it just kept going. We couldn’t see a good place to end it, so kept the company on it. There’re electric buses that go all the way up and down, eighteen hours.’

‘So what’s your next big project?’

‘Mozambique. They want road and rail links improved, links into the Saudi enclaves. And a new highway from Nairobi north, and through Somali to the north.’

‘I had a hand in the design of the Chinese enclave for the Kenyan coast.’

He nodded. ‘I’m laying road and rail links for it; a short stretch to hit the main routes into Sudan. Chinese are talking to the Angolans about an enclave near the port we use.’

‘Oh, I hadn’t heard.’

‘Jimmy’s dealing with it. Russians want a warm water port in northern Somalia, so the existing naval base is being extended again. They’re going to put some of the Sebastopol fleet there.’

‘What was Jimmy like, growing up?’

Steffan took a moment. ‘Normal, I suppose. He changed when I was in university. Well, went and came back I guess, he doesn’t talk about it.’

‘You had the full drug?’ I enquired.

He nodded. ‘I do some exercise.’

I left the tall and not-so-charismatic gent, and mingled, soon finding Kimballa.

With a smile, he said, ‘I try to throw a good party, but your Mister Po and Mister Yuri - they dominate the party scene. They throw all the good parties and control it with a ruthlessness.’

‘Fine, let them. Your job is to throw the political parties, and to oversee the nations. If they all get along, then great.’

‘There are twenty thousand Americans here now, including the strange large men with the tattooed face.’

‘Hawaiians, yes.’

‘And many Chinese and Europeans. It is truly a cosmopolitan city, of one point four million people.’

‘What about old Kinshasa?’ I asked.

‘We convert the government buildings to offices or apartments, and make new industrial areas for jobs. It has not become a ghost town - as we feared.’

‘Good.’

‘May I ask, Mister Paul, how much the Americans owe us? Truly ... owe us?’

I took a moment. ‘If you included the shares we bought, over a trillion dollars.’

‘And those stocks, I watch them every day now. I check the DOW Jones each evening, and have charting software on my computer. We are ahead, are we not?’

‘The stocks are recovering, and we’re doing well.’

‘And this money will come back to us?’ he nudged.

‘It will,’ I assured him with a warm smile.

‘You were secretive about the amount of gold, Mister Paul, and you have shocked many people far and wide. The Democratic Republic of Congo is now considered a player, a major player, much to the consternation of Nigeria and South Africa, since we dwarfed them in one move.’

‘Timing ... is everything, Mister President. We waited for the right moment for maximum impact.’

‘Mister Jimmy tried to explain to me why the gold could not be used here.’

‘The Saudis take oil out of the ground, they have nothing else. If we took just gold out of the ground we’d be tied to gold prices, and when the gold ran out we’d collapse in a day. We need genuine jobs, genuine industries, internalised markets, and diversification. Or we’ll have no future when the ore runs out.’

‘Indeed a wise strategy,’ Kimballa noted.

Kimballa was right, we had become players in our own right, and everyone knew it. We had told former President Samuels that we’d help with forty billion dollars, and he had been shocked by that amount. Now, President Blake knew we had very deep pockets, and

many were quietly concerned; our pockets were deep enough to change the political map. The British Prime Minister had been staggered by the amount of money we employed, the Europeans concerned.

They also knew, they all knew, that people power had arrived, and it was firmly behind us. Any thoughts that any world leader may have had about undermining us were washed away. They were wary of us now, and afraid. Power had shifted, it had shifted towards Team Silo.

In Russia, their economy still suffering, we made the news with large-scale voucher use, some two million distributed per day during the winter and spring, now down to around half a million a day. The Russian people had known us before, we'd been popular, but now they were grateful as well. And we had targeted the poorer voters, not the rich few; we had addressed ourselves to the masses.

Jimmy had said, 'The thing that the rich people of the world most dislike, is that they only have one vote, and the unemployed guy has the same one vote. Democracy very inconveniently levels the playing field for them.'

Well, we had targeted the poor masses, gaining a great many votes – if we needed them. B.N.K. shareholders and former employees were trying to sue us, but we held enough of the old shares to block most moves against us. Besides, our US lawyers were arguing that we were foreign diplomats. It would drag on for years.

That summer was a good one, optimism high, and my family life reached a point of happiness and contentedness that I thought I had lost long ago. Shelly and Lucy came out with us often, and charmed everyone with their keen intellects. Helen and I enjoyed the partying and meeting people, and people loved meeting us. We welcomed new residents to the area each week, a resident's party always on somewhere, and Gotham City became exclusive. It became Beverly Hills, many rich Americans and Europeans moving across.

President Blake struggled along, on the phone to us often, but became more popular as the US economy started to turn around. Hardon Chase was being nudged by Jimmy to run for office again, especially in California, and he received ringing endorsements from Jimmy in public. Chase worked well with Brad, despite their differing political backgrounds, and California slowly dealt with the social burden of the displaced.

Bit by bit, Brad moved families to other states, thousands every week, and the social burden was eased. As US stocks climbed,

Kimballa carefully watching the charts, we sold stock in small blocks, often using the money to buy things we needed – but also trying buy them from California where possible. I bought two hundred Jetranger helicopters and allocated them to various police forces.

The development of the two Saudi enclaves and the Chinese enclaves boosted jobs globally, skilled workers brought in, international contracts allocated. Russia developed its naval base in Somalia, next to our original base, and drunken sailors of many nations frequented the bars on shore.

Jimmy dedicated a lot of his time to the base, having restaurants and bars built; Chinese, Indian, Thai and even Russian. A marina was built, complete with pontoons for sailboats, many a naval officer keen to be aboard a smaller vessel. Races were organised along national levels.

As autumn reached us, and I watched the leaves fall from the trees through my office window, the naval base in Somali grew as fast as New Kinshasa; naval ratings would now ask to be assigned there. A scuba centre was opened, firing ranges, assault courses and barracks.

The airfield inland had always been a military airfield, but now accepted planes off carriers on a regular basis. A Russian squadron of Migs turned up, at Jimmy's invite, a training squadron that made use of the Somalia ranges and its wide-open spaces. Fitted with cameras instead of guns and missiles, they would fly out and attack US F14s off carriers in simulated dogfights.

The British and French then complained, so an additional apron and dispersal was installed, more hangars, and European training squadrons moved in. When the airfield was increased in size again, the US Air Force put in two squadrons of its new, and much awaited, Joint Strike Fighters, the F35. Those aircraft sat in a dominant position in the Yemen Straits, and pleased the Joint Chiefs no end.

The Joint Chiefs then approached us and asked about a second base, a little further inland, and for B2 bombers that could reach around the Middle East.

'It'll be ready in a month,' Jimmy told them. He handed them a file, the new airbase having been constructed in secret in an isolated area over the past year. It already offered a suitable runway, all the concrete aprons and dispersals that they could desire, but hangars would be down to them. Barrack blocks had been built, a control

tower, an officer's mess, the works. The fence was already up and secure, Somali Rifles patrolling around the outside.

Splice the main brace

In November, we flew out to the joint naval base in Silo One, a direct flight. I'd never seen so many ships in one place, grey naval vessels from a dozen countries hugging a dozen concrete jetties. And their fuel, that came from us, from CAR wells near the Ethiopian border.

Whisked around to the joint naval command headquarters, we found offices labelled up by nationality, some of them common. In the common command centre, responsible for operations to catch small al-Qa'eda launches crossing the straits, we greeted the assembled officers in turn, a variety of languages used.

Jimmy then called a meeting. He tapped the table map, at the Sinai, with a pointer. 'Gentlemen. When 2025 arrives, we will consider the Sinai as critical. Here, there are two airfields; Sharm-el-sheik and Taba. I'd like plans made to seize them, soldiers in Hercules landing. But the problem is this: despite the very deep waters of the Red Sea, there is no suitable deepwater port available to your ships for re-supply – unless Eilat or Aqaba are used.

'Overland supply is out of the question, supply by air expensive. Building a deepwater port is out of the question, because a hundred yards offshore the water is a hundred metres deep. You, gentlemen, are the experts, so figure it out. Put an international working team together and ... be clever.

'Now, this base, and the nearby airbases, are isolated, and can be re-supplied by sea. There should be no future circumstances that I can think of ... where this base would be compromised. In the years ahead I would like to see the storage facilities improved, taking the view that this base would be important – and important for many years.

'It would also be a staging area for African soldiers ... if they were to be deployed into the Middle East for any future crisis. A handful of troop transporters should be here at all times. Now, around the coast is an area that I'm setting up as training range. You'll be able to pound it from your ships, bomb it in your planes, and assault it in amphibious craft to your heart's content.

‘We’re kindly supplying your ships with fuel, also your aircraft, so make the most of the free fuel and train your people in manoeuvres that involve typically Middle Eastern coastlines and deserts in the years ahead.’

The officers showed us around the command centre before buying us lunch at a nearby restaurant for officers only, the base now something of a small town. There were very few black faces here, most of the bases facilities organised by the various contributing nations. The idea was simple; if there are no locals working here, they couldn’t smuggle in a bomb.

After lunch, we strolled down to the marina, the off-duty sailors enjoying all modern conveniences here, including a Thai brothel and an Africa brothel, hidden away around the back. Since there was no risk of disease, attitudes had changed, and the “don’t ask, don’t tell” policy was applying to many things around here. Squash courts were being constructed, tennis courts, a swimming pool. We noticed a small shopping area leading into the marina, the harbour side itself rammed with off-duty sailors sat enjoying the sun and the beer.

As soon as they saw us they stood, many walking over for a chat. We shook hands with those who extended a hand first, and I asked young Russian sailors about life on the ocean wave.

Finding a group of Brits, I said, ‘You lot are spoiled here.’

‘Fuck, aye,’ they said. ‘Shops, cafes, bars, sports, hookers, the fucking works, aye. This is the place most of us try and get a posting to.’

‘How’s the integration with the others?’ I asked.

‘Some keep to themselves, some like to chat. Not many speak the lingo, but there’s a few translators that wander around,’ a second rating informed me. ‘Besides, for football you don’t need the lingo. We play American football.’

‘Here?’

‘Well, we dress up in the kit, but use a round ball, beating the crap out of each other,’ they said with smiles.

I pointed at the sailboats. ‘Do you sail?’

‘Aye, had a go. Done a bit of diving as well. And you get some civvys coming in; they’re allowed to berth here for one day, unless they have a fault. Some stupid civvy had a problem the other week, and was towed in by a frigate!’

Another young sailor said, ‘All the officers go crazy over the sailboats; any excuse to be helping out the civvys.’

I greeted a group of Chinese and made them feel very welcome, a few French, and a loud bunch of US Marines. Seemed like every

which way I turned a t-shirt proclaimed a military unit of some kind. Wandering on, we tripped across the scuba centre and popped in, finding some odd equipment lying around.

‘Navy divers and navy SEALs come in regular,’ the British manager said, a PADI instructor.

‘How did you end up here?’ I puzzled.

‘I’m ex-Navy, and one of the command staff knew me, so asked if I would run the dive centre. We don’t charge much for the lads, but there’re lots of them wanting to dive, so it ticks over. And I get free food and board, live above the centre.’

‘Sounds like the life for a young man,’ I noted.

‘Well, maybe. But I’m divorced, and I doubt her solicitors could make it past the Somali Rifles.’

‘No,’ I agreed with a smile.

‘You mind if I ask a question?’

‘You can ask,’ I told him.

‘Any wars or problems going to affect a ten yard radius of where you’re standing in the next few years?’

‘No, none,’ I said with a smile. ‘But be gone by 2025.’

‘I won’t be here that long,’ he told me.

Jimmy stepped over. ‘Wife still chasing you, Rob. Best not tell her about the house you own in Somerset.’

The man stood rigid, wide-eyed and stunned. ‘Well I’ll be rogered sideways. How the hell do you know that?’

‘He’s a time traveller,’ I pointed out. ‘You figure it out.’

The various ship’s captains were keen to show us around their tubs, and we made a point of visiting one vessel from each nation. We eventually left at 2am, a little worse for the alcohol, and I made a note to ban Shelly from visiting the place.

End of year

The approach of 2018 saw a renewed optimism in many places, and Shelly had surprised us by not starting university this year. She was entrenched in her work in New Kinshasa and absorbed by the plankton. She also figured that she would learn little more in university.

Jimmy was surprised by the move, since he had been certain that she’d opt for a course in California. Well, there was always next year. For the moment, we saw more of her when we flew down, and

it was very hard to think of her as a teenage girl. She had her own circle of friends down here, a regular TV news slot, a dozen modelling assignments and her own security detail. But her room at the mansion still had the original sign pinned to it, a teenage girl's notice to her parents: Shelly's room.

We flew down before Christmas, the household "M" Group and my office team joining us, my team in a hotel. A review of my projects produced a few problems, in that we seemed to be producing way too much of everything. Agricultural production was so high that we exported it just to keep the prices here stable, North African states now benefiting from it. Zimbabwe had returned to being the breadbasket of Africa, and cereal crop production was astounding.

Population growth was a factor, with the supply of the drug and bountiful food, but we had hoped for a spike in population curve anyway. Africa no longer received either food aid or financial aid from overseas, and we began exporting surpluses to India and the Middle East.

In our own region, the bar charts and graphs relating to New Kinshasa were not a problem, they were just unexpected. One point four million people now lived in the city, and the current rate of building and immigration would put the city at two million within eight months. That immigration was being tightly controlled, and people could not just turn up. Still, it was growing quickly.

Looking at the map of the area, I ordered that the road to Forward Base be dotted with small towns to ease the pressure, and that a large suburb be built at the next highway roundabout below the southern airport, including shops and business offices. That gave me an idea, and I followed on by ordering a town to be built at each major junction, some six miles apart. Since there were mines to the south, I decided to extend that process, the towns being centres for workers.

With Goma International Airport getting busy, I ordered the southern airport expanded - for our regional aircraft to be located there; 737s and A320s. In future, if someone wanted to fly to Nairobi, they'd use the southern airport.

On the outskirts of new Kinshasa, I ordered tall office blocks built, aiming to have people work close to where they lived. The Saudis had proposed a number of buildings and hotels, and I agreed them all, but I moved the towers further southwest than they had asked for. Their planned five star hotel, however, would be just a half mile south of the marina.

Our influx of Hawaiians and Americans, including Americans unaffected by the tsunami, was having an effect on business. They had been offered loans at great rates, and most established businesses along the lines of those they had lost. They opened garages, computer businesses, and repair centres of all sorts. Many had been absorbed into teaching, especially the ladies, and young Africans were leaning English with a Hawaiian accent.

Kimballa found the Hawaiian culture fascinating, and ordered a social centre and church built for the community. Learning of the famous boat races and sea faring traditions, he had a large pond dug into a park, fifty yards wide and five hundred yards long. We flew over outrigger canoes and Dragon Boats, and local Congolese children could watch as the Hawaiians raced each other.

The Rifles officers noticed the races, and the odd wager was placed on Rifles soldier teams. Within weeks the races were being taken seriously, nations and units competing fiercely. Kimballa extended the course, now almost eight hundred yards long, roads preventing further expansion. The park's land was invaded in favour of this new spectator sport, the pond widened to accommodate four or six boats, depending on the type.

Hawaiian restaurants popped up, and imported pineapples and exotic fruits were soon being sampled by Congolese housewives, waitresses in grass skirts and coconut bras to be glimpsed in a few establishments.

Christmas went well, way too many presents bought by everyone and dished out, a series of parties thrown. French Michelle was still with us, but Jimmy appeared with a new squeeze on Christmas Eve, a leggy model. Shelly found her to be a kindred spirit straight away, and chatted at length about modelling assignments.

For New Year we lost many of the "M" Group as they headed home, and invited the Mawlini gang over. Mac's new young lady was six months pregnant, Mac set to be a father at seventy-three. He didn't look it. In fact, he had hardly changed in thirty years; still short, bald, tanned and ugly.

Anton and Cassie popped in with a tall daughter, the girl having grown around five feet since I saw her last. No sooner had they set-off to explore the city, than Anna, Cosy and Rudd turned up, but without their kids in tow. It was just the parents, the kids now adults and having their own lives, and in some cases – their own families.

Jimmy popped around to the TV station to deliver a rousing speech of hope at 8pm, New Year's Eve, and we all moved to the roof of the casino afterwards. It had been converted to a quality

rooftop bar, and would offer us a great view of the fireworks. Yuri and Po played host, the two men having been invited to some fifty parties.

‘We say Jimmy ask us come here,’ Po explained. ‘We can no be fifty places.’

‘So you’re saying ... that you’re here to avoid them, rather than to see us?’ I teased.

‘No, no, you family. But business important too.’

I wasn’t sure how to take that, but was distracted by Shelly’s new young man, a Hawaiian biochemist volunteer, a great combination for her. He was over six foot, well built, and caught Helen’s eye.

I asked the lad, ‘Are you the reason my daughter is not going to university?’

‘I hope not, sir,’ he replied.

‘How long have you been dating?’

‘I was seeing someone else when I met Shelly, but broke-up with that girl a month ago.’

‘You were unavailable. Well, bound to attract a girl that way; it drives them nuts.’

‘I keep thinking Shelly is older than me, way older.’

I lifted my eyebrows and nodded. ‘Don’t worry, I get that feeling as well. She still bosses me about. So, how did you end up here?’

‘My family was originally looking at New Zealand or Samoa, but we read about this place and saw the pictures, and decided to give it a go. We were allocated an apartment, and a basic welfare allowance – which goes a long way around here, and I wandered into the research centre one day. They made me welcome, made me a meal, and refused to let me leave.’

I laughed. ‘Press-ganged were you?’

‘Well, kinda given a large dose of motherly love and asked to stay on. Besides, I’m heading up projects here that I would never get to touch elsewhere. I even have a staff, and I’m twenty-two.’

‘Do you work with Shelly?’

‘Sometimes, but she can be a bit competitive. If I know something more in certain areas, she’ll sit up all night till she knows as much.’

‘So why haven’t we seen you around the house?’

‘I have an elderly gran to look after, and I work a lot.’

‘I would have figured that my daughter would have hired you a nurse for your grandmother.’

‘She did, but my gran prefers me.’

‘Well, I’m surprised Shelly tolerates your lack of time.’

‘Me too, sir.’

‘Mali,’ Jimmy offered the young man. I had not even asked the lad his name. They shook. ‘How’s your gran?’

‘Fine, sir.’

‘How did you know?’ I asked Jimmy.

‘I keep tabs on your daughters,’ Jimmy replied.

‘It’s a great honour to finally meet you,’ Mali offered Jimmy.

‘What about me?’ I teased.

‘Well, Shelly told me all about you, so I feel that I know you better, sir. Mister Silo is ... well, unique.’

‘So what does Shelly say about me?’ I pressed.

‘She’s quite proud of your work here, especially of the city.’

‘Oh.’ I glanced at Jimmy. ‘She’s never told me that.’

‘Fathers and daughters, sir; you can’t be a father and a friend.’

‘Very true,’ Jimmy put in.

Shelly stepped up.

I said, ‘I was just telling your young man here about the time you crashed your Hannah Montana golf buggy.’

‘Golf buggy?’ Mali repeated.

‘It’s a big estate,’ Shelly explained. ‘And I was ten.’

‘She rammed into the Deputy Director of British Intelligence,’ I pointed out. ‘Didn’t even leave her insurance details.’

Mali smiled. ‘I don’t get to hear much about your childhood,’ he told Shelly.

‘Well your gran tells me all about yours. Including the wearing of you mum’s earrings.’

‘Let’s agree not to discuss our childhoods,’ Mali suggested, Shelly leading him away.

Watching her go, I said, ‘She’ll be seventeen in a few weeks.’

‘Going on thirty,’ Jimmy added.

‘Should we be concerned that she’s not gone off to university?’

‘She’ll never need a formal qualification for what she’ll end up doing.’

‘Which is ... oceanography, yes?’

‘To start with, then other things. And no, I won’t tell you.’

The fireworks sounded the arrival of the New Year, and beyond them I could see the bright lights of New Kinshasa. To Helen, I said, ‘Shelly told her young man that she was proud of my work down here.’

‘I’m sure that she is,’ Helen responded. ‘You’ve achieved a lot. Even Jimmy says you’ve done a good job.’

‘What about you, babes. Are you proud of me?’

‘You’ve never let me down, or wandered.’

‘How do you know I’ve never wandered?’ I teased.

‘Jimmy promised to let me kill you if you did.’

I laughed. ‘No, he wouldn’t let you kill me - I’m part of his grand scheme. He has a role for me to play sometime later. But times like this, its easy to forget 2025.’

‘Nothing wrong with that, we’ve done enough; a quiet year will do us all some good.’

‘I think about Sanchez often, still pissed about that. He was a good man, a hell of a passion for helping people.’

‘Jimmy says that next year will be better,’ Helen told me. ‘And I’d like to spend more time down here.’

‘Fine by me, love. Does Jimmy want you back following him around?’

‘He said no.’

‘Oh. Well, this is where my work is. I’ll talk to him about it, but Lucy would -’

‘She’s asked about enrolling in a high school down here.’

‘Really?’

‘Besides, she knows more than the teachers.’

‘And she could fly more often,’ I noted. ‘Are you ... unhappy with the house in the UK?’

‘No, its just that we’re prisoners a lot of the time in the UK. Down here we can leave the house without being followed.’

‘Let’s chat to the oracle tomorrow. If my work’s the same, then here’s better than the UK, especially in the winter. And, both the girls would be close.’

I didn’t wait till the morning, I cornered Jimmy when Helen wasn’t looking. ‘Helen wants to live down here, at least be here more often.’

He nodded. ‘I had expected her to make that choice last year.’ He straightened and sighed. ‘If you don’t stay down here with her, then you’ll drift apart. Absence, will not ... make the heart grow fonder. You’re already on borrowed time.’

‘Things seem the same.’

‘They always do, till they change.’

‘And if we *are* down here more often?’ I nudged.

‘Then I’d guess that you would have a couple of years, unless you can come up with some miracle formula. And if you can do that, bottle it and sell it.’

‘I hadn’t thought about what you said, not for a long time.’ I lifted my gaze to the stars and sighed. ‘Best adjust my mindset a little.’

‘You’ve had a good run, more than most. More than me. Anyway, next year is an easy enough year. Stay down here, enjoy it while you can.’

Part 17

Family. Goma, 2018.

Jimmy was happy enough for me to stay in Goma when he set off around the world, and I spent my days working on all things African. The cooperation group parliament, at the Pentagon building, received more of my time and I sent fewer emails; I visited people instead. Shelly's young man visited the mansion when he could, and Lucy enrolled at the University, surprising us. She passed the entrance exam, which didn't surprise us, and got stuck into a degree course on economics and politics half way through a term.

In February, both Ngomo and Abdi ran for President in their respective countries, and both received endorsements from Jimmy. With the other candidates dropping out, the pair were simply named President and got on with it. They would have won anyway, and with good majorities, but an endorsement from Jimmy was gospel around the region.

We attended both inaugurations, then sat the Presidents down and told them what we wanted - and how we wanted it done. Rifles officers took up posts in the new cabinets, and advisers were brought down from Europe to help out. Abdi checked the Somali finances straight away, and executed six people straight away. Ngomo punched a junior minister within a day of taking office, but then officially pardoned himself.

The President of Burundi was an ex-Rifles officer, as were most of the Defence Ministers in Africa these days. The new Presidents of Sierra Leone and Guinea were ex-Rifles, as were those of Malawi and Mozambique. We had the continent sewn up.

As things improved in the States, money came back from shares being sold, and the coffers filled. There was never a danger of us being short of money, but Kimballa was happier to see the money return for an African rainy day. Exports improved slowly, but much of our raw material was still being used internally, or being sold to the Saudis or Chinese as they built their enclaves.

Our international volunteers built their own factory to make electric buses, the ones that never stopped, and more of the oddly shaped buses could be seen on the roads of Africa. One young lad, a brain-trust Congolese lad, then built a sailboat, but I figured they had been invented already. His craft was a square boat, three hulls and five computer controlled sails. On days that were suitable it sailed the great rivers of the Congo, ferrying passengers in quiet efficiency.

Just to be a smart-arse, he programmed the boat to be captain free, and it followed the water's depths and currents. He put one on the lake, and it passed back and forth to Rwanda automatically. Albeit slowly.

I steadily bought dollars off any country other than the America, and used them to pay people in our region, the US Dollar now the official currency of the DRC. Seeing the size of the gold reserves that we now declared, Kenya, Tanzania, Somali and Southern Sudan switched to the US Dollar as their official currency. A dozen smaller countries followed, and Hardon Chase finally achieved his dream. We turned Haiti towards the dollar, that was easy enough, and the Saudis agreed not to consider dropping the dollar, not now.

I advertised in the US papers, and tempted another ten thousand Hawaiians to New Kinshasa, although most were non-ancestral. That then gave me an idea. I ran it past Jimmy and he just shrugged, making a face. I took that as a yes. Contacting the Madagascar Government, I enquired about an isolated area on the northern coast, and would they like to sell a strip to us - the corporation, a strip ten miles wide and five miles deep.

They were happy to sell the land, getting used to the Saudis in the south now, as well as used to the Saudi money. With the deal signed I gave the corporation the details, and told them to fence the land off, build a harbour and marina, and a small town. And quickly!

I then sent the Hawaiian elders in America a note to say that we had coastal land in Madagascar, and that we could settle people there, primarily ancestral Hawaiians. I asked if they could find families willing to help clear the land till it became suitable for further people.

Within a week I had six hundred families willing to give it a go, mostly because it was us, but they had also heard of the success of the Hawaiians in New Kinshasa. I paid their airfare and signed up the families, most living in self-assembly cabins to start with. When they asked what to build, I said 'Anything you like, you design it.' It took a week for other Hawaiians to realise that they could build anything they wanted, and more flocked to the area.

Things were going well around Africa, but al-Qa'eda reared its head in March. Terrorists hijacked a passenger plane in Yemen, the pilot managing to get out a distress call; that call being picked up by the naval base in northern Somalia. Fighters took to the air.

Contact was lost with the pilot, the plane's course, speed and altitude erratic, but seemingly heading towards the naval base itself. Ten miles short of the base the plane was being tracked by the

missile systems of no less than twenty ships and a dozen aircraft. The order to shoot it down was given by the base commander, the airliner crashing into the sea with the loss of eighty Yemeni citizens.

It was a disappointment, but also a good reminder of the dangers out there. I went for a walk down to the park, finding crocs sunning themselves and expecting a chicken or two. Staring at small fish being chased by larger fish, I thought about the years ahead, and about 2025.

The next day I tackled the African education problem, the problem of adult education. Anna came over with the Education Ministers of a dozen countries, and we reviewed both adult education - and the teaching of basic English. I offered to try and get more of the new American arrivals teaching English, and would advertise for them. In our region, the thirst that local people had for improving their English was amazing, and we now saw extra colleges being built all over.

I asked Anna to move the educational emphasis away from the villages till such time as the urban areas were satisfied, and arranged teachers for the mine workers hostels. Factories would also now offer classes after work.

In the months after New Year, 2018, Helen became more of a secretary to me than Jimmy, and took on board some of her own projects whilst scrutinising my diary and organising my time. Jimmy spent a lot of time flying around and giving speeches, and Helen and I enjoyed the mansion, many items requested from the old house and flown down. When the “M” Group were in attendance in Goma, poor old Cookie in the UK had little to do.

Family life was good, Liz a pleasure most of the time, her older sisters willingly helping out with the babysitting. Shelly and Mali, and Helen and myself, would often dine out together, Lucy having met a friend of Mali’s and hooked up. He was another tall lad, also studying in the university here, and at eighteen was not too old in our eyes.

Lucy’s interest in flying waned, as Jimmy had predicted, and she buried her nose in the books. She had caught up the half-term that she had missed, and filled in the gaps in her knowledge very quickly. The only thing she didn’t like about the university was the armed guard sat behind her all the time, even in the canteen.

Helen and I enjoyed the party scene, and since Christmas we had been out more than in the past ten years, often coming in late and tipsy. I was putting on weight because of it.

When Jimmy next visited he asked me to assist the Turkish and Jordanian economies, to help save any unrest there ahead of 2025. I sent an oil tanker to Turkey and offered future subsidised oil. That helped, and they were grateful for it, but I also struck a deal with a few European carriers to subsidise their flights to Turkey during the tourist season.

Considering 2025, and being a bit sneaky, I offered to fund two new airports in the east of Turkey, my thinking being that they could be used if necessary in any future conflict. I suggested they be placed near the coast to assist with potential tourism, the Turks delighted. I contacted the same French airport builders and commissioned the company for the expensive projects.

For Jordan I also sent oil tankers, but had to send cheap oil to Israel to stop them from complaining. Trying to be practical, rather than just a donor, I sponsored several housing projects in Jordan, as well as farm projects, and commissioned hotels for the Jordanian Red Sea coast and the Dead Sea coast.

Knowing about Jordan's uranium ore deposits, and the dangers of leaving it in the ground after 2025, I offered to buy regular amounts from the kingdom, the unprocessed ore to be stored at the Somali nuclear plant. When the Israelis complained, I said that I was removing the ore from use by The Brotherhood later on, to which they couldn't argue.

At the end of March, Helen and I returned to the UK, more for a visit than to live, and reclaimed our old house. It felt odd, the house oddly quiet even with Liz running around. We caught up with the gossip around the main house, Keely soon to be a father - in his sixties. My UK office team were still busy, but often produced summaries for Jimmy now. They were based here, in the UK, receiving information from the corporation in Africa, summarising it and sending it down to me in Africa. It seemed inefficient, but I couldn't put my finger on why.

When we had arrived back in the UK, Jimmy had allocated Helen and myself a few projects that were unrelated to Africa, and they held our attention for two weeks. I asked Jimmy about our residency in Africa, but he was happy enough to see me remain there - for now.

I had to stop and consider if he was leaving me there for practical purposes, or to save my marriage, a marriage that didn't feel in any danger of failing. I had to stop and consider if I was doing all I could towards 2025, and not being selfish. The next day I confronted Jimmy, and pressed the issue.

‘Paul, your ... future usefulness is not being affected - and won’t be affected - by a few years in Africa.’

‘But closer to 2025?’ I nudged.

‘Then things will change for you.’

‘So what can I be doing to ... you know, help more?’

‘Building up our region *is* a great help; you’re already doing most of what I need.’

‘But the other part?’

‘Start playing politician more - around the region, and include some of the North African states and the Middle East. Go right through Africa and make sure that all the various nations have the same policing and military agendas. You could start on South Africa, but they’re a pain to deal with at the best of times, and they won’t play ball with us. I always figured that we’d work around them.’

‘Botswana?’

‘Ask them nicely to join us; they already have a good society. Oh, Pakistanis here tomorrow, you and Helen in on the meeting. And get yourself some books: global economics, politics since the last war, the UN structures. Read them all at least once.’

I’d been given some homework.

In the morning, the Pakistani President and his delegation arrived, a convoy of limousines with police outriders. Jimmy welcomed them at the front door, leading them into the dinning room, our guests more reserved and businesslike than friendly. They were introduced to the household “M” Group, who then sat off to one side. The Pakistani delegation sat facing us, glances at the panel-like line up of “M” Group representatives.

‘Mister President, thank you for agreeing to meet with us,’ Jimmy offered.

‘We considered that it might be ... important, having received the invite without detail of the nature of the meeting.’

‘It’s the most important meeting any of you will ever attend,’ Jimmy told our guests. That got their attention.

‘I’m hoping that you’re not about to mention an earthquake in Pakistan,’ the President said.

‘What you’ll face ... is far worse than an earthquake.’

We had their attention; they looked horrified already.

Jimmy continued, ‘In the year 2025 there’ll be a problem, which leads on to widespread financial problems, a global financial collapse. As a direct result of that financial crash, many countries

will see civil unrest, protectionism in trade, the rise of nationalist leaders, and the rise of separatist movements and terror groups.

‘The economies of the Middle East will be hit particularly hard, leading to the rise of various terror groups based on existing groupings. One such group will inspire the poor and downtrodden Islamic masses to rise up. Unfortunately, their aim is not so much political as religious, and they’ll advocate the abolition of all modern technology. Such as ... electricity, telephones, and especially the use of oil.

‘They’ll desire a return to simpler times, and will massacre anyone who holds onto such technology, or who doesn’t join them. They will - at least they would have, found a willing audience in Afghanistan, which is why our forces are there. Second, they *will* ... find a willing audience in your tribal regions. Unless the near future is altered, gentlemen, then by 2027 you’ll be fighting a full-scale war at a time when your economy is in tatters.

‘You *will* ... lose that war, and anyone with an education will be massacred. That in itself ... should concern you enough. But you’re a nuclear state and, as such, those around you - and in the wider world - would not allow your nuclear arsenal to fall into the hands of a terror group. If I was to hazard a guess, then I would say that as soon as you start fighting this group, and start losing ground, that you would be hit with a pre-emptive strike using advanced weapons that I’ve designed using future technology.’

‘A strike ... by The West?’ they asked, horrified by the idea.

‘A strike ... by a coalition of forces, using advanced weapons. Your nuclear facilities would be destroyed and irradiated so that your nuclear arsenal could not fall into the hands of the terrorists, something that I’m sure you don’t want any more than anyone else. Now, gentlemen, I told the Americans about Hawaii, and they didn’t really pay attention. If *you* fail to pay attention, you’ll lose everything. You’ll lose your country.’

‘What exactly are you suggesting that we do about it?’ the President loudly asked.

‘That you cooperate with us to prepare, obviously,’ Jimmy replied.

‘Prepare ... how?’

‘First, you must consider that a terrible global financial downturn will strike in 2025. Take whatever measures you can up to that point. And ... re-organise your armed forces to consider the nature of the threat from your tribal areas. Cooperate with us on disarming or killing gunmen in your tribal regions, especially closer to 2025.

And cooperate with us and India by looking for cost savings, by reducing the overall spend on your military.

‘If you’re willing to look effectively at reducing the size of your military - in a treaty with India, then we’ll look at financial assistance for you. You’ll save money on your military, *and* you’ll gain financially from us.’

‘And what would be India’s role in 2025?’

‘When your tribal Taliban groups start to attack India, India will attack you. You’ll have a war on two sides,’ Jimmy explained. ‘But India already knows about this problem, and they’re not keen to see you diminished since you’re an effective buffer for them – so long as you’re still an effective functioning government. They’ll be happy to see you throw away your soldiers holding the line for a year or so and then - you might say - they’ll be happy to see you completely destroyed. Unfortunately for India, they’ll be next in line. They know that, so they’ll cooperate with you towards a common goal.’

‘You’re not painting a very good picture for our chances of survival!’

‘You don’t have a good chance of survival. But I’m giving you the courtesy of this warning, and giving you a way out. I don’t think you’re smart enough to take it, but the offer is there anyway. As with some of the Hawaiians, you’ll sit in your houses till they’re destroyed, dying in ignorance.’

‘And this ... way out?’

‘First, you have to believe my prediction. Second, you have to consider future generations of Pakistanis, and put them ahead of your own careers and popularity. Third, you should do what I say, exactly what I say, and when I say it. If not, I’ll supply certain armies with advanced weaponry and you’ll be hit hard. You won’t see it coming, and you won’t be able to defend against my weapons.’

‘We’re well aware of the attack on Tehran,’ they said, making it a complaint.

‘That was a tap on the shoulder,’ Jimmy pointed out. ‘If the Iranians succeed in developing a nuclear weapon, I’ll end their existence in the blink of an eye.’

Our guests glanced at each other.

‘On the way here I was worried about an earthquake,’ the President glumly noted. ‘Now I’d swap for the earthquake.’

‘You *will* be hit by a quake, the damage extensive,’ Jimmy added. ‘And at an inconvenient moment.’

‘The Saudis are worried, very worried,’ the President mentioned. ‘And they are nudging us to cooperate with you as well. These Saudi locations in Africa -’

‘Enclaves to hold their people when they run like hell from the terror groups. But that’s a private matter, so don’t mention it to anyone. They ... are listening and preparing.’

‘If the Saudis are worried, then so should we be,’ the President thought out loud. ‘And if we cooperate ... you can fix the problem?’

‘If you do everything I ask, you’ll have a fifty-fifty chance. Fail to cooperate, and your chances are nil.’

The President again glanced at the “M” Group panel. ‘And can we expect assistance from anyone?’

‘You can expect assistance from a great many countries,’ Jimmy told him.

‘We’ll need time to think, and to discuss this.’

Jimmy took out a sand-timer, placing it on the desk. ‘Take a look at the sand. In a few short years, you and your people will be nothing but sand blowing in the wind, just a memory of a nation that once was. Hawaii still has a peak above water, you won’t even have that, gentlemen.’

With our shocked visitors gone, Jimmy held a household “M” Group meeting. ‘If they don’t cooperate, then in January 2026 I’ll be asking for an EMP strike followed by a nuclear strike, because what the Pakistani Government doesn’t know, is that many of its people will welcome The Brotherhood, and once that process has begun in Pakistan they’ll be no stopping it. In Afghanistan, I’ll be ordering the massacre of males eighteen to forty in many places.’

‘Jesus,’ Keely let out.

‘2025 is creeping closer, so don’t lose focus,’ Jimmy told them. ‘When the battle starts, we’ll all be in the fight of our lives.’

Splitting up

Helen and I returned to Goma, and we returned to the business of growing African GDP, a task that seemed far simpler than dealing with global politics.

That following week I watched as Northern Italy tried to break away from the south, as Belgium effectively split into two nations, and as parts of Spain discussed breaking away. The recession was

having an effect, the various regions figuring that they could do better by themselves. They couldn't. Jimmy knew that and waded in with harsh comments, helping to sway many voters in referendums.

Mexico started to fall apart thanks to its drug cartels, and Jimmy became involved. Despite America's reservations, we put Rifles on Mexico's border with Guatemala, also in Panama, and in Colombia itself. War had been declared on the drug trade, Rifles style.

The Colombians had been suffering greatly in recent years, and the offer of financial assistance from us was readily accepted. We by-passed a US delegation in Colombia, the US working on their own ideas about how to stem the drug trade.

Colombia had been drilling oil since the Second World War and offered numerous small oilfields, all subject to the odd attack by FARC guerrillas. We had previously done a good job of wiping out much of the FARC leadership in the east, but their members were spread far and wide. We would now give it another go. We put a thousand Rifles on the ground in Colombia, acting as independent units to protect oil fields, and to set traps. Offshore, we placed Russian, Chinese and European naval vessels to help create a picket line.

As soon as the deal with Colombia had been struck, we dispatched by ship a hundred thousand individual household wind turbines, a thousand water turbines – each capable of powering four hundred homes, and fifty thousand solar panels. When the TV news in the region started to show housewives extolling the virtues of free electricity, everyone wanted our toys.

We sent the modified German turbines over, fifty of them, and they were soon providing small towns with free electricity. A Bogotá factory was then selected and taken over, the Colombians shown how to make the efficient household wind turbines for themselves. From Zimbabwe, we exported grain to the coast and across to Colombia in huge ships, thousands of tonnes delivered at subsidised rates.

With the hearts and minds of the people won over, and the government happy enough, Colombian police officers and soldiers moved out of certain areas known for drug growing, and the Rifles moved in. Where the Rifles found either marijuana or coca growing the crops would be destroyed, traps set. Anyone returning to the crops would disappear.

The Guatemalan and Panamanian borders were now sealed tight, and both the people traffickers and drug traffickers were not happy, gunmen sent to the border to attack the Rifles. It was not the best

thought out plan, and hundreds of gunmen were duly dispatched to the local cemetery.

The American border unit had never gotten off the drawing board, and we figured we'd work around President Blake. Soon after, at the Mexican/Guatemalan border, a notorious drug gang attacked a police station and killed several officers. Acting independently, a Rifles office offered to assist. Everyone knew who the drug lord was, but getting evidence - and then getting near him, was the problem.

The Mexicans could not see how the Rifles could assist, and refused the assistance. A week later, the local news station was reporting that the drug baron had disappeared, along with fifty of his men. No sign, no trace, prostitutes at the man's villa claiming they fell asleep, and when they woke everyone had gone.

On the opposite coast another drug lord disappeared, a little future technology deployed, a special knockout gas developed by the brain-trust kids, the same gas was being used with great effect in the Colombian hills and mountains. Suspect villas would be targeted, Rifles in respirators simply walking in after an hour and searching around. If they found nothing they moved on, but if they found something interesting they called the federal police, who made televised arrests of confused people just waking up.

Boosted by that success, the Colombians allowed more Rifles in, and we soon had eight thousand men on the ground, having been only permitted to land just four thousand. Hell, they all looked alike.

In Afghanistan, Jimmy gave the order to eradicate all poppies, and to hell with the locals. The Rifles got to work, and the street price of heroin in Europe rocketed. In the States, marijuana was now legal and they grew their own, something else that put pressure on the drug barons of Central America. Jimmy approached Bolivia next, the country ranked number three in the world for cocoa growing after Myanmar in Asia. We offered financial assistance, soldiers, and coal-oil technology - a deal too good to pass up.

As Bolivia received units of Rifles, we entered into talks with the Myanmar regime who, despite maintaining a very large army, seemed powerless to control the nation's drugs trade. CAR already operated oilrigs in two locations off the Myanmar coast, and we enjoyed a limited working relationship with the paranoid regime. We offered wheat and money, and they grudgingly allowed us to invade a small corner of their country.

The locals fiercely defended their coca crops and were cut down in large numbers, the crops destroyed. A chemical was utilised,

another invention of the New Kinshasa volunteers, and it would prevent re-seeding. Global drug prices were soon rocketing.

We knew that the drug war was not a war we could ever win, and that the farmers would move across borders and set-up elsewhere, but we did have an effect. Meanwhile, on the Mexican border, the drug lords were killing each other for an increasingly small share of a shrinking drug trade. With revenues falling, the hired gunfighters could not be paid, and sloped off to do other things.

As the months passed I watched remotely, but with keen interest, as we tackled the drugs trade, but I was also watching with less-than-keen interest as various nations tried to split apart. Separatists groups sprung up in many places, claiming an ancestral right to various bits of land in Asia, and fighting broke out.

A few regions were offered limited autonomy, but others just sank into despair and anarchy, their previously lucrative tourist trade ruined. Northern Italy now enjoyed limited powers, the rich northerners wishing to break away from the poor south, not least because of the crime rate in the south. The Ukraine started to split along ethnic lines, Russian speaking or native Ukrainians. Problem was, the Russian Black Sea fleet was still in Sebastopol in the Crimea, the local population mixed. Part of that fleet had found a happy home in Somalia, free fuel supplied by us, but Sebastopol threatened to explode into civil unrest.

Macedonia struggled with its ethnic Albanians, and Hungary and Bulgaria both faced a redrawing of their borders. The Russian Caucasus were still smouldering, and Islamic extremists there continued to set-off bombs on a regular basis. In the Baltic States, Jimmy waded in heavily when ethnic Russians were discriminated against, but also offered resettlement grants if those ethnic Russian speakers wished to go and live in Russia itself. Since job prospects were better in Russia than the Baltic States at the moment, many took up the offer.

At home in Goma - and the mansion was now starting to feel like home, things were great. Shelly and Lucy were close by, albeit studying a great deal of the time, and I never thought I'd be annoyed that my kids studied too much. Liz was growing rapidly and a real handful, her favourite word being 'no'.

Stateside, Brad was doing well, settled into the job, and things were improving on the west coast. In reality, things were bad on the west coast, but *less bad* than they had been before. Houses had been

cleared of sand in Los Angeles and people were moving back in, thanks more to the volunteers than federal or state workers. Venice Beach was indeed a beach again.

Overall, the US economy was flat, but that was better than where it had been. Stocks were climbing slowly, gold below two thousand dollars an ounce, and people power continued to grow. The Ark expanded right across America, and volunteer groups continued to give their time to renovate derelict houses. There was also a strange reverse migration going on, recent African immigrants returning to Africa for what they now saw as better job prospects, relatives contacting them to ask them to return from America.

I became involved when I read an article about it, and offered free flights and relocation grants back to certain countries, and more than ten thousand took us up on the offer within weeks of the launch of the project. 'Exodus', the American press were calling it, and were also calling it a few choice names as well, since Africa was a pull for jobs, homes and security these days – more so than the States for some Africans. The opposition used it as a big stick with which to beat the nice man in the White House.

I laid on extra planes for the returning children of Africa, the human cargo filmed at the airports, and a wake-up call for the man in the White House. In reality it was good for the States, because homes were being freed up, the social burden on the various states being eased – but it was not seen that way.

Politics

Following Jimmy's advice I had bought a pile of books and set about reading them; economics, world history, politics. And, when stuck, I asked Lucy. Many an evening over a cold beer we would argue about politics and economics, macro and micro.

Also in line with Jimmy's advice, I travelled to the various African capitals more often and made a point of getting involved with local issues. Jordan and Turkey also became regular contacts, and I even visited Saudi Arabia. But I kept getting gentle nudges from Jimmy to improve Jordan's economy, but to do so in secret. I shipped the Jordanian authorities more oil than the Israelis believed I shipped, and more wheat than I declared to Jordan's inquisitive and ever watchful neighbour.

Our UK property company had already built hotels on the Jordanian stretch of Red Sea coast, and I subsidised a certain number flights from Europe to Aqaba. The Jordanian desalination process was going well, their uranium ore extraction increasing, and their farms were expanding. After Jimmy had tapped a particular region of a map for me, I secretly funded the building of almost thirty new apartment blocks in Jordan, many more again in Egypt, on Egypt's northeast coast near Gaza.

The Red Cross, assisting Palestinians in that region of Egypt, received anonymous funds, and less than anonymous grain deliveries from Zimbabwe, plus food from our region. When the news of that leaked I thought, "fuck it", and shipped enough subsidised food to Jordan to make them all fat.

The net effect was that the trickle of Palestinians that left the occupied territories grew. It became more than a trickle because homes and food were available across the borders, safe from Israeli air strikes. The Israelis could see it, and must have been delighted, but they were being oddly quiet about it. I didn't know it at the time, but they had asked Jimmy for a loan, and he was 'considering it.'

When Egypt complained that Palestinians were crossing over in larger numbers as a result of my efforts, I sent the Egyptians themselves food, and a little money towards their Palestinian refugees.

Now that I was actively involved in the region, I read up on the history of the Middle East conflict, but it was not actually a Middle East conflict; it was an Israeli-return conflict. But I couldn't actually find where the country known as Palestine had come from. It seemed that the Romans coined the phrase, but to cover a wider area than just the modern disputed land – occupied by the Israelis at the time. The crusaders used the phrase, but at a time when the land was mostly just frequented by nomads. I determined that the Philistines were more Greek than Arab or Jew, but that the link was weak at best, the Philistines being more accurately located in Lebanon, and never having moved off the coast.

Other than during Roman or British rule, I could not see a time when a nation state called Palestine ever existed; no defended borders, no currency, no separate language. They spent most of their time being occupied by either the Persians or the Ottomans, and could not actually point to a time in history when the area was free of invaders, one of the longest holders of the lands being the pre-Christian era Israelis. After the Israelis, everyone had a go at the land.

I could not find any references to the land ever being an independent state under local rule after the Israeli Diaspora, and started to wonder what the fuss was about. I did, however, like the ancient Roman soldiers slogan for the region, loosely transcribed in “that troublesome toilet of a region”. Seems that Roman soldiers avoided postings there. It hadn’t changed much in two thousand years, today’s peacekeepers not wanting to be there either.

Helen was good with history and politics and would help out when I had a question, and the question of right of ownership was a current hot topic, many countries trying to split apart because their grandfathers had spoken a different language. In Africa, I was proud that English was the norm, and we taught English wherever we could. We were trying to melt the tribes and borders into one, the rest of the world wanting to break itself apart into small regions. The Flemish area of Belgium could be walked across in an afternoon, yet they now exercised limited independence from the French speakers.

In Africa, I had a simple way of dealing with separatists; I’d have them shot and buried. It cut short a long conversation.

India had long suffered Maoists separatists, and I had put pressure on China to disown the guerrillas. It had been a long time since the Chinese had tried to assist the Maoists, and the rebels could be seen carrying weapons they pinched from the Japanese in Burma at the end of the last war. A little nagging persuaded the Indians to allow the Rifles in, and a unit of just two hundred Pathfinders landed in the southeast of India, close to the Bangladesh border.

Twenty members of the Indian commando unit that we had sponsored and trained tagged along, and would act as local guides. The group’s remit was simple: shoot anyone with a rifle in their hands, and the Indian government would deny all involvement. Or they’d blame us!

Our soldiers split into smaller groups and strung out in a line north to south, a giant spider’s web. And waited. They didn’t have to sit quiet for long, soon noticing rebels walking brazenly along with their dated weapons over their shoulders. Engaging and killing the first half of a Maoist patrol, the Pathfinders allowed the remainder to flee, hoping that they’d report the incident and its location. Additional Pathfinder units moved closer, and a few days later a larger rebel unit approached, almost two hundred men. Less than a dozen escaped with their lives, the remainder buried, or simply dumped into rivers and steams.

That resulted in the ideal scenario for us, a large mobilisation of card-carrying book thumping Maoist rebels. The remaining

Pathfinders set traps, and deliberately chose a single hill from which to fight. It gave the impression that it could be surrounded and laid siege to.

The Sunday afternoon Maoists turned up as a rag-bag army, but there were hundreds of them. They surrounded the hill and launched their attack with dated weapons, only a handful surviving. That night, under cover of darkness, the Pathfinders split in two and moved north and south, looking for new trade, and planning on staying a while.

Summer

Jimmy joined us in June, needing a rest from endless travelling. He reviewed the deployments of Rifles around the world with Abdi and Ngomo, and even agreed to place Rifles on the Yemen/Saudi border, satisfying a request from the Saudis.

The Pakistanis had agreed to try and follow our route map, and talks would go ahead with the Indians, the Americans and Saudis present, the Africans hosting the talks. We agreed that the Pakistani Army should not try to enter the tribal regions, and that the combined force in Afghanistan would creep across the border and “disarm fighters”. The Pakistanis knew what that meant, so did we; but the Pakistanis also knew that our people did not get seen or caught, and that no evidence would be left behind. But, most of all, they knew that we’d get the blame, not the Pakistani authorities.

That deal had earned the Pakistanis several large oil tankers and huge grain ships, and Big Paul received his coded orders. He also received more men, many of them American, Russian and Chinese, men trained in the combined units near Mawlini in Kenya, and in the Somalia hills.

‘We suck the puss out the wound,’ President Ngomo had said about the strategy.

Ngomo had, technically, less power than the Kenyan Prime Minister and cabinet, but everyone knew who was really calling the shoots. And these days, the new President of the cooperation group often had the last word.

Jimmy would spend a lot of time with the volunteers in new Kinshasa when he was around, either reviewing projects or issuing

new ones. Locally, we not only had the brain-trust kids to call upon - all four hundred of them, but we had another twelve thousand people behind them.

In Russia, a largely non-political self-help group had been formed, and they sometimes met at the coffee shops. Their aim was to help those Russians that qualified for food vouchers, but they also took onboard research projects for Jimmy. Brad's group was now coast to coast in the States, and he maintained close links with it and its international arms. With a massive army of volunteers, or low paid helpers, a great deal was getting done on the cheap.

The displaced Hawaiians had created their own website, a kind of Friends Re-united, but just for Hawaiians. That kept them in touch with the Hawaiians in our region, their numbers having grown considerably. It also kept them in touch with the new Hawaiian colony in Madagascar, now home to an additional twenty thousand people. A harbour had been built there, plus two marinas, both of which started earning a small amount of money from sailboats docking.

Inland, the Madagascar colony cut down trees and made log cabins, they laid roads, and created small dams for water storage. I sent them German turbines for electricity, plus thousands of the small wind turbines. We had paid for an oil-fired power station, and now shipped down the oil. That power station was wired up to the nearby towns, and cheap electricity was soon being sold to the locals, a surplus produced for the colony itself.

In a chat with a USAF General, I asked if he wanted a base on Madagascar, and dropped a hint that it would create local jobs - for Americans! Oh, and we'd pay for most of it. Since we were building an airport anyway, we could kill two birds with one stone. He sent the idea up the line.

President Blake finally approved the base, since it would cost little and create jobs. It would also allow the USAF to dominate the Mozambique Channel; we had a green light from the nice man in the White House. I contacted the Hawaiians and sold them the idea, since they were not a hundred percent keen on things military.

Northeast of Madagascar, the Chinese had built a deepwater port in southern Sri Lanka, but had been asked by us to extend the port to include a base for naval vessels of many nations, a smaller version of the base in Somalia. With the new port in northern Madagascar, the existing Somali base and the existing facilities on the island of Diego Garcia, the India Ocean was sewn up.

Summer in New Kinshasa saw Dragon Boat racing on the lake, a course some five miles long. Mali would take part when he had the time, and Shelly was still at his side, something of a surprise for Helen and myself. Another surprise, for Jimmy, was that Helen was still at my side. When we chatted late at night over a beer, he said that he couldn't quite explain it. The arrival of Liz had been a factor, the move down here another, and even Hardon Chase had assisted my marriage – albeit indirectly. Instead of us going head to head with the White House for eight years we had enjoyed a relatively easy time.

All of these factors must have had an effect, and Jimmy and I were both glad that they did. I didn't wander, and I never felt like wandering, I was happy with my home life. Many a late night would be whiled around the patio under the stars, chatting away with various people, Shelly and Lucy bringing their boyfriends back to the house.

But Jimmy said an odd thing, something I had never considered, in that Helen had never really developed any close friends. Well, given the lifestyle, none of us could. We had been close to a few other parents back in the UK, but never managed to maintain friendships for long because of all the travel.

Jimmy suggested that Helen's thoughts of leaving might have been curtailed by a lack of outside support, or girlfriends to discuss me - and my marital conduct - with. I wasn't sure if I quite liked that idea, the idea that she was here with me because being somewhere else was too much of a hassle.

At bedtime that evening, I said to Helen, 'Do you think we'll stay together? You know, when we're old and grey?'

'What's brought this on?' she puzzled.

'Something Jimmy said.' I decided to be bold. 'He accidentally let slip that he was surprised we were still together.'

'I'm ... surprised he doesn't know what we'll do.'

'He has no knowledge beyond 2030 apparently,' I reminded her.

'No, but to say that *now* ... he means *now*.'

'Are you unhappy about anything?' I nudged.

'Well, off and on over the years.'

'Like...?'

'Well, when Jimmy first revealed who he was I felt like a prisoner for a long time. Then, later, I realised that the intelligence services wouldn't leave me alone, even if Jimmy let me go. After the kids were born, things were much better...'

'But...?'

‘Well, as I said before, the press in the UK get me down; we’re prisoners.’

‘Those are all outside things. What about us? You ... and me.’

‘I’ve not thought of leaving you for anything you’ve done, if that’s what you mean.’

‘Have you ever thought of leaving?’ I pressed.

‘Yes, but not in the way you think. I often used to think that I’d like to run away and hide, to have a normal life, to be anonymous.’

‘That’s OK, I get those thoughts sometimes.’

‘So ... Jimmy is surprised that we’re still together?’

‘Yep, but things are different, more has gone well for him. And this house was never supposed to have been built.’

‘No?’

‘No, apparently.’

‘If we were still in the UK, and things had been worse, then I can imagine wanting to be away, but that would be away from everything, not just you,’ she said.

‘But don’t forget, the marriage license says you have to give me thirty days notice,’ I joked.

‘I do kind of see us getting old together, assuming we survive.’

‘We could live to be three hundred, love. We might get on each others nerves by then.’

‘God, that’s a long time. What would we talk about?’

‘Well, let’s review it after the first hundred years, then see, eh.’

We didn’t talk about it again, and I figured we’d review it - but after 2025.

Lucy spent plenty of time with us during her summer break, Mali and Shelly off to Somalia to join a research vessel. Our green plankton slick was growing, and the Chinese had seeded their coastal waters, keen to burn fossil fuels with less criticism. Both ocean plumes could be seen from the International Space Station, which was now dominated by Russia and China, no sign of a Space Shuttle anywhere, not even on a drawing board.

Autumn

As my computer calendar turned to September we were still at the mansion, no thoughts of the UK. New Kinshasa had grown by another quarter million people, and additional mono-rails were being

installed. I continued to be involved in all things African, and the regions GDP continued to grow strongly.

Big Paul paid me a visit, on his way to some secret training base, and gave me the low-down on Afghanistan. The international soldiers had moved to the Pakistani border, then across, setting ambushes - and basically just killing anyone carrying a weapon. Bases were set-up in plain sight, traps set, the local fighters keen to attack. The body count was high, which led to more fighters attacking the tempting visible camps, only to be slaughtered by the hidden snipers.

The aim in the Pakistani tribal regions was the same as for Afghanistan: to remove any men keen for a fight. Those that held down jobs or tilled the fields were left alone, those that picked up a weapon and attacked a base were killed. We planned on staying right up to 2025, absorbing any fighters. And, during 2025 itself, making a big effort to cut a line from the Chinese border, through Afghanistan and down the Iranian/Pakistani border to the Gulf. Jimmy said that it would be an important line, and that it would be held at any cost.

Winter approached, and we visited the UK as a family, returning to our old house. Being there together felt odd, and Shelly decided she didn't like her cottage any more; she opted for one of the hotel-style rooms in the main house. Liz hardly recognised the place and wandered around looking at things that seemed oddly familiar somehow.

We re-acquainted ourselves with Cookie and Sandra, Sharon and her daughter, and the security staff. In some ways it was good to be back, and I took a walk down to the first house with Jimmy. His mother and aunt were both now dead, the house the sole domain of the security staff. It seemed smaller than I remembered, much smaller, but was a mansion when we had first arrived here from the London apartment.

The security lads had built their own bar in a lounge and now pulled us pints, and we sat staring at a familiar stone fireplace, almost thirty years since I saw it first.

'Where do the years go?' I asked. 'When I arrived here I hadn't even met Helen.'

'When you arrived here you were with Judy, about to start seeing Katie Joe.'

'Fuck, that was a long time ago.'

'Try being me.'

I took a moment, facing him. ‘Is it hard to keep going sometimes?’

‘Very hard, sometimes. I felt like blowing my brains out a few times, but never more than one or twice a week.’

I smiled. ‘Are we on track?’

‘We’re more than on track, and well placed, and the next few years are not particularly difficult. I’m hoping that Brad will knock President Blake out of the White House, and then we may have a clean shot at 2025. Africa is doing much better than I expected, and part of that is down to you. If the US economy turns up ahead of time we could use the money to boost Africa significantly.’

‘So what headaches do we have ahead?’ I asked.

‘OPEC has been dealt a blow. They’re not thinking of dropping the dollar, they’re thinking about snuggling up to us instead. And getting the Saudis on board – I can see the sense in that now. It’s ... given me a few ideas, a few new directions. Hardon Chase was the best bit of luck, his desire to carve his name in stone gave us a boost. And his investments in Africa should never have been there.’

‘So we’re better positioned for 2025,’ I realised.

‘Better in many ways, but it’s a hell of a tangled web to undo. It has many components, any one of which could go wrong, and I can’t fix them till they do go wrong. Many of the world leaders think they can surround the Middle East and bottle it up for decades – which is crazy.’

‘And if we sent the Rifles in?’ I asked.

‘They’d have to kill every able-bodied male from seventeen to fifty-five, and that massacre would obviously start wars outside the region. No, first The Brotherhood need to rear up and get people frightened, then we can act. But by then they’ll already be moving. And that will happen at a time when the world economy has gone to shit.

‘So, between now and then we need more clean coal-oil, more electric cars and buses, and an expansion of oil fields outside of the Middle East. Problem is, if we open those taps too early we cause the Middle East states to fail ahead of time. We need to discover the oil, tap it, and leave it under the ground ready. Oh, I’ll be floating CAR in a few months.’

‘It’ll be a big player,’ I noted.

‘World’s largest company. We’ll probably keep the voting shares as they are for now, issuing “B” shares that pay dividends – probably at two dollars to start with. I’ll sell the Saudis three percent of the voting shares, and give Cuba three percent.’

‘Why Cuba?’ I puzzled.

‘They have more oil than they realise, and it’ll be important after 2025. And I’m going to give CAR a development loan of fifty billion, zero percent interest over a hundred years.’

‘It’s a gift then.’

‘CAR has a role to play, an important one.’

‘I figured that when you created it,’ I mentioned.

‘Didn’t figure the coffee shops.’

‘No, I was a bit slow there,’ I admitted. ‘Will you need to beat up the Russian Government?’

‘On some issues, nothing major.’

‘Any problems in The West?’

‘Fraud will become a big issue, people less concerned about living a long time; they’ll live for the moment and raid the bank’s computer system. Especially now that people are focused on 2025 – and rumours of impending doom.’

‘Yeah, I suppose. Why build up your savings if the frigging world is coming to an end?’

We wandered slowly back up to the main house after our nostalgic visit, chatting about the floatation of CAR.

Helen and I headed back down to our home in the sun, and I reclaimed my seat by the pool, and my cold beer, another million emails to go through.

But a week later bombs started to go off in Ethiopia and Somalia. PACT were mobilised en masse and descended on the area, Jimmy informing me that the bombers were the forerunner to The Brotherhood. Concerned at that, I gave PACT a firm kick, and visited their offices often. Money was used to recruit Ethiopian double agents and sleeper agents, large bribes offered, and some initial successes resulted in the capture of a few key players. The men were duly interrogated by the Somali Rifles, and soon giving up the names of others.

As winter neared, not that we noticed much of a change of season in Goma, the Rifles were spread far and wide, engaged in conflicts in many regions. The Maoist rebels in India were being thinned out rapidly, the Myanmar drug lords were being shot to pieces - their crops destroyed, and in Bolivia and Colombia drug growing was becoming an even more dangerous horticultural pastime.

In Mexico, our Pathfinder units were now being supplemented by Americans who had fought in Afghanistan. Drug lords would be identified, knockout gas employed, the premises searched without a

shot being fired, the slumbering gunmen stepped over. Where necessary, whole villages were hit with an EMP to stop people warning of impending police raids.

Buoyed by these successes, the Mexicans agreed a wider programme, and Jimmy sent more money. Our teams cleaned-up the Mexican/Guatemalan border and moved north, soon the first unit of Americans on their own border, but just on the Mexican side. In some small towns, whole neighbourhoods were hit with EMPs before being sent to sleep to enable searches.

The knockout gas took a few hours to take hold, making people feel drowsy, and eventually knocking them out for eight hours without side effects; deaths from the gas were rare. That gas was also colourless and odourless, and if a villa was hit at 3pm then everyone yawned and took a nap, but didn't wake up when the police battered down the doors.

The initial raids netted hundreds of assault rifles and large amounts of the precious, and increasingly scarce drugs. The drugs were destroyed on-site, cash removed, the weapons sent to Africa for the Rifles to use or train with. President Blake claimed some of the credit and we backed him up on it, America commandos now being seen in Mexico.

North of the border, the price of cocaine had quadrupled, and that was when you could find it. Addicts were going short. Since many were being injected with the super-drug, their addictions were being lessened anyway. The war on hard drugs had finally turned, marijuana now the most popular recreational drug in the States, and now both legal and licensed in many states - a one hundred billion dollar annual trade. At least the dealers paid tax.

In the space of a few months the people of Mexico had become jubilant, and with each new success we increased the number of Rifles in the country. Suspect villas would be hit with EMPs, then the gas, finally stormed by men who would have succeeded even if the occupants had been awake.

Thailand had been watching Mexico closely, the nation suffering a heavy social and financial burden at the hands of its addicts. They accepted Rifles advisors, knockout gas and baby EMPs, and went to work in their own border regions. But when the police officers themselves tipped off the drug lords, the approach failed. We offered units that were purely Rifles, and the Thai Government reluctantly accepted them in its border regions.

The drug dividend in Europe and the States was huge, the money being saved in police and social resources to deal with the drug

trade. In the UK, the estimated drug related cost was cut in half, hopeless addicts given the super-drug and plenty to eat. Few returned to their old ways.

The usual gang of family and friends gathered in Goma for New Year, 2019, and Jimmy handed me an odd assignment.

‘The cooperation group President, he’s up for re-election in January,’ Jimmy reminded me. ‘Why don’t *you* run?’

‘Me?’ I frowned at him. ‘If I ran ... no one would stand against me.’

He waited.

‘Me, for President of the group?’

‘In effect, you would be President of Africa,’ Jimmy pointed out.

‘Oh. And ... was I supposed to go that route?’

‘No.’

‘I’d be ... fully tied up, and tied to a desk.’

‘You could set your own agenda. And, Helen would be First Lady. And, you’d have your own aircraft, Africa One.’

‘My own plane,’ I considered. ‘Cool.’

‘Think about it, but ... you know, do it because I say so,’ Jimmy said with a smile.

I went and told Helen.

‘We’d be based down here permanently if you took the job,’ she noted, without sounding too concerned.

‘You’d be First Lady, and we’d have our own plane.’

‘First Lady?’ she considered. ‘Oh.’

‘You’d have to buy a few more ball gowns,’ I told her with a mock-serious frown.

‘We wouldn’t have to move, would we?’

‘The current President lives four doors down, love, so no.’

With thoughts of jobs to come I got back to work. Jimmy had told me to off-load more diamonds, which I did, but that brought complaints from the Amsterdam Diamond Merchants Association. They nagged Ben Ares in Israel, and he nagged me. I gave it some thought, but it was Lucy who came up with the answer.

She said, ‘Why not cut the diamonds down here, local labour – which is cheap, and sell to Africans.’

I wagged a finger. ‘That may be a solution.’ I called the Amsterdam merchants, and told them that I wanted them to set-up shop down here, to cut diamonds down here and sell down here – or I’d drop ten tonnes of diamonds onto the market. They flew straight

down, a delegation of twelve of men, all in their black suits and looking very Jewish.

At the mansion, I said, ‘Guys, we have the diamonds, we have more gold then we know what to do with, and we have cheap labour, so I want you to create a jewellery factory down here. I’ll get you good rates on property, and then we’ll sell to the Africans. If you don’t do it – I’ll find someone who will.’

They set off to tour the city and to look at premises. The next morning they were back, happy to give it a go. I offered to create a company with a fifty-fifty split and they agreed, drawing up a rough paper agreement. A week later, thirty skilled diamond cutters arrived, another twenty from Israel, forty from America. I had an office suite waiting, the place very secure, the guards already hired.

Part of my condition was that local workers be trained, and I had found fifty Africans already skilled in making gold jewellery, some experienced in diamond cutting. The Dutch merchants were staggered at the low cost of food, the low cost of labour, and the tax breaks that they could get. They got to work, two shop units in the main shopping centre grabbed.

Their first shop targeted the city’s rich, and stocked the kinds of jewellery found in Europe. It was an immediate hit with the Russians, who all bought expensive items just to show off. Po visited and bought items, and the African leaders purchased items for their wives and mistresses.

As Christmas neared, a second shop was opened, this one for Africans. The jewellery was modestly priced, but still with a good mark-up over cost, and the trinkets sold quickly.

I toured the shop with the main Dutch operator. ‘Fine,’ I said. ‘Now I want a shop like this in every African town, a hundred in the first six months.’

He was shocked, but pleasantly shocked. He grabbed additional office space, and I allowed in ninety Israelis, allocating work permits for ten years. We’d soon have a Jewish quarter.

End of year, 2019

A week before Christmas the US stock markets picked up and climbed, but I held off selling our stock; I was hoping to see a good

year-end posted. California was still struggling, but extra federal aid had been granted, more of the displaced moving on to other States.

At the house, we made ready for Christmas, the decorations up, Liz as excited as a kid at Christmas. We'd all be here for Christmas, the whole family, and I was excited as well. Mali's grandmother came around to stay for a few days, a nurse allocated to her, and we saw more of Shelly and her young man. Liz was now attending a local kindergarten for rich kids and making friends, a few of the children and their parents invited over.

Jimmy arrived back from a world tour on the 24th, bags full of presents from places afar, and another new woman. She was Swiss and a countess; a quality bird, as I referred to her.

On Christmas Eve we enjoyed a meal around the main dining room table, Helen having cooked, and found ourselves on the patio under the stars at midnight. There was trouble ahead, but for now I was happy. New Year's Eve, 2019, we again journeyed to the casino roof and met familiar faces, team and family, politicians and staff.

After the fireworks, I asked Jimmy what the new year would bring.

'Fireworks,' he said. 'In a few areas, but nothing that a man of your calibre couldn't handle.'

'No clues?' I pressed.

'At the right time, young man. Besides, it would be dull if you knew what would happen.'

'Helen is still at my side,' I pointed out. I waited.

'You're nowhere near as smart as we'd both like you to be. What I told you about Helen – I made it up.'

I stared at him. 'Why?'

'Why do you think?'

'If she wasn't planning on leaving, then why say so, numb nuts!'

'To keep you keen on her. And the birth control that I fixed ... that was wasn't for her benefit.'

'Her pregnancy ... was for me?'

He nodded. And waited.

'I ... I would have wandered?'

'In another time, and another place, you begged me to stop you from wandering.'

I took a moment, shocked. 'I would have wandered,' I said to myself.

'Without Liz, and with a quiet house, you would have wandered,' Jimmy informed me. 'I gave you Africa to keep you busy. And

Helen - all she ever wanted was security, and you gave her that. She'll never leave you unless...'

'Unless I wander. Bloody hell.'

'You met a model in New York and made a mistake, but I covered it up. After you got away with that there were others. If you want it, you have a married life for the next hundred years – unless the world goes to shit of course.'

'Bloody hell,' I repeated. I needed a drink, and swapped my beer for a short.

'OK, daddy?' Lucy asked.

'Apparently, yes.'

The next day I gave much thought to what Jimmy had said, and hugged my grown daughters a lot, certain that I would not swap this for anything. That same day I announced that I was running for President of the cooperation group, and it made the news.

It took the African leaders a day to digest the detail, and to puzzle over it, since I already had more authority than all of them combined, but then they started to send in their backings. Since they were the ones who'd vote on it I was already half way there.

At the cooperation group conference in mid January I made my nomination formal and they took a vote, a hundred percent in my favour. I was now the President of sub-Saharan Africa, and my inauguration saw the majority of the world's leaders pop over, even President Blake. We organised a fly-by of military jets, and a march past of thousands of soldiers and Rescue Force staff.

At the reception afterwards, I found Ngomo, Abdi and Kimballa chatting. 'Mr President, Mr President, and ... Mister President,' I offered, making them laugh.

'Mr President,' they returned.

'You are the King of Africa now,' Kimballa noted.

'It's a ceremonial job, no real power,' I suggested.

They all gave me looks.

Ngomo said, 'You run the group, the corporation and CAR. That makes you a very powerful man, Paul.'

'I still can't get my daughters home at a reasonable hour,' I complained, making them laugh.

'You can set a curfew in law,' Kimballa suggested. 'Have them arrested.'

'The Queen of Africa wouldn't like that,' I said.

'You will work from the Pentagon building?' Ngomo asked.

I nodded. 'I'll be a nine to five worker, lunch in the canteen.'

President Blake tipped his head, catching my attention. ‘Excuse me, gentlemen, but the world’s most powerful man wants a word.’

‘Where is Jimmy?’ Ngomo asked, a glint in his eye.

I stepped across to President Blake, still smiling. ‘Mister President.’ We shook.

‘You’ll be running a continent, with a GDP growth the envy of the world,’ Blake noted.

‘Are you after a loan?’ I teased.

‘We’re out of the nosedive, but it’s an odd time. Drugs and crime are right down, Africans are leaving us to come here, and congressmen actually listen to their constituents these days.’

‘Carry on like that, and you may end up with a democracy,’ I quipped.

‘That group, The Ark, they have five million members on paper. And when they don’t like something they fill the streets and change policy.’

‘People power,’ I said. ‘Nothing wrong with that. What’s wrong, is that they think they need to do that, rather than just voting for their representatives.’

‘Well, maybe. Housing is better; if anything, we’re freeing up homes for people that weren’t displaced.’

‘Unemployment?’

‘Still way too high in some areas.’

‘We’ve kept gold prices down so that people switch to stocks, and we’ve eased off on selling US stocks to keep the markets up.’

‘I saw that.’

‘How long you down here?’ I asked.

‘Going to visit an airbase here tomorrow, then home.’

‘How about ... you go visit that naval base in Somalia, as a favour to me.’

Blake took a moment to study me. ‘Might be time for it.’

‘Rumour has it the Russian leader will meet US naval ratings there,’ I said with a wink.

I found the Russian leader, and suggested that Blake will make good capital out of the visit, and how about he just turn up. The Chinese also got a nudge, Abdi asked to put in an appearance.

Mac approached me with Coup, both men dressed smart. ‘Mister President,’ Mac offered with a mock salute.

‘You know, Mac, the first time I saw you in a suit – at my wedding – I thought you looked like a dog turd in flannel.’

Coup laughed. ‘Nothings changed since then.’

‘I’m a military man and field commander, not a desk poofter,’ Mac pointed out.

‘How’s the sprog?’ I asked.

‘Growing quickly,’ Mac grumbled. ‘Food in one end, crap out the other.’

‘She may inherit your good looks,’ I teased. ‘What happened to Hal’s girl?’

‘In college in America somewhere,’ Coup replied. ‘Near where Hal retired.’

‘Is he OK?’

‘Good for ninety!’ Coup noted.

‘He was sixty-five when he joined us,’ Mac put in.

‘The years do go by,’ I noted. ‘And I miss my Huey.’

‘You’re the boss, you can do what you like,’ Mac suggested.

‘Helen has a mean right hook, so I’ll not be taking risks in Hueys. Those days are gone forever.’

The following evening, President Paul Holton, and First Lady Helen Holton, sat with their daughters and watched their own TV channel report the news, images of the American, Russian and Chinese leaders being greeted by Abdi at the naval base, a fly-by organised.

‘Progress,’ I sighed.

The next morning I formally claimed my desk. My team in the UK now reported to Jimmy, two now working down here, and I organised my new staff, just in time for the start of a potential war. I was in a crisis meeting by 11am on my first full day in the job.

The Nile River started its life in tributaries in Rwanda, Uganda and Kenya – the White Nile, flowing north through Southern Sudan and then Sudan itself before reaching Egypt. Uganda had built a few dams, and the Egyptians were very unhappy – on the point of war unhappy.

The river’s level had not fallen, but Egypt’s need for water had grown over the years. Now, additional upstream dams were planned, and Egypt was threatening military action against Sudan, and unspecified others. No one thought that the Egyptians would be daft enough to attack the Rifles, but the Egyptians possessed a reasonable air force. I put our own air forces on alert and set-up air patrols, just in case.

Looking at the problem, and listening to the various experts, there seemed to be no solution. Uganda had the right to create dams, as did other nations, and the Egyptians could not justifiably claim that it needed all of the water - since it was not their water to start with.

First, I asked the Ugandans if they wanted cheap coal-oil and a power station or two – and would that stop them from building dams? They accepted the offer, but only to stop two out of four dams. Sudan was beyond my control, but not my influence, so I considered offering them coal-oil and power plants. But that could have seen a lot of money being spent on a country that was destined to turn against us in a few years.

Maybe they would turn against us because of their water and power shortages, I considered, now in a quandary. I considered desalination plants for Egypt, but much of the water they needed was for farming. In our region, we had more food than we knew what to do with, and so I offered a great package of cheap food to Egypt, in the hope that they'd grow less of their own. The Egyptians were happy with the food, and that eased part of the problem. I sweetened the deal with a hundred electric buses, the ones with the solar panels, since Egypt offered plenty of sunshine.

The population of Egypt was growing quickly, however, and that was a growing problem. We already had a pipe that grabbed fresh water before it entered the Mediterranean Sea, and a plant that cleaned it. I sent the Egyptians a proposal, the building of another plant, but west of the Nile, and one that would supply drinking water to Cairo. It would be financed by a thirty-year loan at zero percent interest.

A week later they accepted, and the plant was commissioned. That turned my attention towards Kenya, and I commissioned a desalination plant next to the Chinese enclave. In the future, drinking water would go west by pipe, and Kenya's precious river water could be used for farming.

The annoying thing was, that the Congo had too much water. A pipeline would have been costly, but was considered. Through our own water bottling plants, I increased deliveries to Southern Sudan.

Jimmy then sent me a note. 'If we get beyond 2027, that region will dry up, and wars will break out.'

Well, that sealed it. I went to see the volunteers and the brain-trust kids, handing them the problem. I asked about the cheapest type of pipe that could be made, and they immediately suggested a type of reinforced plastic. If buried, and out of the sun, it would last. I had it priced up, realising that it was less than a tenth of the cost of steel. But could I build a six hundred mile pipeline across mountains and deserts?

Lucy popped up to the office one day, and looked at the map on my desk. 'You don't need a pipe, use nature.'

‘Huh?’

‘Pipe the water to the Nile head and let it trickle down. You lose on evaporation on the way, but the waterway is already there.’

‘Good idea, babes. Just have to work out how much we’d lose en route.’

First, I picked a valley in western Uganda that received a lot of rain, but could not be argued to feed the Nile. I commissioned a large dam, but not a high dam, a pipe running east towards Lake Victoria. On paper, it appeared that the water would add to the Nile, since Lake Victoria drained into the Nile. My agreement with the parties stated that the amount of water we pumped into the lake could then be taken out by the Kenyans, on the other side, and pro rata.

With the agreement sealed, I then commissioned plastic pipes from three dams that we had created in the north of our region, and down to Goma’s own lake, Lake Kivu. On the Rwandan side, I commissioned a plastic pipe to head towards Lake Victoria, the Rwandan’s being able to take some of the water as it travelled east. That done, I commissioned additional plastic pipes from a point west of Forward Base, where rain fell almost every day.

The new pipeline scheme had many benefits. It created jobs in our region, it would keep our lake topped up with fresh water, it helped Rwanda, Uganda and Kenya, but then – downstream – helped Southern Sudan, Sudan, and ultimately Egypt.

When Jimmy saw the plan he simply nodded, asking me not to forget Chad. I went back to the map, and eventually commissioned another pipe, from the wet north of the Central African Republic and towards Chad.

Calling in the Egyptians, who were now happy enough, I pointed to the Blue Nile in Ethiopia and suggested a dam. They were no longer happy enough. I explained that when the Blue Nile flooded it lost water to the surrounding parched soil, and evaporated, and that such a dam would only stop floodwater. Then, when necessary, it could release that water to increase levels downstream. They were back to being happy enough, and went off as I commissioned a high dam in tight gorges, actually a series of them. Hopefully, war would be averted in years to come.

Jimmy popped in a week later. ‘What you’re doing here - it has parallels to Iraq, and we’re seeing tensions with Turkey and Syria – since Turkey and Syria both have hydroelectric dams upstream on the Euphrates River. And if those countries go at each other, The Brotherhood are a step or two behind.’

I was back to staring at maps.

General Masood, the long running dictator of Iraq, had handed over to a son a few years back, and the new dictator had undergone something of a programme to attract western investment - more of a playboy than his father and educated in England. I sent him a note straight away, asking him if he would like desalination technology. He flew over, and I entertained his party, striking a deal on the desalination plant.

It would be a large plant, and would provide bottled water to Basra and Baghdad. They had oil to make the plastic containers, and the oil to power the desalination plant. It begged the question as to why they had not gone that route up to now, but I didn't press the issue. I offered them a loan at zero percent interest over twenty years.

Jimmy then dropped a hint. 'One of the things that helps to give rise to The Brotherhood in the refugee camps, is a lack of water. Those particular camps will be north and west of Basra.'

Jesus, I thought. We were actually doing it; we were planning for the rise of The Brotherhood.

I asked my guests if we could experiment with reclaiming the waters of the Shatt al Arab waterway as it reached the Gulf. They had no objections, and I immediately commissioned a team to work on reclaiming fresh water before it became too salty, and a plant to clean it up. A very large plant.

Jimmy did, however, request that the plant be upstream, at the end of a long pipe, and closer to the workforce of Basra. They puzzled it, but since we were paying for it all - and creating jobs for locals, they had no particular objections. It made sense to me as well.

Sat drinking around the patio, one of the Iraqis mentioned the poor employment rate of the Basra region, and Jimmy offered to assist. This new move was odd, because he had always told me that he wouldn't assist those countries where The Brotherhood may rise, but now we were trying to assist in the very place that they would rise. I could see the logic, but puzzled Jimmy's change of direction.

With our guests gone in the morning, Jimmy asked me to assist Basra. 'Turn it into the fucking Garden of Eden,' he said.

'And ... won't the money be wasted when The Brotherhood rise?'

'If they rise, yes. But if it delays the rise by a few years, then ... well, it may help.' He took out a map and tapped it. 'The refugees will collect all around the Middle East -'

‘From the disaster that you still haven’t explained to me.’

‘Yes, from that disaster, and some will gather in Iraq; around Basra and south of Baghdad. The camps are filthy, and that helps to give rise to the terror groups.’

‘Young men with hungry bellies and nothing to do,’ I noted.

‘Very much so.’

‘And the attitude of The West?’ I nudged.

‘They won’t want any of them, and that adds to the tension.’

‘Leave them to fester ... and the terror groups rise,’ I noted. ‘And it’s no frigging wonder.’

‘Ten million refugees,’ he carefully mouthed.

‘Ah, well I can’t see The West wanting to take them. Had enough of a problem with Hawaiians in America.’

‘When you build the pipelines, make them deep and strong so that they can’t be blown up too easily, and make the plant strong and durable as well.’

The CAR floatation was fully subscribed, if not over-subscribed, despite Jimmy’s warning that the company would not make extraordinary profits, and that funds would be used for charitable actions.

With the voting shares also floated, but allocated, it instantly became the world’s largest capitalised company, its board truly international. Each previous shareowner was asked to sell a small amount of their holdings, just to meet the rules of the stock exchanges.

A week later our property business was floated, again becoming a huge listed company, its principle shareowners being the Chinese. Two extra tickers appeared on the world’s stock market screens, and both climbed steadily after floatation.

Africa One

After more than a month in office, the First Lady and I boarded our plane, a converted 747SP, and finally toured our domain. Every country in turn was visited, the two of us greeting the politicians and the people, always seen to be visiting an orphanage or opening a new factory somewhere. We reminded ourselves of Prince Charles

and Lady Diana, only we'd been married longer, we didn't cheat, and we made a real difference.

We visited the Chinese enclave with Han, inspecting roads and buildings under construction, the Chinese pleased with its progress. The port facility was already working, trains full of ore arriving from Southern Sudan or even from the DRC. Flying down the coast from Kenya, we landed at the part-finished airport in the Saudi enclave, meeting many senior Saudi figures. The enclave was coming along quickly, my teams assisting – and now experienced at building cities.

Flying on, we crossed the Mozambique Channel to the second Saudi enclave, landing at an airport that was no more complete than the previous. We again met Saudi officials, studied maps and drawings, and asked if there was anything we would do to assist. We spent the night on the plane, entertaining a few of the Saudis, and in the morning flew up to the US airbase in the Hawaiian enclave.

The US airbase was not strictly a base, since they shared a runway with the civilian airport the opposite side. After touching down, the USAF drove us around to their facility, a quick look around buildings being finished off, before driving us around to the small town that the Hawaiians had built. The Hawaiian community in New Kinshasa was only a third ancestral Hawaiian, but here they were in the majority, around seventy percent of the twenty thousand populace.

The marina was now complete and open to passing sailboats, the cafes and bars plying a modest trade. But from the marina I could see many large boats in the nearby harbour, and I enquired whose they were.

'Jimmy bought them,' a man informed me. 'Fishing boats. We have a fishing trade, and sell some in the cities.'

'With your Air Force here, and various ships visiting, you should have a few jobs created.'

They agreed, optimistic about their small and isolated community. They also hoped to create a small tourist industry: beaches to sit on and jungles to visit, scuba diving and Dragon Boat races. Jimmy, it seems, had also promised them a few hotels, one under construction for visiting sailors to use. It would be a large hotel, some six hundred rooms, and would offer a soccer field, tennis courts, pools and bars. I was certain that it would be a repeat of the integration process at the Somali naval base.

Back in Goma, I reclaimed my desk and listened to the petitions of the various governments for things they thought they needed, but my mind was on Iraq and The Brotherhood. How the hell could we deal with ten million refugees? When the First Lady popped in for lunch I discussed it with her.

‘Housing will be at a premium. The longer they’re in tents, the worse it will become,’ she noted. ‘And they’re short of water now.’

‘No country will want to take them - the burden would be huge, not to mention the fear of terrorism.’

‘We produce a lot of food and water, so we can help,’ she suggested.

‘They’d still be living in tents.’

‘So we need to build apartments ahead of time.’

I raised my eyebrows. ‘That’s a lot of money, and when The Brotherhood rise, a lot of wasted money.’

‘It’ll cost just as much to try and ring-fence the region with soldiers.’

The next day the Kuwaiti’s came to see me, accompanied by my Saudi contact. They were, however, all dressed in western suits, not in robes. I had a bad feeling where the conversation would go.

They began, ‘We have been most puzzled by the Saudi desire for enclaves in Africa, and our Saudi friends have been ... less than full in their disclosures, but agreed to try and assist us. Hence our visit to your good self.’

I responded, ‘Jimmy believes ... that in 2025 a ... disaster of sorts will strike the earth, and that widespread financial collapse is certain. As far as you’re concerned, you won’t be selling much oil – if any. That financial collapse will lead to unrest and conflict in the Middle East, hence the Saudi desire to have business interests and friendly locations outside of the region.’

‘We would, naturally, offer a good price for ... accurate information.’

I shook my head. ‘Such information won’t help you, since the situation is fluid, and Jimmy is trying to fix it. That may result in complete success, or total failure.’

‘Or somewhere in the middle,’ they stated. ‘So, we would like to be more prepared than we are now, since we’re a small nation surrounded by large neighbours. You gave our Saudi friends enclaves with oil, and seem to be greatly assisting in construction. As such, we would like you to consider a similar, yet ultimately smaller deal, for ourselves.’

‘I would have to ask Jimmy where the undiscovered oil is, gentlemen, since I don’t know.’

‘But you’re not averse to the idea,’ they nudged.

‘The Saudi deal means that Mozambique and Madagascar get financial aid, and we get a cut of the oil revenue.’ I held my hands wide. ‘Everyone gets something.’

My secretary stepped in. ‘Sorry, sir. Mister Silo. Line two.’

I lifted my phone. ‘Jimmy?’

‘Kuwaitis with you?’

‘They are indeed, plus our Saudi friend.’

‘Grab a map of Namibia,’ he told me.

I called up a map on my computer. ‘OK, got it.’

‘Look at the coast, below the border with Angola, Angra Fria. See it?’

‘Yep.’

‘Offer them an enclave there, if you can work a deal with the Namibian Government, which shouldn’t be so hard. That place has oilfields offshore. Talk later.’

I placed the phone down. ‘He anticipated your visit.’ They were impressed. ‘There is a possible enclave in West Africa, the dry and dusty part, if I can work the deal. Leave it with me.’

‘We could ask for little more.’ They stood. ‘And now we’ll tour your city and enjoy the facilities.’

Two days later, Jimmy popped down from Europe. Sat around the pool, he said, ‘I wasn’t planning on the enclaves but ... but it would be cruel and unreasonable not to try and help them. If I didn’t help, then history would judge me harshly.’

‘If the rich folk pull out, either now or at the time, won’t that make the economy of the region even worse?’ I pondered.

‘No, not really, certainly not for Kuwait. It’s the economies of Iraq, Syria and Jordan that will make a difference when the time comes.’

‘And ... should we be assisting them more?’ I nudged.

‘Boost all the nations around Israel ... and leave the Israelis out?’ he scoffed. ‘We’ll have Israeli diplomats trying to shoot us then.’

‘I can see why you struggle with this one. We could spend the money here, we could develop the Rifles, or we could try and house ten million refugees in the hope that they don’t bite us on the arse.’

‘There’s not enough money on the planet to help the region that will be affected. And, I’ll have to persuade those refugees to move out a month or two before the disaster, warn them a year before. If I don’t, it helps The West by reducing the population of the Middle

East by ten million or so, but then gives rise to anger – a lot of anger, because we didn't warn them.'

'You'd ... leave ten million people in place?' I asked, horrified at the idea.

He looked away. 'Those ... *people*, the displaced, *are* The Brotherhood, and I've seen what they'll do close up. They're capable of great atrocities, whether they're moved out in time or not. But no, I won't leave them there to die, and that may sign a death warrant for the planet. I'm damned if I do, and damned if I don't.'

'And presumably, no country will want too many refugees, especially if the world's economy goes to fuck.'

Jimmy nodded. 'No one will want to take them; even their own capital cities won't want to take them. They'll be the ... *internally displaced*.'

'No enclaves for them anywhere?' I asked, sighing.

'Wherever they went they'd be feared, and they have a culture very different to any outside of the Middle East.'

'Could the Middle East economy be rebuilt?' I asked.

'Sure, over twenty years and with a shit load of money. Problem is, it's a fragile global economy; a two percent hit causes a depression, but this will be ten percent in a day - banks and businesses folding within hours. I do have an idea, I have several – all variations on a theme, but I don't know if the Americans would like it, and the Israelis certainly wouldn't like it. And, when I tell the world what will happen, certain countries will be upset with us.'

'Why?' I puzzled.

'For not warning them sooner, and stopping them spending money on developments.'

'How much warning will you give?'

'As soon as I give the warning, the economy of the region suffers, the people suffer, and The Brotherhood rises from the unemployed and hungry masses.'

I sighed. 'We're going around in circles.'

'Welcome to my life,' he carefully mouthed.

Getting into bed that night, I said, 'I'm not just the President, I'm becoming Jimmy.'

'How do you mean?' Helen queried. 'Wider shoulders?'

I gave her a look. 'No. He revealed more about 2025, and it's a puzzle wrapped around a problem inside a paradox. It's doing my head in.'

'You ... don't think there's a solution?'

‘It’s a like a long balloon that you want to flatten out. Press down on one end and the other goes up. Press down on both ends at the same time and the middle goes up. I need more hands.’

I didn’t sleep well that night, and I had to wonder how Jimmy slept at all. Sitting up in bed in the morning, I said, ‘I need more hands.’ Getting into the office early, I ordered a meeting for the next day, a war council. I requested Ngomo, Abdi and quite a few others.

The next day, fifty people sat in one of the conference rooms in the Pentagon building. On my left I had Abdi, Ngomo and a few Defence Ministers, PACT, the head of the corporation and his deputy, the senior volunteers, the leaders of the brain-trust kids – who were all now adults in their thirties and forties, and a few of my ministers.

‘Ladies and gentlemen, thank you all for attending this meeting. First of all, this meeting is confidential. The subject matter and the individual topics are to be kept secret from outsiders and from the press. If anyone asks ... we’re simply discussing routine political matters.’

I took a moment. ‘Jimmy has revealed to me a little more about problems we’ll face in 2025, and ... to tell you the truth, they scare the hell out of me.’ I took a big breath. ‘So, we’re going to make some plans, and we’re going to try and figure out solutions to a few problems. It’s a long list!

‘First, a summary. In 2025, a disaster will strike, resulting in a global economic crash. Countries in the Middle East will suffer a sharp economic downturn, their populations suffering, and that will lead to the rise of terror groups, one of which will rally the downtrodden masses into an army, an army with sights on taking over the world. Part of their aim will be to invade Africa.

‘Now, we could – obviously – just sit and wait for that to happen, and defend our borders as best as we can in the hope that we can fend them off, and for decades to come. Unfortunately, when the economics problems hit we wouldn’t be selling ore and oil around the world, and our own economies would suffer.

‘So first I want an economic study group created with our best minds. I want a plan of action ... so that if necessary, in 2025, we could make our markets totally internal and self-sufficient. If that plan calls for changes to be made now, then we need to start making those changes now.

‘Second. We need a plan of action for a combined African army defending our borders, especially the northern border. Abdi, you’ll be in the front line, and as such will receive most of the military

budget. I want to work on the assumption that Sudan, Egypt and Libya will not be allies, but may become enemies. I want a plan for neutralising Ethiopia's military if we need to. Ngomo, I want a plan for neutralising the armies of North Africa if we need to.

'I also want the borders strengthened, and plans made of how we would hold them. I want plans for a call-up of reserves, and of police officers that are not ex-Rifles to be trained as soldiers part-time. I want all former members of the Rifles who have retired to be given two weeks training a year to keep them fresh.

'OK, water sources. We're already seeing problems in many areas because of a shortage of water, and that shortage may lead to unrest and conflict. I want a team set-up to monitor the water availability of North Africa and the Middle East, and to see where the problem areas may be in the future. I want those plastic pipes that we produce to be researched so that we can produce more, and faster, and cheaper – and I want that a priority.

'Ladies and gentlemen, simply piping water to an arid region may prevent a war. If we can spend money on a pipeline and stop a war, it'll be a great indirect cost saving for us. I want to look at additional dams in the Congo, and pipelines running towards the Nile. But first, I want to invent ways of cheaply producing the pipes – pipes that are hundreds of miles long. Since Southern Sudan is central to this problem, let's have a factory there that makes the pipes - and ideas on cheap ways to dig trenches and bury pipes!

'OK, food. We produce more than enough food, so I want to look at increasing the supply of cheap food to the North African states and the Middle East. In particular, I want cheap food sent to Iraq, Syria and Jordan by boat.

'Next, electric buses and cars. I want the small factory that we have here increased in size, and I want to be able to produce our electric cars. Open factories with the Chinese; one for cars, one for buses. To start, we only need to produce a few hundred a year, but – if necessary after 2025 – we want to produce all cars and buses internally. Those buses with the solar panels, I could do with a thousand this year alone.

'OK, munitions. I want a research facility and munitions factory created within the year. After 2025, I want us to produce our own ammunition, and if necessary our own rifles, grenades or even artillery pieces. I want a stockpile of ammunition created in 2024, enough to last us five years or more, and I want to be able to mass-produce our own weapons if necessary.

‘Next, electronics. I want a factory set-up with the Chinese, one to produce radios and TVs, telephones, things like that. I want another set-up with Nokia to produce mobile phones. Basically, if the outside world goes to shit after 2025, we make our own.

‘Next, we have a long coastline, and that coastline will need to be defended. I’ll be buying more maritime patrol aircraft and creating a coastal patrol force. We’ll buy more ships to enhance that force. Whilst on ships, Africa has very little in the way of ship-builders, except South Africa, and they’re a pain to deal with. We’ll be commissioning a few coastal patrol craft from them, as well as fishing vessels.

‘But I want to see a shipbuilding yard near Mombassa. When it’s ready, we’ll keep its order books full. And whilst on the fishing vessels, we see many other nations fishing off African waters, so I want us in there first; if they’re our fish, then we’ll catch them. Again, after 2025 we may need to be self-sufficient.

‘Now, before today the cooperation group was about boosting the economies of sub-Saharan Africa. In the future, this cooperation group will be about the survival of Africa. It will become more important, and will take on greater responsibilities. We will ... need to see more power in the group, and less with regional governments.

‘To that end I’ll be creating a central bank for the group, the lender of first choice. Our other bank will loan that central bank a large part of our reserves, and the central bank will then set interest rates. It will also look at the 2025 problem, and what may happen if the world economy collapses; we may need to issue our own internal currency - and quickly. I want emergency plans in place for just such an eventuality.

‘We have just over five years, people, and we have a lot of work to do between now and then. One of the first tasks is to see what we import that we could make ourselves. To those of you who are overseas volunteers, know this: Jimmy chose to build-up this region in particular, and Africa in general, to assist with 2025. That may mean that we shoulder the burden, and that may mean that our people are unhappy at others *not* shouldering the burden with us.

‘The answer is simple: we can rely on ourselves, we may not be able to rely on others. If everyone sits back and says that it’s not their problem, then we lose the planet. If we step forward and shoulder the burden, then we may end up greatly diminished afterwards, but the planet will be safe.

‘You’re here ... because you stepped forwards to shoulder the burden, and this new task is no different. If the other nations can’t

decide what to do, or to cooperate, then Africa will act – and we'll worry about recriminations afterwards. First, we save the planet, then our own lives, then worry about the rest of the world later.'

'I think we'll all need sleeping pills after this,' Ngomo noted.

'It is a war,' Kimballa put in. 'A fight to the finish. And if Africa leads where others follow, so be it; I will die fighting with my last breath.'

'Somalia will be ready,' Abdi faithfully promised.

'These meetings will take place every month or so,' I said. 'So go and make some plans, and deal with each other without going through me every time.'

We broke for coffee and a chat, the brain-trust kids already in a heated debate about the production levels of various things.

Back at my desk, I glanced at income and reserves, and ordered four hundred electric buses from China to be delivered to Iraq, another hundred for Jordan and two hundred for Syria. When I looked at the cost, and the cost of failure in 2025, I doubled the numbers of buses.

We already had permission from the Iraqis to assist in the Basra region, so I ordered fifty thousand solar panels and fifty thousand of the small wind turbines to sit on rooftops, to be installed free all over Basra. Since the items were made locally it would create jobs in Africa.

I checked with the Chinese, and many Middle Eastern countries were still low on the uptake of the super-drug. I asked the Chinese to send more anyway and to bill it to us, hoping that the region would receive a health dividend.

Practical solutions

I visited a factory a week later, one that made plastic pipes. They showed me the yellow pipes, tall enough to stand up in, and how they were made. They used heat-bonded layers, and wove in a kind of carbon fibre, making the pipes resistant to outward pressure. Huge machines moulded the initial plastic, others weaving the fine threads around the outside in layers.

It seemed like a quick enough process, but we were after hundreds of miles of pipe. A team of sixty scientists had been put on the task, the task of saving costs, and of speeding up the processes

whilst making the pipes strong and durable. The cost of the oil was negligible, the labour was cheap – volunteers now working at the plant, and the research was free. The cost per mile was not much, but was falling further.

Aboard Africa One, I flew over several sites where dams were being constructed. They would be of a simple construction, and not high, each placed where water would accumulate backwards for a few miles. They would also have an effect on the localised flooding that came each year, since they could help to regulate water levels.

Back in Goma, I met with the Chinese, who were falling over themselves to build electronics factories. Ten factories were agreed, the land free and the basic factory costs paid by us. It wasn't a difficult deal to work.

The American Ambassador to the DRC then came to see me with military officers, a list of second hand kit for sale. I bought six old P3 Orions straight away, and four coastguard cutters. They had three oddly shaped maritime Hercules aircraft, so I took those with suitable training staff. As for the rest of the list, I told them to ask Ngomo what he wanted and to get back to me.

In the months that followed I made sure everyone was working with a sense of urgency, and I increased the staff at the Pentagon building. I was soon known as a slave driver, and seen to be always encouraging people to work faster and be cheaper. Behind my back I was known as 'President Faster and Cheaper!'

I would arrive at my office in the mornings when just the security guards were around, and I would leave late, glad to be home. Helen would pop up to my office often since she had her own office a floor below, and her own list of tasks as First Lady. We'd sit and have lunch together, talking about production quotas and new inventions.

Shelly split her time between New Kinshasa and the research vessels, our green stretch of ocean growing, a side effect being rising fish stocks. The Chinese had turned their coastal waters green, as had Australia, and one of our ships was mid Pacific, leaving a green trail behind.

Shelly and Mali remained an item, and an odd period of calm had descended over my family. The work that we were all doing had become the focus, and people were supportive of each other. Despite the stems, we were often tired at the end of the day, mentally tired. Lucy spent a day a week at our finance ministry – a kind of work experience programme, but was too bright to just do chores. She sat in on meetings and offered comments on macro-economic solutions.

Jimmy left me to get on with it, but said that time was drawing near, the time to debate a solution to 2025, or to reveal it to the world. I could see him struggling with it, struggling with both a solution - and the timing.

June saw Jimmy call a special meeting of selected world leaders in Goma; the Americans, Russians, Chinese and British leaders present, our British PM stepping down in just a month. Abdi and Ngomo were in on the meeting, as was the head of the corporation and the CEO of CAR, Ben Ares attending for Israel.

‘Gentlemen,’ Jimmy called. ‘The Chinese have known for some time what will happen in 2025, as does the British PM. Former President Harvey knew, and now you - Mister Blake, and the rest of you, need to know what will happen. It goes without saying ... that a breach of security could cost the world greatly. What you learn here today ... you do not discuss outside the group.’

A map of the Middle East was laid out. Jimmy began, ‘In March, 2025, an earthquake will strike through Northern India, Northern Pakistan, through Afghanistan, and along Southern Iran. That quake will be devastating, damage done to houses as far away as Israel.

‘But in addition to the quake and its damage, the land on the Iranian side will rise by five metres, and the land on the Dubai side will fall by five metres. The resulting tsunami will slam into the south coast of the Gulf, a wall of water a hundred feet high, the wave five miles deep. Qatar, Dubai, Kuwait and a large part of Saudi Arabia will be destroyed. When the wave rebounds it will destroy southern Iran, then flood up the Shatt al Arab waterway to Basra. In a single stroke, most of the world’s oil production will stop.’

‘Jesus,’ Blake let out, the CAR chief staring wide-eyed at the map.

Jimmy continued, ‘If not evacuated, ten million people will die. If evacuated - and when evacuated, they’ll create a refugee crisis, and those refugee camps will see the right conditions for the rise of The Brotherhood, a terror group that will rally the masses, raise an army of a million willing suicide bombers, and start by attacking your attempts to rebuild the oil industry in Southern Iraq. Their second target will be Baghdad, then Damascus, then Israel.

‘Their aim is a simple one - a return to a simpler life, their belief being that God washed away the evil oil industry in a stroke. They’ll behave like communist Wahabists, destroying modern technology, killing educated people, intent on taking over the world.’

The CAR chief asked, 'Is there sufficient oil outside of the Gulf to cope?'

'A good question. If the oilfields that I know about are tapped, and held waiting, and electric cars are widely used – then yes. With some very careful planning we could just throw a switch on the day in question. But to do that would require widespread cooperation, including people like the Cubans and the Venezuelans. Russia, your oil sales would be very profitable, and in much demand, in 2025.'

'Could the Gulf oil be drilled later, years later?' Blake asked.

'Yes, it could,' Jimmy confirmed. 'Providing The Brotherhood are not rampaging around the area. But the one question we have to ask today is ... when do we tell the world about it? And when do we tell the governments that would be affected.'

'How much of Dubai would survive?' Ben Ares asked.

'Not a single building,' Jimmy said. 'But warning them twenty years ago would have achieved little; they would not have listened.'

'A lot of western companies have invested in the region,' Blake noted.

'Your people knew about this twenty years ago,' Jimmy pointed out. 'But yes, they'll be a lot of unhappy campers about, and people will go bust when the news leaks. Problem was, if I had revealed it earlier the world economy could have crashed, a depression caused, and wars would have broken out. And, the Middle East countries would have seen it as a trick, and ignored it, attacking the west – as well as little old me.'

'The Saudis seem to have an idea about what'll happen,' Blake noted.

'Yes, and they could be better prepared if we warn them fully now, so too the others,' Jimmy agreed. 'But the release of the information could spark a financial crash, and we're still in a recession. Besides, if the world plans to live without Saudi oil, how will the Saudis rebuild afterwards?'

'There'll always be a market for oil,' the CAR man put in. 'If it takes five years to get to the Gulf oil then it may be needed at the time.'

Jimmy agreed. 'I will – one year before the quake – give a full warning. The question ... is how much we reveal to people like the Saudis, and when?'

'Well, what do you think?' Blake asked.

'Let's have a show of hands for those that believe a disclosure now to the governments affected is the right thing to do.'

I raised my hand, as did the corporation. I was joined by Ngomo, Blake and CAR. And that was it. Russia, China, Britain and Abdi were not in favour of disclosure now. Or Jimmy.'

'Well, not a clear mandate,' Jimmy noted. 'But, since the Saudis are the largest players, and they're willing to cooperate with us, a show of hands on just the Saudis knowing now.'

Most raised their hands.

'OK,' Jimmy added. 'Let's talk about the refugees. Any nation here willing to take a few million Arabs?'

No one raised a hand, surprisingly enough.

'So, they'll be internally displaced in various nations. Iran will have a great many, so too Iraq. Syria will take Iraqis, Jordan will take some, and Saudi Arabia need only evacuate the coast. People from the smaller Gulf states would wish to flee to Saudi Arabia, many to Europe – those with money.'

'How many in the enclaves?' Blake asked.

'A million in advance of the quake, perhaps four million afterwards,' Jimmy responded.

'Well, it reduces the numbers,' Blake noted.

'The enclaves would not be sustainable,' Jimmy pointed out. 'Not for those numbers.'

'So we help the internally displaced in camps,' Blake suggested. 'Since The Brotherhood rise up from poverty, no doubt, we assist where we can.'

'Assuming that you have the money, and the American people behind you - willing to back the move,' Jimmy firmly pointed out.

I asked, 'If conditions for the refugees were good enough, would The Brotherhood still rise?'

'Rise, yes, get enough support – maybe not. It would delay the rise.'

'How much of a delay?' the Russians asked.

'Years,' Jimmy answered.

'Enough time to re-drill oil and make some money,' Blake suggested. 'And that money could help the people.'

'Since when has oil money helped the people of the Middle East?' Jimmy scoffed. 'The poor stay poor, and the rich leaders stay billionaires! Do you expect the Kuwaitis and others to help the poor of Iraq? Do you expect the Iraqi regime to help the poor of Basra? They never have, so why would they bother afterwards? And what message are you trying to send, Mister President? How many rich folk in America go down to the soup kitchens to help out?'

‘Becoming a socialist, are we?’ I asked Blake. ‘You had a hard enough time with your own refugees!’

‘I think this will be different,’ he said defensively. ‘Especially given what’s at stake.’

‘You’ll persuade Congress that a rag-bag bunch of terrorists will take over the world?’ I asked.

‘They’ll accept it if Jimmy goes public,’ Blake assured me.

‘Which will be a year before the event,’ Jimmy pointed out. ‘In American terms ... just enough time to get a bill passed!’

‘What else can we be doing?’ Abdi asked.

I faced him. ‘We can build apartments in certain areas of the Middle East, and try and boost their economies a little. And we can build desalination plants where they won’t be destroyed in 2025.’

‘The Gulf states are rich,’ the PM put in. ‘Surely they should be doing more in preparation, financial or otherwise.’

‘As soon as this news hit, they become less rich,’ Jimmy pointed out.

‘Given the oil situation,’ the PM began, ‘could we not agree to make the most use of Gulf oil before the disaster, and switch to outside sources afterwards?’

‘A good and practical approach,’ Jimmy commended. ‘But it would require fuller disclosure to the world.’

‘But it would mean the Arabs pay for their own preparations,’ the PM insisted. ‘As part of a deal that we all buy more oil from them beforehand.’

‘Hands up those seeing sense in that approach,’ Jimmy called. He raised his own hand, as did most everyone else. ‘Which brings us right back around to disclosure. I suggest, since Saudi Arabia and Kuwait are concerned enough to build enclaves outside the region, that we brief them in a month. In the meantime, I will expand CAR’s exploration and drilling, only to cap off the wells till 2025.’

‘And, this year, I’ll talk with Cuba. Since oil production is a factor of demand, America and China should try and buy more from the Gulf before 2025, switching afterwards.’

‘On condition of cooperation,’ the Chinese insisted.

‘Yes, of course,’ Jimmy agreed. ‘With at least the Saudis.’

I had been tasked with breaking the news to the Saudis, and a month later invited them over, not looking forward to the meeting. Welcoming them to my patio, they could see that something was wrong, not least because I was being very polite.

When they had settled, drinks arranged, I began, 'Jimmy has revealed to me, and others, the exact nature of the 2025 problem. We'll now reveal that to you, since it affects you more than most.' They were all ears. 'There is, as they say, good news and bad news. Well, there's moderate news and dire news. In early 2025, an earthquake will devastate Iran, the resulting tsunami destroying your northern coastline – and inland ten miles.'

'The oil producing regions,' they sombrely noted.

'Your offshore fields will be affected, rigs, and port facilities,' I mentioned.

'How affected?'

'Complete destruction; a tidal wave a hundred feet high and a few miles deep. The water will reach miles inland.'

'And Qatar, Dubai, Kuwait?'

'All gone.'

'The Iranian side?'

'Destroyed by the quake, then a tsunami,' I said.

They took a long moment, glancing at each other. 'You said good news?'

'Before the quake – if we have an agreement – the world will buy up as much of your oil as it can, and there's the chance that years later you can drill for it again on the coast, and repair your ports.'

They sipped their drinks. 'We have many oilfields inland, more than twenty miles,' the Prince thought out loud. 'And the offshore rigs, they could be uncoupled to float free, re-attached after.'

'It's a good approach,' I commended. 'But there's another problem. The mass movement of the populace, and the resulting refugee camps, will give rise to a terrorist group, and they'll do a good job at destroying the planet. It's the reason Jimmy came back through time.'

'A terrorist group ... that can do so much damage?'

'They'll mobilise millions of refugees, hungry and homeless refugees, when the economy of the region is reduced to zero.'

They nodded. 'I can see that,' the Prince stated. 'And this ... agreement?'

'If you help to spend money on planning for the refugees, the other nations will make you the preferred supplier till 2025, then switch to others to make up the shortfall.'

'What ... planning?'

'Build apartments and houses in regions that will be unaffected, move some of the people of Southern Iraq to the central region, help us create desalination plants that will survive the quake. And, a year

before the quake, help us create refugee camps away from the affected areas.'

'These terrorists who rise up, they are our people?'

'No, mostly Iraqis.'

'We can move our people inland,' they stated. 'That will not be so difficult. As for Dubai...'

'The migrant workers and westerns would leave,' I said. 'The rest ... well, we were kind of hoping you'd give them a home till they could move back.'

'And how much of Dubai will be left?' they pressed.

'Not a single brick,' I told them. After a moment, I said, 'If you gave the Kuwaitis, and others, small enclaves inland, they only need to be twenty miles away from the coast. Months later they'd be able to go back to ... well, a possible new start. And gentlemen, we're telling you, but asking you not to tell others yet.'

'We can survive this,' the Prince insisted.

'The tsunami, yes, the terror group ... probably not. Jimmy saw them rise before, and they took down the whole world.'

'How is that possible?'

'They infiltrate refugees fleeing the area, then blow themselves up at checkpoints. Others move on and cross borders to Europe, blowing up everything they can, a never-ending supply of suicide bombers rolling forwards. And, when they attack Israel, they'll start a war, soon to be a nuclear war; Jimmy didn't step back through time for nothing. Millions of refugees mean millions of potential recruits.'

'Where will these refugees congregate?'

'In Basra, Baghdad, Tehran, and in Pakistan. The main terror group rises up from Basra, which will be damaged by the tsunami. Jobs in the Iraqi oil industry will be lost.'

'Refugee camps, like the Palestinian camps in Lebanon,' the Prince noted. 'A perfect breeding ground for the angry young men to come together.'

'And be preached to,' his colleague added.

'We will take this deal to our people and return,' the Prince said as he stood. 'But, if this becomes known, people may switch oil supplier early.'

'We have considerable influence,' I assured them.

That following month I watched with keen interest as Saudi Arabia woke up and got moving – and without discussing it with us first. They closed down many of their inland wells, and concentrated on

pumping at the coast and offshore, soon seen to be practising uncoupling rigs and re-attaching them. Their east-west pipeline took on more importance, a second planned. Building work around Riyadh increased exponentially, and a few facilities on the coast were seen being dismantled. Their African enclaves also developed an added urgency to them.

They came back four weeks after the initial meeting, keen to see the oil purchase agreement implemented. They signed an agreement on behalf of their government, and within a day CAR had cut production. President Blake got together with the US oil importers and encouraged them to adjust their buying patterns, without saying why. Sweeteners were offered.

Jimmy persuaded Cuba to scale back production, but to ramp up exploration, briefing them on the disaster to come. China reduced consumption from Tanzania and bought more from Iran, not just Saudi Arabia. West African states were encouraged to reduce production, but Nigeria took some convincing. Jimmy had to explain to them it was a matter of life and death, and time travel, and that he could not expand upon it yet.

The Saudis increased production after years of successive reductions – thanks to us, and I saw movement in Kuwait. I had not discussed anything with the Kuwaitis, neither had Jimmy, but a town in the desert popped up some thirty miles inside the Saudi border. Meanwhile, bombs started going off in Dubai, probably sent by Rahman. The net effect of the bombs was a reduction in tourism, and in business. Property prices began to fall, the Dubai authorities struggling.

They were already in difficulty because of the American led recession, now almost two years long, and things did not look good for them, either side of the tsunami. When the Dubai airport blew up and caught fire it sealed their fate. Tourism died, investors fled, and as soon the party was over it was time to go home.

Jimmy said, ‘Dubai has been moving forwards at twenty percent a year. All it needed was to dip down to ten to collapse completely. It’s a house of cards.’

The bombs continued through to September and the house of cards was on its knees. You couldn’t give away a holiday here.

The brain-trust kids, working with the volunteers, had improved their plastic pipe technology. It all came from oil, but somehow the layers had different properties. Carbon fibre was woven in at one stage and silica powdered onto the final layer, giving it some element of heat resistance.

Production levels were off the chart, the Rwandan stretch of pipeline growing by ten miles a day, a dozen gangs working on it. On the Kenyan side of Lake Victoria, the pipeline was already buried and mostly invisible from above.

In Ethiopia, we had created jobs with the dam projects, one such dam creating a lake stretching back miles. I mentioned fishing to the people who ran our fish farm, and they got on the case. First, they dug up soil from a place ten miles away, dumping it into the lake and turning it brown. Where the lake touched parched soil in the hills, diggers or explosives were used to move the soil into the new lake, currently sitting on mostly barren rocks.

With a dozen dumper trucks a day dropping in soil upstream, the lake was seeded with fish fry, nutrients added to the water. The dirt would settle at the bottom and form mud, and that would give life to both water plants, and the kind of small creatures that fish might munch on. In the meantime, flour and stale bread was dropped in, plus special pellets that the kids had come up with. The rest would take time.

In Uganda, our dam was coming along, a start made on the pipeline. Our Congo dams were taking shape, pipeline being laid north, plans made for additional dams near the Ugandan border.

The citizens of the Middle East could now be seen travelling on our buses, inter-city routes, the local authorities marvelling at how cheap they were to run. Electric cars were also to be glimpsed on the roads. South of Basra, our pipeline was coming along, the desalination plant just south of the city and a mass of cranes. And in the city itself, solar panels now powered TV sets, wind turbines drove air-conditioning systems, and people disconnected from the local electric grid.

The Saudis allocated their first payment to the refugee problem, and sponsored the building of large apartment blocks in Baghdad. The Iraqis were surprised, to say the least, at the generosity suddenly being shown by its previously arrogant southern neighbour.

‘We can win this,’ I told Helen one evening, having spent a hard day poring over production levels.

She seemed sceptical, yet optimistic at the same time.

The following week I commissioned the building of apartments in Amman, Jordan, and further apartments on the Egyptian border with Gaza. My Egyptian pipeline was coming along, the cleaning plant being built west of the Nile delta.

Ben Ares then came to see me. I took him up to the roof, to a café that was open when it was not raining, and we sat with cold beers. 'We're losing Palestinians,' he noted.

'Is that good, or bad?'

'Good, in that they're less of a burden on the Palestinian state, less of a burden on water resources.'

'But?'

'We could ease settlement pressure if we built in other areas.'

'And by that ... you mean if I pay for the building in other areas.' He shrugged.

'And would settlements in the West Bank be halted in favour of these other areas being built on?'

'It would ease the pressure.'

'But would there be a ... direct link, Ben?'

'Would that be a condition?'

'Since we're all busting a gut down here to save the planet, you're damn right it would. It would be a condition – not a hope. And we'd need to provide water for them, so that delayed pipeline would have to be extended first. Then ... then I could see a few apartment blocks rising in the interests of peace. I could also see a loan for you, and a few ... business deals. I could also see the Jewish quarter here growing.'

'That jewellery business has grown very quickly.'

'I could give you a loan towards building a hotel down here, and an apartment block, and stuffing it full of Israelis. And, hopefully, they'd come up with a business idea or two.'

'We would be interested.'

'And a direct flight once a week to Tel Aviv,' I nudged.

'That would be fine. One El Al flight, one of yours.'

'I'll want to see settlements eased, Ben, or there'll be no deal – on anything.'

'And if we compensated Palestinian farmers near the settlements, but moved them?'

'If the compensation was realistic, move as many as you like to the east of Ramallah, or to Jordan, or to Egypt – I don't care; it's the lack of compensation that's the issue. And I'll even refund some of

the compensation afterwards – but only after I see what you're doing, Ben.'

'I think we can reach an agreement. And we'd be interested in property and business down here.'

'It's a free and open city – so long as people do exactly what I say,' I said with a dangerous smile.

I went to see our jewellery factory the next day, and their chart on the wall said it all; production could not keep up with sales. Of most interest to me was the fact that I was turning gold into cash, but without lowering its value. We were also using up the diamonds.

They showed me pictures of shops all around Africa, sixty in total, plans for a hundred more this year alone. They were also now franchising the shops, and we'd soon have shops in every town.

Jimmy was pleased with the project, very pleased, admitting that it was not something he'd ever thought of. But he asked me to franchise it to India, China and South America, and I sent the factory a note to that effect. Hell, if we got into the Chinese market we'd make a killing, and I could shift a lot of gold.

My Saudi contact then cheekily asked if he could buy gold at a good rate, for his cousin who was involved with gold jewellery. We haggled a price, and I gave him a fifteen percent discount on market value, to be paid in US Dollars. Hell, it shifted gold out of our vaults, but not as fast as our jewellery business. That was burning up gold by the tonne, many Africa housewives now adorned with cheap jewellery, bought with their husband's hard-earned dollars.

At the next meeting with the volunteers and the brain-trust kids, they reported that there were now almost twenty thousand of them. A unit was working on economics and the internalisation of the markets - coming up with things that we could produce ourselves, factories popping up all over our region. Those factories created jobs, the research and development departments more or less free of cost.

A massive furniture factory opened, its wood cut in our region, its cloth made from the cotton we seeded many years ago, or from synthetics. Household goods of all sorts were now being produced locally, steel, plastics and glass available cheap. We still imported a great deal from America, but that was intentional.

One of the groups suggested that we create a bottling plant in Southern Chad to service the area, at a point on our water pipeline north, and I gave it the go ahead.

The next group came up with a flat-pack house, complete with solar panels, wind turbine and stove. I had to see it. We all journeyed around to the factory, where a demonstration was laid on. The pack came on a lorry, the pack about six foot wide and twelve foot long, three feet deep but not very heavy; it took only six men to unload it.

As they got to work assembling it, the chief designer said, 'We use local plastic, wood and metal, and the solar panels that we produce. Everything is made here.'

'And the cost?'

'Six thousand dollars per unit.'

I stood observing the small cabin taking shape. The walls were thin, but had two layers to them, and the staff explained that sand, dirt or even cement could be placed in the layers to give extra strength. If not, they were cool during the day and warm at night. Bolts and wires took the tension and stiffened the assembly, the floor and roof adding strength to the shape.

With the roof on they fixed the solar panels to clips, attached wires and fed them below. A small wind turbine was placed on top, powering either a fan or a heating unit. A silver water container was fixed to a corner and wired to the solar panel; the water could be heated up. We stepped closer and peered inside.

A fold down table was clipped in place, a sink, pipes attached to the tank on the roof. A foot pump could be used to pump water up to the tank. Strong plastic chairs were placed down and I sat observing as a bed frame was clipped together, rubber straps run across the top of the base.

I tested the walls, pushing and poking, I pumped water up and watched the wind turbine turn the fan, and even lay on the bed frame. Triangle shelving was fitted to the corners, and it gave the final added strength to the walls.

Stepping out, I asked, 'When can they go into production?'

'In a month or two.'

'Produce a thousand, and use them around Darfur and Chad, see how they work. Send some to Rescue Force at Mawlini for them to experiment with, but then I want a larger version - to fit a family of five. As soon as that's ready I want to see it. Well done, everyone, it's a good design - and cheap. But where's the TV?'

I took away their brochure, and sat up late that night reading it. Turning to Helen, I said, 'For The Brotherhood to rise up and organise they'll need people and ... a density of people, yeah?'

'Yes, I should think so.'

‘So if the camps are all small camps, dotted around, they can’t organise too well, now can they?’

‘Well, no, I suppose not.’

‘In order to get the supplies in, people like the Red Cross will opt for larger camps - it makes life easier. But I’d opt for smaller camps, well spread out.’

The next day the news broke; someone had gone to the press and reported that the 2025 disaster will be a quake in the Gulf. The detail was both accurate, and a worry.

Jimmy waited a day to see what the press speculation would be, but a Kuwaiti official confirmed the story. That was that; we were in the final leg of Jimmy’s struggle. I spoke to him on the phone, and he didn’t sound concerned, he sounded almost relieved.

Global stock markets dipped and oil prices rose; I guess they weren’t looking at the calendar since we had five years to go. Jimmy then planned a TV statement, asking for the speech to be piped to everyone on the planet at the same time. It would be 2pm GMT and held in London. In the house, I sat with Helen and the girls to watch it.

‘Ladies and gentlemen, and those watching this broadcast far and wide, I’m here today to address you about the speculation about a disaster to occur in 2025. The press speculation is correct, there will be an earthquake in the Gulf region, and a bad earthquake.

‘As with other earthquakes and disasters, I have been working with the various world leaders for long time to plan ahead, and to consider what we might do. Many of the world’s leaders knew twenty years ago, but we’ve kept it secret so that we could plan, and so that the peoples of the affected regions could get on with their lives and receive outside investment.

‘It was decided a while ago to inform the Saudi Government and others in the Middle East, and to make joint plans and preparations. The earthquake will strike a region stretching from Northern India, through Northern Pakistan, Afghanistan, and Iran. There will be widespread devastation in those regions, particularly in southeast Iran.

‘As a result of the earthquake, the Iranian side of the Gulf will rise, and the Saudi side will sink. The resulting tsunami will reach inland ten miles, and will sweep away all before it. The water will reach Basra in Iraq, and will wipe away Kuwait, Qatar and The Emirates. The wave will also strike southern Iran, Southern Pakistan

and the west coast of India, Oman and Yemen, even as far south as Somalia and Kenya.

‘Following the earthquake and tsunami, the economy of the region will be severely affected, and there will be a refugee crisis. The various world leaders have been working with me to make plans to deal with that refugee crisis but, unfortunately, if those refugees are not housed effectively, then civil unrest in the Middle East is likely.

‘Everyone should be aware ... that in early 2025 all oil production in the Gulf will end. That should not be a cause for concern, since I know where additional oil can be found. We also have electric cars, and electric bus technology, and I now urge all nations to adopt the electric car technology before it’s too late.

‘Everyone should also be aware that this crisis can, and will, be dealt with, as were the other problems that we previously faced. Mankind will go on as before, the world economies will go on as before, husbands and wives will argue ... as before. The worst thing you have to fear ... is idle gossip by the press. Thank you.’

‘Well, it’s out there,’ I said with a sigh.

‘My God,’ Shelly said. ‘No Middle East oil. Is there enough in other areas?’

‘I doubt it,’ I commented. ‘That’s why we’re pushing electric cars.’

Checking the news online that evening, I could see banks collapsing, property development companies folding, and other businesses making provisions for losing money in the region. Individual tales emerged of people being wiped out after having invested in certain regions of the Gulf. Oil continued to spike upwards, the markets falling further – despite Jimmy’s reassurance.

The next day the TV news was not good, Dubai property prices reducing to zero, the ruling families complaining that they should have been warned twenty years ago. At least they were blaming the US and the Saudis, and not Jimmy directly.

I called an emergency meeting of the African leaders for the following day, and welcomed them into the conference centre as their President. Taking the podium, I hoped that I could be reassuring.

‘Ladies and gentlemen. You’ve all now seen the news about the 2025 earthquake, and let me start by saying that the affect on Africa will be very small. We produce our own oil, and we’re not as dependent on the Middle East as some nations are. But, even though

we'll not be affected, we will do all we can to assist, because as Jimmy said ... problems in the Middle East may lead to civil unrest there, and maybe a war.

'In the short-term, we are asking all African oil producers to cut back on production, and are hoping that the Gulf states sell as much oil as possible in the next five years. Some of that oil revenue will then be used to assist the refugees in 2025. You must calculate that, after 2025, Africa oil will be much sought after, and will make us a much greater profit. So leave it in the ground for now, where you can.

'But there is more to this tale than I'm letting on. Jimmy believes that unrest in the Middle East could lead to war, and that it will spread, probably to us. Because of that we're making plans and contingencies – just in case. I urge all of you to cooperate fully with those contingency plans; if we all pull together in one direction then we're a very strong continent.

'In the years ahead we'll be looking at ways of internalising our markets, and making things that we currently import. We'll be sponsoring factories in many nations, aiming to build what we need. We'll also look closely at the goods that each nation makes, and will try to have them sold around the other nations.

'Ladies and gentlemen, we're in a very good position, good enough to help the Middle East, and strong enough to resist any aggression. Reassure your peoples, and carry on expanding as usual. Hold your heads up high, and never appear concerned. Africa is now strong, very strong.'

After my applause we broke to mingle, drinks in hand. Small groups huddled and discussed the turn of events, and I beat up those countries that produced oil, hinting at consequences if production was not cut back.

An agreement was made, even with the Nigerians, and oil quotas were set, a communiqué released. I made a speech to the TV cameras afterwards, reassuring the peoples of Africa, and suddenly felt like I was the President, really the President.

G20

A week later, Helen, myself, and my team jumped aboard Africa One, bound for the UN building in New York and a meeting of leaders and Finance Ministers. The UN did, however, now screen all

diplomats. They kept the lousy coffee in plastic urns, but they screened potential shooters.

Familiar faces were greeted, a few new ones introduced, thirty minutes taken to chat in small groups before Jimmy called order.

‘Ladies and gentlemen, politicians, hard working aides. This meeting is ... a little more out in the open than I had anticipated - by a few years at least. Perhaps that’s a good thing, not least because there are fewer secrets that I’m burdened with. Some in the Middle East are very concerned, some afraid, some downright angry at the thought of losing their homes, businesses and livelihoods. They will, at the very least, escape with their lives, and if the people around this table work together and assist, then the Middle East may have a chance at recovery.

‘We’ve already seen the Saudis move quickly, and I’m pleased that they’re showing such resilience. That brings us to the first topic, the one of oil production - an important topic to us all. The Saudis, and hopefully other Gulf states, have entered into an agreement whereby the nations represented around this table will buy more oil now, expecting fully for there to be none from that region in 2025. Part of that deal ... is that the Saudis will assist financially towards the cost of preparing and dealing with the refugee crisis in 2025.

‘So, first of all, can I have a show of hands ... of people not happy with this approach towards Saudi oil.’

‘Oil prices will be high for five years?’ the Brazilians asked.

‘Not high, but more than before. If they rise too much then we’ll increase our own production.’

The Saudis piped up with, ‘We believe that we can restore offshore drilling within weeks after the tsunami.’

‘And how will you get it ashore?’ Jimmy asked.

‘We will tanker it straight down to Mozambique.’

‘A good approach,’ Jimmy commended.

‘And after 2025?’ the Japanese asked. ‘Where do you expect oil prices to be?’

‘Ninety-five dollars a barrel,’ Jimmy suggested, a few people exchanging looks.

‘Why so low?’ the Japanese asked.

‘Because the crisis will polarise people’s view of electric cars,’ Jimmy explained. ‘They’ll panic, despite assurances, and I’ll be pushing hard to get electric car costs down even lower.’

‘How do you see the refugee crisis developing?’ the Turks asked.

‘I see Turkey not accepting any refugees, and I advise you not to. I see the refugees remaining in their own countries, or close by, and

being assisted there. I see temporary shelters being built, food and water shipped in.

‘The President of Africa, my good colleague, assures me that they have invented self-assembly homes that are not only suitable, but come with solar panels and wind turbines to generate electricity and warmth. Such homes are only around six thousand dollars to produce, made from materials in our region of Africa.

‘All of the nations here are free to buy those homes in years to come, to assist with refugees, or can simply donate towards them. A little money will go a long way to keep the refugees ... happy.’

‘And would donor nations be expected to contribute to the Iranians?’ President Blake asked.

‘They most definitely will, since an unstable Iran is not desired ... by anyone. And the countries unaffected by the disaster, those that expect to take refugees, will be Jordan and Syria, Iraq itself hosting its own refugees from Basra and the area to the south of it – plus those of the Gulf states. I’ll be asking that donor nations contribute towards the added burden on those countries, but – as you may know – Paul is already assisting those nations, and will continue to do so. Paul? Mister President?’

I gave him a look. ‘We have desalination plants already working, increased agricultural output in Jordan, and we’re funding housing projects. In Iraq itself we’re working on much needed desalination, but around Basra - water piped up to the city and far enough away from any tsunami damage. I’ve also donated hundreds of electric buses and thousands of solar panels to assist with their economies in a small way.

‘In the years ahead I intend to build apartments in Syria, Iraq and Jordan, ready to assist with refugees. But, we’ve no idea of the movement of the peoples of Kuwait, Qatar and The Emirates. Perhaps our Saudi friends could give us their opinion.’

‘The Kuwaitis will be at an enclave thirty miles inland, across our border. The other nations are ... undecided on a course of action, but there is high ground they could go to.’

Jimmy said, ‘If they remain in the area, then food and water will be scarce, no electricity, no roads, no functioning ports. Perhaps you could offer them temporary areas till they see the damage ... and finally pay attention.’

‘And then?’ the Saudis nudged.

‘And then ... you could assist them till they reclaim their own lands, or move to other nations – under agreement with those nations.’

‘Will the Kuwaitis not use their enclave in Africa?’ India asked.

‘Yes, they will,’ the Saudis replied. ‘For a certain number of citizens. And we will relocate almost three million.’

‘Could Dubai not relocate as well?’ the Indians asked, and I tried not to show my disappointment in their question.

‘Dubai’s wealth came from the allure of their golden city,’ Jimmy suggested. ‘That wealth is now gone, and they owe a great deal of money to many people. They have little to bargain with.’

‘The Emirates and Qatar total some four point five million people,’ the Saudis thought they would mention. ‘More than we could absorb, or would wish to.’

‘Could they return later?’ Blake asked.

‘No,’ Jimmy suggested. ‘They’d be starting from scratch, nothing left. Absolutely nothing. Many will drive towards Iraq when the time runs short, some towards Oman – but Oman will have its own problems.’

‘And what of Pakistan?’ the Indians asked.

‘They’ll have an internal refugee problem of one or two million people.’

‘And will that lead to unrest?’ the Indians pressed.

‘No,’ Jimmy answered. ‘The Warizistan Taliban have been diminished, and will continue to be diminished before the time.’

‘And Iran?’ Blake asked.

‘Will concentrate on looking after its people. The *unrest* ... that I expect, would start in Basra, and that’s where my efforts will be focused.’

We spent thirty minutes going back and forth before we broke into smaller groups, individual deals discussed. After a lunch break we met with the Russians, Chinese, Americans and our outgoing British PM.

Jimmy placed a map of the region on the table. ‘OK, let’s get down to it. First of all, the Saudi factor is new to me ... and unexpected. If they help financially, then things may be better in the region after the tsunami. I’ll also be expecting you all to dig deep, because the rise of The Brotherhood is about displaced people with empty bellies, rejected by those around them. The displaced from Qatar, Kuwait and the Emirates - the poor displaced, will end up north and west of Basra, in camps.

‘Even though those camps will have Iraqis in, the local Iraqis will soon want the foreigners gone, because around Basra jobs are scarce enough now anyway. If the Saudis take many, then the Basra camps

could be reduced, and let me be clear about something: the rise of The Brotherhood is not assured, and may be delayed for years.'

'I had an idea,' I put in. 'If we create many small camps, instead of one big camp with a million people in it, then the rise may not find the support it needs to gain momentum.'

'An excellent idea,' Jimmy commended.

'If we pressure the Saudis to take some, then those camps don't need to be so big,' Blake suggested.

'We'd need the oil buying nations to join forces and pressure the Saudis,' Jimmy informed them. 'Oman will suffer, they won't want to take any people – even if we offer financial aid.'

'Four million people is a lot for the Saudis to adopt,' I cautioned.

'Anything is a benefit,' Blake suggested. 'I'll talk to them. Do they know about the Brotherhood?'

Jimmy nodded.

'But not the other nations,' Blake noted. 'Probably best; that would depress people around the world for sure. And you're sure that Iran won't descend into chaos.'

'Pretty much,' Jimmy suggested. 'Besides, we'll assist them.'

'How many refugees will they have?' Blake asked.

'The most, almost five million homeless, but most will stay near their old homes.'

'What if Iraq closed its border?' I asked.

'They did before, but the border guards all accepted large bribes to let the people in. And people just drove around the border posts, across the desert. The Saudis will be quite brutal with unwelcome visitors.'

'OK, moving on. If, and when, The Brotherhood rise up, this is the plan. Our forces in Afghanistan run a line from the Chinese border to the Gulf, stopping anyone crossing into Pakistan, or vice versa. That will be the same force as is there now, but strengthened.'

He tapped the map. 'Next, the Africans will take the Sinai Peninsula, possibly with Egyptian permission. Your combined navies will patrol the Gulf, the Red Sea and the Yemen Straits from the base we now have. NATO takes the Mediterranean, Russia – you take the Black Sea, the Bosphorus Straits down to Europe.'

'An army of Rifles will land in India and assist on their border with Pakistan. Russia, you'll cut off Georgia with an army north of that country, a second line of defence inside your own borders. The European armies will position themselves in Greece, Bulgaria and Romania, Gibraltar and Spain, Southern Italy and Malta.'

‘Russia and China, you need to watch northern Iran. That bottles up the region, but that’s just the start line. At the time I’ll look at where pockets of The Brotherhood are active, and use search and destroy missions with the Rifles, plus those of your soldiers suitably trained. Then, as in Afghanistan, we would make camps and set-up flags, inviting attack ... and killing anyone who does attack us; they’ll run out of people before we run out of ammunition.

‘My aim ... is to be able to call upon a hundred thousand Rifles, and forty thousand of your soldiers suitably trained, but never deploying more than half of that.’

‘What about Turkey?’ the Russians asked.

Jimmy took a moment. ‘Hard to call. I probably will put Rifles on their border, but they do have their own very capable army. But there are two things that The Brotherhood will want to attack. One is oil production in general and the Saudi Arabia oil in particular, and the other is Israel. One strategy could be to deploy Rifles to the Saudi border, another group around Israel; if they killed enough people it could turn the tide. It could be the solution I’ve been searching for.

‘Problem is, that’s a ten year job as the Middle Eastern countries get back on their feet and fight back themselves. Remember, the economies will be hit hard.’

‘And if the displaced are spread around?’ the Russians asked.

‘Then they won’t have the concentrated firepower, and they can’t gain momentum. And remember, it’s not just the displaced that join them, many ordinary Arabs flock to their cause because they’re all unemployed and suffering.’

‘Can your soldiers go in sooner?’ the Chinese asked.

‘They would help to spark the rise,’ Jimmy said as he studied the map. ‘Seen as foreign oppressors.’

‘This whole mess comes down to the wrecked economies,’ Blake noted.

‘Do you fancy throwing some money at the problem?’ Jimmy testily asked.

‘I can just see Congress approving money to rebuild Iran!’ Blake scoffed.

‘And that, boys and girls, is why we’re screwed,’ Jimmy said with a sigh. ‘We’d have to throw a lot of money at corrupt dictators or proclaimed enemies.’

Studying the map, an idea came to me, but I kept it to myself.

Jimmy ended with, ‘I want all of you to consider just how much you would commit to the restoration of the Middle East economies.

We have a while yet, and I would expect the recession to end this year. I'll supply CAR with locations of untapped oil; we'll drill, but cap them off ready. Russia, try use your coal-oil internally where you can.'

Back in Africa, I offered the South Africans coal-oil technology, provided they buy factory goods from us. It was an easy deal for them to accept. I sent them details of the non-chemical process and a bunch of experts, plus a loan towards their first refinery. That done, I asked Abdi to pop in.

'Abdi, how do you feel about giving over some of your empty land for an enclave, for a few years.'

'To who?' he puzzled.

'To rich Arabs from Qatar and The Emirates.'

He took a moment. 'What do you think?'

'They would be fenced off, not interacting with your people, but buying goods from you. And I'd expect them to go home after 2029. They'd pay you towards the land, and they'd build a port.'

'Will they become dangerous after this earthquake?'

'Dangerous? They'd be surrounded by Somali Rifles! Can you think of anyone wanting to trouble you?'

Abdi smiled. 'No.'

'And they'd have no weapons. Maybe their police would have some weapons, but that's it.'

'How many people would come?'

'Maybe a quarter million at most.'

'If you think it would be OK.'

'What could go wrong? You surround them. And, ask them to spend some money on oil exploration offshore.'

'That is expensive,' Abdi agreed.

'It's what they're good at, so let them do it. You'd get a share of the profits.'

I then asked Jimmy where the untapped oil was off Somalia, and he sent a scanned image with a few scribbles on. The Saudi Prince was summoned with his opposite numbers from Qatar and The Emirates. They came to my office, but the new faces did not look pleased to be in my company.

'Thank you for coming,' I offered.

'We have little to lose,' one stated.

'And everything to gain,' I quickly added. 'OK, I'll get down to it. I've worked long and hard to persuade the Somalis to allow you an enclave, as with the Saudis in Mozambique.'

‘That enclave has oil.’

‘This has more oil.’

‘Why were we not offered that?’ the Saudi Prince asked.

‘It’s close to the Middle East and ... if there’s conflict in the Middle East, it’s ... close. We figured you’d want to be far away.’

‘What conflict?’ the Qatar representative asked.

‘We believe that if the economy of the Middle East stays poor for many years after the quake, that war could break out.’

They glanced at each other, shrugging. They obviously didn’t seem to disagree with that.

‘Look,’ I said. ‘The land is cheap enough, there’s oil offshore, and when your existing countries are back up to speed you can move back. You’d have to pay the Somalis a percentage of the oil, but I’d subsidise your food and water.’

‘Subsidise? For ... how many people?’

‘How many do you have?’

‘Two million,’ the man from Qatar said.

‘Then I’d subsidise food for that number.’

They stared back.

‘Who is the offer for?’ the official from Qatar asked.

‘Both of you, enclaves side by side.’

‘And who extracts the oil?’

‘You do it under agreement, overseen by CAR, quadrant by quadrant. Anyway, think about it.’

‘And if they do not wish to pursue this offer?’ the Saudi Prince asked.

‘I’ll try and get you in there,’ I offered. ‘But only if you set-up an enclave in your territory for these good gentlemen; quid pro quo.’

‘And the oilfield size?’ the Prince asked.

‘Don’t get ahead of yourself, these gentlemen haven’t decided yet.’

I took them to lunch in New Kinshasa, showing them the view from the tallest tower. ‘I built this from nothing,’ I told them. ‘And I can build you an enclave very quickly.’

Jimmy rang me a few days later and asked what I was up to. I said that I had an idea, and that I was doing what I was good at, and to trust me. He sounded worried.

A month later the governments of Qatar and The Emirates, which were basically the royal families, agreed to the deal. They each paid Abdi two billion dollars down for the land, and I got to work. I sent a thousand of the basic quick-assembly huts that we made to

Somalia, along with a thousand workers. With a batch of the new flat-pack homes ready, I grabbed five hundred and sent them up as well, along with a couple of hundred miles of barbed wire.

The initial team set-up the two squares, both five miles wide and five deep, and pegged them out. I sent bulldozers by train and lorry, hiring four thousand Somali builders, Abdi providing Rifles to patrol the perimeter wire. The corporation sent up convoys of water tankers from Mogadishu, bottled water and food.

The ground was cut before year's end, Helen and myself filmed with shovels in hands. Back at the mansion, Jimmy was waiting. He nudged me towards the end of the garden and the jetty.

‘How much are the enclaves in Somalia costing us?’

‘How much will the rise of The Brotherhood cost us?’ I countered.

He shot me a look before taking in the calm lake, sailboats in the distance. ‘Good answer. If I thought it would stop them ... I’d use everything we have.’

‘But...?’

He put his hands in his pockets and stared down at small fish in the shallows. ‘Was a time when I considered committing the Rifles to the Middle East, even if it cost them all their lives. And ... there was a time when I thought about using all the financial resources from down here. But ...’

‘But you couldn’t bring yourself to do it,’ I finished off. I put my hands in my pockets and stared out across the lake, heaving a sigh. ‘What I’ve built down here means everything to me; I’d be sorely tempted to tell the world to go to fuck and just isolate Africa.’

‘I’ve had that thought once or twice. But if The Brotherhood get Iranian missiles or fissile material –’

‘Then we’d be at the end of a nuke inside a decade. Yes, I know.’

‘When I gave you more to do down here, it was to develop your political skills, and to widen your experience. I figured that the experience would come in handy when the troubles started. Africa is now five or six years ahead of where it should be, and that’s on an exponential chart, and you’re looking at things with a commercial slant, not a political one. Instead of asking people nicely ... you’re dangling big carrots. As well as kicking a few doors in.

‘That jewellery factory was a good idea, a billion dollar industry already, and the water pipes should make a big difference to tensions now and in the future. Fact is, we’re in new territory, way ahead of schedule and on a different course. The Saudis were never supposed to have enclaves, nor the Kuwaitis or others.’

‘If they’re not there in 2025, then they can’t become refugees,’ I pointed out.

‘If the rich leave and the poor stay, then it’ll still be an issue.’

‘Well, in that case, I may just have a word with certain Arabic gentlemen and modify my agreement. Or else!’

‘Maybe this is the right approach, the commercial approach. I’ve been focused on the fighting too much.’

‘Fighting with your other self. Which are you, soldier or doctor?’

‘If I’m the soldier, you’re the doctor,’ Jimmy softly stated.

‘The enclaves can’t do any harm. They get people out of the quake zone, they create jobs here, they make money for Africa, and they’re ring-fenced; surrounded by Rifles.’

‘There’ll be no Iraqis in the enclaves,’ Jimmy commented. ‘And they’re the spark for the fire.’

‘I’m working on a few ideas, and I’m sure that I can make a difference.’

‘That’s what I always hoped for, that someone else would take on the fight.’

‘It’s what you hired me for, boss.’

He turned and smiled. ‘I hired you for your charm and wit, and because you produce nice daughters.’

‘Shelly has surprised us; not interested in university now.’

‘She’s bright enough as it is, and university is just three years of reading books.’

‘She’s quite settled with Mali, and working eighty hours a week. Poor girl looks tired some days.’

‘She’s found her calling,’ Jimmy commented. ‘And a few years early. Another surprise.’

‘Well, there’s no point knowing the future just to repeat it – someone once said.’

Jimmy smiled. ‘You’re learning. And it’s only taken thirty years. How’ll you power the enclaves in Somalia?’

‘Got a ruddy great nuclear reactor down the coast with spare capacity; I’ll run power lines. The plant will also power the desalination works.’

‘Some day, the Somalis may not be happy you gave away their oil.’

‘They get twenty percent.’

‘They should have got eighty!’

‘Well, they got money upfront, and I’m creating jobs for them. They can whinge if the world is still here after 2025.’

‘Don’t repeat this yet, but that quake will cause a tiny shift in the earth’s orbit, making us a little cooler in the decades ahead.’

‘Noticeably cooler?’

‘No, just a degree or two, but it all helps.’

‘You’ve banned the release of the plankton in the Caribbean,’ I noted.

‘It would do well there, but affect their tourist trade. And right now we need the world economy buoyant. Anyway, how’s money?’

‘Don’t you keep track?’

‘Yes, but I like to ask you what you’re up to, *Mister President*.’

‘Cash is fine, American stocks climbing and we’ve offloaded some. The loan money is coming back, but slowly, CAR is down because we capped the wells, but GDP and taxes here are rocketing. My good citizens are not savers, they’re spenders.’

‘New found wealth,’ Jimmy noted.

‘Got a bunch of companies that want to build hotels down here, but I only grant them a license when the other hotels are over sixty percent occupancy.’

‘You are indeed a wise leader of your people,’ Jimmy mocked. ‘And Ben Ares was after a few quid?’

‘I made it conditional; a peace dividend.’

‘Yeah, well good luck with that. But ... but the Gaza Palestinians are moving to Egypt in numbers, and to Jordan. Your policies there are easing the housing shortages inside the occupied territories.’

‘And the Israelis are now compensating Palestinians before they boot them out of their homes. We’re paying for it ... but it’s the thought that counts.’

He shot me a look. ‘Cats and dogs; the Israelis will never change.’

‘Their economy is suffering,’ I said. ‘More orthodox Israelis on state benefits than people working!’

‘The working Israelis tend to have two kids, the orthodox Israelis have four or more. And the poor old US taxpayer is being nudged towards helping out.’

‘Sanchez seems to have become a footnote in history already.’

‘The US military machine sees Israel as an important outpost in a sea of hostile nations, and the Israelis see the Americans as a pushover. They’re using each other, but it’s the Israelis that will pay the price - the higher price ultimately.’

We headed back to the house. Jimmy said, ‘A lot of human rights activists are after us for the Rifles in South America and elsewhere, accusing us of shooting first and arresting second.’

‘Damn right.’

‘So pull them out, all apart from Mexico.’

In the weeks that followed I dispatched a few thousand volunteers to Somalia, to speed up the enclaves, and hired another three thousand Somali builders, the men coming from all over the country.

Oddly enough, many of the hotel companies that nagged me about building in New Kinshasa now started to ask about the enclaves. I explained that it was sovereign land belonging to Qatar and The Emirates, and to ask them. They received permission straight away, and ground was soon cut on a dozen hotels in each enclave.

We housed plenty of building companies in our region, some of whom had laid off staff as New Kinshasa neared completion, so I dispatched a few of them up to Somalia with grants. They re-hired former staff and shipped their heavy equipment up by train. I figured that the enclave would be ready way ahead of schedule.

I then had an idea, a sneaky idea. I contacted the emirs and princes responsible for the building work, and informed them that I would build worker’s apartments at the rear of the enclaves, and that they would be pulled down in 2025. They had no objection, but thought it expensive compared to the pre-fabricated houses that a lot of workers suffered in.

The order was signed off, and concrete apartments for five thousand workers were sanctioned – in each enclave. But I had made a mistake, deliberately. I assumed one worker per two- bedroom apartment. Silly me. Ten thousand apartments would now be built, built by men who were expert in building these standardised blocks. And when finished, I would forget to demolish them.

End of year

The end of 2019, and the start of 2020, was widely celebrated, a little like 1999 turning to 2000, and cities the world over competed for the best displays – apart from Dubai. The former golden jewel of the Gulf was now a ghost town, apartments empty, cars abandoned and collecting dust and sand.

Dubai’s penthouse suites, bought for tens of millions, sat empty. But they started to attract a strange crowd of holidaymakers, people keen to stay in luxury for a week or two at next to nothing –

especially the Palm Fronds villas belonging to the rich and famous. The rental agencies handled the bookings, no regard for the absent owners, tourism picking up a little.

Most of our belongings from the old house had now been moved down, and we had little interest left in the UK. Some UK newspapers accused me of abandoning the country, but the stories didn't bother me. Much. I gave an interview to the BBC a day later.

'My work here is very important, especially towards 2025. We're building cities for the Arabs to live in, and we're working on new products and new technologies to help the Middle East after the earthquake and tsunami. That work is vital. We're also working on fresh oilfields, and new energy technologies to assist in the future if there's an oil shortage.

'The coal-oil technology that the UK is benefiting from so much was developed down here, and that's created tens of thousands of jobs. The lights will stay on the UK for the next hundred years because of that technology.'

I felt better, and vindicated, and wasn't sure if I cared any more about British newspapers. Much.

Christmas was a family affair, Jimmy plus his new woman - a thirty-five year old American actress. She had gained work through some of the films that we had sponsored, and met Jimmy at a charity function to raise money for the Hawaiian displaced, some of whom were still displaced.

The films we had funded had done well enough for us to recoup most of the money, and the propaganda machine was working flat out. Books about the combined soldiers in Afghanistan had been available for a year or so, a hundred thousand printed in each language and sent to every military base of the countries in question. Ordinary soldiers and young recruits now had their idols, and a goal to aim for.

Two films about the combined units had been released, and international military integration was becoming the norm. The naval base in Somali had been filmed many times, as well as the bases in Madagascar and Sri Lanka. Russian long-range bombers landed in Scotland, and British and American warships docked in Russian ports, Russian dolls and trinkets purchased for wives and girlfriends, Russian prostitutes visited after a spot of shopping.

Jimmy had made a point of visiting many of the bases where the nations mixed, and had taken his latest squeeze along to the base in Somalia before joining us here for Christmas. Mali was now part of the family, but Lucy surprised us by swapping boyfriends every

three months or so. We had always considered Shelly to be the tart of the family.

Liz loved Christmas, and loved to be fussed-over by Jimmy; I rarely got a look in if Jimmy was in the room. She would sit on his lap and watch the TV with us, Jimmy content to carry her to a room where she could watch a kid's programme with him, sometimes for hours.

Our Christmas catering was handled by Cookie and Sandra, down on a kind of working holiday, and we all ate way too much as usual. I even fell asleep by the pool after lunch. With New Year threatening a bit of a squall, we opted for a function in New Kinshasa, a business tower with a restaurant and nightclub on the twentieth floor. It offered the partygoers a view of the city lights, and I stood staring down at my creation.

Jimmy's lady, the stunning actress, drew level. 'It's beautiful. And you built all this from jungle.'

'Well, it wasn't all jungle – some was mosquito infested swamp.'

She smiled. 'Quite an achievement; you must be proud.'

'I am, but we're not finished yet. Just built an Olympic sized pool for competitions, a new fire station, another library and a few extra Internet cafes. It's never ending trying to design the perfect city. So, how're things Stateside?'

'I don't really get to see any of the problems, but you see it on the news.'

'Still many homeless?'

'The people protesting are not homeless, just not ... living where they'd like to live ... or have the jobs they want. Most of the coastal areas have been repaired, the parts you can see, but compensation claims and insurance are still an issue; still people trying to claim. My mother's house was damaged in Malibu, and she's still trying to sort out the insurance almost two years on. You still see homes boarded up.'

'And Brad, how's he doing?'

'He's very popular, doing what he can, always attacking the damn insurance companies. He's formed his own political party and will be running as a late entry this year.'

'Elections are ... November?' She nodded. 'You Americans like to start early. My election was easy enough, I just said – I'll do it.'

The background music ended suddenly. 'Please leave, we have a fire down below!'

I grabbed the man who warned us as people filed out. 'What floor?'

‘Number three, sir.’

I turned. ‘I want all able-bodied men and security staff with me!’ I shouted, Jimmy closing in as I led the security detail down the stairs. We rushed down creating our own echoing roar, a full sixteen floors, our party being the only people in the building. On the fifth floor I stopped, asking the initial guard who warned me where the fire was.

‘Towards the canal, sir.’

I opened the stairwell doors and checked, leading the men into an open plan office. Looking down, I could see the canal through the smoke. ‘Security, shoot out these windows, all of them on this side.’

Standing back and joining Jimmy, the guards shot out the windows, a breeze and a whiff of smoke entering the large open plan office.

‘OK, throw everything out, into the canal. Move it!’

Jimmy took his jacket off and grabbed a desk by himself, soon shoving it through the broken glass. Computer screens splashed into the water, filing cabinets tumbled, and chairs clattered on the concrete below. With everyone working hard and cooperating in carrying desks, we soon had an empty office.

‘Carpet tiles, ceiling tiles!’ I shouted. ‘Rip them all down.’

Sticky carpet tiles were pulled up, guards on chairs knocking down the white ceiling tiles.

Jimmy grabbed a water cooler and stepped out. He descended a floor, the ladies now out of the building, and smashed it onto the stairs. Others copied, water coolers smashed on the floor that I was on.

I led the men a floor lower, all now perspiring, and found a corner office alight. ‘Shoot out the windows, throw everything out.’

Heading towards the fire, I pulled the hose off the wall with an angered determination, straightened it out with a little help and turned on the water. We had pressure. I sprayed the office doors first, yellow flickering flames visible, then ordered the guards to hold them ajar. With twelve inches to play with, and black smoke billowing out, I aimed at the ceiling, soon seeing white tiles blown aside.

Closing in on the gap, I aimed lower, soon no flames visible, just a lot of black smoke. I backed up, handing the hose to a guard. ‘Turn the water off!’ I faced the man I handed it to. ‘Stay here.’

We checked each office in turn, all dressed in our black tuxedos, but found no further evidence of fire on this floor. Opening the stairwell doors, shiny helmets burst in.

‘Are you OK, sir?’

‘Yes, we got the fire out. And the floor above us - we moved everything flammable out.’

‘Please be going now, sir.’

‘Going? I built this city, and I’m not losing a building! Follow me.’

Jimmy tagged along behind, back up a level. We found smoke. ‘Coming from the vents,’ Jimmy noted. ‘That’s how fires travel floor to floor.’

The vent turned out to be hot to the touch. With Jimmy and the fire chief helping, we reeled out a hose and turned it on, spraying the vent. When it was cooler, Jimmy punched a hole into its thin metal, the hose shoved in. The bare concrete floors were now wet, sticky stains from where the carpet tiles had been.

Not wanting to take a chance, I dosed the whole floor, the open plan office now very open, the odd calendar fixed to the walls, loose telephones lying in the water.

Another fireman stepped in. ‘All OK above this floor, sir.’

‘And where the fire started?’ I asked.

‘Out now, sir, but much damage.’

Jimmy led me below, past firemen on the stairs, and to the blackened remains of an office, sloshing through a half-inch of water, drips falling from the exposed concrete ceiling, a few soggy and deformed tiles still hanging.

I picked up a half-burnt calendar. ‘Someone will have a redecorating bill in the new year.’

Jimmy picked up the melted plastic pot of a charred Christmas tree, the wires of Christmas lights still visible. He waited.

‘Fairy lights left on,’ I realised.

‘Good idea to clear out the fifth floor, could have made a real difference,’ Jimmy commended. ‘C’mon, best go get cleaned up - and reassure the women folk we’re alive and well.’

Outside, the police and fire brigade had arrived in force, the party guests all huddled as it started to rain, names taken. I collected my ladies, Jimmy collecting his date, and we headed home, faces blackened with soot, suits wet and ruined, Helen not impressed that I tried to tackle the fire.

‘I built this city, love; I’ll be buggered if I’m going to let a fire damage it.’ I got a disapproving scowl, and looks from Shelly and Lucy.

At the mansion, I threw away my jacket and grabbed a beer with Jimmy. Jimmy commented, ‘You may now feel ... a little as I did

when I came back. That ... feeling of anger towards the inevitable destruction of what's been built.'

I sipped my beer and took a moment. Peering down into my drink, I said, 'I'd have died trying to fight that fire, and not given up.'

'There'll be other buildings, in other places,' Jimmy commented.

I took a moment. 'Not easy to let one go - any one.'

'It never is, but you move on and try again.'

I stared back at him. I carefully stated, 'I could never do this again.'

'You think that now, but you'd change.'

The actress wasn't following our thread.

Jimmy added, 'And, if disaster comes, all you need is that first step. Then, once you're there ... it's a case of one step at a time, one day at a time.'

Helen and the girls were not happy, and I received an ear bashing. Jimmy assured them that there was little real danger, till he received an ear bashing as well, opting to take his lady to the casino. Liz was still up, and at least she was not whinging at me. We settled down to a Japanese 3-D cartoon about a monster eating Tokyo, my daughter fascinated.

Returning to the fire the next morning, I ordered a review of all tall buildings and their respective fire codes. Later in the day, my deputy from the corporation came around with a large Christmas tree. He placed it on the road and set fire to a low branch. The damn thing went up in three seconds.

'Chinese imported Christmas trees, sir. Two others reported alight.'

'Issue a warning, ban them from Africa for next year.'

Desert bloom

Things returned to normal, and I returned to my desk, but I now set out one-year and four-year plans, some elements of which I kept to myself. First, I asked the brain-trust kids from the farm college in Kenya to form a team, and to see if they can boost crops in Jordan and Northern Iraq.

The pipeline across Rwanda was ready and tested, water leaving our lake and travelling across to Lake Victoria, thereafter to either

join the start of the Nile or be pumped out and onwards to Kenya. The pipes to our own lake were then connected and tested, huge areas of white water created, bubbles surfacing, which was good for the fish I was informed.

The next morning, as I stood with a coffee at the end of my garden, I could see that the water level was higher. I called the corporation and they called the water company, who said everything was fine, but that what they hadn't figured on was a rainy Christmas and New Year. What they had planned on – without telling me - was raising our lake twelve inches to improve water storage, and water quality.

Another phone call and a little research showed the Rwandan pumps not at the required capacity, and if ours kept pumping I'd have crocs in my swimming pool in a day or two. Our pumps were throttled back to fifty percent of normal pressure whilst the pumping stations across the lake were fixed.

Three days later, the water level fell back, Lake Victoria receiving its full quota. The second pipeline, the one from the west of Uganda, now burst into life, and the Egyptians monitoring the lake level were happy at the increase. That increase was measured in millimetres, but would have an effect downstream. The Kenyans were also happy, because water was bursting forth in arid regions, including some of our safari lodges.

The only hiccup to the whole start-up ceremony was a Rwandan worker who managed to fall into a pumping station and drown, being fished out of Lake Victoria the next day after a journey of some twenty miles. My engineers were delighted that the man had made it all the way, marvelling at the interior smoothness of the pipe and its joins. They tried to explain the quality of workmanship to me, but I just stared at them till they left my office.

A branch of the third pipeline turned north and into Southern Sudan, its first use being to irrigate safari savannah and bring a little greenness back to the area. Literally. Dormant seeds burst to life, and the livestock and prey animals that had been brought in now had streams in which to quench their thirst. Lions could stop and have a drink before returning to chasing the antelope across the savannah for the tourists.

One of my first visitors in the New Year was a Palestinian spokesman, accompanied by a Jordanian official, the pair something of a surprise. With tea and coffee made, I sat and faced my unexpected visitors.

The Palestinian gentleman began, 'We are familiar with your work in Jordan and Egypt, your work which ... goes around the Israelis. And, although we do not wish to see our citizens leave, we are grateful for what you have done.'

'But...?' I nudged.

'We were wondering if there was more that you could be directly involved with.'

'Such as...?'

'Financial assistance.'

'What could you spend it on? And what could you get through the Israeli lines without them sanctioning it?'

'The Israelis have no problem with us receiving overseas aid, and then spending it on Israeli goods.'

'Ah...' I let out, easing back.

They waited.

'Gentlemen, if I'm going to be get involved, then I want tangible results for my money.'

'Results?'

'A peace dividend,' I said. 'Some ... progress.'

'And what ... *progress* did you have in mind?'

'I'll build apartments in Ramallah, and east of occupied West Bank, if you'll move people that are snuggled up to the Israeli settlements.'

'We'd be giving up our land.'

'They're going to take it anyway, by slow creep,' I countered. 'This way you can compensate your people, and get extra housing.'

'The fact they may do it anyway ... should not be a reason for tolerating it.'

'Oh. OK. Try someone else.'

They sat exchanging looks.

The Jordanian official said, 'I'm sure that we can work something out. You have been a great friend, and most generous.'

I eased forwards and interlaced my fingers. 'Here's the deal. I build more apartments away from Israeli settlements, you move your people out of stone-throwing distance, and I'll send some money. That's not because I agree with Israeli settlement policy, it's because I agree with moving out of the way of the steamroller. You've seen the Gulf states moving thousands of miles, so you can move a few short miles. That, is being pragmatic.'

'And if we agree?' the Palestinian asked.

'Then you'll find me very generous. You can spend the next twenty years shouting at the slowly advancing steamroller, or move

ten miles and have twenty years of peace. And, if you consider the quality of life of your people - rather than your cause, you'll take my money ahead of your pride.'

I faced the Jordanian. 'You have a great many Palestinians in your country. Perhaps you could take more, possibly even an enclave of them. Then, my assistance to you will be much higher than it has been.'

'Do you aim to empty the West Bank?' the Jordanian asked, not looking happy.

'I aim to ease tensions by reducing both the proximity of the warring parties, and the numbers. Fewer people means more of those left in work, and less of a welfare burden. That's how I see things. But, if you wish the next twenty years to be like the last, then stay as you are.'

'You think we are better off outside our lands,' the Palestinian noted.

'The Gulf states chose enclaves in Africa ... over the death of their people. They, obviously care more about lives than parched soil. What do you care about? If that parched soil and nationhood is so important to you, then use up the lives of your people to fight back - I have nothing against that. But don't do it slowly, causing suffering to your people. Do it all in one go, sacrifice all of your people in one go, and when they're all dead you can be sure that you fought honourably for that patch of parched soil. And the rest of us, we can all get some bloody peace.'

'Alternatively, you could look at the Saudis in Mozambique, the Kuwaitis in Namibia, the Hawaiians in Madagascar, and realise that being alive, and being part of the human race, is more important than a piece of land. If you wish to die on your own soil, fine, just hurry up and get on with it.'

They were a little shocked.

'We'll need to discuss your proposal with our leaders.'

'Of course, take your time. Go forth and cogitate, sit about the camp fire and smoke the pipe, it's not like your people are suffering every day.'

They left me with odd expression on their faces.

Ben Ares was on the phone an hour later. 'Paul, how are you?'

'Cut the crap and get to the point, please, or it'll be embarrassing.'

'You've had visitors.'

'Unannounced visitors, who claim ancestry back to the Philistines.'

‘And what did they want?’

‘The usual; nukes, EMPs, rotten apples to throw at you lot.’

‘They want money.’

‘Yes, but I made it conditional.’

‘On what?’ Ben nudged.

‘That they relocate and compensate their unhappy farmers in the shadow of those pesky Israeli settlements, and that Jordan takes more of them.’

‘What did they say?’

‘They said they’d get back to me, but they did compliment me on my diplomatic style, asking if I picked it up in Tel Aviv.’

‘You’re rude even by Israeli standards!’

‘A compliment if ever I heard one. I’ll let you know if they come back.’

‘We’d like to open a small consulate in New Kinshasa.’

‘Sure, pick a spot. But does that mean we have to recognise the State of Israel?’

‘You already do.’

‘Bummer. My Palestinian visitors won’t be happy.’

‘When *were* they happy?’

My visitors returned two weeks later, happy to make a deal. Well, happy was not the right word, but they were ready to deal. They agreed to move farmers, and I’d foot the bill, provided that the buildings on the land would be demolished and no one else would try and move in.

I sanctioned the building of five apartment blocks and sent twenty million dollars cash via the Jordanians. Further assistance would be dependent on them keeping to their side of the deal. The Jordanians, meanwhile, were also prepared to deal, accepting a few more Palestinians for increased uranium ore purchases and development grants.

The Israelis, meanwhile, ignored my previous agreement to build apartments in Israel and grabbed some of the vacated Palestinian land, as I had expected. It was an odd world, but a reliably unreliable and predictable one.

The Israelis opened their mission in New Kinshasa a few weeks later, and further Israelis involved in the diamond and jewellery industry became involved with the existing company, now some six hundred shops in size. The business expanded into India and South America, and my surplus gold was reducing at a pleasing rate. The

Israelis opened a kosher food store and restaurant near their offices, and we added another nationality to the city.

But a month later we had our first serious incident, four armed robbers intent on relieving the jewellery manufacturers of some of their produce. The thieves, South Africans, made the mistake of trying to target the offices instead of the factory, but either one would have proved equally as fatal.

They burst past the first guard, and held a second at gunpoint, both guards being Rifles. When the first nodded a signal, he knocked two gunmen down whilst his colleague pulled his pistol faster than a wild west cowboy and shot dead all four men in an instant.

I arranged for the incident to be covered up, since it would have been bad for business. The getaway driver was found and became crocodile meat, the South African jewellery fence that they would have used meeting Unit 402 head on.

It was a disappointment, but it was a big city and this was the Congo. I had the street that housed the jewellery office and factory gated off, armed guards placed at the entrance. Signs were removed, no bright advertising boards trying to sell the produce made within. Still, you're not a proper city till you attract armed gangs.

Post apocalyptic Canada

'Commissioner Silo, I know what your complaints are, and your desire to feed the people is commendable.'

'There's always food if you have a gold coin, or some fuel,' Jimmy pointed out to the army general, General Gibbs. The general stared back for a second, then walked off. Jimmy turned right and entered the old hotel that was his office, the place always reminding him of a Wild West saloon. He took his outer layers off, the coats damp and dirty.

His secretary had been watching the altercation and now accepted the coats, hanging them up. 'Keep at him and you'll wake up dead, Jimmy,' she cautioned.

'Run the Jacuzzi, I need a bath.'

'Hah!' she laughed. 'Anyway, you have a visitor.' She nodded towards a seat, a dark-skinned man sat in a padded coat, holding his hat.

Jimmy ran a hand down his grey beard and stepped over. 'You're Doctor Singh.'

Singh stood. 'Yes. I work on ... the project.'

'I know, hard to keep secrets around here.' They sat next to a low table, well read magazines from 1994 scattered about. 'What can I do for you?'

Singh took a moment, seeming hesitant. 'I've been doing my own research for many years, in parallel to ... theirs. They've lied to the people, they've hit a dead end, the same calculations over and over and they get nowhere. They've made no progress for nine months. In effect, the project is shut down.'

'That doesn't surprise me. And all the power they take from the dam.' Jimmy shook his mop of unkempt grey hair. 'What a waste.'

Singh glanced over his shoulder. 'I think I can get it to work.'

Jimmy eased back. 'You ... can get it to work ... where they failed?'

'They're trying to use brute force energy to wind back time. Brutish, simple, but flawed. They would need a dozen nuclear reactors wired end to end just to open a tiny portal.'

'And you think you have a way to do it?'

'I know I do, I've already opened a micro-portal,' Singh admitted.

Jimmy eased forwards and rested his elbows on his knees. 'You opened a portal?'

'A micro portal. But I got a radio programme, and it sure as hell wasn't from around here. And it was reporting the Falklands War.'

'1982?'

Singh nodded.

'Then why are you telling me this, and not your military paymasters?'

'Sending someone back through time would be very dangerous, it could do more harm than good. Besides...'

'Besides?'

'There are a few things you don't know. We'd like you to ... join the resistance.'

'I thought we were the resistance,' Jimmy said with a smile.

'The resistance to tampering with time. There's a group of us, all scientists, people who worked on the drug.'

'And your main objection ... to all things military?'

Singh checked that the foyer was empty. 'Jarheads with attitude going back through time.'

Jimmy checked his filthy nails. 'Could get us both shot for just having this conversation.'

'We'll take the risk, instead of helping them finish it.'

'And what is it that you want from me, Doctor Singh?'

'We want you to go.'

'Go?'

'Back.'

Jimmy's eyes widen. 'Go ... back?'

'Yes. There's more to it, more than I can explain, but not here. First, I want you to think about it.'

'What's to think about? If I could go back and warn people, then of course I would.'

'And who would believe you?' Singh posed. 'They might just lock you up as a nut case, or worse – they'd grab you and make you tell them all that you know so that they can use it.'

'They being ... people like the good general.'

Singh nodded. 'He is what he is ... because of the situation. Back in 1982 ... people were different, still in the Cold War. Would they use our knowledge to better the world, or to defeat the Russians and Chinese and then nuke the Middle East before The Brotherhood rise up.'

Jimmy heaved a sigh and slowly nodded. 'Yes, I can see the issues. Who you tell, and how you tell it, could just make it worse.'

'We think we have a plan, a strategy that will work, but it ... it's not what you think, and it will take time. If we could get you the drug, would you go – go back?'

'Why wouldn't you go yourself?'

'Someone needs to operate the machine, and ... as I said, there's more to it.' He handed over a book, and extra food coupons. 'These are for you.'

Jimmy examined the food coupons, then ran a finger down the book's spine. 'History of mankind from 1945 to 1995.' He looked up. 'A little light bedtime reading?'

'We'd like you to eat the extra food, put on some weight, and meet us in ten days. We'll inject you with the drug to give you a boost. But then, then we need you to make a few of the woman in the resistance pregnant.'

Jimmy lifted his eyebrows. 'Is this resistance more of a cult?'

'You'll see when we explain it.'

Ten days later, Jimmy was picked up in the dead of night at the rear of the hotel, whisked away with his head full of the history of

mankind, and what he may say if he stepped back through time. He was not worried about being followed, since he was sure no one cared, certainly not enough to get out of their warm beds on a cold wet night.

After a fifteen-minute drive, they pulled into a farm and bumped along a track towards a barn, the driver not having said a word. They drove straight in to the barn's dimly lit interior, the barn doors closed behind the jeep. Stepping down onto crushed and muddled hay, his nose full of the smell of pigs, Jimmy could make out Singh, but also recognised some of the technicians and scientists that he knew worked on the time machine.

He stood and took in their faces. 'I was thinking ... that the best way to warn the world might be through anonymous letters about disasters, things like earthquakes, and to use those letters to build up trust and credibility. And not just with the American authorities.'

They glanced at each other. 'A good idea,' Singh acknowledged as he stepped forwards. 'Take off your coat and roll up your sleeve.'

Jimmy eased off his coat, glancing at the faces as they stared dispassionately back, most just dark shadows wrapped up warm. 'And this drug will do what ... exactly?'

'This is the low potency version. It will make you immune to most diseases, a little fitter, but mostly it will keep you alive if disease breaks out here.'

Once he had completed the injection, Singh told Jimmy, 'It will have an effect in a few days, but they won't see a difference in you. We'll get you extra food coupons each week.' Doctor Singh then took a blood sample, handing it to a lady. 'This is Mira, and we'd like you to couple with her.'

'Couple with her?'

'Make her pregnant.'

'And ... without seeming ungrateful at the opportunity to *couple*, would you like to explain why?'

'We've developed a drug that stimulates the body's natural production of stem cells. Once injected, you basically stop aging and feel much better, fitter and stronger. But if we take the stem cells of the umbilical, of a child of your own, then we can create a genetically modified variant, and that will make you look twenty years old again.'

'And don't you think the army will notice that?' Jimmy scoffed.

'Yes. When we're ready, you'd have to fake your own death, be injected, and two or three weeks later go back through time.'

‘And just why the hell do I need to look twenty to do that?’ Jimmy loudly asked.

‘To replace your younger self, and to be able to prove that you’re ... you, basically.’

‘Replace my younger self? Why?’

‘We’ve given it a lot of thought, and to change things you’ll need at least ten years or more – perhaps twenty, and they will be looking for you. If they find you ... then you are your younger self, and that will throw them off the trail. You’ll have a perfect DNA match to your parents -’

‘You think my parents would accept me?’ Jimmy scoffed.

‘If we do this right, then yes. We’ve already completed the procedure on a solidier ... by accident. He looked just like he did at twenty.’

‘I was about thirteen stone at the time!’

‘We know, we have everything planned out. Trust us.’

‘Jesus.’ Jimmy took in the faces through the dim light of the barn. ‘So what’s next?’

‘We’ll send you each of ten ladies in turn, once the drug has kicked in, and then – in nine months – if all goes well, we’ll inject you in secret and send you back.’

‘In nine months, there may be none of us left,’ Jimmy pointed out. ‘The Brotherhood landed in Mexico last week.’

‘If things look bad, we’ll open the portal early. Besides, Texas nuked Mexico yesterday.’

Jimmy took a moment. ‘That figures. But just what the hell do you expect me to do for the next nine months?’ Jimmy asked.

‘Study a great deal, I’m afraid.’

A woman asked, ‘When you were young, you were a stock market trader?’

‘Yes. Ah, I see where you’re going with this; trade the markets and make a lot of money!’

‘And use that money to alter things,’ Singh added.

‘So, I guess I better study the markets for those years.’

She handed over a data stick. ‘All on there, and more.’

Jimmy held the stick. ‘You lot still haven’t explained ... why me?’

‘You’re the most trusted person in the area,’ Singh began. ‘But, more than that, we all know about the long voyage you took, and what you’ve done seen arriving in America. And, for what we want done, we require someone with a strength of personality, and

someone who can keep at a project once started; a very long project, and a very difficult project. The chances of success are slim.'

'And you'll explain it all ... when?'

'Step by step, Jimmy. And we have more research to do, a lot more. Be aware, you may just be killed when you step through.'

'I'd still try it,' Jimmy quickly answered. 'If there's a chance, a chance to undo this...'

They exchanged looks.

Back at the hotel, Jimmy accessed the data stick in his laptop, calling up a chart of the Dow Jones, 1985. 'Haven't seen you for a while old friend. So, how do I commit you to memory?'

He clicked on a particular day, and then cross-referenced his book, annotating the events of the day to the chart. Every major earthquake or eruption was noted, cold winter or hot summer, wars, terror attacks, World Cup soccer matches and Eurovision Song Contest winners.

'Lady Diana's death, 1997.' He marked the chart, then stopped and eased back. 'I could alter that, and save her. But if I save her, does that alter the time line?'

He stood, stepping to the window of his small and cold bedroom and peered out through the rain. 'This'll take some thought.'

Goma, spring 2020

With the US economy recovering, the Chinese naturally wanted a reversal of favours, but Jimmy insisted it was too soon and asked to review it in six months. Meanwhile, he promised the Chinese the enhanced coal-oil technique - to be handed over at that time.

I went to see how that particular project was advancing, finding the plant heavily guarded.

Inside, the manager explained, 'We have refined the technique, but we need to drill more holes. If we drill down and hit a coal seam, we can pump down the first chemical and pump up the stage one liquid. That then gets cleaned up and put through the second stage, a little distillation, and a third chemical reaction, a little more involved than the first method.

'But as we dissolve the coal, the hole gets wider and more liquid is needed, diluting the liquid solution, and so we need to distil more

at the second stage. The best way is to make many holes, find the seam and plot it on a computer, then use angular drills to make a hole down the centre of the seam and work from there. Second stage distillation is still an issue, but it's quick enough, and cheap.

'Cost per barrel?'

'If the fuel is used for clean power stations, twelve dollars a barrel. If you want to refine it to be good enough for a vehicle, twenty dollars a barrel.'

'That's still cheap,' I commented.

'Volumes?'

'Volumes are excellent. We can produce enough to power Africa each year, and for the next hundred years.'

'Good work. And in September, this technology will be released to much of the world.'

'The benefits to the global economy should be huge, sir.'

'Let's hope so,' I told him with a smile.

Back at my desk, the mine manager responsible for our richest gold seam turned up unexpected.

'Problem?' I asked.

'No, sir, quite the opposite. I have been searching for ten years for a source of platinum, which -'

'Is more expensive than gold, and in demand. Yes. Did you find any?'

'We did, sir, this week. Right on the border with Zambia.'

'Since we have the mining rights to Zambia I want it. How much?'

'Initial estimates are very good, sir.'

'And in dollars?' I pressed.

'In the trillions, sir,' the man proudly stated.

I stood and punched the air. 'Yes!' I hit my phone. 'Get me the head of the corporation, send him in right now!'

I stepped around my desk and shook hands with the man. 'Do you feel like changing the world, my friend?'

'That is your privilege, sir. My honour is to serve.'

The head of the corporation stepped in. I said, pointing at the manager, 'He's opened a mine near the Zambian border. I want four hundred Rifles there today, and I want you to give this man anything he needs; staff, equipment, money. That mine is your top priority, drop everything else for today!'

I thanked the manager again and showed him out. Downstairs, I entered Helen's office, finding the First Lady sat behind her computer.

'Not lunchtime, is it?' she puzzled.

'I have some news.' I stepped around her desk and sat on her windowsill, nudging aside a potted plant. 'We found platinum ore.'

'How much of it?'

'Enough to worry a lot of countries; more than the hidden gold seam.'

'My God. How much is it worth?'

'In the trillions.'

'But ... if we sell it, would it fall in value?'

'It's increasing in demand, they use it in everything; including our electric cars and buses. But we won't sell it. We'll put the ingots in the bank, and loan against it. And, when people buy from us later, it's adjusted. What's more, we're a dollar denominated country and central bank. With that load sat in there we'll prop up our own central bank, which props up the dollar.'

'Seems like a good find then.'

I drove around to a hotel where Jimmy was holding a meeting with potential trading partners. I rudely dragged him out. 'We found platinum?'

'Where?'

'On our territory, up against the Zambian border.'

'How much?'

'Trillions of dollars worth.'

'South Africans and Russians will be pissed. Play it down.'

'I'll stick it in the central bank, that'll prop up our dollars and the US Dollar.'

Jimmy nodded. 'Excellent. We'll be able to shift some platinum jewellery as well.'

Back in my office, I scanned the list of requests for either funding, or for items to import. I sanctioned two hundred thousand copies of Microsoft Office 2020 Clear Sight, and ordered a hundred thousand iPads for schools and colleges.

Running a finger down the list, I ordered four small destroyers for the Somali Navy, three for the Kenyan Navy. They were dated American destroyers, but they suited our needs. I added twelve dated Hercules aircraft, ex-USAF stock, and four new C5 Galaxies.

Figuring I may need to wait to see the ingots arrive before spending them, I walked down the corridor and into the offices of

the Finance Minister. No matter how many financial reports he gave me, I always preferred to see a summary, or just hear a summary.

‘How much could I spend this year without worrying, given what I just ordered from America.’ I showed him the sheet and he totted it all up.

‘After commitments of the next four years are taken out, assuming a safety margin and drop of GDP, you could spend two point six trillion dollars and still be inside the guidelines Mister silo set.’

‘Money is no good if it’s just sat in the vault.’

‘True, sir, very true.’

Back at my desk, I commissioned a road improvement scheme, north from Mogadishu to the Qatar enclave, a new rail link to run alongside it. Whilst thinking of Mogadishu, I commissioned new apartments and a new shopping centre.

An improved road and rail link, from our port in Angola down into Namibia and the Kuwaiti enclave, seemed like a good idea. Next, I moved north, way north, and considered something that Jimmy had once said. The Russian countryside was capable of feeding the world, but little was being farmed properly. I sent the farm a billion dollar loan and asked them to expand as rapidly as possible.

My final purchase was fibre optic cable and mobile phone masts, ordering a massive increase in the penetration of the Internet. We had a satellite above New Kinshasa that was supposed to be very fast, but we were clogging it up already. I wanted the fibre optic cable to follow the road to old Kinshasa and beyond to the coast, there to join the Atlantic cables. Other cables would spread out to each town in our region.

I had spent a fraction of what I could spend, and decided to be frugal, for a few weeks at least.

A month later, the first platinum ingot was placed on my desk, and thereafter I used it as a very valuable paperweight. When the IMF audited our central bank they noticed the new section and enquired as to how much more we had. We didn’t say, but all of the world leaders were on the phone the next day, all making gentle enquiries, the dollar strengthening.

Some of the new platinum was then handed to the commodities traders and sold at our exchange. That generated further enquiries, but we assured people that the amounts sold on the open market

would be small. Platinum jewellery took off, advertised as “rare African platinum”, and we sold it by the tonne to the housewives.

Seeing the gold coming in, Jimmy said, ‘I might go back now.’

I was stunned, the two of us sat on my patio. ‘Go? Before 2025?’

‘There are ... other things I need to be doing. Besides, time has a meaning here, but not ... *there*.’

‘There?’

‘Canada.’

‘You’d go back ... to Canada? And won’t what we’re doing here have altered that?’

‘No. It’s there ... and this is here.’

‘I’m no expert in temporal mechanics, but won’t success here stop Canada from ever happening?’

‘No, it’s ... not that simple. Forget it, I’m staying. Forget what I said.’

I took a moment. ‘You think I could pull it off without you?’

‘Yes, I do,’ he confidently stated. ‘I can see now that money was the key, not weapons or politics, but good old fashion money and bribery. I was always battling between soldier and doctor, but I overlooked banker.’

‘Ninety-nine percent of everything I’ve done has been your idea, so don’t sell yourself short,’ I pointed out.

‘You ignored me and pushed the enclaves, and the help for the Middle East, and it took time for me to see sense. I can see that we need to forget the other nations and do it ourselves; just Africa. We can rely on ourselves when the time comes.’

‘You know, the thing I always hated the most, was that there was no one there to help me, and I mean psychologically; no one more experienced. I was constantly the one people relied on, yet had no one else to rely on.’

‘And am I ... becoming that man?’

‘No.’

‘Oh,’ I said, deflated.

‘But someday, well ... maybe there’ll be someone. But it would be nice just to be told what to do for a change.’

‘Should have raised daughters,’ I quipped.

He smiled. ‘Don’t take this the wrong way, but I get better directions from Shelly than from you.’

‘She’s her father’s daughter,’ I proudly stated. ‘Bright and headstrong.’

2035, aboard the Eco-Warrior submarine.

I tapped my computer screen. 'Begin recording, append to previous, topic: Jimmy leaving.'

'Recording,' came from the computer as I stood and stretched.

'Would Jimmy have left us then? Hard to say, but the thought had certainly crossed his mind. He was drawn back to Canada, but for reasons I wouldn't fully understand for another year or so. And if he had gone back, could I have handled it?

'Well, at the time I didn't think so, but I had done more to defeat The Brotherhood than I had realised; the development of Africa ahead of schedule, the platinum find, coal-oil. It all had an impact on my spending power, and I was certainly not afraid to spend our money. And that willingness to spend the money had an effect, both in Africa and the Middle East.

'The creation of Mining City was a turning point; Jimmy acknowledged that a year later. It set in motion a chain of events that would grow our GDP by so much that we would be unstoppable. And that GDP would make a difference, both before 2025 – and in the critical time afterwards.

'Some argued later ... that we wasted African money, and that the money should have been spent internally, but who could argue with our rate of growth? No, I had no problem spending the money, and to tell the truth ... I was never happier than when I was signing off on a new project, President Faster and Cheaper.' I smiled as I thought back. 'I even signed a few forms that way.

'I could understand Jimmy's desire to return, but I didn't know at the time what waited for him there, or the grand plan, and years later – when I knew – I struggled with when to tell the world, and if to tell the world.

'I was glad when Jimmy stayed. I could handle Africa, and I could handle most of the world's politicians, but he had a blow by blow knowledge of 2025 that would have been invaluable to me.'

My cabin door opened and my granddaughter burst in, Lucy not far behind.

'We'll be there tomorrow night,' Lucy mentioned. 'How's it going?'

'Up to 2021,' I informed her, touching the computer screen before grabbing my granddaughter.

‘You’ll be rejoining the world then, and being less unsociable,’ Lucy complained.

‘This is important, I have to get it down.’

‘You could do it bit by bit.’

‘No, I want to get it all down, and then let the editors and historians have a look at it.’ I looked down at the top of my granddaughter’s head. ‘You don’t remember Jimmy, did you?’

She didn’t know how to respond.

‘Are you going to let the world know where he went?’ Lucy risked.

I shot her a disapproving look. ‘Some things ... are secret. But yes, soon enough.’

Post apocalyptic Canada

A knock at the door, and Jimmy let in one of the ladies he had met in the barn. She was no looker, but then neither was he.

‘I’ve had a long hot bath, a shave, cleaned my teeth and found some deodorant. I’ve even had a haircut so that I’m a bit more appealing and less ... old and knackered.’

‘You scrub up well,’ she noted.

‘Was it the thirty second special you were after, or the full minute?’

She laughed. ‘Let’s see how it goes.’

‘It’s been a while, but I think I remember what goes where. We have black market wine, music and candles.’

‘Very considerate,’ she said as she took off her clothes.

‘And afterwards, the child?’

‘You’ll understand when Doctor Singh explains.’

‘It won’t be harmed?’

‘No.’

The following week another lady arrived, by the back door and at night. And eight more followed in quick succession. With the pleasurable part done, Doctor Singh dropped in another data stick, injecting Jimmy a second time.

Singh explained, ‘This injection will make you look better, so hide your appearance; maybe a beard or long hair. You’ll want to eat more, you’ll sleep less, and for the first few days your pee will smell terrible. Exercise by running, no weights, and try and slim down. If

not, you'll put on muscle and we want you thin. You'll only need four hours sleep, so study the rest of the time.'

'And when the babies are born?'

'We'll gather your own compatible stem cells, modify them and inject you. That will be ten days strapped to a bed, and it will not be pleasant. If it works, you'll look as you did at twenty.'

'And then...?'

'Then we'll give you the full picture.'

'I guess I better get my reading glasses.'

'You won't need them after a week, not with this drug. But keep them anyway so that you look as you did before.'

'I've been thinking about how to stop the war, and I'm reasonably sure that I can do it.'

'We have a team working on a plan, you need only memorise it.'

'Oh, well, you're the experts.'

'If you learn everything on the data stick, the plan will slot into place.'

'Let me show you something.' Jimmy called up the DOW Jones. 'I've memorised the chart by date association and major event, disasters, Presidents and leaders, and the release of certain songs and films.'

Doctor Singh nodded. 'Good. Very good.'

'That's not all.' Jimmy called up a map. 'Discoveries of gold and oil in Africa. If I made money on the stock markets, I could open a mine and make money, drill for oil and strike it lucky straight away.'

Doctor Singh slowly nodded. 'We hadn't thought of that. Excellent. Geography is geography, and rocks don't move.'

'Rocks don't move?' Jimmy puzzled.

'We'll explain later.'

Goma, 2020

The mining manager who had found the platinum arrived unexpected, a map under his arm.

'Problems?' I asked.

'No, no, sir. But I wanted to show you this.' He rolled out the map on a bare tabletop. 'These are all the places that we drilled, sir, taking core samples. Some have gold, some other metals. They are not concentrations, but they are valuable.'

‘How do the ore concentrations compare to our other mines?’ I asked as I studied the map.

‘About the same, sir.’

I called in the head of the corporation. Tapping the map, I said, ‘I want CAR given concessions to their choice of these mining prospects, the rest given to anyone who wants them by auction.’

‘That’s a great many mines, sir,’ the man cautioned.

‘I want the money, and CAR has capacity since they capped off wells – and a few idle hands.’

That next week, CAR bought the concessions for twelve new mines, its share price spiking upwards. Twenty other concessions were sold by auction after the various company geologists had inspected core samples. In a stroke, I had created thirty thousand new jobs. We’d also receive a cut of the production profit, and the usual taxes. With this new future income in mind, I ordered a new city to be started, in the south central region and at the heart of a group of towns in the mining belt.

Having learnt from New Kinshasa, I designed the city first, then auctioned land, the developers footing much of the cost of the construction. I named it Mining City, and that attracted investors like a pack of wolves; I was inundated. A second auction was arranged, and I could see bidders from all around the world, in particular the Middle East. The Chinese Government were present, Po and Yuri, the value of land rising.

There was plenty of land for sale, and cheap, but everyone wanted to be on the main boulevard through town. Twelve hotel chains bought land, a token hundred thousand dollars each. I commissioned an expansion of the closest airport, but then had an odd request from Yuri. Could he hire the C5 Galaxies to move equipment?

I purchased four dated C5s, painting them white, but kept them as part of our new Military Transport Command; the military pilots could practise by flying delicate cargo around the region to keep their skills sharp. Army Huey pilots already did that.

Studying the proposed layout of Mining City, I was like a giddy teenager, salivating at the prospect of creating another new city. Hearing about it, Steffan Silo came up to see me from his office on the second floor.

He got straight to the point. ‘I think we could create a mono-rail all the way down, up to sixty miles per hour.’

‘Cool. But its three hundred miles,’ I mentioned.

He nodded. 'We've struck a deal with a Japanese manufacturer; they'll make the track here, at a local factory, so that'll save cost. They'll supply the carriages and – well – power is electric.'

'Which we have plenty of,' I said with a smile.

'I think two tracks should be laid, alternate directions, and we should build halts at six locations on the way down.'

'Only six?'

'It would be a slow total journey otherwise. Besides, the existing trains stop at many places.' He handed over a very detailed plan, and its very detailed costs. It even had a building schedule.

'Total costs ... thirty million dollars?' I queried. 'Why so cheap?'

'We have surplus steel we bought that was never used in the city, so I had it put to one side. The girders are already cut, so we've designed a base structure around them, they won't need to be cut again.'

'Cool. You have a green light.'

He hesitated. 'Are you going to tell me to do it *faster and cheaper?*'

'Steffan, do it faster and cheaper!'

He smiled and left, the first I remember ever seeing him smile.

That following month I settled down to some good brain sex, taking my work home with me. Helen had become a widow to my designing of the new city, but I often involved her and the girls in it, loud debates about where to put what.

Shelly grabbed the computer modelling software that the volunteers used and entered much of the detail. I could now 'walk' down a three-dimensional street on my computer and see what it might look like someday. The brain-trust kids got involved and created a website where anyone could walk through the theoretical city. The hotel owners added in graphics for their new buildings, as did many others, and we soon had a detailed virtual city.

One day I noticed a new bar with a neon sign. Since it was called the Faster and Cheaper Bar I had a closer look. Ladies looking like hookers stood outside, well-endowed ladies, and inside I found a realistic caricature of myself sat a table. As I approached myself, the character said, 'Faster and cheaper!' Cheeky buggers.

With the number of platinum ingots growing by a stack a day, I turned my thoughts to the Middle East again, viewing rioting in Gaza on the TV news. Jimmy was in America, working on film scripts, so I decided to be bold and invited the Palestinians down again. They arrived three days later.

‘Gentlemen, I have a question, and a proposition. You’ve seen the Arab enclaves in Africa. If it didn’t cost you anything, would you like one of your own?’

‘One of our own?’ they queried.

‘A fenced off enclave, your own sovereign land, peace and quiet a long way from Israel. And, maybe a little oil offshore. I’d build a city for you, a sea port, an airport, and you could sustain yourself from the oil.’

‘And have the Israelis asked you to make this offer?’

‘No, they don’t know yet.’

‘We’d be giving up our rightful land, and the Israelis would have won!’

‘Is that what it’s all about; who wins, who’s right, who has the last word? Are the lives of your people not more important? You could have schools, hospitals, playgrounds for children – a thousand miles away from an Israeli helicopter. Or you can stay where you are and suffer for a thousand years. And in 2025, the economy of the region will be devastated, millions of refugees and unemployed people wandering around. Things will be bad for you then.

‘How much worse could your own enclave be ... than Gaza is now? You’d be free, you’d live in peace, you may even prosper. Some day you might be a nation like Qatar or Dubai, and your children would grow up learning mathematics and English, not how to make bombs and hide from Israeli helicopters. It’s good enough for the Saudis and others, so it’s good enough for you lot, and I’m offering to spend billions on a new city for you.’

‘And Israeli would claim all of the disputed territory!’

‘What use it is to them,’ I scoffed. ‘What’s your GDP? How many mines do you have, oil wells, or even adequate water? You’re living in a shit-hole!’

‘The people would never give up their lands. We’ll have no part in this.’ They stormed out.

I went down to Helen. ‘They stormed out.’

‘They’ve been fighting for that land for so long they’ve grown used to it,’ she commented.

‘I’m wondering if I could work around the leadership,’ I thought out loud.

‘Most Palestinians live outside the occupied territories.’

I raised a finger. ‘They do, and they struggle. So, if someone offered them a job someplace else, they may come.’

‘Once enough of them were there, and doing well, others would follow by word-of-mouth.’

‘If I built it ... they will come!’

‘Wasn’t that a Kevin Costner film?’

‘I learnt a lot by watching TV,’ I told her as I left her office.

I rudely requested that Abdi fly down the next day, save me flying up to him. I took him up to the roof, the weather fine, and we strolled around, enjoying the view and the cooling breeze.

‘How do you feel about another enclave?’ I asked.

‘They are good for jobs and trade.’

‘Do your people worry about foreigners on your land?’ I asked.

‘Its just desert, no one lives there. I think they like the job and the money more than the sand.’

‘No complaints?’

‘Some small voices, but everyone sees the work and money.’

‘How would you feel about a Palestinian enclave?’

He glanced at me. ‘Many of my people, they understand the Palestinian struggle and take the side against the Israeli, but the soldiers see the Israeli as fellow brothers. It is mixed.’

‘You have land in the north, barren land - no one lives there, hundreds of miles without a house. They’d want only an area five miles wide and five miles deep.’

Abdi shrugged. ‘It is a grain of sand on the map. But how will they pay - they have nothing? Less than nothing.’

‘I would pay.’

Abdi glanced at me as we progressed. ‘You wish to make the peace?’

‘If the two sides have an ocean between them, then they can’t fight; it may end a long period of suffering. And, in 2025, that area may see a lot of fighting, the innocent caught in the way.’

‘You and Jimmy, you have never been wrong, and you have never steered us wrong. Somalia is a rich, strong, and proud nation now, and I think what it would have been without you. If you say that it is necessary I will order it accepted - it is five miles of sand and camel shit.’

‘There’s something else. Jimmy told me where a small oilfield is located offshore; not enough to make anyone rich, but enough to feed a few hungry Palestinians. I would position the enclave next to it, and let them drill for oil. Your oil.’

Abdi plodded onwards. ‘And this oilfield, how does it compare to the money you gave my country?’

‘Well, it’s less. A lot less.’

‘Then it shall go some small way towards paying our debts.’

‘C’mon. Lunch on me,’ I said.

‘We’ll split it. I insist.’

Ben Ares rang later. ‘How are you, Paul?’

‘Cut the crap and ask your question, Ben.’

‘What did the Palestinians want?’

‘I offered them an enclave in Africa.’

‘You did?’

‘Yes, but they refused; stormed out the meeting.’

‘That doesn’t surprise me,’ Ben scoffed.

‘So I’m going to build one for them anyway.’

‘You are?’

‘Yep, and I’ll work around the leaders and see if I can tempt a few people along.’

‘Where would it be?’

‘Somalia, a coastal enclave.’

‘How long would it take to build?’

‘Ben, can you do something for me?’

‘What’s that?’

‘Fuck ... right ... off.’ I hung up.

Using the designs for the Kuwaiti enclave in Namibia, I modified the basic layout and scaled it down. Fixing the location where Jimmy had indicated a modest oilfield, I marked out a square, getting the coordinates off Google Earth. I checked the satellite images and saw no settlements - the area backed by hills, and no roads. It truly would be an enclave.

I commissioned a Somali company to build a port and marina, and asked them to make a start straight away.

Jimmy popped in a week later. ‘You’ve been busy? You pissed of the Palestinians - and Ben Ares.’

‘Fuck ‘em all, they’re all a bunch of wankers,’ I responded. ‘You never get anything done trying to be nice. So I’ve commissioned the enclave anyway.’

‘You have?’

I nodded. ‘When the basic facility is ready, I’ll offer jobs to Palestinians from outside the occupied territories, from Egypt; they can come down by boat. If nothing else, they can work there for a while, but some are bound to stay on.’

‘Not a bad idea. Where are you building it?’

I showed him on the map.

‘Oh dear,’ he said. ‘Israelis *will* be pleased about the oil.’

‘Fuck ‘em.’

‘Let’s avoid mentioning the oil till the place is full, and then play it down.’

‘Why?’ I pressed.

‘Because if the Israelis believe that a free and independent Palestinian colony might grow rich, they’ll want to destroy it.’

‘Why, for fuck’s sake?’

‘Because the Palestinians will have long memories, and some will want payback. The Israelis know that, and they won’t want to see the Palestinians with their own navy or air force.’

‘They won’t have an air force; it’s a small enclave with limited oil,’ I insisted. ‘Besides, the fucking Israelis will be happy as fuck if all the Palestinians move to it – they’d have the land they want and no terror threat.’

‘Old habits die hard. Be careful.’

‘If the Israelis go near that enclave I’ll have the African armies stop them! Besides, the Israelis would have to fly over Egyptian or Saudi territory to reach it, and that would be a war with those countries! And it would be a war with me as well.’

‘Build a Somali base down the road; the Israelis will think twice about nuking the area. And plenty of international hotels, especially Arabic chains. Problem is, as we get closer to 2025, the Israelis will get twitchy.’

‘Twitchy ... pre-emptive strike twitchy?’ I asked.

Jimmy nodded. ‘It won’t do them any good, and it’ll make things worse. I’ll have advanced EMPs in the region, and at the first sign of an Israeli attack and I’ll bring down their planes and missiles.’

‘Do they know that?’

‘No, not yet.’

‘Then I guess we’ll both be popular.’

President Blake was on the phone a week later. ‘Paul, you’re building a Palestinian enclave?’

‘Good news travels fast.’

‘They don’t have two beans to rub together, so I’m guessing that you’re funding it.’

‘I am. But the Palestinians have refused to occupy it.’

‘Have you halted construction?’ Blake asked.

‘Nope, I intend to offer jobs to Palestinians from Egypt.’

‘What will that achieve?’

‘A trickle may become a flood, and the Red Sea may part, a guy with a beard - and looking not unlike Charlton Heston - leading his people to the promised land. Either that or they’ll come by ferry.’

‘And your aim, Paul?’

‘To tempt Palestinians away from Palestine.’

‘If they left of their own accord, there’d be peace in the region,’ Blake noted.

‘They don’t pay you the big bucks for nothing, do they.’

‘May I ask about your platinum reserves?’

‘What would you like to know?’ I nudged.

‘How do they compare to your gold reserves?’ Blake asked.

‘About the same, in weight.’

‘It’s a lot of money.’

‘And will be used well, not least to prop up the dollar.’

‘Our guys have your GDP growing at around fifty percent.’

‘Yeah, sounds about right.’

‘And the new city, they say it’ll be bigger than New Kinshasa.’

‘Could well be, lots going on in the region. Your Caterpillar company has a stiff dick at the prospect.’

‘You’re their biggest customer, by far.’

‘So, how’s the west coast?’ I asked.

‘Progress is slow, still a few insurance companies wrangling about claims. But jobs are up, the welfare bill falling, more people being relocated around the various states. This quarter’s figures are good, markets are up.’

‘We’re buying what we can from you.’

‘And we appreciate it,’ Blake emphasised. ‘Paul, can I ask a question you may not like?’

‘Of course you can, you’re American.’

‘Will Brad run for President next year?’

‘We hope so, and he’ll get a billion dollar backing – thanks to your lawmakers changing the law and allowing such things.’

‘I’m not running, as you probably now, and we’re not popular.’

‘Sitting governments always get the blame, even if they do everything right.’

‘Tell me about it. Oh, Hardon Chase is back in the Senate.’

‘Good. It helps to have friends in high places,’ I quipped.

‘You don’t need friends, Paul, they need you. My guys say that by 2025 your cooperation group will be a super-power in its own right, an economic superpower at least. You’re making India, China and Brazil look bad.’

After the call, I went up to the roof and for a stroll, glancing down at our creation, noting tall cranes in the distance and not even knowing what building was going up. Stood looking down at the canal, I realised that we were becoming an economic superpower, and I was determined to use the money to fix 2025.

I had previously sent the Iranians an invite to visit, and they finally turned up in June. After a welcome chat and a tea I took them outside, and to a demonstration of a flat-pack home being erected. Once up, they poked and prodded the house, and marvelled at the electricity coming from the roof.

I told them, ‘When the quake strikes you’ll lose a quarter of all your houses. I intend to send you five million of these so that your people have something better than tents. I’ll also send you grain ships every week, and food from here.’

They took a moment to consider my offer.

I added, ‘I also have another suggestion. After the quake your oil industry will be devastated, but CAR could move in to sink fresh wells, and you’ll get the lion’s share of the proceeds till you’re back on your feet.’

‘Given what you say will happen, we will be glad of the assistance, not least ... because we have very little choice. But what of payment for the grain and food.’

‘It’ll be done on the honour system. If you can pay, and when you can pay, you can send us what you think is appropriate, but we won’t be chasing you for it.’

That puzzled them greatly. I showed them around Gotham City in a civilian S61 helicopter, followed by an aerial tour of New Kinshasa, finally lunch in the marina. We had an agreement; I’d send whatever the hell I wanted to send, and they’d use it. It was simple enough.

The corporation dispatched a hundred flat-pack houses to Iran, another batch to Iraq, even some to Pakistan.

The UN Secretary General then paid me an official visit, and reviewed the flat-pack houses himself, wishing to make use of them in the UN coordinated effort. What he meant to say was “Could I have some powers back – you took them all!”

I graciously offered to work within his written plan, but then scribbled all over it. Handing it back, I gave him my plan, which he then adopted as his own. Rescue Force would have a major role, a full deployment, but would also channel the food and control flat-pack house erections. They would run the camps, and as such would be the front line. They’d also be my eyes and ears for when The Brotherhood put in an appearance.

On the TV news I caught Jimmy campaigning for Brad in the States, the opposition trying their best to have him stopped. Problem was, US laws on support for candidates were loose at best, and the laws governing the sponsorship of candidates had been relaxed a

decade earlier. Corporations could send money to candidates – even foreign corporations, so CAR had sent Brad sixty million dollars, Pineapple Music another ten million.

Wherever Brad and Jimmy turned up the crowds would be huge, Jimmy giving speeches about troubled times ahead and a need for the right man in the White House. It was as if he was saying Brad was destined to fix America, and that no other candidate would do. It made me smile, the poor old Republicans low in the ratings as Brad fielded his volunteers as new candidates for Congress, making good use of twenty-two Democrats and four Republicans who had switched sides.

The opposition claimed that if Brad's newcomers gained a majority in the house - that the house would suffer from a lack of experience. Jimmy countered by stating that he knew of all the problems and issues to come and would advise accordingly, a hint that he would only do so to Brad's team. It was outrageous interference on a grand scale, and we didn't care.

Moses parts the Red Sea

With the fence up around the proposed Palestinian enclave, and the main harbour wall complete, I had a thousand flat-pack houses raised on the barren sandy soil. A canteen was constructed, a shower block, a food store, and little else.

We then advertised in Egypt for Palestinian labourers, and Palestinians only, the first batch of fifty men turning up by boat, an overnight voyage down the Red Sea. The existing Somali builders hired the men and set them to work. The men's wages were modest, but food and accommodation were provided. They began work on the harbourmaster's office, followed by a customs building, a few sheds erected.

Two hundred turned up the second week and were put straight to work, materials arriving by ship every day.

By the end of the first month I had five hundred Palestinian men, including a handful from Gaza. They began building apartment blocks with the guidance of Kenyan builders, apartments with no water or electricity yet. Having constructed the apartment blocks they moved into them, water brought in by bucket for the moment. Two small oil-powered generators turned up by ship, and the blocks

gained power, water soon pumped up to the roof tanks, hot showers created by solar panels and wind turbines.

That following month the first family moved in, and the wife began to make a living washing clothes. I continued to advertise, and attracted a second batch of five hundred men the following month, ten families tagging along. A small oil-fired power station was then landed by boat, in pieces, and was soon knocking out more than enough wattage to power the apartment blocks.

In the hills behind the enclave the Somalis sunk wells, enough water found to save bringing it in by ship. We increased the advertising and attracted five hundred additional men, many escaping Gaza through the smuggler's tunnels and with just a suitcase.

Now that things were moving along I sent two thousand Somali builders to the enclave, a thousand from the corporation, and commissioned twenty apartment blocks in a row. Satisfied that the harbour was now big enough, and operational, I commissioned the same French company to build an airfield, positioning it up against the edge of the enclave.

A desalination plant, big enough to provide water to half a million people, came by ship, many of its components only needing assembly. Plastic pipes turned up, enough for a comprehensive sewer system, fibre optic cables being laid from nowhere to nowhere through the sandy soil, the builders wondering what the hell was going on.

Increasing wages, and paying in dollars, our advertising went into overdrive around the Middle East, families turning up that had left Palestine in 1948. I then considered that it was time to piss off the Palestinian leadership, erecting a large billboard picture of what the enclave would look like when finished. It was labelled as New Palestine, and two huge flags blew in the breeze next to it.

Only now did it dawn on a few of the builders just what they were building. The sign next to the picture stated that anyone of Palestine origins would be granted citizenship and allowed to live and work there.

The UN came to see me a week later, a very polite "what the fuck are you doing?" type of question, but asked very nicely in a round about sort of way.

'I'm building a Palestinian enclave. Anyone Palestinian who wants to live there will be welcome.'

'You ... are encouraging them to give up the occupied territories.'

‘Not at all. If they want to stay where they are they can, or they can go to the enclave. Besides, most of the people in the enclave are from outside the occupied territories.’

‘You expect the enclave to be recognised as a country?’

‘It will be recognised by all African and Middle East nations. Or else!’

‘Oh.’

They went off thinking about my approach, and just how little they could do about it.

Following the UN visit, I altered the building schedules at the enclave and had the marina given priority, a horseshoe promenade backed by cafes, bars and apartments. Pontoons were brought in, and the first sailboat docked, the first cup of tea served. Mooring fees were nil, no customs officers to be seen.

The Saudis then decided that they should have a hand in the enclave, if not an influence, and commissioned several hotels, a few schools, and a tower block that one day may house business offices. I was delighted, but tried to make out that I didn’t want too much Saudi influence in the place.

The harbour was suddenly alive with boats, all wishing to offload their men or materials. I sent another five thousand flat-pack houses, and two thousand Kenyan builders, the second harbour wall being hurriedly finished off. Offering resettlement grants to the citizens of Gaza, I seriously pissed off Hamas, a flood of people escaping by the tunnels to Egypt and down to the enclave. Two hundred families took up residence in the apartment blocks, agreements stating that they were rent-free for five years.

The first shops appeared, built by merchants bringing their goods in by boat. Since there were no taxes, margins were good. After a few fights and one stabbing, I put fifty Somali police officers inside the enclave, backed by fifty Rifles. But we had no prison or police station yet, they all had to be built, and so troublemakers were simply deported.

When a fat old police chief turned up with his family we gave him a uniform, a jeep, and a detail of Somali police to work with. He called former colleagues in Gaza or the West Bank, and they journeyed down; all of a sudden, Israeli issued travel permits were right easy to obtain. Getting back in afterwards would be the problem.

Palestinians arrived from Lebanon, their sea fare paid by us, apartments allocated. The enclave was a dusty hot place, alive with building work going on from dawn till dusk, the place a hive of

activity. The Egyptian President flew in on a military transport, landing on a half-finished runway, and had a look around. He was losing the burden of the Palestinians on his state, but made out that he had concerns about the welfare of the people.

Not to be outdone by the Egyptians, the Saudis flew in and made a grand tour, praising the enclave. A Palestinian politician then approached me, and asked if he and ten of his colleagues could take charge of the enclave. That delighted me, and I gave them a good budget, finding them temporary offices. The sign went up: "Interim Palestinian Authority". They recruited additional police officers, customs officers, and tried to bring order to the dust bowl building site, immediately condemned by both Hamas and the West Bank Government.

Another three thousand people journeyed down, and we were accepting them faster than we could build, the flat pack houses made use of. I nudged the builders to finish roads, and to create a shopping centre. I had already dispatched twenty Rescue Force medics, but now made that a hundred, jeeps and all, a temporary clinic erected.

As the end of 2020 approached, Brad now President Elect, twelve thousand Africa builders and eight thousand Palestinian men toiled on the enclave, the port in use day and night. With the runway finished, the terminal just about usable, I dispatched C5 galaxies full of goodies, keen to make sure that no one suffered for the lack of basic amenities.

All day long, aircraft landed and took off, the stores mounting up and being distributed. Fridges, TV sets, basic furniture, medical supplies, food and drink; everything had to be brought in. Ships bringing concrete berthed every three hours, others offloading steel girders, bricks or breezeblocks.

At my request, warships docked one at a time, and the ratings sat around the marina bars, buying food and drink, and stimulating a small local economy. A scuba centre opened up, and visiting naval ratings could dive in the Red Sea, extra dollars earned by the locals – untaxed dollars. The ruling council had not yet got to grips with taxation or currency, so they used dollars at my request. They charged sailboats a modest fee for docking, and controlled the customs officers and police, and little else so far. It was time to upset the Israelis.

I had a bank built, a large bank. It offered a retail service, changed money, but more than that it held a gold reserve that I had sent around, a small number of bars. But that gold secured a new currency, the Palestinian Dinar. We printed them in New Kinshasa,

both coins and notes, and fixed a rate against the US Dollar. One dollar fetched three Dinars.

A million Dinars were printed and sent to the bank, the first few puzzled citizens holding a purely Palestinian currency. Hamas were furious, the West Bank Government making threats. Well, they would if they could actually get out of the West Bank. Workers were paid in Dinars, using them at the local shops or exchanging them for dollars.

The Saudis recognised the currency straight away, asking to buy them from us. We sold the Saudis five million Dinars, more than was in use at the enclave. The Saudis then paid the people working on their tower in Dinars, Egypt recognising the new currency. Lebanon and Syria followed, if anything just to piss-off the Israelis.

By January, 2021, and Brad's inauguration a week away, a steady trickle of five hundred people a week were leaving Gaza, the Israelis allowing us to land boats in little used harbours. From the West Bank, Palestinian families made use of re-opened border crossings with Jordan, boarding ships in Aqaba, all paid for by us.

Inside the enclave, full employment was guaranteed, wages good, and a few additional political leaders arrived. They couldn't agree on what colours to paint the walls, let alone on a government, so we ignored them and worked around them till I imposed a structure, Somalis and Saudis acting as honest brokers and stewards.

With the airport almost ready, certainly enough to handle a few flights, we installed security equipment - manned by Somali Rifles, and landed two 737s painted in the Palestinian colours and labelled as Palestinian National Airways – just to catch the attention of the Israelis. Daily flights began to Cairo and Amman, filmed landing by the world's media.

The West Bank Government were about to burst a blood vessel, since they weren't involved, and Hamas could only sit and scratch their heads as their supporters slipped away at night. The Palestinian Government then suggested that they would send a delegation down and govern from afar. I said that the men would be welcome, but then emailed the Israelis, asking that the men never be allowed back in to the West Bank.

The delegation took up offices in the enclave and joined the other political leaders, still arguing over the colour of the walls. Not to be outdone, Hamas sent its own representatives down. Their boat was intercepted, their weapons dropped over the side, and as they came ashore they were again checked for weapons. Now, if they wanted to

argue and fight, they would have to do it with words, heavily armed Somali Rifles wandering around.

Hamas set-up its own office, but no one was paying them, the men told to work or starve. They picked up tools and melted into the workforce just as I created the first basic ruling council. That council had taxation rights, and Palestinian workers were now paid through the council, taxed at a modest rate, the money used towards the police and customs officials. We stopped paying those officials ourselves.

An extra five million Dinars were flown up from New Kinshasa, handed to the council to pay workers. And, after I asked, Kimballa flew in for a visit, the council welcoming him and showing him around. He informed the council that he would grab an office suite to use as an embassy, and that the DRC would officially recognise the enclave as a country in its own right.

The Saudis were hopping mad, and commissioned the very quick building of their own Embassy. Abdi followed suit, followed by Egypt, soon a row of embassies taking shape, imported trees lining the avenue and watered regularly, Somali Rifles policing the street.

With just enough roadway to make it worthwhile, I dispatched ten electric buses and fifty electric cars. The first few taxis appeared, taking workers from the harbour to various sites, to embassies or the airport, the airport hotel now finished.

Itching to see the building work, I flew up unannounced with Helen and toured the dusty enclave in an electric bus, meeting the provisional council and a few of the ambassadors. We stopped at the marina and took a walk, the Palestinians more than happy to see me, a few British naval ratings enjoying local cuisine. I stopped to chat to them.

‘Never thought we’d be eating at a Palestinian café,’ they commented.

‘Or in a Palestinian port,’ I pointed out. ‘You tried the scuba diving.’

‘Only here today; next trip maybe. Had a nose, and it looks good, the water is good around here.’

‘Locals friendly?’ I nudged.

‘Very. Nice spot as well, this.’

I made sure that we were snapped looking around, since we had – after all – brought a dozen hacks and a TV crew with us. They filmed the marina, getting footage of me chatting to the ratings and the locals. What they didn’t film were the hot-tempered men of the delegation that couldn’t get back into the West Bank.

When I met with them, I said, ‘Why don’t you bring your families down here; free apartments, jobs, and it’s peaceful.’ I was being less than sympathetic to the men, and they were not that keen to stay.

Arriving back in Goma, Ben Ares sent me an email, asking if Palestinian prisoners wishing to move to the enclave could be sent down. ‘Sure,’ I said, but then worried about something.

My worries were confirmed when a ship turned up with a thousand former inmates, all of whom had been expelled from Israel. They were given apartments, but the men’s families were still in the occupied territories. I uttered a few rude words for being played, then encouraged the men to bring their families down, offering good money as incentive. Some of the men caught the next ferry to Egypt – heading for Gaza via the tunnels, others stayed, their families sent for.

The Israelis modified their approach, and sent just prisoners from the West Bank on the next ship, the UN and Middle East leaders condemning the move, worried that the Israelis might now try to forcibly expel Palestinians. I voiced my opposition to any forceful expulsion, but we still received a steady five hundred a week from all around the Middle East.

The local council received blank passports from me and began to register people, the first few passports issued, Egypt and Saudi Arabia recognising the new passports. Africa recognised them, but would not issue visas, not yet.

As spring approached, the Saudi enclaves in Mozambique and Madagascar were coming along, as were the Chinese, and those of Qatar and The Emirates. My pile of platinum was growing rapidly, and the IMF had to count it afresh each month. With money coming back to us from America, and the addition of the new platinum, a very large sum was soon sitting in the central bank.

But unlike many countries we didn’t sell bonds; we had no need to. Instead, we loaned money to many countries by buying their bonds.

South Africa was now doing well thanks to coal-oil and electric buses, their economy booming and adding to Africa GDP. Nigeria continued to increase its own GDP, and Southern Sudan was becoming a rich nation, starting to eclipse Sudan. Around Africa, things were looking good.

President Brad Sullivan made an official visit to Goma, a grand show put on for him. Thousands of soldiers lined the streets, aircraft

flew by overhead, and half a million people lined the streets as we toured the city in an open-top bus that was oddly glassed over with bullet-proof glass. I had to question the ‘open-top’ aspect of it.

Brad was seen and filmed opening several new buildings and projects, and described to the press numerous large contracts that we had awarded US companies, making it appear as if he had secured them himself. He spent the night with us at the mansion, but discreetly steered things away from mention of the Hawaiians here, still a sensitive topic to the Americans.

Mali popped in, thanking Brad for all he had done on the west coast, but I could see that Brad was uneasy; he wanted the emigrants home, Jimmy wanted them here – and more of them.

Post apocalyptic Canada

Jimmy lifted a baby and smiled down at it, the realisation that this small bundle was his child finally dawning on him. ‘If only you could have been born into a better world.’

Dr Singh stepped up. ‘We believe we have what we need to begin. Next week, could you fake your death and hide.’

Jimmy took in the expectant faces. ‘You going to tell me the big secret now?’

Dr Singh gestured Jimmy towards a chair, the child’s mother taking the bundle. ‘The drugs will greatly extend your life, and that’s necessary. We have a plan, but it may take from two to three hundred years to get it right.’

Jimmy stared back, his mouth slowly opening.

Part 18

Jewellery. Goma, 2021.

Helen asked me the question, 'Did our safari lodges sell our jewellery?' I had no idea and made a call, finding out that they didn't, and that neither did our hotels.

In the morning I issued a decree and just about made it the law in Africa for every hotel and safari lodge to sell our jewellery. Our Dutch and Israeli friends recruited an extra two hundred people for President *Faster and Cheaper*.

Meanwhile, Jimmy had won CAR a massive contract in North Korea, a contract to mine numerous areas, CAR's share price climbing. Well, when you had a chief salesman like Jimmy Silo you'd always do well. His cold calling technique had a hundred percent success rate.

As the summer approached, I gave my deputies more responsibility and concentrated on the enclaves, and Mining City. Our clever 3-D modelling software was fantastic, and a great time-saver. I could click on a building and see who was building it, what its schedule was. The brain-trust kids then modified the software, and half-finished buildings could be displayed on screen as half-finished buildings. I could alter parameters and either view the finished article, or where we were at the moment.

Impressed by that, I put a team on the Palestinian enclave - to digitise it. Using the same technology that Google Earth had employed over the years, a helicopter flew low over the enclave and digitised images for me. In my office, three A3 iPads then gave me a three-dimensional view of the enclave, other screens displaying work schedules.

With Jimmy in the UK, I settled down to what I was good at, and built things.

Stateside, Brad was using Jimmy's rhetoric to pass bills. Mentioning future terror threats, he passed a bill that tightened the border controls of the States, additional resources being placed with the coastguard and with federal agencies. The DEA lost staff and the border agencies gained staff and budget increases, in some cases quite sizeable increases.

I was then surprised to see Brad militarise the Mexican border. He had gained the vote of the Hispanic community and much of the black Democrat vote in order to win the election, but now risked

alienating those Hispanic voters. His next speech then shocked me, not in what it was, but that it came from him.

‘If an American were to travel to another country illegally, they would face imprisonment, beatings, and deportation after heavy fines were paid. But if an illegal immigrant comes to America we turn a blind eye to it, and may deport only a small number of them.

‘If an America citizen, living illegally in another country, stayed there for a few years, held down a job and started a family, they would not be entitled to remain because of it. If the immigrants of the world wish to be treated fairly here, then they should petition their own governments to treat American citizens the same way in their countries of origins.

‘There are troubles ahead - I’ve been made aware of them, and I’ll now takes steps to return America’s right to govern its own people, and control its own borders. We ... will decide who settles here, and with due process and law; the immigrants will not decide for us. There must be law and order, and our borders must be respected.

‘As such, strengthened laws will see businesses or individuals fined ten thousand dollars for each illegal immigrant that they employ. If the company is caught twice, that’ll be twenty thousand dollars for each illegal. A private citizen, employing an illegal as a nanny or housekeeper, will be fined just the same – and no excuses will be acceptable.

‘Starting this week, additional resources will be channelled towards repatriating illegals from this country. Some compensation will be paid to those who have resided here and worked for many years, since we don’t wish them to suffer unduly when they return to their countries of origins.’

I was shocked, and called Jimmy. Jimmy explained, ‘The number of Hispanics will grow, and become a serious issue after 2025. If and when the economy goes to shit, the Hispanics will organise into self-help groups along the lines of The Ark, but eventually turn militant. So we’ll ship them out, millions of them.’

‘Will they be taken back?’

‘The various governments will be offered inducements,’ Jimmy reported. ‘And we’ll help.’

‘We’ll help?’ I questioned.

‘Yes, helping to deter those deported from turning to crime too early on after their return home. We’ll build apartments in various countries, offer loans, send solar panels.’

‘Brad will never get a second term,’ I noted.

‘He’ll lose most of the Hispanic vote, but a large number of them don’t vote anyway, and those that are entitled to don’t usually bother. As for the rest of the States, their minds have been polarised by the Hawaiian displaced; they’re all for kicking out the illegals. And while we’re on the topic, keep encouraging recent Africans emigrants to America to return – and those here with itchy feet to stay.’

After that conversation, I checked to see how many Africans were returning, finding that it was around six hundred a month. I increased the budget, saying that I wanted Africans educated in The West back here and helping to start new businesses. We soon had six hundred a week returning from North America, a hundred from the UK, many from Spain.

2022, Canada

‘Two or three hundred years?’ Jimmy repeated. He stared at Doctor Singh, then took in the faces of the other members of the resistance.

‘When we opened the micro-portal, we received and isolated various radio signals, and one was a news programme that described the Falklands War,’ Doctor Singh explained. ‘In the broadcast, the British lost the Falklands War.’

‘Lost it? They won it.’

‘Not where the signal was coming from.’

‘And ... just where was the signal coming from?’ Jimmy puzzled.

‘An alternate earth, an alternate history, an alternate time line,’ Singh carefully stated.

‘An ... alternate earth?’

Singh nodded. ‘We don’t believe that the portal would ever allow us to travel back in time through this particular timeline, this planet’s history.’

‘Then what the hell are we all here for?’ Jimmy loudly asked. ‘If this can’t be fixed?’

‘It can’t be fixed, but there are other things to consider.’

‘Like what, for fuck’s sake?’

‘We can’t go back through this time line, but we can go back to certain points in other dimensions, maybe even thousands of them, and they all share the same basic fate as this world. Jimmy, if you

could save the people of a ... a carbon copy of this world, would you do it?’

‘Carbon copy?’

‘An almost identical copy of this world - with some slight variations, but physically the same planet. There’d be a version of you there, your family, people you know. The man who you sailed here with, he’d be there ... but in 1982 or 1992 – alive and well.’

‘But facing the same war as we suffered,’ Jimmy said, turning away.

‘And many planets like that, all facing the same problem,’ Singh said with urgency in his voice. ‘We’ve isolated thirty so far, most very similar, some quite different.’

‘After millions of years of evolution, how could they be similar? How could I be born on any alternate planets?’

‘I’ll start at the beginning.’ They got comfortable.

Goma, 2021

Sat on the patio, Helen and the girls at a function, Jimmy said to me, ‘I should probably tell you something about the time machine. To start at the beginning, Doctor Singh was a clever young Indian astrophysicist. He did his PhD on the background noise of space, but then decided it was all wrong and dropped out for a while. You see, he had a radical idea; it made sense to him, but no one else. He started everything off with the idea that background noise in space was caused by nearby parallel dimensions.’

I eased up and stared across at Jimmy, my mouth opening. ‘You *are* from a parallel dimension, you big lump. I’ve been discussing that with Shelly for years, but it never made sense – the detail you know of this place.’

He nodded. ‘This is the first time I’ve been here, this planet. This ... is not my world, and nothing I do here will affect my own world, my own version of earth.’

‘And if you went back?’ I asked.

‘That timeline would continue, and we’d eventually be overrun by The Brotherhood.’

‘You can’t stop that?’ I puzzled.

‘No, not directly. There is ... a plan, which is also a hope, and that I can’t discuss with you yet. It’s ... not completely hopeless, but

it is tricky, and it's linked to success here.' He lifted his head to the stars and gathered his thoughts. 'Let me start simple.

'If you stand next to a high-speed train as it goes past, you see a blur. But inside the train – if you weren't looking out the window – you wouldn't know that you were moving at all. People live in that space, and then later on others live in that same space.

'Now, imagine a train travelling close to the speed of light. Ten thousand of them would pass you in a second, just a blur, but to each person on each train they had their own little world, unaware of how fast they were travelling. If you took a single second in time, then all of the people occupied it - ten thousand trains and a million people, all crammed into an area a few metres high and wide. Take a look over you left shoulder.' I did. 'See the lion stalking the antelope?'

'Er ... nope?'

'Because they're on a different train. They're here, but moving too quickly to be seen. And since we're moving just as fast, we couldn't see them anyway. Open a portal, and you'd see the lion; you'd see the people on the other trains, and stepping across is far easier than you think, so is stepping across at varying places in their timeline. Trying to go back in time on this train is fucking hard, and we never mastered it. Now, consider the Big Bang; there wasn't one.'

'No Big Bang?'

'No, the universe is a circle, but ... shaped like an apple. Think of it like this: big old magnet at the centre, a solid object. From the top of the magnet, lines of magnetism radiate outwards, curve around and eventually hit the arse end. But the lines are not lines of magnetism, they're lines of pure energy. Everything ... is energy in one form or another, there's no such thing as solid matter. Solid matter is just energy that has cooled down a bit, it's vibrating less on an atomic level, and temporarily forms atoms and electrons, and then molecules and matter.

'From the top of the big magnet at the centre of the universe, lines of concentrated energy flow out and around, eventually hitting the arse end billions of years later. All this, this planet, will eventually go back to energy.

'Now, as the lines of energy travel out from the top of the magnet, they split apart and cool down – for want of a better phrase, and become strands. Each strand is an expanding universe as we perceive it. In those universes are planets, like this old rock, and after a few years, or decades, the strand that we're now in will split

in two as it cools down and gets further away from the centre, the centre being the apple core.

‘When the line splits, a complete carbon copy is created, since there’s more than enough energy around us to split hundreds of times and not notice it. This planet, and the molten core and its gravity and its moon, that’s a template. And when the strand splits, when the timeline splits, it doesn’t go anywhere in effect. It’s over your left shoulder, but occupying the same space, like those fast moving trains, but they’re parallel, not one behind the other – or something like that.

‘This particular timeline split from another in 1976, which was after I had been born to my parents, and you to yours; we targeted it specifically because it was a recent split. If I had gone to another timeline, then the Germans may have won the last war, or mankind may have died from a plague. And finding the closest timeline was real easy; we just used the minimum power settings. Since they were so close, we only had to take a small step.

‘After Doctor Singh had thrown away his PhD, he figured that background noise in space was coming from events in nearby parallel dimensions. Problem was, they all thought him a bit crazy, so he did his research in private. But when he arrived in Canada he was a prime candidate to assist on the time machine, fronted by NASA, and ran some of his own tests. He opened a micro-portal when NASA had just about given up – and without them knowing about it.

‘After that initial success he recruited other scientists, those he knew were disenchanted with the Army’s approach to things, not least because the Army wanted to go back and nuke the Middle East in 1991, when the Russians were at their weakest.

‘So Singh formed a resistance movement, and eventually asked me if I would go back through time, only not back through our own time. It took a while to understand it all, and to see what they were after. But, at the end of day, this planet is just as worthy of being saved as the one next to it.’

‘I figured you’d been here many times, you know so much.’

‘No, I’ve been to many worlds many times, all almost identical, a few subtle changes. Like you with a moustache.’

‘I had a moustache?’ I asked.

He laughed. ‘No.’

Canada

Jimmy waited till dark before approaching the field. Stood in the open field, he took his bearings from nearby mountains, spending almost an hour checking and re-checking his position. Knowing that a micro portal was permanently open, he took out a small device and switched it on, a radio signal sent, the same code over and over. Wrapping it in a plastic bag to keep it dry, he placed it onto the damp grass and stepped back.

At 4am he could hear a distant helicopter, and see lights towards the nearby hamlet. Stood shivering in the cold rain, he stared at shadows in the trees, wondering if he would make it.

Half an hour later he could hear dogs on the breeze, certain that he would be captured. Stood there, hopping from one foot to the other to stay warm, considered taking his own life to keep the authorities from finding out what he knew.

By 5am the sound of the dogs had faded, but he could now see the headlights of vehicles in the distance, still the intermittent sounds of a helicopter. Thankfully, the weather was terrible.

A flash of blue light startled him. He turned to the left and began running, sloshing through the mud. Reaching the illumination of the portal, its edges shimmering brightly, he could see the laboratory the other side, well lit and with people in white lab coats peering towards him. He reached down and grabbed the transmitter, soon realising that the base of the portal was a good two feet off the ground. He ran as fast as he could manage on the wet grass, car headlights close by now.

Reaching the portal, he jumped headfirst, a burst of light and warmth preceding an impact with a concrete floor.

‘Close it, they’re right behind me!’

Singh cut the power, Jimmy laying on his back and panting. Easing up with the help of the others, he sat looking at his wet trousers and muddy shoes. Up on his feet, he took in the laboratory and its equipment, and a few faces that he had almost forgotten. ‘How long was I gone?’

‘Hour and fifty minutes,’ Singh reported.

‘Eleven years that side,’ Jimmy reported, blowing out hard. He took his coat off as a technician wiped down his muddy shoes.

Singh brought forwards a backpack, placing it down with an odd look on his face, almost apologetic. Jimmy stared at it. Singh said, ‘We’ve isolated another timeline, closer than the last.’

Jimmy slowly nodded, staring at the backpack. 'I made millions on the stock markets,' he idly commented.

'We couldn't hear any radio programmes mention you, and you're back before the use of wireless Internet locally,' Singh noted.

'I bought hotels in Africa, and a mine or two. It was going well, but I slipped up somewhere because the CIA was all over me. I was interviewed twice, they took DNA samples – good thinking of yours to replace my younger self – and I gave them the slip in Seattle. They caught up locally; another day and they would have had me.'

'We'd like you to go through in an hour,' Singh said after a glance at his colleagues, seeming apologetic.

'What's the time here?' Jimmy asked.

'One o'clock, Saturday morning.'

'Do you think we'll do it?' Jimmy asked after a moment.

'Yes, we're on schedule. We knew the first time would be the worst, and you've learnt from it no doubt. But Jimmy, Monday morning they'll be coming through that door.'

All of the technicians brought over chairs, forming a circle, notepads in hand. 'Tell us what happened,' Singh requested, some urgency in his voice. 'We'll make a modified plan.'

Jimmy accepted a coffee and sat. 'The fake passports were fine, and the money. I almost got caught fencing the diamonds you gave me, I'll have to be careful in future. When I arrived back I got a bus to Toronto and made like a tourist, bought a case and packed it out; that survived inspection in London airport.

'I stayed in London for two years, placing bets on horses and making good money, studying hard, but keeping the weight down. In 1984 I got a place in Cardiff and studied my younger self, eventually just knocking on his door. I ... killed him and hid his body, taking his place just before I – he – was due to move to London for a new stockbroker job, not seeing my parents for almost five months, and when I did they accepted me.

'I traded the markets and made a fortune, bought a nice apartment, a nice car, and all the while sent letters about disasters to ambassadors in London. Those letters never leaked out, and I could see disasters being avoided – so it was working well enough. I used the name Magestic as we discussed, but the CIA *was* looking for me.

'I made contact with a future British Prime Minister, and gave him a detailed briefing. He's due to take office in the years ahead, so he may well make a big difference. I also gave him the chart for gold prices for a few decades, and a few hints at technology to come, so I'd like to think that he would make a difference.

‘The British security services paid me a visit on more than one occasion, but never figured it out. I lived the high-life when I knew they were watching, and they lost interest.’

‘And if you did it again?’ a lady technician asked.

‘Oh, I could do a much better job of it. And I know who I could recruit and trust to help me.’

‘Recruit?’ Singh asked.

‘It’ll be difficult by myself,’ Jimmy insisted. ‘I need people I can trust, and I know of one now.’

‘You told him who you were?’ they asked.

‘Yes, and he offered to help. After seven years – no problems, but ... well, I think they have him in custody.’

‘And the Russians and Chinese?’ Singh asked.

‘I speak a reasonable amount of each language now, and I warned them both of the future to come by letter.’

‘Did *they* try and find you?’ Singh asked.

‘I don’t think so.’

‘Did China research coal-oil technology?’ they asked.

‘I read an article about it just before I came back to Canada,’ Jimmy informed them.

‘I have a signal from that world,’ someone said from behind Jimmy. ‘It’s ... 2017 ... it’s ... military ... it’s ... post apocalyptic.’

Everyone collectively sank.

‘Next time,’ Singh insisted. ‘Next time.’

With the briefing over, and a few ideas bounced around, Jimmy put the backpack on, checking his fake passport and money. Stood next to the portal he turned and looked back at the expectant faces. ‘Wish me luck.’

Goma, 2021

A week after Jimmy had revealed more about who he really was, my head was still full of all things temporal. I was dying to discuss it with the girls, but dared not.

But now things were different for me, and different between Jimmy and myself. He was the outsider now, and this was my world, that’s how I felt. I was being trained to assist him – but here, and some day soon he’d be gone. I felt more attached to the world all of a sudden, that realisation that this was my world, and that there were

others out there. The care and belonging I had felt for Africa I now started to feel for the planet as a whole.

Brad had, apparently, been given his own briefing, a private one-to-one that lasted six hours. Two people on the planet now knew, three if you included our version of Doctor Singh, who was in a secret location in India and busy working on his theories behind closed doors.

In the States, Brad had passed a bill that basically paid us back almost half of what was still owing to us from various American states and our coffers were full, if not bursting. With this new reality about Jimmy, and the new reality of full coffers, I continued to work hard on the enclaves, certain that they would make a difference.

In New Palestine, Shelly had become involved after studying satellite photographs of the enclave. She had noticed a nice beach just outside the enclave, and a nice stretch of coastline. Without my knowledge she had approached Abdi, and nagged that he extend the enclave by four miles. Abdi agreed, since it was just parched soil, and Shelly dropped a project on my desk.

‘There’s a great beach east of the Palestinian enclave, the potential of a great coastal region. So, if we developed that region, added another marina, it would help to generate future income and to develop a small tourist trade.’

‘Tourism? To a Palestinian enclave? People will think of Gaza!’

‘Till they see the pictures. Abdi has agreed the land, I asked him nicely, then sat on him and refused to move till he agreed.’

‘He agreed more land?’

‘I asked for a mile, and took four. Who’s counting? Anyway, if you move the fence and landscape the beaches will be lovely. Put a road at the back, then parkland, then nice apartments.’

I had been given a firm nudge, and sent additional builders up – not wishing to be sat on till I gave in. Their work was simple enough, the road completed quickly, the parkland down in a few days, sand moved around on the beaches. Hundreds of labours moved rocks and filtered the sand, trying to create a perfect beach. They even swam out and removed rocks from the shallows, save important paying tourists stubbing a toe.

When the hotel chains of the world saw the sketches, and accompanying photographs of the beaches, many wished to plant a beach hotel nearby. I sanctioned the building of twelve immediately.

Meanwhile, the dustbowl was taking shape, some three hundred apartment blocks either complete, or soon would be, the first row of nice villas built. A police training college had been knocked together

next to an army barracks, the Rifles in charge of both for now. Former security staff from the occupied territories signed on, the Israelis on the phone straight away.

‘Paul, Ben. Will these Palestinian soldiers be trained like Rifles?’

‘No, I’ve specifically forbidden it, so relax. They’ll have just basic training, no super-drug, and a nap at 3pm each day. We’re not creating Palestinian super-soldiers, because they might bite us on the arse as much as you.’

‘And the Somali base nearby?’

‘Is there in case trouble breaks out. Relax, worry about your economy instead, huh. That’s heading towards the toilet.’

Fearing a growing Israeli interest in the enclave, I ordered that the basic dirt airstrip that the nearby Somali base offered become a half-decent airfield that would hold a squadron of Kenyan F15 fighters. Or two. I also had the breakwater harbour at the Somali base increased in size, asking that Somali and Kenyan coastguard cutters be based there all the time.

When Ben Ares popped down for a visit, we touched upon the subject of the enclave.

‘Ben, their army will be tiny, and not trained like the Rifles. But, should they be a problem, I’ll invade them myself and sort the problem. But if *you* were to launch a raid I’d consider it an act of war, and I’ve already signed a defence treaty with the enclave’s provisional council. If you fire a shot, you’re at war with Rifles.’

He was not a happy bunny, but I assured him that I would take responsibility for the conduct of the enclave, including the searching of ships. I also pointed out that the colony offered the death penalty for the private possession of a firearm or explosives.

We toured the massive jewellery factory, and its equally large offices, some four hundred Israelis now working in the city. A temple had been built near the offices, and the city now boasted three restaurants that could be described as offering Jewish cuisine.

A week later, Rahman and al-Qa’eda reared up, and attacked Dubai again. I had to wonder about their logic, since the city was dying anyway. A bomb had gone off in Dubai’s tallest tower, another building set-alight. The economic damage may have been great, in another time, but now it hardly made the news.

Stateside, Brad was earning friends on the right and losing them on the left, and I’m sure that Sanchez was turning in his grave. The TV news showed Hispanic illegals being deported, businesses being raided or shut down for employing illegals. Unemployment rates

amongst Hispanics soared, even if they were legal, but Brad held firm.

Brad told a TV interviewer, ‘When a person lands at JFK they show their passport, because that’s international law. If someone wishes to come and live and work here ... then they apply to do so – within the laws of this land!’

Studying a political analysis website, I could see Brad gaining on the right and losing on the left, but overall he was doing OK. Jimmy then waded in with a TV interview.

‘During 2025 and after, there will be the danger of high unemployment and civil unrest here in America. In the years following 2025, some groups of Hispanics will turn militant and fight the authorities, making some areas no-go areas, hundreds of police offices and soldiers being killed.’

That frightened right-wing America, who now called for even tougher action. Landing in Goma a week later, Jimmy gave an interview to our TV station.

‘New Kinshasa is a beautiful city, and the Democratic Republic of Congo has done well. But unchecked immigration by those without jobs could spoil all that. Control of the people, and application of the law is important in any country. If we allowed it, we’d have millions of unemployed people in our region and beggars on the streets. That would harm business, and investment.

‘That’s not saying that we don’t like the people from other countries, that’s saying that we’ll help people in their own countries, and allow movement with legal paperwork. We help the Ugandans in Uganda, and we help the Kenyans in Kenya, but we don’t allow anyone to just move where they please and put up a tin shack.

‘President Kimballa is in office to govern the people of the Congo, not to govern the people of any other nation. His first loyalty is to his own citizens, and to consider overseas workers afterwards.

‘Personally, I don’t like to see Africans with an education going to work in The West. I think they should be here, making things better for their homeland. If they work in The West to get experience and come back, then fine.

‘As for the foreigners in New Kinshasa, they are all legal; we know who they are and they have papers, invited here to do jobs that locals can’t do yet. And working alongside these Westerners, our people learn to do the jobs themselves.

‘I am all in favour of people mixing, but done so with control and the rule of law, not done without planning, and not like the Mexicans climbing over the fences on the American border.’

When he arrived at the house, I asked about the situation in America. Jimmy began, 'There was a time when American politicians realised that their health service and welfare bill was a giant Ponsi scheme; the new arrivals paying for those already in it. The thinking was that new migrant workers would increase the size of the population and help to prop-up the welfare bill and pensions years later.

'The health dividend eased that greatly, but it also means that Americans will live longer, and their obesity problem hasn't gone away. Senator Pedersen's own health insurance company now screens out obese people, or charges a great deal more. People are living longer, and that'll stretch the pension payments greatly.

'Brad will soon tackle that, and people who've been injected with the drug will be told to retire ten years later - and to contribute more to their own pensions. It's a ticking time bomb, unfortunately, but he will hit it head on - or die trying!'

'Will he get re-elected?' I asked.

'He doesn't care. He'll tackle every problem I give him and do what he can, and to hell with it.'

'Hispanics are not happy.'

'They're illegal, they have no rights - certainly not to be complaining about it. Besides, I know what'll happen, and they need to go.'

'Mexican border sewn up tight?'

'Getting that way, as well as Mexico's border with Guatemala. And I've given the Mexicans money to ship South Americans out. America used to gain people every year, now they're starting to lose them, but it's a decade or two too late.'

A week later I had a visit in the Pentagon building from some of the brain-trust kids.

'We've been working on the drug to slim down the pigs,' they said.

I had to stop and stare. 'Slim down ... pigs? Are our pigs overweight?'

They smiled. 'It's a drug for humans, sir.'

'Ah,' I realised, and I remembered the visit to the pig sheds. 'Yes, yes. So, how's it going?'

'We think we have it, the trial on the first hundred humans is being conducted now, and so far there are no side effects.'

'And their waistlines?'

‘Much better, sir. But they need another injection if they put the weight on, which is what Mister Silo wanted.’

‘He did?’

‘Yes, sir. They have to keep buying more.’

‘Ah, good idea. And it could be worth a fortune to us. What do you need?’

‘We’d like to create our own pharmaceutical company here, sir, and then sell the drug locally first.’

‘You’ll have everything you need,’ I promised. I sent for my deputies and instructed them, asking the group, ‘When do you think it will hit the shops?’

‘I may be six months, sir, if all goes well.’

‘Try and accelerate it, conduct a bigger trial; I want to make a lot of money from this ready for 2025.’

I informed Helen that lunchtime.

‘Could be worth more than our gold,’ she suggested. ‘Just think of the women who’ll want it; they can eat chocolate all day and then just pop a pill.’

Security for the group was duly tightened, armed bodyguards for the key researchers; I had PACT take on board the project’s secrecy until the drug was ready, my target audience being the chocolate munching women of the world.

Horseback

Jimmy washed his bloodied hands in cold river water. Standing, he took in the view, a wooded river valley leading to gentle hills devoid of trees. ‘It’s beautiful. I guess it’s what the original settlers saw; virgin territory.’

Corporal Diaz straightened, taking in the view, stood in his drab green uniform with his hands on his hips. ‘It’s also deadly if you have no food, tools or weapons, or if you don’t know what the fuck you’re doing.’ He pointed at Jimmy’s cut hand. ‘That OK?’

‘Be gone by the morning.’

Diaz took a moment. ‘You going to explain that at some point, buddy? And back there; you killed those three men like they were made out of straw. You going to explain that?’

‘At some point,’ Jimmy acknowledged with a smile.

They grabbed their heavy backpacks, trudging slowly onwards, always north and towards the Canadian border. Diaz had carried an M16 rifle, Jimmy wore an AK47 slung and a pistol on his hip. They had already glimpsed a bear, but it had been more afraid of them and scampered off.

‘So, this place ... Manson, that’s where the British Army is?’ Diaz asked.

‘That’s what I heard.’

The next day they found a road, but decided to avoid people; those that they had met so far had tended to shoot first and say hello afterwards. They crossed the road, pressing on along a little used track. Finding a wooden cabin, partly burnt, they dropped their packs and investigated, weapons ready. Inside the cabin they discovered three bodies; two charred, the third partly eaten by animals.

Diaz said, ‘That one - she killed the other two, burnt them and the cabin, then killed herself.’ He pointed at a photograph above the fireplace. ‘Parents and daughter by the look of it.’

Tinned food was liberated, powdered milk, but little else.

‘Diaz?’ Jimmy called from an outhouse.

Diaz came running, weapon ready. Jimmy pointed. ‘Saddles. So where are the horses?’

‘They probably let them go.’

‘If they were broken-in, raised tame, then they wouldn’t have gone far.’

Leaving the outhouse, Diaz pointed towards a large field. Reaching the open gate, they could see four horses grazing happily on the far side.

‘You know horses?’ Diaz asked.

‘I was having lessons a few years back.’ Jimmy turned. ‘We’ll need food for them, and the householders probably grew their own. C’mon.’

They discovered an overgrown vegetable patch towards the track, beyond it a line of apple trees, a dozen apples collected by each of them.

Back at the field, Jimmy tried to whistle. ‘Never learnt to fucking whistle,’ he cursed. ‘You?’

Diaz dropped his apples, put two fingers in his mouth and created a loud whistle, repeated many times. The horses were now staring across, the first starting to amble towards the humans, the previous providers of sustenance.

A full twenty minutes later the first horse nervously approached, sniffing the air. Jimmy tossed it an apple, soon gobbled up and munched, a second following. The horse edged closer. Holding several apples, Jimmy stepped to it and halted, standing perfectly still. Five minutes later the horse was close enough to sniff the apples, Jimmy holding one out on his upturned palm. The horse took the apple and munched it loudly, the remaining three horses closing in, Jimmy tossing them apples.

The first horse, the most confident, allowed Jimmy to rub its nose. 'Hello there,' Jimmy quietly offered.

Diaz eased forwards, offering an apple to a second curious horse. 'What now?' he whispered.

'Now we take a few days to get to know them, them us, and for them to get used to saddles again. In the meantime, we close the gate, move the bodies and set-up a happy home.'

With the three bodies buried, Jimmy marked the graves with a shovel, and a photograph in a glass frame from above the fireplace, an image of the once-happy family. He joined Diaz on the porch.

'We fucked it all up, man,' Diaz stated, focused on the graves. 'Fucked it all up *big time*.'

Jimmy took a moment to stare at the graves. 'Attacking China was a mistake; your President fucked the whole world in one go and started the war.'

'I never voted for the asshole.'

'Can you keep a secret, Diaz?'

'Who'd I tell?' Diaz scoffed.

'You've seen me heal, you've seen how fit and strong I am, how little sleep I need, but you seem to accept it.'

Diaz shrugged. 'I'd be dead without you, man. You got me out that camp – fucking Texans would have sent me back to Mexico. I was born here man, a serving corporal, and those fucking rednecks wanted to deport me, or lynch me.'

Jimmy gently nodded, then turned his head and made eye contact. 'In Manson there's a secret facility. Inside it is a time machine. I'm ... from another time.'

'Shit...' Diaz slowly let out.

'And I need a favour.'

'Anything, man.'

'It's important that I get to Manson, because I may be able to go back in time and alter all ... all this. If we run into trouble, I need you to do everything you can to get me there, even if it costs you your life.'

Diaz stared back. 'You can alter this?'

Jimmy nodded. 'I think can, at least I hope I can.' Wistfully, he added, 'I just need to figure a way to stop your fucking President from nuking China because of your economy, and your economy not failing because of OPEC, and of OPEC not dropping the dollar.'

'Jesus,' Diaz let out.

Jimmy stood. 'I found a syringe in the bathroom. Take off your jacket and roll up your sleeve, I'm going to inject you with my blood.'

'Inject me ... with your blood?'

'Afterwards you'll be just like me: fucking indestructible.'

'Shit...'

The horses accepted apples twice a day every day, Jimmy and Diaz getting to know them, Diaz improving his strength and fitness. On the third day, Jimmy showed the horses a basic rope harness and bit, getting them bridled eventually, the bridles removed at dusk. That following day, Jimmy led the horses around on a rope, each in turn, running and jogging.

'They seem OK,' Jimmy told Diaz. 'But I'm no expert. And I've no idea how to check their shoes.'

In the morning, Jimmy tied his favourite horse to the fence, stroking and patting it for five minutes. They seemed to have an affinity. It took a while for Jimmy to figure out the saddle assembly, instructing Diaz where he could. Finally ready, Jimmy saddled his favourite horse, leading it around the field before tying it to the fence again.

An hour later, with Diaz stood ready, Jimmy checked the saddle position, tested that it wouldn't slip, and mounted up. Diaz smiled widely as the horse simply stood there.

'Untie me,' Jimmy called.

Diaz released the knot, tossing Jimmy the rope, watching now from the fence as Jimmy walked the horse around the field for half an hour. Back at Diaz, he said, 'Your turn, Corporal.'

Jimmy held the horse, rubbing its nose as Diaz mounted up. 'Slow gentle kicks with your heels. Talk to her, reassure her, pat her neck.'

Diaz dug his heels in and walked the horse around the field. 'How do you turn?' he shouted back.

'Pull the rope with your left or right hand, turn the horse's head.'

Diaz survived the experience, back with a huge smile. 'We're like proper cowboys, man.'

‘Release your left foot, hold the big bit in front of your groin, move your weight forwards, then right and down, keeping hold on the rope.’

Diaz landed on his back, laughing hard. Unbridled, Jimmy rewarded the horse with apples.

Four days later, Jimmy and Diaz, travelling companions, sat atop their horses, the final two horses roped behind and carrying their back packs. From a gentle rise they looked back at the cabin.

‘Could have stayed there, man,’ Diaz said. ‘Vegetables and all, and fucking apples.’

‘You have to keep moving, because it would be too easy for me to just stop, just stop and try and have a life.’

They turned their horses north.

Mexico

On a visit to Nairobi, I met Jimmy in a new hotel that our property business had built. He was booked in, I’d be flying back later, and we met in the bar.

‘Hello stranger,’ I offered as I sat.

‘Well, someone has to try and fix the world whilst you’re busy fixing Africa.’

I wasn’t sure if I liked the dig at me. ‘Is there something else I should be doing?’

‘Probably, but I’m not sure these days. Africa and The Middle East is the problem to fix for 2025, my efforts in the wider world are for ... after that, assuming that 2025 is dealt with to some degree. Anyway, need you to gear up on helping Mexico.’

‘Mexico?’

‘Need to ease the pressure on Brad. Best way to do that is to make Mexico less of a shit-hole, and more attractive to those being kicked out.’

‘They don’t have much industry or mining, except silver and iron ore,’ I pointed out. ‘And their coal production is limited; they import some.’

‘First, they have old coalmines that are not worth drilling, but may be worth coal-oil liquid technology. Second, they have more coal than they realise, but its deep under tough rocks.’

‘Less of a problem for liquid extraction,’ I realised.

‘I’ve already asked the Mexican Government for permission to re-work old mines and to sink new wells. CAR will handle it, but use the latest liquid technology, and we’ll see if we can’t keep the lights on in Mexico City a while longer. They have a coachbuilders, so send them more electric batteries suitable for buses, and the new solar panelled buses.

‘Then, get the property company to buy land where I’ve arranged, and build condos and hotels and sell them. We’ll cover our costs, but it will employ local labourers and encourage tourism. Then we’ll get CAR to attack their copper deposits, and I know a few that the Mexicans don’t know about. We’ll break even on it, but that’s not the point – we need to create jobs where we can.

‘I’m also encouraging the Mexicans to increase the size of their immigration service, and they’re starting to chuck out South Americans. Send them some money.’

‘I could subsidise a few weekly flights from Europe to Mexico,’ I offered.

Jimmy nodded. ‘It all helps. But CAR will create the most jobs in the short term. Still, you have a knack for thinking of things that I miss, so see what you can do.’

‘Brad getting a lot of heat?’ I asked.

Jimmy reluctantly nodded. ‘It was always going to be this way, and his majority isn’t great. It’s been good to see that America has shifted left a little, become a little more caring towards its own citizens, but the media is still controlled by corporations with a political agenda, and there are plenty of powerful Americans who think that America should stay on top at any cost – even if that means forcing the rest of the world to conform by force.’

‘We knocked the rich back a bit,’ I offered.

‘Not enough, and it’s a constant process. The greatest danger they face ... is if the super-rich and the powerful get into a situation where they’re so rich – and control the media so much – that the gap between rich and poor will be widened to the point where there’s no fixing it. It’ll be something you’ll need to look at if I’m not around.’

I nodded my agreement, and sipped my beer. ‘People listen to you more than ever, so a few good speeches on the matter may help.’

‘I’ll be making them as we get closer to crunch time, when people’s minds are focussed. I met with the American oil industry last week and showed them all the untapped wells, and capacity, and we’re reasonably sure that the 2025 shutdown won’t cause a jump in oil prices. CAR has capped off twenty wells around Cuba and Haiti, some in the gulf, and I pointed towards additional Gulf reserves, some in Asia.’

‘American coal-oil having an effect?’ I asked.

‘Some, but not enough; I have Brad looking at it. And the take-up of electric vehicles is still slow. Some states have introduced the electric buses, especially California and Florida, but others are being slow. And to most affluent Americans, electric cars are what poor people drive.’

‘I’m still bringing back Africans from Europe and the States,’ I mentioned.

‘Good, keep at it, especially the States. More we can bring back, the less trouble later. When 2025 hits and the economy slumps, people will turn their anger towards the social deadwood - and foreigners.’

‘How’s the propaganda going?’ I asked with a grin, having seen some of the films.

‘Very well – Americans can easily grasp a concept if its on the big screen, a hero and babe to save, but they’re not so big on reading the papers and figuring it out. They all now see Russians and Chinese are brothers in arms against Muslim terrorists, which makes it hard for the media to portray the Russians and Chinese in a poor light.

‘Besides, companies like CAR and others are truly international, and they have an effect; a nudge from the board of CAR can influence politicians. Other US companies are becoming truly multinational, some with my help, and that makes it hard for a US politician to criticise China when the largest employer in his home state is part owned by the Chinese, a company that funds his election campaigns.’

‘We didn’t give Brad that much after all, and got some back.’

‘My campaigning helped there, and Brad was frugal in his spending. He did most of his work on the social media sites like Facebook and others, a viral campaign. That’s the way of the future for US politics, not kissing babies on doorsteps.’

‘You’ve been to North Korea a few times,’ I noted. ‘Seems to be going well.’

‘I flooded them with food and fuel, and asked nicely afterwards for modest changes to the regime. Coal-oil is making a massive difference there, and private ownership is now being tolerated. But, now that they’ve started that process, it’ll be impossible to stop. And you ... you’ve been making friends with the Iranians.’

‘I flooded them with food and fuel, then asked them nicely afterwards to lower the rhetoric,’ I said, making Jimmy smile. ‘Most of the international sanctions have been lifted, and they’re selling more oil to the Chinese. They know they’ll be hit bad in 2025, and they’re terrified.’

‘We should have tried that approach before; cut the sanctions and played nice – then asked for favours.’

‘Israeli economy is struggling,’ I noted.

Jimmy made a face and nodded. ‘It’s unsustainable with their defence spending, but the US military hide the donations well enough. US taxpayers now contribute twenty billion a year to Israel, and since I described the threat from The Brotherhood that’s hard to argue against.’

‘Has New Palestine had an effect?’ I asked.

‘On the psyche of the Middle East it has, because so much emphasis was put on the Palestinian struggle before, and on two small areas of land. Now people can see the Palestinians leaving, so how can they try and back the Palestinian’s cause – when it looks like the Palestinians themselves have abandoned the land.’

‘Any signs of a peace dividend in Israel?’

‘No, because they still get the odd rocket lobbed over. The reduction in tension has not come from your enclave, its come from a changed Iranian attitude, and a diminished Hezbollah. I also had a word with the Syrians a while back, and pointed towards what the Somalis did to Tehran. They got the message.’

‘By 2025, I could have a quarter million Palestinians in the enclave. I’m building taller towers to make better use of the land, but I don’t think Abdi cares if we expand it further.’

‘As I said, the greatest benefit has been the perception that the Palestinians are leaving, even if most of your people are from outside the occupied territories. The Palestinians are getting less support now from The West. Oh, while I remember, the UN is now producing those household wind turbines for a few countries – I had them sent the designs.’

‘I heard. I’ll ship more to Mexico and Central America; they’re only thirty dollars a go locally. Costs as much to transport them.’

‘Brad now has private agencies deporting the illegals, and that’s working quite well. Just a few small problems when people with papers were shipped out by mistake, over-zealous private operators on a commission. In California, hundreds of small agencies are popping up, working like bounty hunters under license. They bus people south to the border and collect their reward money, many of them Hispanic themselves.

‘They even have private agencies on the border now, nabbing people and handing them over for their bounty. But one innovative group crossed the border after bypassing US soldiers, grabbed a bunch of local villagers, brought them back and collected their bounty.’

I laughed.

‘US soldiers now get a small bounty for each person caught as well, just fifty dollars, but it buys the beers. And the new Governor of Texas, he thinks it’s his God given mission to repatriate as many as he can. In another time - and another place, he would have made Texas independent, and fought The Brotherhood in Mexico.’

‘You think we’ll beat them this time?’ I delicately enquired.

‘With everything that the world’s armies now know about them? Hell, if they lose ground now then they deserve to die. I’ve given them blow by blow accounts of how it will happen, where and when.’

‘You ... optimistic?’

‘Of the military campaign, yes, but not of the economic and political. Basic human instinct is to be downright miserable and nasty to your fellow man when your belly is empty; it’s easy to make rash decisions then.

‘When 2025 hits, I think we may be able to condition people enough to expect it – and accept it and move on. But if The Brotherhood set off bombs in Europe, then attitudes will change quickly, and European stock markets will crash. That’s the danger early on, more so than being invaded. And don’t forget, Britain has two and half million Muslims; a time bomb waiting to go off.’

‘And if The West hits Pakistan with a pre-emptive strike?’ I nudged.

‘Civil war in the UK, and complete economic collapse; and that’s something I experienced first hand, before I set off on the Long Voyage.’

‘And if the rise of The Brotherhood is delayed - what can I expect?’

‘Well, I’ve already done what future Republican Presidents would have done, not least with the illegals in the States. The movies have brought the nations close together, and the multi-national corporations are making it hard to start wars. I’ve knocked back the big banks before they took down the world economy, but they are back to their old tricks already.

‘I’d have to say ... that American politics will still be the biggest issue, the rich poor divide and the idea by some of the rich and elite in America that they can turn the world into one large company with themselves on the board of directors.

‘That’s not actually an idea that I completely disagree with, but to them its about control and power, with me it would be about unity and peace – plus a fair deal for the little guy. Their vision of the future has all the power in the hands of the banks and corporations, and debt is used instead of warfare; if a nation can be fooled into borrowing too much from you, then you own them - and don’t need to fight them.

‘It’s the same principle that was used in Africa before we arrived on the scene: keep them poor and subservient, don’t give them a chance to grow, and keep taking the ore. If the US banks can get Syria and Iran in debt to them in the future, then great.’

‘And China?’

‘China will suffer from its own success; their middle classes will start to grow in influence and have a political effect. They’ll go the same way as Russia, watered down socialism where capitalism is good. Just as China gets to the point where it feels that it can throw its weight around, its own people will stop it.’

‘What are you doing with trees that I read about?’

‘Replanting trees in the American mid-west, the old dust bowl. We’re drilling wells and pumping water with wind turbines, hundreds of them - that will become thousands of them, and the irrigated areas are being planted with trees that are already a few feet high, some seeded.

‘In the wetter areas, we’re employing local labour to dig trenches to form small canals, and planting trees along the banks; they create small eco-systems. I’m aiming to plant a couple of million trees, and that helps with soil erosion in years to come. California has a chronic water shortage already, and it’ll get worse, so we’re looking at pipes from the north or desalination using solar energy.’

Back at my desk the next morning, my head was full of post-2025 ideas, and I found myself stood in front of a map of the world. With

my hands in my pockets, I spent ages just staring at various countries, mountain ranges and rivers.

Getting to work on Mexico, I put a team of brain-trust kids and volunteers together, outlining the need to boost the Mexican economy. They went off to do a study and report back. My CAR representative - and they had their own offices here - popped up for a cup of tea, and we went through my plans for Mexico. First, I ordered additional surveys and bore samples to be taken right across Mexico. After all, there may be something under the ground that we didn't know about, and that Jimmy didn't know about either.

I ordered more electric buses from within Mexico, certain to keep their coachbuilders busy for many years, and sent five thousand Chinese electric cars to be used as taxis.

My next meeting was with the property business, which was now a listed company and technically not ours to boss around. But, as with CAR, we held the largest minority of shares. They promised to send a team out to Mexico straight away and to start buying land – or leasing it, since the Mexicans still did not allow foreign corporations to own land.

But Jimmy had set me thinking about trees, and over lunch I discussed it with Helen. She mentioned that she was already involved with tree planting in a few small areas, so I asked if those few small areas could become numerous large areas. She told me – firmly but politely - to do it myself. After lunch I put a team together, and asked that they start on Kenya first.

I wanted canals dug from Lake Victoria, not purposefully to take more water - but to improve the trees and wildlife in that area. Volumes would be hidden, little mention made of the fact that some of the canals would be a hundred miles long. Following Jimmy's example, I ordered wells drilled and water pumped using wind turbines, the water being pumped into areas where trees were now scarce.

The tree-hugging team set off, and threw up fences around saplings, the green shoots otherwise to be eaten by passing grazers and elephants. Acacia trees did well on the savannah, but few other species of tree thrived. They identified a tree species in the Congo that was also indigenous to Kenya, and so young trees – under six foot tall – were dug up and transported, being transplanted into the Kenyan savannah in clusters and fenced off. Those fences contained holes for certain animals, but would keep the larger grazers out.

When CAR reported the find of a significant silver deposit in Mexico, I negotiated directly with the Mexican Government. Temporary homes were constructed around the mine, CAR hiring some six thousand people, the planned mine covering an area some six miles across. I made sure that the wages were above average, and laid on electric buses for workers to commute to local villages and towns free of charge.

I had created my first jobs in Mexico and felt good about it. The next part was easy enough, I just needed to join the dots. I contacted CAR and asked if they could give employment priority to Mexicans kicked out of the States, those that had the skills. I sent Brad a note, and he agreed to cooperate, those able-bodied Mexican men returning home given a grant to apprentice at a mine; Uncle Sam would pay the apprenticeship costs for a year.

CAR had taken over thirty old coalmines, the former owners stunned at the request to mine the worn out old seams. Our people plugged up holes, drilled other holes, then poured in the first stage chemical. A good amount of second stage distillation was necessary, but coal-oil soon appeared from small on-site refineries. In the local town, the petrol stations took delivery of the refined gasoline, reprocessed at existing petrochemical refineries, and consumers could fill up with slightly cheaper petrol.

But the main benefit of the coal-oil came when a coal-fuelled power station was converted to run on coal-oil instead. Imports of coal from the States eased, and the costs to the state electricity company were lessened, the first of many such planned moves.

Biblical proportions

The Palestinians had been using a large marquee tent as a temporary mosque, but now asked to begin construction of a mosque. I looked at my plans, soon realising that I had not included one, so suggested that they design their own.

That led to a note from the Saudis, who said that they would not only design it, but build it as well. They sent me the designs and I had to laugh; it was a replica of the Golden Dome in Jerusalem.

With more Palestinian builders now in the enclave, and skilled at putting up the standardised apartments, I pulled out some of the Kenyan builders, making sure that all the Palestinian men were fully

employed. Apartment blocks were rising at the rate of one a week on average, the steady trickle of people being – well - steady. But I was pleased to see more families arriving, including those without a paternal head of the family. I instructed that the mothers and daughters be given welfare if they couldn't find work.

The UN then sent a very polite note about the enclave, which translated to: you left us out of it and are making us look bad, asshole! After I had stopped laughing, I sent them a note, giving them permission to do whatever they liked in the enclave, subject to approval by the provisional council. They got straight to work.

Tented cities popped up, UN aid workers and medics taking up residence and showing how caring they were. UN grain, which had no use around Africa these days, was duly delivered, and schools received more equipment, even foreign Arabic teachers.

Three months later, we ran out of families to put in apartments, the apartments now rising faster than we had warm bodies arriving by ship. As had happened in other areas, builders used their spare time to buy land from us and build their own houses, and we soon saw the first sanctioned private sale of a property. The beach hotels were nearing completion, one already operating and attracting an oddly motivated crowd. They were nearly all Arabs, and were flying down from Cairo or Amman so that they could use Dinars - and give something back to the Palestinians.

It was political protesting holidaying, and made me smile. Still, it put money into the local economy. An Israeli documentary about the enclave, filmed by Jordanian cameramen, showed the beaches and hotels, parks and apartments, and missed most of the dustbowl. The tall Saudi tower was filmed, the airport and the scuba centre. The floodgates opened.

I had to wonder if the Israelis were trying to make the enclave look good, or if it had been unintentional. Either way, Palestinians from the occupied territories applied to Israeli to emigrate, knowing that they would receive a small grant from us. That first week after the documentary, shown in the occupied territories and Israel, two thousand families made the journey down the Red Sea. They occupied apartments, and we were soon watching their kids playing on the beaches, no Israeli helicopters overhead.

My time was typically split between doing the mundane Presidential stuff - functions and the opening of hospitals, to running the macro elements of the economy, to my pet projects. I had lost interest in the

Arab enclaves to a degree, and concentrated on either Mining City or the Palestinian enclave, an eye on Mexico.

Lucy then gave me a few ideas for the Palestinian enclave. 'A university,' she suggested.

'University? There's hardly enough teenagers to warrant a school!'

'But there will be in time, and the university would be like here – for people from all over to study, and to pay fees. It would help the local economy.'

'It might,' I realised. 'At least – it may cover the teachers salaries.'

'And then a teaching hospital,' Lucy added. 'Again, people would study there, and if it was a good hospital you could charge for operations.'

I went back to the drawing board, sketching out the position for an Arabian regional university and a teaching hospital, commissioning the building work straight away. That led, inevitably, to a request from the Saudis that they have a hand in both projects, and I agreed that they fund a third of them respectively, and a third only; I had images of the university being a little on the radical side.

But no sooner had the ceremony taken place, the cutting of the ground on the university, than the enclave suffered its first terror attack. A small boat from Yemen had evaded the local patrols somehow, and landed at dawn near the main Palestinian port. They stormed ashore and began firing indiscriminately for half an hour, the Rifles eventually killing the Yemen al-Qa'eda operatives.

It was a shock, and I uttered a few words, smashing furniture in my office. Calling the commander of the combined naval base in Somalia I offered to go up there and kick him in the balls, before ordering Kenyan F15s up that evening. They blew several large holes in the main runway of Sana'a City airport. That resulted in much condemnation of my actions from the Arab world and The West, but I didn't care. I went on TV and threatened to invade Yemen if necessary.

Jimmy called. 'You're behaving like an Israeli,' he calmly stated.

'How so?' I challenged.

'When Palestinians set-off bombs in Israel, the Israelis send over warplanes - or invade. Now you know how they feel.'

The parallels were there, and I apologised to the Yemen Government - who now feared for their lives, Abdi sabre rattling towards them. Naval patrols were increased, extra Rifles placed onshore, but paradise had been lost. Or so I thought. The following

day, the tourists all mobilised into a march and protest, stating firmly that they would not be scared off. Bookings continued. We recruited additional would-be sailors, and the tiny Palestinian navy grew, twenty-four hour patrols organised.

The following week, three thousand families appeared, up from the weeks before, and I was now back to increasing the building rate. I even sent more African builders to the enclave.

Meanwhile, the less controversial area of Mining City was growing rapidly, fifty buildings being worked on at once, more than a hundred thousand builders of one description or another, many from outside the region.

When someone suggested that we may grow to the point where we have so many mines we run out of ore, I commissioned a study. That study suggested that African ore would last three hundred years, so I was reassured. Still, I adopted a different policy. The corporation encouraged mines to be opened, assessed, but to then adopt the policy of “just ticking over”. In other words, we would soon have many more mines, we would know what was there, but we would not exhaust them.

Extra mining surveys were conducted in Angola, Namibia, Central Congo, Southern Sudan and even Chad. Ore was found in many new places, assessed and left. Working along those lines, I made a move that would have ramifications, but without realising it. A group of CAR teams were tasked with sinking wells offshore, right around the African coastline, to judge future potential.

When Jimmy saw the detail of the scheme, he commented, ‘I know where some of it is, but to tell the truth, ninety-five percent of the coast has never been tested.’

Months later, when CAR had found good pockets in many places unknown to Jimmy, he ordered the findings kept secret.

I called him. ‘Why is the CAR oil survey being kept secret, oh great one?’

‘Why do you think, lord and master of all you survey.’

‘You tell me.’

‘If there’s more oil than we know about, then what affect will it have on the Middle East, before and after 2025?’

‘Ah, yes; could knock them lower, oh great one,’ I conceded.

‘Find it, cap it off, but leave it for a rainy day – Mister President.’

CAR spent money on exploration, reported to its board its findings, but kept the detail hidden from the wider world. They had become secret agent oil explorers. And as such secret agents, I asked

them to survey both the land around the Palestinian enclave, and the waters.

A month later, CAR confirmed the oil, and that it wasn't deep. They capped it off as requested and moved on, but found another small oilfield just at the western edge of the enclave, a third where Shelly had claimed the land for beaches. On land they found iron ore and copper as expected, just ten miles from the back of the enclave, but in quantities worth extracting.

As with much of Somalia, especially the northern area that was Somaliland before integration, ore was taken where found, and little additional exploration took place. The rear of the enclave was a long way from anything, and the mountain ranges might have suggested that moving the ore to the sea was the best bet. I got Abdi on a video link.

'How're things in rainy Goma?' Abdi asked.

'Fine. How're things in dry Mogadishu?'

'They are ... dry and warm.'

'Listen, there's iron ore and copper under the ground at the rear of the Palestinian enclave. It's in an isolated area, difficult roads, and would best be extracted and moved by ship. Could the Palestinians remove it under license from you, working with CAR?'

'Certainly, if it is difficult to get at any other way.'

'How're things with Yemen?' I broached.

'The runway was repaired, and we have agreed to stop small boats crossing in a joint venture. They captured the brother of one of the men who attacked, and he said that they attack because Israel builds the enclave to push the Palestinians out.'

'The Israelis don't tell me what to do,' I stated.

'I know this, but they do not, my friend.'

'The patrols are tight enough now, more ships in the area. Anyway, enjoy your sunny day. It's raining here!'

As year end approached, the newly formed Palestinian Mining Corporation was sub-contracted by CAR to mine ore from the hills behind the enclave, the raw ore moved by truck to the port on roads improved by us, and then sold on the open markets. The corporation did not make much, but it employed a growing number of men in skilled positions.

Our own corporation bought some of the ore, not all of it because we wanted an export trade and foreign currency reserves for the enclave. I commissioned a smelting plant at the very rear of the enclave – at a time when the Central Bank of New Palestine housed

a few thousands dollars worth of each of three currencies, their biggest reserve being in Egyptian pounds. It wasn't much, but it had been earned, and this year's national income could top a hundred thousand dollars if exports continued at this blisteringly slow pace.

The rate of immigration was actually the rate of hiring, since not that many families considered their move here to be a permanent one. Most saw it as a job opportunity. But after a few weeks, and after they had strolled along the marina promenade, bathed on the beaches or enjoyed the parks, attitudes slowly changed amongst many. We even had a few babies born.

At Ben Ares request I had built an open prison – of sorts, and the Israelis made prisoners the offer of moving to the enclave, or spending the next twenty years in an Israeli jail. Thousands moved down, many intent on sneaking back into the West Bank or Gaza. But the enclave was a long way away from the occupied territories, and the new arrivals could not board a plane or a ship.

Outside the enclave, Somali Rifles turned escaping prisoners back at gunpoint, some of the die-hards sneaking aboard ships in order to try and return to the territories. We eased the situation by making the prison more of a hotel, and brought down families to either visit or to stay. Since apartments were free, food cheap and work guaranteed, many families stayed.

The UN, and just about everyone else, condemned the prisoner move as a breach of human rights and international conventions, but I defended it, saying that the prisoners were better off here. And the Israelis ignored the UN as usual.

But New Palestine was becoming a little gem in a sea of sand. People serious about their scuba diving flew into the enclave, never before dived, and the Arab world still frequented the hotels. The enclave's reputation was growing, and Shelly had been right about the beaches and hotels; they added a quality to the place.

I commissioned two additional marinas and arranged for small harbours to be built, suitable to moor small boats. With a gentle nudge from me, more warships docked, foreign currency being earned in the cafes and shops.

For New Year we decided to head for River View by the sea, Mombassa, and block-booked rooms. Rescue Force were invited down, Rudd and family, Anna and Cosy.

It had been years since I had been here last, and I noticed a few subtle changes, starting with an Internet room with video conferencing equipment. I took a wander down to the scuba centre

and said hello, the instructors all strangers, the place not offering the welcome it once did.

Sitting at the beach bar, Han appeared, joining me. ‘Didn’t know you were down?’ I said.

‘I have work in my country’s enclave here, and so decided to grace you with my presence.’

‘You’re always welcome.’ Studying Han, who still seemed to wear glasses – despite being injected – I said, ‘You’re looking old, Han.’

‘I am seventy one this year.’

‘Had the full drug?’

‘I received the lower dosage many years ago. Otherwise, I would have retired by now.’

‘Jimmy could inject you...’

‘My government will soon have mastered the drugs, and the stems, to a much higher potency. I may be, as you say, the guinea pig.’

I sipped my cold beer and took in the ocean. ‘It’s been a lot of years, Han.’

‘For us ... just a small step when compared to Jimmy. May I enquire, for myself, your aspirations and expectations of 2025.’

‘There’s no way ... that I believe the oil changeover will go smoothly. I think the markets will crash and oil prices will jump up. They know it’s coming, but its not the same till it gets here. As for the refugee crisis, I think we’ll handle it – the rise of The Brotherhood delayed by years. The Iranians have agreed to allow CAR to drill for oil whilst they’re incapacitated, and that’ll help. I have enough food in Africa to feed the refugees, and enough temporary homes.’

‘And will that approach ... lessen the growth of African GDP?’ Han posed.

‘Can’t have it all ways.’

‘Indeed no. And your recent activities in Mexico?’

I swiped away a fly. ‘Simply to try and help their economy, for when large numbers of illegal Mexicans are kicked out of America – to help Brad.’

‘And your thoughts as to the stability of America, post 2025?’

‘Jimmy can’t accurately predict that, and I’m no expert.’

‘You are better than you think, Mister Holton. That I *have* learnt over the years. These enclaves were your idea, and the Palestinian enclave may just solve an old and intractable problem.’

‘It’ll take a few years, and may help, but it’s not big enough for all of the Palestinians – even if they did want to stay there. Many will stay where they are.’

‘And oil offshore, we understand?’

‘Some, yes.’

‘But not tapped yet?’ Han puzzled.

‘We’re keeping it quiet for now, or the Israelis will be jumping up and down.’

‘But if the oil was extracted, then the area may see a rush of people?’

‘It may do,’ I agreed. ‘But the Israelis may do something to undermine it. They don’t want to see a rich and independent Palestinian state.’

‘Perhaps the time for caution has passed, and the time for firm actions has arrived,’ Han suggested. ‘There are only three short years remaining, and the time will pass quickly.’

I sipped my drink. ‘I have been getting more radical of late, more of a sense of urgency.’

‘My government grows focused by the day. Our coal-oil extraction is far higher than we agreed with Jimmy, and will grow more, our use of electric buses soon to be law.’

‘Sounds good to me.’

‘Perhaps you should pump the oil for the Palestinians, and fund the enclave that way,’ Han suggested. ‘And, if you sell the oil to Israel – at a good price – then they cannot complain.’

‘Han, you’re a sneaky shit, you know that.’

‘I learnt from the best.’

I made a call and ordered CAR to start pumping from one well, straight to tanker, and to sell it to the Israelis at a discount – if they would take it.

Jimmy stayed in London for New Year, at the club, and I enjoyed a family beach holiday, teaching Liz to scuba dive. She was a natural, like her sisters, and showed no fear of the water. Many an afternoon I would be sat in shade with a cold beer, chatting to old friends, reminiscing about past projects and adventures.

Mac looked odd, and very old to be having a young wife and toddler, another baby on the way. The young girl was adorable, and obviously didn’t take after her father. But she was having an effect on Mac, who was less sarcastic, smoked less, and swore less. Parenthood had tamed Mac in his seventies.

Rudd was a grandfather of six, Cosy a grandfather of one, and us old men enjoyed babysitting at the beach bar.

On the 2nd of January, 2022, I took Lucy the short distance up to Ebeye, finding that few of the original old buildings still stood.

‘When I first came here it was falling down, a wall of flies to get through to reach the courtyard,’ I told her. I pointed at a new wall. ‘That wall used to be six feet high, and locals would drop their kids over the side, just dumping them here for old Mary.’

‘My God.’

‘And over there was a hospital ward of sorts, all the kids dying from AIDS. Should have seen the look on the old lady’s face when Jimmy told her to inject the kids with his blood.’

Staff rushed out and lined up. I told them not to bother, but we soon had a thousand smartly dressed kids chanting and singing, Lucy recording them with a small video camera.

A man stepped up to me, a teacher. ‘Mister Paul, I was here the day you first arrived,’ he said in an accent. ‘I was five years old, and I remember the big man swinging me around.’

I shook his hand. ‘That was a long time ago, my friend.’

‘Thirty-four years, sir.’

‘It’s changed a bit.’

‘Ah, very much so, sir. And now, when the children from before have the job, they send back the five percent. We have the five percent from the thirty-six thousand people, sir. We have the six Cabinet Ministers, the eight Junior Ministers, and the twelve CEO of the big company, sir. And one hundred officer in the army more than the Major rank.’

‘Excellent. I guess we did some good then.’ I waved, and more than a thousand kids waved back.

Leaving, Lucy commented, ‘It’s amazing what you achieved, despite the knowledge of the future.’

‘Small acorns,’ I said. ‘Jimmy knew back then that he had time, and that the dying kids here had nothing to lose. It was an army of the dead; ghosts walking.’

‘I read the other day that this place has produced twenty thousand teachers. Around Africa, your orphanages have produced over a hundred thousand teachers.’

‘It was what Africa needed, an education system to rival The West. But first it needed security, then to be extracting ore for itself; without the Rifles it would still be just hostile jungle. You know, back then we took a lot of risks, we could have been killed many

times. When I asked Jimmy about it recently, he said he was tempting God.'

'Tempting God? He's not a believer.'

'No, and after everything he's been through I think he welcomes the idea of death.'

'He seems OK.'

'There are things you don't know, babes. Maybe someday he'll explain them to you.'

Back at the hotel, Ben Ares called. I was in two minds to answer the phone.

'Yes?'

'Paul, Ben.'

'Happy New Year to you too,' I quipped.

'Yes, happy New Year.'

'Have CAR offered you some oil, Ben?'

'They have, Palestinian oil.'

'And...?'

'We'll not recognise them or pay them directly. We'll accept the oil, but pay you.'

'Any which way you like, Ben. What else?'

'Is there much oil there?'

'Enough to make the enclave pay for itself, and to encourage a great many other Palestinians that way at the prospect of a good job and nice home.'

'And how many will you take?'

'As many as we can. We have almost two hundred thousand, but most were from outside the territories to start with. Still, there're more families arriving now. Perhaps you should show that documentary again. Update it first though, and show the ore mining and the oil.'

'We may do that, certainly. But this enclave, its too small for ... larger numbers.'

'It's twice as big as Manhattan Island in New York, and the towers are growing higher. As it stands it'll take a million, but we may extend it since the Somalis don't care. We're seeing six thousand people a month arrive, so by 2025 you'll have fewer potential recruits to The Brotherhood, maybe a lot fewer.'

I needed a beer, and worried if I was doing the right thing. I was interfering with an entire nation, but we had done that before.

Ben didn't need to show his documentary again, the news of the ore and oil spread like wildfire, Palestinians telling relatives that the enclave would be the next Kuwait or Dubai. Our intake doubled, and

this time more came from the occupied territories, the Israelis only too happy to assist with travel plans. But I still worried about what I was doing.

Fourth attempt

Jimmy said goodbye to his assistant Paul Holton, a glance at Paul's ex-wife, Helen, then dived through the portal. As he lifted his head, his pack came through and landed on him, followed by two additional packs. The portal was powered down.

Doctor Singh helped Jimmy up. 'What the hell happened?' he asked with a desperation and sadness in his voice. 'You did it, you fixed it all!'

Jimmy straightened himself, taking in the confused faces. He took a breath. 'I got further in that timeline than here, and by a few years. In 2025, a massive earthquake will devastate the Middle East. Over there, it reduced the world economy to zero, civil unrest broke out, wars, and The Brotherhood rose up as they did here, destroying what was left of the Middle East and attacking into Europe.' He shook his head. 'We could never have factored it in.'

'Why such a crash in the economies?' Singh puzzled.

'The quake wiped out all Middle East oil in a day,' Jimmy reported as he took his coat off.

'How the hell can we fix that?' a technician barked.

'OK, OK,' Singh shouted, seeming tired and looking drained. 'Get the computer simulation up.'

'What's the time?' Jimmy asked.

'Sunday, twelve noon,' Singh informed him.

'Time for two more,' Jimmy said with a sigh.

'You were gone forty-five years, Jimmy,' a lady technician reminded him as she closed in. 'You're on borrowed time as it is.'

'Inject me again,' Jimmy insisted. 'I can get the weight off myself, I know how. Trust me, I can do it.'

Ten minutes later, sat with a coffee, his arm sore from the injections, Jimmy said. 'I know where the oil will be found outside of the Middle East. If that could be found early, it might counterbalance the loss of Middle East oil.'

A technician put in, 'I have the web pages we saved; they have all the world's oil, ore and gold, and potential oilfields.'

‘I’ll take it back with me on a data stick, study it, and tap the fields,’ Jimmy suggested.

‘What about The Brotherhood?’ Singh asked.

Jimmy blew out, taking a moment. ‘I developed the Rifles in Africa to clear away the rebels and warlords. If they’re increased in size, then maybe they could be used to fight The Brotherhood. I’ve got the technical data on advanced weapons, invented by the autistic kids; it’s on a disk. And we discovered that the kids injected with my blood - who then go on have their own kids, produce an antibody to Lagos Fever. I’ll experiment with it when I go back. Copy my data-stick and have a look.’

‘You’re way ahead of us now, Jimmy,’ Singh admitted with a tired smile.

‘By a few years,’ Jimmy agreed.

‘No, not just the advance in years, the advance in you,’ Singh pointed out. ‘Your technical knowledge, your political skills. We caught some of the speeches, we saw the things you developed. None of that was in our original brief.’

‘I’m sure that if *you* lived another two hundred years, you’d improve as well.’

‘Incredible,’ Singh noted. ‘You left Friday night, and you’ve picked up two hundred years of experience.’

‘Did they re-invent the stems treatment?’ a technician enquired.

‘No,’ Jimmy answered. ‘But they cracked the blood properties eventually, even improved upon some of it; I’ve been injected with a drug that would baffle you lot.’

Stood ready to leave, Jimmy faced the group, a line of expectant yet saddened expressions. ‘It comes down to an alternate to Middle East oil, then a military solution to the terror groups. If I can nail that ... then we’re there.’ He offered an encouraging smile. ‘Wish me luck. Oh, and enjoy the goodies in the backpacks.’

Ten to midnight

Jimmy landed back in a heap, the clock on the wall indicating that it was ten to twelve. He eased up and dusted himself off, a tired expression offered to the expectant faces. ‘Time?’

‘Ten to midnight, Sunday.’

Jimmy grabbed a chair and sat, the laboratories tabletops littered with coffee mugs. Nothing was said for many seconds, worried looks exchanged. Without looking up, Jimmy began, 'We got the military ready for the rise of The Brotherhood after 2025, but the terrorists did well in Europe, destroying the economy. NATO pulled back from Turkey – as they did here, which caused problems with the Turks - again, many of whom switched sides.

'Europe couldn't be held, but American had the Atlantic and Pacific, so did well enough. China's western provinces rose up, Indonesia attacked its neighbours...' He eased forwards and put his face in his hands.

Lifting up, he said, 'When I sent you the signal I'd already been in Canada almost two years. Texas had broken away – again, it ... it was a carbon copy of what happened here, just later.' He stood and stretched. 'Inject me.'

'There's only time for one more trip,' Singh reminded Jimmy, urgency in his voice.

'I have a few ideas,' Jimmy offered, but did so sounding less than confident. 'When I get there, I'll have plenty of time to think about solutions.'

After being injected with the genetically modified stems, Jimmy retrieved a small bottle of blue pills. 'Super weight loss pills. They were invented in 2025.' Heaving a big breath, he declared, 'This time.'

Singh handed him a data stick. 'The details of the portal controls and frequencies are on there. Even if ... you don't fix things, maybe they could send help here.'

'The last couple of hundred years has taught me to trust no government,' Jimmy stated. 'It would have to be under exceptional circumstances that I'd give this to anyone. The Chinese were very helpful, and the Russians, but at the end of the day they all buckle under pressure – and look after their own. Paul Holton can be trusted, his wife, a few others I recruited. But no government.'

Stood at the portal, backpack on, Jimmy turned and faced the group. With no energy in his voice, he said, 'Wish me luck.'

Goma, 2022, the long hot summer

Despite a wet winter, our lake's water level was down; I noticed it in the mornings. Our rainfall millimetres were down across our region, as they were across the Nile tributaries. Our dams in Ethiopia were low, many still being worked on, and Egypt was asking for Nile levels to rise.

By time spring came around, Egypt was no longer asking - but demanding that Nile levels rise. The West Nile Reclamation Project was going well, clean water production increasing, but production was insufficient for Cairo's growing population. Egyptian politicians had already condemned the Ugandan and Ethiopian dams, but then the sky fell in. Sudan announced a hydroelectric project of its own, and war was on the cards.

Sudan was not part of our group, but we did enjoy cordial relations with them these days. Egypt was not part of our group either, but was an important trading partner. Ethiopia was part of the family, as was Uganda, and any threats against them had to be taken seriously. I sent a note to that effect, but since an Egyptian army would have to cross the vast Sudanese territories first, we were not too worried.

A meeting was organised at the Pentagon building for the interested parties, myself as chairman. Everyone said their piece, politely to start with, but the Egyptian delegation seemed to be from another planet, let alone another country. They spouted rhetoric about the Nile having been part of the ancient Egyptian empire for thousands of years. The Sudanese delegation labelled them as imperialists as bad as America, which caused the Egyptians to walk out.

The meeting continued without the Egyptian delegation. Both Uganda and Ethiopia offered to release a little more water, but the problem was Sudan – and its proposed hydroelectric dam. That dam would take a year or two to build, and would then greatly lower the Nile's level whilst it filled up, thereafter returning to previous levels. Hopefully.

Sudan would not budge, and the situation deteriorated in the weeks that followed, this year turning out to be particularly hot, our own river levels low. Then a bomb went off at a builder's camp near an Ethiopian dam under construction, ten workers killed and thirty wounded. PACT investigated, another bomb going off a week later, initial evidence pointing towards an Egyptian group who called themselves The Brotherhood. Shock waves went around the world's intelligence agencies.

Ethiopian Islamic fundamentalists, also calling themselves The Brotherhood, then set off bombs near Ethiopian oil and gas fields, and we all felt a chill, despite the hot weather. Security was increased, PACT given a firm kick, rewards offered for information. Fingers were pointed at the Egyptians, and the situation deteriorated.

A month later, in June, our new reclamation pipeline from the Nile was blown-up, TV images of kids playing in the escaping water holding my attention for most of the day. Fixing the pipe would be easy enough, but they could always blow it up again. Meanwhile, bottled water supplies fell, prices rising. Disquiet spread.

The Egyptians blamed the Ethiopians for the pipeline attack, despite the fact the Egyptian Brotherhood now claimed responsibility. The Egyptian military was put on alert, its Air Force flying 'training exercises' close to the Sudanese border. The Sudanese responded in kind, their own Mig 29s flying close to the Egyptian border, up against Egyptian F16s. The Egyptians out-gunned the Sudanese ten to one in the air, six to one on the ground, their armed forces more modern, the Sudanese making good use of cheap Chinese fighters – plus Egyptian tanks from the '67 war.

Doubting very much that Sudan would attack Egypt, we concentrated on Egypt. I offered a second pipeline and processing plant, practically giving it away, but that didn't seem to do the trick.

Jimmy had been oddly quiet on the matter, so I called him.

'Do you know what the outcome will be, Sudan and Egypt?'

'Most likely there'll a negotiated settlement, with Egypt offering investment in Sudan if it drops its hydroelectric ambitions. But, a preferred solution would be Egypt pounding the hell out of Sudan, reducing their military and removing the current Sudanese regime. Then ... then you can go in and help - influencing the future leaders, and put a coal-oil power station or two in the country.'

'And how, exactly, would that come about?'

'Use your negotiating skills.'

I gave it some thought. The next day I had a one-to-one with the Egyptian Ambassador to the DRC. 'I've spoken with the Sudanese, and they won't budge unless ... unless *you* pay towards oil-fired power stations in Sudan.'

'We pay?'

'Look, we both know you'll not go to war, and if you did then that war would cost you more than the twelve billion they're asking for.'

'Twelve billion? Dollars?'

I nodded.

‘Tell them to go to hell.’

After lunch I called in the Sudanese Ambassador. ‘I’ve spoken to the Egyptians this morning, and I think you could ask for inward investment towards oil-fired power stations instead of a dam. I think, if you start negotiating around twelve billion dollars, you may get what you need. It’s in their interests, and a war would cost them a lot more.’

The next day, the Sudanese publicly aired the idea of inward investment from Egypt. I had spoken with Abdi the day before, and later that day bombs went off outside the Egyptian embassies in Ethiopia and Sudan. The Egyptian press condemned the request for money, the people up in arms, the Egyptian government – who had actually considered some money – under pressure from the media. A war of words began.

A day later, Egyptian border guards were fired upon and wounded. Egypt moved several companies to the border in response, the press calling for revenge. Abdi’s agents fired on a Sudanese patrol and wounded a dozen men, the Sudanese now moving their tanks towards the border.

Jimmy called for calm, and publicly offered extra desalination for Egypt. We all knew that a new desalination plant would not have much of an effect, and would take a year to get into place. I echoed similar offers, all the time giving mixed messages to the two parties whilst relaying rude messages that were never uttered. I was about to start a war, yet publicly stated that we took no sides in the dispute, a dispute over water.

A week later, Abdi’s agents fired on Egyptian soldiers, well within the Egyptian border. The pursuing Egyptian unit crossed the border, being fired on by startled Sudanese, but also tripping mines placed by Abdi’s agents. The war had begun. I moved thousands of Rifles to the borders of Chad, Uganda and Ethiopia, as much to stop refugees moving south as anything else; the soldiers were certainly not about to take Sudan’s side.

In a massive dawn attack, the Egyptian Air Force bombed Sudan’s airfields, plus the civilian airport in Khartoum. Those Sudanese Mig 29s and Chinese fighters that managed to take off were all shot down, few losses on the Egyptian side, the Sudanese airfields hit with Somali baby EMPs just prior to the Egyptian air attack. With radar’s not working, aircraft engines not starting, the Sudanese aircraft were destroyed on the ground in numbers, control towers demolished.

On the border, Egyptian tanks rolled forwards, engaging Sudanese tanks. Those Sudanese tanks lacked supplies, their re-supply routes mined in advanced, their tanks tripping anti-tank mines as they manoeuvred. Leaving his Presidential Palace, the current Sudanese President's car blew. It was all over by noon.

The Egyptians paused, never having aimed at causing so much damage, and pulled back, the UN urging for a ceasefire. Jimmy nudged Brad, and Brad told Egypt to negotiate – or else!

In a few short hours, Sudan had lost most of its air force, a large number of tanks, its President, but its total casualty figure was less than three hundred. I breathed a sigh of relief, now wishing to get on with the task of rebuilding.

The Sudanese Parliament Speaker assumed control and ordered elections in a month. Working from a list Jimmy had supplied me with, four candidates met with accidents, two appearing to have shot each other. The frontrunner was Jimmy's favourite, and I arranged a discrete payment for the man's campaign.

When our candidate was duly elected I invited him up and laid it on thick - a massive aid package offered, provided he play ball and join our group as an affiliate, not a full member. He was in no position to argue, or to negotiate, his economy in tatters, his people traumatised.

I insisted on greater tolerance for non-Muslims, a less-harsh religious regime, free and fair elections every four years, a maximum of three five-year stints for presidents and independent courts. I gave the man a new constitution.

He agreed - he had little choice, and I adopted Sudan as my next project; to rebuild the nation. CAR went in, a complete survey of ore and oil prospects, Jimmy hinting at a few areas. We paid for the repair to the main airport, but not for the military bases, then dispatched thousand of builders north, our standard apartment blocks soon to be seen in Khartoum.

A hydroelectric dam was off the negotiating table, two oil-fired power stations commissioned, cheap food shipped north by train. And, after things had settled, I was seen as the peacemaker, praise from many areas – even the Arab world.

Life returned to normal, but the terror groups persisted, the odd bomb going off. Jimmy informed me that the groups would never gain enough support, and I lost no sleep over them. CAR found ore deposits worth extracting, even a modest gold deposit. Mines were started, locals employed, fenced-off camps erected.

Within a month we had isolated eleven new areas worth mining, large camps pegged-out, some twenty thousand much need jobs created, revenue soon to be earned for the state coffers. Jimmy hit a spot on the map and said that it would be good for tourism, an area on the Red Sea, a second area in the hills near the Eritrea border. Hotels and safari lodges were commissioned immediately.

By October, twenty-eight new mines had been started, the potential revenue prospects very good for the new Sudanese regime, unemployment falling rapidly. But, being a bit cheeky, I asked if we could put an international air base and port at an isolated location on their Red Sea coastline. They saw no problem, since the base would be both isolated and fenced off.

I commissioned a small port, an airfield inland of it, and sent barbed wire up, miles of it, the American Joint Chiefs paying me a visit as soon as they found out. I showed them the agreement I had signed with the Sudanese, and my design, the men delighted; within a year they'd have access to a port and airfield halfway up the Red Sea, besides Djibouti. Another step towards 2025 had been taken, the ring around the Middle East strengthened, a new place for naval ratings to run ashore and enjoy the Red Sea.

Winter, 2022. The big freeze.

Sat in Goma, it was not easy to appreciate a cold winter in the northern hemisphere. Jimmy went public in October and warned of a hell of a cold spell, one of the worst winters on record. He warned Canada and Russia to make provisions, and for people to stockpile food ready for January.

Our farms in Russia were now huge, the largest independent producer of food in the world. We even produced cereal crops in abundance. I called down the farm directors for a crisis meeting, and we sat about the about the table discussing what we could do. Wherever possible, regional stockpiles were increased, dried foods and canned foods shipped to the towns and cities to be stockpiled, but also to help supply the need for those panicky citizens now hording food.

From Zimbabwe, I dispatched several large grain ships to Europe, the various governments cooperating on storage. We did a hell of a

trade in tinned food that month, trains loaded with our produce trundling ceaselessly to the coast and up to Europe.

In the UK, Jimmy asked that a register of pensioners be collated and made ready, especially for the infirmed or those living alone. Rescue Force UK, and the Supplementals, were kitted out in winter wear, additional helicopters shipped up from Africa. Jeeps were made ready, snow chains for their tires tested. Millions of extra blankets were handed out as the temperature dropped, the Red Cross and Salvation Army handling the distribution.

Huge cargo ships, packed with tinned soup from our region, journeyed north, each vulnerable British pensioner allocated plenty of tins and asked to hold them back for emergencies. The continental Europeans we didn't need to worry about, they could handle a bit of snow. But in the UK, more than a few days of blocked roads led to paralysis and chaos. Two weeks of blocked roads would end all commerce in the UK, and three weeks would have finished off the country. Jimmy now predicted block roads for six weeks, and the British Army was mobilised, Marines brought back from Norway.

An emergency fund was allocated, reservists of all descriptions called up, the police issued cold-weather gear and given some basic training; police stations now stocked tins, powered milk, and fuel.

A week before Christmas the snow fell, and settled, unusual for Britain. But, since Jimmy had predicted it, the bookies stopped taking the traditional bets on a white Christmas. When Jimmy warned that UK airports would be closed through January, ticket sales plummeted, extra snowploughs brought in, the Prime Minister estimating the damage to the economy to be huge.

Christmas day saw British kids playing in two feet of snow, many of those kids never having seen snow, especially in the south of Britain. I was enjoying a warm rain in Goma, a family Christmas, but the girls were grown ladies now, Liz as independent and as stubborn as her sisters, so it just wasn't the same.

On New Year's Eve we celebrated inside the casino, the roof sodden, the fireworks cancelled, but the Brits were under four feet of snow and suffering. Mobile phone masts froze and stopped working, people's dependency on their mobiles highlighted since landlines still worked. Few people in the UK had cold winter clothing, certainly not suitable boots, and getting to the shops and back was a nightmare for them.

Rescue Force helicopters could be seen on the TV news, flying supplies to remote villages and farms, tinned food dropped from

above, the odd windscreen smashed by a tin of tomato soup. But not even Rescue Force could get through the snowdrifts.

At one point I stuck my hands in my pockets and stared at the screen, as one innovate group came up with a petrol tanker flamethrower of sorts. They were seen advancing along the M4 motorway, burning away the snow quite efficiently. Having cleared six miles, they'd used thirty thousand pounds worth of fuel. I shook my head.

By mid January the mood had altered, deaths being reported across northern Europe as the freeze started to bite. By the end of January, the death toll in the UK was around thirty thousand, nearly all pensioners, but most living in urban areas, not in isolated farms. In Russian, whole communities had been decimated in the north due to the coldest snap since records began. The Russian Army mobilised, but there was little they could do.

Scandinavia started to suffer shortages, the UK struggling to get grain from the stores to the bakeries to the shops. Less than half the UK workforce was making it in to work, planes were not flying, the economy suffering. Fortunately, many people worked from home these days, and everyone had a computer pad. Videoconferences were being held, images of people sat in their living rooms, work carried out at home like never before.

By the end of February, people were fighting at the shops for food, civil unrest a growing problem, stores running low. And the death toll was over sixty thousand in the UK, many more due to be found when the weather cleared. Our ships made it to the docks, but getting the supplies inland was an issue.

Rescue Force and military Chinooks took to ferrying tinned soup and bags of grain, and our Rescue Force teams broke open a warehouse stuffed full of the parachute emergency packs. Hueys were soon dropping supplies by parachute, although the bottled water was not appreciated; people had plenty of water to hand.

March saw an end to the worst of the weather, and some two hundred thousand people were now part of the emergency service that set about clearing drifts and moving supplies.

Jimmy gave a broadcast. 'It would be wise for the Governments of Britain and Europe to increase their civil defence budgets, to increase training for a whole range of disasters, and to create extra stockpiles of food and fuel – for a future disaster.'

He had let them suffer more than they should have, just so that the message would be heard loud and clear. As the weather improved, Jimmy publicly made suggestions about future civil

defence readiness, and suitable structures. Each point he raised was now public knowledge, and the UK Government could not fail to implement them, lest they be strung up by the populace.

Fuel stores were commissioned at the coal-oil mines, tinned food and dried food stores, massive warehouses created. They would not be filled yet, but they would be ready. Civil defence training took on new meaning, and included civil unrest training, even weapons training. A reserve force of some fifty thousand part-timers was planned, all to be trained in first aid, fire fighting, crowd control, even basic survival skills. 2025 was in our sights.

Horseback

Cresting a gentle hill devoid of trees, Jimmy slowed his horse with a tug of the reins and a soft call, the three trailing packhorses halting in line. Below him, down the valley, Jimmy could now see a ranch, a few people moving around on horseback, others working near a large house, three large barns behind it. Lifting his gaze, Jimmy figured that he had an hour of daylight left.

Making a choice, Jimmy kicked his heels in and moved down the slope to a point where he must have been in clear view, and halted. Five minutes later, three riders galloped up the gentle rise towards him, slowing to a walk fifty yards away and approaching cautiously. The leader of the men appeared to be in his late fifties, the other two men in their thirties. And they were all armed.

‘Howdy,’ the elder man said from five yards out, but made it sound like a threat. He halted, eyeing Jimmy’s AK47.

‘I’m British,’ Jimmy announced. ‘I was a soldier, and figured I’d join the army again in Canada; there are NATO soldiers up there.’

‘You come a long way?’

‘I was in Africa when the war started. Britain was all gone – I knew that. So I travelled across Africa for a few months, getting the first boat I could, and that boat dropped US citizens in the Caribbean. Since then it’s been a struggle to get here.’

‘Been more than a year,’ the elder man noted.

‘Yes, it’s been a ... long road,’ Jimmy agreed.

‘You can join us for evening meal,’ the man offered, making it sound an order.

‘I have nothing to pay you with, or barter with, but you’re welcome to one of the horses,’ Jimmy offered.

‘I didn’t ask for payment.’

‘I’m not comfortable to sit at your table unless I can give something back. Do you have a few days work for me?’ Jimmy asked.

The elder man took a moment to study Jimmy. ‘There’s no shortage of work around here.’

‘Then I’ll accept the meal if I can pay my way.’

‘Follow us down,’ they said.

With the horses tied off, one of the younger men noticed blood. ‘Your horse hurt?’

‘No, I had a travelling companion, but he was shot a day back.’

‘Sorry to hear that.’

‘He died trying to save me,’ Jimmy said, focused now on the blood. ‘His things are still on that horse, I haven’t been through them yet.’ Jimmy retrieved Diaz’s M16 and ammo pouches. Approaching the elder man, he said, ‘I won’t be needing this.’

‘Thanks, weapons are always useful.’ He pointed. ‘You mind not carrying that AK into the house.’

‘Of course,’ Jimmy offered. ‘He handed it over, a pistol still hidden under his arm. ‘And it’s Jimmy.’

At dinner, everyone wanted to know about Jimmy’s travels, and how the outside world was coping, some twenty people sat around a large table. Jimmy did not paint a good picture, one of nuclear wastelands and roaming gangs.

‘Stay away from towns and cities,’ Jimmy told them. ‘Well away. And ... stay out of Texas, they’ve declared independence – for what that’s worth, raised a militia, and they like to exact swift punishment for anyone they don’t like the look of.’

‘And Europe?’

‘All gone,’ Jimmy said. ‘Hit by the Russian counter-strike. Africa wasn’t hit, but the economies obviously failed, shortages everywhere, lawlessness.’

‘How did you get across Africa?’

‘By fighting one long-running gun battle,’ Jimmy replied. ‘I killed at least a hundred people, lost my travelling companions. I had some gold, and that got me passage on a ship.’

‘Why Canada?’

‘I had a farmhouse in Canada, well – it might still be there, and was thinking about that when I heard on the short-wave radio that a fair number of British Army units had made their way to Canada;

Navy and Air Force. There's a large concentration of your armed forces near Vancouver, and in the Canadian Rockies.'

'You could reach it in six weeks by horse.'

Jimmy nodded. 'That's the hope.'

One of the young men at the table had seemed disturbed by the topic of conversation, and now stared intently at the elder man.

The elder man said, 'The US Army, it's east of Vancouver you say?'

'Yes,' Jimmy agreed. 'A large concentration.'

'Karl here was a soldier, but ... decided he'd rather help out here,' the elder man told Jimmy. 'But I think his conscience has caught up with him, and he wants to rejoin the Army.'

'It's a dangerous trip,' Jimmy cautioned. 'But some company would be appreciated.'

'I know this country,' the young man offered.

'Good, because all I have is an old map,' Jimmy responded.

After dinner, the elder man produced a large map of Montana, giving Jimmy a recommended route, marking it on the map. He also marked a friend's ranch, and signed and dated the edge of the map to show the ranch owner.

That night, Jimmy slept in a bed for the first time in weeks, and even had a hot shower. The next morning, one of the ladies cut his hair and provided a shaving kit. With a few shirts and jeans being washed, Jimmy assisted with a new barn-raising.

Taking off his shirt, the other men stared toward Jimmy for a moment, before everyone got to work. 'Afraid I know nothing about raising barns or carpentry, so you'll have to instruct me.'

'You can help fetch the lumber.'

Jimmy accepted a pair of gloves, walked to the pile of lumber and lifted a long beam, bringing it over.

The men stopped and stared. 'Fella, what did your mama feed you on?'

'I used to work out,' Jimmy said with a smile. 'Where does this go?'

'It normally goes between three of us.'

Two days later, Jimmy was part of the family, the barn almost complete, everyone referring to him now as Mister Silo. Jimmy would be up first, worked all day long, and was last to bed, often to be found reading old magazines late at night, next to the fire with the household dogs at his feet.

Two weeks later, Jimmy felt comfortable, very comfortable. It kept him awake, and at 5am one morning he packed his things and crept out, waking the young lad. Outside, in the cold grey half-light, the dawn yet to put in an appearance, they saddled up.

Mounted now, Jimmy led his horses, and the young lad, from the paddock.

‘You not saying goodbye, Jimmy?’ the elder man called.

Jimmy halted, taking a moment. ‘If I stay any longer ... I won’t be leaving at all.’

‘That’s not such a bad alternative. People here kinda taken to ya.’

‘There are people waiting for me in Canada, if I can find them. If I don’t go ... I’ll spend forever wondering about them – and hating myself for staying here.’

‘I wouldn’t wish that on ya. Take care of the lad.’

‘I’m hoping he’ll take care of me.’ Jimmy kicked his heels and moved off.

At the Canadian border Jimmy was alone, two horses trailing behind. Finding an abandoned car with a little gas, he turned the engine over. From his saddlebags he retrieved several bottles of petrol, pouring them into the vehicle’s tank, soon loading the rear seat with his stuff. The horses were unbridled and let loose, but stood staring at Jimmy. He issued them the last of the feed he had, rubbed their noses and said his goodbyes.

Two hours later he pulled into a farm, tooting the vehicle’s horn. A porch light came on, a man appearing with a rifle.

Jimmy clambered out of the car and straightened. ‘You won’t need that, Robby.’

‘Jimmy? My god...’ He rushed over, a woman appearing at the window. They hugged.

‘Thought you were dead,’ Robby whispered, a tear in his eye. The lady rushed out, a second woman appearing at the window. ‘We’ve got all your stuff here, it’s been ready for ... well, since the war. When will you set-off for the time machine?’

‘There’s no hurry,’ Jimmy told them, hugging the woman. ‘No hurry at all.’

The second woman approached, the others taking a step back.

‘You made it,’ Jimmy flatly stated.

Helen stepped closer. ‘We went to the west coast of Wales as you said, to where the boat was waiting. It was an easy enough trip across to Nova Scotia, the weather good, and then ... then we used the gold coins to get rides across Canada.’

‘And Paul Holton?’ Jimmy enquired.

‘He ... went to try and get his parents first.’

Jimmy slowly nodded. ‘And Big Paul?’

‘Shot dead near Quebec,’ Helen reported. ‘Ricky made it here with me, but was killed fighting off raiders.’ She closed the gap and gave Jimmy a long and passionate kiss. ‘I missed you,’ she whispered into his ear.

‘Then I best have a bath, and you can show me how much you missed me.’

‘How did you get here?’ Robby keenly enquired.

‘Across central Africa, onto a boat to the Caribbean, sailed up to Texas, and walked or rode up here. Fifteen months, so get the damn kettle on.’

2023, An American Tale

I had often heard the term ‘The American Dream’, and wondered what it meant, especially now that the US media circus was reporting that it was under threat - and in imminent danger of disappearing. After chatting to Lucy, who knew everything, we decided that the American dream was a term used by the original settlers from Europe, downtrodden and landless people with no chance of advancement in their countries of origins. In the new territories, land was available cheaply – or free for a while, and farms could be started. People could open a small business and flourish, away from the monarchies and noblemen of Europe that owned most of the land.

The American dream was about self-reliant people wanting to get ahead, about throwing off the shackles of an old feudal class system, about freedom of travel, freedom of speech, and religious freedom.

America hosted the Red Indians long before the first Spanish landed, was owned partly by the English and partly by the French, parts owned by the Spanish through Mexico. But the first group of people that could be called a ‘ruling-class’ were wealthy white folk from Europe, English speaking for the most part, and somehow that same group of people still seemed to think that being a middle class white person made you an American - a proper American. Other ethnic groups were not quite so American.

Watching a debate on a US show one evening, I caught a whiff of the definition of what a true American was. I said to the screen: 'First it's a Red Indian, then a Hispanic, then a black salve, and finally a white person - you tosser!'

The panel didn't hear me, and didn't seem to agree, since they were debating a lack of patriotism amongst ethnic groups, and whether or not it should be tolerated. Yes, the panel seemed to be in favour of something being done about people 'bad mouthing' the United States. After watching for another twenty minutes, it seemed that people who voted Democrat were not patriots; a socialist could not be a patriot, their right to citizenship lessened somehow.

I watched the entire show, feeling a little saddened at it all, the main thrust being that President Brad Sullivan was leading the country towards socialism, and that it would destroy the great American dream. But Brad's plan would not stop anyone starting a business, or buying land, and it would not take anyone's land or livelihood away. What it would do ... would help to provide a safety-net for when problems like Hawaiian quake reared their ugly heads.

After the show, I cracked open a beer, and watched the news on the same US channel. Well, their version of the news. Seemed that Brad was trying to make America a little more like our region of Africa, and coming in for some criticism. I had not heard Brad use such a comparison. Ever.

They threw up a chart of Brad's spending since coming to office, much of which was the emergency aid for the displaced agreed by his predecessor. They cut to a senator.

'The people of my state work damn hard for their money, and they don't see why they should be sharing that in higher taxes, a tax on the rich to give to the poor. This is America, not Russia.'

Well, most of the rich Russians I knew never paid any tax, or if they did it was below five percent.

The argument was a simple one: Americans don't like sharing. Sat there, I wondered how many of those early settlers helped to raise a barn of their neighbours, and did that constitute socialism? After all, they weren't being paid - they had volunteered to help their neighbours.

And the people back then - they paid tax, and businesses paid tax in order to raise and pay an Army. That army then went and shot the Indians, making space for more farmland. The settlers paid their taxes into a communal fund, the government, and reaped the communal benefit of an army. They also benefited from a postal

service, a legal system, prisons and police officers – all paid for from a communal pool raised by taxes, and for the benefit of all.

Nowhere during the TV debate did they suggest that the police should be disbanded, or the army, or schools inspectors, or even the oceanographic service. But where money was to be spent on trying to assist poor people – for the common good of the nation – then the government was moving towards socialism. Raising taxes towards other things was fine, even if the money was misspent. But job creation schemes, homes for the poor, welfare and public hospitals – well, they were just downright communist.

A commentator then came on, labelling Brad as “fucking communist dickhead”, and I had to wonder whatever happened to censoring such language on TV. Since most TV reached people across the web these days, it was very hard control the content.

That following week I watched the same channel on many consecutive evenings, asking Helen and the girls to sit in and to comment. They were horrified as well, simply by the tone, and what US political commentary had become. I decided to act.

I chose the worst three offenders and banned them from Africa, and banned their staff and reporters from Africa, or from attending any news conferences I might give. We knocked their feeds off our satellite, and African housewives could no longer be perturbed by such crap reporting. CNN came calling straight away and I gave an interview in my office.

‘The news channels in question are not reporting the news, they’re making up stories, inventing crap, and trying to present themselves as serious newscasters. They’ve lowered the tone greatly of your news casting, and they’re trying to create a culture of mistrust towards the White House.

‘In reality, they’re owned by Republican sympathisers, and nothing that the White House does will ever be good enough for them. If the Republicans were in power, these newscasters wouldn’t be attacking the various polices, and they seem to think that anyone who doesn’t vote Republican is not a patriot, which is rubbish.

‘They’re also trying to attack President Sullivan as being a socialist. Well, what is socialism? Every country in the world is socialist, because every nation raises taxes then dishes out the money to see that the citizens are taken care off. All American citizens pay tax, and that tax goes to the police and the army. Who in American wants to do away with the police or the army? And who in America wants to vote on how their taxes are divided out?

‘If you fail to address the needs of the poor ... they turn to crime, and then you’ll need more police officers and more prisons. And keeping people in prison for years on end costs more than a few job creation schemes. If you educate the poor, and try to create jobs, you have less crime and need fewer police officers and prisons.

‘Every old Wild West town had a sheriff, and that sheriff was paid by the townsfolk to keep order. They all paid taxes towards the sheriff, a common pooling of money. But no one labelled the sheriff as a socialist.

‘There are some twenty million people in America living in trailer parks, another twenty million in social housing. Their education standards are low, teenage pregnancy very high, and crime very high. The rich people can’t build a fence to live behind, they have to deal with the issue, and ignoring it is not dealing with it.

‘And those poor people are no less American, and they have rights. Your constitution starts by mentioning “the people”, all of the people on not just the rich people or Republican voters. But what these news channels come down to is simple fascism; modern American fascism, and the idea that the Republicans would like to create a one-party state, their party, because they know best and no one else does. That’s how Hitler got started, and that’s how many of the world’s dictators got into power - and hang onto power.

‘I’d like to see the good people of America become more involved in stopping the rise of fascism in the media. Everyone should stop watching these news channels, and start seeing them for what they are, which is simple propaganda. And if the Republican Party has an ounce of decency left they’ll distance themselves from such programmes. I know who owns these particular TV channels, and I’m going to take a personal dislike to the company.’

The next day I did just that, and banned the company’s websites from the African continent, as well as their TV shows. Since they had spent a lot of money in the region, it hurt them. Their offices in New Kinshasa were attacked, the staff having to flee. I found out that we had stock in their company and sold it as a block, knocking the price lower. I then encouraged everyone I knew to sell the company’s stock.

With a nudge of Po and the Chinese, a deal about to be signed allowing the media group into China was put on hold, and that was worth billions. That led to an emissary wanting an urgent meeting, and I accepted a meeting with the man in my office a few days later.

‘Thanks for seeing me,’ he offered as he sat, a young man in his thirties, a west coast accent.

‘Aren’t you a bit young for such a high level approach?’ I curtly asked.

‘No one else wanted to risk coming here.’

I smiled, but forced it away. ‘So what can I do for you?’

‘We’d like to come to an understanding, and to fix ... what’s wrong.’

‘Stop putting shit on the air; that’s simple enough.’

‘We’re willing to look at ... content and direction. Do you have anything ... specific?’

‘Bring back Walter Cronkite.’

‘I ... think he’s dead, sir.’

‘As a metaphor; someone that the viewers can trust, and someone free of political bias. I don’t mind you attacking politicians, so long as it’s fair and unbiased. Oh, and not made up, distorted, or ... you know – complete shit.’

‘It’s a Republican group – strong ties. They do ... own the station.’

‘Then put a line at the bottom of the screen: this is a Republican Party Political Broadcast, not the news.’

‘That ... might take money out of our pockets.’

‘I’ll take billions out of your pocket,’ I mocked.

He took a moment. ‘Well, how do we proceed, if we were to fix that?’

‘Run your normal service for a month, and I’ll watch. I’m not looking for praise for Brad, or bias, just a new concept for American news – the truth. I want nothing more. And I don’t want to hear swear words on the news. Simple enough?’

‘Easier said than done. But, I will try and convey that.’

‘And I’ll resist the temptation to come for you more than I have done already – which is a possibility.’

‘Oh. Can I ... come back, and leave in one piece?’

‘What purpose would that serve? You know what I want, either do it ... or not.’

At 6pm I found Jimmy at the mansion, sat enjoying a cold beer. I sat next to him. ‘Any views on my attack on the US media?’

‘No, you keep at them. But I would have gone for their balls first, then made them an offer instead of going public. You made enemies in the media, and they’re like a bunch of ten year olds.’

‘Fuck ‘em. If they want a war they’ll get one.’

‘You hurt them in the pocket, and that’ll cause them to sit up and take note.’

‘So, Mister Oracle, what is the great American dream?’

‘That’s a bit of a dated phrase, from a time when parts of the world suppressed opportunity and others encouraged entrepreneurs. Now, most of the opportunities are outside of America, with a cheap and well-educated workforce. America missed a trick by not coming here, and not taking over companies in the Far East and India. Those countries are now doing well and beating their American rivals.

‘The Americans will always do well at technology, media and the social arts, books and films, but whatever they invent will be copied and produced cheaper elsewhere. They missed a trick by not grabbing the cheap workforce.

‘And they ignored China for so long that it was too late. If they had been nicer to China early on, entered into joint ventures, they would be reaping the benefits now. They could have bought factories for fifty dollars back then. Now, that factory is a billion dollars – and not for sale.

‘Education standards in America are not falling, but the rest of the world has caught up, so the gap has narrowed. There are more PhD graduates from outside the States now, have been for a decade. And Russia ... their sixteen to eighteen year olds average a few points better than their American counterparts – who all aspire to skateboard, or be in a band.

‘It was America’s race to lose. They haven’t lost it yet, they just haven’t noticed that the finish line is close, and that when they look over their shoulders that once clear road is now crammed with people catching up. In the hare and the tortoise race, the hare got cocky and took it easy – trying to win the military, political and ideological race, when it should have been trying to win the commercial race all along.

‘And you, young man, you’d make a great US President, because you try and make a buck before spending a buck, and you watch the bottom line. You fought a war, a commercial war, and you beat the crap out of everyone else; they weren’t even looking at Africa. What America needs is a President that thinks like a factory manager and a salesman, not a world leader who likes the sound of his own voice. American needs to stop trying to change the world, and start selling to the world.’

‘And what about the future?’ I asked.

‘There’s only one way that America can go, and that’s backwards. That’s not because they’re doing a bad job, but because the others – Indian, China and Africa - have a cheaper and better workforce, more resources and more entrepreneurs.

‘A lot of people criticised American imperialism in the past, but I’d say they were never imperial enough. They should have opened hundreds of factories in India, Africa and Asia. Now those nations sell to America when America should be selling to them.

‘It’s a pity, but American kids want to be famous or in a porn movie, not entrepreneurs. You see, American culture and language gives rise to all the best music, film and literature – but those same creative qualities make the kids want to skateboard instead of study. And they don’t mind large-scale disasters – so long as they look good doing it. They’re so used to watching movies that they live their lives as if there’s a camera on them.’

I nodded. ‘That kid – the other month – killed twelve people and admitted he did it because he wanted the exposure,’ I put in.

‘Yep. Life on TV is not real, but they haven’t figured yet where the off button is. Last week a trader took eight billion from a pension fund, and it looks like his bank may fold.’ He sighed. ‘There are a lot of people whose motto is: live for now, and think only of yourself.’

‘They need to be a little more socialist,’ I quipped. ‘Raising barns on the weekends.’

‘I did that once, in Montana. And to tell you the truth, I didn’t want to leave. Living on a ranch appealed to me; it’s simplicity. You grew crops, raised cattle, tried to survive, and did a little bartering with your neighbours. You know, for the most part my travels through America – after the troubles – were one long gun battle, struggling to reach Canada.

‘But when I passed through Wyoming and Montana I dealt with farmers, and they had a better appreciation of the world, and what it needs. A farmer and rancher knows that you’re as rich as what you can see in front of you, not what the bank can lend you; you count your herd and you know where you stand.

‘I stopped at a few farms, and for the most part they couldn’t do enough to help me – once you said howdy and got past the end of a rifle. I avoided the towns and cities; they were like a bad zombie movie. But the farmers, they saw life and death every day in their animals, and they had a better appreciation for life, and hanging onto it. I’ve always liked farmers, and the simplicity of attitude, and simplicity of purpose.’

‘I’ve been watching the America news more, since I got involved,’ I began. ‘And I caught a programme about teenage suicide, which accounts for some twenty-thirty thousand teenager

deaths a year. What is it that makes a youngster so despondent about their own futures that they'd take their own lives?'

'My theory, is that they watch too many films. You see, we all watch films and empathise with the characters. If you watch a lot of movies where the characters are dealing with life and death issues, then your head is full of those feelings – even though you haven't experienced them yourself. Sixteen year olds have young bodies, they live at home with their parents, but their heads are fifty years old. They say ... been there, done that, got the t-shirt. Thing is, they haven't - they saw it in a movie.

'Back before TV and cinema, kids were wide-eyed and curious about discovering the world. But years of negative imagery kills that in our youth. They know what having a job and family is like before they have the damn job and family; they feel like they've already done it. And that causes the despondency. Been there, done that, got the t-shirt – so what's next? Nothing? May as well end it. The kids today are not better off, they're emotionally damaged by the media.'

That following week I continued to spend hours each day watching the US news. Two kids walked into their school and shot dead a dozen people, a banker walked into work and killed thirty. A second banker stole six billion dollars, and a bunch of teenagers managed to get a crude EMP working, knocking out the electronics across an area a mile in diameter, including a hospital.

I stopped watching the US news, I couldn't handle it any more, and went to visit one of our orphanages; suicide rate – zero. The kids started with nothing, grateful to have a warm meal. They received an education, and they were grateful, and when they left they got jobs and started families, the divorce rate very low.

What had the western world become, where killing yourself, your classmates or your work colleagues was a fun thing to do? Survival was no longer an issue for people in The West, the issue was one of gaining pleasure, more and better than the last experience, something new, a new t-shirt with a catchy slogan. From the roof of the Pentagon building I took in my creation, wondering how long it would be before people here had so much, so much that the only thing left to do was to kill their work colleagues and then themselves.

The Joint Chiefs, and various US military advisors, had become regular visitors in 2024, the idea on everyone's lips being that the Rifles would front the war. The Russians and Chinese also held that view. The Americans were ready and willing to deploy and fight, the Russians less so, the Chinese hoping to stay in barracks.

The various allies conventional armies would not have helped, we all knew that. Using a conventional army in a counter-terrorist campaign was always going to be a problem, as well as a mismatch in problem to resources. The Rifles, plus the non-African soldiers trained and seasoned in Afghanistan, were the most suited, and would take the fight to The Brotherhood.

May, 2024, saw a meeting in the Pentagon building, a secret planning session, the world leaders and their military advisors all present. We all sat around a large table covered by a map of the Middle East, other maps on the wall. Major Big Paul was in attendance, now chief expert on all things counter-terrorist, and a seasoned veteran of Afghanistan and Pakistan.

The meeting started with the US Joint Chiefs detailing resources and availabilities of shiny hardware, soldiers in boots. The Russians detailed their forces in the Caucasus, the Chinese simply giving numbers that could be employed.

Jimmy then took the floor, standing. 'Gentlemen, there is only one thing to consider when planning for a fluid situation – and that is to remain fluid. The toys stay in the box till they're needed. Any movement of military hardware towards the Middle East ahead of time will cause tensions, and those tensions will help to give The Brotherhood support.

'We're already seeing commentators on the Middle East suggesting that we'll move in when the countries are at their weakest - and try and take over, stealing the oil. If our naval vessels turn up in force after the tsunami, then the Arab populations might just believe that we're there to invade, and to hold onto the territory after invading.

'What Paul has done in recent years ... has altered the playing field, and I'm happy to admit that his strategy has changed the playing field significantly; he saw something that I missed. The number of refugees in certain areas will be so low ... that the chances of The Brotherhood rising is low. We could go a decade before they take shape.

'And, if we supply enough housing, food and water, then maybe they won't rise at all. I'll admit, I had been looking at ways to deal

with the uprising, and to deal with them militarily, but missed the simple option of putting food in their bellies and dispersing them. It'll cost a lot of money to repair and rebuild the Middle East, and that will drag the richer nations down a little. But if that money is spent, then we might just get away with it.

'I came back through time to change things, and to fix things, to prevent history repeating itself. If we look at a military solution to the Middle East, then we're all half way to repeating the previous mistake.' He sat.

'There'll be no deployment ahead of time?' the Israelis asked, clearly not happy.

'Are you paying attention?' I curtly asked them. 'A deployment will start the war for certain.'

Jimmy said, 'From the point that The Brotherhood blow up their first oil well, to reaching your borders, is almost a year. With the refugee camps dispersed, that first oil well may not blow up for two or three years. Do you expect us to put soldiers in the desert for three years, when it takes a week to deploy them?'

'We'd like additional military resources,' the Israelis requested.

'Good luck with that,' I told them.

'We'll not deploy ahead of time,' Brad stated, the Chinese and Russians echoing that, and I had to wonder if the Chinese and Russians would deploy at all till their own borders were threatened.

'We have a plan,' Jimmy stated. 'We'll be as nice as we can to the refugees, we'll try and rebuild the Middle East, and we'll meet to discuss The Brotherhood when that first oil well blows.'

I said, 'I have an idea how you can all assist the Middle East, without getting problems from the voters back home. If you invest in our region, we'll divert funds to assist in the Middle East. You can all tell your media that you're not helping. And, just for the record, I'll take a very dim view of those not wishing to help, a commercially dim view in years to come. If you don't help ... you'll lose money anyway afterwards.'

We broke for coffee and to chat in small groups, the Israelis still asking for more resources. I led their delegation to a side room, Ngomo and Abdi in on the meeting.

'Guys, if the Middle East falls apart, you'll be sat at home in the deckchair watching the fireworks, whilst the other nations have an ocean between them and you. If you do anything to spark a conflict, then you're the ones that will be killed first. And we're not talking about a conflict like the '67 war, we're talking about a conflict that will kill every last one of you.'

‘Take a look at the fucking map, guys; you’re an aircraft carrier in a sea of hostile neighbours! If you fire off a few shots first you’ll fucking sink. Now, if – and when – your borders are threatened, I’ll put forty thousand Rifles around you. But those soldiers are not going to sit in the sand scratching their arses till they have something worth shooting at.

‘And extra aircraft and helicopters for you are not going to make any difference, because aircraft and helicopters would be useless against The Brotherhood. As useless as your nuclear weapons will be.

‘I’m going to fix the Middle East, gentlemen. Have faith. But make an aggressive move outside our plans, and you might find no support when you need it. This is a team game, and you’re not the quarterback or the captain.’

Back in the meeting, we kicked ideas around, promises of financial assistance. CAR would lead the way to re-drill Middle East oil, working hand-in-hand with the other nations. Off the coast of Somalia, enough oilrigs lay at anchor to drill a hole right through the planet and out the other side.

The brain-trust kids and the volunteers had been handed the task of re-drilling the oil, and had come up with a variety of ideas, rigs being modified, strange new bits of equipment appearing. They had worked out a plan of action, a mad rush to re-drill the most lucrative wells. Those wells were not as lucrative as others found outside of the Middle East, peak-oil having been passed a decade ago, but they were still important.

One particular invention was a large oil tanker fitted with a huge net-like trailing boom, and a huge ugly distillation plant perched on its deck. Everyone figured that the quake would rupture wells, and that the Arabian Gulf would turn black with oil. They also considered that the quake may rupture rock formations, and that oil may escape through cracks. So this new ship would sail up and down reclaiming the oil just floating on the surface of the Gulf.

With the military meeting over, it’s next session postponed indefinitely, we met to discuss economic matters, trade agreements, even student exchanges, a group dinner in the evening.

The next day, Brad hung around to meet with the volunteer groups, who had now evolved into a global political movement under Jimmy’s careful guidance. The American branch had reached public office, their man in the White House, the other national branches less overtly political, but having an influence in areas that Jimmy nudged them towards.

Worldwide, they counted a hundred million members, and made great use of social networking websites to bring down politicians or to expose dodgy practises by big business, especially the banks. People power had arrived, and on-line voting websites were the norm these days. If your local representative saw that eighty percent of his constituents were not in favour of a bill, the politician would have a hard time voting for it.

The Internet gave instant feedback on many things, and comments on news shows by politicians could mean an end to their careers in an hour. No politician could get away with anything any more, and a new age of morality and decency had arrived in politics in some countries. It had only taken two thousand years, but we finally had a system that prevented elected representatives behaving like politicians. The ancient Greeks would have been pleased with how our democratic systems had turned out. They would have doubted the benefit of involving the hoi poli, and marvelled at the technology, but overall would have agreed that elected representatives do – after all – work for the people.

2025

The New Year celebrations for 2025 were mixed, mixed in that all countries outside of the Middle East celebrated, and those in the Middle East tried to put on a brave face – those that had a few faces left to party. Dubai was a sand-blown ghost town, Qatar returning to the desert already, Kuwait evacuated. Watching the images on the news, I could see homes boarded up, their owners being somewhat optimistic about their potential for return.

In Dubai, the Palm Fronds were the object of attention for a crazy bunch of holidaymakers who wanted to stay in luxury villas right up till the last week. Rescue Force chasers were also out in force, and tens of thousand of people wished to witness the tsunami close up, hilltops in The Emirates now hosting tented cities, plots sold by those local Arabs daft enough to remain.

The area south of Basra had been evacuated, very orderly refugee camps created north of the city. But as I had planned years earlier, we had relocated many of the citizens of this area to apartments to the north, or to Baghdad. Not many sat in self-assembly huts, cooled by ceiling fans powered by small wind turbines. And the camps that

had been created had a limit of ten thousand people imposed by me, the UN and other aid agencies ignored.

Many of the citizens of Qatar now enjoyed their enclave in Somalia, the small area now a gleaming city of high-rise buildings, oil flowing and jobs appreciated. In Angola, Kuwaitis sat in their gleaming enclave, and more than two million Saudis lived and worked in their African outposts. But, against our wishes – yet somehow inevitable, the Gulf State's enclaves hosted large numbers of migrant workers. And, as I expected, the low-grade apartment blocks used by workers were still there, being utilised to house foreign workers.

At the mansion, we welcomed eleven African Presidents, all of them our protégés, and I invited along Major Lobster, now an instructor at the officer's college and a potential future leader himself. Shelly and Lucy worked the crowd and impressed everyone with their knowledge of African politics and local issues. Jimmy turned up with another New Year squeeze, a Rescue Force doctor, and a babe in a cocktail dress. Shelly and Lucy mobbed the new squeeze, as usual, and asked questions.

At midnight, we stood in the garden and enjoyed the fireworks, Po and Yuri joining us after their own parties. At 1am I was stood on the jetty with Jimmy, bowties loosened, buttons undone, drinks in hand.

'It's 2025,' I commented. 'It's ... finally here.'

Jimmy heaved a big breath of warm evening air. 'There was a time when I worried about it. Now ... now I'm beyond that; I've done what I could.'

'We're ready,' I assured him. 'Refugees are spread far and wide. There are more aid workers and Rescue Force staff in the camps near Basra than there are refugees!'

He nodded. 'You've done very well.'

'We ... did very well.'

'No, I kicked the ball into the penalty area and you headed it in. Be proud of yourself.'

I took in the lights of the other mansions, numerous parties going on simultaneously. 'You're only human, Jimmy. You saw a lot, were captured and tortured, and built up a prejudice to The Brotherhood. That's only human. I never went through that, so I can deal with Arabs without hating them.'

'I don't hate them, and I've always wanted to help them, but it's not easy when you've seen what they're capable of.'

'Things OK Stateside?'

‘They’re trying to change the law so that I can’t bribe their politicians so much.’

I laughed. ‘They made the rules.’

‘My lobbyists are the most aggressive, my campaign donations the largest. I also have a lot of the good representatives investing in a fund I created. That – they want banned as well. But for now, the good old dollar is king, and I’m using their own flaws against them. And Brad is still there, so it’s sewn up ... more or less.’

‘And the Hispanics?’

‘It’s settled down, but since Brad took office he’s repatriated five million illegals, which all helps. There are also recent citizens being expelled - if they commit a serious crime within ten years of citizenship. Brad also kicked the Hispanic prisoners out, paying the countries of origin a small fee to take them back. And as for Africans – hell, it’s still a negative immigration number.’

‘A hundred and fifty thousand Americans working here now,’ I proudly stated. ‘Most in mining or oil.’

‘States have finally given up oil and gone nuclear, and coal-oil production is massive now,’ Jimmy stated. ‘Took long enough.’

‘Any thoughts of leaving?’ I risked.

He made a face. ‘No, I’ll hang around and see how it pans out.’

‘Chinese suffering?’

‘A little; their Middle Classes are gaining more power. The leaders warn about the dangers of this year, but still lose ground. We’ll see the first independent party being tolerated next year.’

‘Took long enough,’ I echoed. ‘And North Korea?’

‘Once they reach a certain level of affluence, which is not far away, they’ll join a union with China, no border controls. Taiwan is a step away from that as well, and Japan’s looking towards China instead of America; new treaties being signed every day. I could see six other countries joining a union with China. Without Brad in the White House that would lead to tensions or war, but he can see China breaking apart from the inside.’

‘Been thinking of expanding my empire as well,’ I put in.

Jimmy waited.

‘I spoke to the Saudis about an economic union, also the Iraqis and Iranians.’

‘You’d have the world’s oil sewn up.’

‘It’s the influence I’m more interested in - future influence. We enter into talks with Yemen next week.’

‘They’ll take any deal you offer,’ Jimmy noted.

‘Exactly. But I need to secure them, or they’ll disrupt that region and the shipping lanes.’

‘You’re thinking like a global leader, Mister Holton. And I can remember giving you advice on how to handle a girl in your room.’

‘Ah, those days were good. Looking at the world afresh, looking at the world from the bottom of the pile. Life was simple. Well, you scared the crap out of me and we were dodging the intelligence services – but life was simpler. Back then I used to have baby elephants peeing on my feet in the shower, and sex with babes.’

‘And now...?’

‘Now, Helen is a friend, and bedtime pillow.’ I shrugged. ‘I wouldn’t want to be without her...’

‘But?’

‘Well, it’s been a long time, and we both work ourselves to death. You know.’

‘No, I never settled ... because I knew I would have to say goodbye, sooner or later. And having kids, well ... I’d leave them here and ... go elsewhere.’

‘You consoled yourself with a long list of babes,’ I pointed out.

‘And I needed consoling.’

‘Much consoling.’

‘But I deserved it.’

I nodded, mockingly.

Jimmy raised his glass. ‘To the year that changes everything, and the man who made it all stay the same by changing so much.’

‘Thanks. I ... think.’

Rescue Force. February, 2025.

Descending into Mawlini at dawn, I could see more white helicopters than desert. Stood at the top of the aircraft steps, I put a hand over my eyes and took in the cluttered apron, and the line of white Hueys; some were dated, many a new variant, but none were newer than six years old. And some of these old ladies had been flying a long time.

At the base of the steps I accepted the salute from the honour guard of Rifles and stopped to chat to the senior officers, jumping into a black limo for the short trip around to Rescue Force Africa’s headquarter building. Clambering out with my deputy, I shook hands

with Coup and his team, finally with Mac after he gave a typically mocking salute. They led me inside the new building; air conditioned, clean, and a far cry from the original huts that we found here.

The new command and control centre offered a wall of screens, each four foot square. Some displayed the news, others maps, a few displayed lists of current dispositions. I greeted each member of staff in turn, finding Bob Ratchet.

‘Jesus, Bob, its been a while.’

‘I’m still at it.’

‘What happened to Spanner?’

‘Married a New Zealand lady and settled down in civvy street.’

‘And you?’ I nudged.

‘The missus is here, up the road, and two kids. Our eldest is eighteen now.’

‘You were the first recruits; Ratchet and Spanner,’ I said with a smile. ‘Immortalised in numerous books.’

‘It’s been a long road,’ Ratchet said. ‘1989 to now; thirty-six years this spring.’

‘Seems like forever,’ I commented.

‘You won’t know this one,’ Ratchet said, gesturing towards a lady. ‘She was in the womb when you fetched her mum out of Somalia that day.’

‘Well I’ll be damned. Was it ... Nash?’

She nodded. ‘Yes, you rescued my mother. I took my own daughters to Baardheere a few years back.’

‘Time does move on relentlessly,’ I noted.

‘Have you heard about Tubby?’ she asked, a glance at Bob Ratchet.

‘No?’

‘He retired, then came back, then switched to the Flying Doctors, but crashed a Cessna yesterday and killed himself. He was drunk, as usual, so we covered it up.’

I shook my head. ‘I liked Tubby; he taught me a thing or two about flying.’

I joined Mac in his office, Coup and his deputy sat waiting. ‘So, we all ready?’

‘Seventy-eight helicopters sat getting a tan,’ Mac informed me. ‘Three hundred jeeps set off yesterday, driving up to the naval base in Northern Somalia, from there they by cargo transport to various spots around the Gulf.’

Coup put in, 'C5 Galaxies ready to move the warm bodies, plus a bunch of your 747s.'

'747s?' I queried. 'Stick 'em in a Hercules, make 'em rough it!'

'They're all tough as fuck,' Mac pointed out. 'They could give the soldiers around here a run for their money.'

'I miss the dust and the Hueys,' I put in.

'Aye, well you're a fucking pen-pusher now,' Mac commented. 'And a bloody politician!'

'And you're a father of two,' I countered with.

'No need to swear,' Mac mock complained.

'When I arrived here you had a falling down hut, ten dollars and bottle cap to your name,' I pointed out.

Coup's deputy fetched an A3 photograph.

I held it, and peered at a familiar image, that of the old huts taken from the control tower roof. 'We used to have a fridge on the roof, and deckchairs.' I lifted my gaze. 'What happened to Doc Adam?'

'Killed by robbers years ago,' Mac informed me. 'Somewhere in Chad I think.'

'Family?' I asked, causing a loud a raucous laugh from the men.

'He fathered twenty-six kids – that we know about!' Coup informed me. 'Six of his work for us.'

'Ah,' I let out. 'He was a bit of a ladies man.'

'Rabbit?'

'Stepped on an old mine,' Mac said with a smile. He shrugged.

'You want to tell us the truth about what'll happen after this quake?' Coup nudged.

'If the economies of the Middle East go to fuck, and the people suffer, there'll be wars – and they could spread into a global war.'

The men exchanged looks.

'You got a ... you know, plan?' Mac asked.

'Got it all sewn up, Mac. Don't worry. Besides, if war breaks out you can change back to green, stick your tin hat on and die with your boots on, not in a soft bed.'

'He has a waterbed now,' Coup mentioned.

'Was a time when you slept on a camp bed in your hut,' I pointed out to Mac.

'Aye, well that was before you gracious fuckers appeared and changed my life for me.'

'Jimmy could take you back to as you were at the time if you like,' I teased.

Mac took a moment, becoming serious. ‘When you have fuck all, you worry fuck all. Now ... now I worry all the fucking time, especially about what’ll happen after this bloody quake.’

‘Leave the worrying to Jimmy and me, that’s what we’re here for.’

I flew up to New Palestinian, welcomed on the tarmac by their President. Whisked a short distance along the apron in a bus, I stepped down to four white Hueys, an entire turnout of Rescue Force Palestine, all twenty-six of them. I greeted them all in turn, finding just three women in the group, before sitting in a dated Huey, memories flooding back.

Late for our lunch appointment, I boarded the bus, outriders ahead of us, blue lights flashing. Beyond the airport gates the crowds began, ten deep, cheering and waving Palestinian flags. I waved back. At the Parliament building I walked down to a funnel of Kenyan Rifles, Palestinian police beyond them, and was ushered inside.

The legislators stood and applauded as I entered the chamber, the building and its interior just a year old. Stood at the podium, I noted the sixty faces, mostly men, the various politicians representing small areas of the enclave, broken by uniform square districts. Titles were often: ‘The member for district 12.’ There was a posh quarter to the enclave, nice villas, a middle portion, and the dock area, so you could say that they had a social divide based on income.

‘Thank you,’ I offered, the legislators settling. ‘And thank you for the kind invitation to visit here today.’ I took in their faces. ‘Ladies and gentlemen, there have been many times over the years ... when I worried greatly about creating this enclave. At first ... I thought I would create a few jobs – more for Palestinians outside of the occupied territories – and that the enclave might grow, easing pressure on the occupied territories. But more than that, I wanted somewhere where you could come together and live in peace.

‘But in time my ambition grew, grew into a dream that you may have a separate land, and finally find some peace, and some sense of national identity. Was part of my idea to move you away from the Israelis? Yes, of course. That was not because I wanted you to give up your claim to the land, it was simply because I wanted the two sides to stop fighting.

‘I also knew about the troubles ahead, the troubles we’ll face in a few short days. I knew ... that if you remained in the occupied territories, and there was a Middle East war, that you would be in the middle of it, in no-mans land.

‘In the past four years this colony has grown, and has grown peacefully into the modern and vibrant city that it is today. You no longer worry about water shortages, jobs and Israeli helicopters – you worry about traffic, school league tables, and the daily routine of families. Well, they’re down to you, not me.

‘You’ll be pleased to know that the new rail link will be completed soon, and a widening of the road to Mogadishu. Export of ore should be simpler. And don’t forget, that my original agreement with the Somalis was that you have an enclave five miles by five miles.’ They laughed. ‘Not the twenty-five miles you now have.

‘Ladies and gentlemen. If you want to reward me for my efforts here, then bring as many of your people as you can down here. That ... is my greatest wish. Thank you all.’

The representatives of the districts stood and applauded as I left, the President accompanying me to my hotel. We chatted at length over lunch, new deals and ideas discussed, before I claimed my room and checked my emails.

At 8pm I stepped up to the roof, meeting again the President, many TV cameras and journalists present. ‘You may proceed,’ I told the President. He made a call, the Rescue Force unit mounting up. From the rooftop we could both see, and hear, the Hueys, soon watching them fly overhead and out to sea, heading for Oman via Yemen as the sun tucked itself behind distant hills.

Everyone turned to face the southeast as drinks were handed out to the assembled guests, and I could now see many people on nearby roofs, crowds in the streets, kids faces in windows and on balconies. A distant dull roar signalled that we had dispatched the local RF unit just in time.

From the low hills that backed the enclave came a distant rumble, soon a few black specs on the horizon, growing distinct and into the shape of Chinook helicopters. A ‘V’ formation became recognisable as the rumble grew, five Chinooks in formation coming straight for us.

The first flight passed low enough for us to see their faces, passengers hanging out the back and waving, the hotel roof seemingly shaking as the formation thundered overhead and out to sea, heading towards Yemen and Saudi Arabia. Three flights of Chinooks roared past, normal conversation drowned out, a flight of Pumas behind, soon followed by more white Hueys than anyone had ever seen in one place at a time.

I stood staring up, a silly grin on my face, the sky full of the Hueys in formation, doors open and rescuers sat on the sides. Group

after group passed overhead, some twelve minutes for them all to pass over the hotel. As the last flight showed me their tails, their images diminishing as they headed out to sea, I felt saddened to be not going with them.

The President stepped closer. 'I spent most of my life fearing helicopters, or shouting abuse at them.'

I smiled. 'And now?'

'Now I rejoice that these brave people go to help the countries that will suffer.'

'Progress,' I said.

The beginning of the end. March, 2025.

Stepping into my command and control centre at the Pentagon building, I glanced at the array of screens, news channels from around the world displayed. Thirty people buzzed around the room, some sat behind computer screens, many peering up at large screens displaying a map of the gulf with countries, capitals and certain roads highlighted.

My deputy stepped up to me. 'The last oil well was just capped off, sir.'

'Bloody typical; day to go and they're just finishing off!'

'All CAR wells now online and at capacity, sir.'

'Shortfall?'

'Holding at six percent, the Cubans still not agreeing prices and quotas.'

'It'll have to do. And the Cubans can sell on the open market; we'll work around them. What is the market price?'

'Two hundred and sixty dollars, sir.'

'Not too bad, considering. Electric bus usage?'

'It stands are sixty-two percent worldwide.'

'Europe?' I asked.

'Eighty-nine percent.'

'China?'

'Seventy-five percent.'

'Africa?' I asked with a smile.

'Ninety-two percent, sir,' came back, also with a smile. 'But ... Sweden has just banned all petrol cars, buses and trains – tractors still permitted.'

‘They’re slow, New Palestine achieved that a year ago, so did the Qatar and Emirates enclaves. Stock markets?’

‘DOW Jones is still sliding, sir, down four percent today, but year-on-year is up more than twelve percent.’

‘Could be worse,’ I sighed. ‘OK, how many Saudis in their enclaves?’

‘Two point two million, sir, and just under eight hundred thousand for Qatar, one point four million for The Emirates. Kuwait has tallied at just under a million in Angola, the remainder in Saudi Arabia, as are the peoples of Qatar and The Emirates.’

‘And New Palestine?’ I asked.

‘One point six million, sir,’ my deputy proudly stated. ‘Unemployment at only twenty-six percent.’

‘Not bad, not bad at all,’ I told myself. I heaved a big breath. ‘Basra region?’

‘Evacuated to the north of the city, Southern Iran evacuated.’

‘Iraqi refugee camps?’ I knowingly asked.

‘None are bigger than ten thousand people, the total number displaced standing at half a million. Pakistan reports that they are ready. UN waiting for you, sir.’

I nodded and smiled. ‘Good work.’

In the next room I settled in front of a screen, immediately seeing the UN Security Council at the other end. ‘Can you hear me?’

‘Yes, we can see and hear you,’ came back from the British member, currently the rotating President.

‘Would you like me to go first?’ I asked.

‘Please do.’ They adjusted earpieces.

I glanced at my computer pad, a confirmation of the figures I had just been briefed on. ‘We have less than half a million refugees in Iraq, no camp bigger than ten thousand refugees. There are forty thousand Rescue Force staff in Iraq, so plenty to go around. We also have four thousand Cuban doctors, the Red Cross and the Red Crescent in there, so the people should be feeling pretty bloody well looked after by now!

‘Every refugee family has a hut to live in, we’ve got the medics in tents, and we have spare huts ready. Food is stockpiled, water, and a pack of cards for when they’re bored! Short of that, I can’t think of anything else to do other than to wish them luck. Over to you.’

‘We’re concerned about Pakistan, because few have evacuated from Karachi and the coastal regions. They aim to sit on their roofs,’ the British chair of the UN Security Council stated.

‘Some areas will be hit with a fifty foot wave, so I hope they have high roofs and solid houses,’ I said toward the screen. ‘As well as a pack lunch to keep them going till the water level drops.’

‘In the north, they’re sleeping outside, but it’s cold for them. I’d guess that some will stay indoors tonight.’

‘It’s due at 9am sharp, Gulf time, so they should be up and about and stretching their legs,’ I commented.

‘And CAR?’ they asked.

‘We have thirty oil rigs and a hundred and sixty ships waiting to go back in, which will take three days to get there towing the rigs. That’s fine, because Jimmy says that the tsunami will slosh backwards and forwards for two days at least.’

‘There are still people in Dubai, also on their roofs, some up the tall towers.’

‘That’s down to the Dubai authorities. We can’t shoot people or chase them around an empty city,’ I angrily stated. ‘I’m not risking the lives of good people to chase after idiots!’ Calmer, I said, ‘There are Rescue Force helicopters in the area. Maybe ... maybe if a few buildings survive the people could be picked up.’

‘Anything left to do?’ they asked.

‘Sit and wait, then start Operation Bucket and Spade.’

Some of the council members smiled. ‘It’s Operation Clean-up – officially.’

‘Not down here it isn’t,’ I said with a smile.

‘And the African armies?’ the Chinese member enquired.

‘Trained, equipped, ready. We have a hundred and eighty thousand Rifles to call upon, sixty thousand former members under fifty-five years old, sixty thousand police reserves trained to soldier, and two hundred thousand regular African soldiers – for what they’re worth.

‘But I don’t think they’ll be needed for a few years; if at all. We’ve moved out most of the refugees, we’ve built apartments in the north of Iraq and Baghdad, and they have electric buses and cars, solar panels and wind turbines on every blood roof. Most of the citizens of Iraq can’t remember what an electricity bill looks like! And Iraqi unemployment is lower than in the States.’

‘Thanks for that,’ the American council member offered.

‘How are you ... financially?’ the British member asked.

‘Coping, so don’t worry about it. And the special reserve – we haven’t touched that yet.’

The British council member said, ‘The Israelis will move into the occupied territories tomorrow.’

I took a moment, and heaved a sigh. ‘It may sound wrong, but I agree with what they’re doing. The Palestinian population has reduced by half. If the Israelis sweep through and disarm everyone left, there’ll be less trouble. Hell, there’s been less trouble in the past two years. And if they expel those with Jordanian passports I’ll help support the displaced in Jordan, and if they expel others for weapons offences or any excuse they like, we’ll welcome into New Palestine.

‘Peace means more to me than that piece of land, and if the Israelis administer it – as they used to – then maybe it will be better, maybe they’ll harass those remaining and nudge them out. Either way, Palestinians are living in peace in my enclave, which is now twenty-five miles long and eight deep as of last week.’

‘We’re not going to condemn the Israeli move, but the wider council will,’ they stated.

I offered the screen a big shrug, my hands wide. ‘Like I said, I don’t care. And I have a party to go to.’

‘We heard. Why the celebration?’

‘We’re celebrating all the hard work of a lot of people, me included.’

‘Good luck.’

‘To us all.’

I cut the transmission and called Bob Davies in Mapley. ‘You awake, Bob?’ I asked as the screen came to life.

‘Not much to do now, not till tomorrow. We been using the software to run simulations over and over, we’ve triple checked supplies and dispositions. I’m going to have an early night.’

‘You are getting on now.’

‘Aren’t we all!’ Bob quipped.

‘I’m a young sixty-one!’

‘You look thirty something, so you’re doing something right.’

‘Swimming, sunshine, and a clear conscience, Bob. Besides, I was injected young, and that helps.’

‘Jimmy seems to have taken a bit of a back seat to you,’ Bob noted.

‘I’ve finally grown up and matured into the son he never had, or would want!’

Bob laughed. ‘Where is he?’

‘On his way down here. Bit of a party tonight, to relieve some of the stress.’

‘Well, I’m sure that we’ll speak tomorrow.’

‘Have a good rest tonight, old man.’ I touched the screen and it blanked out.

At the mansion I welcomed Presidents Kimballa, Ngomo and Abdi, Jimmy arriving with a new young lady, a Croatian model that was all legs. I felt a small pang of jealousy.

‘Are we ready, Paul?’ Abdi asked.

‘We’ve done more than anyone could have asked of us,’ I said, and I meant it; I felt drained.

When the doorbell rang again it was Solomon, the new President of Zimbabwe and the former Army Chief. ‘Mister President,’ I offered.

‘Mister President,’ he said with a tip of his head and a huge toothy grin.

On the patio, I approached Jimmy, leading him to the end of the garden and onto the jetty. ‘How we looking?’ I asked.

‘You tell me, you’ve been the force pushing this all along.’

I took in the lake. ‘We’ve tackled the refugee crisis, and beaten up the Saudis and Iranians over the post-quake oil targets. CAR goes in and takes it, and they get a cut. Beyond that, I’m fresh out if ideas.’

‘You know about the Israelis?’

‘Yes,’ I said, letting out a breath. ‘I don’t care really, I hope they kick out all the Palestinians.’

‘They should have done that in ’67, saving sixty years of conflict. How many more can your enclave take?’

‘At least another million; it’s getting to be like New York down there – all tall towers. And Abdi doesn’t care how much land we use, he’s taken the Palestinians under his wing. There’s a Palestinian embassy in Mogadishu.’

‘You altered global politics with the enclaves, Paul, and they were something I never considered. And they’re working well; we’ve not had any problems. You’ve also reduced the refugee numbers, something I failed to do. Part of me even wanted to leave them there.’ I faced him. He added, ‘I saw what they did and ... and that’s hard to let go. You want to - you know it’s right, but it’s hard to let go. Old prejudices die hard.’

‘You recruited me and trained me, so if I’ve done a good job you get some credit. Not much, but some.’

He smiled widely. ‘You’ll do well when I’m gone.’

‘Any ... thoughts on that?’ I nudged.

‘I’ll wait a year or so to see what happens, then decide. Oh, American lab came up with a drug that’s even better than the stuff

kicking around my system. One injection at aged twenty and you could live to be two hundred or more.'

'The Americans are struggling to pay their pension bill now, let alone with people living to be two hundred!'

'The bill that was passed means that by law, anyone injected voids their pension till they show signs of slowing up, and that will cause problems anyway. Even when people do slow up they'll live another forty years.'

'French reckon they have SARS licked,' I put in.

'I have my doubts,' Jimmy said.

'Yemen is worrying me. Again. They're across the water from New Palestine and on life support from the Saudis. I might conduct an ore survey and see if I can mine over there, just to help.'

'Oman will stay peaceful after the quake. Help them where you can.'

I nodded, noticing a fish jumping clear of the water. 'Shelly gets married in a year, and she's talking about moving back to the UK.'

'She's supposed to go into politics.'

'Politics? Shelly? Lucy is going into politics.'

Jimmy made eye contact and shook his head.

'No?'

Liz ran up, my youngest now up to my shoulder. 'Uncle Jimmy, they're asking for you,' she politely stated.

'First things first.' He pointed. 'You see that boat approaching.'

We both looked, no boat approaching, Liz shoved into the lake a second later with a yelp.

Jimmy said, 'Educate your young daughter, not to ask visiting Africa Presidents if they're *well hung*.'

'She didn't?'

'She did,' he said as we walked down the jetty, Liz shouting abuse after him, a colourful choice of phrase for a ten year old.

The party went well, soggy daughter aside, and it was good to relax and pat each other on the back after many years of hard work. We had largely ignored the rest of the world and proceeded as we had wanted to. Various governments came up with plans and proposals, but I did it all my way.

When the dawn arrived I was already awake, soon in the situation room and glued to screens - along with everyone else on the planet. At 8.45am the world held its breath. It was Saturday, and images arrived on the screens of empty streets in Asia, in Africa, and in particular in Baghdad and Syria.

Ten minutes later an alarm sounded, a particular screen displaying the quake pattern. Jimmy arrived a minute later and sat next to me, having seen the show before. Live-feed cameras showed dust clouds rising from Northern Pakistan, followed by images from Southern Iran.

‘That’s just the warm-up,’ Jimmy said.

We focused on the screen displaying the quakes vibrations, the line now settling. It spiked, settled, then spiked again, now much larger than the previous output.

‘Right now, everyone in southeast Iran is on their backside on the floor. That jolt would have lifted them a few feet off the ground.’

An image appeared of the abandoned Palm Frond houses in Dubai. The sand surrounding the houses had gone, and the houses themselves – luxury villas worth millions – started to sink.’

‘Liquefaction,’ Jimmy said. ‘They were built on compacted sand. How stupid was that!’

‘Look!’ someone shouted, the main screen switch to the Palm Fronds. ‘The water is going out!’

It didn’t stay out long, rushing back in and rearing up. The image switched to one from the tallest tower, a live satellite link, and one of many being beamed out today. The giant wave boiled itself up into an angry monster, and as with Los Angeles turned the colour of sand. It enveloped the Palm Fronds, making the villas look tiny.

‘There!’ someone shouted, rushing forwards and pointing.

A car could be seen driving down the main access road, away from the wave. The wave rushed forwards, the camera still showing the car speeding away.

‘They have nowhere to go,’ Jimmy stated.

Another image seemed to be on the roof of a two-storey house. From that angle the wave appeared to be six or more storeys high. The image died quickly. From the tallest tower, the boiling wave front moved forwards. A tower block took a hit, the water swirling around it, the building slowly collapsing backwards.

‘That was a twenty storey building,’ Jimmy noted.

The camera fixed to the tallest tower shook, the image blurred, then lost. Another view, from an aircraft, showed Dubai like a street map, the water moving across like a beige coloured blanket being pulled across the city.

Images from Kuwait City appeared next, the city’s landmark towers in view from a point a mile inland. The water came at the city side on, moving buildings off their foundations as it progressed.

‘Call up the Shatt al Arab waterway,’ I requested.

An image appeared of a point near the Kuwaiti border.

‘The water level has dropped,’ I noted.

‘Not for long,’ Jimmy suggested.

We could see a grey line on the horizon, getting larger, soon filling the image. Even though we weren’t there, the fear in the room was palpable, the camera image soon lost. Another appeared, that of the top of our desalination plant. We waited.

The image came with sound, and we could hear a roar of wind picking up. Defences had been dug, numerous high sand barriers, concrete barriers near the plant itself.

A rolling wave of sand hit the first sand barrier and bounced high into the air, hit from behind a few seconds later. A second wave hit the second sand barrier and again burst upwards. But as we observed, it seemed to lose momentum, trickling through the final barrier.

‘Our beach hotel will be hit in four hours or so,’ Jimmy remarked. ‘It’s full of tourists, but they’ll be on the roof. Afterwards, or tomorrow, they’ll help clear the sand out the restaurant.’ He tipped his head, leading me towards the door. We climbed to the roof garden and ordered coffee and doughnuts.

‘So what now?’ I asked.

‘Now, we wait. We rebuild the Middle East where we can, and ... and we wait, and we hope. And, in a few short years, my knowledge of this place will end. After that ... well, its down to you, and others.’

‘You said there’d be a final battle.’

Jimmy took a moment, taking in the view. ‘Sealed documents will be given to you after I leave. Worry about it at the time.’

‘Should I be preparing for it now?’

‘No. Now ... you have at least a year, so try and enjoy it; don’t burn yourself out.’

2035. A long voyage

Jimmy had been gone four years, but I received a coded email and prepared for his arrival. A plane was sent out to Fiji, Jimmy’s sailboat docking after an extended voyage.

He hadn't endured much in the way of hardship, since he had built a luxurious pad in a cave many years earlier, and the lady visitors had been most pleasing on the eye – I received images. The cave offered all modern conveniences and allowed a passive link to the web; Jimmy could see what was going on, but could not be traced.

As with my memoirs, his were now finished - including details of trips to other worlds, and I was sure that he would beat mine up the eBook charts.

Leaving my cabin, my dissertation on its way to the editors, I entered the large galley and sat next to Lucy, her daughters stuffing their faces, a Holton family trait. And no sons produced by either Lucy or Shelly so far.

'Mum was on,' Lucy commented as she cleaned up the girl's messy lips.

'Where is she?' I asked.

'New York, at the UN.'

'Perfect. Jimmy's flying in to San Francisco tonight.'

Lucy snapped her head around. 'He was here all along then,' she said, giving me a disapproving look. 'Not back through time.'

'He wrote his memoirs, sat in the sun, did a little sailing.'

'And now?'

I took a moment. 'And now he'll be going back.'

Lucy appeared saddened, and she would not be alone when the news broke. 'He might not survive,' she mentioned.

'It's his choice.'

'Do you think he'll ... go on to other worlds?'

'No, definitely not. He'll ... end it if necessary.'

'He could stay here,' Lucy suggested as she tended her kids, the girls now four and five.

'He knows what he's doing, and it's his choice.'

'When do you go back to work?' Lucy asked me.

'Two weeks or so, but I've kept up on the issues.'

'And mum?'

'She's happy to stay as deputy to the UN Secretary General for now.'

'The man's a fool; mum does a better job of it.'

'You may think that, but I could not possibly comment,' I said with a smile.

'Shelly's in New York already,' Lucy mentioned.

'And...?' I nudged.

Lucy made a face. 'She'll go back to the UK and run again for Prime Minister.'

'And...?' I pressed.

'They're animals; the MPs and the press. She's flogging a dead horse.'

'She has a calling, as you do. Well, it's a bit of a mixed up calling for you both; she was the scientist, and went into politics, and you studied economics and politics, and became a scientist. Go figure.'

'You and mum don't spend a lot of time together these days,' Lucy thought she'd mention.

'We're not seeing other people...' I let float.

'If you asked her, maybe she'd quit the job and live in Goma.'

'What I'll do ... is respect your mother's wishes. Besides, she's doing a good job of keeping an eye on the fool she works for.'

In the hours before we docked in Bermuda I watched the news, images of Jimmy in Fiji, waving as he boarded the plane. Seemed that all of the police in Fiji had turned out, as well as all of the citizens.

Picked up at the harbour, I was whisked towards the airport with Lucy and the kids, a large police escort, tourists stopping to snap the convoy. At the airport I boarded Africa II, an old converted 747XP from 2026, and we headed north towards New York as Jimmy headed northeast towards San Francisco.

Arriving at our hotel in New York, I found Helen already in the room, a meal thoughtfully ordered in advance of my pending arrival.

'For me?' I mouthed, Helen on the phone.

She nodded, and I sat at table to tuck in, Helen finishing her call and sitting opposite. 'Jimmy's due to land in San Francisco soon.'

'He's probably got a tan, and an old salty-dog beard.'

'He emailed the book, but some parts are coded to just you.'

I considered that for a moment, then tucked in. 'Lucy was hoping you'd go back to being more of a housewife in Goma.'

'Had that from Liz the other day,' Helen put in, grabbing some toast.

'And how is the little darling?'

'Pregnant.'

'Liz? Is pregnant?'

Helen rolled her eyes. 'Drunken party at college, a work-up to graduation.'

'Do we know who the father is?'

'She says yes, but I have my doubts.'

‘Bloody marvellous. I always figured Shelly would be pregnant before fifteen, and she had kids at thirty!’

‘Well, Mister President of Africa, we’re going to have a single mum in the family; a bit of gossip for the press.’ She took a moment. ‘Do you know what Jimmy will do?’

‘He’ll go back. I’ll meet him in Canada day after tomorrow. Are you ... free?’

‘I’ll move things around. Be nice to see him before he goes.’

‘He felt a little useless after 2029, not knowing the future,’ I mentioned. ‘Too used to being able to call it.’

‘They love him none the less. And if people know that he’s going there’ll be a crowd in Canada.’

‘The Canadian authorities and US military will seal the area; they’ve promised not to try and interfere when the portal opens.’

‘They wouldn’t dare. But I heard that NASA received something from Jimmy.’

‘Yeah?’ I puzzled.

An hour later we met Shelly, now the Member of Parliament for Monmouth for five years and leader of the Labour Party in opposition, the British elections a year away. She was good at attacking the incumbent Prime Minister, her wit and sarcasm coming from me. She was also the best-looking Member of Parliament by a long way and used her smile to open political doors. A little flirting went a long way with crusty old back-benchers in the commons.

In the old New York nightclub, still going strong, we booked a side room and ordered Indian food.

‘Jimmy going back?’ Shelly asked.

I nodded.

‘You could just kidnap him and hold him here. Or we could ask the Canadians to bar him access,’ Shelly suggested.

‘We’ll all ... respect other people’s wishes, as we did with yours.’

‘I went into politics, father, not a dangerous alternate dimension!’

‘I don’t know, I think the House of Commons qualifies as being full of people from another planet,’ I quipped.

‘Mother?’ Shelly called, wanting some backup.

‘Yes ... child?’

‘Don’t *child* me, old lady,’ Shelly retorted.

‘Old lady?’ I repeated with a grin. ‘Your mum doesn’t look a day over thirty-five.’

Helen gave a look, now sixty-nine years old, but not looking more than forty. ‘We should buy something for Jimmy to take back.’

‘Warm coat?’ I sarcastically asked. ‘Some food?’

‘I think he’ll travel again,’ Shelly suggested. ‘He’ll spend a few days or weeks back, and travel.’

‘No,’ I said. ‘There’s ... something you don’t know, and I’ll explain it later. But ... no, he won’t be taking a few days or weeks to think about it.’

Helen and Shelly stared at me. ‘Will he be in danger?’ Helen asked.

I nodded. ‘Some, yes. But he has an idea of how to ... be in less danger.’

‘He should take an army back with him,’ Shelly suggested.

‘Limited energy on the portal, so limited time,’ I explained. ‘Just two minutes. Well, minute and a half actually.’

‘He could still take someone back,’ Shelly suggested.

‘They’d be in danger, and probably stuck there,’ I pointed out.

‘Plenty of people would volunteer, even knowing the risks,’ Helen insisted.

‘Yeah, well you take it up with him.’ I told her. ‘And ... good luck on persuading him.’

I gave a quick interview about Jimmy’s return, where he had been, but I made no mention of where he was going. In San Francisco, Jimmy organised an impromptu press conference at the airport.

‘Ladies and gentlemen, I’d like to remind you that it’s my birthday next week, and that I’ll be two hundred and seventy six years old. It may not be easy for people to understand how I’ve lived so long, or where I’ve been, but I have written it all down. That story, the story of my life, will be released in the years ahead.

‘Paul Holton has also written his life story, and both books with probably be released around the same time. His book looks from the perspective of being recruited by me, mine looks from my own recruitment to go back through time. They are very different stories.’

‘Where have you been?’ they asked.

‘I needed a break, a holiday to recharge my batteries, and to think about what I do next. I’ll be meeting Paul and his family in Canada for a reunion, and after that I’ll decide on my future. As for where I’ve been, I was sailing around the Pacific. Thank you, I’ll make another speech in Canada, but I request that people do not try and follow us there, we need some time alone.’

I arrived at the hotel in Canada the next day, Helen, the girls and their husbands, and all of the grandchildren in tow. Shelly spotted a

tanned Jimmy coming across the foyer and ran across, a big hug given, her husband holding back.

Easing back but holding onto Jimmy, she asked Jimmy, 'Are you going back?' He didn't answer, hugging Lucy and Helen in turn, finally picking up Liz and swinging her around, a yelp issued.

Jimmy gestured us towards a table, drinks and food ordered, the grandchildren puzzling the big stranger. 'In answer to your question, yes – I will be going back. I have ... unfinished business.'

'You could be killed,' Shelly pointed out.

'I could have been killed many times over the years,' Jimmy reminded her. Only now could I see flecks of grey hair above his ears, a few extra lines around his eyes.

'This is different,' Shelly pointed out. 'It has a certain ... finality to it.'

'Not necessarily,' Jimmy said with an enigmatic smile. 'There are ... possibilities.' He faced me. 'After I'm gone, documents will be released to you. NASA has already had a few.'

'They'll build a time machine?' Lucy asked. 'It's been outlawed!'

'And rightly so,' Jimmy agreed. 'But research is OK, because some day soon you may wish to ... look into that area.'

I knew what he was talking about, but the others didn't. They believed that he had travelled back many times, despite the lack of logic to that premise, and the resultant paradoxes that would have been created. As far as most of the world was concerned, it was still a mystery.

We got off the topic of Jimmy's imminent departure as Jimmy asked all about the family gossip, jobs, and Liz's contraceptive habits. We sat there for two hours, drinks and a meal served. When the grandchildren needed tending, just Jimmy, Helen and myself were left.

'It's been a long journey,' Jimmy said with a sigh. 'And you'll understand more when you read my book.'

'Two hundred and seventy six,' I said. 'That took some doing.'

Jimmy shrugged. 'You face each day, and you try not to think too far ahead, or to fix too much in one go – or you'd stress yourself into an early grave. Every time you go to sleep, the wonderful human brain washes away a lot of the stress, and you wake up and start again.'

'I've been injected many times, and my brain cells are not the same ones I had at the start; there are real gaps about my childhood - things I can't remember. When I came back I studied old photographs and added new memories, listening to my parents

describe old holidays and trips. Each time I came back I had to study a great deal.

‘My bones and teeth are still the same, at least some of it is, but every other part of me is new. I am, technically, a new person – biologically speaking.’

‘Back at the apartment in London, 1985, you were always reading,’ I commented.

Jimmy nodded. ‘I was re-reading human history, just to be sure. But the good thing about the stems was that my brain was like that of an inquisitive teenager; my capacity for gaining new knowledge was good. Old brain cells, with images of my youth, were being replaced by earth history, technical facts, and geography.’

‘But in the last four years I’ve forgotten quite a bit. Writing the book, I had to stop and research my own youth. I couldn’t picture the school I attended, so I found it online – then a few memories came back. I even found stories on the net of people who knew me as a kid, and that helped. But, for the most part, they could have been anyone, I couldn’t have proved them wrong.’

‘I have a hard time remembering my youth,’ Helen admitted. ‘I’ve stuffed my head full of UN facts and pushed the other memories out.’

‘What are your plans?’ Jimmy asked her.

‘I might stay where I am another year, or accept the role of head of the UN for Africa,’ she replied.

‘Why not go for UN Secretary General?’ Jimmy nudged.

‘They’re a squabbling bunch of kids,’ she said. ‘If I want something done, I call Paul and work around them.’

‘If you’re the Secretary General – you can still call Paul,’ Jimmy pointed out. He slid his gaze across to me. ‘How’s GDP?’

‘Steady,’ I replied. ‘It’s found a straight line on the graph. Population growth is down a bit; it’s as you said, educated Africans in good jobs have fewer kids. And since they know they could live a long time they hold off starting families. Gotham City is known as couples city.’

‘Population?’

‘Hundred and ten million for the DRC now,’ I proudly stated. ‘Ten million foreigners.’

‘And South Africa?’

‘Boom and bust,’ I lamented. ‘Boom and bust. But they are closer to Brazil now, a few new trade agreements.’

‘My tree planting projects in Africa and India are going well,’ Helen put in. ‘Good forestation in most places. They say it’ll alter the world’s climate a fraction.’

‘Found coal in Tibet,’ I mentioned. ‘Gearing up mines now.’

‘All sounds good, and it sounds like the planet is in good hands,’ Jimmy commented.

Helen shot me a look. To Jimmy, she said, ‘You don’t have to go.’

‘Yes, I do, there are people waiting for me.’

‘I still don’t understand how you can go somewhere,’ Helen complained.

‘Your dear husband will explain it after I’ve gone. Anyway, tonight I’m going to eat plenty, and drink plenty, because there’s very little of each where I’m going.’

I stood with Jimmy in the field, the weather cooperating with a crisp spring morning, dew on the grass. At the edge of the field the security detail stood waiting, curiously watching us, and wondering what we were up to; I had not briefed them. They had already erected a small table and chair set for us, food and drink on it, plus a tent in case it rained.

Jimmy took out a small device, switched it on and checked the setting. ‘They’ll detect the signal through a micro-portal that is always open, just a few molecules wide, then take a guess as to where it’s coming from, narrow it down, eventually to within a few weeks or so. Then they’ll open larger micro-portals a few times a day, every day. Well, it’s every day here - but every minute over there. If they get a lock on they’ll open the portal and ... off I go.’

‘So it could take twenty-four hours?’

‘Yep, hence the table and picnic hamper.’ He set the device and placed it onto the damp grass.

Stepping back five yards, we sat and poured drinks from the thermos, staring at a piece of air in the middle of a field.

‘This is easier at night, because the portal’s fucking hard to see in the daylight,’ he said. ‘Once, well - twice before, you were here with me, seeing me off. It was a cold and wet night, and we’d given the security detail the slip. We pinched a helicopter and flew over the border, bought a car for cash and made our way here.’

‘And if it doesn’t open?’ I asked, stretching out my legs.

‘That’s a possibility actually. They may have run out of time on the other side.’

‘Run out of time?’

‘It’s all in my book. Just remember ... for the future, that between here and there ... time has no meaning. It’s all relative.’

I stared back, a puzzled frown forming.

‘You’ll understand after reading the book.’

An hour later, the morning warming up nicely, I took a layer off. ‘Pleasant enough spot.’

‘It is,’ Jimmy agreed. ‘And an image I’ll take back.’

‘There are a few nice models you could have spent your last few hours with,’ I mentioned.

‘They don’t have your charm and wit,’ he quipped, focussed on the field. ‘Besides, we’ve been at this a long, long time. And this field ... mark the spot and don’t mix it up.’

‘Mix it up?’

‘You’ll understand –’

‘When I read the book, yes.’

We enjoyed a leisurely lunch, the security staff sat watching us from the edge of the field, then opened a bottle of wine.

‘When I go, I’ll have to go quickly, so ... you know,’ Jimmy said.

‘Yes, no hugs or long goodbyes; it would be embarrassing.’

‘You did it, Paul, you fixed it,’ he said, suddenly serious. ‘Africa, the enclaves, the refugees, and New Palestine. On top of it all, you brought some semblance of peace to the Middle East ... and adopted the region it as you adopted Africa.’

I stared across the field. ‘I like building things. And I like spending money.’

‘And that was the answer all along,’ Jimmy noted. ‘And I missed it.’

‘Not really; you just missed the last five percent, the rest you got right, perfectly right. And to do it over and over? I couldn’t have done that, and I doubt few could. And Doctor Singh was right - the military would have never pulled it off. They’d just have started the war earlier.’

‘Definitely,’ Jimmy agreed. ‘The last peice of the puzzle was a little tender loving care. You had it, but I held onto my hatred of The Brotherhood. You managed to see the people before they became terrorists, and to see some good in them.’

I nodded. ‘I wanted to thank you, for ... Helen and the girls. I could have easily just been a playboy.’

Jimmy now nodded himself. ‘It gave you a stability.’ He faced the field. ‘Over there ... I have ten children, all just a few months old.’

‘The ladies you made pregnant to get the stems,’ I stated. ‘And the chocolate in the backpack?’

‘Gifts, for people who’ve not seen chocolate for a long time. Well, I took some back the last time.’ He stood and stretched his back. ‘I still remember the look on your face when I told you who I was.’

‘You scared the crap out of me, then played to my weaknesses by telling me I’d be rich. God, I was useless in those days.’

‘You were twenty something, I was two hundred and something, so it wasn’t a fair comparison.’

‘You were so cool, like the big brother I never had,’ I said with a smile. ‘But I hated you for that visit to the orphanage. God it was a rough place back then. And when you told Mary you were in the Second World War – I believed that!’

‘I fooled a lot of people,’ Jimmy said, staring at the distant hills. ‘Including my own parents. And I killed my other self five times. This time around I was tempted to inject my parents and keep them alive but ... but I would have found it hard to explain things to them, including murdering their son. I just ... just wanted to have the option not to worry about them while I was worrying about everything else. It’s something that has plagued me for a long time.’

‘My mother didn’t want the stronger drug, she wanted to go,’ I said.

‘Living a long time is not such a blessing, not when you carry the emotional baggage around with you. If I thought I’d live forever I’d probably blow my brains out.’

‘Spoken to Brad?’ I asked.

‘Sent him a note, he’s still running The Ark. And he and Hardon Chase made all the difference. That conversation I had with Chase in the Oval Office - that was a turning point; I focused him more on how he would be remembered than on his term in office itself.’

‘He stepped down from the Senate three years ago, still active with The Ark,’ I put in. ‘Brad’s second term was touch and go. We had the right wing on board, but the Democrats were at his throat.’

‘You spent a fortune in Mexico, and that helped,’ Jimmy noted as he stood staring across the field. ‘You found ore that even I didn’t know about.’

‘It was a tried and tested routine,’ I said. ‘And CAR, they could sink a borehole in a day. These days they use lasers and water cutters; they go through rocks like a hot knife through butter.’

‘How’re your bio-fuels?’ Jimmy asked.

‘We have good production levels, but they’ll never match coal-oil or nuclear. It’s not much cheaper than solar power or wind power. Besides, the need for liquid fuels is waning.’

‘There’s something you should know. The third time around, when Helen first came to work for me, me and her ... well, we were lovers for years, and she made it to Canada with Big Paul and Ricky. I hate to say it, but I shagged your wife.’

‘I always wondered if you two had been close. I mean, she was sent to spy on you – and you knew about it.’

Jimmy heaved a sigh. ‘In Canada ... I lied to them; Helen and the others. I told them if I stepped back into the machine and altered things ... that they would never have known about it. I left them there.’

‘Best spot to be at the time,’ I noted.

‘They had a house stocked with goodies I set up. I did that each time, but kept it secret. I have a place in Montana, Canada, and Texas, set-up ... you know, just in case, but didn’t need to use them this time around. And, the day before yesterday, I went horse riding.’

He took in the field. ‘Wasn’t easy, I almost burst out crying. You know, I was never happier than when it was just me and the horses camped by a river. The lifestyle was so simple, so little to worry about, no confounded emails; it was just me and nature. And that’s what I craved, a simple existence. But I got this.’

The air around us cracked, and my heart raced. Jimmy smiled widely, grabbing the backpack, a shimmering circle now visible just a few yards in front of me. I wanted to reach out and grab him.

Without a word he turned and accelerated, and I stepped after him, getting an image of the laboratory he mentioned, people moving about – and looking back at me. Jimmy jumped headfirst into the image, and I saw him land, the image gone a second later.

With the security staff approaching, I kicked over the table, picking up a chair and smashing it down on to the upturned table.

‘He’s gone?’ an out of breath guard said a few seconds later.

I kicked the table, turned and walked across the field, enquiries about Jimmy ignored.

Helen and the girls stared at me in silence as I found them in the restaurant. I sat without a word, offering a reassuring smile to the grandchildren. Helen and Shelly exchanged looks, the rest of their lunch eaten in an awkward silence, the children wondering what was wrong.

Walking down to the lake with Shelly, I pointed. 'Do you remember rescuing a boy here?' I softly asked.

'Yes,' she said. 'Jimmy lifted me up and carried me in, fetching me ice cream as a reward.'

'For a while back then, I used to check you didn't have gills and webbed feet.'

We approached the shore, the water a light blue, the sheer cliffs shading part of the lake and forming a dark blue corner, a few tourists in canoes enjoying the warm day. I remembered us canoeing around the lake with Big Paul and his son, and suddenly felt that I had lost something, something precious that would never come back. I wanted to reach back in time and live the moment again, to make the clock stop at drag out the day. It was a horrible feeling in my stomach.

'Did Jimmy tell you about all the trouble I got into when I was young?' Shelly asked, a hand over her eye as she took in the lake. 'He covered it up of course.'

'No. Thankfully.'

'I lost my virginity at fourteen, to a twenty-year old farmers son. Police were involved.'

'They arrested him?'

'No, they arrested me.'

'What for?' I puzzled.

'The sex was OK, but afterwards he refused to give me a lift home, so I broke his nose, then battered him with a shovel.'

I laughed, putting my hands in my pockets. 'You were headstrong. Get that from your mother, not me.'

'And I made a pass at Jimmy dozens of times.'

'I figured that.'

'He slapped me a few times, had me handcuffed once and kept in the basement. Locked me in a room at the club in London.'

'Well I'm hoping that's not in his book.'

'And I damaged Michelle's car; I was jealous of her.'

'You turned out all right in the end, but you surprised Jimmy by not going to university in California and studying oceanography.'

'I applied, and I had the acceptance ... but wanted to do something sooner rather than later, something to help. And I loved Goma, I wanted to stay.'

'Do you remember "M" Group meetings, kicking people in the shins?' I asked.

Shelly nodded. 'I embarrassed the Chinese Premier a few times, deliberately.'

‘Never would have thought that the Americans would have tolerated the Greater Chinese Union; Taiwan, Korea, and Myanmar. But it’s turned out well.’

‘They’re more worried about Africa these days, you pinching their export market,’ Shelly put in.

‘Will you go back into British politics?’

‘It’s possible, but they’re such children. I might try and find a small and struggling nation somewhere and just try and build it up from scratch.’

‘You got that from me,’ I noted. ‘Why not try Papua New Guinea; they have ore, and lots of problems.’

‘Something like that. I’ll live a long time, so I’ll probably move around a little. What about you?’

‘Africa for now. More to build; always more to build.’

An hour later I faced a bank of cameras outside of the hotel, requesting that the images be transmitted to all news outlets around the world, and on the web, at the same time.

‘Ladies and gentlemen, Jimmy Silo has left us. He is not dead, but he is no longer on this planet. He has gone ... to where he came from.

‘He asked me to consider carefully before revealing the nature of his time travel, and his presence here. Well, to hell with that. Jimmy came to us from a parallel dimension, another version of Earth that’s almost identical to this one. His own world had suffered a global war and had been destroyed, but his journey here was not to escape that world. His journey here was to help us, to prevent us suffering the same fate.

‘Jimmy left behind those he cared about, and journeyed to this world in order to try and help us, the citizens of this planet, knowing all the time that it would not help those he left behind. There was no greater act of kindness, there will be no one more determined, or as strong, ever again. This world has lost Jimmy Silo, its guardian angel, but he only left after he knew this world was safe.

‘We should have destroyed ourselves before now, but we were spared – with a little help. We owe it to Jimmy not to destroy ourselves in the decades ahead. He ... he gave us our world back, and I hope you can all live up to that.’

A day later I landed back in Goma, Africa having declared three days of mourning, state mourning, schools closed. I journeyed around to the main square in New Kinshasa at 6am, to the unveiling

of a statue I had commissioned six months ago. Despite the hour, chosen to avoid the crowds, thousands of people lined the square in silence.

I had noticed a statue of Atlas previously, the muscle bound god kneeling whilst carrying the world on his shoulder. It seemed fitting.

Kimballa pulled the chord, the sheet falling away. The facial likeness was good on the huge bronze statue, the pose apt, not a dry eye in the square. I hugged Kimballa, then turned away, one last glance over my shoulder as I boarded the coach. At the mansion, I cancelled all appointments and called up Jimmy's book on my computer. It asked for a password, with a hint: Who would the mystery man have killed at River View? I entered 'Rudd'.

Next question: During the Long Voyage, what island did we find the most supplies on? I entered 'Seychelles.'

The software allowed me in, and I started to read.

Manson, Canada

Jimmy landed partly on his shoulder, partly the backpack, trying hard not to smash the contents. With Singh attempting to lift Jimmy's heavy frame, the assembled technicians applauded loudly, all now offering beaming smiles as they closed in and formed a half-circle.

Jimmy dusted himself down. 'Thank you; it's always nice to be appreciated. He took in their haggard appearance and tired faces. What's the time?'

'Almost seven AM Monday morning,' Singh said with a smile.

'I guess you've been watching my progress.'

'Local farmer had unsecured wi-fi Internet access. We found more stories about you than anything else,' Singh reported through a huge smile. 'When you were reported as missing we worried a little, but seeing what you did to that world – well, we were all jubilant.'

'Just a little worried about me missing,' Jimmy teased. He lifted his backpack and placed it on a desk, unzipping the pocket. 'Latest high-power computer, and the history of the world – that world – all songs and all books.' He handed it over to Singh.

Reaching into the bag, Jimmy pulled out a dozen large bars of chocolate. 'Ladies, more chocolate.'

The female technicians tore open the foil and bit down on the milk chocolate.

Jimmy pulled out a photograph in a glass frame, fortunately unbroken. He handed it to Singh without a word.

‘Meena?’ Singh gasped, putting down the computer pad.

‘Your other self married her, as you asked me to arrange, and you – your other half – had six kids.’

‘Six?’ Singh was shocked. ‘Six!’

Jimmy took off his coat, dressed smartly in a suit underneath. ‘I gave your other half a lot of money, so feeding the brood won’t be a problem for him.’

Singh slowly nodded as he studied the picture intensely. Lifting his gaze, he said, ‘What you did in Africa – amazing, truly amazing. And the spread of the technologies – incredible.’

‘I had a little help, and some practise. How long was I gone?’

‘Three hours.’

‘Fifty-two years the other side,’ Jimmy noted. He sighed, ‘Fifty-two years.’

Pulling another photograph from the bag, he handed it in silence to a lady technician. After a second studying the image she burst into tears, consoled by her colleagues.

‘Your brother did well, very well, and I made sure that he was cured of cancer in time. He’s now married with three kids and working in Seattle. You ended up in Hawaii, at an observatory, but you left in time. After that you went to Europe, but never married.’

‘Do you think it will work, Jimmy?’ Singh asked, everyone focusing on Jimmy.

Jimmy smiled. ‘Send the signal.’

A lady technician rushed forwards and operated a computer, ‘Power is limited,’ she said as another technician threw a switch. When done, both technicians stood back from the coils that powered the portal, waiting expectantly.

‘Well,’ Jimmy said with a sigh. ‘I guess we’d better face the music. Someone open that door and send for General Gibbs.’

With the door unlocked, two guards stepped in, drab green uniforms that had seen better days. ‘What the fuck was the door locked for? It’s been locked for hours, we tried it!’

They focused on Jimmy. ‘Who are you?’

‘Silo, James,’ Jimmy calmly responded.

‘Silo’s dead.’ The man stepped forwards, to within inches of Jimmy. ‘You ... you look different, and why are you alive?’

‘Chocolate?’ Jimmy asked, handing the guard a bar.

‘Chocolate? Can’t even get that on the black market.’

Jimmy lifted an A4 computer pad from the backpack, turning it on. ‘Computer. Display New Year celebrations, 2034.’

The screen came to life, images of celebrations in Time Square, New York, the guards focused on the scene.

From his backpack, Jimmy pulled out a silver ball. ‘Watch this.’ He held it out, tapped it twice on the top, and let go. It stayed where he had left it. Giving it a gentle tap, the ball moved slowly towards Singh, who tapped it back, Jimmy letting it bounce off a wall and return.

‘That’s not my favourite toy. Watch this.’ He pulled out what appeared to be a dead Sparrow, tossing it up and catching it. ‘It’s a toy. Sparrow, fly!’

The bird came to life and flew around the room, settling on a chair back.

‘Where’d you get this stuff?’ the guard asked, breaking the chocolate bar and stuffing down squares.

‘From the future,’ Jimmy carefully mouthed.

‘The ... future?’ they puzzled.

‘It’s a time machine, isn’t it?’

‘You ... you mean it works?’

‘More or less,’ Jimmy responded. He pulled out a four-pack of Bud, handing a can to each amazed guard, and cracked one open himself.

‘Haven’t seen these for years,’ a guard noted.

Half an hour later, General Gibbs arrived with his adjutant and a dozen guards, walking in to something of a party atmosphere. ‘What the hell is going on?’ he barked, being ignored. ‘It’s just been reported to me that the door was locked all night!’

The silver ball slowly floated past, curiously observed by Gibbs, the sparrow flying around, but whistling as it flew – whistling Dixie. Jimmy stepped down towards Gibbs. The general squinted, taking a step forwards. ‘Silo?’

‘It’s been a very long time, general,’ Jimmy stated.

General Gibbs looked Jimmy up and down. ‘You’ve ... changed. And where the hell have you been? We found your jeep in the river!’

‘That was a very long time ago,’ Jimmy said with a sigh, thinking back. ‘Three hundred years.’

‘Three hundred years? What the hell are you talking about?’ Gibbs barked.

‘Doctor Singh got your machine to work.’

‘Work? The ... the time machine?’

Jimmy lifted his eyebrows and nodded. ‘Where your people failed, Singh succeeded. But the good doctor didn’t want to see a stupid jarhead like you in control of it. So I stepped through.’

General Gibbs shot Singh a look. ‘You’re a dead man.’ He turned to the guards. ‘Arrest them all!’

The guards drew weapons.

‘Bad idea, General, because you’ll never make it work without these people,’ Jimmy told Gibbs.

‘We’ll see,’ Gibbs threatened.

A soldier ran in. ‘Sir, come quick!’

Jimmy turned to Singh and winked.

‘What is it?’ Gibbs asked.

‘Soldiers outside, thousand of them.’

‘What soldiers?’ Gibbs asked. ‘Texans?’

‘No, sir, but they are American – but their uniforms and weapons, they’re nothing like I’ve ever seen before. They say ... they say they’re from the future.’

Gibbs turned and focused on Jimmy.

‘General Gibbs,’ Jimmy loudly stated. ‘You are hereby relieved of command.’ He turned to the guards. ‘Put your weapons down, before I forget what a nice man I am. Those soldiers outside are mine, kitted out with advanced weapons from the future. Put your weapons down, gentlemen, or face the consequences.’

Confused, the guards lowered their weapons, the sounds of boots echoing along a corridor. The doors burst open, two soldiers holding the double-doors open, a four-star general striding in. He walked right up to Jimmy, pushing guards aside, and saluted.

‘Mister Silo. Sir! General Mathews, and ten thousand US Marines, reporting as requested.’

Jimmy smiled, shaking the general’s hand. ‘What kept you?’

‘You’re ... from the future?’ General Gibbs asked.

‘No point in building a damn time machine if it doesn’t work!’ General Mathews told Gibbs. ‘We have food, medical supplies, and advanced weaponry to fight The Brotherhood.’

General Gibbs pointed towards the portal coils. ‘But ... but if it works, then why not go back and stop the war?’

‘That would create a paradox, and would stop Mister Silo from having reached us,’ General Mathews stated. ‘And, since we’re very happy that he did reach us ... it would not be allowed.’ Mathews pointed at the guards. ‘Outside. Now!’ The men filed out, past the Marines.

Jimmy took a step forwards, smiled at Gibbs, then knocked him down. 'I've been wanting to do that for a while.' He stepped closer and stamped down on Gibbs' groin.

Boots snapped to attention in the corridor, the report echoing. Jimmy turned towards the door, and I stepped in. I walked forwards, taking in the room, the technicians, the dirty floor and the sticky-tape keeping things together. General Mathews stamped to attention and saluted me.

'You're ... Paul Holton,' Singh realised as he stepped closer. We shook.

'I met your other self and your – his - family many times, Doctor Singh.' I turned to Jimmy. 'I don't remember you wearing a suit when you came through.'

'How much time has passed that side?' Jimmy asked me as the technicians closed in.

'Twelve years! Took bloody forever to get a consensus on the time portal,' I told Jimmy. 'Anyway, this is the famous lab, eh?'

Jimmy took in the faces of the tired staff. 'You're safe now, you're all safe.' He turned to me as the ladies burst into tears again. 'Can they be evacuated?'

'Of course they can; the portal outside is open and stable,' I told Jimmy. I faced the group, taking in their expectant faces. 'We'll be taking you to our world, and to the future; good food, warm beds, and a few billion people who'd like to say hello ... and to say thank you.'

The ladies dried their eyes, the men patting each other on the back.

'What position do you hold now?' Jimmy asked me as I directed everyone outside.

'After you went I stayed on as President of Africa, then eight years later as World President, the UN upgraded to a more democratically elected body with real powers. I suffered that for a few years and went back to Africa.'

We walked along the corridor.

'And Helen?'

'UN Secretary General, Shelly being the British Prime Minister for five years before she'd had enough, and Lucy is a low paid scientist.'

We approached the entrance.

'Liz?'

I gave him an embarrassed look. 'Single mum of three, and not bright at all.'

‘Ah well,’ Jimmy let out.

We stepped out of the tunnel entrance and into a chill morning, the dawn fighting to take hold, a blue-grey herringbone sky promising a clear day. The Marines closest snapped to attention, but for Jimmy as much as myself, a civilian cameraman recording the event. Across the field, thousands of soldiers filed out of the portal, most carrying boxes, dishevelled local soldiers accepting tinned food and chocolate off the Marines.

‘Looks like it might be a nice day,’ I commented, taking in the sky.

Jimmy stopped and looked up. ‘Do you think you can do it?’ He only looked at me after he had said it. Our eyes met.

‘I’m planning on a twelve year campaign, and I’ll stay here till its finished. Hopefully, you’ll see me in a day or two at that end.’

‘I’m not going,’ he quietly stated. ‘This is where it started, and I’ll stay and beat The Brotherhood.’

‘You beat them when you fixed my world. We can do the job.’

‘I know this place, I can save you time. Besides, we both know that I was more soldier than doctor. Or banker.’

‘We have a ranch waiting for you in Montana. It has ... horses.’

‘Horses?’

‘Say goodnight, Jimmy.’

‘Huh?’

Two soldiers caught him as he collapsed, a device put away by a third soldier.

‘Stubborn, cantankerous, obsessive compulsive.’ I stood shaking my head. ‘Take him back. Carefully!’

I turned and took in the sky, the breeze cold on my cheek. ‘Twelve years.’

I thanked Doctor Singh again, and approached a Marines Major. He fell into step as I inspected the camp. ‘First, coal-oil, then we have fuel for the vehicles, then we get the crops growing to feed the army, then we go on the offensive – starting with South Africa and working our way up. I have a city or two to build from scratch. Thinking of calling one ... New Kinshasa.’

A soldier ran up. ‘Sir, there’s ... another you here.’

‘Another ... me?’

‘Another President Holton, sir.’

The soldier stood to the side as a group walked across to me, someone looking like myself flanked by US Marines. Our two parties met, the soldiers and onlookers staring wide-eyed at myself and my carbon copy.

I offered myself a hand and we shook. ‘Where did you come from?’

‘Here.’

‘Here?’

‘Four years from now this timeline will split.’

‘Ah, you’re from a separate branch,’ I realised.

‘Who do you think sent the messages, dumb fuck?’

‘That was you?’ I puzzled. ‘VAT14:JDI? And the diamond ring in the swimming pool in Somalia?’

He nodded. ‘You – us – thought it was from us later on, but no, it was me later on, after we realised that the timeline split.’

‘What year is it your end?’ I asked.

‘2046.’

‘We only got the consensus to come back in 2047,’ I told him. ‘So why the messages, because right now I’m not thinking of altering things.’

‘After fighting here for ten years you’ll decide to make a few small changes. But, you know, don’t bother now.’

‘Yeah, sure.’ I put my hands in my pockets. ‘So, you and Helen?’

‘Divorced, finally.’

I made a face and shrugged, my opposite number mirroring the move.

‘Anyway,’ he said, ‘We’ll sort diplomatic relations, and think about –’

‘Distant worlds, yes, we’ve been discussing them.’

He handed me a disk. ‘That’s our location and frequencies, we have yours – they were our old ones.’

‘Of course. So, if I’m not here when the line splits...’
