Part 1

No 10. Downing Street, London. Summer, 1985.

The Prime Minister ran a quick eye over a letter, initialling the corner before handing it back to the waiting messenger.

Thirty minutes later and a buff coloured file was keenly opened by Jack Donohue at the Ministry of Defence. The letter, a tip-off about an upcoming IRA terror attack, now had the addition of TOP SECRET stamped onto it in blood red ink. He touched the edges of the letter reverently and squared it off to the file; neatness was next to Godliness for Jack. He curled a lip at the fingerprint dust still adhering to the paper, pursed his lips and blew delicately.

Jack read the brief letter over and over, trying hard to read between the lines. He attempted to judge the tone and the style of writing, trying desperately to glean some intelligence about the sender – his assigned task. Magestic with a ‘g’, whoever the individual was, had already caused him some sleepless nights. If only the letter had been signed “Majestic”.

Majestic had been the CIA campaign of misinformation about UFOs in the 1960s; a tantalising link, so close. But why spell the word with a ‘g’? Was our friend simply a bad speller? No, the writing style had been exhaustively analysed by various linguists and handwriting experts. Our friend was deemed to be well educated and cultured. So, it was a deliberate spelling mistake. ‘Magestic’ was a noun, a few references around the world, but none of significance or relevance.

This new letter, typed like the rest, had been numbered by the sender in handwriting as ‘12’ and detailed an elaborate IRA attack, so much detail that some were certain that Magestic was *in the community of spies*, possibly a high ranking member of the IRA itself. Jack knew that to be nonsense, because lying next to him was a file of the first eleven letters, many detailing natural disasters. Being an intelligence researcher, Jack knew the limitations of field agents and double agents, and predicting the next winner of the Eurovision Song Contest was not amongst the attributes of any spy he ever knew of. No, this was something quite, quite different.

The fact that the Magestic letters had been assigned to him was a great honour, his career not quite working out as anticipated in his youth. Thirty-eight years old, if he was going to do anything noteworthy, he figured, he would have done so by now. Civil Service retirement at fifty-five loomed as the only light at the end of the long dark tunnel as he sat in his basement office, longing for a window.

He smiled when considering why they had assigned him this task; a degree in psychology. Actually, it was a 2.1, not so clever. But still, here he sat, grinning smugly at his assigned task, a task that his superior resented. His boss always read the letters first, just to make a point, but never gleaned anything of use outside of the obvious facts detailed. Like the other so-called ‘experts’, Jack considered, his boss was stuck in the detail, not the topics or the style. He considered again the detail of this latest message as he worked alone in his office, muttering to himself. ‘Playful, confident, sarcastic almost ... yet important, direct, necessary.’ He made notes, comparing them to a previously prepared summary.

‘Terrorists actions ... but only related to us, to the UK, not to any other country. Posted in the UK, London, various central locations, plus Cardiff, Reading and Swindon. Our friend uses the train a lot, a commuter like myself. Hell, I may have even sat opposite him, and I’m sure by the tone that *it* is a *him*. Mid to late forties, ex-military or similar I believe, and a powerful clairvoyant.’ Easing back, his chair issued a creak of complaint as he tapped his top lip with his pen.

He tipped his head back as far as it would go, stretching his neck muscles. ‘So why tip us off? Why not ... bet the races.’ He raised a pointed finger. ‘Maybe he does. Note: look for big, consistent winners at the races - stock markets maybe.

‘So far ... three IRA attacks, one faulty ship – which sank unfortunately, one spy escaping the safe house a day early, a rail crash averted – but disputed, an aircraft with a faulty fuel line – gratefully found in time, Reagan’s win at the polls, an attempt on our Ambassador in Angola – averted, the Eurovision Song Contest winner – just to make a point, the Iran-Contra affair...’

A thought surfaced, his features hardening quickly. He typed a hurried note and sent it directly to the Cabinet Office by courier, a deliberate breach of protocol.

The Prime Minister read the note, took off her glasses and eased back in her chair, staring out of focus for several seconds. 'I want the intelligence chiefs. Tonight. Oh, and this officer ... Donohue, fetch him as well.'

When the officers had assembled in Cabinet Office Briefing Room 'A', COBRA, the Prime Minister stepped purposefully in and sat quickly, placing down her handbag. Jack adjusted his tie, wondering just how annoyed his manager would be, yet not giving a damn. Deputy Director Sykes was in attendance and eyed Jack suspiciously.

Straight to the point, The Prime Minister said, 'This gentleman -' motioning toward Jack. '- has come up with a... very significant point. What if our good friend Magestic is sending tip-offs to other nations?' She waited as concerned looks swept around the assembled faces. 'Up to now we have assumed that this was just about us.'

Jack delicately raised a finger.

'Yes?' the P.M. curtly prompted.

'I hope you don't mind, but when I ... er ... got the idea I rang a good friend in the London CIA section, the researcher I'm supposed to co-operate with on the psychology of the Russian leadership -'

'Yes, yes,' the P.M. urged, beckoning Jack onward with her hand.

'I figured that, if they didn't already know, then they would not register anything about the name. I asked if he had heard the word Magestic...'

'And?' Sykes firmly nudged when Jack hesitated.

'My contact went apoplectic at the mention of the word, demanded to know what I knew.'

Numerous whispered conversations broke out, the P.M. staring hard at Jack. She cut through the chatter with, 'You have short-cut ... what could have been a lengthy process.'

Now they know that we've been getting letters. But, more importantly, we know that this is not just about us.'

Jack forced a breath. 'Prime Minister, we know that Magestic is probably London based, or a commuter along the M4 motorway. So ... so if the Americans have had letters, they would, most likely, be posted to the US Ambassador here ... in London.'

'Are you suggesting ... that we *intercept* the American Ambassador's mail?'

Jack decided to be bold. 'They can't possibly know when the next letter will appear, so they won't miss it if ... it went missing.'

The P.M. stood, a nod toward Sykes before exiting quickly. A chorus of overlapping whispers began. Jack tentatively raised a finger.

'Donohue, you don't need to raise a finger like a schoolboy wanting the toilet,' Sykes suggested. 'What is it?'

'Well ... er ... I firmly believe that our friend, well meaning that he is, may also be sending letters to others; Russians, Chinese...'

'Jesus,' Sykes let out.

November 21st, 2035, aboard the eco-submarine Warrior III, North East of Bermuda.

As I sat down at my cabin's small desk I knew exactly what I wanted to write, but still let my hand hover over the data pad. I finally touched the screen.

'Ready to begin recording and transcribing' came a pleasant, yet detached female voice. It had obviously been thoughtfully designed by some youngster at Chinchon-Microsoft to be non-patronising, and was the same voice as that on my PCD. If she was real I hoped she was on a commission; a penny a device would have made her billions!

'PCD' I repeated in my mind: Personal Communications Device. When I was lad a computer was called a computer,

then they became desktop computers – fair enough, then personal computers, PCs – or was it the other way around. Then everyone had a laptop to carry around. Soon mobile phones started to do what computers did and so they became Personal Communication Devices – shortened eventually to PCs, and it all got confusing. Your laptop worked like a phone and your phone worked like a computer, only smaller. And me, I often longed for the first IBM PC's keyboard, ivory keys that 'clunked' heavily when you hit them, so much better than touch screens with intuitive algorithms. The number of spreadsheets I accidentally sent my mum from thirty thousand feet over the Atlantic.

When I first started work in the city of London, mobile phones were called phones and were the size of a house brick, a thousand pounds to buy; only city brokers with pink shirts and briefcases lugged them around. Then they got smaller, soon everyone and their kids got one, then there were suddenly more mobile phones on the planet than people, and poor Africans tried to fix them, or melt them down or something; I remembered images of poor black kids sitting on a mountain of old phones, trying to make enough money to cover their next meal.

When was that, I considered, thinking back over the years; probably around 2013, before the troubles began. And talk about city traders, I was one for a whole six months before starting to work for Jimmy Silo. It was how we met. Actually, it was how he recruited me, and not for the first time. He came looking for me.

I took a breath, a quick glance at the wall and the photographs of my kids and ex-wife. 'Kids', I repeated in my mind, they were now parents themselves. But they would always be kids to me. 'My name ... my name is Paul Holton ... and this is my account of my life with Jimmy Silovich; time traveller, womaniser, philanthropist, reluctant politician ... and my friend.'

I caught my own image in the desk mirror; seventy years old going on twenty-five. At least I appeared twenty-five on the surface, thanks to the genetically modified stem cells floating about my system, hunting earnestly for something to

repair and rejuvenate. I could pass for twenty-five, but these days so could a lot of people if they had the money. My mop of black curly hair was still there, and still a mop. As a teenager I had tried to tame it, around the time I had tried in earnest to stop my mum from buying me shirts with wide collars, and cuffs that took ages to iron. The taming had not worked, neither the hair nor my mum. No matter what I tried, my hair had its own ideas. It was cut every six weeks and we agreed to ignore each other and do our own thing. In its favour it never needed combing and looked exactly the same after a futile attempt at male grooming.

Sometimes, these days, my eyes looked tired and I could imagine how I might actually appear at seventy: grey hair, or no hair, wrinkles and sun spots, opaque skin and errant strands of hair trying to escape from my nostrils and eardrums. But thanks to my mentor I, and everyone else on the planet, had the chance of eternal youth, a subject of much debate amongst many groups, some of whom wanted me dead.

I began.

1986, London. My 'digs' in Richmond.

The new guy was shaping up nicely. Six foot four, built like Darth Vader's big brother and smart with it, we were getting on well. He did the dishes, cleaned the house, bought way too much food and drink for just his own consumption and he nearly always picked up a take-away on the way home, from the Chinese next to Richmond tube station. Me, and Dave the other lodger, were getting fat and lazy after just two weeks. With England playing in the World Cup, and tonight's match against Argentina of all countries, we were well geared up; Chinese, cans of lager, ice cream slowly defrosting and some popcorn for later. Dave and I were as snug as we could get. All we needed was a pair of lap-dancers for half time and life would have been perfect.

Jimmy had joined McKinleys Stock Brokers almost a month ago now and had noticed my advert for a lodger. Rents were high in London, especially posh Richmond, and I had taken the lease on a whole damn house just to be near my parents. Four streets away, it was far enough away to be independent. Just. I was twenty-two and the hormones were raging. All I needed was some money, and not to be so damn tired on the weekends that I just slept. Somewhere out there was the big wide world and the bright lights, yet to be discovered.

Getting out on a Saturday night and *going large* was proving to be more difficult a task than I had anticipated when I moved out. Money was tight, better now with the last room occupied, and the working day was killing me; I was running on chocolate and coffee. Didn't know how Jimmy did it, he hardly slept and was always wide-awake, polite and pleasant. I suspected cocaine, since many of the lads in the office were using it, especially on a Saturday night. We were up at 6am, on the tube at 6.30am, two changes, into the office for 7.45am, pink Financial Times under arms and looking quite the part in our smart suits. We hadn't yet opted for pink shirts, and I definitely couldn't afford a mobile phone. Still, we were 1980's city traders, sons of the Thatcher's revolution and yuppies in the making.

The match had proved boring so far; a few chances, a few nudges and hard tackles, plenty of shouting at the TV. At least the food had been good and the beers were going down nicely. Holding my aching stomach I remembered the threat we had made to go around the corner and show the local girls how to dance. This was why I was single: getting home at 7.30pm knackered, stuffing my face and falling asleep till bedtime. I was twenty-three going on forty!

With ten minutes of the match left to go Jimmy said, 'You know what I reckon will happen.' He stated it in a voice that made him sound much older than myself, even though we were both the same age. 'I reckon ... that Maradona will *punch* the ball over Shilton's head, winning the match one nil.'

‘What?’ Dave said with a heavy frown. He shot me a look. ‘If he hand-balls it, it won’t be a goal, will it?’ He looked embarrassed for Jimmy, who we had already figured was not a football fan.

‘They’ll allow it,’ Jimmy suggested. ‘Ten quid on it.’

‘Twenty quid on it,’ Dave countered, easing up from his slumber and flicking noodles off his smart work trousers.

‘Make it a round hundred,’ Jimmy confidently suggested.

‘A hundred?’ Dave repeated, another glance toward me. ‘That Maradona ... will hand ball the winning goal in? You’re on, sucker.’

Jimmy opened more cans and politely offered them around as we waited. A few minutes later Dave and I were on our feet, our jaws touching the floor. And I should have known then that there was something very odd about the big guy. Dave couldn’t speak for a whole minute. He rang his mates to check that the match really was live and not recorded. He even rang the BBC as Jimmy insisted that he did not want the money. And that was the start of it. My lodger could predict the future with pinpoint accuracy, a handy trait for a budding stockbroker.

The second clue came that Friday night when I actually felt like I had the energy for a few beers in the pub around the corner. In those days they were smoke filled, no laws against smoking in public places yet. And if there was a pretty girl present then she most definitely was a smoker. Still, in those days the birds were British at least, we were not knee deep in East Europeans yet. With no seats free we stood at the end of the bar, me and Dave picking Jimmy’s brain on politics, which he seemed to know way too much about; he had an opinion on everything. And I mean *everything*. In our work suits we soon caught the attention of two nice girls, smokers of course, and Jimmy bought everyone several rounds. Oddly, he had deep pockets, just one more mystery about mister mystery guy.

‘That’s my ex-boyfriend and his mates,’ the first girl whispered at some point, a nod towards the other end of the bar.

‘Not to worry, and not a problem,’ Jimmy quietly and confidently assured her, not even bothering to scan the would-be troublemakers.

I, on the other hand, was worried and glanced their way, a bit too obvious. Now the former Romeo knew we were discussing him, maybe even the size of his dick. Judging by the size of the rest of him it could well have been a whopper. We were in trouble. Dave was no fighter, and I preferred the *run very fast* approach to these things.

‘I think your ex is still interested,’ I suggested to the girl.

‘He’s such a wanker,’ she came back with, shaking her head. ‘Watch out for flying bottles.’

‘Shall we ... eh ... go somewhere else?’ I suggested. ‘Curry maybe?’ That was a bad idea, I just remembered, since I could not have even stuffed a packet of crisps into my bursting abdomen.

‘Sounds good,’ Jimmy enthused, a budding world champion at face stuffing; fella had the size to squeeze it into. Outside, in the cool night air and smoke free environment, Jimmy said, ‘Start walking, I’ll be a step or two behind you.’

With curious frowns the four of us plodded slowly towards the local curry house, Jimmy trailing behind. We could not have made ten paces before a shout caused the girls to snap their heads around; ‘wanker’ was on our trail. Jimmy waved us on as he turned to face six angry men. We took a step before what was left of our chivalry caused us to stop and turn, and wait.

‘You six gentlemen must be the local mutual masturbating society,’ Jimmy offered them. I turned my head to Dave. As far as tactics for diffusing situations like this went, it was a first for me. Dave and I exchanged worried looks.

Neither of us had seen someone move like that. To kick a man across the bonnet of a car, another through a plate glass window. In the time it took me to take three small steps there were six unconscious men sprawled on the pavement and road. And Jimmy, he stepped casually towards us combing his hair.

‘So ... curry?’ he said as he joined us.

Stunned, we fell into step with him and plodded on, numerous glances back. The second girl was most impressed and linked arms with him, a come-on smile spread across her face. It was clue number two, number three if you include his very deep pockets. We rounded the corner and ducked into a curry house just as flashing blue lights flickered by. The waiter offered us a seat by the window but Jimmy, ever the tactical thinker, chose one at the rear, me and him sat with our backs to the wall in an alcove. If the local coppers had looked in they would have seen the girls and Dave, probably not clocking us. I was getting suspicious of Jimmy, pleasantly suspicious. Was he a junior trader like me, or a secret agent of some sort?

Jimmy faced me. 'Why don't you guys just have some drinks, soft drinks, sober up a bit so that after this we can hit Stringfellows. I know the head doorman, get us all in.'

It was a plan I liked the sound of. Jimmy stuffed down a curry with the girls, God knows how he had the room for it, as me and Dave sipped shandys. And the odd thing about the big fella - he let me and Dave take the lead with the ladies, always managing to put himself down and play us up. He was helping me out like the big brother I never had.

At Stringfellows there was a monster of a winding queue and it had just started to rain, but we walked right past everyone. I noticed Jimmy fold a note into his palm before he shook hands with a doorman, who seemed to recognise him. The note changed hands with practised ease and I was back to thinking about secret agents again, and how little money I had on me, since drinks in here had to be pricey. No sooner had the thought crossed my mind than Jimmy gave me four tens without the girls noticing. Back then forty quid was a lot, especially for a night out.

'Pay me back when you can,' he whispered as we headed towards the VIP area. He stopped at the bouncer policing the VIP area entrance, another handshake and some whispered words in an ear. We were in, and rubbing shoulders with football players and TV stars. I rubbed my hands with glee.

Little more than an hour later Dave was done, well done and wobbling. Someone had given him a half drunk bottle of

champagne, mistakenly believing him to have just won some international award, and he had finished it off. Jimmy grabbed a bouncer and gave him some notes, telling him to stuff Dave in a taxi whilst placing our address in Dave's lapel pocket. Smooth, real smooth.

Suddenly, Jimmy and the girls seemed to be getting ready to go somewhere else, a worry for me because I was struggling as it was. 'I've got the use of a friend's penthouse flat, not far,' Jimmy told me. 'C'mon, let's get you some fresh air.'

We took a taxi around to Belgravia, pulling up in front of a very posh set of marble pillars, a doorman coming out to greet us, a strange fella in a long green coat and green top hat.

'Evening Jimmy,' the man offered, holding open a set of glass doors.

Jimmy slipped the man a note without the girls noticing as we stepped inside, the girl's heels clattering on the marble. We took a snug, gold coloured lift up to the tenth floor and opened to a corridor with just the one door, which I found puzzling in my drunken state. Jimmy turned a key in the door and we stepped inside, the heating already on, a champagne bottle in an ice bucket on a coffee table.

With a frown I touched the bottle. 'Is he in ... your mate?'

'No, away working,' Jimmy replied, slipping off his jacket. 'We can crash here, go home in the morning on the tube.'

As I stood there I was waiting for the girls to object, or to run off. I avoided eye contact with them and I waited; no objections came, no running off. Oh bloody hell - did I have clean underwear on?

Jimmy opened a door and said, 'Your room. Try the balcony, get some cool air.'

I stepped in and glanced around, almost fainting; it looked like the inside of Buckingham Palace, making me terrified to touch anything. Stepping across the vast room I noted the ensuite bathroom before opening a glass door onto a balcony. Breathing the cool air, I tried desperately to sober up, finally turning around and closing the door to find Sophie, the girl I had spent most of the time chatting with, bouncing on the side of the bed. Something started to get hard.

‘Very posh,’ she joked, kicking off her shoes with scant regard for whatever they impacted with.

‘Er ... drink?’ I asked, taking off my jacket.

‘Champagne,’ she said with that look in her eye. Actually, I had very little experience of that look up to that point, but I figured it out all by myself. Back in the lounge I found Jimmy sat by himself, sipping the cooled champagne.

‘So?’ he asked. ‘All ... OK?’

‘It’s like frigging Buckingham Palace,’ I said as I eased down opposite, two champagne flutes already full and fizzing. ‘What does your mate do?’

‘Trader, like us. Older and richer.’

‘Where’s your bird?’ I whispered.

‘Shower,’ he mouthed.

‘Have you got any –’

‘Bedside cabinet,’ he said with a grin. Easing forwards he softly said, ‘Let me be so bold ... as to offer some advice.’ I was all ears. ‘Shower together, do the business, robe on, back out here, cool off, coffee, do it *again* ... then to sleep. Get up first, shower – smellys in there, coffee, make her a tea, do it again, give her money for cab home and get her number. Fix a provisional date for tomorrow ... here.’

‘Money –’

‘Beside cabinet. Now, take the glasses and ... have fun.’

I was terrified and exhilarated, but I had been given a plan. I was even tempted to stop and write it down in case I screwed it up. As it turned out she was great, not pushy, and quite understanding of my drunken state. Coffee was waiting for me in the kitchen as she lay in bed and round two was better than round one.

In the morning I found Jimmy reading the papers. God knows where they had come from, since I hadn’t heard anyone go out.

‘Well?’ he gently probed. I gave a thumbs-up sign. He pointed at the second coffee mug. ‘I heard you moving. Milk and plenty of sugar.’ I sat. ‘Oh, if you need to take a dump use that door there, separate small bathroom that she won’t be able to smell.’

God he was good. I took my coffee and made a horrendous smell, extractor fan turned on. After another shower and a *firm* wake-up call for Sophie we both got dressed, finding Jimmy and his girl sat in robes.

‘Hungry?’ he asked.

‘Starved,’ we both said.

Jimmy checked his watch. ‘Be some food brought up in ... oh, about ten minutes or so. Grab yourselves a fresh tea, all laid out in the kitchen.

It was, and the damn kitchen was as big as the bedroom. Ten minutes later a woman appeared with a trolley, leaving with only a smile and a nod; four English breakfasts and extra everything. We settled around the kitchen table and tucked in, Jimmy and me trying to explain derivatives trading to the girls, who were both secretaries up the East End somewhere. After an hour of munching we flopped on the sofas around the coffee table and dozed, except Jimmy, who read the papers, circling a few articles. The girls had to head off and change, arranging to meet back here at 8pm for dinner; Jimmy was taking us somewhere and it was a surprise.

With the girls gone I said, ‘I’d better get back and get some clothes.’

‘Left hand wardrobe. Have a look.’

I found shirts of all sizes still in their packets, socks, pants, even trousers and shoes. Many were my size. ‘Won’t your mate be pissed?’ I asked as I re-entered the lounge.

‘No, he owes me *loads-a-money*. Help yourself, I’ll settle it when I see him.’

I sat, my brain starting to play catch up. ‘What do you do for McKinleys ... *exactly*?’ Up to that point I had not even seen where he sat in the office.

‘Private client investments and company trades.’

That put him about a million grades above me. ‘At your age!’ I blurted out, immediately regretting it.

He smiled. ‘I’m very good at what I do.’

‘So why are you staying at my gaff, you must be on good money?’

‘Money’s OK, but I tend to spend it quickly. I needed a room ... and you’re a trader from the firm, someone who’s not going to go through my company papers at home.’

‘Oh, well ... yeah, naturally like.’

Jimmy checked his watch. ‘It’s 2pm already –’

‘Shit!’ I said, checking mine.

‘So why don’t you get some sleep and be fresh for the ladies when they return.’

‘You think they will, you know, come back?’

He smiled a knowing and confident smile. ‘I’d bet good money on it.’

‘Right, well, er ... I’ll crash out for a bit then.’ I headed for the door and stopped. ‘Thanks ... you know... for all this.’

‘Someday you can help *me* out, when I need it. I’ll call Dave and see if he got home OK.’

‘Ah ... fuck ’im,’ I said, and got some sleep in a bed so big I couldn’t touch both sides, still smelling Sophie on the pillows.

That weekend’s format was repeated three times before we took the girls down to the coast, Jimmy borrowing his mate’s posh Mercedes. Dave got transferred to an office in Leeds for six months and so he moved out. It was just me and superman, and sometimes the girls since they only lived a few streets away with their parents.

One long weekend we drove the girls across to France, to a secluded chateau that Jimmy said he read about in the Times. And I was heavily in his debt, something that was starting to weigh on my mind. We took the girls on trips down to Bournemouth and to the Cotswolds, before Sophie had to move with her family to Germany for a year. We said we’d stay in touch, but I never saw her again. By then I was cool and relaxed about the whole sex thing and one of Jimmy’s numerous *mates* was teaching me to drive. I didn’t work on Jimmy’s floor, but I began to visit regular, often surprised to find the senior managers in with him having coffee. Everyone treated him like he owned the damn place.

Six months in and Jimmy said he was going it alone, going to trade some private client funds, and would I like to join him. There was the worry about making enough money to

cover my salary and to live, but Jimmy showed me a trading statement that indicated he had millions of pounds of client money under his control. I took the chance, afraid to upset him, not least because he could always sniff out a beautiful woman whose mate would shag me.

Jimmy explained that the owner of the posh apartment had moved to Singapore for at least a year and that he could now afford to rent it. A side room was converted to an office and it soon housed a multi-coloured live computer feed, stock prices ticking over. The second bedroom was now my room and the side room our office, no more trains to work. Jimmy was paying me more than I had been on, no rent for the room, so my money was mounting up nicely. As was my debt to him, and my concern about it.

My old landlord took back the house and I threw out a lot of stuff, buying new clothes. I had to look the part, I even thought about a pink shirt and a mobile phone. I never did get a straight answer from Jimmy about Maradona's handball, or a bunch of other things, but life was too good to knock it. But something was always nagging at me, and for good reason.

First day at school

Jimmy sat me down after we got the IBM PCs set-up and running, a link to the stock exchange via a dedicated phone line.

'Right,' he began. 'Trading: lesson 1.01. Don't trade when you're bored. Don't trade because you've just made a mint. Don't trade when you've just lost your shirt. In essence ... don't trade unless you planned it. I make good money by holding out for the right trades. I may make no trade for the next six weeks, or fifty. It depends.'

'If I have a feeling for which way the FTSE is going then I'll rotate overlapping Index trades, never selling against my stock or reserves. If I have such a feeling, as I do now, I'll tell

you what I think the FTSE may do ... and you manage the small, overlapping positions. That's the trading part of what we do. There's also investing, some of the stock tucked away for the long term; you'll see them listed, so don't go selling them. I'm hanging onto Microsoft, Apple Computers and Nokia in Finland. When there are large market corrections on the downside I often pick up more stock, sometimes off-loading first.'

I was following so far.

Jimmy continued, 'So ... at the moment I think Unilever will break out. Watch the FTSE and Unilever, wait for the index to stop falling and start to level out, then we buy about a hundred grand's worth of shares, not options, and hold for around six to eight weeks. I'm expecting a thirty-five to forty-five percent return.'

I did the sums quickly in my head. It wasn't hard. 'Not bad for six weeks.'

Jimmy nodded. 'Read the FT, do your bits, I'm off to the gym for three hours.' He stood.

'Any totty in this gym?' I enquired.

'Some, yes. And no, you can't come. I've got to have some time away from you ... *employee*.'

I read the papers, checked the charts, had several cups of tea and made myself scrambled eggs, and stood on the balcony a lot. Soon I had a *work from home* routine going, long before it became trendy or financially expedient. But also long before internet porn and music downloads.

We hit the clubs Thursday through to Saturday, so we were not always in the apartment, and Jimmy disappeared for a few hours every day to the gym. But the trading was worrying me. I was starting to believe there might be some insider-dealing going on here, but Jimmy firmly denied it when I nudged. Still, we were one hundred percent right in our trades, numerous accounts set-up with half a dozen brokers so that money could be spread around. Jimmy said it was in case one went bust, but he always said it with a grin. We had made our client fund two hundred thousand pounds in eight weeks, not including investments.

But it was not just the stock market that Jimmy was good at predicting, he also had a bad habit of predicting world events with uncanny accuracy. Looking back, I was being a bit thick, blinded by the money and the lifestyle. And the big guy often joked about crystal balls and other mumbo-jumbo stuff, joking away reasons to make trades and anticipate what the news would bring. It was as if he wanted me to catch him out, to confront him. I was just being slow. A good salary, a posh apartment and an endless supply of pretty girls will do that to you.

One day I bumped into a senior trader from the old firm.

‘Ah, Paul, how’s it going? You learning loads from the big guy?’

‘Yeah, sure,’ I said, since Jimmy had been teaching me a thing or two that I did not already know.

‘Must be great to be a trader ... and a fucking clairvoyant!’ the man joked.

As I walked off a bad penny finally dropped. I stopped in Oxford Circus and stood rigid for so long that a copper came up to me and asked me if I was OK. Back home I found Jimmy reading the papers, something he spent an inordinate amount of time doing.

‘Er ... tea?’ I asked, trying to summon up some courage.

‘Take a seat, Mr. Holton,’ Jimmy said without detracting from his study of some obscure war in some obscure country that I had never heard of. As I eased down, he lowered his paper. ‘Something on your mind, young man?’ He waited. I didn’t know where to start. ‘Guess you’ve been wondering about ... many things. Such as ... my ability to predict the future, and not just in stocks.’

‘It’s a bit ... you know ... spooky.’

‘But a good kind of spooky ... because it makes me lots of money and allows me to have nice apartments and cars and the money to ... well, help you live the life you’ve become accustomed to.’

He hit the nail on the head and made me feel very ungrateful for all he had done for me. ‘Well...’ was all I could get out. The last thing I wanted to do was to spoil our friendship.

‘If you have a question ... ask it, before we both get hungry just sitting here.’

I forced a breath. ‘How can you predict the future? Are you, you know –’

‘Clairvoyant? No, not clairvoyant, but I *can* predict the future with great accuracy.’

My poor brain was puzzled. ‘Isn’t that ... a clairvoyant?’

He seemed amused. ‘A clairvoyant can see the future... if you believe in all that crap. I can *remember* the future. Your future, my past.’

‘My future ... your past?’ I gave it some careful thought. ‘That would make you a ... what, like a time traveller?’ I said in an off-the-cuff manner, a dismissive wave of the hand.

‘Yes,’ he answered with a smug grin.

‘Yes ... to what?’

‘Yes ... I’m a time traveller.’

‘You’re a ... time traveller. What, like Doctor Who on the TV?’ I scoffed.

‘Similar, I guess. But my TV sidekick doesn’t have large breasts.’

‘Not from this planet, then?’ I joked.

‘Technically ... no,’ was not the answer I expected. He focused on me. ‘Ever seen me sleep?’

I thought back, realising that I hadn’t, that he was always awake; last to bed, first up. And if I got up in the middle of the night he’d be reading, telling me he could not sleep. Oh shit.

‘You’ve seen how strong I am,’ he added. ‘And yesterday you saw me burn my hand.’ He held up his hand. ‘See any scars? Any red burns?’

I was getting worried. He fetched a file and plonked it into my lap. It consisted of a series of letters, typed and signed, and all addressed to the Prime Minister. I gulped. Each had been signed “*Magestic, The man in the middle*”.

‘The ... er ... man in the middle?’ I queried.

‘Someone in the middle ... sits between opposing parties,’ he enigmatically explained.

I scanned the first letter. It was warning the Prime Minister about an IRA terrorist attack, and suddenly this was all way

out of my league. The next letter itemised a train crash from a faulty signal, the third another terrorist attack by the IRA - this time in great detail, and naming names. The fourth outlined the election victory of Ronald Reagan and the capture of a British spy in Tehran. It got worse. Predictions of things to come in years ahead, ferries sinking, aircraft crashing and being hijacked. I finally looked up.

Jimmy casually asked, 'If you had the ability to predict the future, what would you do with such a skill? Trade the stock markets like me? Sure, got to make some money and oil the wheels. Bet the horse races, make a mint? Why not, you can always give some money to charity. But would you not, also, warn people about things like ... plane crashes? Terrorist attacks?' He eased back and waited.

'Well ... yeah, of course I would,' I firmly suggested.

'So you would use such an *ability* ... for the benefit of mankind?'

'Well ... of course.'

'Sounds laudable. And if you had this *ability*, and you were warning people and saving lives, then you'd be ... what ... one of the good guys, yeah?'

My head nodded itself.

'And if you knew that ... let's say ... your mum was due to get cancer in twenty years time ... then what?'

'My ... my mum will get cancer?' I was horrified.

Jimmy nodded, looking solemn. 'What would you do?'

'Get her to the doctors before that time, for a check-up,' I rushed to get out.

'Check-ups ... reveal things, they don't cure them.'

'She ... she'll die at sixty-seven?'

'Not if we don't let her.'

'What could you do?' I asked, almost sounding angry with him. Calmer, I said, 'You ... you'd help me pay for private medicine for her? Early treatment?'

'Something along those lines.'

This was now a different ball game, a very different ball game. When I came up in the lift I figured he was some sort of clairvoyant, and that he used his gift to trade the markets. I had completely missed the other uses of such foresight, such

as plane crashes. I felt very guilty all of sudden. We simply sat and stared for a moment.

Finally, Jimmy said, 'Of course, if you expose me ... I won't get to carry on preventing plane crashes. And I certainly could not help your mum and others.' He opened two cans and poured me a lager, which I needed. 'So', he finally said. 'You going to turn me in to the authorities?'

My mind was still on my mum, and plane crashes. 'No, of course not.' There was also the matter that he was the best friend I had ever had. In fact, just about the only decent friend I had ever had.

'Why *of course* not? I could be a dangerous alien for all you know,' he toyed.

'Are you ... you know?'

He laughed. 'No, I was born in Newport, South Wales. You'll meet my parents soon enough.'

'Then how...?'

'Time travel,' he carefully mouthed. 'In simple terms: I lived to be sixty-four years old, went to Canada after World War Three destroyed the planet. -' My eyes widened. '- Became Commissioner for British, European and Israeli Refugees, stepped into a time machine built by the United States Air Force and came back here knowing what I know. My body is full of genetically modified stem cells and other drugs, giving me greatly extended endurance and strength. I'm immune to all diseases known to man - and a few they haven't discovered yet. I heal quick, I don't sleep much, I eat a lot, but I can't jump tall buildings in single bounds and I most certainly *do not* wear my pants outside my trousers.'

'Wa ... World War Three?' I repeated, now wide-eyed and transfixed.

'Kicks off in about seventeen years time, give or take.' He raised a finger. 'Unless, of course...'

'You warn them. You stop it.'

'Tricky.' He shook his head. 'Would they listen? I'd need some ... credibility, built up over twenty years or more.'

I lowered my head to the letters, suddenly realising where this was going.

Jimmy added, 'Of course, it would be a difficult task all by myself.'

I scanned him from under my eyebrows, finally switching my brain on. 'You didn't need a room, did you?'

'No, I'm worth millions. And this place, dumb fuck, is mine. I bought it for two hundred grand. You'd make a lousy secret agent.'

'Why come to me? I'm no James Bond.'

'You have a destiny.'

'I do?' My expression made him laugh.

'Yes, you do. I'll guide you, so all you need to do ... is to think more about *others* than yourself for the next twenty or thirty years. Do you think you could do that?'

I nodded, although I had no idea what I was nodding about. 'What would happen –'

'If the authorities found out about me? We'd be locked up, tortured for information, dissected probably. So, you know, not a word to anyone. And I mean ... anyone. Your life ... depends on it.'

'Bloody hell,' I let out before setting about my lager.

'If you accidentally tell your parents, or some lady you're dating, you'll put everyone you know in danger. In time, in the years ahead, I'll be rich enough and powerful enough to stop any such action. But for now we have to be careful.'

'So, your plan –'

'Is to make some money, build up contacts and friends, build up credibility with the tip-off letters and, when the time is right, go public.'

'What?' I whispered.

'Years from now you'll be very rich, and have your face all over the TV and papers, so start thinking like a celeb' in the making. And now that you know what you need to know ... we'll be off on our travels.'

'Travels?'

'Starting with Kenya, then the States, Australia, everywhere. I need to educate you in the ways of the world.'

It sounded good. But I foolishly asked, 'What if the plane crashes?'

'It won't, dumb fuck –'

‘Because you know which ones crash,’ I said, feeling silly. ‘So what’s the weather going to be tomorrow?’

He laughed. ‘No idea, check the news weather. I only know what I need to know.’

‘So how come you don’t look like ... you know ... a wrinkly old guy?’

‘Stem cells, my lad. Everyone has stem cells, they’re what builds our bodies when we’re in the womb. After about eighteen-years-old the production of stems slows down - enough to keep us alive and to heal wounds - but not enough to keep us looking youthful forever. I’ve been genetically modified so that I produce an excess of them, something that doctors will be able to do in around ... oh ... twenty-five years time. When I *was* an old guy I was strapped to a bed and intravenously fed stems for ten weeks, stems taken from the wombs and umbilical cords of ten ladies I made pregnant for that very procedure. Because the stems were fifty-percent genetically my own, they worked well.

‘I was only given enough protein to survive, and so lost a hell of a lot of weight – appearing like the twenty-year-old me at thirteen stone. The genetically modified stems basically reverted me to a full adult at the youngest age, around twenty, which was what I needed for my parents to accept me as me.

‘*That* particular story ... is very secret, so we’ll discuss it at some point later. So is the exact mechanism of time travel – the people here can’t find out by accident. If you don’t know you can’t accidentally disclose it. As for my appearance... ten or twenty years will pass and I’ll age just a couple of years. Eventually I’ll grow old and die if I don’t get another injection ... from doctors that are in nursery school as we speak.’

‘Bloody hell.’ I sipped my beer. ‘So ... so what do I do... in the future?’

‘Mostly, you’re my assistant, helping me do what I need to do. There’s no one else I can trust with what you now know, and what you’re going to know.’ I felt honoured, then immediately concerned. He added, ‘And if, and when, I’m killed ... you take over.’

‘Killed?’ I repeated.

‘It’s always a possibility. Accidents ... or getting shot by irate husbands.’

‘And then what do I do?’

‘I’ll tell you what the future holds and you ... you fix what you can. But don’t worry, you’ve got ten or fifteen years before we get near a situation where the CIA will want to shoot me.’

‘CIA?’ I whispered.

‘In the future, the Americans are going to want to invade a few countries. I’m going to try and stop them, not least by tipping off those they aim to invade.’

‘Bloody hell.’ I sipped my beer as he fetched a large box.

‘Reading material.’ He took out each book in turn and made a pile on the floor that grew to a height of three feet: history of the world, UK history, first aid, advanced first aid, Pre-Hospital Trauma Life Support, expedition first aid, mountain rescue, UK politics, The Global Economy, principles of flight, piloting helicopters...

‘Helicopters?’ I queried.

‘How else are you going to impress a bird ... other than by flying her home the next day in your own helicopter?’

‘Bloody hell.’

‘Your language tutors will arrive in a few weeks.’

‘I’m like Luke-frigging-Skywalker being trained to use The Force.’

He eased back. ‘You know, in years to come they’ll make three prequels to Star Wars.’

‘What the fuck’s a *prequel*?’

He sipped his beer. With a deadly serious expression he answered, ‘My life.’

After a reflective beer I asked, ‘Well ... what exactly do I do now?’

‘Now you carry on trading the markets, you study, travel... get ready for the future. I’ll give you some money so that you can trade your own account, make you eventually look rich on your own, so you appear to be my business partner, not an employee.’

‘R ... rich?’ I repeated, making him smile.

‘Yes. By time we get to 2005 you’ll be one of the richest men in the UK.’

Wide-eyed I said, ‘I will?’

‘*You* will, I won’t.’

‘Huh?’ came out without any help from me.

‘I’m going to make a lot of money and give it all away. You, on the other hand, will hang onto a lot, so that we have a reserve.’

I suddenly considered that my future self was quite mean. ‘Don’t *I* ... give any away?’

‘Some, yes. Quite a lot in fact – compared to most; tens of millions. But I need you to act as banker. If someone sues me we’ll have a fall-back position.’

I pointed at myself. ‘I ... I’ll have more money than you?’

‘Lots more; nice cars, helicopter, lots of women chasing you.’

‘So ... so what’s the catch?’ I finally asked.

‘When you have a lot of money – a lot of people try and take it off you. You can’t just pop down to the corner shop... because someone will claim that you punched them – even though you never did. Girls will claim you attacked them, hoping to make some money from the story or from a settlement. If you’re in a car and some idiot nudges you from behind, they’ll tell the police you deliberately reversed into them and how bad their neck hurts and ... could they please have a million quid.’

‘Little fuckers,’ I quietly let out.

‘It’s no fun being a millionaire, you’ll have to watch your back. If someone asks you if you like your mum you’d say yes. Next day in the papers it would say you hate your mum.’

‘Little bastards. All because you got a few quid?’

Jimmy explained, ‘In the years ahead the tabloids will get more aggressive than they are now; they’ll print anything, till some privacy laws start to take effect after 2009. So anything you say or do now – that people will remember – will make it to the papers in years to come. Probably be an unauthorised biography about you as well.’

‘Biography? About me?’ I challenged.

‘Should think so.’

‘How can they write it ... you know ... without my say so?’

‘No law against it. If they say you hate your parents it’ll sell better.’

‘So anything I do –’

‘And anything *you did*,’ he emphasised.

‘Shit. I lost my virginity to a middle-aged hooker up the West End for forty quid.’

‘Who knows about it?’

I thought back. ‘I think I told a mate in school...’

‘Then make sure you look him up, buy him dinner, stay on his good side.’

‘I got arrested for nicking a cricket ball from a pavilion when I was sixteen.’

‘Fine, tell them you were a rebellious teenager. No one will give a shit about stuff like that. It’s what you do in the next ten years that matters.’

‘What about all the one-night stands?’ I asked.

‘Not a problem: man about town; money, cars, women. Papers love that sort of stuff.’

‘I haven’t even made any money yet and I’m worrying about it!’ I complained.

‘That, young man, we have in common.’

After two beers I said, ‘What the future like?’

‘Which part?’

‘I dunno ... girls.’

‘They shave off their pubes.’

‘They ... what?’

‘Nearly all girls shave off their pubes, or have them cut into patterns – like butterflies. And tattoos, they all have lots of tattoos.’

‘Girls ... have tattoos?’

‘Just about all of them; up their arms, on their boobs, sides of the hands - it starts in the 1990s. Around 2020 you see old women with stupid tattoos misshapen by their ageing skin. Singers like Robbie Williams have lots of tattoos.’

‘Who’s he?’

‘Wait and see.’

‘Christ. What’s music like?’

‘In the 90s it’s good, but by time we get to 2009 there’s a lot of Rap music in the charts.’

‘Rap? Like what those black kids do in America? Here?’

‘Top sellers.’

‘You’re fucking kidding me!’

Jimmy shook his head. ‘But after 2010 there’re lots of covers, not much original stuff. Guess everything has been done. I’ll commission a clever bit of software that’ll compare songs.’

‘Software?’

‘A computer program. And those mobile phones you see yuppies with, Motorolas, they’ll be small as a credit card.’

‘What?’

Jimmy lifted his eyebrows and nodded. ‘They end up as small as a playing card, and either touch screen or voice activated. You’ve seen Captain Kirk use his communicator? Well ... just like that.’

‘Cool.’

‘You can get a small device to put on your belt and wear around. It beeps if you’re going to have a heart attack.’

‘Strange ... but cool.’

‘Imagine this ... walking down a street, you take out your phone – size of a credit card - and say *where am I?* It tells you where you are, what direction you’re walking. You ask it *where’s the nearest curry house?* And it tells you.’

‘Fucking hell. They expensive?’

‘No, you get them free and pay a monthly charge of around fifteen quid.’

‘Jesus,’ I let out.

‘Everyone has one, kids as young as six. Everyone. If a parent wants to know where their brat is they ask their phone and it tells them.’

‘Bloody hell.’

‘Many cars go electric around 2015, I have a hand in that. Some things are great, some crap.’

I gave it all some careful thought. ‘What do *you* like the most... in the future?’

‘Probably the Internet.’

‘The what?’

‘*Our computer* is connected to the phone line, and in the future all computers are connected to central super-computers that hold information on *everything*. You can click a button and find out the news, the weather, everything. The best bit is the social networking by computer: it’s a gossip shop on the computer screen. You type in something... and lots of people see it, tell their mates. So when the CIA are about to do something naughty you tell people down the computer wire and it goes all around the world in minutes, soon on the news, so that the CIA can’t do what they want to.’

‘Better than letters warning people,’ I suggested.

‘Much,’ Jimmy carefully mouthed. ‘In the future people watch the TV news – about some idiot behaving like an idiot – go online and complain about it, and an hour later the idiot stops doing what he’s doing. *Real* democracy in action. But in the future jobs are still crap, the tube is still crap, British Rail is still crap, plane flights are the same, cars are the same, houses are expensive as fuck – ten times the average salary, and night life goes to shit.’

‘Whooa there, buddy. Nightlife does what?’

‘They relax the licensing laws, so anyplace can stay open and put some music on, dance floor in a corner at the back. No more nightclubs, no one going out in suits after ... say 1993. It’s all jeans and t-shirts.’

‘Jeans and t-shirts ... in a fucking nightclub?’ I was staggered.

Jimmy nodded reluctantly. ‘It’s why we’ll open our own.’

‘I knew there was a reason I hired you,’ I said loudly. We laughed. ‘Our own nightclub. Yes!’ I broached the subject of Jimmy’s fondness for the ladies. ‘If you’re, you know, so old – young looking with the wonder drugs and all – then mentally, you know, you’re old –’

‘Yes?’ Jimmy slowly let out, his brow pleated.

‘Then ... inside ... you’re old, yet you still like the young ladies –’

‘And ... so?’

‘Well, there’s ... you know ... quite an age gap,’ I delicately suggested.

‘And you’re wondering why an old man would go for the young ladies instead of ... what ... a fine fifty-year-old. How do you think I would look with a fifty-year-old woman?’

‘Well, a bit silly really.’

‘Exactly, dopey.’ He sipped his beer and took a reflective moment. ‘When I got to Canada I was fifty, knackered and despondent – women were the last thing on my mind. The conditions were harsh and I grew old quickly, you do in those circumstances. When I became the Commissioner for European Refugees, some five years later, I had some power... and better food and living conditions than most. After a year or so I entertained the odd young lady, paid for in food like the rest, but it was not a priority. It felt ... not right. So much death and starvation, it just doesn’t do anything for your libido. At least it didn’t for me at the age I was at.’

‘The young men raped regularly, punished when they were caught – typically a week in solitary. Others used prostitutes, although it was fair to say that *all* women there would lift their skirts for extra rations; when you’re starving, all other considerations go out the window. People here don’t understand that because they’ve never lived through it, but the Second World War generation would understand.’

‘There was one woman, a doctor under my command, Elizabeth her name was, who spent a lot of time with me. I suppose you could say that she was a girlfriend. But one day she went to an outlying region and never came back - that happened a lot. And now ... now I have to be very careful –’

‘Why?’ I stupidly asked.

‘Why do you think, Dumbo?’

I shrugged. ‘So you don’t slip up and say who you really are?’

‘And what else?’ he prompted.

‘Er ... you don’t like commitment?’ I toyed.

‘Never did when I was a mere mortal, stuck four years once. But what would happen if I did marry someone?’

‘You’d ... need to find a big-fitting tuxedo?’

He smiled. ‘What else? What would happen to the lady in twenty years time? And the kids?’

‘Ah, they’d grow old,’ I realised. ‘Your kids would grow up and go down the pub with you, looking more like brothers and sisters.’

‘And don’t you think that might be a bit ... odd?’

‘Yeah, yeah,’ I agreed. ‘You’re right. What you should do – to make up for the heavy heartache of not being able to marry – is to shag loads a pretty girls without commitment. Console yourself.’ We laughed, toasting each other with our drinks.

‘This job’s not all bad,’ he said with a glint in his eye.

We spoke till the small hours, made some plans, and ordered-in a curry like normal. When I woke the next day I was Dr Who’s assistant, but without the large breasts. After a coffee by myself I went to see my mum, and gave her a big hug. She was so surprised she thought I’d made some girl pregnant or lost my job. It took a whole hour to convince her I just missed her, and even then she was suspicious.

2035

I put down the keyboard, letting out a tired sigh. ‘Computer. Off.’ “*Closing down*”, came a pleasant voice, followed by a chime as I stretched out on my bunk. My back was aching from sitting hunched for so long. My eyes closed themselves, fatigued with concentrating on the screen.

The door burst open, the patter of small feet followed by a heavy four year old landing on my stomach, air bursting from my lungs. ‘God, you’re getting heavy,’ I whispered as my youngest granddaughter snuggled up. Reaching down I put an arm around her, finding her well-worn teddy; they were inseparable. Adult footsteps caused me to open an eye briefly, my youngest daughter stood with hands on hips, an expression of motherly disappointment and exasperation. She stepped closer, reached over and pulled a blanket up, covering her disobedient offspring. I heard the door click shut.

There would be gentle nagging in the morning about letting my granddaughters snuggle up, again, but I didn't care. I did not see that much of them, and they could snuggle up anytime they wanted. It took me back, back to when my own daughters slept in the bed with me and my wife. Ex-wife.

As I lay there, I thought back to the day Jimmy revealed who he was, well – part revealed the story. It seemed like a million years ago, it seemed like yesterday. Now Jimmy was gone, missing for almost four years now. The search had been extensive, large rewards offered. Some believed he had gone backwards or forwards through time, even some of the politicians firmly believed that, but I knew different, and I kept the secret. It was his wish, and I would honour that wish. The need for some sleep robbed me of further thought on the matter.

1986. First name terms

Jack Donohue was worried, being summoned to No. 10 early one morning. He adjusted his tie as he entered through the rear, ushered quickly to the COBRA meeting. Everyone was staring at him, especially Sykes. Gingerly, he sat as directed. 'Morning,' he offered, just before the Prime Minister entered.

The P.M. sat and studied Jack for a moment. 'First, the Americans have admitted, finally, that they also get letters. Those posted to their Ambassador, here in London, are just about identical to those that we receive. We could not say, at this juncture, that they get anything more than we do. They have had some specific warnings of mishaps in The States. Question is, do the Russians and Chinese get letters?'

The head of MI5 answered, 'We intercepted a letter to the Russian Ambassador, then sent it on its way the same day. It

was a warning about a fire at a chemical plant.’ He pulled a face and shrugged.

‘Then we received today’s letter,’ the Prime Minister announced, opening the file she had brought in. Paraphrasing, she read, ‘It was a good idea of Jack’s -’ Everyone focussed on Jack. The P.M. lowered her gaze. ‘-about the other letters. Just for the record, the international community receives warnings of disasters where I feel my tip-offs may do some good.’ She cleared her throat. ‘*Keep your panties on, luv.*’

She took a moment as people shifted uneasily in their seats. Continuing, she read, ‘I am British, and you can be assured of my loyalty of purpose to state and crown. Tell Jack that I do not bet the races.’

Jack tried, and failed, not to smile.

The Prime Minister continued reading, ‘If you wish to send me a message, use the personals in The Sun newspaper, messages to... Big Wobbly Bertha. We will not meet for many years to come, nor should you disclose these letters, since it would most certainly be unseemly for the Prime Minister of our great country to be seen to take seriously the advice of clairvoyants.

‘P.S. If the nice gentlemen -’ She glanced about the assembled men. ‘- intercept letters to foreign embassies I will know about it and re-direct such letters by alternate means. Kindly remember who you are dealing with. P.P.S. Jack will eventually figure out some more about me. How about an office with a window for the poor fella?’ She focused on Jack. ‘We carefully checked the signature, just in case it was *you* ... who sent the letter.’ Faces creased. ‘Fortunately, it stops short of suggesting a pay rise or promotion for you.’

That afternoon Jack got a visit from his departmental manager, Wilson, a sour-faced man with little hair, little patience and even less in the charm department. He scanned Jack’s office without a word then sat. ‘Despite your fondness for your new *pet* ... pen pal, I don’t share your views that this guy is a benefit to anyone.’

‘Sorry?’

‘He’s not just a clairvoyant, he’s a seer – someone capable of remote viewing.’

‘Remote viewing?’ Jack asked, despite the fact that he had recently read a dozen books in the subject.

Wilson flicked dust off his knee. ‘The CIA experimented with it, probably still do. People who can see into the USSR at some missile base and draw a picture of the layout. Uncanny, some of the stuff they could do but, overall, very inconsistent. Every time the Yanks used them for real missions they screwed up.’ He jabbed a finger towards Jack. ‘And so will your boy.’

‘Sir?’

‘He’s dangerous. He should be behind bars, in a psych’ ward where he belongs.’ Jack did not agree with that sentiment, but held his tongue. Wilson continued, ‘If he can see into this office, if he knows what we’re up to, he can also see into other areas. That kind of power cannot be left unchecked. So I want you to find him. Use the newspaper message system, arrange a meet, tell him you’re not well or something – since he seems to have an affinity for you. Just find him.’ He stood. ‘Or else!’

A knock at the door preceded two senior police officers stepping in. ‘Mr Wilson,’ the first stated. It was not a question.

Wilson was caught off guard. ‘Yes. Who the hell are you?’

‘We ... are the nice gentleman who’d like to talk about the death of a young lady you were seeing in college, 1958.’

Wilson stood rigidly shocked.

‘If you’ll come with us, please.’ They led him out, one officer remaining. Jack was on his feet, his mouth hanging open.

The officer neared. ‘Mr Magestic said to say hello.’

‘How ... how do you know about him, it’s top secret?’

‘I’ve been getting letters for years. Our clean-up rate is through the roof.’ He smiled and winked, letting himself out.

For ten minutes Jack stared at the door with a contended smirk. Despite Magestic’s suggestion, no new office had been forthcoming. Still, it was time for a little celebration. He opened a side drawer and took out a packet of Bourbons

biscuits. No, this was a special occasion. He replaced the packet and retrieved a Kitkat.

Kenya

Our first trip was to Kenya a month later, landing at Nairobi airport. My first impression was ... what a shit hole. And the heat was intense. The paint was cracking off the terminal walls, fans on worn bearings competing to see which could emit the most annoying sound - I guessed they were trying to attract mosquitoes, and the staff all stank. Unlike Jimmy, I was not in love with Kenya in particular, or Africa in general.

A local stood with a sign saying 'Silo' and directed us to a cab that had seen better days, a Ford Cortina like my dad used to have. He put our luggage into the boot, eventually getting it to close, and we settled in, Jimmy telling the man which hotel we wanted in the man's own regional dialect. To say the fella was surprised would be an understatement, and we were tooted from behind to get a move on.

Jimmy tipped the puzzled driver well, thanking him again in his own tongue. At least the hotel looked half decent. The staff, dressed in green waistcoats and funny hats, took our luggage and directed us into an air-conditioned interior with lots of white folk milling around; I guessed that it was the local tourist trap. Jimmy signed us in, talking in French to the dark skinned local, who questioned our nationality when the passports were handed over. Jimmy offered him a few words in another dialect, pleasing the man. The rooms were nice enough, good views of the city centre, but Jimmy nodded his head towards the door.

'Follow me,' he enigmatically stated.

We took the lift up to the top floor, opening to a roof garden with a small pool and a good sized bar. We sat, Jimmy ordering drinks in some weird dialect. He checked his watch, so I checked mine. 5.45pm.

‘Sunset over Nairobi,’ Jimmy let out with a contented sigh. ‘It’s been ... *many* years since I was here last.’

With cool beers we lay on sun beds by the pool, several nice ladies swimming lengths and clocking us, the sun going down to the west, the way we were facing. Fair enough, it was very pleasant, and two French ladies joined us, doctors with some agency linked to the Red Cross. Despite Jimmy’s strange knowledge of local dialects his French was limited, the two lady doctors conversing in near perfect English.

I was lost after ten minutes, Jimmy amazing them by knowing more about their mission in Africa than they did. He even told them when their project would end, something they had not yet been informed of. Hairy armpits aside, four hours of slow drinking resulted in Michelle dragging me to my room, thinking I was twenty-nine. Kenya was growing on me.

The next day we were up early, kicking out our guests and telling them we would be back in a week. We hadn’t even unpacked. We hired a taxi, making the driver very happy by booking him for three full days, expecting him to stay overnight with us. Jimmy negotiated a rate equal to a month’s pay for the fella, about a hundred pounds, with petrol on top. Off we set to some place with a long name. After two hours I was back to my original thought: what a shit hole. I made allowances because it was Africa, but God was it dusty and dirty, the roadsides littered with tatty shacks and naked kids.

We eventually left civilisation behind and hit the countryside proper, stopping to let a lion run across our path. An hour later and we arrived at the place with the long name, a small lodge of sorts that looked like cluster of Canadian log cabins, albeit dusty and dirty. Jimmy booked us in, speaking in German to the German owner, a room for the taxi driver arranged, then tipped his head for me to follow. On the veranda of a well-stocked bar we sat, cold beers placed down, and looked out across pure African countryside; a gentle slope down to a winding river, all sorts of animals milling about, forest in the distance and hills beyond, the sun setting. Whoever had positioned the bar had done so deliberately.

Jimmy pointed. Following his finger I could see my first herd of Elephants, lolling about at the river's edge. After saying something in German, a man brought Jimmy two pairs of binoculars and we peered through.

'David Attenborough, eat your bleeding heart out,' I said.

'Met him many times,' Jimmy idly commented. 'Great man.'

And for the next four hours we sat there. Sundown, sunset, afterglow and pitch black, roars of unseen animals echoing through the dark. Not to mention the million flying insects buzzing about the bar's lights.

The next morning we had an acceptable breakfast in a communal hall, some other German guests present, before hiring a private guide and two wardens to take us on a jeep trek. A dated and uncomfortable green Land Rover bounced us along, but we stopped many times, whenever Jimmy uttered some odd words to the driver. My first lion family was a joy; we could not have been more than twenty yards from mum and cubs at one point. We got up close to an Armadillo that seemed to just ignore us, then found a herd of Elephants the other side of a stream. We sat quietly, and they looked us over a few times, the youngsters frolicking in the water. Must have stayed there for an hour, but I was not complaining, I was starting to really enjoy the experience. Further on we spotted Cheetahs, Zebras in the distance, before pulling into what looked like a farm. And there started one of the great loves of my life.

It was not a farm, but an animal sanctuary, for injured or orphaned animals that the rangers and wardens found. The German staff greeted Jimmy, who offered them ten thousand in dollars towards their costs. Fair to say we got the run of the place after that. A teenage girl with a lopsided hat and cute smile took me to one side and sat me down against a wall, re-appearing with a bottle of milk and a bundle of blankets. She handed me the bottle and unwrapped the bundle; a lion cub with its eyes still closed. And for the next hour or so I fed numerous lion cubs, a Cheetah cub and a baby monkey with wrinkly pink skin and an improvised nappy. I was hooked. As she knelt next to me, making sure I was playing mum

correctly, her khaki green shirt fell forwards and revealed her small breasts. Then she began talking about nipples and teats. I got her back onto the subject several times.

They cooked us a meal, not least because of the ten grand they'd got, and we all got along like old friends. Jimmy's knowledge of animals and the country amazed them, so he explained it away by telling them he had visited many times before. Good job they didn't check his passport. During the meal Jimmy took a sandwich to the black driver, who seemed not to be allowed inside. When Jimmy returned, the family avoided eye contact for five minutes.

As we sat at their kitchen table, the sun going down, a variety of animals wandered in. A fully-grown Cheetah forcing its nose under my armpit and pinching my food was a shock. Not the table manners, but the fact that it was a grown Cheetah. Second time around I stroked its chin and head and it seemed to like that more than my meal. Guess he had tried the hostesses cooking before. A fully-grown lion caused me to stand and look worried, Jimmy grinning at my discomfort.

'Not to worry,' the teenage girl told me in her accented voice, sounding like the South Africans I had seen on the TV. 'It has a gammy leg and we file down its teeth and claws. It cannot hurt anyone.'

Jimmy got up and grabbed the beast around the neck. It struggled, but he held it firm. He got the animal to rise up and put its paws on his shoulders as he grabbed it by the mane, the lion seeming to enjoy the encounter. They moved outside and started rolling around on the floor like old friends, carefully observed by the bemused staff. Finally, Jimmy poured some water into the lion's mouth and hand fed it some meat.

'It is not normally so easy to control,' the surprised manager informed me. 'He is a strong man, your friend.'

'Either that ... or he smells like a lioness,' I suggested.

Jimmy returned to perplexed looks, letting out a sentence in some local dialect: *a lion knows another lion when he sees one*. That shocked the man even more, Jimmy taking off his ripped shirt and adding to their fixed gaze. Back at the lodge we nagged the staff to join us at the veranda bar and Jimmy bought everyone way too many drinks, soon a round of

German songs filling the night air, some quite rude, followed by the black driver singing a local lament about a boy who lost his goat. In fairness, the lament was quite good, and somehow very African.

I missed breakfast, sleeping in, and missed the big row with the owners. The previous night's activities had resulted in everyone being hung over, Jimmy paying the manger a thousand dollars for his troubles – principally a lack of available staff. I eased into the taxi with a squint, a water bottle and a hangover and we set off again. As we trundled along poorly maintained roads I tried to sleep, feeling guilty because I was supposed to be getting an appreciation of Africa in general and Kenya in particular. But when you're hung over everything is a chore.

River View Hotel

Another four hours and we were to the coast, although I slept some of the way and had no idea where we were. We were checked through some tall security gates with large holes, making me consider why they were there at all, and piled out at yet another reception desk.

‘What's this place?’ I asked.

‘A hotel we'll buy in years to come.’

‘Really. Looks a bit, you know...’

Jimmy grinned and nodded towards a path. ‘Walk down there, I'll check us in.’

So off I went; sunglasses, squint, parched throat and headache. I followed the path, winding past thatched huts, nicely decorated inside from what I could see, and onto a beach. ‘Oh, yeah,’ I let out, clanking along a wooden walkway over the sand and to the beach bar. I took a seat in the shade of a beach bar and accepted a fruit drink of some sort with ice-cubes in. It did the trick.

The horseshoe bay stretched around five hundred yards of turquoise ocean, the sand a brilliant white. The water was

shallow and inviting, some sort of net strung out across the mouth of the bay. At the back of the sand nestled two-dozen huts, all similar to those I had passed, some guests sat outside their hut doors and sunning themselves. I could see a few white families, but also a few black families. At least there was no segregation here, I noted. The edges of the bay were bracketed by rocky outcrops, perfectly symmetrical and opposite each other. And at one end of the bay a local man was showing a young elephant to some guests.

Jimmy plonked down and ordered a beer. 'Room twelve for you, for your drinks tab. So, what do you think?'

'Great location, fucking excellent beach. Better than Brighton beach! What'll this place cost?'

'We'll buy it next year, just over three hundred 'k' for all the land.'

'K? Is that the currency down here?'

'Sorry, *K* ... is computer talk; it means a grand. In the future everyone says *K*. *How much is that house? It's two hundred K.*'

I took in the layout, that which I could see. 'How far along does it go?'

'Long old way, almost half a mile in both directions. There're gardens here for growing food for the hotel, farms with chickens and pigs.'

'And an elephant,' I said, pointing. Checking that no one was in earshot I said, 'There're black families here. I figured the white folk here ... you know.'

Jimmy nodded. 'There's some de-facto segregation here, but that's money more than skin colour. The black families you can see are rich, and they don't want poor black families in here anymore than the white folk. You'll soon learn that African blacks are far more racist than their white counterparts. If you're not from the right tribe or region, they'd happily kill you. You see the staff here ... they're all from this region. If someone from another region came here with a different accent the locals would attack him.'

'It's something you have to learn about Africa, and quickly; it's all tribal, with fuck-all unity at national level or for the continent. If someone from Tanzania was in the UK

and he met someone from Kenya, then fair enough they'd probably chat. Here they wouldn't, even if they were neighbours. The locals can pick up an accent and see it in the faces. So if the new neighbours don't look and sound as they should ... it's war! One of the problems here, especially in years to come, is the Somalis. Their own country is about to implode into civil war and many refugees will stream south, taking land here as squatters and causing lots of problems. It's one of my tasks.'

'Tasks? What is?'

'Fixing Kenya.'

'Why?'

'In years to come a Muslim terrorist group called The Brotherhood will rise up, various places at various times. One of the first things they'll do is move south from Somali, attacking Kenya. Before that happens we need to fix the economy and politics of Kenya and get them ready.'

'Nice of us,' I grumbled.

'There's still a hell of a lot you don't know. We can stop The Brotherhood here ... or wait till they walk down the Richmond High Street.'

'Here,' I firmly suggested.

'Right, you've never been scuba diving.'

'Nope.'

'After lunch.'

And two hours later I lay in a few feet of crystal clear water, exhilarated by the curtain of orange fish darting about as the dive instructor, German again, cut up a dead fish and thrashed it about. I was now hooked on diving, and lion cubs the size of my hand. And I never did find out why they called that damn hotel 'River View'; the nearest river was miles away. Sea View, sure, or Mountain View, but we never did find out why it was called River View.

The music business

A few days after getting back from Kenya, suitably tanned and showing it off, we headed for a small office in Kentish Town. Jimmy was keeping the trip a secret to “see what a dull twat I was”. We jumped out of the taxi around 11am and pushed the buzzer on a purple door between two antique shops. I have to admit, I thought it might be some dingy brothel. A small card declared it to be Pineapple Records.

‘Yes?’ crackled a woman’s voice.

Jimmy leant in. ‘Here to see Oliver Standish.’

A buzz preceded a click and we pushed the door open, met immediately by a steep set of stairs whose carpet had seen better days. Our footfalls were heavy and echoing, announcing our approach. We opened into an office that seemed much larger on the inside than I would have expected.

‘Bigger on the inside,’ I noted.

‘We get that a lot,’ a pretty young girl stated. ‘This office is actually three houses knocked into one, at least their upstairs parts. You after Oliver?’

‘Please,’ Jimmy said.

The girl took a moment to study Jimmy. ‘Haven’t I seen you in Tosca down the Kings Rd?’

‘Probably,’ he replied. ‘Next time kick me in the shins and I’ll get you a drink.’ We edged towards a man striding towards us. ‘You must be Oliver,’ Jimmy said, a firm handshake initiated. The boss, Oliver, was average in every sense; height, weight and looks, easy on the eye with a friendly and welcoming face. To me he appeared to be in his early thirties.

‘Yes. And you are...?’

‘I’m Jimmy Silo, and this is Paul, and I want to buy your company.’

That caught the guy off guard, as well as the staff within earshot.

‘I didn’t know it was up for sale,’ Oliver quipped. ‘But still, nothing to lose by a coffee and a chat.’

We settled around a neat desk floating in a sea of untidy floor littered with files and tapes.

‘The reject pile,’ Jimmy told me.

‘Not all rejects,’ Oliver countered.

‘You sign up one in fifty-two, I’d guess,’ Jimmy told him.

‘That’s ... a good guess. I see you’ve done your homework.’

I picked up a music sheet with some lyrics in pencil.

Oliver asked me, ‘Do you have an eye, or indeed ear, for such things?’

‘He don’t, I do,’ Jimmy cut in.

Oliver raised an eyebrow. ‘Forgive my impertinence, but you don’t look the music type. More the ... nightclub doorman type.’

I said, ‘More the multi-millionaire type,’ still reading the lyrics, someone’s hard work. Either that or their drug crazed delusional ramblings.

Oliver smiled. ‘I see you gentlemen like the direct approach.’ He asked Jimmy, ‘Where are you from, I’m not picking up any accent?’

‘All over,’ Jimmy replied, easing back into his seat. ‘So, down to business. You ... are doing OK for a small record company, but going nowhere in particular. Last years accounts were the same as the years before, and will be same as this year.’

‘That’ll save money with your accountant,’ I helpfully suggested. ‘Just photocopy them.’

Oliver did not see the joke, Jimmy shooting me a look.

Jimmy continued, ‘So what I would like to do is this: I buy seventy percent of the shares for three hundred thousand pounds.’

I could see from Oliver’s expression that the numbers were exciting him.

Jimmy continued, ‘That would be spread over three years so that you don’t run away. You stay on as boss and draw a salary of ... what ... forty-grand a year? I give the company a director’s loan of half a million and you get some decent offices and some advertising going. You leave the selection of budding musicians to me.’

Oliver coughed out a laugh. ‘Well ... that’s er ... quite an offer.’

‘Given what this company makes, it’s above appropriate and generous, yet factors in your loyalty. And no staff would

have to leave.’ Jimmy took out a thick envelope and handed it over. ‘The details are all there, so that you can peruse them at your leisure.’

Tea and coffee finally arrived. We waited, Oliver now under the spotlight. At least he hadn’t thrown us out yet. And the pretty girl gave us biscuits, none for Oliver. Guess she didn’t like the boss.

Oliver scanned the document. ‘And how much ... input would you have into day-to-day running?’

‘Some, obviously,’ Jimmy answered. ‘My accountants and solicitors would breathe down your neck once in a while, I’ll pop-in twice a month or so and we’ll obviously link anyone you sign up to the nightclub I’ll be opening.’

‘Nightclub?’ Oliver repeated.

Jimmy forced a neutral smile. ‘One with a large room with a stage to showcase new bands, as well as to *select* new bands. You know ... talent contests.’

Oliver seemed to be nodding as he considered it. ‘You said... *you* would select new artists?’

‘Yes, get that chore out of your hair.’

‘You’ll be able to see your carpet again,’ I suggested. ‘What colour is it?’

Oliver smiled widely, but briefly. ‘I guess there follows some *hard sell*?’

Jimmy stood, so I followed him up. ‘No, take your time to think about it. No hurry. My contact details are on the proposal.’

Oliver followed us up, Jimmy shaking his hand. It was just a brief meeting, but I liked Oliver straight away.

Outside, Jimmy said, ‘Well?’

‘Nice bloke, I liked him.’

‘And what do you think I’m up to?’

‘Going to get your own record company so that you can shag nice lady singers?’

‘Partly right,’ Jimmy admitted. ‘What else?’

I was being thick again and shrugged my shoulders.

Jimmy said, ‘The future?’

I was still being thick.

Irate, Jimmy explained, 'I know every band that's going to be a success, dumb fuck.'

'Oh ... yeah.'

Jimmy shook his head. 'Fucking Batman never had this much trouble with Robin.'

Would you kill Hitler as a child?

Metropolitan Police Commander Harris waited in a nondescript café, a mug of tea cooling. His uniform was carefully covered by a trench coat.

With a 'ding' the door opened, a man sitting down opposite. 'Tea, love?' he shouted at the woman behind the counter. Facing Harris he said, 'So ... problem?'

'A ... dilemma.'

'Ah. Guess that's why you're paid more than me.'

They waited as a mug of tea was plonked down. Harris slid across a small slip of paper.

The newcomer read it. 'What's this guy done?'

'It's what he's *going* to do,' Harrison carefully mouthed.

'Ah. Another one of those.'

'This chap, when he grows up, will kidnap, rape and kill a string of twelve-year-old girls.'

The newcomer's features hardened. They stared at each other for several seconds till the newcomer lowered his head and re-read the note. In a low, husky voice he said, 'Be difficult for him, not being able to see and all.'

Students on planes

'Remind me again why we're here?' I asked, already knowing the answer.

'World peace.'

‘Yeah, thought so. Just checking.’

We stepped into a damp stairwell and up numerous flights of steps, this nondescript building off the Tottenham Court Rd, Central London. Finally we were to the Student’s Union Travel Department, what it was. Apparently, they advised long-haired students on getting cheap flights around the world. It reminded me of my own student days in Kingston Polytechnic. Jimmy knocked and entered, the two of us stepping into a cramped and untidy office.

‘Been burgled, have we?’ I asked a bored looking middle-aged woman, Jimmy shooting me a look.

She studied us over the rims of her bifocals. ‘Not students.’

‘Worse,’ I said. ‘Stockbrokers.’

She raised an eyebrow.

‘I’m looking for Mr Timms,’ Jimmy told her.

A young man stepped in at the mention of his name, looking like a student in a three-day-old shirt. ‘Yes?’

Jimmy got straight to the point. ‘We’d like to give you some money.’ That got their attention. ‘You handle student exchanges, in particular with Russia and China?’

Young Mister Timms nodded. Jimmy gestured the man back towards his own office, which turned out to be a corner of an even more cramped room that he shared with six others. There were just enough seats for the staff, none left over for guests, charitable donors or otherwise.

Jimmy asked him, ‘How much do you spend each year on exchanges to Russia and China?’

Timms shrugged. ‘About five grand, I think.’

‘And how many people does that allow to travel?’ Jimmy asked, the rest of the young staff now attentive to the two stuffed suits in their midst.

‘About ... twenty five.’

I made that two hundred quid a throw.

Jimmy presented a cheque in an envelope. ‘Now you can send an extra hundred each year. My address is in the envelope, and I want a list of names and places they visited. If I’m satisfied with your progress I’ll double the amount next year.’

Timms read the cheque with an expression, as if it might be a fake.

I closed in on pretty girl. 'I went to Kingston Polytechnic myself.'

'Errrr,' she let out with a pulled face.

Jimmy grinned. 'Should have told her you were a millionaire, might have worked better. Come on.'

We turned and left, my pride hurt. What the hell was wrong with Kingston Polytechnic? And we gave the fuckers money.

Our faces in the papers

Next day we got up early and hopped on the train at Paddington Station, bound for sunny Cardiff. I had not been in the First Class section of a train before and sat looking the place over.

'We're not in First Class,' Jimmy pointed out as he stood waiting.

'Oh, yeah, right. I knew that ... I was just, you know, checking it out.'

We squeezed past people in the queue at the buffet car and grabbed two seats on a table of four, suit jackets off and neatly folded, placed overhead. Jimmy started on his newspaper as we pulled out, the train almost empty.

'Empty,' I idly mentioned.

'Going the wrong way,' Jimmy quietly stated without taking his gaze off his paper. 'Workers come *in* to London in the mornings, students - and people visiting relatives - go out from London. Same with the motorways.'

Five minutes later we were slowly clanking over points and picking up speed.

'Grub?' I asked, sat in the isle seat.

Jimmy nodded. 'Burger, sandwich, tea. Something for you.'

I joined the queue.

Two hours, and several teas later, we pulled into Newport.

‘If you look left,’ Jimmy said without raising his head. ‘You’ll see where I was born. Parents now live off to the right.’

I scanned what detail I could, the track raised to the height of the tops of the terraced houses. I could see urban hills and then a river. ‘Low tide?’

‘It’s the River Usk, second highest tidal range in the world – about thirty feet.’

‘We close to the coast?’

‘Couple of miles to the Severn Estuary, off to the left.’

I clocked the town centre, what I could see, before we ground to a squeaky halt at the station. Jimmy looked up, issuing a sigh after studying the platform, alone with his own thoughts. He appeared saddened. Ten minutes later we were in Cardiff.

The first impression of any place is often from a train carriage. As I sat there I thought, *what a shit hole*. Why the fuck didn’t the council clean up those houses facing the track? It would make a better impression on visitors. Still, London was just as bad; rich people did not live in houses overlooking the train tracks. We walked out through the crowds, grabbing a taxi.

‘Heath Hospital,’ Jimmy told the driver.

As the streets blurred by I tried to take in as much detail as I could, clocking the old castle and the civic centre. The hospital was a giant white edifice, almost a single block that had been unimaginatively designed by the same guy who commissioned the rest of the high rises in 1960s Britain. If I ever met *that* guy... We stopped next to a park, Jimmy checking his watch. After paying the cabbie Jimmy approached a photographer.

‘You from The Echo?’ The guy nodded. ‘Follow us, then.’

Jimmy led us to a building next to the park, looking as if it had been designed after a trip to Japan and some Saki downed. This is where our taxes went, I considered as we stepped down a flight of steps and into a reception area. Medical Genetics it read, a brief flash in my mind of Jimmy

strapped to a chair and being drugged up by mad scientists. I was, however, reasonably sure that these guys had nothing to do with that. I could see parents with kids, toys on the floor. We ignored the lady receptionist and trailed up a flight of steps, turning right at the top.

‘Jill, Prof Harper,’ Jimmy offered.

The ‘Professor’ could not have looked more like an archetypal professor if he tried; wild grey hair and a tank top. He seemed confused, or in pain. I could not figure out which.

‘Sorry for the unannounced visit but I’m a rather busy man,’ Jimmy said. They shook as a peeved looking secretary peered around the door. Jimmy pulled an envelope from his jacket pocket. ‘I’d like to donate some money.’

‘Oh ... well ... that’s always appreciated,’ Prof Harper offered. He opened the envelope to a cheque for quarter of a million pounds. Poor bugger had to hold a finger to the digits to work them out.

‘That’s a quarter million quid,’ Jimmy casually noted. ‘Can we have a photo before we set off back for London?’

‘Um ... er, yes ... of course,’ the startled academic managed to get out. Jimmy and me stood either side of him, a photo quickly snapped. ‘My details are in the envelope if you want to put me on your Christmas card list,’ Jimmy told him before nudging me out the door.

With the snapper trailing behind, we walked the short distance around to the children’s building, some sort of new centre for kids and their parents to gather at. Jimmy went straight in, and straight to the office he wanted. With as much haste as previously, we stunned another academic medic. And I was getting confused by all the wall-signs and directions, not least because they were doubled-up into Welsh. What the hell was Obstetrics? It sounded painful. We got our pictures taken with someone who looked like he would need the Cardiac Department, wherever the hell that was. At least I could see the signs for X-Ray in case I broke a leg. Jimmy thanked the snapper and gave the man a twenty note. Soon we were in a taxi to Newport.

‘Parents,’ I figured.

Jimmy nodded, looking both concerned and saddened, no explanations forthcoming. We sped along the motorway into Newport's suburbs and to a bland semi. 'Mum' was surprised to see him.

'Oh, Jimmy.' The white-haired lady held the door open and let us in, Jimmy towering over her. 'You're smart.'

'This is Paul, he works with me at the stock brokers,' Jimmy lied.

We entered the lounge, a tanned, grey haired man easing up, somewhat reluctantly. I could see the family resemblance.

'Tea?' came an unseen voice.

'Two, milk and sugars,' Jimmy shouted back as he sat.

I said hello to his father, then clocked some of the family photos. As his mum returned I plonked down. 'So, you two are responsible for bringing the big guy into the world.'

'Getting bigger all the time,' his mum mock-complained. 'Are you seeing clients down here?'

'Came to see a brokers in Cardiff,' Jimmy lied. 'You well?'

'Yes, all OK. Your bother was down on the weekend,' his mum enthusiastically reported.

'Did you drive?' his dad enquired.

'No, train,' I put in. 'Read the papers on the way.'

We made small talk for twenty minutes, tea and scones downed, before Jimmy gave his father a wad of money. He had to spend ten minutes justifying how much he was on before his father would grudgingly accept it. Leaving the house, we walked back towards the train station, a twenty-minute stroll, Jimmy pointing out a few places of interest; it seemed to be somewhat of a trip down memory lane for him. Passing through a run down area he pointed out where he had been born.

'You know, when in Canada – and they were finishing off the time machine – one bright spark suggested that anyone going through would re-appear as a younger version of themselves, probably with no memory of the future; which would have achieved nothing. I had to consider that I might re-appear back here as a kid or teenager. Wasn't a pleasant thought, I could not have done my school years again. I

figured that, if I re-appeared here, I'd top myself rather than do my school years again.'

'That bad, were they?'

'No, not bad, but just imagine it: fifty pence pocket money and in bed at nine o'clock, bath on a Sunday, spelling homework! Could you do it ... with an adult brain in your head?'

'Be hard, but maybe fun.'

'It was hard enough going back to twenty years old, damn hard to pull off. And that was without re-possessing a younger body.'

'Then how...?'

'The other me, the original, went forwards. It was a swap.'

'So, what would have happened to –'

'An uncertain future. Probably would have been dead quickly, knowing where I came from. Conditions were harsh.'

On the trip back he was gloomy, but for reasons I could never have understood.

I said, 'Your folks ... they'll see us the in the local rag?'

'No, we'll be in the Cardiff Echo, they don't read it. But someone will tell them and ... and it'll be a big row.'

'Why?' I delicately broached.

He held his gaze on the countryside shooting by. 'Because I should keep my money for a rainy day, or give it to the family.'

'Your dad didn't seem too pleased to take *any* money?'

'Exactly. But that don't mean I should give it to strangers either.'

Pineapple records

I answered the phone to Oliver Standish from Pineapple Records on a wet Tuesday morning, two weeks after meeting with the guy at his offices. 'How you doing, mate?'

'Good, good. Is ... er ... James about?'

‘Sure is, and he don’t like *James* very much – Jimmy will do.’

Jimmy took the phone. ‘Home for fallen women. Are you dropping off or picking up?’

Oliver laughed. ‘Picking up, definitely. How are you?’

‘Keenly awaiting your next sentence, Oliver.’

‘Well, I’ve given it a great deal of thought and I like the proposal. So, where do we go from here?’

‘My accountants and solicitor will be around to you this afternoon with some papers ... *and* a big cheque. Can you join us for a meal this Friday, bring the whole gang?’

‘I should think so.’

‘In the meantime, could you send around every tape that was rejected or not yet screened, use a courier and I’ll pay this end.’

‘Will do, quite a few boxes full though!’

‘You’ll be able to Hoover after. I know you probably have things to do, but I’d appreciate that pile of tapes in a box in a matter of hours.’

‘Not a problem, I boxed them up on the weekend, kind of a clean sweep through the office. I’ll send them round c.o.d. right away.’

‘Thanks. We’ll pop in this week, dinner Friday – treats for the staff.’

‘Sounds like a plan. Your people –’

‘Will be with you around 2pm. Call me if you have any questions, anything at all. Bye.’ He put the phone down.

‘They got any sexy chicks on their books already?’ I keenly enquired, closing in.

Jimmy made a face. ‘Not really.’

An hour later we took delivery of three large cardboard boxes.

‘Right,’ Jimmy began. ‘Earn your bloody keep.’ He upturned a box, its contents spilling over the floor. ‘Call out the name, the stage name and the name of the song.’ He picked up a tape as I grabbed several.

‘David Wilson, Call me back baby.’

‘Nope. Back in the box.’

‘Susan Chasilton, a.k.a Sugar Sweetie, Blow my mind.’

‘Nope.’

An hour later we had selected just three artists from three big boxes.

‘Take that lot down to the garage, ask the doorman to bin it all and slip him a few quid.’

We put the tapes that we had selected - that Jimmy knew would be hits - into a big envelope and couriered them back to Pineapple. Our note said: *Sign them up pronto, please – bring them out Friday.*

‘They going to be big hits?’ I asked.

‘Two will be big, one will be a one hit wonder, like a lot of artists. Eighty percent of who we sign up will have just the one big hit.’

‘Why just one?’

‘After one hit they go a bit crazy, often hit the booze and the drugs, let it all go to their heads. A hit record makes you very arrogant, especially if you’re living in a bed-sit at the moment. From Hackney to a limo fucks with their heads, they lose it.’ He cracked a cheek into a smile. ‘One of the singers you’ll meet Friday will be big across twenty years, and she’s a babe.’

‘Which of us ... er ... dates her?’ I carefully nudged.

‘Neither, she likes girls.’

I took a moment to get my head around that. ‘Do you think...?’

‘Once or twice, her and mate when they’re drunk.’

‘Yes!’ I punched the air and did a little dance.

Rubber veins

A few months later we reached a financial target. Actually, we were ahead of schedule, and so headed back down to Cardiff. I figured we’d be donating some more money, but Jimmy said not. He had contacted the Professor at Medical Genetics and asked for an introduction to the head of Medical

Physics, which did not sound as painful as Obstetrics. This new fella must have been salivating at the prospect of some money.

The aforementioned department was down in the bowels of the hospital and it turned out they made things, weird bits of equipment for specialist use, all of the stuff they showed us turning my stomach. A new clamp for holding open a chest did nothing for my appetite. We finally sat in the Manager's office, not a professor, and the guy was called Dyke - pronounced 'dick'. I held my tongue.

Jimmy kicked off with, 'I would like to invest some money into designing and building a training aid for medics, both doctors in the hospital environment, as well as paramedics and ambulance staff. I'm looking for someone like yourself to design an artificial *sick person*. What I mean by that is an advanced dummy – not a robot or anything clever – but a dummy that lies down and looks and feels like an unconscious person.'

Dick was intrigued, but I could see a hint of disappointment that he had not got a fat cheque yet.

'What ... er ... what would it be used for?'

'Training, since there are many things that you cannot practice on a live person or simulate, such as rapid pulse, unless you inject the willing volunteer with adrenaline, or stop his heart.'

'Ah. I see,' Dick offered.

'Got a paper and pen?' Jimmy nudged.

Dick got himself ready.

'We need to find a rubber tube with the consistency of an artery. It stretches like an artery, it breaks like an artery and it can be cut like an artery. Then we map out all veins and arteries in the body and make a working model in rubber, or similar material. Then you find a suitable material to make an artificial bone, that breaks like a normal bone, weighs the same. Then you build an artificial muscle from strands of something else, so that it looks, feels and weighs the same as a muscle, and when you cut through it looks like muscle –'

'For training surgeons?' Dick said without looking up, scribbling away.

‘Yes, but also for a few other purposes. You then find a substance that looks and feels like skin, cuts like skin. The arteries are attached to an external pump that creates a pulse which can be varied –’

‘To simulate various medical conditions,’ Dick put in as he scribbled away.

‘Yes, and rubber lungs attached to external pipes so that they can inflate or deflate; in essence, a complete artificial person. The head should be realistic, with eyes that either dilate or weep.’

‘Complicated. And expensive,’ Dick let out as he eased back.

‘You get fifty thousand a year to start plus capital costs, plus the rights to a commission on sales when it’s sold around the world. Year by year, depending on your progress, I will increase the budget. If you can show that it works, to my satisfaction, we’ll accelerate the timescale and you’ll receive more money. I’ll even look at giving you a grant for a full time researcher or two to work on it.’

Despite the fact that he would not be getting a fat cheque, Dick seemed interested. It was done deal, a cheque for twenty thousand handed over on good faith.

Hong Kong’s Mr Wang Po

We landed at Hong Kong airport at a time when it was still under British control, and when 747s flew in at an angle designed to catch washing lines with their wing tips. Jimmy enjoyed my discomfort as we banked hard to line up with the runway. Peering out the cabin window I could see into people’s houses through their windows.

We had refused the recommended Drysdale Hotel when we booked the trip at the travel agents, a small firm around the corner from the flat that specialised in long haul. Being the excellent customers that we were they did not argue. When

we landed in Hong Kong Jimmy explained that the Drysdale would burn down, but he could not remember exactly when.

We booked into the posh Mandarin Oriental Hotel, Jimmy explaining that he needed to bump into someone there. We would not have normally spent so much money on a hotel, but this was business. As it turned out I really liked the Mandarin and would return many times in the future. Within an hour of hitting my room I had my first massage, two local ladies at the same time, with Chinese music playing in the background. I even had the James Bond style massage with a little lady walking on my back. Fortunately, the little lady weighed six stone soaking wet.

Later, Jimmy led me down to a large and empty function room, saying, 'What do you reckon to the acoustics?'

'Uh?' was all I offered as I scanned a large room with red curtains and red carpet. The door sign said it was called 'The Red Room.' Fair enough.

'Tomorrow, there's a convention on stock market trading, including technical trading and derivatives. We're going to crash.'

'To find the guy you want to bump into,' I surmised.

'He should be in the audience. Mr Wang Po.'

'Poor fucker,' I muttered. 'What does *he* do?'

'He's in property, shipping and food. At least he'll be in those industries in a bigger way in the years ahead.'

'Successful guy?' I asked as we took in the room.

'By time we get to 2009 he'll be one of the richest men in China – worth about twenty billion quid.'

'Shit...'

'Exactly. And you know how he made a lot of it?' Jimmy teased.

After a moment I said, 'You don't?'

'I do.'

'Why? He's Chinese, a communist rice nibbler!'

'In 1997 this place goes back to China and infects the whole country with capitalism. China rapidly becomes a very rich nation and ultimately catches up to the Yanks – becoming the second super-power. And Wang Po is going to help me

make a few quid ... as well as influence the Chinese Government.'

'Jesus,' I blew out. 'Don't tell the UK Government.'

Jimmy focused on me. And waited.

'I know,' I admitted. 'You're already a very secret squirrel.'

'And so should you be, underling.'

'Less of the *underling*, I went to Kingston Polytechnic.'

'Got your old McKinleys' pass?'

'Nope.'

He handed me my old pass. 'You do now, underling.'

That evening we dined at a restaurant that gave me vertigo, glass panels below our feet that viewed the street far below. At least the food was good. It was similar to that which I had sampled in the UK, but somehow better; I guess the ambience helped.

After the meal we sat on high stools at the bar, a huge glass front allowing an uninterrupted view over the brightly lit city. Numerous local girls made clumsy attempts to get a free drink and a new customer for a few hours, but we resisted. Jimmy surprised me with his fluent Mandarin, the brightly coloured little ladies in no doubt as to the firmness of the putdown.

'Not before the main event,' Jimmy suggested. 'Work comes first. Couple of beers, bed, get rid of your jet-lag, fresh in the morning. Sauna and swim, late breakfast and then crash the big show. You might recognise some of the faces.'

'Anyone from McKinleys?' I puzzled

'They're on the list, so our passes will get us in, dummy. Old Bob is here.'

'Old Bobby,' I repeated, fond memories of the rotund senior broker, something of a mentor to me in my first few weeks.

Jimmy tipped his head. I followed his gaze to a table with a colourfully dressed local girl facing a rotund man. With a smirk we eased up. Sneaking in quietly from behind, Jimmy slapped his hand onto Bob's shoulder. In a Chinese accent he said, 'What you do my wife?'

‘Wha ... what?’ Bob stumbled, suddenly horrified. He hurriedly wiped his mouth with his napkin and stood. ‘By God! Jimmy Silo!’ He clocked me. ‘Paul?’

‘In the flesh,’ I said, shaking his hand.

Jimmy shook Bob’s fat claw of a hand, then slipped the girl some currency and told to her leave quickly. There were seats for four at the table, so we plonked down.

‘What are you two doing here?’ Bob puzzled.

‘What are *you* ... doing here?’ Jimmy countered. ‘Besides shagging locals.’

‘I’m here for the seminar ... ah, you as well, eh?’ Bob surmised.

Jimmy lifted his eyebrows and nodded.

‘And I’m here for the booze,’ I put in. ‘So, anyone else from McKinleys here?’

‘Oh, yes,’ Bob replied. ‘Couple. Right now they’re down the local brothel. I decided to give it a miss.’

‘Really?’ Jimmy teased.

‘Well, the young lady sat down –’

‘If you don’t get rid of them quickly they see it as a contract,’ Jimmy warned.

‘Oh ... really,’ Bob mused. ‘Never mind, only here for three days. So, what you two been up to? I heard you had joined forces.’

‘Bit of trading,’ Jimmy nonchalantly stated.

‘Still doing well?’ Bob whispered.

‘Very well, of course,’ Jimmy responded.

Bob addressed me with, ‘You day trading, or client account, or what?’

‘Learning to fly helicopters,’ I said. ‘So that I can impress birds.’

Bob frowned his lack of understanding.

Jimmy explained, ‘He’s spending his pocket money on flying lessons. Something to impress the birds.’

Bob again focused on me. ‘You should get Jimmy to take you to some London clubs. Bit of a ladies man, our Jimbo.’

I resisted the temptation to respond to that. ‘Slave driver he is, I’m always too tired to go out. He’s got me on the Dow and the Hang Seng – twenty-four hour job.’

‘Bit of arbitrage, ay?’ Bob assumed.

Fresh drinks were placed down.

‘So,’ Jimmy began. ‘Got your speaker’s pass for tomorrow?’

Bob fetched it out. ‘They gave us these today.’

Jimmy took it off him and pocketed it. ‘I lost mine, so this’ll have to do.’ He gave Bob a wad of notes. ‘Tomorrow you’re going sight-seeing and shopping.’

‘Oh, er ... right you are, Jimmy.’ Bob pocketed the wad. ‘Hate public speaking anyway.’

And just in case Bob changed his mind about speaking at the seminar we got him right royally drunk, before making sure three ladies took him home. Jimmy removed his wallet first, paying the ladies well and telling them, in Chinese, which hotel to drop in at, no earlier than 2pm. On the way back Jimmy explained that the ladies were under contract to the restaurant *and* high class, so they would not abuse a customer – and no, I could not have one.

As we again approached the aptly named Red Room we encountered a throng of Chinese, most of who seemed pleased to see us. Jimmy explained that the Chinese were into their trading in a big way and that seminars like this were always well attended. Some of the Chinese were even from across the border.

We flashed our McKinleys passes, although they were not needed: we were Caucasians in suits and in the minority, being treated like honoured guests, and there could not have been more than ten westerners present. Jimmy approached Bob’s massage-parlour visiting colleagues, the men startled in their recognition.

‘Jimmy Silo!’ they questioned. ‘By God!’

We shook hands.

‘Bob’s not well, so I’m speaking,’ Jimmy told them.

‘Do my slot as well,’ one of the men grumbled, not wanting to speak.

‘I will, I need the time,’ Jimmy said. ‘Give me a good write up, lay on thick, then wait for us in the bar.’

The first representative of McKinleys spoke after two other Brits, boring talks about currency arbitrage and day trading. Then Jimmy took the podium. Unlike his countrymen, he gave a welcome in Chinese, then French, Russian and finally English. And the bugger could have warned me in advance about what was to come next. He gave a one-hour talk, complete with numerous diagrams on a white board, in Mandarin Chinese. At the end of it the other Brits waiting to speak looked peeved, but the locals loved it. And I was wondering just where, and when, he learnt to speak Chinese.

When Jimmy rejoined me he asked, 'How did I do? Clear enough?'

'Fuck off,' I whispered as numerous locals closed in on us. 'Is your boy here?'

Jimmy nodded. He answered questions from several locals as tea was served, then seemed to be heavily engaged with one particular gent, a round-faced local with dimples in his cheeks and a permanent smile. He introduced the man to me as Mr Wang Po and we shook.

Jimmy said, 'Mr Po speaks excellent English.'

'It OK,' our new friend suggested, his words accented.

Jimmy told him, 'I am happy to answer more questions, but not on an empty stomach.'

'We go, we, go. I have restaurant,' Po insisted.

'Not wanting to hear the rest?' I teased.

'No, no. Jimmy theory *very* good.'

We walked out through the crowds and to the taxi rank, but Po had a car waiting, a dark blue Rolls Royce. Chatting away like old friends, we got in and headed off, Jimmy trying to keep the conversation English for my benefit. But the big guy looked, and sounded, like a nerd in a suit when he spoke Chinese. 'Jimmy' could not seem to maintain the butch image as he contorted his face to form the Chinese words. It took half an hour to reach the restaurant, which turned out to be a staff canteen of sorts for executives of one of Po's companies, numerous security gates negotiated as we spiralled up a hill. But the place turned out to be posh enough.

Po was not the boss, but the boss's son, his father elderly and infirm, Po being the heir and de-facto managing director.

We settled down at a round table, many different offerings placed down, the idea being to sample a little of each and then order some more. I tucked in as numerous executives entered, bowing politely in our direction. Guess it was lunchtime around here.

I heard Po say, 'You can predict big crash in market.'

Jimmy suggested he could, and Jimmy did not get involved in guesswork. He and Po discussed 'bubbles' and 'saturation points', some of which I understood: if everyone was in the market, where would the new money come from? My ears pricked up when Po suggested Jimmy trade some money for him.

Jimmy replied, 'Mr Po, the fun of stock market trading ... is to do it yourself. I am happy to provide you with recommendations for a few years, for you to see how good I am. After that we can talk about commission.'

Po was stunned. 'A few years – no commission?'

'That's correct. I am in no hurry ... and a good friendship takes time.'

I decided to be helpful. 'If you visit London we will show you around.'

'I have UK passport as well,' Po explained. 'This Hong Kong, no China.'

Trying to be even more helpful I turned my head to Jimmy and said, 'What was that company we heard about, the secret takeover?'

'Ah, Anglo Oil,' Jimmy responded, the company we had bought shares in the day we left. He faced Po. 'Anglo Oil should be a good bet in the next few days, they'll be a bid by Shell.'

Po snapped his fingers at a lady and had a phone to his ear a few seconds later, a rapid exchange with his broker. Little more than a minute later Po had ordered a million shares at just about two quid.

Jimmy said, 'Hold them till they reach two-eighty at least.'

Po thanked us and we stuffed our faces. I did not know what work Po did, but we remained there till the sun went down, waited on by the nice ladies in traditional dress. Jimmy told Po that we had to meet the other Brits, which we didn't,

but offered to see him at the casino that night. It was a date, Po sending us back in the Rolls.

Back in the hotel I said, 'We meeting McKinleys?'

'No, just needed a break or he would have adopted us as family. Get some rest and be ready for 9pm, the car's coming back for us, could be a late night. Oh, and his daughters – not a finger on them nor innuendo spoken, you'd wash up in the harbour.'

'Nice, are they?'

'Very. And sixteen with it.'

We were almost half a day ahead of the UK, the FTSE opening as we were losing shed loads of money at the tables. At least I was, Jimmy was playing blackjack and doing OK. At some point someone must have handed Po a phone or given him a message, because the UK market had opened with the news of the takeover leaked, Po now a million quid or so better off. First I knew of it was a member of staff offering me a silver tray with bundles of dollar wads on it.

'For you, sir, from Mr Po.'

With quite an audience observing, I accepted the money, a stack the size of two house bricks, then decided to head to Jimmy instead of my first impulse, which was to put it all on black.

'Anglo oil?' I knowingly asked.

A smiling Po, sat next to Jimmy, nodded the answer: it was already at three quid ten. Jimmy also had a pile of cash, stacked up on the table, but he did not seem to be gambling it.

It was my turn to surprise Jimmy. 'Mr Po, can I ask a favour?'

'Of course, of course.'

'Can you hold this,' I said, handing him the bundle. I took out the flyer that I had found in the drawer of the bedside cabinet and held it for Po to see. 'I want you to take our money and give it to The Red Cross mission here in Hong Kong.' I handed him the flyer.

Jimmy was as cool as ever, stacking his money on top of mine without making eye contact with me.

Po was surprised, to say the least. ‘You want to give it all – to Red Cross.’

‘Yes,’ I said. ‘And I trust you to deliver it, of course.’

With a quick tip of the head Po had two members of staff at hand, collecting the money with instructions on what to do with it.

A minute later Po’s two daughters arrived, introductions given, Jimmy turning and standing. He engaged them at length about their studies, before switching to English, asking a few more questions. Turned out nearly all of the educated locals spoke English. And the two girls were just nice enough to eat. I took them to the bar, and helped them practice their English.

When the girls had to leave, Jimmy explained that we were due to meet our friends from McKinleys in the morning, and we thanked Po. Jimmy got Po’s fax number and card and gave him our details before we left, the Rolls taking us back again. We flew out the following afternoon with a new friend in the colony. And the local branch of the Red Cross got a surprise, Po as trustworthy as the Pope. From now on I was to fax our new friend regular tips.

Kenya, Feb 1987

Staying at the hotel that we were due to buy, one day Jimmy ordered us a taxi and we set off through the dilapidated gates, a half-hearted salute from the fat old guard.

‘You’ll need to be good at improvising today,’ he said as we bumped along a road that I was determined to fix some day. ‘Don’t react to weird stuff, I’m going to frighten someone.’

‘Frighten them?’ I asked, a careful study of the sweaty taxi driver. But the man seemed ignorant of our discussion, concentrating hard on trying to run over chickens in the road.

‘There’s a woman ... you’ll see. She thinks I was in the Second World War.’

‘Were you?’ I testily asked.

‘No, but her belief serves my purpose. You see, the first time I met her she thought I looked familiar, told me a story about an English soldier who saved her during the war. I’ll adopt that persona so that she’ll assist us.’

‘Assist us how? If she was in the war then she’s gotta be fucking ancient!’

‘Seventy now.’

‘So...’

‘She runs an orphanage,’ he said with a smirk.

‘Oh,’ I muttered. ‘I got a few quid to give them.’

‘Me too.’

‘You Englishers?’ the taxi driver finally asked.

‘Yes,’ I said. ‘From the Chicken Protection League.’

‘I like da chicken, man,’ I got back.

‘Get your wife to scrape some off the tyres later, be well cooked by time you get home!’

We had passed this orphanage before, on each trip to the hotel. It was a red brick building on a corner of the main road and resembled a school from the outside. It also looked a hundred years old and falling down, the outside dilapidated. I wondered what the inside might be like. I wondered too soon. The inside stank, a curtain of buzzing flies hanging in the air, the pungent odour of stale urine greeting any visitors – no need for a guard dog. I looked inside a hanging bell, but found no striker, so I tapped it with a coin. A local appeared, a face so black that I could not make out any features other than bloodshot eyes.

‘Sister woman,’ Jimmy told the man.

The man, dressed in a sweat-stained blue shirt, turned around and hobbled into the bright sunlight of an internal courtyard, the distant echoes of kids’ voices coming from somewhere. We followed him across the courtyard and into another building, to an office, finding the diminutive ‘Sister woman’ sat attending some paperwork. Her hair was grey and unkempt and she appeared as if she had neither had a good bath, nor a good meal, since the end of the aforementioned war. Maybe even the First World War.

‘God bless all here,’ Jimmy stated as we stepped inside, causing me to puzzle the line. Blocking the sunlight of the doorway, Jimmy towered over her. ‘Are you all alone under the rubble, Mary?’ He held out his hand.

She stood slowly, her wrinkled face contorted in confusion. For a full ten seconds she stared at him before holding a hand to her mouth and shrieking.

Jimmy took her frail arm, lifting her shirtsleeve and revealing a scar. He ran a finger along it. ‘I did good stitches, child.’ She collapsed back into her seat with another shriek, uttering some words in Dutch. Her assistant looked worried for her, pouring her a drink.

‘Are you not glad to see me?’ Jimmy asked. ‘It has been a while.’

‘You ... you,’ she struggled to get out, pointing a shaky finger. And I was starting to feel uncomfortable; poor woman looked like she had seen a ghost.

‘Yes, Mary. I have come to help.’ From his pocket, Jimmy handed over a thin wad, totalling ten thousand dollars, which out-trumped the ten dollars I was going to give them. She examined the wad. ‘I think some food for the children is in order, some more staff and new toilets in the boy’s building,’ Jimmy told her. He turned about and led me outside. ‘Give her a minute, I’ll show you around our new orphanage.’

‘Our ... our orphanage?’ I queried.

‘Our ... AIDS orphanage.’

I stopped dead, not least because some of the sickly looking kids were closing in; snot noses, a dozen personal flies each, tatty clothes, ribs showing. I swallowed. I was not ready for this and Jimmy, bastard, dropped me right in at the deep end. He began to chat to some of the kids in various local dialects as I tried hard not to touch them. I was walking through them with my arms up, as if negotiating a field of stinging nettles.

‘They will not bite you,’ came a weak and husky voice from behind as Mary joined us.

‘You can’t know that for sure,’ I told her. ‘They look hungry.’

‘You are not like him.’

‘No, I’m mortal,’ slipped out, immediately regretted. Now I was winding up the old lady as badly as Jimmy, and by accident.

She put a hand over her eyes and stared in his direction. ‘I had prayed for help...’

I gave it some thought, trying not to make a joke. ‘Some solutions come in *extra-large* size.’ We observed Jimmy pick-up two ten-year-old boys and swing them around. He straightened his arms level with his shoulders and spun around, the boys flying over the heads of the other children, the gathering staff amazed.

Finally he joined us, three members of staff now stood flanking the old woman. ‘I’ll be sending ten thousand dollars a month to start, more next year. We’ll be visiting regular, three times a year, and we will be taking over this orphanage, rebuilding it to hold more children. I will build a school and bring in teachers, also a permanent doctor based here.’

To say they were stunned was an understatement.

‘Going to get some fly traps as well,’ I put in, hoping it did not sound too sarcastic.

He closed in on the old lady. ‘Now, show me the children who are dying.’

I swallowed. If the rest of the orphanage was anything to go by, what the hell awaited me in the Terminal Ward? It was as bad as I thought; I was fighting not to be sick with the stench. The kids lay in their own excrement, many with limbs dressed in bandages that had been white at some point.

Mary saw my look. ‘No money, no care. When they die we burn them. One or two a day.’

In the space of an hour I had gone from a nice beachfront hotel and a cold beer ... to hell on earth. My guts were turning and my thoughts jumbled. What I would have paid to be out of there that instant.

Jimmy faced Mary squarely. ‘Do you trust me?’

‘Of course,’ she offered, seemingly shocked that he would ask.

‘Get a needle and syringe.’

My guts tightened some more as I stood as close as I could get to an open window. I could see out over some low brick

buildings toward a wooded area at the rear, smoke coming from a fire. I remembered what she said about the bodies, vomiting hard through the window and gripping onto the peeling paint frame. Turning around a minute later I saw Jimmy prepare a needle, hand it to Mary and offer her his straight, upturned forearm. After a moment's hesitation she drew dark red blood.

'Inject a quarter into the four children with the best chance of survival.'

What had she to lose, I thought as I observed; the beds held the living dead with no hope. These kids didn't even have the strength to move their eyes towards us. She carried out her task diligently, returning to Jimmy as I wretched again. My brain was fried and not working. As I stood there I realised he was immune to everything, future genetics, and now I understood. His blood, in them, would make them better.

He informed her, 'If it is not too late they will run a fever for a day, then start to recover. They must have protein and water, so use the money I gave you. You understand?'

She nodded, holding the needle reverently.

'We will be back in seven days, use the money, there will be more. And Mary, do not discuss me with anyone. Understand?'

I was very grateful when he grabbed me by the arm and led me out, delighted to be on the street again, but also a little angry at having been dragged in there in the first damn place. Still, what he had done had put me to shame and I felt it as badly as my stomach hurt. We made the short trip in silence and I plunged into the cool waves, several beers at the bar before I forgave him. And forgave myself.

'Better?' he asked without looking around, Abba playing from a badly tuned radio behind the bar.

'Yeah. Sorry about that.'

'It's part of my world, not yours. Not yet.' He faced me. 'There's something you need to know. If I inject you with a syringe full of my blood ... you'll change, be just like me.'

'Change?'

'You'll have extreme endurance ... and be immune to every disease known to man. You'll also live to be around one

hundred and twenty, at least. You won't be a hundred percent like me, maybe sixty percent, but you'll be able to break every Olympic record. And if you're going to piss about down here with me ... you'll need the immunity, or you'll die. And ... most of all, you'll be able to provide a very important backup to me, in case I'm killed.'

'Back up?'

'My blood has key antibodies to a variety of diseases, including cancer. Later on, decades from now, doctors will use it to reverse engineer cures for a lot of things, saving millions of lives. And, when the time comes, if I'm not around, you could inject your mother.'

'Your blood ... it will cure her,' I realised.

'My blood will cure more than just her, she's just one woman – but whatever it takes to motivate you to do the right thing.'

I walked off, not returning till sun down.

Jimmy greeted me with, 'For you the fun part is over. We start to get serious in the years ahead. Sit, there're some things about the future you need to know.'

I was as sick as the Terminal Ward, my head now filled with what the future held: disease, wars and financial crisis. Sat there I must have aged ten years. Ten cool beers later and I fell unconscious, unable to rid my guts of the feelings that gripped me.

The next day was a blur. I managed a quick swim, some bread for breakfast whilst Jimmy was off scuba diving, then a few beers and back to bed. By sun down I had a thick head and took some Anadin with my beer. I joined him for dinner, but we said little. I retired to my room and watched a black and white TV, mostly local Kenyan programmes. Seemed the Ford Capri had just arrived and was being shown off, and the in-crowd all had Sony Walkmans on their hips. I started to worry about what decade I was in.

Jimmy left me firm instructions to get my dive certificate sorted, PADI Open Water followed by Advanced Open Water, which seemed to just consist of looking at fish and filling in questions in a book that had the answers in the back. I went diving as he headed off to 'plan things'. A week later,

freshly qualified as an Advanced PADI diver, I joined Jimmy in a return to the orphanage from hell.

As we pulled up I noted numerous locals up ladders, some scraping the walls and others painting them a tacky bright blue. Hell, it beat the old natural brick surface, I considered. We stepped over upturned paint pots and ducked inside.

The man with the very black face and no features shrieked, running away as fast as his gammy leg would allow him. Guess he was a convert, and buying into the story of Jimmy being in the war. If he knew the truth, I considered, he'd do exactly the same thing and run off again. The courtyard enclosed happy playing kids, this time all dressed like school children in blue shorts and shirts; albeit dying from AIDS. I figured the guys painting the walls were trying to be consistent. There seemed to be more members of staff, now dressed in blue shirts, or maybe just the same ones had a bath and makeover. We ran an eye over more painting work, again blue, then entered Mary's office.

She jumped up as fast as she could and gripped his outstretched hand with both of hers. 'Welcome, welcome,' she said in an accent. 'Come.' She led us back towards the Terminal Ward.

'Hardware store had a sale on blue?' I asked, trying to take my mind off what awaited us.

'In Kenya ... it's the law for children and kindergarten,' she explained as we climbed the new blue stairs. Well, that explained it.

The ward had been metamorphosed into something closer to this decade; and fucking blue. The floor was covered in lino painted blue, the walls smoothed down and painted blue, the windowsills painted blue. The ceiling fans were still rusted, so I guessed they had not reached that far yet. The bed linen was clean, the kids alert and awake, their bandages white. At the far end of the ward, which now looked like a ward and not a death camp, a lady doctor from the Red Cross sat attending a child.

Mary stood proud. 'You see. You just need money.'

Jimmy half-turned his head towards me. 'You just need money.'

‘You just need money,’ I repeated, suddenly realising something. I stood nodding at my own understanding.

‘Come, come. Quick,’ Mary got out, squeezing between us and back down the stairs in a hurry. We trailed behind. In the courtyard she called four names, the children falling-in as if on parade. ‘They had the blood,’ she explained.

I halted. For many seconds I could not move as it dawned on me; these four kids, shiny faces and broad smiles in their neat blue uniforms, had been in the ones in the ward above, dying in their own filth.

‘They put on weight quick,’ she commended, adjusting their collars.

Jimmy stood proudly inspecting them, like soldiers before their commander, exchanging a few words in the local dialect again. He was contented and sent them off to play. Facing Mary he said, ‘The Red Cross doctor lady, she is Anna Pfunt?’

‘Anna, yes,’ Mary responded. ‘You know her?’

‘Let’s go and see.’ He led us back up the stairs. It was wind-up time again.

‘Anna?’ Mary called, no regard for sleeping kids, the doctor walking down to us. She stood dressed in a white overall with Red Cross flashes, an image that I would see a lot of in the future. A well-built woman, she looked like she could handle herself in a bar fight. Her face was reddened from the heat, no make-up, her blonde hair tied back.

‘Yah?’

‘This is the man who gave the money,’ Mary stated.

That did not seem to impress the big lady. She looked us over.

Jimmy said, ‘Have you forgiven yourself yet ... for your sister’s death?’ The Amazon warrior blinked. Jimmy continued, ‘It is why you came here, Anna. Do you still blame yourself for Lotti’s accident? It was not your fault, you were trying to get away from the old man ... the dirty old man in the big house at the end of Aust Strasse, but she could not ride her new bike well.’

I could not tell if Anna wanted to punch him, or keel over.

‘How ... how do you know this?’ she demanded in a whisper. ‘I tell no one this.’

‘You told me.’

‘When? When do I tell you this, I do not know you!’

‘When you were asleep.’

Mary smiled contentedly, seeming to enjoy it.

‘When I was ... asleep,’ Anna asked, her brow pleated to the point of pain.

‘When you were six,’ Jimmy began, ‘you asked God for a wish. You remember what it was?’

‘Yah ...’

‘You now have a big brother.’ He handed her a wad of dollars. ‘Buy a bus for the children, and take them to the ocean as you want to do. In the meantime, I want you to sit and watch us.’ He helped her down onto a bed without resistance before facing Mary. ‘Syringes bitte, schwester.’

With myself sat on a windowsill, blue of course, Anna on a bed, Mary ruthlessly and hurriedly extracted blood, Jimmy wincing one or twice at the haste. Soon ‘Sister woman’ was injecting the kids, Anna on her feet after the second kid and seemingly not in favour of injecting one person with another’s blood, or the sharing of needles. When she finally managed to open her mouth Mary snapped at her, told her to shut up and watch the miracle. I had to commend her, the old lady attended every kid, the whole room, in fifteen minutes or less, jabbing Jimmy in both of his arms, no antiseptic swaps applied or consideration for his human condition. Nothing was going to stop her.

When done, Jimmy told Anna that he wanted her to stay for seven days and to observe the children, but not to say anything to anyone; as a doctor it would go bad for her to be part of this. Now *that* was something of an understatement. Even I knew that, and all I was ... was PADI Advanced Open Water with a temporary paper certificate.

Back in the courtyard I noticed the stack of three grubby mattresses. Pointing, I said to Mary, ‘Throwing them out?’

‘No, no.’

‘No,’ I challenged. ‘They’re filthy!’

‘It is for the children, for the wall.’ She pointed, but I was lost. She clarified, ‘The painting work, people know we have money now. They come at night, here – this wall, and throw the kinder over the wall.’

My eyes widened. ‘People ... throw their kids over your wall?’ I was getting louder as well.

‘The kinder with disease, they put them over the wall. We put the mattress so that they are not so hurt. The staff, they sit here at night and wait for the kinder. But the kinder bounce off the mattress and onto the floor, so always some problems.’

I pointed. ‘That fucking wall is six feet high!’

‘Yah, they swing the kinder over the top.’

‘The locals? They throw the kids with AIDS *over* the wall?’

Sister Woman nodded, none too phased. I could not move. My face wanted to laugh out loud at the absurdity of it, my jaw stuck tight so that I would not appear to be laughing at anyone’s misfortune, my eyes watering.

I fought for a breath. ‘Why not ... why not lower the wall?’

‘Then they come and steal the food. It’s OK, the kinder bounce.’

Jimmy nudged me out the main entrance, kicking empty paint tins as we went. I had just had a crash course in the African’s sense of practicality: mattresses to catch the children. Still, it seemed to work.

Back in Nairobi we dined with death - we caught a taxi across town, and entered a nondescript office block. The guard on the door did not challenge us; white folk I guessed. Soon, we were seated before a perplexed looking Dutchman in a nice office, air conditioning and a mini-bar; this was the United Nations. And Dr Van Den something-I-could-not-pronounce was one of a very small team of people who organised the clearing of mines and ordinance after wars and conflicts. I figured Jimmy would give him some money and we’d leave for the hotel rooftop pool.

‘I’m Jimmy Silo, a wealthy British stock market trader. I will be buying a hotel or two in Kenya.’

Van Den Something was puzzled. ‘There is ordinance near the site of your hotel? It is near the border?’

‘No, that is not why I am here. I have taken charge of an orphanage ... and it is terrible to see the children with no limbs...’ Van Den was now following and looking very sympathetic. ‘So I wish to give some money for mine clearance. But, more than that, I wish to be actively involved in fund raising and awareness.’

Now we were talking Van Den’s language, not double Dutch, and he fetched us both cold drinks. But I could not remember seeing any kids with missing limbs at Smurf central.

‘What would you like to do, exactly?’ our host enquired.

‘It strikes me ... that the best people for mine clearance in any country are the locals themselves – suitably trained and supervised.’

Our host brightened. ‘Yah, yah. I have this idea also, but always the former mercenary with the bad attitude. And they want so much money for the work.’

Jimmy nodded sympathetically. ‘If you can find a training facility ... I can offer you ten or twenty thousand dollars a month.’

‘A month? Mein Gott.’ Our host gave it some thought. ‘There is a place, near the Somali border. There are former soldiers there, old grey men, but they do not want much money to help. They have an airfield – not used – that the government allows them to occupy. They have trained a handful of locals, and some Somalis, in mine clearance.’

Jimmy handed over a wad of dollars. ‘Please, give them this money. And, until I am back in a few months time, would you draw up some simple plans – something we can work to?’

‘Yah, yah, of course,’ our host excitedly got out.

And it turned out that our host would be leaving the service of the UN in six months time, but wanted to stay in Kenya with his family, his wife a local, his kid’s half-caste. Jimmy hinted at a job for the man and we left a very excited pen pusher behind.

In the taxi Jimmy said, ‘I first met that guy at the rooftop bar. He told me about the mine clearance efforts, his family, when he would stop working for the UN, the camp on the border. I just wanted it to appear to be his idea.’

‘And the orphanage gave you the credibility and the way in.’ I nodded to myself.

‘Step by step. I’m working to a very detailed plan with twenty thousand boxes to tick.’

‘How many so far?’

‘About a hundred.’

‘Long list,’ I grumbled. ‘Are the answers in the back of the book?’

Jimmy laughed. ‘No, but I have taken the test before.’

‘So why mine clearance?’

‘Mine clearance staff need medics on hand, in case they blow a limb off.’

‘Ah ... medics means those Rescue Force people you mentioned. Small acorns.’

‘Small acorns, my lad, are easy to move ... or to stop growing. The problem comes when they’re sixty feet tall!’

‘Too late to do anything,’ I concluded.

Colonel Pointer, US Marines. (Retd)

Colonel Thadius J. Pointer started his service life as a pilot in the Marines, serving with distinction in Vietnam, three tours. He progressed to be an instructor before becoming a test pilot for General Dynamics, Northrop and eventually NASA. He was accepted into the space programme by NASA in 1976 but never got the chance to fly into space, returning to test pilot work for a few years, in particular the stealth bomber programmes. In 1982 he hung up his wings and became a consultant to the CIA, advising on spy plane tactics and operations, and continued to act as consultant to the USAF on stealth matters. 1986 found Thadius working as a part-time consultant to the CIA on remote drone spying.

Today’s trip to Langley was different, an urgent summons, something he had not encountered before. Since his work was in research it was a tantalising intrigue that had kept him

awake the night before. He now knocked on the door of his principal contact at Langley, Air Force Colonel Summers.

‘Thad, come on in,’ Summers urged, waving him forwards.

‘Where’s the fire, Bob?’ Thad joked. ‘You need me for a mission that no young buck can handle?’

‘Nothing so dramatic,’ Summers said as he literally man-handled Thad by the shoulders and into his own chair. He took a breath, stood at Thad’s elbow. ‘This is classified Top Secret.’

‘Ain’t it all?’ Thad baulked, a quick glance up.

Summers tapped a blue file on his desk. ‘I got to be some where for two hours. While I’m gone I want you to read the letters in this file – they’ll explain themselves. At the end I want a conclusion, not least because you’re one of only a handful of men still serving who’ve touched upon a... *certain topic*.’ He grabbed his hat and left, his enigmatic smirk lingering in Thad’s mind.

Thad opened the file, finding a typed letter, an odd signature at the bottom. ‘Magestic, the man in the ... middle?’ With a heavy frown he read the first letter, the detail of a train derailment that would happen. ‘What in God’s name have they got me doing now?’

The second letter detailed a terrorist attack in the Mid East, a warning of a few months given. The third outlined the problems with a railway bridge that would collapse in a year or two.

‘What...?’

The third letter detailed an Israeli spy working for the CIA. ‘Jesus.’

He flicked pages, stopping at the collapse of communism after the fall of the Berlin wall. It held his attention for many minutes as he read and re-read it. Slowly, very slowly his face contorted in a surprised smile. ‘God damn ... they did it. They actually ... sons of bitches ... did it.’

Summers returned with an expectant look, sitting opposite a smug looking Thad.

Thad asked, ‘You got any whiskey in this place?’

With a huge smile Colonel Summers opened a cabinet and retrieved two glasses and a bottle. ‘Special occasions.’ He poured out two drinks.

Thad took his glass and raised it. ‘Project Magestic.’

‘To Magestic,’ Summers offered, the drinks downed. With his glass lowered Summers asked, ‘Any doubts?’

‘None.’ Thad was adamant. ‘There are key words and phrases in here that only those of us who worked on Magestic knew about. Hell, some of these phrases I made up myself! And the fact that he can predict the future.’ He tapped the file. ‘These letters were received *ahead* ... of the events mentioned in it?’ Summers nodded. Thad added, ‘This letter on the end of communism...’

‘Has already upset a few, who see it as a Russian trick.’

‘Yeah, that figures,’ Thad let out with a sigh.

‘There’s something you don’t know about the letters, old friend. They were posted in London, all of them. British Government has been getting letters.’

‘London?’ Thad repeated. He eased back and peered into his glass. ‘Would make sense, actually. We drew up scenarios of what would happen if someone just appeared out of time and knocked on the White House door. Best we could figure they’d lock the guy up ... forever!’

Summers suggested, ‘London is close enough, yet far enough away from us, and if the British Government where to hide him...?’

Thad found himself nodding as he reflected on the abandoned old project, a project to look at the possibilities of time travel. ‘You know how it got that name? Some secretary in the Pentagon spelt it wrong. We thought it was funny so we kept it. Because of the other Majestic project – the UFO misinformation project – we figured no one would ever find our project.’

They laughed in unison.

Thad explained, ‘We always figured that anyone going back in time would have to proceed carefully, or he’d upset the time line. We also knew that too much information – too soon – would be a problem to the government of the sixties, or earlier. They may not have listened.’

Summers put in, 'Imagine turning up in 1941 and warning of the Jap attack. You'd be shot as a loony!'

Thad lifted his eyebrows and nodded. 'So it makes perfect sense. This guy is hiding out and drip-feeding us what we need to know, Brits as well. Just hope he looks both ways when he crosses the damn road.'

'You sure *we* ... sent him back through time?'

'The evidence is all there, the manner of the warnings and the code phrases we thought up,' Thad insisted.

'But what if ... what if in fifty years or so time someone got access to those old files and used them for a ... grand deception?'

'Burn them! Today! If this is a deception based on those files then our friend would disappear in a puff, so too the letters, since they could never have been written in the first place.'

Summers smiled. 'They were accidentally burnt a while back. We can't find any record of them.'

'There you go then. No deception. And the end of communism? Hell, he ain't working for their side, for sure. And time will prove it so.'

'Would he be under orders to report in, do you think?'

'Being under orders was something we considered. If he wanted to he could just sit back and bet the World Series, make a fortune and live the life. Who'd know? Guy is probably alone, so who's going to stop him having a great life, eh? It was the one thing we considered a problem area. Whoever got sent back would be alone, no backup, no return ticket. He's an astronaut for sure, mental faculties strong enough to survive the trip and a moral compass big enough for the Titanic. No one else could be trusted. And I'm sure he will make contact in time.' Thad tapped the file. 'With one letter a month for a few years he's going to work up the credibility. Shouldn't be a problem after that?'

'You may even get the chance to debrief him,' Summers suggested.

'Be an honour.'

‘So these phrases and stuff ... that you put into the letters to the Americans, that’s to make them think you’re an astronaut... sent by the US Air Force?’ I queried with a worried frown.

Jimmy nodded. ‘When I was in Canada I got access to all sorts of info, spoke to some real old soldiers and CIA types. After a few beers they were more than happy to reminisce, and why not? Fucking world had come to an end, America gone, so who’d care?’

‘So why’d you want the Americans to think that?’

‘So they won’t want to shoot me. If they think I’m one of theirs it’ll keep them off my back for a while. Problem comes when I start telling them stuff that they won’t like – stuff about future American presidents and what they get up to.’

I shrugged. ‘What we doing tonight?’

Jimmy also shrugged. ‘Curry, lap-dancers, nightclub?’

We set our moral compasses in the right direction.

A pineapple office

The new offices for Pineapple were rented, Jimmy suggesting that they would stay two years and move on. It was a nice, glass fronted three storey building in Putney, a view of the river if you stood in a far corner.

‘Like the motif,’ I told Oliver. ‘Where did you get the idea for that?’

Oliver laughed as I prodded a giant plastic pineapple hung from the ceiling. We stepped across the new open-plan offices, a dozen waist high cubicles spread out, a large square of sofas in the middle for would-be artists to chill out. We settled in Oliver’s new office, closing a glass door but maintaining a view of the entire office through glass walls.

‘How’s it going?’ Jimmy asked.

‘Six hits in four months – all top ten – and one number two,’ Oliver enthused. ‘Making very good money. You certainly seem to have an ear for the hits.’

‘Staff OK?’ Jimmy enquired.

‘One left to go back to college, two new members, one off after a car wreck.’

‘Up the pay five percent,’ Jimmy suggested. ‘We can afford it now.’

‘Will do. On a side note, we had this arrive.’ Oliver handed Jimmy a letter. ‘It’s a formal offer to buy the business from an industry giant.’

Jimmy handed it back after barely glancing at it. ‘In years to come we’ll buy them. File it away.’

‘Not looking to get rid of us already?’ I asked Oliver, but jokingly.

‘No, no. But had to let you know about it.’

Jimmy said, ‘I think we should rent some recording studio space, get a good deal and get our people in there.’

‘I’ve got someone in mind,’ Oliver said, rifling through files. ‘A good price if we block book it.’ He handed us the advertising flyer.

‘Fine,’ Jimmy said. ‘Book a block and see how it goes. Then we need a marketing manager.’

‘Cathy is doing that with me –’

‘We need a big hitter,’ Jimmy cut in with. ‘Someone flamboyant... who can spend his time travelling around the distributors. And I’m sure that *you* don’t want to spend all day doing that.’

‘Well ... no.’

‘And Cathy can act as deputy, office backup and appointment setter,’ Jimmy added.

‘I’ll advertise the post, see what turns up.’ Oliver made a note on a pad.

‘And then we need a better relationship with a video company,’ Jimmy added. ‘As with the studios, get a good block deal for video shoots, start a good working relationship.’

Oliver made another note.

‘Don’t be afraid to spend money, or to ask for more. What we don’t want is to lose artists when they grow because *we* can’t support their growth.’

‘That has been on my mind,’ Oliver admitted. ‘The big producers have the clout to handle things like large concerts.’

‘And so will we in time,’ Jimmy confidently suggested. ‘I’m transferring another million into the account, so use it.’

Old dogs, new tricks

Two months after meeting Van Den Something, the U.N. man with the nice office, we were back in Nairobi with a purpose, Jimmy telexing him a good three weeks notice of our pending arrival.

That first night we chilled at the rooftop bar, all the staff remembering us, and I was starting to like the place; beer at sunset was becoming a tradition for us. We met the keen Dutchman the next day for lunch, around the corner from his offices, and presented a modest cheque towards any charity the man liked. As expected, Van Den had arranged a trip to see the airfield near the border, vehicles booked for the next morning.

We rose early, just about sunrise, and found a white UN jeep waiting outside the hotel, Van Den excited like a schoolboy on a fieldtrip. I was warned in advance not to take the piss out his forename, or his wife. Turned out that Van Den Something was actually Rudd Van Den Something, pronounced ‘rude’. His wife was called ‘Virgin’ and I had to work hard at keep my trap shut. We set off, my only comment being about the use of UN trucks.

Van Den explained, more for the benefit of the UN driver, that *such large benefactors* were always treated well. At a stop to use the bathroom he admitted that he had stretched the reason for the using vehicle in the paperwork, but was leaving in three months and didn’t give a crap. We got back in as the sky turned dark, the heavens opening for a quick downpour.

It took a good four hours to reach the airfield, what was left of it. The perimeter fence had just the lonely concrete poles remaining, a clothes’ line hung between two. I noticed what was left of a control tower, the glass missing, and a few single

story buildings reminiscent of films about Second World War prison camps. A modestly well-preserved hangar defied gravity and rust, stood proud in the distance, and some new low buildings formed the square into which we now parked up. We were expected, three men walking out to greet us, squinting against the bright midday sun. Two were silver haired, one bald, all appearing tanned and weather-beaten and in their late forties or early fifties.

‘How’s ya doon?’ the first asked, a Scotsman.

Rudd introduced us, unsure of how to describe our occupations.

Jimmy took charge, taking off his sunglasses and shaking their hands in turn. ‘Robin McPhearson - known as Mac, Booby Tanner – known as Darkie, and Micky Hutches – known as Rabbit.’ The men were surprised, as was our host. Jimmy explained, ‘I checked you all out thoroughly. I like to know who I’m dealing with.’

‘Ya get a letter from my mum?’ Mac testily enquired, glancing at his colleagues.

‘You never knew your parents, Mac. So no.’ Mac did not look pleased. ‘I got a note from The Regiment, which recommended all three of you – although I was warned that you never like to pay for a round.’

The men laughed, the ice broken.

‘Come on inside, out the heat,’ Mac urged, leading us into a hut. ‘We’s got us some cold ones ... courtesy of the UN.’

We cracked open cans of chilled lager, sat on threadbare chairs arranged in a circle.

The walls of this windowless hut were adorned with various badges, medals and unit emblems, a few pictures of aircraft, helicopters and weapons, a few technical posters in Chinese detailing mines and grenades. Other than the military décor there was little of anything else in the hut; a makeshift half-moon bar and a fridge that protested its lack of maintenance.

‘So,’ Mac began, the obvious group leader. ‘You’s some sort of city slicker with a few quid to spend.’

‘We’re very rich stockbrokers ... and yes, we have a few quid to spend,’ Jimmy explained. ‘We’ve taken over an

orphanage down here and I'll be buying a hotel on the coast.' The men glanced at each other, clearly unsure about us. 'At the orphanage there are a few kids with missing limbs –'

'Mines,' Mac cut in with.

'Yes. I understand there are a lot of kids in Africa like that.'

'Around here they don't clean up after a wee battle, they leave it for the kids ta find,' Mac stated, some anger in his voice. 'Have a few three legged cattle around here too.'

'And you guys teach mine clearance,' Jimmy prompted.

'When the funding is there,' Rabbit put in. 'Rude Boy here–' I tried not to smile. '- gets us what contracts he can. Man has three kids, but his wife's a Virgin!'

We laughed, the bastard stealing my joke.

'From now on you'll be fully funded,' Jimmy suggested.

The men straightened in their seats, glances exchanged.

'To do what ... exactly, big fella?' Mac delicately enquired.

'To set-up a training school right here, well equipped and well funded. To train Africans in mine clearance, as well as others I'll send down – medics and doctors.'

'Doctors?' Mac challenged, his surprise evident.

'I read an article about a doctor who had his leg blown off,' Jimmy explained. 'He was working in a remote village, didn't know what to look out for. Another was handed a grenade by a kid and blew himself up. If medics are going to work in remote locations they need awareness training, and they need to know what to do if they wander into the wrong field.'

The old dogs exchanged looks, nodding in approval.

'Well ... aye,' Mac conceded.

'And the UN –' Jimmy gestured towards a keenly attentive, yet quiet Rude Boy. '- will want medics close at hand when people are clearing mines, for when they make mistakes.'

Rude Boy nodded. 'Yah, yah.'

Jimmy put on his superior voice. 'So this is what I would like: new buildings, new fence, some classrooms, a nice big sand pit to put fake mines in and practice, plenty of mine clearing equipment – the latest kit.'

‘I can get that,’ Rude Boy keenly offered. ‘No cost.’

Jimmy gestured towards him, but addressed the Old Dogs. ‘And how will you gentlemen feel about having Rudd as your administrator?’

Rudd straightened.

‘Fine,’ Mac answered with a shrug. ‘Been working with the lad for years.’

‘I see a clear division of labour here,’ Jimmy explained. ‘Rudd does the managing, you get a tan outside – doing the training. He sharpens the pencils and keeps the lights on, you crawl around the sandbox.’

We waited. The men were in approval, not least because they could not have even afforded a plane ticket home. We wandered back out into the heat and flies, the existing sandbox pointed out, some dummy mines retrieved and keenly explained; if you stood on one it went bang, but you did not lose your leg. The runway was still operable, the odd aircraft making a forced landing from time to time, scattering the goats of the local farmers and scaring the odd camel. Water came from a well and food was either bought local or grown, Rabbit quite the gardener. No lettuce growing in his patch, wrong climate altogether. I asked.

The outlying areas, surrounding the base, were a contrast. Along the road we came down locals were living in huts, some trees for shade and the odd field of produce. The far side, across the runway, levelled off to a desert-like expanse of nothingness, hills in the distance. I put a hand over my eyes and peered through the shimmering heat to see if Lawrence of Arabia was heading towards us on a camel. I saw only a local woman balancing a large silver container on her head.

‘How far to the border?’ I asked Rabbit, conscious of what Jimmy had said about Somalia.

‘Not far, laddy. Thirty miles or so.’

‘Any trouble?’

‘With the Somalis? No, they’s a proud people.’

I figured I’d best not reveal the future. Away from the others I asked Jimmy if it was wise to be this close to the border.

He grinned. 'If there's trouble here, it'll justify a security detail under our control – paid and trained by us.' I waited. 'That group will be the forerunner to an army I'll raise.'

'Our own Army? Tidy. What'll the Kenyans say?'

'They'll be happy for the help to patrol this border. Ten years from now this'll be *war zone central*.'

We gave the three old dogs twenty thousand dollars, informing Rude Boy that he had a job any time he wanted it, although it would involve a lot of travel. He planned on coming out on a Monday and going back each Friday to start with. It sounded like a plan.

The Old Dogs, as they were now referred to openly, had three months to get ready, twenty thousand dollars going a long way in that part of Kenya in 1986. We had given Rudd another ten thousand towards a jeep for himself and start-up expenses, a computer and a fax line at home. Rudd would also have to tackle the Kenyan Government and the red tape, I figured, till Jimmy explained why not.

The Old Dogs held onto a license, had done for ten years or more, so we – as the new owners – did not need one. Rudd was also on good terms with all the relevant people and so a process that could have dragged on for years would require no further thought.

A sandbox in the desert

Two months later, as we arrived back at the airfield, originally called RAF Mawlini by the British in 1956, we noticed that the place was now a hive of activity. The fence and front gate had been fixed, at least the gate and ten sections of fence either side had been fixed. Anyone wanting to get inside would be surely disheartened by having to walk a hundred metres around the completed sections. I would sleep well at night knowing that.

We passed through the imposing front gate, a look exchanged with Jimmy, getting a salute from a local teen

manning his post. At least he had a military hat on. Scrub had been cleared and fires were still burning to reduce the dried shrubs. The old air traffic control building had a lick of paint and some new windows, some signs fixed to the wall: Ablutions, NAAFI, HQ Block. I guessed the old dogs were feeling nostalgic. That or they did it one night when drunk. Rabbit's cabbage patch was ten times larger, a rusted water truck parked at the edge and slowly dripping, a brown puddle being lapped at by goats. There were more camels than I had noted before, locals driving sheep across the dusty runway.

Mac stopped us with a hand. We jumped down as he said, 'Up the control tower, lads. You can see the lot from there.'

We followed him into the building, the cool interior being decorated by a local man, his young son asleep on the floor below him. On the roof of the control tower we caught a cooling breeze, stood now in the shade of the tower's overhanging structure.

'Gate's done,' I prompted.

'Aye, but only so much fencing. We's awaiting on the rest.'

'And a bigger vegetable patch,' I noted, peering down at it.

'Aye, food around here is limited, so you grow your own where you can.'

'That the sandbox?' Jimmy asked, pointing into the distance at a section of sand fifty yards square and taped into smaller quadrants.

'Aye, twelve inches deep and plenty a room for ten or so lads in there.' He pointed at the hangar. 'Side of the hangar - we's building classrooms, in the shade of the big bloody thing.'

'Those yours?' Jimmy enquired, pointing at two old Land Rovers.

'To fetch people from the nearest train stop, fetch supplies. They wus cheap.'

The convoy that had been following us now arrived, having stopped to cool a radiator or two.

'Who's that?' Mac asked.

'Help,' Jimmy informed him.

Rudd led the way in a UN jeep that he had borrowed, kind of permanently, another jeep and three lorries following him past the diligent teen at the gate, now saluting each truck.

Jimmy explained, 'Wood, wooden panels, pitch for the roof, wire, some chicken wire, generator, another fridge, tins of food, blackboards, chalk, hammers and nails, saws. And fifty chicks.'

'Chicks?' Mac repeated.

'They grow up into chickens,' I pointed out. 'Brought two cocks as well.'

Jimmy gave me a look.

'Fuck me, you don't hang about,' Mac let out, a hand over his eyes as we watched the convoy park up and start unloading, a wave from Rudd.

On the way down from the roof the painter's son was complaining of paint flecks on his head.

'Don't grumble,' I said. 'If you were in our orphanage we'd put you in a blue dress.'

The next day three self-assembly portakabins arrived as ordered, albeit a day late. For Kenya, that was ahead of schedule by a week. Packed onto the trucks were also several large tents, UN stencilled on the top and sides. Well, it gave the operation an air of authority and credibility.

When the circus-sized tents were up we walked inside, room enough for fifty people to live. Camp beds were laid out, twenty of them, for the recruits to sleep on; this was a residential course. The dirt was swept, weeds pulled up, snake holes blocked. The floor was ready, the goats grateful of the shade. With a flurry of activity over the next three days we got the place ready. In reality, we dragged it from 1956 to around 1970. It was basic, but functional.

With the money we gave Rudd he paid the government and they in turn paid twenty local recruits, as had been done previously when Rudd was official; about five dollars a day each for the men. And Rude Boy, he may have neglected to tell the government that he had stopped working for the UN – and nicked their tents. The recruits slept in the tents, not at all fussed by the conditions, and ate well, meals served in one of the portakabins. The classrooms in the shade of the hangar

were cool all day and the sandbox got plenty of use, a puff of sand followed a second later by an echo off the hangar scaring the camels every thirty minutes or so.

‘If those trainees were in a real mine field ... they’d be fucking mince meat by now,’ I told Jimmy.

The three Old Dogs now had new green khaki shorts and shirts and strode around with clipboards barking instructions. For much of the time, Jimmy and me sat on the control tower roof in deckchairs, sipping cold beers and watching the activity, till Friday morning came, time to drive back with Rudd to his Virgin wife. We left to dull echoes scaring the camels.

A hurricane, a Chinaman and a bubble

In the weeks leading up to October 1987 we sold all of our stock, ready for a big market crash. I had no doubt about Jimmy’s prediction, but I also had never seen such a crash, none of the current generation of traders had, and all the experts were predicting a good end to the year on the British FTSE index.

We had advised Wang Po to sell all his stocks and bet the down side, our man in Hong Kong trusting every detail we gave him and making a fortune in the process, and for the big show Jimmy invited him over. Wang Po booked into the Hilton up the road and we met for a meal at a Chinese restaurant that his family owned. He could have told us before. Still, he made it clear to the staff that we were always to get the best table – no waiting – and never to pay. Fair enough.

We ate, drank and laughed to the small hours, meeting at noon the next day at the apartment for a planning session. Wang Po had brought two bodyguards, not trusting London much. They were settled into the kitchen, given newspapers and left to their own devices.

Po understood the basics of buying index options, a bet on the market falling, but did not fully understand, nor trust, derivatives. Just as well that Jimmy had it all written down for him, the optimum series and price to select. Po rang his broker back in Hong Kong to place a few trades, but had also transferred a million pounds to HSBC London, opening a dozen accounts here as we had advised him. Soon he was carefully placing orders down our phone, reading the script Jimmy had prepared and given him. It took an hour. With the business taken care of from the comfort of our lounge, we sat behind the screens and watched coloured stocks ticking over, Po now keen to get a live link for his own office. Today was Tuesday, and Jimmy came out with strange suggestion.

‘Weather forecast says it’ll be very bad weather for Thursday and Friday, so there’ll probably be many stockbrokers not able to get into work. If this coincides with a crash on the American markets it’ll be all the worse here. I think Friday will be the day, British market makers deliberately crashing the stock to make themselves some money.’

Po was fascinated by how the market makers worked, how they set prices – and forced prices up and down artificially. I, on the other hand, was fascinated by the weather forecast, since the news had not indicated that there was particularly bad weather due to us. I figured Jimmy had a good memory, but to remember detail like that surprised me.

Po spent Wednesday shopping with his daughters, their first trip to London, and Jimmy was surprisingly quiet. Thursday at noon we met up as the weather worsened rapidly. Soon the tickers were all red on thin volume traded. It had begun.

Po was fascinated, quoting and re-quoting figures, and at 3.30pm Jimmy called McKinleys. Unknown to me he had made his feelings known to them about the crash and, for the most part, they had taken his advice. They had not, however, recommended to their clients that they sell their stocks. Instead, they had bet the down side in a modest way, enough to protect exposed positions and make a few quid on top. I was to learn later that Jimmy’s advice saved the firm from

certain bankruptcy, elevating Jimmy to Godlike status with them.

Placing the phone down Jimmy faced us. 'They can see it in the market, lots of rumours. Something big is up.'

By close of play the market was down, but not crashing, the DOW sliding modestly. We ordered in from Po's family restaurant, Po not wishing to miss a beat as he watched the DOW slide. We munched away, mostly without Po, as his fascination with our software grew. When our bellies were full the DOW was down over a hundred points, the move now significant. Po's Hong Kong broker called to say that the Asian markets were down significantly, following the DOW south. With the close of the DOW, Jimmy reconfigured the software and we gained a live feed of the Asian markets. The spare room was already made up, Po wanting to stay put. A bodyguard was sent back for some clothes and personal effects, the second offered Jimmy's bed.

Our explanation of Jimmy's lack of sleep worried Po greatly, who offered acupuncture, green tea and everything short of Tiger's Penis to cure it. Jimmy explained it away as a benefit, since he could read many financial reports overnight. Still, our guest was concerned for Jimmy's welfare.

I went to bed, being a mere mortal, Po catching an hour or two as Jimmy kept an eye of the Asian markets. At 7am the Hang Seng Index was down significantly, but not a crash by any means. He woke Po and me at nine o'clock, the UK market sliding from the start. The morning news was on, reporting the storm and the closed railway lines.

Jimmy pointed at the TV screen. 'Most people won't be at work in the city today, they can't get in.'

Po was amazed, but I was concerned. And even the bodyguards were watching the screens, discussing the moves, their boss explaining some of the detail. After all, the men turned out to be family. It was mesmerizing, especially when you remembered how much money you had placed to bet the down side. And the FTSE was already below the point where McKinleys made a few quid. Their head trader had walked in to work, he did not live far, and had called Jimmy – no doubt with a huge grin. When off the phone Jimmy explained that

McKinleys had left all their phones off the hook – no customers could sell.

By four o'clock we were the best part of a million pounds better off, Jimmy keeping the trades small so that the Regulators would not notice us on their radar. Po had bet over two million pounds, and on more leveraged positions than us, now sitting on a five million pound profit. Jimmy stopped him calling his broker, explaining that now the slide had begun it would be bigger on Monday. Well, Po was stunned into silence, his staff worried for him.

'Not sell?' he repeated many times. 'More big fall?'

Two people I had never heard of rang, sounding very pleased with themselves, asking for Jimmy.

'Hold till Wednesday,' Jimmy had told them. 'Besides, you won't get through to any UK broker till then. Relax.'

'Relax?' I repeated, Po so quiet that he worried me. The little Chinaman was sitting on around ten million quid in profit, not to mention what he saved from selling his stock portfolio in time. It was fair to say we'd never pay for a meal in that restaurant again.

With the close of the UK market we watched the DOW as it slid further, finishing well down. This was now officially a crash and creating news headlines. Jimmy told Po to have a relaxing weekend – not much chance of that – and sent him packing, politely but firmly, a place on our sofa booked in for him at 8am Monday morning. With big hugs and a million thanks issued we keenly pushed him out of the door.

'Fuck I'm knackered,' I let out, slouching down. 'Like being back at the firm.'

Jimmy eased down. 'Po will reward us well next week, so too some others I persuaded. So next month we can spend some money.'

'Medical Genetics?' I asked.

'No, need to make a start on a few other things in Kenya. We'll use the money quick enough.'

'We out tonight?' I asked with a yawn.

'Not in this weather. Besides, they'll be fuck all people about. Get some rest, watch the TV.' He stood. 'I'm going to change the sheets and get an hour or two.'

‘How long can you go? Without sleep?’

‘Five days at least, but then I get cranky and my coordination goes wobbly. I once did a whole month at one hour a night, but felt like shit and slept for twenty hours in a single stretch. Four hours is the optimum, more than that and I get a headache. Anyway, we just passed a significant milestone; now we have the money to start Rescue Force, or at least its predecessor.’

‘It’s as if you’re working to a plan,’ I joked as he headed for his bedroom.

Sat there alone, various odd feelings surfaced, something odd about the exactness of the plan and the storm outside. Hell, he’d always been mysterious. I cracked open a can and watched the news about today’s action.

After a lazy weekend, Po turned up early, the little bugger ringing the bell at 7am. Jimmy was already up and welcomed the gang in, the two daughters accompanying, and the commotion woke me.

‘For fuck’s sake,’ I yawned, still in my pants.

The two girls giggled as I slammed the door, needing another hour; I was not fully cooked.

I joined them at 8.30am; showered, awake and smartly dressed. The girls were still giggly, and looking even more gorgeous than the first time I had set eyes on them. ‘Morning all,’ I said with a bow, the bodyguards smirking, and headed to the kitchen for breakfast and several coffees. The girls joined me, sat staring with fixed grins. By time I joined Po and Jimmy the FTSE was again sliding heavily, as predicted. An hour later we had coffee and a conference around the aptly named coffee table.

‘No more trades for four weeks at least,’ Jimmy informed us. ‘No good short term trades for three months at least.’ We were both surprised. Jimmy explained, ‘The market will be volatile, staying low and then recovering in three months. Now is a good time for investments, one or two years.’ He offered to give Po a list, gratefully acknowledged. Problem was, Po liked to be active and to trade.

‘Discipline, like me,’ Jimmy firmly pressed. ‘Make money when the time is right.’

Po accepted the advice, planning on selling some options on Wednesday, some later. What we didn’t know at the time was that he had already sold some via the Asian exchanges and was sitting on a tidy profit. His extended family, having sold all of their stocks in advance of the crash, were now gleefully buying them back for a quarter of their former price. The name ‘Jimmy Silo’ was starting to spread.

When Po got around to promising Jimmy some money ‘Jimly’ stopped him dead.

‘There will be a charity that I wish to start in Hong Kong in a few years time,’ Jimmy explained. ‘I would like you to put any money that you would like to give us into that charity, so that when we are ready it is there to use.’

We were ‘vely’ strange men, but most respected, Po said, swearing that he would itemise it and send statements. Fair enough, we knew where it was. By end of play the FTSE had plummeted, Po and Jimmy far richer than the week before, a few stockbrokers biting the dust, but none of ours. Jimmy explained to Po that the excitement was over and now we could relax, dinner at the restaurant arranged.

Keeping my hands off his two daughters was the hardest thing I ever did, especially after a drink, but I also desperately wanted to keep my hands attached to my arms.

Stepping up a gear

Jack Donohue read the letter with a hidden grin.

Sorry for not warning you about the market crash, but it was necessary that I use the opportunity to tip off a few people I know, so that they could make some money. A good percentage of that money has now been earmarked for several charities, here and abroad.

Since the crash did not affect UK politics and no one was hurt - I hope you understand my reasoning.

And I hope you took my advice about the Fastnet Yacht Race.

When finished, he raised his head to the assembled COBRA meeting.

‘Opinion?’ the Prime Minister asked.

‘Like he says, nothing political or deadly about the market crash and, more importantly, would the Government have taken any action?’

‘It would have been nice to have the option, I suppose,’ the P.M. commented.

‘Is he drifting towards financial motivation?’ the MI5 representative asked.

Jack put in, ‘He could do so without letting us know, and by now would be the richest man in the UK.’

‘Fair point,’ the same man conceded.

The P.M. opened a file and handed the letter to Jack. ‘This... we have not shown you yet.’

Jack scanned the letter. ‘Bloody hell.’

‘Quite,’ the P.M. agreed.

PM, a Mid East terrorist group is well advanced in their planning of a spectacular hijacking in the years ahead. They have selected twenty young men, mostly for their clean passports, and are giving the selected men flying lessons. Their aim is simple in its audacity.

They aim to hijack several aircraft at the same time, ideally 747s with full manifests, and to fly these aircraft to Western capitals. There, they will kill the crew, take their places and crash the planes into built-up areas, principally city centres.

Try, if you will, to imagine half a dozen 747s crashing into London; Buckingham Palace, Westminster or Oxford Circus.

The solution comes in two parts. First, and quite straightforward, you must reinforce cockpit doors, provide inside locks only and perhaps a peephole.

Second, and more difficult, you must instruct pilots never to give up the cockpit, even if cabin crew are threatened or killed. Since giving up the cockpit will, most certainly, result in everyone in the aircraft being killed - and hundreds on the ground being killed - the pilots must sacrifice the passengers and cabin staff and land the aircraft, disabling it.

‘So,’ the P.M. began. ‘Opinions?’

‘It would be devastating -’

‘The biggest single loss of life -’

‘We must act -’

The P.M. nodded. ‘Set up a working group to review aircraft security procedures with this in mind. We do, apparently, have a few years at least.’

The next meeting, three weeks later, had a different tone altogether.

Jack read the letter quickly, but twice. ‘Dear God.’

The P.M. stated, ‘Given the nature of this ... I have decided to join forces with the Americans. Jack, you’ll get a liaison at some point. As to the subject matter of this latest letter... well, we can all hope it’s true.’

‘Ma’am, he’s never been wrong up to now,’ Jack pointed out.

‘That may be, but this is ... incredible. The end of communism?’

Sykes put in, ‘We are seeing a rapid increase in dissent right across the Warsaw Pack countries, particularly the GDR.’

‘Dissent in those countries is not the issue, it’s what Moscow would do in response,’ the P.M. pointed out. ‘That, has always been the issue. And a re-unification of Germany could seriously destabilise that country – and our bases within it. There’s also the consideration of a unified Germany – which way they would lean?’

Two weeks later Jack got his liaison, Colonel Thadius Pointer. He met the tough-looking white haired man in a hotel bar, all very ‘cloak and dagger’. Not to mention great fun being out of the office.

They shook. ‘Jack Donohue.’

‘Thad Pointer, Colonel. Retired.’ They sat.

‘Air Force?’ Jack enquired.

‘Marines.’

‘Vietnam?’

Thad nodded before ordering a drink from a waiter. 'You?'

'Just a pen pusher. Psychology. So, how did you go from an honest living ... to this?'

Thad laughed. 'Jets, NASA, spy planes, CIA, desk work. I even worked on the original Majestic project – that's why I got called back for this.'

'You think there is a link?' Jack broached.

'Not really. Your guy is the real thing, we never found anyone with any real powers. Sure, they drew pictures of places they'd never been, but not much else.'

'If I may be so bold ... does Uncle Sam think that Majestic is *on the level*, as you say?'

'Sure, everything pans out so far.'

'And the end of communism?'

Thad raised his eyebrows. 'What you have to keep in mind, is that some rich and powerful folks back home don't really want an end to communism, they're making a buck selling tanks to the Army, planes to the Air Force.'

'So, they *choose* not to believe it,' Jack stated with a disappointed tone.

Thad shrugged. 'Politics.'

'There's no need to swear.' They laughed. 'May I enquire,' Jack delicately began, 'if your side are trying to find him?'

'If they are, they haven't told me,' Thad suggested. 'Are *you* looking for him?'

'In a small way. They check for fingerprints, where the letters were posted – that sort of thing. But I don't think our friend is the sloppy type.'

'No, he sure isn't,' Thad agreed, Jack puzzling that statement.

'So, do you think he's British, or an American living here?' Jack asked.

'Oh, British for sure - linguists say so.'

An hour later Jack was stood before the Prime Minister.

'Well?' the P.M. asked.

'Lying through his teeth, Ma'am.'

The P.M. reflected on that statement. ‘Pity. Still, we must co-operate on NATO matters.’ She retrieved the latest Magestic letter. ‘Guess we’d better not show this to anyone.’

PM, you will soon have an American Liaison, a Colonel Thad Pointer, US Marines, Retired. He worked on the original 1960s Magestic project, no link other than the nature of the source of the information.

The Americans, having analysed the letters, fully believe me to be an astronaut, sent back through time to assist the US to dominate the world in the decades ahead. They believe this because it allows them their pride, and who else might build such a thing as a time machine but NASA? You might consider that the CIA have used this story to make it easier for them to present my story to the White House. A British clairvoyant would be mistrusted.

Your servant, Magestic.

P.S. I get vertigo if up too high. Still, as a child I liked the idea of being an astronaut. So, in some small way, I have achieved new heights in the eyes of some.

‘Astronaut,’ the P.M. repeated. ‘Where do the Americans get these ideas?’ She handed Jack the letter. ‘File that somewhere where no one else will see it.’

‘Yes, Prime Minister.’

The first medics

Back in Nairobi, in mid November, we met up with Rudd. As Jimmy had requested, Rudd had advertised for a Kenyan doctor to provide medical cover at the airfield and to teach first aid. At our lunch meeting Rudd handed over a shortlist of candidates that he had faxed us the week before. Jimmy ran an eye over the list and selected the man he wanted, named Adam, the perplexed Rudd delicately enquiring as to how he knew which man to employ.

‘I know people down here who can check backgrounds,’ Jimmy explained. ‘I want to meet him as soon as possible.’

‘He’s here in Nairobi, looking for work, staying with a brother. He has been doing UN rotating contracts – which, I guess, you know...’

Jimmy nodded. ‘Call him, please. Bring him here.’

Rudd interrupted his lunch to make a quick call. After lunch we retired to the bar area and waited, the dark-skinned medic appearing in little more than half a pint’s waiting time, recognising Rudd and striding over. We stood. Jimmy greeted the large man in his native dialect, shocking the medic. They clasped hands.

‘You know my region?’ Adam asked in a base baritone voice.

‘Yes,’ Jimmy acknowledged. ‘I am ... a well-travelled man. Please, have a seat.’

We sat back down, Jimmy ordering fresh drinks from a hovering waiter, a black tea purposefully selected for the medic – again surprising the man.

‘So, Adam, you have finished with your last contract?’ Jimmy began.

Adam nodded. ‘Yes, a month ago. I was in Zaire.’

‘And Rudd has indicated what type of work we need you for?’

Again Adam nodded. ‘Teaching the young men about medicine and being the base doctor for emergencies.’

‘It’s not much of a base at the moment, but will grow over the years,’ Jimmy explained. ‘Each year more and more recruits will attend training there. When there are no courses you can come back here to Nairobi, you’ll still be paid. Next year I want you to start a training programme for field medics, people who can – like you – go to Zaire and other places and provide basic medical help.’

Adam straightened. ‘This will be a permanent position?’

Jimmy nodded and smiled. ‘Yes, Adam. You were on eleven thousand dollars for the UN. We will pay fifteen thousand - and travel costs.’

I put in, ‘We’ll even give you your own allotment.’

‘Allot – ment?’

Jimmy explained, ‘At the base, at the airfield, the men grow their own food.’

‘Ah, yes. I like the gardening. I have the green fingers.’ He didn’t, I looked.

‘Can you start in a few days?’ Jimmy asked.

‘Yes, yes, I am available now.’

‘Then pack a bag and we’ll take you out to the base tomorrow,’ Jimmy suggested. ‘You can come back with Rudd every weekend.’

We stood again, shook, and arranged to meet at our hotel the next morning. Reclaiming our seats Jimmy handed over a document and chequebook to Rudd.

‘I’ve opened an account for our operations ... in a local bank. Later, we’ll pop along and they can meet you and get your signature for cheques.’

Rudd held a finger to the detail of the document with a heavy frown. ‘This says that there is ... two hundred and fifty thousand pounds in it?’

‘That’s correct,’ Jimmy casually explained. ‘From now on we’ll start to increase what we do. Once Adam has seen the base I want a small clinic built across the road from the base, for the locals. I want it well equipped, staffed with a local nurse – and a jeep for them to do house calls.’

The stunned Dutchman nodded. ‘With this much money you could build a hospital.’

‘There are other things I need you to do as well,’ Jimmy explained. He sipped his beer. ‘Find a local lawyer we can use, someone good. I’ll be buying a hotel on the coast and need a lawyer.’

The next morning we set-off early, before the day warmed up, and headed North. At the local town for the base we stopped, a dusty and dirty place, Jimmy dropping off Rudd with a shopping list and expecting him to get a taxi the remaining nine miles to the base. We continued on, passing one of the Old Dogs’ green Land Rovers as we progressed. The fence had grown another ten sections and I was surprised to find an armed police officer on the gate, another in a small watchtower.

Mac greeted us with, ‘Back again?’

‘Someone has to keep an eye on you,’ Jimmy retorted. He introduced Adam. ‘This is your new doctor.’ They shook hands. ‘He’s been in the Zaire doing field work for the UN.’

‘Got some of your tents over there,’ Mac said, pointing out the large UN tents.

Jimmy faced me and said, ‘Show Adam around, would you?’

I did my bit, leading Adam away as Mac and Jimmy chatted. After a meandering half-hour stroll of the base we climbed the stairs to the control tower roof, in need of a cool drink. Since the roof now had an outdoor fridge wired up, we were in the right spot. I fetched two cans, one each for me and Doc Adam, Jimmy and Mac already supping theirs as they sat in deckchairs.

I eased down. ‘What’s with the local police?’

Mac explained, ‘We pay the local chief, he takes his cut, pays them. They get a better deal than the town, better food and drink with us. They stop the locals nicking stuff, or they’d have the buildings away.’

‘Where’s the new clinic going to be?’ I idly enquired.

Jimmy pointed to an abandoned mud hut, over the road from the main gate. ‘Right there. Doc will be close enough to provide medical cover here.’ Adam took a keen interest, Jimmy facing him. ‘Before it’s built, your office will be below us. It’s the best room and we can lock it.’ Facing Mac he said, ‘Double the length of your courses, pad it out with comprehensive first aid from the Doc.’

‘Sure.’

‘And I’d like you to start to introduce an all-weapons course, get them making safe every kind of weapon and ordnance you can think off.’

‘Be a three month course,’ Mac cautioned.

‘That’s OK, it’ll keep you out the local bars. I’d like a tank or two, fifty cals – mounted, AKs, the works. When they leave here they should be able tackle any ordnance they find. Then you can start demolition school.’

‘Have to be way over there,’ Mac pointed. ‘But we’ve already a license for demolition.’

‘Build a few sunken bunkers for the plastic explosives, and get that fucking fence finished.’

‘I’ll have to drive down to the city and fetch some, locals are useless,’ Mac complained.

‘My brother, Seth, is in construction,’ Adam put in, swiping away flies. ‘He has fenced many football grounds.’

‘There you go,’ Jimmy told Mac. ‘Get Rudd to meet his brother and buy some - I’ve given Rudd a bank account.’

Two trucks trundled noisily closer, checked by the police at the gate and allowed in. Rudd had dragged the local merchant along with more supplies.

‘Looks like cement bags,’ I suggested. ‘Got any sand, Mac?’

‘I’ll check with Stores,’ Mac retorted.

Jimmy told Mac, ‘There’ll be a shit load of cement, so get the trainees doing a few hours a day, give them a few quid. Have a go at the airfield, fill in any small holes.’

Mac turned his head. ‘You planning on using it?’

‘Of course, be flying people in an out,’ Jimmy explained. ‘When we’ve got some recruits worth a damn we’ll hire them out to the UN, fly them into Mozambique and other places. Whenever *that* is ... is up to you. We need people who can disarm anything, medically trained and switched on.’

Mac carefully observed Jimmy. ‘You sure you’re not ex-military?’

As we sat there, relaxing, the lorry’s cargo was slowly unloaded by a local who needed a rest after each bag of cement.

‘C’mon,’ Jimmy called. ‘Let’s unload the trucks.’ He took off his shirt, surprising the locals and Mac alike, before grabbing two bags at a time, placing them in a pile. We all took one, trying to keep up with him.

‘Jimbo works out, eh?’ Mac puffed out as we progressed.

A man came running; a recruit in a uniform blue shirt. ‘Doctor man, doctor man!’

Adam reached for his bag and we all followed at the jog, into one of the smaller tents. What greeted us was a recruit sprawled out on a bed and appearing quite dead, his leg

swollen to twice the normal size, his skin splitting. It turned my stomach.

‘Snake bite,’ Adam said as he knelt down.

‘Serum?’ Jimmy asked Mac.

Mac shook his head.

‘In the town,’ Adam hurriedly suggested. ‘He may have an hour.’

Jimmy sent Mac, telling the recruits to fetch water and make a fire.

Adam checked the man’s vitals. ‘He will not live much longer.’

I made eye contact with Jimmy and pointed at the leg. ‘Could ... you?’

‘Yes,’ he softly admitted. ‘But it’s a risk, at this time.’

Adam was not following.

‘Well,’ I nudged, time passing.

‘It’s a risk,’ Jimmy repeated.

‘So was the orphanage,’ I reminded him.

He took a breath. ‘Watch the flaps, no one in. Adam, get a syringe.’

Adam fetched a syringe from his bag, looking puzzled. ‘You have serum?’

‘Yes, but not in the form you’re used to. Do what I ask, or you’ll have no job.’ He offered his upturned forearm. ‘Take a syringe full. Quickly, man.’

Adam glanced at me as I policed the door before drawing the blood.

Jimmy snatched the syringe off the doc. ‘Say nothing, do nothing, stand back.’ He injected the leg, above and below the obvious bite mark, finally injecting the remainder into the man’s arm.

When done, Adam closed in. ‘What do you do?’

‘I was born with a rare genetic condition,’ Jimmy lied. ‘My blood can ... cure many things.’ He faced Adam. ‘If you speak about this I’ll kill you.’

Making Adam stay with the patient, we stepped out as the other instructors arrived.

Jimmy told them, ‘It’s touch and go, see what happens when Mac gets back. In the hands of the Gods now.’ He

cleaned up without saying anything, put his shirt back on and returned to the tent without a word.

Adam jumped up. 'He is getting stronger.'

Jimmy did not respond. He just sat on a bed, his head lowered. I checked the leg over, and even I could see that the swelling was going down.

'Adam,' Jimmy softly called from a dark corner, the doc turning his head. 'I am sorry ... for threatening you.'

Adam swung his head around to me, not knowing what to say or do, clearly still terrified. We sat in silence, pestered by flies, the patient's vitals checked every five minutes; they were getting stronger. Mac re-appeared a full forty-five minutes later, serum thrust into Adam's face, quickly injected into the patient.

'I think he will make it,' Adam solemnly stated. 'We ... need to move him to the local clinic ... and inform his family.'

'Yes, of course,' Jimmy stated as he stood. He carried the man himself, out to a jeep, placing him in the rear. Adam jumped in and the jeep disappeared in a cloud of dust.

'You think he'll ... Adam ... he'll talk?' I delicately broached.

Jimmy sighed. 'No, he's a good man. Some day I'll inject *him*. Still, it was a risk.'

'C'mon, you look like you need a cold beer.'

Adam returned in the evening, Jimmy sat quiet.

'The man will be fine,' Adam enthused, avoiding eye contact with Jimmy.

After a minute, Jimmy eased up. 'Doc, walk with me, please.' They stepped out into the cooler night air.

Jimmy explained, 'If the world knew ... knew about my blood ... I would not have a life, I would be in a clinic being experimented on. I would be ... a freak. Everyone would want my blood, and I only have so much. Do you understand this?'

'Yes, I'm a doctor. If we knew of such a person he would not be left alone.'

‘So you can see my dilemma, Doc. If I try and help people, I end up helping no one because I would be locked up by the British or Americans, experimented upon.’

‘It is a dilemma, yes,’ Adam softly admitted.

‘And once again, Doc, I apologise for threatening you.’ He stopped and faced Adam. ‘But you must be aware that I can, very easily, make people disappear.’

Adam nodded his understanding through the moonlight.

‘There is something you need to know, Doc,’ Jimmy said as they progressed. ‘If I inject you ... your blood will be like mine.’

‘Like yours?’

Jimmy nodded. ‘The orphanage we have taken over is an AIDS orphanage. In a few years the people will notice something very odd.’

‘Odd?’

Jimmy stopped. ‘The children no longer have AIDS.’

‘They have your blood!’ he realised.

Jimmy confirmed with a quick nod.

‘How many ... how many can you cure?’

‘I am only one man, Doc. How many could you cure, if you were like me?’ They walked on.

‘This man, today –’ Adam began.

‘Will live a very long time ... and in very good health.’

‘Your friend –’

‘He’s not like me,’ Jimmy quickly cut in with.

Adam finally said, ‘If I take the blood, I will be like you?’

‘First, my friend, study the man who we helped today. Before taking a decision like that you must think about it, your life will not be the same.’

Adam took Jimmy firmly by the arm and halted him. ‘I was raised a Christian. What you have ... it is a miracle.’

‘You may believe ... in what you please, Koufi.’

Adam was shocked. ‘Koufi? My mother called me that ... when I was very young. How ... how can you know this? And how do you speak like you were born in my village?’

‘There are other things about me ... besides the blood, that you would not understand. You, Adam, sat on the riverbank

and fished with no bait on the hook – to be away from your father. But you did not like to hurt the fish.’

‘How can you know this?’ the doc asked. Finally, he said, ‘You were sent to us!’

‘Yes, but not for the reason you think. May I have your word that you will not betray me?’

‘Betray *you*? Never!’ Adam whispered.

‘Then we shall be friends a long time.’

I joined them, appearing through the dark. ‘All ... er ... OK?’

‘Yes,’ Adam confirmed, stood proudly tall. ‘All will be well.’ He headed back inside.

I watched his dark outline recede. ‘He OK?’

‘Yeah, I think so. I just had to bring my plans forwards by a year or so.’ He sighed. ‘No big deal.’ We headed back. ‘Tomorrow we’ll go buy a hotel.’

‘And change the name?’

‘Why?’

‘There’s no river!’

‘It’ll give the guests something to puzzle over.’

We plodded through the dark. I asked, ‘Would I be right in thinking that the Africans ... they take the *Christian name* thing a bit literally?’

‘Yep. Mary, Jesus, Virgin, Seth ... Mathew, Mark, Luke and John. Which is exactly what the British did in the middle ages. Hence ... Paul.’

‘Wasn’t he a betraying Roman twat?’

‘He ... wrote the bible, an unofficial biography that made it up the book charts.’

‘Pity he didn’t copyright it, would have made a few quid. Film rights and all!’

Where's the damn river?

'There's no fucking river!' I complained, a price of one hundred and fifty thousand pounds agreed, the staff staying on. 'How about Sea View?'

'Everyone knows it locally as River View, and some regulars return year after year. It would confuse them,' Jimmy insisted.

So 'River View' remained. Rudd had come with us, picking up the new lawyer in Nairobi on the way, a white guy of old English colonial stock and a bit of prat. Not to mention a bit of racist, referring to a waiter as 'boy'.

'Different countries, different customs,' Jimmy insisted.

We gave the manager a modest pay rise, a list of repairs and improvements and some money for the work. Unknown to me, Jimmy had faxed them an offer weeks ago, so the deal was done on the day we arrived. I headed off to break the news to the diving centre staff, Steffan and Lotti.

'Stand to attention when I walk in,' I joked.

'Back again?' Steffan asked. 'Rescue Diver course this time.'

'I wasn't joking about the ... *standing to attention*, guys. I just bought the hotel.'

'You did?' they puzzled.

'Haven't you heard?'

'We heard someone was interested...'

They looked worried, but my smile defused the situation.

'Don't worry, you still got a job – and we want to spend some money on this hut. So draw up a list of what you need to make this place better. Oh, and a boat.'

'A boat?' Steffan queried.

'You keep telling me there's a good reef out there. Too frigging far to swim to it.'

'Yah, yah. There is a boat for sale in the marina up the road, going cheap.'

'Tell the manager I said to buy it. There'll be more guests in future, so you won't be able to sleep all day like now!'

'More guests?' Lotti queried.

'Place has gotta make a few quid.'

Rudd stayed the night in the hotel, the next day the three of us sitting down with a list of suggestions on décor, amusements and facilities. Difference now was that we did not pay for beer and

lunch. We had met the staff in a group the night before, putting them all at ease. Jimmy had put on a badge that labelled him as 'Owner' and wandered about the dinner tables, conversing in numerous languages to the guests and getting to know some of the regulars. That evening everyone got free drinks at the bar from the new owners.

Since there was already a young orphan elephant, and a half-blind Lion with three legs somewhere in the grounds, we decided to create an animal centre, for the care of strays and orphans that we found. We dragged in a tame ostrich, the bird six feet tall, and offered kids rides on its back. The elephant and the lion benefited from a visit from the local vet, a few sores treated.

The front gate and surrounding fence were promptly fixed, the guard replaced by a man who could go a whole eight hours without a kip. A new sunshade came with the job. And I fixed that damn access road for next to nothing, wondering why the previous owner had not bothered. I walked as far as the first junction, paying keen local labourers to cut down trees, remove litter from the sides of the roads and to remove a few abandoned shacks. We got a new sign made up, placing it at the junction and pointing towards the hotel. We even paid for the houses near the junction to be painted and continued along towards the orphanage. The local police station got a make over, curbs painted white. Figuring that the road used to be tarmac, I got a water sprayer in and soaked it, the local kids splashing along behind the truck. Yep, under all the crap was a road, kids paid to scrub it hard with brushes. Soon an old centre line was revealed.

With Jimmy in Nairobi on some secretive mission with Rudd, I was left a free hand and so made use of the time. The allotments stretched back a long way, so I reclaimed some of the land that was visible to guests and cleared it. We drenched it, throwing grass seeds about. At the new edge of this area I erected a small wooden fence so that no one could see towards the allotments. With the extra space, I ordered four new huts built, one extra hut being built where one formerly presided before catching fire, and another three at the opposite end of the beach. The wooden beach bar was literally lifted-up and dragged back to the grass, giving the customers a beer garden to sit around in. New, and extra, chairs were laid out, many in the shade of trees, a few benches laid about.

We hung up netting around the bar, reducing the effect of the sun by around seventy percent.

I cut down two trees that looked out of place and employed an additional cleaner to go around the sand every morning with a large sieve we constructed, running sand through it to remove the hard spiky leaves that fell from the trees. All branches below seven foot were cut down, save people bending down or getting their hair combed as they walked about.

When the local council planner turned up, a day late, I told him what I wanted to do in the bay. He shrugged, not sure if we needed planning permission. I gave him a wad of dollars and asked him to check, the fella never returning. The shark net was taken down, not least because most of the sharks had been fished out of the water by the locals. Steffan had baulked at the idea of a shark attack. 'Sharks, you'd be lucky!' They had never seen one close to shore.

With the help of the manager, we dragged in a local construction company and I ordered up two rock groins, one further out than the other and calming any onshore waves, as well as creating a great area for diving students. We found three old and rusting pedal boats and cleaned them up good as new, placed onto the sand for the guests to use. Steffan and Lotti went into the bay in their diving gear and worked hard to remove all stones and broken coral in less than six feet of water. No one would step on a rock and cut a foot. The bar and restaurant now had fewer large rubber plants and more space, a few more chairs and tables, plus a new lick of paint and varnish where necessary. It was a good job the hotel was quiet, with all the building work going on. I gave the guests in residence free drinks and meals and apologised for the disruption.

I had worked hard for eight days, Jimmy returning with Rudd, Adam and even the three Old Dogs. Each had already been allocated a room and that night we ate together, Jimmy bringing down 'the staff' to give them a treat. In fairness, this hotel was the best bit of accommodation the Old Dogs had seen in ten years or so and they appreciated it. They also appreciated the free bar tab. Adam's family turned up the next day, followed quickly by Rudd's wife and three kids, creating something of a party atmosphere for a few days.

To one side, Jimmy commented, 'You see the effect this place has on people – people who could not normally visit somewhere

like this?' I did. Jimmy added, 'In future, anyone we recruit we send down here. It'll go a long way.'

'I've already told my parents *you* bought it, they're keen to visit. Would yours come down?'

'Parents no, brothers yes. Mum does not fly well and they'd hate the heat.'

'After, I'll show you the changes I've made,' I offered.

'No need, I'm sure they're fine.'

I was surprised by his lack of interest. It was almost as if he knew what I had done. 'Doc Adam ... OK?'

Jimmy nodded. 'Took him to meet Mary at the orphanage. He's a team player now, they both think God sent me.'

I felt guilty. 'Should *I* have gone to visit the old bat?'

'Nah. Not least because you called her that to her face.'

We sat at the beach bar, now a "grassy area" bar, Jimmy not even commenting on its relocation. He eased back with a cold beer and appeared tired, or perhaps relieved.

'You OK?'

He took in the view, issuing a sigh. 'A few more ticks in the boxes.' With a conscious pause for reflection he sipped his beer. 'Another milestone reached.'

'How many more on the list?' I asked as the elephant was led into the water, a kid on its back.

'Twenty years of hard work,' he let out in a reflective tone.

'And then?'

'Then there comes the real challenge. The hard bit.' I eased my head around and waited. Without making eye contact he said, 'Enjoy it while you can, especially these next few years – they'll be good years.'

'And ... then?'

Rudd's family waved and we waved back.

'Then you'll long for these years.'

Mercenaries

Being happy with our new hotel, we left the gang there and headed back to Nairobi for a 'secret' meeting. We reclaimed our rooms in

the same city centre hotel, heading up to the rooftop bar after a shower. Three men sat a table, standing out: tanned faces, big muscles, fixed stares. They were not the usual mix for this hotel. We strode straight over, ordering drinks from a familiar waiter, two chairs ready and waiting for us.

‘Gentlemen,’ Jimmy said as he sat. ‘Good trip up?’

‘Plane’s a plane,’ one grumbled.

Jimmy reached into his pocket and produced a wad of dollars, handing it over to the man sat closest to his left. ‘Air fare and subsistence costs.’

The man checked the wad below table height. Without looking up he said, ‘We flew up from Jo-burg, not round the fucking world twice.’

‘It’s something you need to learn about my good self,’ Jimmy began. ‘I’ll look after you so long as you do a good job. When you stop doing a good job ... I’ll bury you.’ The men focused on him. ‘That clear enough?’

They reluctantly nodded, not looking pleased at the threat.

‘Paul, this is – left to right – Robert Mark Staines, born in Cheltenham, known as Skids, Albert Hansworthy, born in Bristol and known as Handy, finally Peter John Trewick, born on a ferry across the English Channel in a storm, and known as Trev.’

The men had eased upright and taken off their sunglasses, looks exchanged.

Jimmy added, ‘I like to know who I’m dealing with.’

‘Where’d you get your intel?’ Skids asked.

‘Her Majesties Government.’

I said, ‘So, which one shagged the other one’s missus?’ After all, there was no way they could know.

Jimmy hid a smile as the men regarded each other with renewed interest.

Skids eventually asked, ‘You official, semi-official or private enterprise?’

‘If I was private ... would I get the quality intel?’ Jimmy posed. ‘Would I know ... about the people you just tapped in Angola?’

The men were not pleased, and I was worrying if they about to kill us as we sat there.

Jimmy said, ‘So, down to business. I’ve spoken to those *above*, and from now on you’re working exclusively for me, no discussion with anyone *anywhere* – even if they are Circus. This job is more

of a career posting, good money every month, no more lean periods. You won't get the same rate per job, but across the year it'll work out nicely. There'll also be perks, such as a stay at my hotel on the coast when you need to kick back. You can, if you wish, go back to grubbing around for work and taking the shit jobs, or you can get a yearly salary plus costs. You'll be paid down here, any currency you like, so fuck all tax – all beer money. And if you get an injury ... I'll sort all medical bills.'

He pointed at Trev. 'You're a diver, so when you want to you can work as dive instructor at my hotel, shag the birds and drink the beer. Skids, you're good at ordnance. I've taken over Mawlini mine base - Mac and the boys – who you already know. I'll ask you to help out there once in a while, you'd not recognise the place. And all of you can get involved with training locals for ... jobs across the border.'

Skids asked, 'Across the border ... north, west or south?'

'West in time, north sooner. But first, a job that comes with a big bonus.' The men eased closer. 'You'll get a file delivered to you tomorrow, if we're in agreement. The job will be a scattering of Islamic terrorists that the Yanks are interested in.'

Skids said, 'You know, I've been trying to place your accent. Any Canadian in there?'

Jimmy forced a false smile. 'Some; I spent many a happy year in Canada. And no, I don't work for the Yanks. So, the job: find the targets and assist them on their way to paradise. Simple, and no time limit. But a word of caution: they're getting geared up for a job – lobbing a few bombs at the Yanks – so they're switched on and nervous. One look at *your* faces and they'll either scatter or shoot. Oh, and as for their houses – they're packed full of explosives. Be careful what you hit.'

'And this job pays...?' Trev asked.

'This job pays an annual salary, and gets you in my good books if it's done quietly. Consider it ... *selection*.'

'You said a bonus?' Trev nudged.

'There are many people listed, many photos. If you manage to find and get the main man you get a million.'

'In pounds?' Skids queried, wide-eyed.

Jimmy gave him an exaggerated nod.

'What's with the kid?' Skids asked, a nod towards me.

‘He’s a stock market trader, he handles money for me,’ Jimmy told them.

‘You need any advice on pension plans?’ I asked them.

They laughed, dirty, guttural chortling.

‘I don’t think these gentlemen plan on living that long,’ Jimmy informed me, speaking out of the side of his mouth.

‘You’re a bit young yourself,’ Trev broached. ‘For this kinda work. Were you an officer? Regiment?’

‘I’m older than I look,’ Jimmy stated with menace. ‘And no, no ex anything.’

‘Can I ask a question?’ Handy finally peeped up with.

‘What’s that?’

‘What the fuck did your mum feed you on?’

Student ambassadors

It was just over a year after our first visit to the student’s ‘assisted travel’ company that we returned, again unannounced.

‘Still here?’ I asked the bored looking receptionist.

She did not recognise us. ‘Who are you here to see?’

‘Mr Timms,’ Jimmy informed her.

She waved a lazy fat hand and we stepped into the cramped office again. This time, however, young Mr Timms seemed mildly interested in our visit.

‘Hello again,’ Jimmy offered, handshake initiated.

‘It’s gone quite well,’ Timms informed him. ‘Popular with the students.’

‘I’ve been through the sheets you sent me,’ Jimmy stated. ‘All OK apart from the blind guy.’

‘Blind?’ I repeated.

‘He’s a student,’ Timms argued.

‘But not quite able to appreciate the sights,’ Jimmy nudged. ‘So no more blind people on these flights.’ He handed over a cheque, readily received.

‘Crikey!’ Timms let out. ‘We’ll be able to send a lot more next year.’

‘That’s your half-yearly budget, blind students aside,’ Jimmy informed him.

‘Half year?’ Timms repeated.

‘Yes, so ramp it up, especially Russia.’

‘Crickey,’ Timms repeated. At least he had a clean shirt on this time, I noted.

Jimmy firmly told him, ‘I want the criteria kept tight, no one who’s been to those countries before or is well-off. Understand?’

‘Yes, yes. No problem.’

I noticed the same pretty girl, but now avoided eye contact. Remembering Jimmy’s prior advice I put in, ‘If all goes well you can send some down to my hotel in Kenya.’

‘You have a hotel ... in Kenya?’ Timms repeated.

‘On the coast, but the odd lion wandering in. Got an ostrich and an elephant for the guests, and the scuba diving is good. They can visit the orphanage we took over. Anyway, Christmas is coming so you can all come out for a meal at my friend’s Chinese restaurant. You fix a date for a few weeks, call us.’ We shook and departed.

‘Smooth, young man. Smooth,’ Jimmy approved. ‘If the girl comes to the Chinese –’

‘We’ll get Po to call the restaurant and tell her its ours.’

‘Tell her it’s *yours* – you mean.’

‘If you like,’ I said.

‘Good man.’

‘Boss Man, why is it ... you know ... important to be the *lad about town*? You keep nudging me that way.’

Jimmy stopped dead in the street. ‘How would you react if you met a President or Prime Minister tomorrow?’

‘Probably shit myself,’ I replied.

‘Exactly. You need to develop the confidence to converse with anyone, but there’s no school or college for such things. Confidence with the ladies, and the travel we do, all help to get you to the point where you could meet a President – and treat the idiots with the lack of respect they deserve.’

‘My mum wouldn’t be happy about that.’

Mountain rescue

Without much explanation, as usual, we packed a bag and jumped into the Mercedes, heading for Scotland. Up the M40, across to the M6 and ever onwards, staying the night at an Express Inn, a meal in a local pub just shy of the Scottish border. Eight hours it had taken us to get this far.

The next day we crossed into Scotland and wound around hillsides in the rain near Dumfries, ending up in a small town. We booked into a quaint hotel that offered a salmon stream for guests, before heading for the annual town fair. Dressed smartly, we stood out from the crowd. The clouds had lifted and the sun broke through, the afternoon warming up nicely. Jimmy spotted what he was after and I trailed behind.

‘It’s a plastic rock face,’ I noted.

We stood and watched as men in coloured hats and harnesses climbed up a twenty-foot artificial wall, other men at the top belaying ropes in case the climbers fell a devastating ten feet or more onto the soft grass below.

‘Looks dangerous,’ I told Jimmy, getting back one of his looks.

We stood at the railings and observed, along with parents and kids. After five minutes a fit looking grey-haired man in a pack-a-mack shook a blue bucket below us, a subtle hint.

‘You gents want ta contribute ta the rescuers?’ he firmly nudged in a thick Scottish accent.

Jimmy produce a cheque and handed it over without a word; one hundred thousand pounds. The man with the stylish blue bucket stared at the cheque.

‘This ... er ... this on the level?’ he enquired.

‘It is if you buy us tea and scones,’ Jimmy suggested.

The man stared a while longer, called over another man and directed us around the railings and towards the nearby tourist trap. He showed his colleague the cheque as we progressed through the crowds, looks exchanged. We managed to find a table in a corner and ordered tea and scones, settling around a cramped and cosy table.

‘You’re James Silo-witch?’ the first man clarified, reading the cheque.

‘Jimmy Silo will do. And you’re Mackey Taylor.’

‘Aye. We met?’

‘No, but I take an interest in mountain rescue. You see, I was once on a school trip up here, got lost and needed rescuing. 1978.’

Mackey's eyes widened. 'Seventy-eight, when the kiddie was drowned?'

Jimmy nodded. 'I've never forgotten the help we got that day. Now ... now that I'm a very rich stock broker I thought I'd give something back.'

'Well, that's right good of ya,' Mackey and his colleague agreed. 'Right good.'

'I understand,' Jimmy began as we received our silver pots of tea, the teashop bustling with tourists, 'that you've been stirring up a hornet's nest of late.'

'About what?'

'About ... trying to get an all-Scotland co-ordinated Mountain Rescue effort going, not least when it comes to training standards.'

'Well ... aye,' Mackey admitted.

'Then, Mister Taylor, me and my money are behind you all the way. What I can do for you, is to offer money to the other rescue centres – on condition that they consider your proposals. I'll even pay for an all-UK conference on the subject, put everyone up in a hotel for a few days and let them talk it out. Even get the cave rescuers in there.'

Our hosts exchanged looks.

'We've been talking about it for some time. Way overdue, it is.'

'Ten different groups doing ten different things is never efficient,' Jimmy mentioned, music to the ears of our hosts.

'What'd ya have in mind?' Mackey keenly nudged.

'Well, you're the experts, not me. Why don't you put a conference plan together and send it to me.' He handed over a sheet of contact details. 'You can find a hotel and conference centre, check it out, price it up – somewhere central for everyone – and I'll find the cash. In the meantime, why don't you put together a mailing list of everyone concerned, including the RAF and Navy helicopter boys – anyone concerned.'

Mackey blew out. 'Be a big show.'

'I have deep pockets,' Jimmy insisted. 'And you've already got the money to get you started.'

We munched down our scones, cream squirting out the sides, tourists coming and going, the shop door annoyingly 'pinging' every minute.

The next day we got an invite to a mountain rescue centre, conveniently situated half way up a mountain, and the staff – nearly all part-timers – showed us all sorts of equipment. Many tales were told of brave rescues of stupid tourists. I got strapped into a stretcher and lugged around, taken up and over a rock without incident.

‘Your Land Rover’s seen better days,’ Jimmy told Mackey, kicking the vehicle’s tyres.

‘We’ll buy some new kit now, with the money.’

‘We see a lot of these in Kenya.’

‘Kenya?’

‘I have a hotel down there, some charities I support,’ Jimmy explained.

‘Doing alright then.’

‘Aye,’ Jimmy said with an accent. ‘And if any of your boys want to pop down for a safari it’ll just cost them the flight, rest I’ll chuck in.’

I could see Mackey’s grey matter firing up. ‘We could offer a trip up as a prize, for the fundraising.’

‘Offer up a couple of trips,’ Jimmy suggested. ‘Six a year. But first, you should come out, check it all out so that you know what you’re into, take some pictures for people to look – help raise money. We’re back there in six weeks time if you can get away.’

‘Expensive ... the flights?’

Jimmy held up a hand. ‘Won’t cost you anything, it’ll be a working trip – we’ll sort it. Just bring a good camera.’

‘Oh ... er ... that’s good of you.’

‘No problem, Mackey.’

We said our goodbyes, Mackey threatening to have some plans together quickly. With mist descending we headed towards the M47 and the long trip back.

Letters can be dangerous

Jack Donohue read the letter in silence, the assembled warm bodies awaiting his comments. When finished, he took his time to consider what he might say, easing back in his seat. ‘Is anyone

here ... in any doubt as to why, in particular, our good friend sends us letters ... instead of identifying himself?' Not even the Prime Minister commented, Jack adding, 'This puts him in a very delicate position and, if you don't mind my saying so, you as well Prime Minister.'

The Prime Minister sighed. Softly, she said, 'If this letter had been the first Magestic letter, it would have probably been seen with less ... *importance* than it does now. I have started to gain an appreciation, Jack, for your reasons behind his thinking. Not to mention his desire for privacy.'

Jack glanced again at the letter.

PM, the end of this year will pose a dilemma for you that will begin a process which, once started, could not easily be stopped. By time the New Year is rung in we will have a different working relationship and strategic partnership.

On the 21st of December, 1988, PAN AM flight 103 - Malta to New York - will be blown from the skies over Scotland, a great loss of life on board as well as on the ground. It will be one of the worst terrorist atrocities to reach our shores.

A Libyan agent will carry the bomb onboard at Malta airport, his agency assisting the Iranians in the desire for revenge over the shooting down of their passenger plane over the Gulf in 1984. That agent, and those that have instigated the action, will be monitored by the CIA and a warning given about flights leading up to Christmas. The bomber will not, of course, continue onwards to America with the bomb - an altitude triggered device. Despite the warnings given within American diplomatic circles the aircraft will be destroyed.

Unfortunately, the CIA handlers most directly responsible for the monitoring of the event will allow the planned attack to go ahead, their aim being to turn public opinion against Libya and therefore help to sanction any planned future attacks against that nation. That puts us both in a difficult situation.

Due to the severity of the situation you will forgive me for taking the next step. I have placed a sealed envelope with a media solicitor, and others, detailing the attack. In the unlikely event that the attack goes ahead the media will be informed, the proof supplied in great detail. That may, unfortunately, give you a less-than-peaceful Christmas break.

Please note well. If you discuss this with the Americans then the date of the attack would be altered - but it will go ahead. Your only hope to save a great many lives will be to intercept the bomb in London on the 21st and to disarm it. I have every confidence. This letter has not been

numbered as per normal so that Jack can keep his sequence in the eyes of his counterpart.

P.S. Might I be so bold as to suggest that, after New Year, passenger baggage not be allowed onto flights without the attendant traveller.

‘Opinions, gentlemen?’ the P.M. asked.

Deputy Director Sykes leant forwards, resting his arms on the desk. ‘This is the first time that he has made a veiled threat. And let’s not gloss it over, that’s what it is – a threat. Do this... or else!’

‘We don’t know what’s in the sealed envelope,’ the SAS representative pointed out. ‘It could be more about the Americans than us.’

‘We won’t know till I meet with Pointer,’ Jack suggested. ‘And he wants to see me tomorrow – a Saturday!’

‘They’ve also had their letter,’ the P.M. suggested.

‘How do I play it?’ Jack asked.

‘No mention of this letter at all,’ the P.M. insisted.

The MI5 representative asked, ‘Are we really suggesting that the CIA would go ahead with such an atrocity?’

‘Not the CIA,’ Jack countered. ‘It says *those responsible*, so they’re field officers, European or Mid East sections.’

‘Quite,’ the P.M. put in. ‘There is no suggestion that anyone higher would be involved.’

‘Be hell to pay if there was,’ Sykes suggested.

‘Hence the unnumbered page,’ the P.M. mentioned. She took a breath. ‘For the moment we keep this under very tight wraps, and we work on the assumption that we stop the flight and search it thoroughly.’

The Cabinet Office Secretary knocked and entered. ‘Sorry, Prime Minister, but this seems to have been overlooked today.’ He handed over a Magestic letter. ‘Slipped between two files.’ He withdrew sharply.

The Prime Minister opened the letter. After reading it she made eye contact with Jack. ‘Seems that your counterpart is going to show you a fake letter sometime soon.’

‘A fake?’ Jack repeated, many shifting uneasily in their seats.

‘Yes, I’m afraid. It says that Pointer will present you a fake letter.’

Jack shook his head. 'Magesic did say that the relationship would alter. Seems that he anticipated some problems with the CIA.'

'Call me the minute you've finished your meeting,' the Prime Minister told Jack as she stood. 'But be very discreet.'

Jack greeted Pointer in the hotel bar that they now used, fixed monthly meetings for six months so far.

'Missing fast jets at all?' Jack asked as they shook.

'Oh, yeah. Give me some danger to this pen pushing – no offence.'

'None taken. Tea?' They sat, drinks ordered. 'So, meeting on a Saturday?' Jack teased. 'Something big up?'

'No, no, I just got a trip around Europe and the Middle East to do, so it was down to stopovers.'

'Do you fly well?' Jack lightly enquired, making Pointer laugh.

'No! When I'm in the back I get jet lag. Nothing to do, you see.'

'Perhaps you could pin the picture of a cockpit to the seat in front.'

'They'd throw me off as a kook! Anyway, how are you?'

'Fine, fine. But this month's letter is late.'

Pointer studied Jack briefly. 'Late?'

'Well, they are intermittent; sometimes two a month or more, sometimes none. Like yourself, I get withdrawal symptoms waiting.'

'We got one a few days back,' Pointer explained. 'I don't have a copy for you yet, this is the original.' He opened his case and handed over a letter in a plastic envelope, complete with a SECRET stamp and several sets of initials.

Mr Ambassador, I wish to bring to the attention of your compatriots that arms deals in progress between several bidders, all hoping to supply weapons packages to the Saudi Government, will find themselves under the unfortunate glare of unwelcome media attention in the months ahead.

Several of your negotiators will be secretly taped discussing the less-than-Western practices commonly required to appease the various Saudi Princes prior to any arms deal closing. The taped conversations, suitably transcribed, will appear in both printed media and on TV – a cause of great embarrassment for all involved.

One of the persons most directly responsible will be a senior aid to a Prince, his motives more religious than personal economics.

Please tread carefully.

‘Well, well. Guess our version of that got lost in the post,’ Jack quietly stated. ‘Didn’t happen to pick it up by mistake, did you?’

‘How could you think such a thing, Jack,’ Pointer said with a look of mock horror. ‘Besides, you guys probably got your Post Office sewn up tight.’

‘Prime Minister? Jack Donohue.’

‘Go ahead.’

‘They want us to accuse high ranking assistants of Saudi Princes of espionage against us during weapons trade negotiations —’

‘With the obvious consequences - we’d lose the deals, they’d get them. I can’t believe they’d even try that. Since when has Magestic been interested in commercial or domestic matters?’

‘Exactly.’

‘Well done. Have a good weekend, what’s left of it.’

A nice watering hole

Two months after purchasing River View we flew back into Nairobi, this time to go buy a safari lodge. We spent a day at the usual hotel, meeting Rudd in the rooftop bar and catching up on developments, our man in Nairobi now involved with River View as well – keeping an eye on the manager. We read through lists of bills, reports, looked at diagrams for proposed new buildings at the airfield and scanned recent photographs. Jimmy was happy with the progress, so Rudd would travel with us to Masai Mara country in the morning, West Kenya and close to the Tanzanian border.

We set off early, Rudd again driving us in the UN jeep. It made me smile, the softly spoken and mild mannered Dutchman quite the thief. On the way we spoke about many things, including his family and their first stay at our hotel. Now, when Rudd popped down to the hotel for a visit, he took them along when he could.

Half way to Masai country we stopped for lunch at a roadside diner of sorts, risking a cheese burger – of sorts, but were stopped by the police as we left, the patrol officers driving a dated Ford Granada. Rudd flashed his old UN identity, shrugged his shoulders and waved his hands a lot, the police letting us continue on. Overall we had no problems with the police, the odd traffic officer trying to justify his salary. The last twenty miles of the journey were made negotiating rough tracks, a few animals glimpsed through the dry brush.

‘Hard place to find,’ I grumbled as we bounced along.

‘Tourists don’t drive themselves here,’ Jimmy pointed out. ‘They’re picked up at the airport in convoy.’

‘How much land has this place got?’ I asked.

‘Been on it for the last half an hour,’ Jimmy informed us.

‘Shit, how many square miles is that?’

‘About a thousand,’ Jimmy answered. ‘Thirty miles by thirty miles, dozen Masai villages, a small town on the edge, couple of working farms and the game reserve in the middle. Nice big river runs right through it, one small hill.’

‘Cool. What animals?’

‘Best game reserve in Kenya,’ Jimmy proudly announced. ‘At least it will be. It backs onto the Serengeti. And it’s going cheap, the owners just lost a court battle about back taxes.’

‘What was the problem?’ I asked.

‘They didn’t pay their taxes for ten years.’

‘Why not?’ I puzzled.

‘Because they’re idiots,’ Jimmy explained.

Rudd put in, ‘Many people here, westerns, don’t pay tax and just leave. When I paid yours on account it took an hour to explain it.’

‘Why?’ I asked.

‘I was about five years early,’ Rudd said with a smile.

‘We’ll keep the government sweet,’ Jimmy insisted.

Finally, we opened onto grassland and could see the lodge in the distance, perched on the crest of a rise. It’s thatched roof sagged down almost to the grass, giving the appearance of an enormous hat supported by a neck of dark brown wooden walls, and finished with whitewashed boulders strung around it like a pearl necklace. It was not a place to approach at night when very drunk. Several small outbuildings, a few yards away from the main

building, were not dissimilar to the huts at River View. We parked up next to a green Land Rover that had seen better days, the white UN truck a bit confusing for the staff who greeted us, Rudd explaining that he bought it second hand and had not painted it yet. We booked in, three quite expensive rooms for what they were, which was basic.

The owners were old English colonial stock, a middle-aged couple that I took a disliking to straight away; the husband carrying a small stick to beat his dog. He snarled at the local staff, not being too sweet with the paying guests either. The husband stood with fists on hips, khaki green shorts and short-sleeved shirt; I had to give it to him, he looked the part. Even the socks in his boots were khaki green.

With my bags in my hut I wandered into the cool interior of the main building, which seemed to have been built up around a tree, the trunk still erect and appearing hundreds of years old. There was no TV or radio, just a shelf of dated books being the central focal point, plenty of chairs to sit about it. I had images of a group of guests all sat around reading in silence; communal, yet solitarily passing of the long nights. Walking through to the far side I stepped out onto the grass and peered down the gentle slope, an obvious viewpoint.

A hundred yards below me ran a meandering river, well-used and muddy banks now attended by hundreds of animals milling about, all sorts. I could see elephants off to the left, zebras, wilder beast, hippos in the water and even lions in the distance. I was impressed with the array, then noted what appeared to be kitchen leftovers scattered around, now realising why so many animals were attending this party.

I noticed a small bar over my right shoulder and wandered in, finding it empty but for a lone local stood ready to serve. The bar top looked as if it had been hacked off a hundred year old tree, leaving me wondering if it was related to the one keeping the roof up. In fact, I could not see a piece of metal or plastic in the whole place, it was all natural wood. I ordered a beer and sat admiring the view in the sticky heat, the others finding me after five minutes. Rudd was not really one for animals, having already spent most of his adult life in Africa; he liked big cities and modern conveniences, and hated small bugs.

‘Lots of wildlife,’ I commented, flicking a flying insect of my knee.

‘That river runs tens miles either way,’ Jimmy informed me. He pointed off to the right. ‘See that rise in the distance? Great place for a bigger lodge.’

‘How many people can this hold?’ I asked.

‘Ten at most,’ Jimmy explained.

‘Which is probably why they’re skint,’ I whispered.

‘Economies of scale,’ Jimmy stated. ‘I would split the trip for the tourists; week here, week on the coast, day in Nairobi.’

‘That would be better,’ Rudd agreed with a nod.

The husband stepped out to us, managing a begrudging, ‘Rooms OK?’

‘Why don’t you join us for five minutes, Grant,’ Jimmy suggested. ‘I have some questions. It is Grant, isn’t it?’

The man sat, beating his loyal dog away with the pencil thin stick. Now I noticed his grey chest chair trying to escape the top of his shirt, and wished I hadn’t.

Jimmy began, ‘I hear that this place may be up for sale.’

Grant took a moment, eyeing Jimmy suspiciously. ‘It may be.’

‘What’s it worth, if you don’t mind me asking?’

I could see Grant’s brain getting into gear. His features turned dishonest.

‘One million, eight hundred thousand - with all the land, three working farms.’ He rested his hands on his stick.

‘Problem is, Grant, that the government has a claim against the property – unpaid tax of three hundred thousand.’ Jimmy made eye contact with me. ‘Which stays with the property and the new owner if they sell. So that makes it one and a half million.’

‘You’re well informed,’ our host grumbled. ‘What ... *business* are you in?’

‘Mercenaries,’ Jimmy nonchalantly informed our host. ‘I kill people for a living, Grant. Dirty business, but it pays very well.’

Rudd did not react. I watched our hosts features move rapidly towards concern. ‘Oh,’ was all he could manage.

‘So, Grant, do you want to sell?’ Jimmy nudged.

‘At what price?’ Grant wanted clarifying.

‘I’d guess one point three million. And ... I’ll pay the staff the wages they’ve not received - that’s another thirty thousand. Then there’re the unpaid bills of vets, wardens and the road upkeep.

That's another twenty five thousand. So really, Grant, you'd be doing well with one point three – very well.'

'You're no tourist,' Grant snarled.

'We are ... for a few days,' Jimmy softly insisted. 'We're here... at this lonely and dangerous place, miles from anywhere.'

Grant viewed the horizon with renewed interest, not knowing who might be out there, and I was enjoying his discomfort. As he went to beat the dog again I snatched his stick off him, broken it and threw it away. Our host sat frozen in controlled anger.

Jimmy produced an envelope. 'In here is a banker's draft and the details of my lawyer in Nairobi. If you present this tomorrow, and sign at the lawyers first, you can have your money transferred anywhere; Kenyan Government will be chasing me for the taxes. All you have to do to walk away from this place ... is take it and drive.'

Grant stared at the envelope for a full minute, then snatched and opened it. He recognised the Nairobi firm of lawyers. 'This draft will need a second signature.'

'Yes, my lawyer. He is *expecting you* around 2pm tomorrow.'

'And if I don't want to sell?' Grant snarled, his already ruddy complexion reddening even more.

'I'll wait for the government to throw you in jail, then buy this place cheap from them,' Jimmy said very matter of fact. 'Your call, money or prison.'

I focused on our host. 'Don't keep us waiting too long, old chap. Those lions down there are looking hungry.'

Our host got up, got into his jeep and drove off, his dear lady wife enquiring about his whereabouts hours later. In a story that I would tell over a few beers, Grant left everything behind, drove to Nairobi and signed over the place, got on a plane and headed to Cape Town, South Africa, with his money, his wife never seeing him again. We thought about taking pity on the wife, but she was even worse than him, barking at us at length when we informed her we had just bought the place. She packed up the next day and drove away, leaving much behind, not least three perplexed and unattended guests; a group of regulars. They were placated with a week's stay at the beach hotel.

After Grant's departure, Jimmy said to Rudd, 'I don't normally do business like that, but I don't like people like him – old colonialists.'

‘Me neither,’ Rudd agreed. ‘Fuck him. But *are* you two into mercenaries?’

‘No, not unless you count the old Dogs. Would it matter?’

‘Not really, just so that I know,’ Rudd answered with a shrug.

We wandered about the near empty lodge and grounds, basically a large patch of dry brown grass on a rise with the lodge in the centre, meeting and reassuring the staff whilst handing out bundles of dollars as back pay. We were now land gentry folk.

Rudd was given the task of finding a manager and overseeing the place, his time now split three ways. He didn’t mind, he was loving it, not least the tips from us for good work. In Rudd’s UN jeep we met the neighbours, letting all of them off their back rent, and I got my first glimpse of the tall Masai tribesmen in their distinctive red robes.

The second day, with the lodge free of guests, we drove to the hill in the distance, if you could call it a hill, and Jimmy made a sketch for Rudd, letting the Dutchman have a say in the layout of a new lodge and its proposed circle of huts. The view from the highest point improved upon that of the standing lodge and Jimmy suggested a two-storey affair with a roof-bar and viewpoint. It was a plan, Rudd still having plenty of money in our account to get the building work started.

Next day the three mercenaries I had met previously turned up, Jimmy only informing me that morning. I took a moment to consider if the three diplomatic types would have helped Grant make up his mind. We settled around the bar, Rudd doing an inventory of everything without prompting, to stop the staff from pinching it.

‘What news?’ Jimmy formerly asked.

‘Two down, one winged,’ Skids informed Jimmy.

‘The guy you winged is the most valuable,’ Jimmy explained.

‘You’re quick on the intel,’ Trev noted.

Jimmy lifted his eyebrows and nodded. ‘He’s fled to Sudan.’

‘Tricky place to follow,’ Trev noted.

‘Don’t. Not there,’ Jimmy insisted. ‘Work through the list. You get your money OK?’

They collectively nodded.

‘Right, your job for the next eight weeks – is right here.’ The men craned their heads around and took in the view. ‘The guests

have gone, I've bought the place, some staff still about. Raid the bar, kick back - *don't* damage anything. Got rifles?'

'In the jeep,' Skids answered.

'So now you're game wardens, of sorts,' Jimmy explained. 'Join up with the staff here, go right around the perimeter – two day drive – I want a detailed map of ways in and out. There're poachers about, so go tooled up. Put yourself in the poachers place, look to see where the game is – especially the elephant tracks – and mark them on the map. I want a plan of action for defeating the poachers; staff, kit, patrol routes.

'Go outside my area and talk with local police, local farms, get a feel for the poaching scene, get some intel.' He wagged a finger. 'But never forget – you work for me, posing as wardens here – so nice as fuck to everyone.

'Go see the Masai chief and give my respects, ask to employ a tracker or two, giving them territories. My man Rudd will sort wages for them, they'll work for fuck all. By time you leave here I want the poachers on the back foot, but a word of warning: no shots fired unless in self-defence, and then only if there's not another soul within ten miles. If you're out alone, and you're sure you've got poachers that no one will miss, bury them deep – no evidence! If the poacher is a Masai then take him back without damaging him and whinge to their headman. The locals around here also poach, but I'm not fussed on the odd cow going missing. Lions and elephants are a different matter; that we jump on hard. Any questions?'

'This be a regular gig?' Trev asked, seemingly pleased with the new assignment.

'Every time you need a break after a job you can chill out here or at the beach hotel. But the first time you get drunk and smack a guest you never get invited back. Simple enough for you?' They nodded. 'This is the same pay, but a bonus because it's fun. So when you're waiting intel' on a target it's somewhere to crash. If some good intel' does surface, go after the bad guys, then back here.'

'What rifles you got?' I asked.

'M16s,' Skids informed me. 'You shoot?'

'No, I drive a computer.'

'Give him some lessons,' Jimmy ordered. 'Come out on safari with us tomorrow, fun day.'

‘*You* need a shooting lesson?’ Trev asked Jimmy directly.
‘No, I could hit a playing card at six hundred yards.’
‘That’s what I figured,’ Trev began. ‘And yet you’re not *ex* anything?’
‘Use your brain for work, not on me. I pay the bills.’
Trev gave a mock salute.

Malaria

On the last day in Kenya I felt ill, shivers and a night sweat, feeling rough in the morning. We made plans to see the quack back in the UK rather than here.

I drank lots of fluids and slept when I could on the flight, British Airways as usual, Nairobi to Gatwick. Arriving back in the UK I felt very rough, Jimmy advising me to tough it through customs or face a quarantine. With determination I struggled through, getting into the car and almost fainting. Jimmy drove straight to central London and to a private clinic, virtually carrying me up the steps. The next day I woke to blue curtains and pastel colours, a brief inspection by a doctor in a white lab-coat before a large needle robbed me of further thought on the matter. On the third day I came around, finding my mum sat there looking worried.

‘You had us all worried,’ she informed me. ‘How are you feeling, dear?’

‘Still alive, I guess.’ I eased up and took in the room, remembering flashes of pastel blue. ‘How long ... how long have I been here?’ I croaked out.

‘Three days and nights,’ she answered. ‘Jimmy called us on the morning after you got back, second day you were terrible - delusional. We were worried sick.’

‘What ... what have the doctors said?’

‘Malaria, a bad bout.’

‘Oh. Has it gone?’

‘They say you’ll be weak for ten days, but should make a full recovery. You can come and stay with us for a while.’

‘Well ... er ... got work to do –’

‘Jimmy said he’d take care of everything, so you’ve got the time off,’ my mum insisted. And she was a force to be reckoned with when she wanted to be.

After two days of pastel blue I was ready to go, Jimmy popping in and dropping off supplies, food and drink, plus fresh clothes. Mum and Dad picked me up, driving me straight home the short distance to Richmond.

‘From Kenya to my old room,’ I muttered. ‘Fucking marvellous.’

I got three square meals a day, whether I wanted them or not, watched daytime television with Mum – many of her friends dropping in for coffee, and after a week I was ready for a large needle to put me under, anything was better than this. Jimmy popped around and I told him I had to get out of here. I convinced my parents I was feeling much better and we drove away, relieved at not being a sick ten-year-old off school any more.

‘Next time, I want a private nurse in the flat,’ I insisted, Jimmy laughing at my ordeal.

‘What’s wrong with your mum’s cooking and company?’ he joked. ‘You should be grateful.’

‘I love her to bits, but in small doses. Right now I need a curry, the lap dance bar and a nightclub.’

‘It’s Monday, so it’ll be quiet. Call that bird you like, Sarah. She rang the flat a couple of times.’

‘What did you tell her?’

‘That you had a nasty infectious disease.’

‘What!’

He laughed. ‘No, I told her you were in Kenya sorting some business. She thinks you’re back today. Tell her you’re jetlagged and you’ll get some sympathy. Anyway, you got the flat for a few days – I’ve got to do a family thing in Wales.’

Entering the apartment I was grateful to be back, checking quickly some stock prices and scanning faxes from Rudd; I had missed the job. I made a tea and sat with my usual mug in hand, reclaiming the peace.

Jimmy sat opposite and heaved a sigh. ‘Got some medical stuff to discuss.’

‘I’m better, no?’

‘Better for the moment, but Malaria reoccurs. In some people it’s not a problem, never coming back, in others they fall as sick as you were every three months or so.’

‘Every three months?’

He reluctantly nodded. ‘It’s too soon to tell, but it could come back every year. And, more importantly, if you go back down to Kenya you might get bitten again and make it worse.’

I stared across at him. This was not what I wanted. The last few years had been good, very good – more than anyone my age could have hoped for or achieved. This was a reality check.

‘I did warn you,’ Jimmy reminded me. ‘Africa is dangerous.’

We had not spoken about him injecting me with his blood since the first trip to the AIDS orphanage, and he had not pushed the idea. And it was not top of my priority list, the idea of it making my stomach turn. The very idea of someone injecting me with their blood – it made me shudder. What came next was a blow.

‘I can’t take the risk of taking you back down there, I’ll go alone.’

I felt like I had done at ten years old, when I was sick sat at home with mum and the rest of the class went off on a school trip to Longleat Safari Park. I did not like it then, and I most certainly did not like it now, that feeling of being left behind.

He added, ‘The rest of the trips are OK. Hong Kong, States, Europe. Just Africa is dodgy.’

With little more said, Jimmy headed off to Wales on the train, leaving me the apartment and the car, Sarah coming over after work. Somehow, I just couldn’t find joy in anything. Sarah turned up looking cute as usual, and I found myself making all sorts of excuses about jet lag or a bug. We watched TV, had a take-away delivered and she headed off late, with me apologising for being grumpy and tired.

What was wrong with me? I just made excuses not to have sex with a cute girl. Twenty-six years old, I was feeling like an old man. No, that wasn’t it, it was the prospect of losing all this, even though that was not what Jimmy was planning. I had no reason to believe that the team would break up, but still I had a bad feeling in my gut.

The next day I got back into my routine, but it felt different. It felt ... as if I did not belong any more. I checked the stock markets, closed out a trade, read faxes from Rudd and replied, read

Flight magazine and opened mail about flying courses. It was all normal - yet not. It was as before, yet somehow different. The apartment wall and me ending up playing stare down, the wall winning after several hours.

The next day was not much better, me and the wall renewing our silent conversation. Sarah called lunchtime and I made excuses, considering just how long it would be till she got the message. The message was: I don't know what's wrong with me, I just feel odd. That evening I gave it a great deal of thought, had a few beers and watched the TV. With the news just a dull blur in the background I thought about Kenya, and found myself thinking about the orphanage.

'I let him down,' I said to myself. Shaking my head I said, 'No, that's not true, it's just a bug, everyone gets sick. Well, he don't.'

Images of the orphanage flashed by, followed by images of World War Three. I suddenly felt like a coward. Buy why? What had I done? Another ten minutes passed by as I stared out of focus. 'No, I didn't let him down - I let *them* down.'

Jimmy had told me of the war that could break out next year, 1990. It was a turning point, and I was thinking of myself too much. My head nodded itself. 'I've been enjoying it all too much.'

It was amazing how I suddenly felt better, like a bolt out of the blue, like a revelation. I was a soldier on a mission, an important mission - and this was not about me, not any more. Standing, I went to the balcony for fresh air. Looking down on the traffic I muttered, 'I wonder if fucking Batman felt like this?' I was feeling better.

The next day Jimmy returned and I told him to sit.

'What's up? You better?' he enquired.

'I'm not happy to be left out of Kenya, or anything else.'

'Well, that's ... understandable.'

'You need me on this, it's too much work for one person, getting too much for the two of us. And next year is 1990, the start point.'

'You have been thinking.'

'I know I've got to be injected - but it freaks me out just thinking about it.'

He nodded sympathetically. 'I know.'

'But I'm not going to give up Kenya, so it's ... it's worth it for that. What ... what'll happen if I'm injected?'

‘Not much. You’ll sleep less, be fitter ... and you’ll be immune to all diseases known to man, including Malaria.’

‘It won’t come back?’ I pressed.

‘No, never,’ he replied.

‘If I have sex ... with a girl...?’

‘Yes...?’

‘Will she, you know?’

‘Get pregnant or disappointed?’ he teased.

‘Will she be ... affected?’

‘No,’ he carefully mouthed.

‘She won’t be like you?’

He fought hard not to smile, too much. ‘No.’

‘Can I still have kids?’

He rolled his eyes. ‘Yes.’

I eased back. ‘OK, I want to be injected.’

Jimmy turned serious. ‘Are you sure? There are *some* risks.’

‘Risks? Like what?’

‘You’ve just been in hospital and given blood. The next time you give blood they’ll notice a lot of odd stuff in it, call in the Government and they’ll lock you up in a lab and experiment on you.’

‘Not if I don’t get sick,’ I insisted.

‘If you’re in a car wreck you’ll be in hospital, blood taken,’ he pointed out.

‘It’s the same risk for you!’

‘True. Life is full of risks.’

‘Like getting fucking Malaria.’ I took a breath. Quietly, I stated, ‘I don’t want to be left out of anything, left on the sidelines.’

Jimmy slowly nodded. ‘We’ll sort it soon.’

‘No, now,’ I insisted. ‘I want to get it over with.’

‘You sure?’

My chest heaved itself. ‘Yeah, got my mind on World War Three at last.’

‘Took long enough,’ he carefully mouthed. He eased up, retrieving a medical pouch from his room.

Five minutes later and I was nursing a sore arm. ‘How long to take effect?’

‘You’ll run a temperature for twenty-four hours, have an aspirin and plenty of water – no more alcohol. Start eating protein: egg, fish, meat. On the third day you’ll start to need less sleep, then you

can exercise. Try and do nothing for the next day; sleep, sit and eat.'

Feeling much better I decided not to take his advice and called Sarah, taking her out and staying over at her place.

The next morning, back in the flat at 8am, I had a complaint. 'When I pee it looks odd and smells terrible.'

'Right know the stem cells are hunting around for old cells to attack and replace, the waste coming out. That will last a week, so drink plenty of water and stop whinging. Your metabolism will increase as well.'

On the third morning, a Sunday, I woke early and could not get back off to sleep. '5am?' I cursed. I found Jimmy sat reading.

'Can't sleep?' he asked without looking up.

'No, pigging wide awake.'

'From now on you'll only need four hours a night max, get used to it.'

'Should I exercise yet?'

'Sure, try and go for a run.'

I got my tracksuit on, running shoes, and headed out. 5am on a Sunday morning. Christ, we sometimes got back from the clubs at this time! Two hours later I limped back in. 'I hurt like hell!' I complained as I slumped down.

'Your muscles are full of energy and raring to go, your bones, joints and tendons are not there with them yet. Take it easy, gentle exercise.'

Removing my socks revealed huge blisters. 'Christ! Do *you* get blisters?'

'Sometimes. You're still mortal, so don't push it. Pop the blisters and they'll be gone in a day.' He went back to his book.

The blisters healed overnight, so I headed to the gym, running on the treadmills with a pen and paper tucked in. Day by day I improved, being their first customer each morning at 7am; 5k, 7k, 10k, 14k, 16k, 20k. I stopped at 20k and tried to improve on my time, the cute girl assistant often chatting to me and impressed by my performance. Well, I was the only one there bar the cleaner.

I was impressed by her fondness for sweaty men in running shorts and we had sex in many different hideaways, even the steam room and sauna, no one else around till at least 8.30am. Three or four times I week I had sex in the gym, also seeing Sarah in the

evenings a couple times a week. I was full of energy with a raging libido. But despite the running I put on a stone in three weeks.

Big Paul

With my training at the gym coming along, and my boxing improving rapidly, Jimmy said that it was time to recruit a bodyguard, something of a contradiction. I had to stop and wonder what the hell he needed a bodyguard for, and could we find someone big enough?

We advertised for 'driver/bodyguard' and offered a reasonable salary, indicating overseas travel. Fifty-two letters came via a PO Box number. Jimmy sifted through them till he found the name he wanted: Paul Baines. I called the man and invited him around for an informal interview. Opening the door to the guy I could see why he was in the security business. He was just about an inch shorter than Jimmy and solid with it. A hard face, he looked the part, appearing to me to be mid thirties. Stepping in he ran a professional eye around the apartment.

'Have a seat,' I offered. 'Tea?'

Jimmy appeared from the kitchen. 'Tea, no milk, half a sugar.' He placed down the mug for our guest.

'Good ... guess,' Baines noted with a pleated brow, sitting opposite Jimmy. I plonked down in one of the chairs.

'Still on the books at KMS?' Jimmy enquired.

'That wasn't in my CV,' Baines pointed out, carefully studying us as he sipped his tea. He spoke with a deep, resonating voice and a preciseness that suggested confidence.

'No,' Jimmy answered. 'But I know a great deal about you, Paul.'

'Such as?' Baines prompted.

'Such as ... Masterson asked you to apply for this job to spy on me.'

I was lost, confused, and now worried.

'So why drag me over here?' Baines finally asked, lowering his tea, but seemingly none too worried about being rumbled.

'To give you a job, of course,' Jimmy explained.

I was now more confused than our job applicant.

'Give me a job ... knowing that MI6 want me to keep an eye on you?' Baines questioned.

'Why not? You need the work, and I need a driver and bodyguard -'

'You don't look like you need a bodyguard, Guv.'

‘- and you can tell the nice people at MI6 that I am of no interest to them. That’ll help you to get back at Masterson.’

Baines’ eyes narrowed as he peered toward Jimmy. ‘First, you know I’m coming. Second, you know the history between me and Masterson. You must be connected to someone in his office.’

‘No.’

‘No?’

‘Why do you think they’re interested in me, Paul?’

‘You got six ex-troopers on the payroll in Kenya, some of them with a bad record.’

‘Who does he mean?’ I asked. ‘The guys chasing poachers?’

‘Poachers?’ Baines queried.

‘Yes,’ Jimmy began. ‘We own a game reserve which is plagued by poachers, after the elephants. We hired some troopers to hunt them down, no more complicated than that.’

‘And the others?’ Baines firmly nudged.

‘The Old Dogs? They teach mine clearance to Africans, a charity I donate to. Nothing more.’

‘Guess Masterson got his intel’ wrong.’

‘No, he hit the jackpot with me, he just doesn’t realise it.’

Baines waited for an explanation.

‘The stuff he told you about Africa was true, but just a cover. No, he’s after people who have very similar profiles to myself; good on the stock markets, connections to Wales or the M4 corridor, and charitable donors.’

I was lost, not registering the government’s interest in the Magestic letters.

‘What the fuck for?’ Baines curtly asked.

‘They have a profile of someone they’re looking for. Only not.’

‘Huh?’ I put in.

Jimmy had not turned away from Baines. ‘How would you like to wreck Masterson’s career with a single phone call? So much so that he couldn’t strike back at you.’

‘Love to – *if* it can be done.’

Jimmy produced a piece of paper and handed it over. ‘Call that number, it’s a Jack Donohue at the MOD. Tell him what it says on the note.’ He reached under a file on the coffee table and handed Baines a thick wad of fifties. ‘That’ll cover the cost of the call.’ Our guest’s eyes widened. ‘Go outside and use a payphone well away from here, then come back when the dust settles. Oh, and I’d

appreciate you not saying anything about me. You were never here.'

Baines re-read the note. 'This'll bury Masterson? Finish him?'

'Most definitely. He's got you doing a job that the Prime Minister forbade him to do, and one that the CIA has nudged him towards. They'll bury him. Oh, and I was serious about the job. Don't forget to come back.'

Baines stood, checked the wad again before pocketing it, then let himself out. I thought I could see him shaking his head as he left.

With our guest departed I said, 'What the fuck was all that about?'

'Some people in MI6 and MI5 want to find whoever is sending the Magestic letters.'

'Ah...'

Jimmy shrugged and made a face. 'Even if they do find me the handwriting is different, the style of writing, there're no prints on them and no connection. But ... it would be a distraction.'

At five o'clock our job applicant returned unexpectedly.

'Tea, black, half a sugar,' I dryly commented as I held the door.

'Got anything stronger?' Baines firmly requested.

Jimmy lowered his book, marking the page. 'How did it go?'

'I almost didn't do it, then I figured that ... if there was chance to fuck over Masterson... well, I've been on the bloody phone for hours. They arrested Masterson, warned me off ever saying anything and even offered me a few quid to clam up. I pledged my loyalty and promised to be a good boy, Scouts honour.' He gave a mocking, two finger Scout salute.

'Well,' Jimmy sighed. 'That's one chapter closed. Fancy a beer and a curry later?'

'Sounds good. What about this job, now that I'm between employers. Again.'

'It pays well, you get an apartment, lots of foreign travel... and you help prevent World War Three.'

I almost choked, jerking upright in my chair.

'What?' Baines asked, looking back and forth between us.

'World War Three,' Jimmy casually explained. 'Kicks off around 2017.'

'Got a while then,' Baines commented. 'Get a curry in at least.'

‘Key event is next year. It sets in motion a chain of events that leads directly towards World War Three.’

‘You wanna start making some sense, Guv?’

‘The boys in intelligence are searching for someone – a very powerful clairvoyant – who’s been sending them letters for a few years, tip-offs concerning disasters about to happen, terrorist attacks, wars, that sort of thing.’

‘And Masterson thought ... that was you?’

‘No, he was going through a list of possible suspects. But he would have been right about me.’

‘He would?’ Baines queried, a glance at me.

‘He would,’ Jimmy repeated. ‘But what’s the point in trying to sneak up on a powerful clairvoyant? I mean, if the guy was genuine – he’d see you coming, Paul. How’s the knee, still hurting from getting hit by that taxi?’

Baines studied Jimmy carefully as he subconsciously rubbed his knee. ‘You ... are a clairvoyant? What, you give tips in the back of The Sun newspaper?’

Jimmy forced a false smile. ‘Pick a topic about your past life, something that I could not possibly know.’

Baines eased back, another glance my way. ‘When I was on selection for the SAS –’

‘You cheated.’

I could see the surprise in our guest’s face.

‘How ... did I?’ Baines pressed.

‘You cut out a corner when you saw the umpire’s Land Rover get stuck. Pick something else.’

Baines gave it some thought. ‘My first girlfriend.’

‘Not including your second cousin, who you lost your virginity to?’

‘Dirty bugger,’ I put in.

Baines had not taken his eyes off Jimmy, his mouth now open.

Jimmy added, ‘You once hid in a cupboard in your friends house, down the road from where you lived, and watched two grown-ups having sex, only realising later than one was your mum and that the gentleman – well, not your dad.’

Baines sat transfixed.

‘Pick something you’re sure about,’ Jimmy pushed.

After a few seconds Baines’ features turned sullen. He said, ‘The reason I did not marry Ellen and walked away.’

‘You suspected that your kid ... was not your kid.’

‘Is it?’ Baines asked with a curled lip, not making eye contact.

‘Yes.’

Baines raised his eyes briefly before again looking away. Turning back he said, ‘No wonder they want you so badly.’

‘I could tell them stuff about the Russians, Chinese, the works.’

‘So why don’t you?’ Baines challenged.

‘Simple fact is - I do, have done for years; I send them letters. But what do you think my life would be like with Masterson as a prison guard? Or someone like him?’

Baines tipped his head. ‘Not so hot.’

‘Do you think they’d let me walk the streets, visit my mum on her birthday? Go down the pub?’

Baines shook his head and lowered it. ‘They’d lock you up like a freak. No offence, Guv.’

‘So you can see why I need a bodyguard,’ Jimmy explained. ‘I need someone who knows what they’re really like, who’s not blinded by the bullshit.’

‘What’s all this World War Three stuff? That on the level?’

‘Yes, very much so. I can see way into the future. If I don’t stop a few things ... it all goes bang. That includes you and your family.’

After a moment Baines focused on me. ‘What do you do?’

‘I trade the stock markets ... with *one hundred percent* success.’

Baines eased upright, focusing on Jimmy. ‘Shit! You can see what the stocks do?’

Jimmy nodded. ‘And the horses, Eurovision, World Cup, elections. You name it.’

‘You’re taking a big risk telling me all this,’ Baines commented.

‘Not really, you forget who I am.’ Jimmy waited.

‘What? You can see that I work for you ... in the future?’

‘Yes. And I know when you and Ellen get back together, I help arrange it.’

‘We ... we get back together?’ That struck him more than World War Three.

Jimmy gave an affirmative nod. ‘I also know what illness your kid will suffer, and how to cure him.’

Baines stiffened. ‘Illness?’

‘That’s for the years to come, don’t dwell on it now. First, you have to find her.’

‘Do you ... know where she is?’ Baines softly asked.

‘Of course. You also have an illegitimate kid –’

‘Whoa, there.’ He offered Jimmy a flat palm. ‘I’ve got another kid?’

‘A girl: very pretty, very bright. You remember a girl in Bournemouth, that course with the SBS in Poole Harbour -’

‘Christ!’

‘Christchurch, actually. Lovely village.’

‘Dirty stop-out,’ I helpfully offered.

‘So,’ Jimmy said as he stood. ‘You want to work for us or not?’

Baines eased up. ‘You can really do all that shit, what you just said?’

‘And more,’ Jimmy strongly emphasised.

‘I’m in,’ Baines told us with a shrug.

‘Good, would have hated to move your stuff back to that dingy flat you’re in.’

‘What?’ Baines queried with heavy frown.

Jimmy produced a key. ‘One floor down, apartment twenty-three is yours. Your stuff is in there.’

‘My stuff? You moved my fucking stuff?’

‘Go and have a look, then pop back up.’

Baines took the key and let himself out, appearing angered. And he was too big to anger.

‘Fuck me, you got my heart going there,’ I let out, closing in on Jimmy. ‘Fucking warn me next time.’

‘I needed you to look surprised.’

‘Achieved that alright.’ I took a breath. ‘He’ll work for us?’

‘Oh, yeah. He’s a good man, he’ll be loyal as hell till the end, you’ll like him.’

Baines was back in five minutes, looking a little calmer. Guess he liked the apartment. ‘What about the flat I already rent?’

‘Paid off, back with the landlord,’ Jimmy explained. ‘And the place downstairs won’t cost you anything.’

I could see the big fella working hard not to smile.

‘And if I didn’t take the job?’ Baines pressed.

‘For fuck’s sake, I’m clairvoyant, dopey! Now: curry, lap dancing and a nightclub. You fit?’

Baines shrugged a big pair of shoulders. 'Why not. I need a drink.'

We headed out. In the lift Jimmy gave him a photograph of a girl, no more than five years old.

Baines pocketed it. 'In time. I still got to get my head around it all.'

'You have a forty-year-old half brother in Scotland,' Jimmy mentioned in passing as we stepped onto the street.

'Scotland?' Baines repeated as he thought. 'My father was stationed there a couple a times with RAF, 1959 to 1969. Bugger was married to my mum at the time.'

'And you know what she got up to when he wasn't around,' Jimmy reminded our new employee.

'I don't care about a half brother, not like I ever knew him.'

'I think my old man was unfaithful once,' I put in. 'Something my uncle said years ago. That side of the family don't talk to us.'

Jimmy turned his head towards me as we walked. 'Big Paul was always faithful to his girlfriend, never wandered, even when posted overseas.'

And 'Big Paul' became his nickname from then on.

Conference centre nametags

It was September 1989, and the Scottish rescuer Mackey Taylor was faxing us every day. The conference was on.

We settled on a castle hotel just outside Stirling, enabling visitors from Edinburgh and Glasgow to drive up for the day and the Aviemore rescuers could drive down for the day. Others would stay in hotels around the area or in tents. Well, they were hardy mountain types. Our rooms were booked early, the hotel soon full. Mackey arranged one giant marquee, two large marquees and some tents for visitors, sleeping bags to stay over. An area would also be set-aside for people pitching their own tents, a field at the rear of the hotel and next to a stream; it sounded nice.

Catering was arranged by the hotel for almost two hundred visitors spread over three days, Friday to Sunday. Mackey had

already sent the hotel a twenty-five thousand pound deposit from the cheque we had given him, covering most of the costs at the hotel and the hiring of the marquees. The event had been advertised to all the relevant people and the take-up rate had been good, not least by the promise of free food and drink.

With Big Paul driving, we set off on Thursday morning, aiming to stay the night in Cumbria and take it easy. Good job, traffic was terrible through the Midlands and we got to a small roadside Bed & Breakfast as night fell, little time but for a meal and a beer before bed – we were working on Big Paul's body-clock, not ours. I read in my room and I'm sure Jimmy did likewise.

Big Paul stirred early, surprised that Jimmy and I were already at breakfast, packed and ready to go. We set off through light rain and headed into Scotland, motorways and main roads all the way to Stirling, finding the castle without much difficulty – someone had signposted the event well. Through thick traffic we crawled into the grounds and parked up on the gravel forecourt, emerging now into bright sunshine.

'Tent dwellers got the weather,' I noted. Turning full circle, I could see three large tents in the grounds, a handful of smaller tents in a field, a multi-coloured patchwork of single person tents further behind. And the hill paths seemed to be well attended by numerous walkers. We booked in, glancing at a large board detailing the events of the three-day weekend, the start point being a noon briefing in the main tent.

The rooms were large and nicely decorated, but after a while a hotel room is a hotel room. We met back in the foyer and decided to find Mackey and his gang, so checked the bar and found them straight away, sat having coffee whilst hurriedly poring over speeches and plans.

'Jimmy, Jimmy,' they called, as if we'd been life-long friends.

'All ready for the big show?' Jimmy asked as chairs were arranged for us.

'A wee bit nervous,' Mackey admitted. 'Lot of controversy already.'

'Really?' Jimmy probed.

'Many kooks spoil the broth!' Mackey suggested. I wasn't sure if it was his accent, or a pun.

'Then I'll assist, since I don't cook. Or climb mountains.'

'Assist?' Mackey asked, needing clarification.

‘If you have a group that can’t agree on a plan, I’ll dangle some money, make a speech, act as arbiter. After all, I’m neutral – yet no one will want to upset me.’

‘Aye,’ Mackey agreed. ‘Yee can start today, already got a group threatening to walk out.’

‘Don’t tell me ... the Aviemore rescuers.’

Mackey and his colleagues exchanged looks. ‘Aye.’

‘My next call, leave it to me,’ Jimmy calmly insisted.

‘You wanna say a few wee words?’ Mackey asked Jimmy. After all, we were paying for the event.

‘Sure. I’ll help you out by kicking things off if you like, give you a good write-up, see if I can’t get everyone behind you.’

‘Not Christmas,’ one of Mackey’s colleagues grumbled. ‘Not the season of miracles.’

Jimmy offered the man a flat palm. ‘Leave it to me. Have faith.’

‘Good job yee got broad shoulders,’ Mackey warned.

After a coffee we toured the very pleasant grounds, the weather holding up, inspecting the food tent and the smaller conference tents. Those tents had many chairs laid out in front of a podium, the main tent big enough for a small rock concert. Someone had even cut the grass beneath our feet. Noon approached and everyone, including those that were sulking about the order of giving speeches, settled down. Jimmy had been meeting people and pressing the flesh and, when it looked like everyone was just about in, he took the podium and the microphone.

‘I hope you can all hear me,’ he began. ‘It’s not a large area, but I guess the canvas tent sides absorb more sound than they reflect. If those of you by the flaps can decide to come or go, that would save the rest from being distracted.’ He waited a few seconds as people settled. ‘OK, my name is Jimmy Silo, and what I know about mountain rescue you could write on the back of a matchbox.’

I noted some perplexed looks from the crowd.

‘But what I do know about ... is making money, lots of it, which is why I’m paying for this event.’

I actually noticed a few people sit upright. It made me smile.

‘To give you some background – I live in London, I’m a stock market trader and investor, and I own hotels and safari parks in Kenya. And it was Kenya that led me to this tent today. You see, in Kenya ... I stopped one day at an orphanage, figuring I’d give

the kids some money. What I noticed ... was a number of kids without legs or feet. You know how they lost their limbs ... land mines.'

Jimmy put one hand in a pocket. 'So, I spoke to a man down there who knew about land mines, offering him some money to help train the locals to do their own mine clearance, a project that I now run in a fairly large way at a disused airfield in the north of the country. There we have former British Army ordnance personnel training Africans from all over the continent.

'But if you were to fly around Africa, visiting each country, what you would find would be small pockets of very good people doing very good work, yet completely oblivious of what others are doing in a similar field. Time, effort and money is being spent by these groups, charities for the most part, on training, on developing techniques and equipment, and sending people out to clear mines. One of my aims is to co-ordinate that effort right across Africa, so that resources are not wasted.

'In some centres they have two doctors and no electricians. In others they have no doctors and ten electricians. In some they have willing volunteers, yet no experts to train them. He took a breath. 'On one flight back to the UK I met a gentleman, who shall remain anonymous for the moment, who was returning from a scuba-diving holiday in Kenya. It turned out that he was a part-time mountain rescuer, and he told me a lot about *your* industry.

'And I asked him what the training was like for his rescue work. The answer: you pick it up as you go along. What ... no formal exams, no overall governing body, just part-timers teaching themselves and mucking in? I couldn't believe it. After all, this is Britain, leader in so many areas. And yet here we sit, some of the people in this audience whinging like little girls about who's going to speak first and on what topics.'

Could have heard a pin drop, if it hadn't been for the grass floor.

'I don't have a lot of time for politics, or for whingers. I do, however, have a lot of money. So how I intend to spend that money will be along the following lines. I don't know which one of you is the most experienced, or has the biggest ego. But I have met Mackey Taylor and his team from Stirling, and they seem to have an idea of two about a national co-ordination of training standards ... and of co-operating. I can't say that he is the best

man for the job, only time will tell. What I do know, is that you need momentum to get anything done, and what Mackey has ... is a passion to cut through the crap and the red tape, and to make some small progress. I've already given his group a hundred grand, and if any other group wants some money then you're going to have to apply for it through him.'

I grinned from ear to ear.

'And the amount of money available is around a million pounds a year.'

Whispers broke out.

'It is my intention, if someone in Mackey's group is up to it, to pay for a small office, a permanent secretary and a permanent co-ordinator, perhaps a small magazine where everyone can send in stories of heroic rescues, new bits of kit, problems, legislation. And, after a few years, many good people doing good work should be able to do a lot more ... for a lot less.

'I will buy ropes in bulk and distribute them ... once the type and colour of rope has been agreed by a national council. I will buy custom Land Rovers ... once you're decided on a vehicle specification, and get a bulk order deal from the manufacturers. Because that, ladies and gentlemen, is what co-operation brings - it brings cost savings. I will also push for a national examination standard and training course for budding young rescuers, followed by a badge that can be sewn onto a jacket. Then everyone will know that the person with the badge has met a certain standard. I will help arrange a standardised first aid programme for new recruits, as well as fun aspects such as canoeing trips, map reading, orienteering ... and regular fun competitions that will pit man against man, team against team, in a spirit of co-operation.

'I'll pay for climbing trips to other countries such as America, and exchanges between rescuers in many countries. I can, even now, offer courses on a variety of subjects in Kenya, where I have a base. Who's to say that, in some distant future, rescuers here don't attend bush fire fighting courses, flood rescue courses, civil disaster courses or search and rescue of downed aircraft or missing kids.

'It will take time, and some money of course, but most importantly it will take a certain amount of co-operation from the good people sat in front of me - people who give up their spare time to risk their lives to help others. If you're prepared to give

your lives for strangers – can you give those who should be your friends some time and patience?’

Big Paul sat quietly amazed. I was impressed as well.

Jimmy finished with, ‘I now give the podium over to Mackey Taylor, who will call speeches and discussions in no particular order of merit, nor size of ego. If anyone has a problem then please stand up and say *my ego is bigger than his...* and we’ll slot you in first. The mountain to climb, ladies and gentlemen, is out there ... not in here.’

As he stepped down many started clapping, followed by people standing, and soon loud clapping from everyone. I hadn’t noticed at the start the RAF personnel at the back, or the Navy. We even had the Coastguard with us. It took a while for the assembled warm bodies to settle down again, Mackey having to call for them to hush down. He did his speech about co-operation, training standards, a magazine, about cave rescuers and mountain rescuers having cross-over training, about seasonal training and covering for each other, and even training for co-operation with the RAF and Navy helicopter crews.

At 3pm Jimmy broke the speeches and insisted everyone take a thirty minute break, the first day not ending till 6pm, the sun low on a pleasantly sunny day. It’s fair to say that the real work got done in the bar that night, the restaurant opened so that people could spill into it; it was needed as some two hundred people tried to cram into a bar for fifty. We even opened the French doors and stood outside under spotlights.

Inevitably some groups asked Jimmy for money for bits of kit, but he directed them towards Mackey – who was the belle of the ball and being courted by all sorts. Big Paul recognised some of the faces from his time in the Army and re-acquainted himself with them, many drinks downed. At 1am we were still going strong, the speeches due to re-start at 9am, Jimmy altering the blackboard to 11am. At 2am Jimmy asked the bar staff to close up and they threw everyone out, me and Jimmy dragging Big Paul’s heavy carcass to his room.

The next morning was not well attended as people nursed sore heads, a few speeches given in the afternoon. An RAF rescue helicopter landed and people crawled over it, but not much serious work got done. As Jimmy had suggested to me, the people broke into small groups and made plans over a few beers. The Saturday

was very hot, most everyone sipping beer all afternoon, in-depth discussions going on in the beer garden instead of the tents. Still, it had broken the ice and people were making friends, chatting over beers and swapping stories. Saturday night was a drunken sing-along for the most part, Sunday a washout as far as speeches went. People had lunch, sat about or started to disappear. Mackey looked rough.

‘Late night,’ I asked as he joined us in the beer garden.

‘Can’t remember going to bed, so a wee bit to drink, aye.’

Jimmy said, ‘I figured it would turn social, that’s why I liked this place – the booze. Would have been a bit stuffy at some conference centre without a bar. The ice has been broken, now you can get some work done.’

‘Hope so, hope so,’ Mackey reflected.

Magestic letter 35

Sir, I would like to bring to your attention, at this time, some detail that is so important I’d appreciate you acknowledging it through the personals.

There are a number of key world events which – if all are not prevented – will lead directly to a global nuclear conflict within a date period ranging from 2011 to 2017. If all key events are missed then the outcome is inevitable. If some are missed, the outcome is inevitable, but the date blurred. Our aim, of course, will be to deal with all key events. If such a sequential and transactional success is achieved it will prevent such a war from starting.

Jack Donohue glanced up at the familiar COBRA faces and took a breath. He read on.

Two of those key events have already been dealt with to a satisfactory outcome. The third key event will occur in June of next year. Saddam Hussein will put pressure on Kuwait for reparations that he thinks are deserved regarding the Iran-Iraq war, joined with complaints of Kuwaiti oil wells drilling down at an angle into Iraqi territory.

In consultations with the US Ambassador to Iraq he will, deliberately or otherwise, get the impression that the US will not get involved should there be a conflict, i.e. an invasion. In June he will invade, sacking the

small territory. It is fair to say that oil prices will become unstable and a tad higher.

The US, in response, will send the largest invasion force since D-Day to Saudi Arabia, ready to expel Iraq from Kuwait. Such an army will easily send the Iraqis packing, that is not in question. But a chain of events will be set in motion that will lead directly to a global conflict decades later.

You may argue that a decade or two is a long time, and certainly a lot can change in such a period. But I know what will happen, the chain of events that will progress through time like a cancer.

PM, a two-inch plant can be pulled from the ground, a sixty-foot Oak tree cannot, not with the best will in the world. Events are best influenced in their infancy.

Might I be so bold as to suggest that you arrange for the Kuwaitis to invite your deployment of an armoured brigade to its northern border. Unfortunately, Saddam will not give up and such a policy of prevention will be a long-term affair.

PS. Should the Iraqis invade and be expelled, their principal divisions reduced by superior US firepower, other interested parties in the region will be glad of the reduction in Iraq's offensive capability. One needs to read between the lines.

'Bloody hell,' Jack let out.

The Prime Minister said, 'I'm mindful of the fact that he could have told us that years ago, yet did not. Instead he dealt with matters as trivial as the Eurovision Song Contest.'

'Building up credibility,' Jack suggested. 'Proving his ability step by step.'

'And now a huge leap forwards ... into World War Three.'

'There's one way to be sure about this,' Jack firmly suggested.

'Yes,' the P.M. agreed. 'Keep an eye on Iraqi divisions moving south. Hopefully, not being too late.'

Sykes put in, 'If there is a conflict, with the US and us pushing the Iraqis out of Kuwait, then there's an excellent chance of other Arab nations supporting Iraq – widening the war.'

'Yes, a powder keg alright,' the P.M. agreed.

Sykes added, 'There are also the studies we've made about what would happen if Saddam was toppled. Our best guess is that the country would split into three. The Shia south might join forces with Iran, taking the oilfields with them. The central Sunis would

join Syria and the north would go back to being Kurdistan, at war with Turkey in a jiffy.'

'Not good if Saddam stays, not good if he goes,' the P.M. noted. 'I want a working group on it, tight monitoring of the situation, and a plan of action.'

Jack asked, 'Do I discuss this with the Americans?'

'Deny its arrival, delay it,' the P.M. suggested. 'When do you meet?'

'A week.'

'Sit on it till then.'

A week later Jack got a note to say that the American Magestic letter had not turned up and they would be in touch when, and if, it did.

Colonel Pointer's Magestic letter 35

Mr Ambassador,

This coming year will see the Iraqi regime of Saddam Hussein put pressure upon the tiny Gulf principality of Kuwait. They feel they are owed money for helping to protect Kuwait from Iranian aggression, potential or realised.

When threats fail they will seek your counterparts council regarding your reaction to an invasion of Kuwait. You may be tempted to allow the aggression, since it will give you the opportunity to send forces to the region, to expel the aggressors and liberate Kuwait and, more importantly, to strike a blow against the large Iraqi army and to diminish its principal divisions. Unfortunately, the weakening or removal of the Saddam regime will result in Iraq splitting into three.

The Shia south will join Iran, handing over the substantive oil fields to the Iranian regime and further threatening Kuwaiti oil fields.

The Sunis will join with Syria, helping to destabilise that country.

The Kurds will declare independence, drill their own oil and sell it, becoming a small rich state. Unfortunately, they will sponsor terrorism in Turkey, as they do now, and Turkey will invade and hold Northern Iraq, destabilising the region and Turkey itself.

If you allow the invasion to take place you will kick over a hornet's nest.

Please note. There are a number of key events that may lead us towards future global conflicts, this is one of them.

Thad slapped a hand on the desk. 'I knew it!' he told General Summers as they sat in Summer's Langley office. 'They sent him back through time to stop World War Three. Why else would they go to so much trouble! We estimated that building a time machine would be like putting a man on the moon – damned hard! Not to mention expensive. They must have done it for a very good reason!'

Summers nodded his agreement. 'You notice anything else about this letter?'

'Tone has changed, more hurried.'

'Analysts says it's less British and more American,' Summers reported.

'We also figured he was one of ours. Maybe the flowery English language was for some other reason, maybe to keep the Brits sweet for some reason.'

Summers eased back into his seat. 'And now we have to prevent the President from allowing this to happen.'

'Easy enough: explain the consequences of a break-up of Iraq.'

'Your input will help, we'll need a united front.'

Job offers

One Saturday morning at 11am I opened the door to our old boss from McKinleys, Joe Pearson, a bald sixty-year-old with red cheeks. Seeing him in casual dress did not seem to sit right, I was too used to seeing him as the old boss.

'Whatcha, boss?' I said.

'Not your boss anymore, unfortunately,' he said as he entered, a seat offered.

Jimmy walked in with a fresh tea for Joe. 'Milk, one sugar.'

'You remembered.' He took in the apartment. 'Very nice. Must be doing well, Jimmy.'

'Just enough to cover Paul's salary.'

‘Then Paul must be the highest paid individual in the country at the moment,’ Joe pointed out.

‘Ha!’ I let out. ‘I’m on a YOP scheme.’

‘So, Jimmy, I guess you know why I’m here.’

‘I never touched your wife!’ Jimmy said with a straight face.

‘Nor would you want to,’ Joe sullenly admitted. ‘No, it’s about work, a position with us as head of client investment strategies. I won’t insult you with a salary offer, instead, we’d like to offer you a commission based position, handling close to sixty million pounds of client money.’

It was a big number. If Jimmy traded that sum the way we traded ours then his commission would be tens of millions a year. Problem was, brokers and investment companies had rules. And mysterious large trades were not in the book.

Jimmy began, ‘Joe, if I was to work for anyone ... you know it would be you and the old firm. I didn’t leave because I was unhappy, I just wanted to be a lazy bastard ... as well as make my own money.’

‘He sleeps in late,’ I joked.

Jimmy continued, ‘But, since we’ve had a few other visits this week —’

‘From brokers and banks,’ I said.

Jimmy faced me. ‘You remember *the thing* ... the *thing* I asked you not to mention?’

‘Oh, that’s the thing,’ I realised, sounding none too bothered. ‘Shit.’

‘Banks after you, eh, Jimmy,’ Joe said. ‘Well, not surprising, you’ve got the touch.’

‘He turned them down,’ I said.

Jimmy again faced me. ‘The ... *thing!*’

‘Yeah, but it can’t be *the thing* if you turned them down, can it?’

Jimmy shook his head. Facing Joe he said, ‘I’ve given the offers some thought ... and I’ll make *you* this offer. I’ll provide you with occasional trades when I find a good one, Index direction or sharp movements if relevant, and you can trade the intel. If you make some money you pay me a ... consultancy fee ... as an external. There won’t be more than one or two a month, and I make no promises. That’s more than I’ve offered anyone else.’

‘Appreciate it, Jimmy, we all do.’

‘I’ll even throw in a few weeks stay at the hotel I bought in Kenya – you just pay your flights.’

‘Kenya?’

‘Nice hotel on the beach, four star, you’ll love it,’ Jimmy explained.

‘Wife’s been nagging for something like that for a while,’ Joe explained. ‘I can tell her it cost a fortune!’

We laughed.

‘Why not,’ Jimmy agreed. ‘We won’t tell. But one thing, Joe – not a word to anyone about trading – you haven’t seen me for a while. This is me and you, no friends, or friends of friends. If I give you a good trade and the price hikes ... there won’t be too many more trades.’

‘Not to worry, I’ll place the deals myself,’ Joe insisted. ‘I know how the rumour mill works.’

With Joe gone, I asked Jimmy, ‘Did I do it right?’

‘Yeah, you’re coming along as a liar.’

‘How many people is that now?’

‘Five, so far.’

‘Going to make a fortune!’ I gleefully stated.

‘Going to need it as well,’ Jimmy sullenly stated.

‘Who else you tipping?’

‘Po, an American, five or six here. Soon have a Russian on board as well.’

‘Price will work against us with all that lot buying at the same time,’ I suggested.

Jimmy stared at me. And waited.

‘What?’ I asked.

‘Will it?’

‘Work against us? Yeah, unless we get in there ... first.’ I rolled my eyes.

‘Dumb fuck. Even if the stock isn’t about to rise they’ll buy into it, start rumours, and it’ll go with its own momentum.’

‘We can’t lose, then,’ I realised.

‘You’re a bright kid, you know that,’ Jimmy sarcastically let out. ‘I knew there was a reason I kept you around.’

‘I’m starting to sign letters as Dumb Fuck.’

Anyone for tennis

Sheffield was cold and wet, the train full of idiots on the way up. We could have used Big Paul to squish them, but he was running secret jobs for Jimmy, so secret I was not allowed to know. We got a taxi from the station to a newly built tennis centre, dashing through the rain inside and looking odd in our suits as northern mums and dads in tracksuits nudged their budding tennis stars along. We wandered around, the sounds of racquets striking balls echoing off the corrugated steel roof, till Jimmy spotted the man he wanted to meet. At a brisk pace we caught up with him.

‘Peter Semanov?’ Jimmy called.

The accused turned about, looking startled. He was a tall and lithe man in a tracksuit, and I figured him to be around the forty mark. Jimmy put out a hand and they shook, Peter still looking surprised.

‘Names Peter Seaman now, don’t use Semanov. Didn’t know anyone around here knew that.’

I could pick up the northern accent, most likely Manchester.

‘I checked you out,’ Jimmy told him. ‘I’m Jimmy Silo and this is Paul.’

‘Checked me ... out?’

‘Don’t worry, you’re not in any trouble,’ Jimmy reassured him as parents and kids walked past. ‘It’s just that I need a Russian speaking tennis coach.’

‘What for? You’re British?’

‘Not for me,’ Jimmy began, gesturing the man away from the crowds. ‘I’m a sponsor of various international student exchanges.’

‘Ah.’ Peter’s features lightened a bit.

‘And I’d like you to arrange tennis swaps with Russian students.’

‘Well ... I’ve thought about it. Getting the grant money is the hard part.’

‘No need, I’ll be paying for everything. You’ll have a fifty-thousand a year budget to start and I’ll subsidise all the flights and accommodation.’

‘Shit,’ Peter slowly let out. ‘Who are you, exactly?’

‘Rich businessman, just giving some money back to society,’ Jimmy suggested.

‘You don’t look old enough.’

‘He is,’ I firmly suggested.

Jimmy handed him an envelope. ‘My contact details are in there. Pop down to London, I’ll put you in a hotel and we’ll chat – it won’t cost you anything; train or room. And if we can get this going in the way I’d like it there’s a full time job in it for you – a good wage.’

‘Doing what?’

‘Taking groups of kids to Russia to play against the kids there, bringing Russian groups over here. Simple.’

Peter inspected the contact details. ‘I’ll er ... I’ll pop down next week.’

‘Fine. See you then.’ They shook.

As we walked off I commented, ‘You never heard of a phone call?’

‘He doesn’t have a phone. At the moment he’s down on his luck, staying with his mum in a council flat in Bolton.’

‘So he’s ours for the taking,’ I realised.

‘Help a man when he’s down, get a friend for life.’

Our man in Texas

On a wet Monday morning we got a taxi around to the Astoria Hotel, Jimmy briefing me on the way. I was a bit shocked by today's risky venture, but Jimmy was as confident as ever. We sat waiting in the bar for our contact to descend from his room.

The guy appeared in a blue blazer, jeans and a shirt. I knew he was from Texas, I'd sent him some stock tips, but even if I hadn't known him I was sure I could have picked him out. He was well-built, just under six foot in his boots and topped-off with dyed black hair combed straight back. We closed in on him, making eye contact as he scanned the room.

'Mr Pederson,' Jimmy said, a handshake initiated.

'Mr Silovich. We meet at last. You're younger than I would have imagined. And bigger!'

We laughed, Jimmy gesturing towards an isolated table and ordering drinks from a hovering waiter as we settled.

'This is my number two, Paul,' Jimmy said, thumbing towards me.

'Paul? You're the fella who's been sending me faxes?' he asked in a Texas drawl.

'Yes,' I agreed.

'So which of you's the talent?' he joked, sitting back and crossing his legs.

'Team effort,' Jimmy responded. 'Anyway, how's the money making going.'

'You know exactly how it's going,' Pederson testily replied. 'I'm still waiting to find the catch.'

'Mr Pederson ... Charles -'

'Chuck'll do.'

'Chuck. I will always ask for a favour retrospectively. That means you make the money first,' Jimmy explained.

'So you must be due a hell of a favour.'

'Do you have any *desires* on public office, Chuck?'

'Straight to the point,' Chuck noted. 'Yeah, sure, I thought about it.'

'Then let me get straight to the point. No public office, no more kind assistance from us.'

Chuck leant forwards and stirred his coffee at length. ‘You’re nudging me towards something I was gunna do anyplace. Not much of a price tag?’

‘Various interested parties have asked me to ... trash a fellow Texan, and to help you beat him to the Governorship.’

‘Again, not much of a price tag. If I run against the fella – I guess my team would find a few holes in his boots.’

Jimmy handed over a photo.

‘Ah, I heard he might run. He’s an idiot! I met him many times. And he aint no Texan, that’s a put-on.’

‘Exactly. And we don’t want idiots in office now, do we?’

Chuck studied Jimmy carefully. ‘This aint some scheme by a foreign power, is it?’

‘Do you consider yourself, Chuck, a weak minded person?’

‘I’m a retired Marine, and I’m a Texan! They don’t come no tougher, son.’

‘So how could anyone influence you?’ Jimmy posed. ‘Besides, all the stock market trades you made were ... harmless in themselves. You were just lucky, and you’ve got the investment records to prove it. Even if I wanted to bribe you, all anyone could prove is that I supplied you stock trading tips. Since I’m a stockbroker ... not so unusual.’

‘So what’s the catch?’

‘I want you to trash our friend, and soon. And don’t stop trashing him just because you beat him to the Governorship. I want an unofficial biography of him and, if you can arrange it, some misdemeanours: cannabis, hookers.’

‘He’s the President’s son,’ Chuck quietly cautioned, a glance around the room.

‘He’s already got a few skeletons in the closet, so just go looking for them. If you do ... then you keep getting stock tips.’

‘I know some stuff about the guy that I bet no one else does!’

‘That sounds like a start point,’ Jimmy enthused.

It was done deal, sealed with a handshake. The US Marines were on board.

Small victories

Sat in the apartment Jimmy offered me the paper he had been reading. 'Have a look.'

I sat and took the paper.

'Top left,' Jimmy directed.

I read the headline. 'Airliner cabin doors to be locked.' I looked up. 'Took them long enough, you sent that letter a year ago.'

'At least it's done. They'll reinforce cabin doors, put in a spy hole, keep the terrorists out of the cockpit. It's a key trigger event, so off to Kenya in a few days, ramp things up now.' He tapped the paper. 'That's a whole six months ahead of when I expected it.'

'Small victories,' I said as a key turned in the lock.

Big Paul stepped in. 'We got company,' he softly stated, none too concerned

'Yes,' Jimmy agreed.

'We do?' I asked. It was just us, no one expected.

Big Paul explained, 'Two cars in the street.'

'We're being watched?' I questioned.

'Spooks,' Big Paul said as he sat.

'That's a term for ...?' I nudged.

'Spies. MI6 probably,' Big Paul explained.

I focused on Jimmy. 'We in trouble?'

'No, not really. They're genuinely interested in who I deal with in Kenya - Skids and company.'

'Not the other thing?' I queried.

'No. Still, we should deal with this before we fly off. Paul, go have some fun with those cars. '

With a smirk Paul eased up and stepped out.

An hour later I was in my room, the window open, when I heard what I thought was a car crash below. From the balcony I peered down. A chimney had fallen off the building opposite and onto a green car, smashing into its roof and windscreen. The car doors were open and two men stood inspecting the damage. I leant on the balcony and watched.

As I did I noticed Big Paul in a side street, walking towards the corner shop. He crossed the road and entered the shop, exiting with a paper and bottle of milk. He crossed the main road instead of taking the shortest route, then ambled along reading

the paper. Below me he stopped, along with others, to view the mess of the car. A minute later he was on the balcony with me.

‘Good aim,’ I said, not getting a reply.

As we stood there, peering down at an attending police car, a small bang preceded a puff of smoke at the end of the street. Now another two men were out of their car and inspecting their vehicle, the police car moving along to them. As we observed the scene the driver flashed some ID at the police, the second man lifting up what was left of his exhaust.

‘They going to be a tad ... pissed off at us?’ I delicately enquired.

‘Fuck ‘em.’

The next day we got a visit. I opened the door to two gentlemen, the others sat around the coffee table.

‘Foreign Office,’ the first man said, flashing an ID that meant nothing to me.

I held the door wide. ‘We’re not hiding any foreigners in here.’

The first man glanced at me as he entered.

‘Please, have a seat,’ Jimmy casually offered, not getting up.

They sat, IDs placed down. ‘Jimmy Silovich?’

‘Yes. And you’re not from the Foreign Office, so cut the crap.’

They glanced at each other, retrieved their IDs and sat back.

The first man said, ‘We’d like to talk to you about your connections to certain mercenaries working in Africa, Kenya in particular.’

‘Skids, Trev and Handy?’ Jimmy asked with a grin.

‘Those are the nicknames of three of the individuals we ... keep track of.’

‘Gentlemen,’ Jimmy began. ‘I know fully well that they’re a bunch of ex-SAS troopers hiring out their guns.’ The two men glanced at Big Paul. Jimmy continued, ‘I have a safari park, near the Serengeti – come visit if you like – and we have several decent herds of elephants. We also have well organised poachers who turn up in gangs of twenty or more, armed with Ak47s. They kill the elephants, which is barbaric, not to mention bad for my business. No elephants, no tourists.’

‘So I take the following approach. I hire them out and pay them to hunt down the bastards killing my fucking elephants, and to shoot them full of holes! And if Skids and company were not the kind of people that *you* are interested in, they’d be no good to me, would they. I need killers, not policemen.’

‘And the base at Mawlini?’ the first man asked. ‘It’s being geared up as a staging area.’

Jimmy and I both laughed, our visitors not appreciating our mirth.

‘Come visit, have a look,’ Jimmy suggested. ‘I’m sure that old Mac would love the attention you’d give him. And to label him as a dangerous mercenary would delight the old fart. He gets up three times a night for a pee.’

‘Then what’s happening at that base?’

‘Some day it will, hopefully, be the biggest base training Africans in mine clearance, a charity I’ve got involved with. I’ve also taken over the orphanage up the road from my hotel, River View.’

‘Orphanage?’ the first man repeated.

‘Phone them,’ Jimmy challenged. He found the number amongst the papers in front of him and handed it over. ‘Listen, guys, get your boss to send us a man, I’ll take him with us to Kenya in a few days, I’ll pay his ticket and expenses.’

They glanced at each other. The first man, the talker, said, ‘There is also the question of Mr Baines ... *situation* here.’

Big Paul eased forwards in his seat. ‘Next wrong word and I’ll put the both of you fuckers in hospital for a very long time.’ He stared at them. ‘And if I’m nicked I’ll talk about enough to bring down the fucking government. Got that, tossers?’

‘Paul, please,’ Jimmy said, waving Big Paul down.

Didn’t know about our visitors, but I was afraid.

Our guests stood. ‘We’ll be in touch.’

Jimmy stood. ‘I’m off to Kenya in a few days. Till then I’ll be here.’

With the visitors gone Big Paul pulled out the sofa’s seat covers, retrieving a small bug. He dropped it into a cold tea.

‘Fifty metres,’ Jimmy said to Big Paul, getting back a nod.

‘Fifty metres?’ I repeated.

‘Small bug, close range,’ Jimmy explained. ‘It would need a localised booster, or they’d need to be in the flat below. Go search your room for anything odd.’

Big Paul set about the lounge, soon on his back under the coffee table. We found nothing. Jimmy called down to the doorman and he popped up. Soon we knew we had a new neighbour, his flat under my bedroom. Close enough.

‘When we’re away I’ll arrange a baby-sitter for the apartment,’ Jimmy suggested.

‘I’ll check my room later,’ Big Paul added. ‘But if you don’t mind me asking –’

‘Why didn’t I *see* it?’ Jimmy said with a smile. ‘Things can change, the future is fluid. Small things can alter, sometimes bigger ones. And everything I do affects the time-line around me, giving it some chance of change. Like moving through a swimming pool; you move the water and cause ripples.’

An hour later we got a call, taking us up on our offer to take someone to Kenya. The man’s name was Cosuir, pronounced ‘cosy’. Big Paul did not know him, Jimmy did.

‘Who is he?’ I asked.

‘Freelancer, French colonial parents from Guinea, West Africa.’

‘How does it work out?’ I asked.

‘He’ll join the team,’ Jimmy replied.

Four days later we were back in Nairobi, the customs officer recognising us and chatting with Jimmy like old mates. Rudd met us again in the UN jeep, the quiet Dutchman always making me smile, and we all piled in, plenty of room for four or more. Cosy turned out to be a slender and tanned individual, same height as me and with similar black hair. He had tired eyes and permanently looked as if he wanted to be somewhere else, which was probably true in this case.

As we headed for the usual hotel Jimmy said, ‘Rudd, this is Big Paul, he’s a driver and bodyguard.’ Rudd said hello. ‘The other gentleman is from British Intelligence, checking up on my operations here. They’re concerned that I might be involved with certain mercenaries.’

‘Mercenaries? The old men at the airbase?’ he laughed.

‘And the ones hunting the poachers,’ Jimmy added.

‘Ah, yes. They look tough. They are former British soldiers, yes?’

‘Yes,’ Jimmy confirmed.

‘They caught some poachers this week,’ Rudd added.

‘And?’ Jimmy nudged after Rudd fell silent.

Rudd glanced at Cosy. ‘They brought back six sets of matching ears.’

‘Ears?’ I repeated. ‘Well, either they killed them ... or some poor bastards will have a hard time reading the papers – their glasses slipping off.’

We all laughed, even Cosy. Booked in, we met at the rooftop bar, Jimmy ordering drinks in a local dialect again.

It stirred a reaction in Cosy. ‘You speak Bantu?’

‘And reasonable Nilote, although there’s so many variations its hard to distinguish sometimes.’

‘You speak Maasi,’ Cosy noted. ‘Not bad after just three short visits here.’

‘I’m a quick study,’ Jimmy said with a grin.

Cosy sipped his drink, then stared into it. Making eye contact with Jimmy he asked, ‘You ordered this?’ Jimmy nodded. ‘How do *you* know what I like?’

‘When they told us you were coming along they gave a list of things about you – favourite foods, time you like to be in bed, stuff like that.’

Big Paul laughed quietly, Cosy not happy, Rudd not following. And I clocked a lovely girl in a bikini at the poolside.

‘What else did they say about me?’ Cosy demanded, none too happy.

‘That you’re just the distraction, keep us off the real spy,’ Jimmy explained. It seemed to ring a bell with Cosy. ‘While we’re all being careful what we say or do around you, the real spy will be snuggling up to Paul here.’

‘What?’ I asked, suddenly back in the conversation.

‘Clocked the tasty bird yet?’ Jimmy knowingly asked.

‘Shit. She’s a ... you know?’ I asked.

‘Marta Hari?’ Jimmy prompted. ‘Yes, a professional. Cosy here is someone they think is just a bit of a joke.’

Now Cosy was definitely not happy, but not at us.

Without taking his eyes of Cosy, Jimmy told me, ‘Paul, I need you take one for the team.’

‘Excuse me?’

‘I need you to leave us, to go chat-up that girl and shag her. Just... close your eyes and think of the team.’ Big Paul and Rudd laughed. ‘Oh, invite her along, keep her tight, boast a lot about money to her.’

I stood. There came a time when every man had to do what he had to do. I had a mission, and I was not going to let the side down. Off I went.

‘Who is she?’ Cosy asked.

‘You know Tasker?’

‘The American,’ Cosy unhappily clarified.

‘She works for him. Bob Telling called him, asked for a favour.’

‘You’re well informed,’ Cosy grumbled.

‘And you’re not,’ Jimmy countered. ‘Still, pleasant week or two, back to accepting handouts from Bob Telling. Unless of course...’ He finished by turning to Big Paul, making eye contact.

‘You won’t convert him, he’s too stupid,’ Big Paul suggested. ‘He’ll go back to Blighty and suck up.’

Cosy stood. ‘I’ll see you in the morning.’

Jimmy bade him a fond farewell in Flemish, Cosy’s childhood language. Cosy stopped and stared for a moment before heading to his room.

‘What language was that?’ Rudd asked. ‘It sounded like Flemish.’

‘West African Flemish,’ Jimmy explained. ‘His main language is French, then English, then his childhood Flemish, some Pigeon English Creole.’

‘Sounds like you know him well,’ Rudd suggested.

‘I do my homework. Anyway, what’s new in Kenya? Family alright?’

I joined Jimmy and Big Paul an hour later, Rudd off home to get some rest before a long drive in the morning. ‘Gentleman, this is Judy.’ They stood. ‘Judy’s an air hostess.’

‘Pleasure,’ Jimmy said as he shook her hand. Big Paul nodded, that actions particular meaning undetermined.

I told her, ‘This is my business partner Jimmy Silo, and this is Big Paul the driver.’

We all sat, Judy still in her bikini and showing some signs of the cooler night air.

‘So you guys own hotels down here?’ she prompted.

‘A beach hotel and a safari park,’ Jimmy explained. ‘You’re welcome to visit, bring a few friends if you’re on a stopover.’

‘The stopovers are never more than two days, be time to turn around when we got there,’ Judy explained.

‘You on a stopover now?’ Jimmy asked, beckoning a waiter for her to order a drink.

‘No, I had some holiday time due, had to use it up, so decided to stay here at the end of a flight.’

‘By yourself?’ Jimmy puzzled.

‘Not to start with, but my friend fell ill on the first day, she’s in Park Hospital.’

‘Poor dear, we’ll have to send her something,’ Jimmy suggested.

‘To be truthful I never really like her that much; she nagged to join me. So actually I’ve been getting some peace.’

‘I’ve invited her along with us,’ I told Jimmy.

‘More the merrier,’ Jimmy responded. ‘We’ll be up early in the morning mind you.’

‘Not a problem, a few Rums and I sleep like a baby,’ she suggested. ‘Anyway, Paul promised a nice meal downstairs.’

We stood.

‘7 am,’ I said.

‘7 am,’ Jimmy responded.

We headed down to her room, some warmer clothes thrown on, a quick flash of boob caught. This was for the team, I reminded myself.

The hotel had two restaurants, one decidedly better than the other and open to residents of Nairobi. If anything, we were the ones underdressed. We sat and ate, chatted and downed drinks, getting on famously. She asked a lot of questions, not about Jimmy, but the kind of “husband material” questions. She was good, real good. At bedtime she made her excuses, a kiss on the cheek, and I headed to my room.

‘Oh, yeah, she’s good, real good,’ I muttered. ‘Not on the first night.’

I sat in my room with the lights off and curtains open, watching the flickering lights of Nairobi, a huge stupid grin

across my face. The mini-bar slowly emptied and I felt good all over, trying to force some sleep around 1am and managing to nod off.

We were on the road at 7am, Rudd as punctual as ever, now six in the jeep. Since it was designed for six it was not a problem. We headed down towards Mombassa and River View first.

Booking in at around 2pm, Judy with her own hut, we mostly split and did our own thing, Rudd beavering away, Jimmy sat reading accounts and Big Paul scuba diving. I showed Judy around, pointing out the improvements I had made and even taking her opinion on a few things. I introduced her to Steffan and Lotti and she nervously agreed to some diving the next day, so long as it was shallow. Yeah, she was good.

Within an hour we were naturally holding hands and could have been mistaken for a honeymoon couple as we ambled along the shore. She got introduced to the young elephant, the beast growing rapidly, and we patted the disabled lion. Damn lion almost made her cry. We caught sight of Cosy wandering around and checking things out during the day. What was there to check out? It was a beach hotel, no secret base hidden in a hut. For the most part we noticed him sat at the beach bar with Jimmy, sipping beer.

In the evening we all met up and had a long dinner together, four courses with wine, Jimmy relaying interesting stories and facts about Kenya and Africa that none of us had known, not even Cosy. Afterwards, Judy dragged me for a long walk after the meal, both of us needing it. Beyond the headland we stepped down into a smaller bay.

‘You own this as well?’ she asked.

‘Yep. And another half a mile further.’

‘Cool.’ In the moonlight she stripped off whilst maintaining eye contact with me. ‘Come on then, bashful.’

She did not need to ask twice. Stood in the gentle surf up to my waist, she wrapped her legs around me. At the time I could think of nothing other than what a great advertisement this pose would make for the hotel – a couple in the surf in the moonlight.

‘Strange,’ I said.

‘What is?’ she whispered into my ear.

‘I’ve never felt like I was on holiday down here, till now. This is probably what honeymooners do.’

‘Well, hotel owner, *this* is your day off.’

Back on the beach we made love under the stars, using our clothes for a beach blanket.

Half way through she said, ‘What the hell is *that*?’

I was hurt, injured, my pride was dented. What had I done wrong?

She pointed. ‘What is *that*?’

Turning my head I focused on the slow moving lump getting closer. ‘It’s a fucking turtle!’ I whispered.

‘I love turtles,’ she whispered.

We interrupted ourselves and crawled on all fours towards it, giggling like teenagers. Next to the large beast we stopped in awe, our bums sticking up.

‘It must be laying eggs,’ she whispered.

‘No, there’s a beach for that miles away – up the coast I think.’

‘Then she’s lost, poor love.’

‘Best leave her to it, I’ll send staff to watch over her.’

We fumbled to get out clothes back on and headed back to reception. I reported the mother turtle and sent a guard to watch, and to keep guests away in the morning. After that I gave Judy a piggyback to my room and threw her into the shower fully clothed. The water was cold and refreshing, the wet clothes discarded on the bathroom floor. Someone had genetically modified stem cells coursing through his veins and he was not going to waste a second. And of all the girls I had dated, Marta Hari here was stimulating me the most.

At breakfast I found a note: Jimmy and the others at orphanage, not for honeymooners. So we stayed on the beach all day, frequent trips back to the hut, but I also noted how quiet it was. At 4pm we heard people asking if they had photographed the turtle yet and realised where everyone had gone. And it was our fault. We headed over and took charge, but could not see any harm in people watching. The guard had seen no egg laying or burrow digging, so we stood and scratched our heads; there was no other reason for the turtle to come ashore. A vet was summoned, arriving half an hour before dusk.

‘It’s a male,’ the vet reported.

‘A male?’ I queried. ‘What’s it doing crawling up the beach?’

He shrugged. ‘There’s a lot we don’t know about them. It could be sick, but looks OK.’

Steffan and Lotti were already in wetsuits and carried the hapless male into the surf. It turned around and crawled out again. They repeated the exercise, with as much success.

I paid the useless vet just as the gang arrived with torches at dusk. ‘Know anything about Turtles?’ I asked Jimmy.

‘More than most. It’s a poofter.’

‘A ... what?’ I queried.

‘Nature, like humans, throws up those who are born into the wrong body. It’s a male with a female instinct, hormone imbalance. It happens sometimes.’ He raised his voice. ‘Steffan, Lotti, hand feed it small fish, get some from the kitchen, or it’ll die.’

And so started the legend of the “poofter turtle” of River View Hotel, the lonesome soul of indeterminate sex carried over to the next bay for guests to enjoy. If it wasn’t sure if it wanted to lay eggs or not, we’d look after it till it made its mind up or swam off. Little did we know that the damn thing would still be there twenty years later, and still dependent upon us.

The orphanage conversion

As we honeymooners enjoyed ourselves, the others headed for the orphanage in the UN jeep. The orphanage walls had now been rendered and whitewashed, the wooden window and doorframes painted blue. Even the curbs had been painted. Rudd entered first, followed by Cosy.

Jimmy stopped Big Paul. ‘Café on the corner – eyes on.’

Jimmy entered the orphanage as Big Paul stepped across the road junction and took up station, scanning the streets as he sipped a beer. The orphanage’s courtyard buzzed with kids in neat blue uniforms thronging around Rudd and Cosy. And Jimmy caught our watcher smiling. The walls around the courtyard had also been rendered and painted, the whole place

now appearing a great deal better – on the surface at least. A wall at the rear of the courtyard was down, now a view through to scrubland that was being cleared, a few small fires burning.

Sister Woman appeared in a blue uniform and apron, waving towards Jimmy. She hurried across. ‘Come and see.’ She dragged Jimmy by the hand towards the rear and through the downed wall. Visible to left was an area the size of a football pitch, several sets of foundations being laid by locals.

‘You’ve been busy, Sister Woman,’ Jimmy noted. He reached into a pocket and produced wad; forty thousand dollars. ‘You’ll need this.’

She fell silent as she accepted it. Finally she said, ‘We had eighty children when you came – the first time. Now we have three hundred and fifty.’

‘I know,’ Jimmy softly let out. ‘Let me introduce you to some help, but you must watch what you say.’

‘I say nothing to anyone,’ she quietly affirmed as they re-entered the courtyard. ‘Only Anna.’

They approached the gang. ‘This is Rudd.’

‘Rudd?’ She exchanged words in Dutch, both pleased to find a fellow compatriot, soon chatting like old friends, Rudd explaining his role with Jimmy and the other charity.

With a pause in the chatting, Jimmy said, ‘And this is Cosy, he is a man without a heart seeking a cause.’

Cosy frowned his lack of understanding at that, greeting Mary in Flemish. She was just as pleased as she been with Rudd, the three of them chatting away.

‘Rudd,’ Jimmy called. ‘Draw up a list of what Mary needs, use her office.’ They headed off. He faced Cosy. ‘You ... come with me.’ They climbed the stairs to the terminal ward, a stark contrast to its original state, finding Anna in attendance. She beamed a huge smile. ‘Hello Anna.’

They shook, Cosy also shaking her hand.

‘Deutsch?’ he asked.

‘Yah? Sie?’

‘Nederlander.’

‘Anna studied in Amsterdam,’ Jimmy told Cosy. He chatted to a few sick children as Cosy and Anna chatted about Amsterdam. Returning he said, ‘A lot more sick children.’

She sighed. ‘Yah, they know we have money.’

Jimmy faced Cosy. 'The locals dump their sick kids here. We've gone from eighty to three hundred and fifty.'

'And now two or three a day,' Anna put in. 'We do not turn any away.'

'I'll buy the land behind, it's only swamp at the moment.'

Anna straightened. 'How much land?'

'Enough for three thousand children.'

'Drei tousand!'

'Was there a reason you remained here, Anna?' Jimmy knowingly asked. 'You've been here three months.' Cosy was not following.

'I gave up my work to stay here,' she softly explained. 'Mary gives me food and a room.'

'Not much of a living ... for a doctor?' Jimmy posed.

'What better use for a doctor ... than the edge of hell itself?' she countered.

'Well, then. We'd best make some sick children better. Get a needle.'

Jimmy hadn't finished the sentence before she had spun around and retrieved several syringes. He was already in a short-sleeve shirt and so simply raised his left arm, firm eye contact maintained with Cosy as Anna drew blood. When she injected the first child Cosy's eyes widened. He closed in on her. Four kids later Anna was back, a fresh needle selected.

With Anna at the far end of the long dormitory Cosy stood next to Jimmy, but focused on the keen medic. 'What the fuck is she doing?'

'I discovered long ago, that my blood has unusual properties,' Jimmy softly stated.

'Unusual ... properties?'

'Yes. My blood cures all diseases known to man – cancer, AIDS, everything. Strange, eh?'

Cosy stared, his mouth open. 'Strange? *Strange?*'

Anna jogged back and thrust another needle into Jimmy's right arm, Jimmy maintaining eye contact with Cosy.

Cosy stammered, 'You ... you...'

'Could cure everyone in Africa? Probably, but I'm only one man, and my blood cannot be reproduced in a lab.'

Anna returned and took off her jacket, just a bra on underneath. She held a fresh needle. 'If you inject me ... I will

not have any disease? I can stay here, in Africa, no risk of health problem?’

‘If I inject you, Anna, you’ll live to be around one hundred and fifty years old,’ Jimmy explained.

She slowly nodded. ‘And I will still be here.’

Jimmy leant towards her. ‘Let’s hope Africa is sorted before then.’ He offered her his right arm again, a syringe filled with dark blood a minute later. Without a word he injected her, a smug smile spread across her face. ‘For the next day you will run a fever, drink a lot of water and eat protein. After three days you will sleep less, only four hours a night and you will be strong, very strong – you can run a marathon for Kenya.’ She put her jacket back on. ‘Oh, and Anna ... after three months you can inject children with *your* blood.’

‘I can do it?’

‘It will not be strong like mine, but it *will* help.’

Mary appeared without Rudd, Anna beaming a smile and tapping her inner elbow. Mary clasped her hands together. ‘A miracle.’

‘A miracle?’ Cosy challenged, still stunned.

Mary grabbed him by the arm and, speaking in Flemish, dragging him down the stairs. In the courtyard Cosy met several very healthy looking kids, saved from death’s door.

When Jimmy reached him he said, ‘Get a taxi back when you’re ready.’ He collected Rudd, and his new lists, joining Big Paul in the corner café, sat at the pavement tables.

‘Nothing of interest,’ Big Paul casually stated.

‘Maybe nobody loves us,’ Jimmy stated.

Big Paul tapped Jimmy’s inner elbows. ‘Given blood?’

‘Yeah, they rope me in sometimes.’

Rudd was horrified. ‘I forgot to give blood.’

‘Next time, they got enough for emergencies,’ Jimmy insisted. He tapped the lists. ‘If you allow yourself to get too involved down here they’ll have you working for *them* only – and you’ll get nothing done. *Do not* ... let them take all your time.’

He shrugged. ‘OK, Boss.’

‘I want you to oversee the building work at the back, nothing more.’

Rudd raised a finger, ‘She said they get two or three kids a day dropped in.’

‘Is there space?’ Big Paul puzzled.

‘No, in a word,’ Jimmy answered. ‘So we’re building more dorms at the rear. Plan is for three thousand.’

Rudd almost choked. ‘Three thousand? Are you crazy? It’ll be the biggest orphanage in all Africa!’

Jimmy sipped his beer. ‘Got to be done. I’m going to buy a school in Nairobi as well. The kids from here who are bright will go there.’

‘Jesus,’ Big Paul let out. ‘Didn’t think you were into all this.’

‘Anyway, there is *apparently* an elephant sanctuary an hour away. We’ll pop and have a look.’

A joke with meaning

As we left the turtle and returned to the hotel’s main buildings Jimmy said, ‘Oh, Paul, we left a gift for you and your lady friend in your room.’

Big Paul’s guttural laugh suggested that something was amiss. I glanced at Judy and we quickened our pace. Opening the hut door we noticed something on the bed, partly covered in a blanket. Closing in we were unable to speak as a baby elephant stirred. Judy melted in an instant and I had a glimpse of what was behind the apparent joke. She lay on one side, me on the other, as the cub, as big as a large dog, stirred. It raised its trunk as a knock came from the open door. A guard stepped in with several plastic milk bottles, extra blankets and packs of tissues. With a huge grin he retreated, closing the door.

Thirty minutes later we were hand feeding the cub its milk, a hell of a mess created. Thirty minutes after that we were down to our pants in the shower cubicle, our feet warm with elephant pee. I don’t know what the neighbours thought, shrill elephant calls in the night, but we just didn’t give a shit. Hell, it was Africa, what did they expect.

We managed to get some sleep after towelling down the cub at length, but the damn thing snored and farted, not that we cared. At dawn we put on swimsuits and led our offspring, aptly named Jimmy, to the water’s edge. Nervous at first to follow us in, it eventually got wet, Judy trying to wash its arse end as the

hotel cleaners wandered past. I noticed Jimmy standing at the beach bar. The first few guests on the beach came over to us and stroked the cub, who was enjoying the attention. Every time we got it out of the water it rolled in the sand, so we shoved it back in; it was a never-ending process. We eventually coaxed it to the beach bar, where it flopped down in the shade, farted and fell asleep.

Jimmy joined us as we flopped down, exhausted. 'Vet will be here in an hour.'

'Where on earth did it come from?' Judy asked.

'We visited an elephant sanctuary yesterday and gave them some money, pinched the little fella 'cause they can't cope. They were going to put it down.'

'Ahhhh, no!' Judy protested. 'Can it stay here?'

'Sure. The guy with the larger elephant will look after it, it needs its own kind. Fuck all chance of re-introducing it to a herd.'

'Not going to take it to the lodge?' I questioned.

'Lions would get it at night,' Jimmy suggested. 'Safer here.' He glanced around as someone I could not see approached. 'There is *something* we'll take up there, though.'

A loud cry preceded a lion cub being placed onto my lap, the little fella the size of a fully-grown Spaniel. I grabbed its two front paws and held its head up, and Judy melted again, all sorts of funny noises emitted from the human female. Soon we had a crowd, every kid in the hotel holding the lion cub to be photographed.

'Where did that come from?' I asked as Rudd held it for guests.

'Same sanctuary, but they had fuck all idea how to treat a lion.'

'We taking it to the lodge?'

Jimmy nodded, swiping away flies, a glance over his shoulder at the snoring elephant. 'Can't re-introduce it, it can live in the lodge. Anyway, tomorrow we'll head there, so pack tonight.'

'Room's a mess,' I warned.

'That's what happens when newly-weds are left alone,' Jimmy noted.

That night we reclaimed a clean room.

'Right, no elephants?' she asked.

‘Nope.’

‘No lions?’

‘Nope.’

‘No bloody turtles?’

‘Nope, just me. And the smell of elephant pee.’

We stripped off and got into the shower cubicle, kicking the water with our feet to remove the lingering smell.

Our arrival at the lodge, now imaginatively and aptly renamed to River View, was marred with the discovery of the carcass of an elephant. Its demise was not down to poachers, just old age, the staff cutting its tusks off to remove the temptation from the locals. Nature would do the rest, little remaining of the once magnificent beast in a few days.

I carried the cub into the main hall, two couples in attendance. ‘Like lions?’ I asked the first startled couple. Wide eyed, they nodded, so I plonked it onto the man’s lap. ‘Found this outside, so watch out for its mum.’

Judy and I headed to the bar for some food, Jimmy reassuring the guests that they were in no danger. The resident pooch, however, looked to be in some danger of serious play fights that night. Judy stood on the low wooden wall that separated the bar from the attractions, hands on hips. ‘Beautiful,’ she let out. I agreed, but not just about the view. We sat and chatted over coffee and a sandwich, Jimmy appearing with the lion cub perched on a forearm, its paws gripped between his fingers. He showed it the savannah, the cub’s nose working overtime, its eyes focusing on nearby cattle.

Facing us Jimmy explained, ‘Got a few days, kick back. I booked you on a trip with the guests in the morning, 9am.’

There were now more staff, I noted, and now in neat uniforms, all very polite and efficient for the guests. Of the lodge itself some areas had been patched up, some painted. Old mosquito screens had been replaced, new iron grills placed over each window. Immediately below the bar rested several corrugated iron benches, a few wooden benches dotted about. Near them stood a metal stand with three sets of large binoculars fixed to the top. Two new chalets were under construction, looking sturdier than the others; plan was to make them two-

storey, a lounge downstairs and bedroom upstairs with a roof terrace. They sounded nice.

As we sat there eating, Jimmy had the cub on its back on his knees, its head falling back as he tickled it. With the cub subdued he clipped its nails with a small silver nail-clipper. Supporting the cub's head with a large hand he whispered to it, the cub tapping his face and clawing at his hair.

'He's a good man,' Judy said admiringly. I wondered if she might be a convert in the making.

A lion roar caused the cub to jump up. It climbed up onto Jimmy's shoulders and held on, staring into the distance as a lonesome male roared.

An hour later, with the sun setting, the three sets of couples were sat on the benches and admiring the view. Distant storm clouds split in two and a starburst of sunlight painted the sky, a red tinge to the fingers of light. So, this is what the marriage thing feels like, I considered. Well, the honeymoon bit at least.

We ate with the gang, Cosy now with a new attitude – although I had no idea why at the time. After the meal the couples settled around the big old tree keeping the roof up and chatted away; weddings and churches. And River View beach hotel; I should have figured that they had been there together, a few days ago, and just missing us. They each had interesting stories of wedding day mishaps, but we surprised when we explained that we had just met. They were then amazed by the tale of the turtle on the beach and the elephant in our room. We certainly trumped them on interesting stories.

The lion cub ran in twice, playfully chased by the dog, then less than playfully chasing the dog back out. When it fell asleep in the bar Jimmy brought it in without waking it, laying it on a blanket on a coffee table, everyone patting it gently, the dog asleep at my feet. With the couples heading off to bed around midnight we joined the gang in the bar, several staff in khaki green also in attendance.

'No sign of the terrible trio?' I asked as we plonked down.

'Off shooting poachers, I hope,' Jimmy explained.

'Shooting poachers?' Judy asked, seemingly horrified at the idea.

Jimmy faced her. 'You know how they kill elephants? Three or four of them get as close as they can to a herd, armed with

machineguns. They spray the herd, hoping to kill a few. None die straight away, so they follow the blood trails. Many survive for days or weeks, some live on with the wounds to show for it.'

'My God,' she gasped, a hand to her mouth. I had to admit it, she was a good spy.

'So we fight fire with fire,' Jimmy softly stated. 'And as for the terrible trio, they bunk with the staff down the road when there are paying guests here. Cosy can meet them tomorrow, sniff them out. Unless, of course, he'd like a job down here.'

'Here?' Cosy repeated.

'Kenya.'

'Doing...?' Cosy asked after a moment's reflection.

'Helping Rudd for a start, he's flat out busy. I could do with someone to build that orphanage, plus help out at the airfield as it grows – I don't want Rudd to spend his life in that jeep.'

Rudd nodded as he held his beer. 'It is a lot of kilometres.'

'Money would be OK, and regular. Plus I'd get you an apartment in Nairobi.'

'UK Government wouldn't be happy,' Cosy suggested.

'They don't care if you live or die,' Jimmy firmly suggested.

Judy was not followed. 'You work for the Government?'

'Civil Service,' Cosy stated for her benefit. 'But it's part-time work. An ... uncertain future.'

Judy put in, 'I thought civil servants had jobs for life.'

'Not in my department,' Cosy stated.

We chatted for another hour, the cool night air punctuated with animal noises and lion roar. Judy and I were so relaxed we didn't even have sex, just cuddled up and fell asleep; ten small Rums had helped to close my eyes. That, and the atmosphere. I was feeling things that I had never felt before.

I woke early, 5am, and slipped out quietly in a grey half-light, finding Jimmy at the bar feeding the lion cub and the dog. I stroked the cub, helping myself to a coffee; the staff were still asleep. 'Did you go to bed?'

'I got an hour. Sat here with Cosy till 3am.'

'Sounded last night like you converted him?'

'He'll worry about his old boss, but I have some dirt on the guy. After his handler is removed he can quit and come down here.'

'You trust him?'

Jimmy nodded. 'Yesterday he saw me give blood.'

'What?' I whispered.

Jimmy said, 'He'll fall for the big German doctor, Anna. They'll have kids.'

'Jesus, she's an inch taller barefoot!'

'He likes big girls. By the way, I injected her.'

'What?' I whisper again.

He took in the view. 'She'll start to use her own blood on the kids, that was always the plan; an army of people like her.'

'Christ. What about my blood...?'

'If you inject someone it'll have the effect of fifty-percent of my blood, still enough to cure most things. Anna is one of a dozen doctors I'll inject and send off.'

'Won't they get noticed?'

'Not for ten years or so. Besides, it's an important part of my mission. The more of the blood that gets spread, the better chance mankind has later.'

I didn't like the sound of that. 'Later...'

'We'll talk about it some other time, you enjoy yourself down here.'

The cub launched itself at my bare ankle. I screamed, Jimmy laughing. With teeth marks in my leg, I snuggled up to Judy.

She stirred, stretching out with a big smile. 'Hello stranger,' she croaked.

'Room service, madam?'

'Oh, yeah. Tea in bed.'

I curled a lip. 'After.' She screamed loudly as I tickled her.

We joined the day's jeep safari with the other couples, Skids riding shotgun with an M16. Stopping at a bend in the river, the staff set-up picnic tables, the guests warned not to go near the river. With everyone watching, Skids shot a young Gazelle on the waterside, the other animals scattering. We waited ten minutes before noting a giant log moving through the brown water.

'That's old Fred,' Skids announced. 'Twenty-two feet long, and about three tonnes. And he could be anything up to ninety years old.'

We were all amazed as we observed the monster crawl out and snatch up the Gazelle, retreating to the water.

Skids added, 'He could eat any of you whole. So no swimming, please – lots of forms to fill in if you get eaten. But we will nick your luggage at least.'

We stood around and chatted, peering through binoculars, the men folk getting some basic weapon instruction from Skids, a few shots fired at a can on a tree stump. By time we got back we were exhausted, the heat having an effect, even on me. Judy and I lay on the bed clothed, Judy soon asleep and snuggled up. I even closed my eyes for half an hour.

That evening's event was a barbeque, a wild boar roasting over an open fire on the grass below the lodge. A couple from a neighbouring farm joined us, tales told of the animals, and life down here. At one point Skids walked out, readied his rifle, took careful aim and fired into the dark a few times. Returning to the light from the fire he said, 'Sorry about that, but we got a curious pack of hyenas of late. They get close some times, barbeque hog will do that.'

'Did you kill them?' a woman asked.

'No, just hit the dirt near them. They won't be back tonight.' He went and sat in the dark, our unseen bodyguard.

The guests departed the next day, driven to Nairobi in a new minibus painted like a zebra and displaying our name. At least it could also be used at the beach hotel as well, I figured. Judy and I set off on our own private foot safari with the notorious trio, plenty of weapons instruction for us both. On the way back we literally tripped across two cheetah cubs hiding in the grass. The guys searched around, soon finding a carcass; mother cheetah.

Trev coldly stated, 'Lion.'

I picked up one cub, Judy another. The trio were not impressed, suggesting we leave them to nature, but I reminded them who paid their wages. I hiked back with a tickly cheetah cub wriggling under my shirt.

Jimmy took one look at the cubs and ordered the staff to hand rear them. We agreed to keep them away from the lion cub for now, it was already five times bigger. Now the lodge had a zoo of its own, Jimmy certain that it would please the guests. That evening was spent with the cubs in our hut, an old dog basket used for a bed. Unlike the elephant and lion cub, these little fellas spent most of the time sleeping. After a good feed they simply

collapsed into a ball of fur. At 1am, with Judy and our children asleep, I slipped out, finding Jimmy and Cosy at the bar.

‘How are the kids?’ Jimmy asked.

‘Asleep, thankfully.’ I settled down with a beer I pulled myself, the staff gone.

‘You seem to be getting along OK,’ Cosy noted.

‘Getting on great,’ I said, although I felt a shudder when I considered who she was, and what would happen in a few days. We’d go our separate ways.

‘She asked many questions?’ Cosy enquired with a professional interest, sounding as if his pride was still hurting.

‘Nope, cool as ice. A real professional – no offence.’

‘Cosy is a good man,’ Jimmy stated. ‘He just hasn’t found his niche yet. When he does he’ll know it.’

Cosy studied Jimmy. ‘You sound a lot older than you look.’

‘He gets that a lot,’ I put in. ‘So, what’ll you write about us when you get back.’

‘Nothing, I’ll give a verbal report.’

‘And...?’ I nudged.

He did not answer.

Jimmy said, ‘If he’s wise, he’ll tell them what they want to hear – that I just like to associate myself with hero types – and then he’ll use the info I’ll give him, dirt on Bob Telling. After Telling is kicked out his new handler will show little interest and Cosy will quit, flying to West Africa with the money I give him. After a month of doing nothing there he’ll fly over to Nairobi and join Rudd, maybe having the odd dinner date with Doctor Anna Pfunt.’

‘Sounds Cosy, no pun intended,’ I said, swiping away a large moth attracted to the bar’s lights.

Jimmy added, ‘Once an African, always an African. Cosy misses his roots and, I’d guess, would like to do something useful with his life – maybe even building a large orphanage.’

‘We’ll see,’ Cosy muttered.

The next day we thanked the staff and set-off again. I didn’t ask Judy how much time she had, I just couldn’t bring myself to put a timescale on things. This was starting to hurt a bit.

We took a leisurely four and a half hours to reach the airfield, the Old Dogs expecting us. We clocked the new foundations for

a building opposite the main gate as we were stopped at the guard post. The fence had also been extended beyond where I could see an end to it. The air traffic control tower looked good as new, a new brick building next to it finished except a roof. The internal roads had been repaired, the edges clearly marked with whitewashed boulders. A water tower had been erected and the place was starting to look like a camp. No wonder MI6 were interested.

I took Judy to the roof bar; an outdoor fridge and few deckchairs. With cool drinks in hands we took in the building work and I explained what everything did and what new areas would do some day. Now she did start to ask questions like a spy, and I was disappointed. Truthfully, I answered all her questions in great detail – after all, we had nothing to hide. She seemed impressed with our charitable intentions. Rudd and Jimmy did a quick inspection tour with the Old Dogs, Cosy in tow and trailing behind with his hands clasped behind his back. We met up with them in the NAAFI an hour later, not looking forward to our accommodation that night.

The Old Dogs spoke at length about plans and projects, trainees coming through. It went on and on, Jimmy changing plans and introducing new ideas. But he always managed to make it appear that it was either their idea, or inevitable. Doc Adam turned up and joined us, he and Rudd having a private chat outside about supplies.

With the Doc gone the Old Dogs vented their concern. ‘Have you seen what the Doc’s building?’ Mac asked.

‘What’s wrong, Mac?’ Jimmy knowingly asked.

‘He’s building fucking Buckingham Palace!’

‘How many rooms?’

‘Five at least in there, plans for more,’ they complained.

‘Gentlemen,’ I cut in, knowing a lot about the Doc’s plans. After all, I got his faxes every week. ‘The budget for that building is separate to this base. The funds for this base are ring-fenced, he can’t dip into them.’

‘Oh,’ Mac let out, easing back. ‘Well, OK then. But he nicks our labourers, some of our wood.’

‘Mac,’ I called. ‘You remember what this place used to be like?’ They glanced at each other. ‘If someone offers you ten sweets, you don’t fold your arms and ask for twelve.’

Jimmy hid a smile.

‘Aye, right you are, boss,’ Mac conceded.

I added, ‘We’re going to build this place up till you three are like directors of a big Plc in the city, a hundred staff. So stop whinging, eh?’

Judy faced Jimmy. ‘Got any cute young animals?’

‘What, you don’t find these three cute?’ Jimmy asked, thumbing towards the Old Dogs and getting a laugh out of them.

‘Got a pet if ya wants it,’ Mac said. He stepped out, bringing back in a tarantula bigger than his hand.

Judy wasn’t frightened at all. With both hands she took it, showing it to me. For the most part it seemed docile.

‘What do you feed it on?’ I asked Mac.

‘Grasshoppers. It crunches ‘em up something terrible, pulls their wings off.’

‘I don’t mind them this size,’ she said. ‘It’s the smaller ones I don’t like.’

‘A few of them around here too, love,’ Mac informed her with a grin.

Rudd and Doc returned, glances at the huge spider, neither keen of the furry crawler.

With Rudd and Doc settled, Jimmy called them all order. ‘OK, gentlemen –’

‘And lady,’ Judy put in.

Jimmy focused on her. ‘Are you planning on spending the next few years at this base, helping out?’

She glanced at the waiting faces. ‘Nope.’

‘OK, gentlemen,’ he started again. ‘In addition to the mine trainees undergoing first aid training I want some dedicated medics trained here. By that I mean a six month course with some ordnance training, in fact a good ordnance grounding comparatively, the aim being to send these medics into shit-holes like Eastern Zaire to help out.

‘In order to move that process along and to give it some focus, as well as more trained staff, we’ll start to get involved with the Flying Doctor Service. At the moment that service is just about two doctors and an old Cessna, but that will grow rapidly when I get involved. The runway here I want cleaned up and fixed, although as it stands a Cessna can land on it without a problem.’

‘We patched up the holes,’ Mac reported. ‘I’ll get some boys out there with sweeping brushes, get the wee stones off it.’

‘It may need a small fence on the eastern side, about fifty yards out, something to catch the sand,’ Jimmy suggested.

‘I’ll have a look before I go,’ Rudd put in.

‘I want a Cessna on the runway inside two months, a hut for two doctors, their kit, and someone who can refuel it. No need to drag an engineer out here yet, they can fly in if necessary. What you will need are some lights for nights if necessary. In essence, we need to be at the point where we can fly a Cessna up from Nairobi and onward to remote outposts.’

He faced Doc Adam. ‘I want a training program for medics, to go into Zaire. To start with they will be nurses and medics from hospitals, already qualified. The training they’ll need will be map reading, jeep driving, survival and cooking, ordnance disposal – that sort of thing. And Rudd, I want the UN and the Kenyan Government involved at each stage. Let them know what we’re doing, ask them for help and advice, offer to supply courses for medics with ordnance to the UN.’

Rudd made a careful note. ‘I know the man to talk to. What... what pay rates for the trainees?’

‘Whatever they would get elsewhere,’ Jimmy suggested.

‘They get very little during training, it’s often done on a voluntary basis, hope of a job at the end,’ Rudd explained.

‘Pick a figure that will keep them interested,’ Jimmy suggested. ‘And before we subject them to Mac’s cooking –’ The Old Dogs laughed. ‘- let’s see about a better canteen here, a two storey barrack room, basic but functional. I know we’re out of the way here, but let’s make it home from home, eh?’

‘Mac, work out a map reading course or two, a jeep driving course – off-road, vehicle maintenance, some survival skills. Take them on long trips to the greener areas, get them used to the following mission profile: long drive, tough terrain, map reading, do some first aid, drive back. If someone is going into the Congo, sorry *Zaire*, they should be as well equipped as possible. Do a geography course as well, so they know their way around this part of Africa; most of these kids have never been outside their home town.’

‘Quite a ramp-up, boss,’ Mac noted with a hint of reticence.

‘I have every faith in you Old Dogs,’ Jimmy stated. ‘Plus, Cosy here may be joining you, lending a hand. He’s from West Africa, speaks a few languages, good with planning and... dangerous situations.’

Cosy offered no comment.

‘So, enough to be going on with,’ Jimmy said. ‘I’m happy with the progress so far, but I *will* stretch you in the future. So next time I come I want a proper bar, and a full sized Olympic swimming pool, complete with diving boards.’

Everyone laughed.

‘Aye, boss. Have that in next week.’

Jimmy focused on me. ‘We arrived a week too soon. Bugger. OK, Doc with me, rest get some food and booze, guests quarters are *very* basic.’ He stepped out with Doc Adam as Mac arranged some dodgy meat and chips.

Two days later we were back in Nairobi at the rooftop bar, saying our goodbyes to Judy. I accompanied her to the airport, not wanting to say goodbye, but also being cool about it. For the whole time together I never once thought of her as the enemy, and technically she wasn’t. She had a job to do, so did I. We kissed at the check-in gate and I headed back in a taxi.

I found Jimmy sat at the bar alone, reading a local paper. ‘She get off alright?’ he asked without looking up.

‘Yeah,’ I said, heaving a great sigh.

‘Got her number in London?’

‘What for?’ I curtly asked.

‘To see her again, dumb fuck.’

I frowned, then turned to face him. ‘What, you think they’ll try and use her again – keep an eye on us at the flat?’

‘Who’s *they*?’ he asked without looking up.

‘They ... MI6 ... they.’

‘MI6 has no idea who she is. She’s an air hostess, dumb fuck.’

‘What? Will you start making some sense.’

‘I said she was a spy to piss off Cosy.’

‘She ... she ... I she.’ My head was spinning.

Jimmy laughed, now looking up. ‘Yes, dumb fuck, she’s a lovely girl. And not a spy at all.’

‘She’s ... she’s not?’

‘No. But there is something more you need to know.’

‘What?’ My head was filled with a range of emotions I had not encountered before.

‘I recognised her, that’s why I asked you to chat her up. You’ll spend the next year with her,’ he said with a huge grin. ‘Good few days, was it?’

I found myself pointing in a direction that seemed to represent where she was. ‘I’ll ... I’ll spend a year with her?’

‘More if you’re sensible.’

My face took control and I smiled so wide it hurt.

Jimmy added, ‘I couldn’t tell you before, I wanted it to pan out this way. Everything in its time and slot, step by step.’

I sat back and stared up at the sky. ‘A year.’

‘Next weekend, invite her over, her parents live in Potters Bar, she lives in Enfield at the moment. Oh, I got you a flat downstairs, number 21. Same floor as Big Paul, but a much better flat, same view as your room.’

‘For ... for me to see Judy?’

‘What else? I don’t smell.’

‘A year,’ I repeated, gazing up at the clouds.

Big Paul plonked down. ‘Told him?’

‘Yep, he’s gone all puppy dog on us.’

‘What about Cosy?’ Big Paul asked.

‘Some things are inevitable.’

Big Paul took a reflective moment. ‘When do I...?’

‘More than a year away, so enjoy your freedom a bit.’

‘Never did, really,’ he replied. ‘Always had a problem trusting a girl till I knew her a few months at least.’

‘I know,’ Jimmy responded. ‘But love is in the air.’

‘What about you?’ Big Paul asked.

‘There’s a girl I bump into when I get back, she’ll be around a while.’

I was still staring at the clouds.

First contact

Cosy arranged for the detail of Bob Telling’s misdemeanours to be handed in an hour before he himself arrived at the MOD

building. By time he was ushered in Telling was gone, Telling's superior issuing a curt, 'Report?'

'This guy Silo just likes to talk the talk with mercenaries, makes him look big in front of his mates. There's nothing to it, the ex-SAS boys are hunting poachers for his safari park. As for their *other work* – he don't have a clue.'

'What I figured. OK, we'll ... er ... contact you via the usual channels if we need you, you'll be paid in the usual way. Thank you.'

Cosy knew when he stepped out that day that he would never return. A smile took hold as he walked along damp grey streets under a damp grey sky, longing for African sunsets. Within a few hours he was at Heathrow, having packed up that morning; one suitcase, not much to show for a life.

Jack Donohue took receipt of Bob Telling's unauthorised Magestic files, immediately noting an active placement, an agent in place in an apartment in Belgravia. 'Who the hell is Jimmy Silo?' he muttered. He opened the file and started to skim through it. 'Born in Wales, lives in London, stock market trader, charitable donor. Interesting, very ... interesting. Six foot four? *Nineteen stone!* In his twenties! No way in hell. Kenya? Mercenaries? What the hell did Telling believe Magestic to be?'

He skimmed through the pages, stopping at a stock trading record. He ran a finger down the right hand column, frowning at the detail before grabbing a calculator. Slowly, very slowly, his cheek creased into a big smirk. He checked again the figures at length. Ten minutes later he interrupted Sykes. 'Sir.'

'Make it quick, please.'

'I found something. And I'll be needing a pay rise, a minor promotion and a much better office.' He sat and folded his arms. And waited.

Sykes eased back and carefully regarded Jack. 'Well, it must be good.' He forced up his eyebrows. 'Magestic?'

'Better.'

'Better?'

Jack explained, 'I've always believed that Magestic was sending letters to many people, and we know that he traded the '87 stock market crash and gave money to charity. What I have now ... is someone with a fifteen-thousand percent a year stock trading record.'

‘Fifteen-thousand percent!’ the deputy whispered, whipping off his glasses.

Jack smiled and nodded. ‘I figured that you’re always complaining about lack of funds...’

Sykes eased forwards. ‘Jack, you’re sneaky little shit, you know that.’ He wagged a finger. ‘You’re wasted in Research.’

‘Thank you, sir.’

‘So, how would *you* handle this?’

‘Plausible deniability, sir. You send me a memo telling me not to pursue such matters, P.M. does the same to you. I’ll go chat to our friend. If there is a problem it rests with me, a *junior* grade employee – at the moment.’

With a grin Sykes rummaged through his draws, handing over a sheet. ‘That account is empty, so if something ends up in there I’ll know why ... and who. Till then ... this is all speculation.’ He put his glasses back on.

‘I’ll ... *not* ... let you know how it goes, sir.’ With a smirk Jack stood and left.

I went to check out my new apartment, noticing on the way the word “spy” spray painted onto the door between Big Paul’s apartment and mine, fluorescent green letters. With a smirk I turned the key on number 21 and entered.

It was under my old bedroom, the same view over the street, and about a quarter of the size of the main apartment. Big Paul’s apartment, at the opposite end of the corridor, was the same size, yet more modestly decorated. This apartment had been done out like our penthouse, an almost identical style, the same furniture. I looked around, pulled a face, then went back upstairs. ‘It’s just like this place,’ I told Jimmy.

‘Home from home,’ Jimmy responded.

Big Paul appeared just as I settled with a fresh mug of tea. ‘Might have a spot of bother with Philby, Burgess and Maclean,’ he reported. ‘I met my new neighbour and offered to kick his teeth in.’

With seemingly little interest Jimmy said, ‘He’ll move out, he’s not stupid. An old couple will move in – *after* the door’s been cleaned up.’ He shot Big Paul a quick look.

The intercom buzzed, the doorman calling us. Visitors.

‘Guess I’m in trouble,’ Big Paul announced, sounding none too bothered.

I pressed the button. ‘Yes?’

‘There’s a Jack Donohue here to see Jimmy. Is he expected?’ crackled from the microphone.

‘Yes,’ Jimmy called without looking up.

‘Send him up,’ I said, releasing the button.

‘Paul, grab a Kitkat, some Bourbons and make tea, white no sugar, please.’ I got to it. Jimmy faced Big Paul. ‘Before this guy gets here disappear, please. Use the stairs.’

Big Paul disappeared out the door.

I placed down the tea and treats as the door buzzed, stepping across and opening it. ‘Come on in, your tea is fresh, milk no sugar, Kitkat and Bourbons.’

The man smiled, shaking his head as he entered. He appeared to me to be in his late thirties, now wearing a tweed jacket with leather elbow pads. Somehow, the jacket seemed to suit him. Either that, or he suited the Jacket.

‘Hello Jack,’ Jimmy offered as he stood, sounding like he was greeting a much loved old friend. They shook.

‘I guess you’ve been expecting me,’ Jack said with a smile. ‘Get a letter did you?’

‘No Jack.’ They settled, I slouched into a chair.

‘No ... letter?’ Jack puzzled.

‘No, Jack. Would you like to give me the bank account details now, get it over with?’

Jack stared across at Jimmy, glanced at me, then produced the sheet.

Jimmy glanced at it before handing it to me. ‘Ring the bank, transfer half a million from the principle account.’ I stepped into the office.

‘Just like that,’ Jack stated, still carefully eyeing Jimmy. ‘You know, you don’t fit the profile, you sound much older.’

‘How old do you think I am, Jack?’

‘Your file says twenty-six.’

‘Closer to a hundred, Jack.’

Jack stared back, frozen to his seat. ‘You’re not...’

‘No, I’m part of his team. And the reason that I have muscles, Jack, is down to genetic engineering. It’s necessary to survive the rigours of time travel.’

Jack's eyes widened. 'Time...'

'Yes, Jack. The Americans were *almost* correct, although I'm not an astronaut. I'm one of a team, headed by Magestic.'

'Wha ... what ... what for?'

'What's our purpose? Simple, and you already know: World War Three. It will kick-off at some point from 2011 to 2017.'

'Why ... why...'

'Why not a fixed date? Why do think, Jack, you're a smart man?'

Jack thought about it. 'Your ... your presence here alters things?'

'Correct. The more we fix, the later it gets. It doesn't go away, but does get more manageable, more ... planned for. Sorry to tell you, Jack, but between now and 2025 most of the people on the planet will be killed, a wasteland left behind.'

Jack sipped his tea, his throat dry.

'You know what the main cause will be, Jack?' Jack lifted his eyes. 'Future British and American Governments colluding to start a small war - to *assist* their economies. But a spark can cause a fire, and destroy a planet. The question that will shape and define the rest of your life, Jack, is ... do you trust Magestic more than your own government? Because if you hand me in ... well, you know what will happen. And between now and then there will be a few wars, a few plagues, a financial crisis, large scale terrorist attacks. If you upset our plans, Jack, millions will die. Not the kind of decision you want to make over just the one cup of tea.'

I returned and sat.

Jack said, 'If ... if you don't want to be caught, then why the money?'

'Best place to hide a big lie, Jack, is behind a smaller one,' Jimmy stated.

I put in, 'When they find the smaller lie ... they stop looking.'

Jack glanced my way, appearing quite unwell.

Jimmy continued, 'You came here fully believing that Magestic is sending me stock market tips. As far as the world is concerned ... he is, and I'll co-operate with your department and send you some money. That relationship will allow you to pop around here whenever you like, and you can get to know us.'

‘I’m Paul, Little Paul the stock trader,’ I said. ‘There’s also a Big Paul - the bruiser.’

Jimmy faced me, ‘Jack here works for MI6. He was assigned the task of making some sense of the Magestic letters.’

I nodded my understanding.

Our guest timidly asked me, ‘Are you...?’

‘No, just the hired help; I make the tea. The other team members are far and wide around the world,’ I lied. ‘Met one, nice enough.’ Jimmy had not reacted.

Jack sipped his tea, still appearing unwell. ‘Wow.’

‘What do you think you’ll do after you retire, Jack?’ Jimmy posed. ‘Perhaps ... join us, help us save the world.’

‘Join ... join you?’

‘Of course. We already know your pedigree, Jack. You’re a good man.’

‘Not sure I could resist interrogation if this gets out,’ Jack quietly mentioned.

‘It won’t,’ Jimmy assured him. ‘Tell them what they want to hear, I’ll do the rest. They’ll never believe who I am, not till many years into the future. And by then...’

‘By then they’ll have taken the money for many years,’ Jack finished off. ‘They won’t dare expose you.’

‘Symmetry, eh, Jack?’ Jimmy joked. ‘Try your Kitkat, keep the blood sugar levels up.’

I liked our new friend, even though he was in awe of us. Sometimes I didn’t know quite how to deal with him and I often frightened him with jokes that he took too seriously. But overall we got on very well.

New neighbours, an old issue

‘The doorman just told me we got new neighbours,’ I informed Jimmy. ‘The old couple that you suggested.’

He heaved a big sigh, inspecting the ceiling cornice.

‘Problems?’ I asked, sitting opposite.

He lowered his gaze. ‘They have a daughter.’

‘Nice, is she?’

He sighed again. 'Yeah, she's nice, and if I'm not careful I'll spend the next few years with her.'

'What's wrong with that?'

He shot me a look. 'Anyone close to me will eventually get suspicious. As she will.' He stretched his neck muscles.

'So ... how you going to play it?'

'She plays a role in the big game, unfortunately. If I don't... date her, two pieces of the puzzle will have to be ... re-worked.'

'*Can* they be re-worked?' I asked.

'Not very easily.'

'It's necessary then. Take one for the team.'

He shot me a look again as I grinned back. 'You seeing Judy this weekend?'

'Yep, it's her first day off since Kenya. She'll be over Friday night.'

He waved a hand, taking in the flat. 'You can use this place whenever you like, of course. And the car.'

'You might have your hands full yourself,' I teased.

'They get on very well, Judy and Liz,' he said without looking up.

'Liz? The daughter of the old couple? How old is she?'

'Thirty, birthday just gone. Right now she's in husband hunting mode, mid-life crisis.'

'What's she like?' I nudged.

'Perfect,' he softly responded. 'She works for a charity off Oxford Circus. Waste of her talent really, she's very bright.' He looked up. 'Oh, well.'

'That's the spirit, boss.' I thrust a fist forwards. 'Tackle the problem of dating beautiful women head on.'

'Shut up.'

'Yes, boss.'

With my invitation of a "welcome coffee morning" accepted, the old couple popped-up on Thursday, no sign of a daughter yet. Jimmy greeted them warmly, offering seats and tea. We settled down and exchanged basic lifestyle details, occupations past and present given. The old guy, Roger, had been in the Navy, then ship-broking, his wife, Heather, working at the same charity as their daughter, but part-time.

Jimmy got Roger onto sailing and they found a mutual love of small boats and ocean sailing. But when we said we owned a hotel in Kenya their faces lit up; they had both considered retiring down there and I had visions of where this could end up. I showed them pictures of River View on the coast and River View in the savannah, the couple accepting Jimmy's invitation to visit. He did not need to offer twice and I figured they'd go straight downstairs and pack.

They were quite well off, they'd have to be to be living in this block, and they had visited Kenya many times over the past twenty years; they promised to bring their photo-album up next time. Roger also liked the stock markets and was keen to pick our brains. I could see it all unfolding before my eyes.

Jimmy told Roger he wanted to hear about various naval campaigns that Roger had been in, an invitation for several days worth of chitchat. Jimmy did, however, suggest they do it alone, without boring Heather with the detail. They arranged a future date at the Chinese, Roger a great fan of spicy food.

Jimmy mentioned Po and it registered, today was the 14th, Po was here tomorrow. We invited them out with us, after all it was Po's birthday bash. Judy's first UK date with me would be loud. Roger and Heather then asked if they could bring along their daughters, a little match making going on. Two daughters, I puzzled. Twins? Jimmy said they were all welcome. It would be a big bash.

Friday came and Jimmy was apprehensive, yet reflective and resigned. In reality, I couldn't hope to figure him out. Po turned up early and we discussed stocks, warning him about the people tonight. His bodyguards were now more relaxed, more like old mates and on first name terms, chatting away to Big Paul about martial arts tournaments; his Special Forces pedigree impressed them no end.

At 8pm sharp the old couple knocked on our door, daughters in tow. And I could immediately see what the big man saw in the taller daughter. She was very good looking, but more than that she held herself with an almost regal elegance. Just a glimpse of her and a line of adjectives filled my head; smart, sophisticated, intelligent, a deep thinker. Posh totty! The second daughter was a frump and we endured a lengthy set of introductions.

Po had arranged three cars, all Rollers, and we filled the lift in two snug groups. The cars were a surprise for the couple, as were the presence of Po's bodyguards. Jimmy travelled with the old couple, I travelled with his daughters, Judy running late and meeting us there, hopefully in fifteen minutes. I had visions of entertaining the frump. I made small talk with the ladies, both older than me, questions answered about work. Liz asked about Kenya and I explained what we did out there, quietly stunning her as London streets flashed by.

The reception at the restaurant was extra-special. We were normally spoilt, best table and straight in and never paying, but they had the red carpet out tonight. Literally. We walked up it like movie stars, Po having arranged a private room for us. We entered a room that we had not seen before, sectioned off with huge fish tanks and big enough for twenty or more. All the tables had been pushed together to make one long one, a selection of drinks already laid out, waiters on hand. And so far Jimmy had not connected with Liz.

We stood with drinks in hands, waiting on Judy. Jimmy told Po that Roger had been stationed in Hong Kong and they got into the typical discussion of what used to be where and what's built on top of it now. Turned out Po demolished Roger's favourite club from the sixties and built an apartment block on it. It made me smile. Jack Donohue turned up, I wasn't expecting him, and Jimmy got him together with Heather; they both had rare cat breeds. The daughters spoke mainly to me, and Jimmy played host, making sure everyone had drinks and enquiring about particular likes and dislikes.

Then my leading lady was ushered in, tall in her heels, looking slim in a tight fitting evening gown. My face betrayed my feelings and we kissed in front of everyone, the frump a little deflated. I introduced Judy to Liz as "a secret agent", the comment not taken seriously. Soon everyone had set eyes on Judy's loveliness. Jimmy took Judy for a small waltz, asking her what she was doing with "the short guy". She thanked him for the holiday, the sisters not following.

With everyone in attendance we settled down, starters brought out, five staff assigned to us. Po and Roger were now inseparable, Jack chatted to Heather or the frump, I sat with Judy and Liz sat next to Jimmy. Finally, a connection. Big Paul and

the bodyguards disappeared to another room, their choice. I guess Big Paul wanted a few beers away from polite company. Two hours later we stood up and chatted in small groups. Jimmy spent time with everyone, making them feel welcome, always playing the dutiful host. But he did return to Liz.

‘I think he likes her,’ I whispered to Judy.

‘This their first meet?’ she asked.

‘He’s seen her from a distance.’

‘I don’t think he’s the shy type!’

‘No, but he thinks things through first,’ I suggested.

‘Unlike you. You see a bit of leg on a poolside and go straight for it.’

I laughed. ‘It was the beer, I’m shy really.’

‘Hah.’

‘Hey, you were the one who started the skinny dipping.’

‘Yeah, I suppose. Got bored of waiting for you.’

‘Hey, I was trying to be mister nice guy.’

‘Suggesting that you’re not normally?’ she teased.

I made strong eye contact. ‘Listen, woman, if you’re not doing anything for the next few years ... I’m available.’

She took a moment to study me. ‘If there are any bloody animals in the bed...’

I laughed loudly, squeezing her middle.

‘Who’s the Chinese guy?’ she asked.

‘We give him trading advice, he pays for the meals.’

‘And the other guy in the tweed?’

‘That’s Jack, and that’s not easy to explain. He works for the Foreign Office. We co-operate on stuff around Kenya.’

‘Oh. And the old couple?’

‘Neighbours from down stairs, or next door now, the girls are their daughters.’

‘Next door? You’re in a penthouse?’

‘I have a separate flat as well, floor below.’

‘For all your women?’ she teased.

‘I just got it yesterday, somewhere for us crash out alone.’

‘Oh. And what if I don’t like you?’ she posed, an arm around me.

‘I’ll get an elephant in.’

Jimmy managed to get the frump to smile, and moved around the room making sure everyone felt wanted, needed or loved. He

spent ten minutes with Jack and I made sure I spoke to Jack when I noticed him sat alone. When I did Liz got together with Judy, a well matched pair and instant friends. Po's daughters turned up late, they'd been to a show, but soon joined in. Jimmy greeted them by lifting them both up briefly, the girls eliciting shrill laughs. He introduced them to the faces they didn't know, time spent with the frump and Jack.

At midnight Jimmy called order. 'Ladies and Gentlemen, foreigners ... and Paul, neighbours and work colleagues. We are here today to celebrate Po's birthday, which, on Hong Kong time, was about twelve hours ago. We would never get enough candles on the cake -' We laughed at Po, Jimmy putting an arm around the short birthday boy. '- so we will have to celebrate his sixtieth -'

'No, no, forty-five only!' Po said through a smile.

'Are those dog years?' Jimmy asked.

'No, no, I vely young,' Po insisted.

Jimmy called towards Po's daughters in Cantonese, a long sentence. He repeated the toast in Chinese at length; we got the gist of it. Po's daughters then sang their equivalent of Happy Birthday to their father, Jimmy standing back. Their singing voices were very good, a lovely harmonious sound produced and quite a surprise for the Brits. A camera flashed, a member of staff, and we all lined up for several more snaps.

Po clambered up onto a chair and called order. 'I want make toast. To man I trust most in world. Big man, big heart, big brain. Jimly Silo.' He raised his glass and everyone else did likewise, although those meeting Jimmy for the first time must have felt odd at the salutation.

At one point it was me, Jack and Jimmy. Jack asked, 'Who's the guy from Hong Kong?'

Jimmy explained, 'Someday he will have a very rich son, who will build a spaceship.'

Jack was staggered. I figured it a lie, but was not a hundred percent sure.

With Big Paul and the bodyguards retrieved, our man a bit wobbly on his feet, we headed back, coffee in the penthouse for Judy and the old couple – the frump gone, and Liz. Roger and Heather tired quickly and made their excuses, Jimmy jokingly

offering them a taxi or to walk them home. That left just the four of us.

Liz said, 'This coffee table ... is right above my parents apartment?'

'Yes,' Jimmy answered. 'And beneath our kitchen is Big Paul's apartment, and below the far end of Paul's room ... is Paul's apartment.'

'Which he just got to impress me,' Judy announced.

'That's sweet,' Liz suggested. 'And how you met ... wow. I'm still waiting for that Mister Right.'

Jimmy lowered his gaze.

Judy said, 'Well, you'd have to search far and wide to find someone like the big guy here. He stuck a baby elephant in my bed.' We chuckled. 'We spent most of the night feeding and washing it – made Paul come over as all maternal and caring.'

'I am,' I insisted.

'Then we got a lion cub,' Judy added. 'And rescued some baby Cheetahs. It showed Pauly here in his true light – a big softy.'

'Hey, I can be tough,' I protested.

'Sure, sure,' she said, soothingly, yet mockingly. 'Anyway, I'm jetlagged and really can't be bother to go a whole flight of stairs down.' She eased up. 'Lead on, Tarzan.'

We left them to it, the new flat not yet christened.

'Another drink?' Jimmy offered Liz.

'No, I have to be up,' she softly replied, kicking off her heels and tucking her legs underneath herself. She turned side on to Jimmy, her eyelids heavy. 'You know, I can't figure you out ... *at all*. And that bothers me, because I'm normally such a good judge of people. And *Jimmy Silo* – what kind of name is that, you sound like a gangster. *Help, police, I owe money to Jimmy Silo.*'

Jimmy smiled at the image. 'Maybe I am a gangster, violin case behind the sofa.'

'A gangster who invites out elderly neighbours? Yuppies don't do that, no one does that, not your age,' she slurred.

'I was raised correctly.'

'Hmmm. And this stuff in Kenya. You have an orphanage and... and some charity that clears mines.' She shook her head. 'You are *such* an enigma. Tall, built like a doorman, you talk like

you're ... fifty years old, annoyingly polite and considerate to ... *everyone*. And how many languages do you speak?'

'A few, but none too well.'

'You speak Chinese well enough.'

'What I've picked up from studying the menus.'

'Hah. You are *so* ... not the marrying kind.'

Jimmy both frowned and smiled at the same time. 'That is true, although I don't know how we got onto *that* topic.'

'*And* ... I'm four years older than you.'

'That's true, you are getting on a bit.'

She nudged him with a stocking foot. Jimmy took hold of it and began massaging it.

'Don't do that,' she said.

'OK.' He continued to massage her foot.

She took in the large lounge. 'My parents love you bits already. And your close by, last boyfriend lived in Swindon.'

'I didn't realise I was a prospective suitor.'

'You're not, you're *Jimmy Silo* the gangster,' she giggled. She gave him her other foot, both now rested on his thigh.

'Your feet always hurt in heels.'

'Mmmm,' she agreed, picking up a leftover drink from the coffee table. 'Don't massage my feet, I don't know you.'

'I know.' He continued.

'And you're really rich, so you've got to be a world class *arse*.'

'World class,' Jimmy agreed. 'I could enter the Olympic arse-putting contest.'

'And you're too good looking. You're a womaniser-er.'

'That's true,' he agreed with a nod.

'You have a driver built like a ... like a doorman and ... and you're only twenty-six.'

'He keep's the irate husbands away.'

'What ... who has a bodyguard? *Jimmy Silo* the gangster. And your Chinese friend had bodyguards and Rollers. I mean, who drives in Rollers with bodyguards?'

'The Royal Family,' Jimmy muttered.

'Don't rub my feet, I don't know you,' Liz repeated, sipping the drink.

'I know.' He continued.

She let her head drop back. 'I'm in a ... penthouse with *Jimmy Silo* the gangster.' She pointed. 'Nice cornice work.'

'Thank you, but it *was* here when I bought the place.'

At 5m I headed to the kitchen in a robe, Jimmy sat reading. He marked his page and looked up.

'How'd ... you know?' I delicately broached.

'She's not good with booze, never was. She's in my bed sleeping it off, and no ... I didn't.'

I put my hands wide. A question.

'Probably,' he responded. 'Oh, we'll meet Po around 2pm, do the tourist stuff – he loves the old palaces.'

'Yeah, no problem.' I stuffed down a quick sandwich and padded barefoot back to my room. Before I got there Jimmy said, 'Oh, I almost forgot. Have a look in the spare room.'

I padded across the cool floor. Returning from our spare room I had a huge grin, and a four-foot tall stuffed grey elephant. 'Couldn't you find a bigger one?'

At 8am Jimmy woke Liz, fresh towels supplied. She appeared half an hour later in the same clothes, hair damp, joining us in the kitchen.

'Well?' Judy nudged with a huge smile, earning a glaring look from me.

'Well ... the gentleman of the house put me in his bed and crashed on the sofa,' Liz explained, a little self-conscious as she helped herself to coffee. 'Too much champagne for someone, I'm afraid.'

'Never mind,' Judy said with a glint in her eye. I slapped her arm.

Jimmy told Liz, 'If you're not busy around 2pm today ... our man in Hong Kong wants a tour of the palaces and, if I am to believe your parents, you're something of an expert.'

She pinched a piece of Jimmy's toast. 'Is that a ... date of sorts?'

'If you like, although I won't be rubbing your feet in public.'

'You got a foot rub?' Judy joked in a strong whisper, getting another slapped arm from me. 'Do tell.'

'Nothing to tell,' Liz insisted, a little embarrassed. 'We chatted.'

‘Actually, you did most of the talking,’ Jimmy said with slightest of grins evident.

‘Sorry about that, I get like that after a drink.’

‘Told me you hadn’t had sex for a year,’ Jimmy softly mentioned.

‘Oh, God, I didn’t did I?’

‘And *lots* more.’

‘Do tell?’ Judy nudged.

‘I don’t kiss and tell,’ Jimmy insisted. ‘Not that we kissed.’

‘I seem to remember you kissing me on the forehead when you put me to bed,’ Liz suggested, her head lowered.

‘Must have been a dream,’ Jimmy insisted, a wink towards me and Judy.

‘Don’t tell my parents I stayed,’ Liz requested. ‘They’ll ... go out and buy wedding hats and ... fuss.’

‘Our lips are sealed,’ Jimmy insisted.

Big Paul wandered in, slapping down the papers. ‘Jesus, must be something in the air.’ He turned on a heel and left.

‘God, even your driver knows now,’ Liz let out.

‘And our *communal* doorman,’ I dropped in.

‘I’d best pop down and see my parents before I go,’ Liz reluctantly suggested. ‘Save them finding out from the damn doorman.’

Judy put in, ‘You must feel cheated – all the blame, none of the fun, girl.’

Liz made no promises about the 2pm “date”, but turned up anyway, tour guide for Po and his extended family. And she was good, a real professional. She came back with us afterwards and out for an Indian meal that evening, her and Judy spending a lot of time chatting. The following morning we met both of them in robes in the kitchen. It was a done deal; we were a foursome. And, at twenty-six, I entered my first serious relationship, tights in the drawers and tampons in the bathroom cabinet.

A belated promotion

Jack Donohue was summoned to Sykes' office as soon as he arrived at work Monday morning, finding his immediate manager already in attendance.

'Jack, come on in,' his manager called.

Jack stepped in and sat as directed.

Sykes began, 'Your *friend* has transferred half a million pounds into that account.' He waited, carefully studying Jack.

'Yes, sir, he said he would,' Jack affirmed.

Sykes coolly regarded Jack. Finally he said, 'We've discussed it with the Prime Minister, of course, and it will be ciphened off for a particular overseas project. Have you any... *indication* about future money?'

'At least a million a year, sir,' Jack informed the expectant faces.

His superiors exchanged looks, faces pulled. They did not seem very impressed by the amount.

'There is something else, sir.' Jack pulled out a sheet. 'Some financial information from ... *our friend*.' He reached across the desk. 'He says that gold will rise steadily for the next two years, then a slump, and that stocks will be flat for the next two years.' Jack's superiors took careful notes. Jack added, 'There will be a pension deficit over the next ten or twenty years, quite a shortage as stocks under-perform.'

More notes were scribbled down.

Jack handed over a second sheet. 'That's the price of gold for the next twenty years, with Sterling overlaid against the dollar.'

'Crickey!' Sykes quietly let out. He displayed the crumpled page to Jack's manager. They mutually raised their eyebrows and exchanged looks. Facing Jack, Sykes said, 'Do you realise what this gives us?'

'A significant advantage of many other countries, sir,' Jack responded, no joy in his voice. 'And he said to remind you that the Berlin Wall comes down in a few weeks, communism at an end within two years.'

'Yes, well, we'll see,' Sykes said dismissively, studying the gold chart.

Back in his basement office, Jack was now a grade higher, a new office threatened. At some point. Thinking about a great many things, he sat and stared at the wall, swivelling aimlessly in his chair. A Kitkat was retrieved, its dimensions and texture

inspected before it was returned to the drawer. His tea developed a skin as it cooled.

An hour later he was knocking on our door.

‘Jack?’ I questioned as I held the door.

Jimmy put down the fax he was reading. ‘Come on in, Jack. Have a seat.’ Our visitor sat without a word. ‘I guess they’ve noticed the money,’ Jimmy said, getting back a nod. ‘And ... they were more interested in the gold chart than the Berlin Wall?’

With his head down Jack raised his eyes, a barely perceptible nod issued.

Jimmy continued, ‘The trick, Jack, is not to try and judge other people by your own standards, you’ll always be disappointed. Things are unfolding as I expect them to, most of my plans are on course, some even ahead of schedule. I *will*... stop the war. Your bosses are ... cats and dogs, Jack. The skill comes in relaxing and accepting that. They’ve been playing the great game a long time and they’re not about to change overnight. If they *were* capable of such a change then my job would be hard. As it stands ... we give the cat fish and the dog a bone. And it’s because they *are* cats and dogs that I can manipulate them so well.’

I placed a tea down for Jack and sat next to him.

Jimmy suggested, ‘Jack, get permission to go to Berlin. December 21st is the key day. Chisel a piece of wall off and watch the future take a step forwards.’

Jack sipped his tea, looking better.

Jimmy added, ‘We’ll be there, and if you’re sharp-eyed, Jack, you might catch sight of ... some others.’

That seemed to lift Jack’s spirit. We managed to evoke half a quick smile and an affirmative nod. And a few weeks later we took the girls to Berlin for the weekend, coming back with bits of wall and a few photographs for the album.

Lodgers

‘This is good,’ Jimmy said, holding up a fax from Rudd.

I plonked down next to him and skimmed the detail.

Jimmy continued, 'The UN has put a small office in Mawlini airfield, also Medicine Sans Frontiers and one other charity. Three charities on the base now, using it as a re-supply stop, the odd aircraft flying in.'

'It is growing.' I touched the paper. 'It says here that we're funding them.'

'We supply the huts, food and water, electricity.'

'And these groups ... we'll work a lot with them in the future?'

'Very much so, they'll be key allies. And we'll need all the help we can get.'

I swivelled my head to him, a question in my look.

'Somali refugees will pour across that border. The airfield becomes Dodge City.'

I finished reading the detail, unable to pass judgement or get excited because Jimmy's long terms plans were often secret. Lifting a second fax from the table I noticed the Pineapple logo.

'That's good as well,' Jimmy mentioned.

My eye navigated itself towards some big figures. 'Where did the dosh come from?'

'Twenty-five top ten hits, it soon adds up. Three top three, one number one hit. And these singers getting into the top ten now - they'll each have a couple number ones in the months ahead.'

A knock at the door and Judy stepped in with her travel suitcase, dressed in her smart blue inform.

'What you doing here?' I puzzled.

'Nice to see you too.' She plonked down, letting out a theatrical sigh. 'Flight was diverted, second leg cancelled.'

Jimmy lifted his head to me. 'Make this poor lady a tea, eh? C'mon, young man.'

When I placed down her tea she picked up the Pineapple fax.

'Pineapple records,' she recognised. 'They produce The Sisters, great trio. Number two this week.' She focused on the detail. Raising her head to Jimmy she said, 'You *own* ... Pineapple?'

'Didn't you know that?' I puzzled.

'No,' she said with emphasis, facing me. 'You're involved with them?'

‘I own fifty-percent,’ I answered with a dismissive shrug. ‘I thought I told you.’

‘No... you didn’t. You get to meet The Sisters?’

Jimmy lifted the phone and dialled. ‘Oliver, Jimmy. You well? Good. Listen, The Sisters, ask them to pop to the flat later, whatever time is good for them. Thanks.’ He replaced the receiver.

‘They’re coming here?’ Judy asked, Jimmy nodding very matter-of-fact. She faced me. ‘I knew there was some reason I liked you.’ She squeezed me quickly and headed off to bed for a few hours.

I asked Jimmy, ‘Does Liz know about Pineapple?’

Jimmy focused on the ceiling, then the wall, the floor and finally back on me. ‘I’ve ... no idea, I don’t remember discussing it with her.’

‘She over tonight?’

He nodded; there were not many evenings when she wasn’t staying over these days. He dialled Oliver again and invited him along. At eight o’clock we were distributing cocktails to the three coloured singers, two sisters and one a cousin, Judy and Liz giddy like schoolgirls. With Judy and Liz in the kitchen Jimmy asked the girls to sit. The three of them lined up opposite him, Oliver closing in.

‘Ladies, as you may already be aware I run a number of charities in Kenya, including an orphanage. I also have a beach front hotel and a safari park.’ They did not have a clue, why would they. Jimmy continued, ‘The reason I dragged you over here ... is to ask you to think about a small charity concert in Kenya, the proceeds going to the orphanage. You’ll get a bit of a holiday, staying at my places out there. Any thoughts?’

They glanced at each other, mostly in agreement. They had numerous gigs booked in the UK till January, after which they were free. They promised to try and sort a date, Oliver making a note. My grey matter fired up. This was the start of a pattern for the future, the tying together of all the things that we were involved with.

Mossad

I was apprehensive, not least because Jimmy had explained that very morning who we were going to meet.

As our taxi progressed, big Paul alert, Jimmy called, 'Mickey?'

The taxi driver responded with, 'Yeah, Jimmy?'

'There's a few gentlemen that would like to follow me to this meeting.'

'Gotcha, boss.'

We overtook a few other cabs, cut some lights and went around in circles for fifteen minutes.

'I think we're clear,' Paul suggested.

'When we go in, you eyeball the lobby,' Jimmy instructed Big Paul.

We pulled up at the Intercontinental Hotel, the taxi waiting, Paul scanning the street as we ducked quickly inside. We took the stairs up three floors and to room 303, a quick knock given. The door opened to a short and stocky man of Mediterranean appearance, Israeli I guessed, his hair greying. He held it open and we squeezed by, another man sat in the window. There were four chairs, a tight fit, but the bed had been pushed back. The second man stood as we neared, a slim fifty-year-old with a European appearance; glasses and thinning, unkempt black hair. Jimmy issued a long sentence in Hebrew, surprising the man.

'You're ... British?' he questioned as we sat.

'Yes.'

We eased down into rigid and uncomfortable chairs that appeared to have been designed for children, the first man joining us. His expression remained the same, a right misery-guts of a fella.

Gesturing toward the man who had already been seated, Jimmy said, 'Paul, this is Shlomo Demitry Artrov.'

The man bolted upright in his chair. 'How the hell do you know my name?' he demanded.

'I'm psychic,' Jimmy joked. I choked out a laugh.

Jimmy motioned towards the second man, the miserable bastard. 'And this is ... Ari, I believe.' Ari was now even more miserable, his face grizzled.

‘Watcha mate,’ I sarcastically offered. ‘Having a good trip, are we? Visited the Palace yet?’

Schlomo pointed towards Jimmy, looking him up and down. ‘You’re a field agent.’

‘No, my friend.’ Jimmy faced Ari. In Russian he said, ‘Why don’t you order us some drinks, we could be here a while.’

With a nod from Schlomo, Ari called down to reception in English, but with a bit of an accent.

Jimmy pointed at Schlomo’s knee. ‘How’s the knee?’

‘How the hell could know so much about me?’ our new friend demanded.

‘I told you, I’m psychic.’

Ari sat, and both of our new friends considered us carefully.

‘So,’ Jimmy began. ‘How’ve you been doing with my stock market tips?’

Eventually, Schlomo admitted, ‘They have been one hundred percent accurate.’

‘Must have made some money then,’ Jimmy suggested.

After a pause Schlomo admitted, ‘Yes.’

‘Must have made a ... lot of money,’ Jimmy firmly nudged. He got back a shrug. ‘Schlomo, if you want more tips you’re going to have to treat your new best buddies less like Palestinian proctologists.’ He eased back and waited.

Schlomo eventually said, ‘Why?’

‘Why is ... very hard to understand. But, like you, I get letters from Magestic.’

Our two new Jewish friends both suffered minor simultaneous heart attacks. I was starting to enjoy the visit.

‘How do you know about him?’ Schlomo demanded.

‘Who do you think recruited us,’ Jimmy posed. ‘Lovely fella, always buys the drinks.’

‘And the odd curry,’ I put in. ‘Nice fella.’

‘Magestic ... buys you drinks?’ Schlomo forced out. I wondered if the poor fella would need a doctor.

‘Well,’ I said, ‘sometimes we pay, of course.’

‘We pay our way, mostly,’ Jimmy said, the two of us nodding our agreement.

‘Who is Magestic?’ Schlomo asked.

‘We’re not allowed to say,’ Jimmy informed him in conspiratorial whisper. He ended by tapping his nose. ‘So, where

were we? Ah, yes, the stock trading. You've been making some money, yes?'

'Well ... yes,' Schlomo admitted.

'And we'll continue to send you tips, so you should be able to make a great deal more.'

'Why?' Schlomo persisted with.

'So that we can ask you favours, of course,' Jimmy explained. He retrieved a piece of paper and handed it over. 'The people on the list are budding Islamic terrorists. Mr Magestic would like for them not to grow up and graduate.'

Schlomo shrugged. 'This benefits us as much as anyone else?'

'No, the people on the list attack western interests around the world, they don't go near Israel.'

'So why don't the Americans have this list?' Schlomo challenged.

'They have ... other lists from Magestic.'

Trying to be helpful I put in, 'And they're not as good as you at shooting Arabs.' Somehow, it did not sound quite right.

With a quick glare at me, Jimmy added, 'Most of the people on that list are around the Horn of Africa. Be a love and make that a priority in the next eight years.'

Schlomo eyed the list. 'How will you know –'

'Magestic will know,' Jimmy confidently suggested.

'Is he...?'

'All seeing? Pretty much so. Oh, before I forget, send me a liaison, Ben Ares will do.'

'Ben Ares?' Schlomo challenged. 'He's –'

'I know exactly what position he holds, my friend.' Jimmy handed over a card and stood.

'Been nice talking to you,' I said directly toward Ari. 'Thanks for the tea.'

Grinning, Jimmy pointing me towards the door. 'Oh, while I think of it, anyone trying to get close to me will meet a proper field agent. Several of them in fact.' We collected Big Paul and jumped into the taxi.

'There's a watcher in reception,' Big Paul reported.

'I know,' Jimmy said. 'Mickey! Evasive techniques.'

'Right, Jimmy.'

'Why we trying to lose a tail, you gave them your fucking card?' I challenged.

‘Not them I’m worried about.’

January, 1990.

I was apprehensive about a holiday in Egypt, but Jimmy reassured me that Sharm-el-Sheik was just a bunch of hotels full of westerners in the middle of nowhere. We landed with the girls, both having five days off, and were met by a local with a sign held up: SILO. The place looked dusty, but the midday heat was very welcome compared to chilly old London.

We drove the short distance to Naama Bay along a main road with very high curbs painted blue and white, a view of desert and mountain off to the right. Turning off, we drove through a sort of bazaar, many Egyptian bars dotted about, and pulled up next to the hotel Lido. Booked in, and with our rooms checked, Jimmy led us to the rooftop bar and pool. From there I just melted as I glimpsed the turquoise water; shallow at the shore and deepening rapidly to a rich blue. With the girls intent on doing absolutely nothing all day but sunbath, me and Jimmy grabbed our masks and fins and walked around a horseshoe bay to a dive school. Thirty minutes later we hit the warm water with a British Divemaster. That first dive I glimpsed a turtle on the sea-grass and a giant Napoleon fish at twenty metres depth.

We ate lunch with the dive leader, ignoring the girls, before another dive in the afternoon, this time to the area immediately below our hotel, a sharp drop off populated with numerous prickly Lion fish. We finally joined the girls at 4pm, the day still warm.

‘Did you see us?’ I asked as we plonked down.

‘No, we’ve been sunning ourselves,’ Judy answered.

‘Gets very cold at night,’ Jimmy cautioned. ‘Wrap up later. As soon as the sun goes down it drops to ten degrees.’

‘Lovely now,’ Liz said. ‘For January.’

Jimmy was right about the sudden chill; when we stepped out that night the girls were cold. We strolled along the beach front, selecting a Pizza restaurant and ducking in, a modest meal dragged out over three hours. We ended the night with a few

drinks in the Camel bar, a rooftop bar with a view of the lively tourist drag.

On the second day both girls tried a dive off the beach with a British female instructor, the men folk heading towards the depths. We met back up in the warmer shallow water, a small rocky outcrop with numerous coloured fish darting about. Liz was a natural, taking the diving manual back to the hotel to read, Judy less sure of herself.

The next day we got up early and boarded a boat from the jetty right next to the hotel, an hour-long trip to a reef. With me and Jimmy acting as escorts, the girls had another trial dive inside a sheltered part of the reef, finding a turtle. At one point we swam along as two couples, holding hands under the water. The two male instructors held hands at the end, just to take the piss. Lunch, of sorts, was provided on the boat, before a second dive in the afternoon, the boat chugging slowly back as the sun sank quickly. On the third day we remained around the hotel to give the girls a break, the fourth day a quad bike expedition into the desert – wrapped up like Palestinian terrorists, ending with a sort of barbeque organised by the locals. We sat cross-legged on carpets and watched a show of traditional dancers, the girls again cold and complaining.

On Saturday we took the girls back to the airport, the two of us remaining for another five days “hard core” diving, as we had described it. Without the girls knowing, we immediately booked into the Hyatt Regency, a sprawling five star hotel with its own beach. On Sunday we dived off the beach with the hotel instructors, that evening waiting a contact in the bar.

‘Is he coming,’ I grumbled as we waited in the near empty bar.

‘He’s been here all day, I saw him twice,’ Jimmy informed me. ‘He’s just being careful.’

Ben Ares eventually entered the bar and sat. ‘Jimmy Silo.’

‘You could have come diving with us, Ben,’ Jimmy said as he gestured our guest to a chair. ‘I saw you this morning.’

‘And how would you know what I look like?’ Ben challenged as he sat. He was a tanned individual, in his forties at least, a slight belly evident under his shirt. But he had a kind face, not meeting my expectation of the deadly Mossad agent I had imagined.

‘This game would be no fun if I just told you everything, now would it?’ Our guest smiled. Jimmy asked, ‘First, what do *you* ... make of Magestic?’

Ben stared into his beer for a moment. ‘I’m not sure I believe in clairvoyants, but...’

‘But the evidence is conclusive,’ Jimmy finished off.

‘It’s astonishing,’ Ben admitted.

‘And I’m Paul,’ I eventually quipped.

‘Sorry. Ben, this is my partner, Paul Holton. Paul, this is Ben Ares, Junior Defence Minister.’

‘Deputy ... Defence Minister,’ Ben corrected.

‘In England, that would be a *junior* label,’ Jimmy pointed out, Ben shrugging. ‘So, you don’t believe in clairvoyants, Ben?’ Our guest did not answer. ‘Well, neither do we.’

Ben’s brow pleated. ‘You ... work for Magestic?’

‘He’s not a clairvoyant, Ben.’

‘No?’

‘No, he’s a member of a team, I’m another member.’

‘And you all work for...?’

‘Which government?’ You need to think a bit more ... globally than that, Ben. More ... consortium, federation, United Nations.’ Ben was not following, Jimmy adding, ‘In the future, Ben, America will not be the only super-power. China, Russia, India and Brazil all catch up to America.’

‘The Americans will not wish to hear that.’

‘And if the American economy were to decline, where would that leave Israel in the future?’ Jimmy posed.

‘Isolated,’ Ben finally admitted. He took a breath. ‘So what do you do for Magestic?’

‘Lots of things, such a trade the stock markets, give stock market tips to others, building up organisations and relationships. It’s all part of a grand master plan.’

‘With a final goal of...?’

‘Well, let’s leave the master plan aside and focus on Israel. Are you a believer, Ben?’

‘Religious?’ Ben puzzled.

‘No, a believer in ... what we tip you off about.’

He shrugged. ‘So far all the information has panned out. We know that the British and American Governments have great faith in Magestic.’

‘And you, Ben?’

‘I trust what I can see.’

‘And that’s why I asked for *you*.’

‘You don’t look twenty-six, nor sound British.’ He pointed toward me. ‘He does, you don’t.’

‘That’s because I’m well over a hundred years old, Ben.’ We let it sink in, our guest stiffening. Jimmy continued, ‘And I can outrun anyone you could put up against me, outfight anyone you could find. I’m immune to all diseases known to man and I get by on an hours sleep a night.’

‘Are you going to start making some sense soon?’ He glanced away, seeming uncomfortable.

‘We’re not clairvoyant, Ben, we’re time travellers.’

Ben focused on Jimmy, his mouth opening.

‘Magestic is play on words. The original CIA/NASA study of the potential of time travel was spelt with a ‘J’. Our little joke at them.’

‘CIA?’

‘No, Ben. As I said, in the future the Americans are not all powerful. By time we get to 2015 they’re struggling, in trouble by 2025. And that’s without the small problem of World War Three and the destruction of Israel.’ Now we had his attention. ‘In a few months the British Government will send tanks to Kuwait to stop Saddam Hussein from invading.’ Ben’s eyes widened. ‘If he does invade it will set in motion a series of events that leads directly to World War Three. And ... the destruction of Israel. If we stop that invasion, Pakistan destabilises around 2009, going to war with India around 2011. The refugees from Pakistan end up around the Middle East. From those refugee camps a group called The Brotherhood will rise up and start blowing up oilfields. In 2011 they smuggle a nuclear device into Tel Aviv. Boom!’

‘So all you have to do, is to sit back and watch it happen. Or... you do exactly what we tell you, step by step, for the next twenty years. Because, Ben, even if the next thousand incremental steps in our plan work perfectly we only push back the war a few years, we don’t prevent it. We travelled back through time to arm you with information - so you have a better chance of survival. But we can’t fix it, Ben. And in 2025 something *will* happen, something that no one but God can

prevent. For Israel to survive would take a miracle of biblical proportions. I can't offer you a solution to a problem, my friend, I can only get you to the last page in the quiz book.'

Ben stared back. Finally he asked, 'Time travellers?'

'Yes, Ben; electronics, circuits, big magnets, human scientists, and no magic or miracles - just technology moving along. We're here, at this hotel, long enough for you to arrange to take blood samples, samples that your scientists will find very interesting. And you, Ben, the man who likes to *see* things, will have a report from a trusted scientist telling you that he is amazed by what's floating around in my blood. You can then start looking at extracting some of the useful stuff, since I have advanced antibodies to every disease, even cancer. So, Ben, when you finally trust the science ... there is the matter of your father.'

'My ... father?'

'He'll be diagnosed with pancreatic cancer at the end of this year, dead six months later. Guess he never will finish that garden.'

'How the hell...?'

'How do you think?' I curtly asked, Ben turning his head a notch toward me.

'I can cure him,' Jimmy confidently suggested.

I put in, 'We have an AIDs orphanage in Kenya if you want to pop down. Just the one small problem.' Ben waited. 'The kids don't have AIDs anymore. Jimmy injects them directly.'

'You wanted conclusive evidence, Ben. Well, here's your chance, a quick flight to Kenya by some of your army doctors. You're facing the destruction of Israel, so you can spare a few medics speculatively for a week.'

Ben eased back, his grey matter fired up. 'Will you drive to the border tomorrow?'

'Of course, Ben. It's been a while since I was in Israel last. What, a drive to Moshe Diane Military Hospital north of Tel Aviv? Bit of a long drive. Your wife still there?'

Ben rubbed his face with both hands. 'I can't believe what I'm doing.'

'But you don't dare *not* do it,' Jimmy suggested. 'We'll be at the border around noon.'

'I have a driver here you can use.'

‘David Rosenberg?’ Jimmy asked with a frown.

Ben threw his hands into the air in exasperation. ‘You’ll recognise him. 7am.’ He stood. ‘I’ll see you in Eilat.’

With our Israeli minister gone I faced Jimmy. ‘I really hope you know what the fuck you’re doing.’

‘Me too, this next bit will be tricky. All I need you to do is to be sarcastic.’

‘They might just lock us up.’

‘No, I hold all the cards. Plus Jack Donohue knows we’re here. If we don’t get back the Prime Minister will get involved.’

‘Not one to whinge, but how would we explain *that* to the girls, our faces in the papers, a major international incident?’

‘We’d have to buy a lot of flowers.’

At 7am Jimmy recognised the waiting driver. We got in without a word, telling the puzzled reception staff that we were on a four-day trip and that we’d be back. We set off along a bland dusty road, four hours to the border, no more large curb stones *painted* blue and white. They did not let vehicles through the border, so we all walked through, overnight bags afforded a cursory search, passports glanced at. On the Israeli side our driver spoke to the officials and we jumped into a police jeep, soon at a helipad and onto an American built helicopter, headsets affixed.

With no music playing, we flew north over brown dirt and brown desert, a few farms with neat rows of crops, greenhouses and plants wrapped in plastic. I eventually saw the old walled city of Jerusalem in the distance, modern roads and houses, then the city of Tel Aviv towards the sea; it was much bigger than I had anticipated. We landed at a hospital helipad, Ben waiting for us with a small group. We clambered down, bent double, and jogged across.

‘Nice day for it,’ I offered.

The helicopter pulled off immediately with a roar.

Jimmy pointed towards two burly men. ‘They for me? You shouldn’t have.’

‘Start backing up what you claim,’ Ben said with some menace. A glance at the two men and they stepped over, soon sent flying through the air.

‘Got anyone better than that?’ Jimmy curtly asked.

Our host with odd manners stood looking down at the men, then beckoned us onwards. We followed him inside, along numerous corridors with coloured lines on the lino floor. In a side room Jimmy gave blood, waving them away from me and saying something in Hebrew. With blood taken we were hurried along to a small gym. I had packed gym kit the night before, as Jimmy had instructed, and now we both put on shorts and trainers. Sensors were tapped to our chests and we were invited to mount the treadmills. Two fit looking men stood either side, stopwatches around their necks.

‘Two hours,’ Jimmy told them. ‘Thirty miles.’

I stopped and considered at that point that I had never seen the big guy run. Never. I’d never been with him to his gym. I hoped he could keep up. I, on the other hand, ran this distance most every day. The fit men seemed to be debating about Jimmy’s size, to be running at all, let alone long distance, and I got the impression a bet was laid off. Two hours later Jimmy was two miles ahead of me, hitting the stop button. We dismounted, hardly puffing at all.

‘How was that?’ Jimmy enquired with a smile.

The fit young men were not happy. Ben appeared and asked for details as we wiped down. Yes, a new world record had been set. Ben offered us water, then beckoned us onwards. In a side room we found a Palestinian prisoner, an elderly doctor in a white lab coat stood over him.

‘He has a few days to live,’ the doctor curtly stated.

‘What disease?’ Jimmy asked.

‘Abdominal Cancer.’

Jimmy offered the doctor his upturned forearm. ‘One hundred millilitres.’

The doctor got to work, so much blood I thought Jimmy might pass out. It was certainly making me feel ill.

Jimmy told Ben, ‘If the Cancer is late stage then my blood will halt it and push it back, but won’t cure it. It needs to be earlier.’ He faced the doctor. ‘He will run a fever for a day, a high temperature. Give him plenty of water and after two days high protein foods for a week. You’ll see results in three days.’

After a lingering look at the Palestinian, Ben led us out, driving us in silence to a hotel. We booked in as if tourists, our passports handed over. Our Host waited as we put our bags in

our rooms and washed; after all, we were a bit sweaty. We settled into the bar for a well earned beer, our host waiting.

‘Ever see someone run like that?’ I asked Ben directly.

He made a face. ‘We’ll have the results soon. Tomorrow maybe.’ It sounded like a threat.

‘No hurry,’ Jimmy told him. ‘On another matter, there are a number of treasures buried around the world, they’ll be found in decades to come. I’d need some logistical support in retrieving them. After that it’s sixty-forty to you.’

‘What treasures?’ Ben curtly asked.

‘At today’s prices? About a billion dollars worth of gold. Part of which is a large pile of Nazi gold.’

‘You know where it is.’ It was a statement, not a question.

Jimmy nodded. ‘Need divers for a lot of it. Some in a hundred metres of water.’

Ben stood. ‘Tomorrow. I have work.’

‘More important than this?’ Jimmy teased.

Ben glanced over his shoulder then stepped out.

The next day we were driven back to the hospital, the one with the friendly staff. Three old doctors had some questions, our Deputy Defence Minister looking glum in a corner.

‘What drugs are in your system?’ the first doctor asked.

‘For the most part, my system has been modified to be overactive in the production of stem cells.’ They took notes. ‘Stem cells are the key to everything. They can be extracted, cultivated, stimulated and grown, then the cells from various organs can be introduced. The stem cells adopt the identity of the new cells, and can then be injected into that body part – such as a hip or kidneys. They then re-grow damaged parts. They could re-grow a finger, but nothing more complicated than that. You could not re-grow an arm.

‘In years to come scientists will learn how to tamper with a part of the Y-chromosome called “the clock”. It determines growth and the slowing down of growth. If stem cells are activated with modified clock chromosomes you start to look like you did at twenty.’

They keenly took notes, their sour expressions gradually changing. They advanced from hostile to just curt.

‘It’s no good asking me too many questions about the science, I’m not a medic or scientist,’ Jimmy suggested. He thumbed at me. ‘Paul here was a normal human. I injected him a year ago.’

‘And now he can break world records,’ a doctor mentioned. ‘Does the donor need to have a compatible blood type?’

‘No.’

A third doctor said, ‘We found antibodies for twenty diseases in your blood. Technically, you should be in quarantine, or dead.’

‘I’m way over a hundred years old,’ Jimmy informed them. That got a reaction. ‘Test my inner bone structure if you like, my bones betray my age.’

‘They are not replenished?’

‘Only to about twenty percent. And I have problems with my teeth, I still need the dentist.’

They discussed that amongst themselves.

‘And the Palestinian?’ Jimmy nudged.

‘He is up and walking about,’ they reluctantly admitted.

Jimmy made eye contact with Ben, who stared back. Facing the doctors again he said, ‘There is something you need to know. If I inject someone with my blood, they can go on to inject others. The effect is only fifty-percent, but it still helps a lot. Paul here is fifty percent, but can break world records.’

Ben piped up. ‘How far *could* you run?’

‘The most I’ve ever tried is two hundred miles.’

‘Two hundred!’ The medics were stunned.

Jimmy added, ‘My joints go long before my muscles do. The bones ache.’ They took more notes. ‘And another thing. It will take you ten years to synthesize out the antibodies in my blood, that’s a fact. There are also antibodies in there for several diseases you will have never heard of, they haven’t been categorised yet.’

Ben cut short the discussion and ushered us out. On a balcony in the bright sunlight he said, ‘You will write down what you know for us?’

‘No.’

Our host turned away from the pleasant view, awaiting an explanation.

Jimmy took in the view. 'You'll need to clamp down hard on this, Ben. If it gets out ... there will be unrest, particularly here. What will the religious extremists see in time travel?'

Ben turned away and held the railings. 'It would destabilise the coalition government.'

'So what this needs ... is a single point of contact, a careful use of the information, and a complete denial if discovered. I've taken risks here because it was necessary, I won't take so many risks in the future. You're the point of contact Ben, take it or leave it. But don't take too long, there's work to do and not much time to do it. And in case you're worried about my personal safety – if I'm killed you get letters at the right time from others. Conversely, if you screw with us you get nothing – and bombs go off, including a nuclear device.' Jimmy pointed towards the distant coastline, 'Thirty miles out there, off shore, is a crusader ship with fifty million dollars in gold on it. Get me an underwater topography map, you can make a start and make us both a few quid.'

I leant of the railings and took in the view of a small park, an engraved plaque set in white marble. 'There's no pleasing some people,' I wistfully let out.

Jimmy nodded, stood at my side. 'Pride, arrogance ... and the strong desire to stand on their own two feet.'

'I'll drive you back to the hotel,' Ben suggested as he turned.

We fell into step behind him.

'I want to be back in Sharm tomorrow morning,' Jimmy firmly stated. 'You can send us a liaison in London, your cousin David will do.'

Ben snapped his head around at that, before pressing onwards at a brisk pace. 'What sex will my daughter's baby be?' he sarcastically asked.

'She'll have a girl,' Jimmy replied, a distinct change in tone. 'When the kid is three a ... Palestinian will ram –' Ben stopped dead. '- her bus with a digger. They'll be killed. Unless...'

Jimmy walked on, I followed, Ben caught up, saying nothing as we drove to the hotel. The last thing we did in Israel was to mark a spot on a map, a sunken ship, flown by helicopter to the border that afternoon, back at the Hyatt Regency around 9pm.

I was glad when we exited our aircraft to the cold drizzle of Gatwick.

Three days after we got back, the nominated liaison, David, turned up and introduced himself. I liked him straight away. He had a pleasant round face, bald except hair above his ears, and a diplomatic air about him. Although he had spent some time with Mossad, more time had been put in with their diplomatic corps, his great love being pottering about in damp English gardens now that he had reached sixty.

‘They found an old wreck,’ he announced.

‘That’s no way to talk about Ariel Sharon,’ Jimmy joked, making David laugh.

Our new liaison liked the odd beer, a curry, Chinese food, and had a pragmatic view of the world. There was not a question nor political point of view he could not answer silently with a shrug or tip of his head. In the lounge that first day he asked Jimmy a few questions, nothing heavy.

‘What do you think about the peace process?’

I was lost already.

Jimmy answered, ‘Cats and dogs. There’ll never be a peace because you don’t want peace, you want a victory.’ David was surprised by Jimmy’s view, glancing toward me. Jimmy added, ‘Why would anyone, who outguns the opposition a hundred to one, stoop to make peace, when victory *should* be so close at hand? No, the Zionists only made one mistake.’

‘And what was that?’ David keenly enquired.

‘They tried to govern the Palestinians instead of pushing them across the Jordan. It was a big mistake, the Palestinians would have been better off in Diaspora than what they have now – and what they’ll endure for the next twenty years.’

‘Well...’ David was lost for words. ‘An unusual point of view for a British man.’

With a glint in his eye Jimmy said, ‘I’m a hundred year old time traveller, David. And I’ve spent a lot of time out of this ... country.’

‘Yes, well I’m still coming to terms with the time travelling and clairvoyant bit. I had a lengthy briefing, but you’ll forgive me if I don’t ... *grasp it* straight away.’

‘Don’t take too long, David,’ Jimmy suggested. ‘You’ll develop Alzheimer’s in six years. They’ll pension you off before then.’

‘Alzheimer’s?’ David repeated, none too happy with the advance diagnosis.

‘Your good lady wife, Sarah, will nurse you after you become a drooling idiot. You’ll sit in the lounge and look out over your garden.’ David eased back. Jimmy added, ‘Perhaps you should finish that novel, three chapters is not much to show for a life’s work.’

‘Dear God,’ David let out in a whisper. He slowly cranked his head around to me, suddenly looking tired. Facing Jimmy he asked, ‘What’s in the next chapter ... that I am thinking of writing?’

‘If I were to hazard a guess, I say you break with a simple linear history of Israel and focus on British and French political double-dealing over Suez.’

‘Dear God.’

‘Water?’ I offered.

David told me, ‘There is only one place that information exists, and that is in my head – I’ve told no one.’

‘He does that a lot,’ I explained. ‘Annoying, isn’t it.’

‘Alzheimer’s?’ David repeated, his head lowered as he considered it.

‘Not to worry, I can cure you,’ Jimmy suggested.

‘Cure me?’ David challenged.

‘I can’t rid your garden of slugs, David, but I can cure you of Alzheimer’s,’ Jimmy informed our guest. ‘Anyway, I have a gift for you.’ He lifted an old file from the coffee table. ‘My friend in MI6 got some extra information on Suez for you. Some stuff in there that you won’t find anywhere else.’

David reverently held the file and flicked through faded old pages that appeared typed by a drunk woman.

‘Don’t leave that on the tube, eh?’ I suggested.

‘It’s as if you knew I was coming,’ David noted. He closed the file, resting his hands on it. He took a reflective breath, his head lowered. ‘My daughter disappeared in 1976, here in London –’

‘Some questions ... produce unpalatable answers,’ Jimmy cut in with.

David puzzled that. ‘How could it? If you know where her body might be found...?’

Jimmy glanced at me, heaving a reluctant sigh. He reached under the coffee table and retrieved a file. From the file he produced a photograph, hesitating a moment before handing it over. From the angle I sat at I could that see it was a couple with two children.

David stared long and hard at the woman. After a few seconds he folded the picture, oddly ruining it, unfolded it before tearing it up. He threw it down. 'I ... I thank you for the Suez file,' he said as he stood. He let himself out, Jimmy staring at the floor.

'She isn't dead, is she?'

Jimmy shook his head. 'Living in Australia with a Gentile, and very happy.'

'Oops,' I carefully mouthed. 'Will he be alright?'

'He'll be back tomorrow, he's a tough old boot.'

A day later he returned, a lunch appointment in our kitchen. We invited Jack Donohue over, but that was a big mistake; it turned out that Jack was working on a novel about Suez. Well, he'd started it ten years ago, so it was dragging on a bit. He and David got into Suez, the rest of us slipping out without being noticed. Before Jack disappeared Jimmy explained the problem of an Israeli liaison, and listed what Jack should say to his superiors. When Jack returned to the MOD building voices were raised, concerns aired at this latest revelation.

Stood in front of Sykes like a naughty schoolboy, Jack explained, 'There is, apparently, an Israeli equivalent of Jimmy Silo in ... well, Israel of course. Magestic got the two of them together to co-operate.'

'Co-operate on what?' Sykes demanded, concerned over potential security breaches.

'On ... making money and supporting a strange long list of charities, many in Africa.'

'Africa?' Sykes puzzled.

'An orphanage in Kenya, a mine clearance charity, things like that.'

His superior pulled a face. Calmer, he said 'What the hell for, Jack?'

'I've no idea, sir. They just say that they like to support charities. Sixty percent of Silo's money goes to charity.'

Sykes puzzled that. 'Well ... well try and find out what you can, Jack. Do the Israelis get terrorist tip-offs?'

‘Yes, sir. There is also, apparently, a Silo equivalent in the States, sir.’

‘So, it is global,’ his superior let out in a resigned tone. Louder, he said, ‘OK, find out what you can, Jack.’ He flicked his wrist towards the door then put his glasses back on.

‘They’re quite open about everything they do, just not what motivates Magestic. And to tell the truth, sir, I don’t think they have a clue either. They get letters like us.’

‘But Magestic *is* in London.’

‘Not necessarily, sir.’

‘No?’ Sykes took his glasses off.

‘I have an idea that he is a long way off, sending letters to someone here to post on. They hinted at Southern Spain, sir, the Costa Del Sol.’

Sykes glanced out of the window as he thought. Softly, he said, ‘Place is packed with ex-pats on the run, or retired.’ He put his glasses back on. ‘Good work, Jack. Keep at it.’

Back in his office Jack slumped into his chair, taking out a Kitkat. With a grin he snapped it, unwrapping the foil with care.

“X” marks the spot

A week after first meeting Jewish David, known thereafter as Dave the Gardener, or just Dave Gardener, he was invited to the apartment. He arrived whilst Jimmy and Big Paul were out, an unpleasant task left to me.

David stepped in with a map rolled up in a cardboard tube. ‘I bring gifts from afar,’ he joked.

I took the map tube, waving David towards our dining table. A lone file lay there awaiting him. With a curious frown he closed in on it.

I told him, ‘Jimmy asks that you read *all* the file. He was pretty insistent about it, no matter how *distasteful* the contents.’

David was intrigued as he sat. I made him a tea, noticing some of the file’s contents when I placed his drink down; the thick file was the life story of his daughter, from a time period after she walked out on her family. I had expected him to get up

and leave, but he sat quietly for forty minutes as I read the papers.

A key turned in the door, Jimmy and Big Paul re-entering. Big Paul dumped down some shopping, just inside the door, and withdrew. Jimmy gave me an expectant look. I glanced at David and shrugged, Jimmy closing on our guest. He stood over David's shoulder and waited.

David said, 'I'm ... I'm not quite sure what your motivations are regarding this ... but I'm hopeful that they're good.'

'Last page,' Jimmy said. David eased loose pages over till the last page was revealed. Jimmy added, tapping the page, 'The two kids go to Temple and Torah studies.'

David lifted his head to Jimmy, but made no comment. Jimmy returned to me, grabbing the map. With David closing the file without further comment, Jimmy opened the map and weighted down the edges with coasters. With a ruler and pencil, Jimmy carefully drew a line from the first sunken wreck; nine miles north and two miles west. He marked the spot with an "x". Rolling up the map, he eased it back into the cardboard tube, handing it over.

David finally said, 'They owe you nine million pounds.'

'Nine?' I questioned, certain it was twelve.

David apologetically explained that the salvage operation had been expensive, making Jimmy laugh.

'Cheeky buggers,' I let out. 'Three million quid salvage!'

Jimmy told David, 'This next one is a little smaller, valued around twelve million in total. If that goes OK then the third one is much bigger. And tell Ben we'll be in Israel in two weeks to discuss Operation Liberation.'

'Operation Liberation?' David puzzled.

'Got a paper and pen?'

David took out a notepad and sat listening attentively.

Jimmy continued, 'For this operation we'll need twenty field agents familiar with Southern Germany and the area around Baden Baden. Get people in there training straight away. We'll need men who can dig and cave, cave equipment, lighting, cutting torches. We'll need cars and camper vans specially adapted to carry hidden treasure, in particular gold bars.'

'Gold? Nazi gold?' David queried.

‘Yes, and lots of it. Estimated value for the entire contents of the cave – two hundred million pounds.’

‘Wey hey!’ I let out with a smile.

‘Oh, and the entire contents goes to Israel, we don’t take a cut,’ Jimmy mentioned very matter of fact.

‘We don’t?’ I asked, closing in.

‘It’s ... Nazi treasure, I want nothing to do with it,’ Jimmy insisted.

I did not know who was more surprised, me or David. I focused on our liaison. ‘Tell your fucking mates to improve their salvage costs, eh. We make you tea when you come around, and it’s expensive fucking tea.’

Jack knocked on Sykes door the next day.

‘Be quick, Jack,’ Sykes curtly said, waving Jack in.

‘Something interesting, sir.’ Sykes waited. ‘An old German submarine, in sixty metres of water in a Norwegian fiord.’

Sykes puzzled over the detail. ‘This is something to do with Magestic?’

‘Yes, sir. A ... gift.’

‘A gift? A war relic?’

‘I guess it’s what’s inside the sub, sir.’

‘Ah.’ Sykes took off his glasses and eased back. ‘And do we know... what’s inside?’

‘Gold, sir.’

‘Gold?’ Sykes eased forwards. ‘How much ... gold?’

‘Four tonnes, sir.’

Sykes coolly regarded his junior, pursing his lips. ‘Would upset the Norwegians.’

‘Would be an interesting operation for the Navy or SBS.’

‘I’ll have to discuss this with the various interested parties, do a feasibility study without letting anyone know the details. You have the exact co-ordinates?’

‘They’ll be supplied in a few weeks, sir.’

With what almost passed for a smile, Sykes said, ‘Good work, Jack. Thank you.’

The next day David brought a visitor, the man who would head up Operation Liberation, a German Mossad member – if that was not a contradiction in terms. In a satchel he carried numerous

maps of the Baden Baden area, soon flattened onto our table and weighed down with coffee mugs. With Big Paul offering useful advice on logistics, we all debated the approach to recovering the gold around our dining table.

Big Paul said, 'If you wait till spring or early summer then there's no problem with camper vans by the dozen. This time of year they'll stand out.' We were all in agreement.

'There're paintings inside, in wooden frames,' Jimmy explained.

'Frames may be rotten,' Big Paul suggested, 'But the canvas should be OK, restored if necessary. They can be cut out and carried out, very light. One man could carry fifty paintings.'

'Which would be just about most of the valuable ones,' Jimmy suggested. He turned to the new man. 'Find an art expert, he'll need to go into the caves and make an assessment, sort out the good paintings. And to teach your boys how to cut out the paintings without ruining them.' Notes were taken. Jimmy added, 'You can drive due south the short distance to Zurich, put the treasures in a vault.' From the disgruntled look on the new guy's face I got the impression he was already planning on doing exactly that. 'Gold can be melted down then sold on the Swiss gold markets without anyone noticing.'

'What about the railway line?' I asked, a finger on the map.

'No, too public. Need camper vans,' Jimmy insisted.

As we poured over the map and made plans I was as giddy as a schoolboy. And I desperately wanted to be along on the mission; a boyhood dream - sneaking about in caves looking for treasure. It was a great disappointment to be on the sidelines. I also wanted to be diving for the sunken gold.

After an hour of discussion the new guy departed with David, the German hardly saying a word, the exact location of the cave given. I hoped he wouldn't leave the map on the tube.

'This is annoying,' I loudly told Jimmy and Paul. 'Why can't we go searching caves for gold?'

'Yeah?' Big Paul agreed.

'We will, just not there, and not now,' Jimmy said. 'In years to come we'll go pinch sunken treasure from a few places, dig up some stuff. This is politics, boys.'

Big Paul and I started discussing re-breathers and technical diving, deep diving. A trip to the bookstore was planned.

Jerusalem

Three weeks after meeting the German cave explorer we were on an El Al flight to Tel Aviv with the girls. David was on the flight, but pretending not to know us, Big Paul guarding the apartment.

The girls had wangled four days off work, basically a long weekend, so we planned to show them around Israel, not that I knew much of the place from my quick helicopter visit. Visas had been quickly arranged, but not affixed to the pages of our passports. That was possible for people who did business in Israel and other Middle East countries, many Arab countries not allowing someone in if their passports displayed an Israeli stamp. Judy had questioned it, she knew they were difficult and lengthy to obtain, Jimmy explaining that we worked with a large Israeli investment company who had pulled a few strings. Still, she was suspicious.

At the airport we got strange looks from the passport controllers, the paper slip scrawled over. We even had our bags checked for authenticity. I clocked several suspicious people near us as we headed for a taxi, not sure if they were watching us. A man held up a sign: Silo, James. Guess that was our man.

‘Mr Silovich?’ he asked. ‘Diamond Investments sent me, I’ll take your party to Jerusalem.’ And that was just about all he said. We clambered into a smart minibus, our luggage in its hold for the half-hour drive toward Jerusalem. At least it would have been half an hour without the traffic.

We were booked into the King David, a nice hotel except for the Israeli staff. Jimmy explained that they were always like this, it was nothing to do with us. The rooms were nice, near the top floor and south facing, so we got the sun during the day, and the sunsets. Judy was happy enough.

With ‘investment’ work planned for the next day, a Friday, the girls joined an organised trip for foreigners, a six-hour tour of the ancient walled city. They boarded a coach with cameras in hand, we jumped into a car driven by the same guy who had

picked us up in Sharm-el-Sheik, another man riding shotgun. He looked armed, a bulge under his jacket. North of Tel Aviv we pulled into a non-descript facility, several sets of guarded gates negotiated as we passed single or two storey concrete buildings, many with sloping roofs shaded by trees that needed a drop of water. Ben Ares greeted us, this time in Uniform.

‘Watcha, mate,’ I offered, a handshake accepted. ‘Progress,’ I muttered, wondering if this time they’d stretch to a cup of tea.

Jimmy exchanged pleasantries about the weather, in Hebrew, as Ben led us inside. After a long stroll down a dimly lit corridor we entered an office with a permanent guard, David Gardener already inside and waiting

‘Good flight?’ I asked him, eliciting a smile and shrug, the man true to form. The German was there as well, along with around twenty other men of all descriptions, a right mixed bag. A map was laid out on a large central desk, Southern Germany, many files and photographs scattered about. And a bloody great gold bar.

I lifted it. ‘Guess you didn’t want to wait till spring then,’ I said as I weighed the yellow bar. As I let it plonk down as Jimmy lifted a silver candleholder, examining the base.

‘1929,’ Jimmy stated.

Ben closed in. ‘We haven’t retrieved all of the gold and silver yet, we’re moving two loads a week, slow going. The paintings are all out.’

‘What condition?’ Jimmy asked.

‘Some will need work, others were well wrapped. The frames were rotten, as you suggested. The dusty old German staff car might be a problem.’ We all laughed.

‘Who’s the team leader?’ Jimmy asked of the group, a man stepping forwards. ‘Listen up. At the rear of the cave are two sealed rooms opposite each other –’

‘We know them.’

‘They’re full of munitions, nothing of value. If you blast your way in you’ll bring down the mountain on top of you.’ Men glanced at each other. ‘Beyond them is another room, with wooden boxes inside. In the boxes are a lot of documents, the kind that the world’s historians would love to get a look at. There are also twenty Hitler diaries; I want five of them. Get them, and everything else out, before you get curious about the other two

rooms. Now, take a look at the men around you. Which of them do you want to sacrifice ... to appease your curiosity?’

Men glanced at each other. Ben took a step forwards, an order barked. I guessed they would not be going into those rooms.

The group leader reached into his pocket and produced gold coins, handing us a few. As we examined them he said, ‘Crusader money.’

‘First or second wreck?’ I asked.

‘They are the same.’

We pocketed the coins, nice gifts for the girls, as Jimmy closed the gap to the group leader. He turned the man by the shoulders. With his face close to the man’s ear he said, ‘Take a good look at their faces, think about what you’ll put on their gravestones. Take the treasure and some papers, then move on.’

With the awkward silence lingering, Ben led us to a side room with David Gardener. We settled about a table, coffee supplied. Small miracles.

Ben began, his gaze lowered as he fiddled with his coffee cup, ‘You know I am Godfather to David’s daughter?’

‘Yes.’ Jimmy sipped his coffee. ‘She left when she fell pregnant,’ Jimmy responded. ‘By ship.’

‘Ah,’ Ben let out, David remaining silent. ‘There was no record of her anywhere. I know, we looked.’

‘The husband was a merchant seaman. He got her onto a boat to Australia,’ Jimmy explained. Ben exchanged a look with David. Jimmy added, ‘In recent years they’ve done well, winning a local lottery, fifty thousand Australian dollars.’

‘Lucky,’ I put in as David raised his head.

‘You’ve been watching over her,’ Ben stated.

‘Of course. I knew that David would be a great help to my cause, as well as your good self. Some people are born with family, others make family as they go.’ Ben and David exchanged looks. ‘But that don’t mean I’d suffer your wife’s cooking,’ Jimmy mentioned. Ben stiffened. ‘Or your cousin, Mosh.’

Ben made a face and shrugged. ‘There are no secrets from you.’

‘No. So, any ... Republican Guard Divisions moving south?’

‘Some, yes,’ Ben admitted. ‘Your Government has sent infantry, labelling it as an exercise. There are British tanks on the way.’

‘If he invades Kuwait then *you* ... will pay a very heavy price,’ Jimmy forcefully stated.

‘You’ve not been wrong up to now, so we are putting pressure on the Americans,’ Ben admitted. ‘But what would be the outcome of a war in Kuwait?’

‘Any event ... that causes a large gathering of refugees in the Middle East, will give rise to a group called The Brotherhood. They are ... if you like ... Arab socialists with a Wahabi leaning. They believe that money, and therefore oil, is the source of all evil, and will set about blowing up oilfields with suicide bombers keen to get to paradise and their thirty-seven virgins. The earliest that they could form up is 2013. Forming in 2025 is certain. The trick, is to let them form when *we’re* ready, not when *they’re* ready.’

‘2013 is a long way off,’ Ben suggested.

‘You’ll be Prime Minister,’ Jimmy softly stated. As Ben sat upright, Jimmy pointed a warning finger at David. ‘Not a word to anyone. Ever.’

‘I’ll ... be Prime Minister?’ Ben questioned.

‘Yes, so any problems you sweep under the carpet now will come back to haunt you later. And if I was you ... I’d not mention that little fact to the current generation of politicians.’

‘They’d bump you off,’ I suggested with a grin.

Ben finally asked, ‘Where do you want your share of the money sent?’

Jimmy retrieved a folded piece of paper from his wallet. ‘That bank account.’

It was my area, I controlled them. ‘Which account is that?’

‘Rudd’s.’

‘Rudd’s? He’ll freak. I like the guy, but can you trust him?’

‘He can only draw a maximum of twenty thousand a month,’ Jimmy explained.

‘Who is this Rudd?’ Ben asked.

‘Our manager in Kenya,’ I replied.

‘This money ... it will go to charity?’

‘A lot of it, yes,’ Jimmy answered. ‘Most of it will help secure Kenya’s northern border.’

‘Their border?’ Ben questioned with a heavy frown.

‘In years to come The Brotherhood will form up in Somali, attacking south. Before that happens I’ll need to secure the border.’

‘How? Ben challenged. ‘Private mercenaries?’

‘Watch and see,’ Jimmy said with a grin.

‘When they form up and attack, what the hell will the British and Americans be doing?’ Ben asked, waving a hand. ‘Sleeping?’

‘They’ll be busy with The Brotherhood attacking into Europe.’

‘Europe? A land invasion?’ Ben questioned.

‘Through Syria, Turkey and across the Bosphorous straights into Europe.’

‘They wouldn’t stand a chance!’ Ben dismissively challenged.

Jimmy took a moment. ‘A million suicide bombers throwing themselves at you ... will wear down your lines.’

‘And when this is going on?’ Ben asked. ‘What problems do we face?’

‘*Two million* suicide bombers on your borders, your people evacuating to America.’

‘Who’s behind them?’ Ben demanded.

‘No one, that’s the problem. They’re a loose group with no fixed leadership, just a cause ... and a shit load of explosives. By the second year they will have Pakistani nuclear weapons and Iranian missiles, and will have reached The Alps.’

David finally piped up, ‘You know ... *how* to defeat them?’

‘If you co-operate with me till 2025, I can get you that far,’ Jimmy solemnly stated. ‘I can’t fix the final problem, and I have resources that would stagger you.’

‘What happens in 2025?’ David whispered.

Jimmy shook his head. ‘If it slipped out ... the panic and chaos would be worse than if it happened now.’

I said, ‘Not even I know that bit.’

Jimmy made strong eye contact with Ben. ‘You, I’ve chosen as the information holder. I’ll tell you things that you need only keep in mind for the future, but you *don’t* tell anyone else. Not even what I’ve said today. Accidental disclosure could destroy you, and there’ll be enough others trying hard to do that for you.’ He took out another piece of paper. ‘Payback time.’ Ben

accepted a list of names. ‘None of these must get into a position of power, money or authority.’

‘Why?’ Ben asked as he read the names.

‘I’ll give you an example. One of them, a Jew, will defraud Jewish families of billions in the future. Another, a future New York mayor, will turn back your refugee ships. Put them all on your shit list, before it’s too late.’

‘Can I ask you a personal question?’ Ben asked, folding the paper.

‘You’re an Israeli, manners are not needed,’ Jimmy responded, David smiling.

‘Do you like Israelis?’ Ben asked directly.

‘Not especially,’ Jimmy answered, and I worried if we’d get out of there. ‘The answer to your question is this: I am not doing what I do – for you. Israel is a piece on a chessboard, an important piece at the centre. You, and The Brotherhood, are two queens battling it out, and when *you* lose Europe goes next. Your country sees American support as a good thing, I see it as supplying ammunition to the Alamo.’

No, we were not getting out of there.

Jimmy continued, ‘What you see as good fortune, in American help, will – in part – be your downfall. They’ll supply the ammo and you’ll stand and fight. The longer I can keep you up and fighting, the better chance the world has.’ Ben lifted his eyebrows. Jimmy continued, ‘What you see as your goal, the Zionist goal of claiming and holding this land, will be the undoing of your people. Hanging onto this piece of land from 2015 to 2025 will cost more than America can afford. Your only hope is that I can dance faster than my adversary.’

‘Your ... adversary?’ Ben questioned.

‘My other self,’ Jimmy suggested, and I was wondering what the hell he was talking about. ‘You see, I have all the answers, even to 2025. The problem is ... knowing when to be compassionate, and when to go to war. I have made, and will make, mistakes when I get the two mixed up.’

David put in, ‘It sounds as if you have been struggling with that... for some time.’

‘For ... some time,’ Jimmy repeated. He focused on Ben with tired eyes. ‘I watched you die, and I took in your granddaughter, to my house in Canada.’

‘You ... were at my death?’ Ben whispered.

Jimmy nodded. ‘You made it to Canada, but wounded.’ He took a big breath. ‘When the time comes, you will realise that you cannot hold onto this land, but you evacuate too late. Your ships are attacked in the Gibraltar Straights, few making it through. Those landing in Southern Italy are cut off by The Brotherhood landing in Northern Italy from Croatia.’

Ben glanced at me, then back to Jimmy. ‘And when this *theoretical battle* is happening, where are the NATO forces?’

‘By then you will have fallen out with American public opinion. Several Jewish fund managers steal a lot of money in The States, people lose their pensions, lots of scandals. In your darkest hour they’ll be no one to call upon, or to take in your refugees. But, unfortunately, I cannot reveal it all and leave you to ponder on a solution, because what I tell you will strike a spark too soon.’

David said, ‘Every time we prove the truth in something you say, I’ll be wishing you a liar. And so far, you’re a hundred percent right.’

Jimmy nodded to himself. ‘And will be step by step, and for the next twenty thousand steps. And even then you will not act, nor believe that which cannot be accepted.’

‘If there’s no solution to this problem, why are you even trying?’ Ben snapped out.

‘That, my friend, occupies my every waking minute.’

‘All problems, have solutions,’ David suggested.

Jimmy cranked his head around to David. ‘There is an obvious and immediate solution: you stand and fight your neighbours all out for ten years, till they are either all dead or give up. And without any outside help, no money from America, huge numbers of casualties each day.’

David said, ‘At the end of a ten year war there’d be nothing but dust left. Salladin would claim his pile of rocks.’

It was a heady meeting, and I was glad to be back in the car and heading for my woman and a nice pair of breasts. And I needed a few beers at the hotel bar.

Saturday was a nice day out, a lengthy trip in a taxi to the Dead Sea, photos taken of the four of us floating as a group. That evening we had a final supper, the Israeli military going on full alert Sunday morning. The Americans had threatened Saddam

and were sending aircraft carriers. Saddam had responded by reminding everyone that his missiles could hit Israel; our departure was made in haste. The girls were glad to be back in London, the news full of a looming war. And Monday morning brought a call from Rudd.

‘There is twelve million pounds in the account!’ They could hear him downstairs.

‘We’re going to ramp things up a bit,’ I said before holding the phone away from my ear, Jimmy shaking his head as he read the morning papers, now full of stories about Kuwait.

‘It is not a mistake?’ Rudd asked.

‘No, not a mistake. We’ll be down in a few days, relax.’

With Liz tagging along, her holiday time swapped with another woman and Judy working, the three of us headed to Nairobi, flying first class for a change.

In the rooftop bar Liz stood with hands on hips. ‘So, this is where you met.’

‘Yep. Like it?’

It started raining almost immediately, the first time in the bar, so we headed down. It was odd for me, not having Judy there; the bed now big and empty. I opened the briefcase I had brought with me, a lot of this trip’s management down to me, and got to work. I had a few million quid to distribute whilst Liz and Jimmy had a relaxing break, no missile attacks threatening.

Rudd met us in the UN jeep the next morning, all of us laughing, Liz briefed in advance. We set off for River View, Mombassa. At the junction beyond the orphanage, the road turning off to the hotel, Jimmy stopped the jeep and we piled out into the sticky heat. He and Rudd clambered up onto the roof, onto the baggage rack.

‘I want to buy the land from here to the hotel,’ Jimmy explained, pointing with a finger. ‘Both sides of the road.’

‘I know the man who owns it, he comes to the hotel bar sometimes. He’s from Zimbabwe, he was a white farmer.’

‘Is he still white?’ Jimmy teased.

Rudd felt silly. ‘Yes. He wants to go to Australia.’

‘Give him a nudge then, get a good price. Tell him you *might* be able to get me interested.’

‘He only wants a quarter million for the land,’ Rudd answered with a grin.

‘Back taxes?’

‘Some, twenty thousand.’

‘Try and buy it, then clear the land, I want a golf course here.’

‘Golf? Yes, what a good idea.’ Rudd stood with hands on hips and surveyed the area.

‘A clubhouse for guests and locals, a small hotel with two hundred rooms.’

‘That what you call a small hotel?’

‘Room for growth; I’m planning on using it for twenty years.’

We arrived at our hotel with the sun low on the horizon, delayed by an ostrich that would not budge. Rudd rammed it a few times. With Liz and Jimmy heading for a hut, I sat down with Rudd and the manager, a mountain of paperwork to go through. It was 8pm before we reached a natural break, finding Jimmy and Liz finishing their meal. It was just me and Rudd, and a few files. As we ate I opened the orphanage file.

‘Cosy has been there a few times,’ Rudd informed me.

‘He’s on the team,’ I replied. Easing back, with an elbow over the chair-back, I asked, ‘How do you find him?’

‘Nice enough, no problems. He likes Africa, he wants to be here instead of London. I think he’s religious, he says some strange things, and he likes to help at the orphanage. Have you given him money?’

‘Yes, why?’

‘He has a new jeep and brings presents for the children.’

‘You think you could work with him?’

‘Sure, no problem. He has an apartment not far from me. But up to now I don’t know what I must say to this man.’

‘From next week he’s your assistant.’

‘Yes?’

‘We want him to take over a lot of the work at Mawlini, save you driving up there. Maybe also the safari park, you’ll be busy down here.’

‘With this new golf course, very busy,’ Rudd complained.

‘So it works out then. You’ll be in overall charge. Call him and get him down here to chat to me.’ I scanned the building plans for the back fields of the orphanage, not happy with the

layout. 'Have the foundations been laid for these other buildings?'

'Only five buildings.' Rudd marked them in red.

'Right, think about this. A central square here, a playing area, overlooked by buildings around it. And let's make them three storeys; it will save on costs. And these buildings should have showers and toilets at the end of each floor. Next to them, classrooms with air conditioning -'

'Air conditioning? For AIDs orphans? You'll be treating them better than the local three star hotel.'

I wasn't happy with that comment, but held my tongue. 'The aim... is to educate them to a good standard, then get them into a school in Nairobi, then help them find jobs.'

Rudd shrugged. 'The oldest boy is eleven, the youngest just a baby. The average age is five, so many years before they could go to an upper school.'

'Then we'll build a nursery and junior school for now. I don't want them sitting around, they study hard all day.'

Rudd nodded and took notes. 'The inspector of orphanages visited. He wanted to know who you were, and would Mary hand some money over to him for other orphanages.'

'And?'

'She kicked him in the leg. Told him to bring the other children here.'

'How many now?'

'Three hundred and sixty two. One was run over outside.'

'Police involved?' I asked, now worried.

'No, they witnessed it. Orphans don't get a lot of paperwork. The police, and the locals, they think all the children will die anyway.'

'Charming.' I tapped the diagram. 'How long before these are ready?'

'The first two buildings are finished and in use, another two months for the next two – that will ease things, almost two hundred beds in each building.' He opened a map. 'I have been thinking about food for them. This land is shit, just swamps. I think we can get it for almost nothing, then a small farm.'

'Sounds like a good idea, try and get it. We'll want to expand the farm down here as well.'

‘It doesn’t need expanding, just improving. The farm hands are useless.’

I gave that some thought. ‘OK, find a farm manager, motivate the rest with money or kick them out. Let’s get productivity up, eh. How are the bookings?’

‘Almost full all the time now. I put small adverts in Nairobi and Mombassa papers.’

‘We need more huts,’ I suggested, Rudd nodding. ‘The ones here are nice enough for the guests, but a bit spread out.’

‘There is room to the left of here –’ He pointed. ‘- for a two storey building, a sea view. I priced it up, only twenty thousand with the local builders – all wood.’

‘Do it. How many rooms then?’

‘In total, twenty twin huts plus another twenty twins in the new building. Eighty people.’

‘Not much for a beach hotel.’

‘The new golf course hotel will hold a lot more, they’ll come down to the beach some days.’

‘Might get cosy down here. OK, we’ll see how it goes. Any other problems?’

‘We’ve started building shower areas for the divers and they now have a small boat.’

‘I want a small café at that end of the beach, for the divers and their families. And let’s get more wetsuits and tanks, groups will get bigger in future.’

Rudd made a note. ‘What about the old hotel next door?’

‘Which way?’ I puzzled. Rudd thumbed to the south, producing a photo. ‘Looks like it’s falling down.’

‘It is, they’ll be closed down soon. If it is, we can buy it for peanuts.’

I tapped the picture. ‘Tomorrow, 7am, you and me.’ I retired to my hut, just files for company, not even an elephant peeing on my feet.

At 7.30am we stood on a rise that separated the two hotels, our side of the fence recently repaired, their sorry looking fence rusted and drooping ten feet away. I took in the immediate topography.

‘With the trees and bushes trimmed we could put a road here, golf carts for the guests to go back and forth. A bit far to walk.’

‘See their pool?’

Gripping our fence, I got up on tip-toes, my nose in the air. ‘It’s a good size, nice grass area around it too. They got a bigger beach as well.’ I eased down. ‘But they’ve got bigger waves, we got the sheltered bay. How many rooms?’

‘Two hundred.’

‘You know what I think? I think there’s probably a local hotel inspector that needs a new car.’ As I finished the sentence I faced Rudd.

‘I see what I can find out,’ he said with a grin. ‘I know the man who comes here, he likes his beer.’

After breakfast we headed to the orphanage, Cosy meeting us there. From the road I could now view the new buildings, the previously unkempt bushes cut down and a wire fence erected. The size of the place struck me. In the courtyard we found Anna and Cosy walking towards us. Well, Jimmy did say they’d get it together. I found myself thinking about Cosy buying shoes with high heels.

‘You look familiar,’ I told Cosy as I shook his hand. Cosy nodded towards Rudd, a greeting. I asked, ‘Keeping busy?’

‘Waiting a job,’ Cosy responded.

‘Your old employers ... OK?’ I nudged.

‘No problems.’

‘You’re hired then, assistant to Rudd here. He’ll brief you, we want you handling the growth of the airfield.’

‘Pleasure.’

I caught Anna’s look from the corner of my eye. ‘And you’ll need to cover for Rudd and visit this place whilst the building work is going on. Where you living?’

‘Nairobi, a flat.’

‘Where would you *prefer* to live?’ I knowingly enquired.

‘Here.’

‘Here ... the playground?’

Cosy smiled. ‘Here, outskirts of Mombassa.’

‘Long drive to Mawlini.’

‘Not really, I have a pilot’s license – like you. There is an airfield a few miles away, a Cessna I can borrow if I drop off people and packages on the way.’

‘Sounds good,’ I approved. Handing Anna a wad of dollars I asked, ‘And how are you?’

‘Good, good. Come, we show you the roof.’

We climbed the stairs of the terminal ward, up onto its flat roof. From there we had a commanding view of the new building work, and I got a true appreciation of the size of the undertaking. With my hands on my hips, I told Anna she had a one million dollar budget, just before Sister Woman joined us.

Anna handed over the money. ‘They will give us one million for the building.’

‘A million?’ The old bat gave me a hug; she could have shaved first. Next time Jimmy could give her the good news.

‘We’ll make a building for staff,’ Mary explained.

I pointed into the distance, explaining, ‘This scrub land, we’ll buy it and make a farm, food for the children. And beyond these buildings we want to build schools. The children should be taught all day – that’s what Jimmy wants.’

Mary said, ‘Before now there is no school, they come to die.’

Noticing Rudd at my shoulder I said, ‘Well, we know that doctors can be wrong. I think many of the children will live.’

Mary glanced at Rudd. ‘Yes, sometimes they are wrong.’

Back on the beach, Rudd and I slumped with a beer, Jimmy wandering over. He was in his swimming trunks, earning a few odd glances from the guests.

‘All OK?’ he asked, sounding none too concerned.

‘Yeah, all OK, you relax,’ I responded. ‘Oh, Cosy’s been hired. He’s got a Cessna and a job delivering stuff, allows him to fly up to Mawlini.’

Jimmy nodded. ‘Family alright, Rudd?’

‘Yes, in good health, thanks.’

‘Safari lodge day after tomorrow,’ Jimmy stated before wandering off across the sand, back to Liz.

‘He works a lot?’ Rudd asked.

‘No, he thinks a lot, worries more, then does a little work.’

‘Seems to pay very well,’ Rudd commented.

The next morning I rose early, keen to tackle the paperwork for the safari lodge and the airfield before the day warmed up. After breakfast I took Steffan diving, inspecting the rock groins we had built, pursued relentlessly by the turtle expecting some food. Rudd went next door and had a look around, pretending he was bringing a party of guests down. They got an inspection that afternoon and, not surprisingly, they failed.

Lunchtime, I met a Zimbabwean, living in Kenya, who wanted to be an Aussie. It was not a difficult negotiation, the man wanted to be gone, and for cash he could be persuaded to drive to Nairobi, to our solicitors; he reminded me of Grant at the safari lodge. It turned out that all the water for our hotel came from a well on his land, which our hotel had been paying for. I informed Jimmy in front of Liz that the hotel was now eight times larger in acreage. She was more surprised than impressed, and I puzzled what her problem was. Still, I left them to it.

Dawn the next day saw us mount up and head for the safari lodge, Rudd not needed. Driving off in a hired jeep, Jimmy insisted that the orphanage had a lot of building work and that Liz would not like it. With me wondering about that odd move, we drove past the orphanage and towards the west, arriving in the heat of the afternoon at a place that Liz had heard a lot about. Jimmy's navigation was a surprise, taking side roads that got us there quicker, and from memory.

Within five minutes of yanking on the handbrake Jimmy was lying on the floor, the growing lion cub attacking him from all sides, jumping on him and rolling over. The scene put a smile on Liz's face, and I got an inkling as to what was wrong, not that anyone had said anything yet. She got handed a growing Cheetah cub and sat stroking it, putting it down to play with its sibling, the two cubs running around freely but avoiding the lion cub. With an acceleration of zero to thirty miles an hour in a second, the Cheetahs could easily avoid the lumbering lion.

The staff put tinned dog food into four dog bowls in the bar and the cubs fed quietly, the lodge's resident dog at the end, and we plonked down for a much needed cold beer. I informed the staff that the larger lodge building would now be finished off quickly, our paying guests pulling up in four jeeps as we sat there. This week we had ten paying guests, all British, a few kids. The kids ran over and sat next to the cubs, stroking them, but getting back growls; feeding animals did not like to be disturbed, no matter how cute.

Stepping out onto the grass, I greeted my guests, explaining who I was and enquiring if all was satisfactory. They all seemed happy enough, so I closed in on Skids and Trev. Our men were dressed in green khaki as usual, large sweat marks visible, M16s

slung as they leant against their jeeps, looking like a scene from a Vietnam war movie.

‘Boss brought a bird?’ Trev asked, a nod towards the bar.

‘Yeah, she just about lives with him,’ I responded.

‘Where’s your bird? You scared her off?’ Skids asked, wiping his moist brow with his forearm.

‘Working. So, all OK in the jungle?’

‘Yeah, no problems. Starting to like it here,’ Trev answered.

‘Well, you’ll have more guests in a few months, we’ll be ramping up the building of the new lodge.’

Skids suggested, turning and pointing into the distance, ‘Could do with a small lodge at the river bend. They can stay a night and drive back the next day. Doing in one day is a pain, they all asleep on the way back – fucking knackered.’

‘Mention it to Rudd, I’m happy enough.’

‘And some huts near the border,’ Trev complained, swiping away flies. ‘For when we do poacher stag down there. It’s a bugger when it rains.’

I nodded my approval. ‘We’ll get it sorted. Any poacher problems?’

‘Not for a while - we keep our ears to the ground,’ Trev suggested.

‘Do the poachers keep *their* ears on the ground?’

The men laughed. ‘No, they hand them over to us.’

Walking off I was shaking my head, nearly tripped by a darting Cheetah cub being chased by the playful dog.

At 1am that night Jimmy joined me in the bar. Up to that point it had been just me, a few large moths and a wandering guard patrolling the grounds. Jimmy pulled us both beers.

‘OK, boss?’ I delicately enquired.

‘Same as ever,’ he said as he placed down the two pints, sitting next to me.

‘What’s on Liz’s mind?’

He sipped his beer, taking a moment. ‘She wants what someone like me would give her, if I wasn’t someone like me.’ I waited with an expectant look in the dim moonlight. Without looking up he said, ‘She wants a cottage in the country with a white picket fence, two kids, a cat and dog and a nine-to-five husband that she’s smarter than.’

‘Ah.’

‘She doesn’t understand I lot of what I do, and why would she. Why would anyone.’

‘Judy gets a bit odd at it all, but I always blame you.’

‘Thanks.’

I laughed. ‘No, I tell her you’re the boss and it’s your decision if she gets inquisitive.’

‘I don’t have that exit. You wanna swap?’

‘No, I’d hate to lose her.’

‘Thanks again ... for that.’

‘Sorry, you know what I mean.’

‘Only too well.’

‘What’ll you do?’ I nudged after a moment’s silence.

‘I’ll be me, and she’ll fit around it till we break up. It’s not easy to enjoy it when there’s an ... inevitability to it; relationships *and* global conflict.’

‘I have confidence in you, so do most people we come across...’

He heaved a heavy sigh. ‘There are a great many things I can fix, but I can’t fix 2025.’

‘You sure?’

He took a moment. ‘Say, for example, that ... Yellowstone National Park’s dormant volcano exploded, destroying America. Would you consider that I might have a solution up my sleeve?’

‘Does it?’ I whispered. He shook his head as I gave it some thought. ‘You couldn’t fix it, but you could prepare the world for it.’

‘Same difference, isn’t it? Falling of a cliff ... you hit bottom, no matter how well prepared you are.’

‘At some point ... are you going to tell me what *it* is? I can’t offer suggestions otherwise.’

‘Closer to the date, yes. For now it’s my burden.’

‘I find it hard to believe that you came back through time... just to prepare us for hitting the wall. You must have an idea or two tucked away.’

‘I thought I did. But you know what, half of me thinks that it’s just ... well meaning stubbornness. A ... refusal to accept the inevitable.’

‘Nothing wrong with that,’ I commended. ‘Fight to the end.’

‘There may be a solution ... of sorts.’

‘There you go.’

‘I’d have to get America, Russia, Europe, China, India and South America ... all co-operating and in step.’

I took in the stars. ‘We’re fucked then.’

‘Pretty much.’

‘What’s the world like in 2025, before ... *it* ... happens?’

He stared into the night. ‘Not that different: politics, wars, terrorism, corruption, and some nasty plagues. British Rail is still crap.’ We laughed. ‘Some technology solving a few problems, some smart kids and smart computers. You know, I have a plan to get me to 2025, but I might just advance a few things, take a few risks.’

‘Sounds like Plan “A” gets us there, and no further?’

‘Ah, well, by then *you’ll* be up to speed and you might just come up with a Plan “B”.’

‘Don’t count in it, I went to Kingston Polytechnic. Told that girl Sarah I wanted just a *plutonic* relationship.’ He laughed. ‘Liz corrected me. *Pla- tonic*. The other ones fucking radioactive.’

The lion cub jumped up onto Jimmy’s lap. Jimmy dipped his finger into his beer and let the cub lick it. ‘What an easy life you have. You eat, you shit, you lay in the sun, and some day you’ll mate... and the nice lioness you mate with will even catch your supper for you.’

‘Ignorance *is* bliss,’ I let out.

Three days later I felt relaxed, all the paperwork done on the first day, and we headed toward Mawlini airfield, Liz warned ahead of time that it was no pleasure trip. On the approach to the airfield I noticed more mud huts strung along the roadside, plus a few ramshackle shelters surrounded by kids. They looked Somali. Doc Adam’s clinic seemed finished, white washed walls and a large red cross painted onto the roof. The big blue UN flag fluttering over the roof surprised me.

The airfield gate was now bracketed by two alert policemen - who were expecting us - salutes given. Driving towards the air traffic control tower I noticed more wooden buildings off the left and more brick buildings to the right; it was starting to look like a base. Another UN flag caught my attention, plus white faces that I didn’t recognise. I did, however, recognise Cosy stood near a Cessna and felt a little jealous. The rooms below the air traffic

control tower were now command central, and impressed me with their cleanliness and orderly appearance as we entered.

Mac greeted us in the cool interior. 'Come on in, it's air conditioned now.'

We took in the large office, its maps on the wall, its neat desks and sofa against the wall. It even had a water cooler and a fridge.

'All the creature comforts,' I thought out loud. 'Mac, this is Liz, the bosses bit of posh totty.'

Mac shook her hand, Liz scowling my way, before gesturing me and Jimmy towards a large wall diagram. Areas had been coloured red or blue and crosshatched. With a finger on the paper, Mac explained, 'These two wee buildings you would have seen coming in, they's Red cross and UN – a good bunch, they get us some kit.'

'And a UN flag over Doc Adam's clinic,' I questioned.

Mac explained, 'He's got a sponsorship from them – he gets a few quid and some supplies for everyone he sees, especially if they're a refugee.'

'I thought I saw some Somalis outside,' I mentioned.

'Aye, they're fucking nuisance already. They's already cut a hole in the fence.'

'Set-up patrols,' Jimmy softly suggested. 'Then recruit some of the Somali men, give them work – anything, just keep them occupied.'

'We already got one or two digging holes and doing some building work, but the language barrier is tough,' Mac explained. 'And they like to stop at noon and have a kip.'

'How many people you got under training?' I asked Mac, already with a rough idea.

'Steady forty on the mines, another twenty medics.'

Jimmy said, 'You've got an extra million quid to play with, so use it.'

'A million?' Mac whispered. 'Fuck.'

I said to Mac, 'Get a decent radio for aircraft, some landing lights, another hangar and a fuel tanker. What's upstairs these days?'

'Come and see.' He led us upstairs and into the glass tower, finding it clean and decorated, old dog Handy sat at a desk.

‘Right, boss,’ Handy greeted us, standing and shaking our hands.

‘Office with a view,’ Jimmy let out, taking in the airfield.

‘Gets a bit warm,’ Handy admitted. ‘But I can use the binoculars to see who’s doing what. I call the gate when I see the Somali kids cutting the fence.’

I told him, ‘At some point we’re going to want to use this for directing aircraft, so don’t get comfy.’

‘It’s got electricity and new glass ready,’ Handy replied. ‘Last week we had a ruddy great UN plane in here. It dropped off some people, jeeps driving out the back of the plane.’

‘I want maximum co-operation with the NGOs,’ Jimmy ordered.

Mac told Handy, ‘Wees got an extra million in the kitty.’

‘Shit. What you trying to do up here, boss?’ Handy delicately nudged.

‘Build a centre of excellence, a shining example of charitable assistance for Africa, but in a practical way. I don’t throw money at refugees, I don’t see that as effective. I’m more interested in training people who can help fix the problem, not just feeding someone for another day. I want you guys to be nice to the UN and the Red Cross, meet their superiors and let them see just what a bunch of helpful fuckers you can be. And my next project you’ll like. I’m going to pay the Kenyans to raise a small security detail around here. We’ll call them ... The Kenyan Rifles.’

‘Soldiers?’ Mac puzzled.

‘Yes, soldiers. Do either of you ... know anything about training soldiers?’

‘Aye, little bit,’ Mac proudly stated.

‘Put together a proposal for a small security detail, trained from scratch with a few regular Kenya NCOs. They would defend this place, and be available to the UN for convoy protection, etc. Maybe border patrol.’

‘And wees be paying the lads, and the kit and all?’ Mac clarified.

‘Yes,’ Jimmy responded.

‘Why not Mercs?’ Handy asked.

‘Because they’d be expensive, ill disciplined and easily bored. Besides, I’m sure that if you had some young lads here for a year

you could mould them into excellent fighting men.’ Mac and Handy exchanged looks as I hid a grin. Jimmy added, ‘While I think of it, I’m going to add a second million to your budget. A want a transit centre built, rooms like a hotel, hundred of them, with a couple of nice rooms for visitors. It should have a decent restaurant and a *well decent* bar. Separate fence around it with a guard.’

‘Fucking ‘ell, boss,’ Mac let out. ‘Where’d we stick it?’

‘Beyond Rabbit’s vegetable patch. Make it a three-storey affair. In fact, why don’t you put a bar on the roof ... a pool at the rear.’

‘A fucking swimming pool?’ Mac challenged.

‘Why not, cool down the guests,’ I said.

Liz climbed the stairs. ‘You lot ignoring me?’

We stepped out onto the roof, pointing out every building to her, what its function was.

‘And you paid for all this?’ she asked, a hand over her eyes as she scanned the airfield.

‘We sure did,’ I answered. ‘We always wanted a sandbox to play in.’

‘How much have you spent down here in total?’ she asked.

‘With the current round of spending ... four million,’ Jimmy responded.

She stared at him, but said nothing. Mac led us back down and we ambled through the heat towards the new clinic, crossing the dusty road. Doc Adam stood and raised his arms, letting out a sentence in some local dialect. His nurse stood smiling proudly, glad to see us, if not honoured to see us. The doc showed us around, very proud of the small clinic, the waiting room next door full, mostly of Somalis. The emergency room was occupied by a sorrowful looking local boy with a leg in plaster.

Jimmy exchanges a few sentences in a local dialect, surprising Liz. He explained, ‘He tried to ride a wild camel.’ Facing the doc, Jimmy asked, ‘How many per day?’

‘Ten ... maybe fifteen patients.’

‘Keeping you busy then,’ I said.

‘They come from up to twenty miles away,’ Doc Adam explained. ‘And they come across the border for help here, to birth the baby.’

‘Are there not doctors across the border?’ Liz asked.

Doc Adam answered, 'Not many, conditions are difficult in Somalia. Here, this part of the border is a desert region, some local fighting, some gun wounds.'

Jimmy told me, 'Take Liz back while I scan the paperwork here, I won't be long. Get a cold drink.'

With the gang withdrawing Jimmy gestured Doc Adam to his office, closing the door. 'What happened to the man I injected?'

'He is here, I have asked him to work with us at the clinic and he is happy to stay, already talk of a local wife,' the doc reported with a smile.

'Does he know anything?'

'Oh no, not a thing. But he is now very big, strong like the Ox!'

'Do you have everything you need here?'

'I have what I always wanted,' Doc Adam proudly explained, his chest out. 'My own practice, and now the help from the UN.'

'We all have our places in life,' Jimmy softly stated. Louder, he said, 'Do you have any questions for me?'

Doc Adam retrieved a syringe set. 'Only one, my friend. To do God's work.'

'Then who am I to stand in your way?' Jimmy held up a forearm, blood quickly extracted.

Doc held up the needle. 'This much is enough?'

Jimmy nodded as he took charge of the needle and injected our keen medic. 'For the next day you will run a fever, drink a lot of water. After that, eat a lot of protein. Exercise after three days, you will not need much sleep. After three months you can inject people with your blood, but make sure no one sees you. Get a small centrifuge and separate out the red blood cells, they're not needed. If you inject a clear liquid it will not cause suspicion.'

'I will be careful', Adam promised.

Jimmy soon joined us in what passed for a canteen, Cosy keenly awaiting some instructions. The new hotel was a mild shock, and the budgets, but he diligently made notes, indicating that Rudd knew a building firm, one we might use for the new golf complex. He was given the title of Facilities Manager and a desk next to Mac. The idea was simple: the Old Dogs spent time training the recruits, Cosy and Rudd did the paperwork.

Jimmy told the Old Dogs, ‘Cosy here spent several happy years in the French Foreign Legion. A paratrooper.’ That impressed them no end. ‘I’m sure that there are *many* things that Cosy can assist you with.’

Liz chatted with Cosy in French in a corner of the office, Jimmy and me chatting to the Old Dogs about progress, problems and plans. Leaving Liz with Cosy we stepped back out into the heat and met the UN staff before talking to the Red Cross at length, finally meeting some of the medical recruits. The medics were dressed in white jackets supplied by us, Rudd converting old UN jackets. At the time I didn’t know the huge significance of a small logo on the jacket, a small hand in the palm of a much larger hand.

At 7pm, with the sun down, Jimmy checked his watch. ‘I could do with meeting Rudd in the morning, so let’s drive back tonight. Be in Nairobi for midnight. Liz, you can catch a nap in the car.’

Since she wasn’t that keen on staying there was no argument, the Old Dogs faxing Rudd our intentions. We set off into the cool night, unloading at the hotel not long after midnight. On our last day Jimmy headed off to meet Rudd as I took Liz shopping around Nairobi for authentic gifts.

Jimmy instructed Rudd to meet with the Kenyan Government and petition them for the security detail. It would not be a difficult proposition to sell; we would be paying for everything. A budget was also given for the grass runway at the safari lodge to be improved and the purchase of a second-hand Cessna 172 four-seat aircraft for us to use. The next day we ducked our heads through aircraft doors in the heat and lifted them into the welcome drizzle of Heathrow.

Family

When we got back Big Paul was waiting, and apprehensive. ‘Bit of a problem.’

‘What’s that?’ I asked, checking the apartment. ‘You had a wild party and broke something?’

‘No, MI5 sent an electrician around to fix the faulty building. I tortured him.’

‘Charges a bit pricey, were they?’ I asked.

‘Any comeback?’ Jimmy softly asked.

‘None so far.’

‘I’ll deal with it,’ Jimmy suggested. ‘Get the kettle on.’

After a quiet cuppa back in the apartment I felt better, always glad to be back, but also always looking forward to being in Kenya when I was in London. Odd. A knock on the door and Big Paul let David in.

‘You spying on us?’ Jimmy asked, none too concerned.

‘Yeah, how’d you know we were back?’ I asked.

‘Jimmy said you’d be back at 4pm today, precisely,’ David explained as he sat, his bag placed down.

‘Which means we’re jet-lagged,’ I told him.

‘I have it on good authority that neither of you suffers from jet lag,’ David quietly insisted. He unfolded a damp newspaper and flattened it out on the coffee table. ‘Two of our people got caught in the cave, the German authorities have charged them with removing treasure without permission.’

‘How much left in there?’ Big Paul asked.

‘Not much, all the gold and paintings out. This last pair were going through the papers at the back – quite valuable in themselves to collectors.’

Jimmy was not fazed by the news. Softly, he said, ‘When good advice is given, take it. I told them to move on.’

David shrugged. ‘I don’t think they could be held for long, they only had papers with them. But the original gold boxes are there, opened and smashed, so the authorities know there was more. The pair are maintaining that they heard about the gold and came looking, only to find it gone.’

‘Might just work,’ I suggested.

David opened his bag and handed over five Hitler diaries, each of us taking one and flicking through. ‘I’m afraid that The Fuhrers’ handwriting is a bit hard to read, especially towards the end.’

‘He was an addict,’ Jimmy softly stated, his nose in a diary.

‘What?’ I asked.

‘A drug addict, addicted to pain killers,’ Jimmy explained.

‘These worth a few quid?’ Big Paul asked, placing down his.

‘To the right people, a great deal,’ David answered him. ‘What will you do with them, if you don’t mind me asking?’

‘Stocking fillers at Christmas,’ Jimmy suggested without looking up.

I asked David, ‘Second wreck finished?’

‘Yes, but not much there, as Jimmy said, but still a nice haul. A golden Menorah was found, first century. Priceless.’

‘Haven’t got it in the bag with you, eh?’ I asked.

‘Eh ... no, I’m afraid. It’s destined for a museum.’

‘Got a map for me?’ Jimmy nudged, raising his head.

David retrieved a map and unfolded it onto the coffee table.

When Jimmy marked the spot I loudly said, ‘Oops.’

David commented, ‘That ... is rather close to Beirut.’

‘Can’t have everything,’ Jimmy responded. ‘It’s a big haul, five times more than the first ship.’

‘I’ll convey the good news to the appropriate people,’ David reluctantly offered.

‘Get a deep sea dive boat sorted, there’re many in deep waters,’ Jimmy instructed. ‘Some are two hundred metres down.’

‘Tricky,’ Big Paul suggested. ‘Need a diving belle with a grapple.’

Jimmy made eye contact with him and nodded.

‘How many more should I suggest to *our friends*?’ David asked.

‘About thirty,’ Jimmy mentioned, very matter of fact.

‘Oh ... I see,’ David commented, appearing quite shocked.

‘Any shallow ones, boss?’ Big Paul complained.

‘Yes, around the Caribbean, twenty-five metres.’

‘Were going diving then,’ Big Paul said to me.

David took a breath. ‘If I may detract from my main purpose, might I ask a question ... about my daughter?’

Jimmy was still flicking through the Hitler diary. Without looking up he said, ‘She’ll come back to the UK in five years and find you, only to lose you to Alzheimer’s. You’ll be beyond the point that you’ll recognise her, or anyone else come to that.’ He made eye contact. ‘Time ... flies.’ He got up and walked into our office, returning with a letter, the name hand written.

David held the letter, starting to tremble. Big Paul fixed him a whiskey and nudged it down his throat, pouring him a second when ready. We waited as David stared at the letter.

‘Some ... guidance here might help, if you don’t mind,’ David asked without making eye contact with Jimmy, a quiver in his voice.

‘Do you want to see the grandchildren?’ Jimmy asked.

David nodded, almost if ashamed of that action.

‘Your wife will reconcile with her?’ Jimmy posed.

‘I think ... *that* may take a little longer, but I did show her the photos. I know she took them out later and looked a second time.’

‘If you don’t do it now you’ll regret it for the rest of your life,’ Jimmy firmly stated.

David gripped the letter tightly. ‘Well...’

‘Well do you want her back or not?’ I loudly asked. ‘Don’t be stupid, man, see her and her kids.’

David focused on Jimmy. ‘You already know what happens?’

‘It must still be your decision.’

David forced a breath and downed the remaining whiskey in one, coughing. ‘I’m ... I’m going to see her.’

‘Good. Now open the letter,’ Jimmy firmly suggested.

David opened the letter and read, suddenly a heavy frown taking hold. ‘It says ... that she’ll be in Tel Aviv ... tomorrow... and thanks me for asking to see her.’

Jimmy reached under the coffee table and handed over six first class tickets to Tel Aviv, dated for the morning.

David accepted the tickets, wide eyed. ‘You ... you told her I wanted to see her.’

‘You just said you did,’ I pointed out.

‘Best go and pack, get the family ready,’ Jimmy suggested.

‘And tell Ben his God Daughter will be turning up tomorrow, grandchildren in tow.’

David slowly stood, reclaiming his bag. At the door he stopped, but was lost for words.

‘Go!’ Jimmy loudly suggested.

With the door closed Big Paul said, ‘Smooth, boss. Smooth. You’re a real fucking operator.’

‘So,’ Jimmy began, focused on our driver/bodyguard. ‘Who was the bird you had in Paul’s bed?’

Big Paul was up and to the door. ‘I can explain.’

‘My bed!’ I roared, on my feet.

Big Paul was out the door in an instant, hurried footsteps echoing.

I found myself stood pointing at the open door and facing Jimmy. 'Who'd he have in my bed?'

'An old flame he's seen on and off for years. Don't worry, I told the cleaner to bin the sheets.'

'You knew in advance?' I barked.

'Of course I knew, dumb fuck.' He stood. 'So, who scratched my car?'

'Ah ... well, that was Judy.'

'I know. But you claimed it was the guy below you reversing into it!'

'Well I couldn't say she did it.'

'Why not? Wouldn't you have got laid that night?'

'I got some unpacking to do, in my apartment, grumpy guts,' I told him, slamming the door on way out.

Jack Donohue knocked on Sykes' door and waited.

'Come in, Jack.'

Jack walked in and placed down a Hitler diary for Sykes.

'What's this?' Sykes puzzled, opening the old book. His eyes widened. 'This is a Hitler diary,' he whispered. Louder, he said, 'This is what was stolen from that cave in Germany! Along with a large pile of gold!'

'A gift from Silo.'

'A gift?' He whipped off his glasses.

'For you, sir.'

'For me? He mentioned me by name?'

'Yes, sir.'

Sykes put his glasses back on and read some of the detail. '1943, September. Christ, I know some people who'd kill for this.' He slammed it shut. 'There was gold in that cave, a lot of it, and the bloody Israelis got it!'

'I think *their* man was responsible for that, sir.'

'Yes, well...what about that sub?'

'Silo says we can't have it now.'

'Can't have it?'

'No, sir. He says that MI5 tried to bug his home when he was away, so he's pissed off with us.'

‘Why’s he pissed off with *us*, when he knows who’s behind it? And why the gift?’

‘A gentle nudge, sir. He asks if you could speak to the head of Five,’ Jack explained.

Sykes calmed himself. ‘Be a pleasure to give them some grief. They’re mad because we got the Magestic letters, and we only got involved because the first few letters involved the IRA or overseas problems.’ He went back to the diary. ‘OK, Jack, I’ll see what I can do. Oh, and thank ... whoever.’

Magestic

Geoff Wolak. October, 2009.

Part 2

Is this airfield for sale?

With Big Paul driving, we headed down the motorway to Swindon, coming off at Junction 15 and heading north towards a seldom-used airfield called Mapley. Little did I know at the time about how important this place would be in years to come. With Jimmy giving directions, as if he had been there a million times before, we weaved through the countryside; 'B' roads with hedges. The front gate had seen better days, now simply a sign saying Private Property. Another sign said Longdon Aeroclub, a third displaying Massie Aircraft Services Ltd. We drove straight in.

In some ways it reminded me of the airfield in Kenya in the early days, that *little-used* feel to it. At least the grass here seemed to have been recently cut. We drove parallel to the runway, and to a hangar with several light aircraft both inside, and in front of it. I recognised most of the aircraft, spotting several Cessna 152s and 172s, those I had flown to complete my pilots license. Pulling up in front of a sign saying "Office" we eased out, Big Paul remaining with the car. Just inside the large hangar we noticed our first warm body, a portly man in his fifties rubbing his hands with an oily rag.

'Can I help?' the man finally said, his words echoing.

'Mister Hobbs?' Jimmy asked.

'Yes.' The man stepped forwards with an unwelcome expression. 'And who might you be?'

Jimmy said, 'We're the gentlemen who've heard that the lease for this place is up ... and that you're thinking of selling it.'

'Can't keep any bloody secrets around here,' Hobbs grumbled.

'Since you are, apparently, at odds with your partners and keen to rid yourself of the place – it's good we heard about it.'

'Did Mark tell you that?' Hobbs angrily demanded.

Jimmy forced a smile. 'I hear no evil, see no evil, nor speak no evil.'

'Well ... now's not a good time,' Hobbs suggested.

'I could get a 172 and a Jet Ranger in here,' I mentioned to Jimmy.

'You a pilot?' Hobbs queried, looking me over.

‘Just for fun,’ I said. ‘I got a place in Kenya ... kind of essential down there.’

‘Oh, I got a cousin down there,’ Hobbs admitted.

‘Why don’t you pop down, stay at our hotel – won’t cost you anything, just get your flight,’ I suggested.

‘Oh, that’s good to know,’ he reluctantly let out. ‘You in hotels?’

‘Stock brokers,’ Jimmy told him, taking-in the large hangar. ‘Investment capital, that sort of thing.’

‘Oh, right. Well, I can’t really stop at the moment –’

‘Forty-five thousand pounds to take the lease off your hands,’ Jimmy told him. ‘Anyone with a plane can stay around for twelve months, Massie’s can stay longer if they want to. You, Mr Hobbs, can keep your office and store for two years. That, sir, is the deal on the table.’

‘You don’t mess about.’

Jimmy handed Hobbs an envelope with the deal outlined. ‘It’s all in there, and my contact details. Give it some thought, but the price won’t go up – I’ve done my homework.’

With Hobbs threatening to get back to us soon we left the hangar, Jimmy leading me across the grass and towards an old wartime Air Traffic Control tower, better condition than the one in Kenya had been. Big Paul followed in the car.

Stopping in front of the disused Air Traffic Control building Jimmy said, ‘Years from now this place will be buzzing – we’ll spend a lot of time here.’

‘Bit a drive from the flat,’ I commented.

‘Won’t be living there, be buying a new house end of next year. Keep the flat for trips to London, but after next year we’ll be country gents.’

‘Yeah?’ I keenly enquired. ‘Where?’

‘Wales.’

‘Wales!’

‘Don’t sound so disappointed, you’ll love the new place.’

‘But it’s ... it’s Wales for fucks sake. Full of ... Welsh people!’

‘I ... was born in Wales,’ Jimmy reminded me.

‘But you don’t sound like that.’

‘Neither do most of the people we’ll meet. People ... *sound like that*... in certain areas. And so do people in certain areas of London and Essex, and elsewhere.’

‘Yeah, but it’s Wales!’

He laughed. ‘C’mon, let’s make a day out of it. Next stop – your future home.’

We drove down the M4 and across the new motorway toll bridge, paying to get into Wales; what a cheek. Turning off the M4 and onto the A49 we headed north, soon in pleasant countryside.

‘Like it?’ Jimmy asked.

‘Nice enough,’ I commented.

We turned off at a place called Raglan and headed back South, soon finding the River Usk.

‘Doesn’t look anything like the shitty river downstream,’ I noted.

‘It’s not tidal here.’

We pulled up on a hillside and entered some sort of picnic area, clambering out. Ahead of me, across the valley, sat a large house that appeared to have been recently built, definitely new, but with a country-dated style to it. It was two-storey, and seemed to offer ten or more bedrooms. Fixed to the side of the house was a triple garage with an apartment above it, some other outbuildings, neat rows of pine trees following the access road as it snaked down towards the river.

I pointed at it, Jimmy nodding. ‘Nice enough, I guess.’

‘And secure. No one can sneak up too easily, break in or bug the place.’

‘That going to be a problem?’

‘In years to come, yes.’ He pointed. ‘That’s the first house, rights to a small part of the river, trout and salmon fishing.’

‘Tidy like,’ I said in my best attempt at a Welsh accent.

He pointed again. ‘Look behind the house, you’ll see a wood. Follow it back to the hill in the distance.’

‘Yeah?’

‘A few years after buying that house we’ll buy all that land.’

‘All *that*?’ I loudly queried. ‘Shit.’

‘And then build another house, forty bedrooms –’

‘Forty?’

‘To put in all the girls you’re going to date!’

‘I see a flaw in that plan, namely that they’ll bump into each other when they go in and out.’

‘And a helipad.’

I was surprised. ‘We’d get planning permission?’

‘Yes.’

‘Shit, got it all mapped out haven’t you.’ I took in the view. ‘How much river section would we get then?’

‘Close to a mile of it, both sides.’

‘My dad would have a go at that,’ I quietly mentioned.

‘Your parents would be able to visit often, get them out of London. Anyway, in the years ahead we’ll have a lot of work to do in Swindon and Cardiff, can’t be in London. And when the press are breathing down our necks we’ll appreciate this place – high fences and guard dogs!’

A few days later David returned from Israel when Jimmy was out, a better colour to his bald plate.

‘How’d it go, mate?’ I asked, offering him a seat.

David took a moment, composing himself. ‘My family are in Jimmy’s debt, for what he did. Greatly in his debt.’

‘Don’t worry about it,’ I encouraged. ‘So what happened?’

‘It was if she had never left. Neither my wife, nor I, said a word about her leaving for the first three days, neither did anyone else. Ben and his family put us all up in their house, a bit of a squeeze. We threw a party, in fact one long round of parties with all the cousins attending at various times. Exhausting. On the fourth day we went for a walk, just my daughter and myself, and spoke about what happened ... and why. Some of the blame is obviously mine, I ... I was the traditional Jewish father, unyielding, and I paid a price for that, losing fourteen years.’

‘Your daughter, she back in with all the Jewish stuff?’

‘To a degree, but she is raising the grandchildren with regular attendance at Temple. They’re here, they flew back with us.’

‘Oh, shit, almost forgot.’ I rifled through the files on the coffee table. I found a padded envelope and handed it over. ‘Plane tickets, you and the missus, return to Australia. You leave in two months.’

‘Really, this is too much...’

‘Don’t worry about it, surprise waiting for you in Oz.’

‘Surprise?’ David repeated. ‘We only had the one daughter!’

I laughed. 'I'm supposed to tell you anyway, just not for week or two. Your grandfather survived the Holocaust, just lost his memory a bit.' David stared back, his mouth open. 'Brits shipped him off to Oz with some soldiers who they couldn't identify, to a funny farm. Seems he was well enough because he got married and had some kids, two are still alive down there.'

'I have relatives ... from my grandfather? My father is still alive.'

'So he's got stepbrothers, you've got step-uncles I suppose. Photo's here somewhere.' I hunted around the computer room and found the file, handing it over.

David stared at the two faces, men in their sixties. 'They look like my father.' He turned his gaze toward me. 'And my daughter -'

'Has no idea about them, your turn to freak her out.'

David just sat and stared at the photos. 'Is there nothing he can't do?'

'Cant sort out his girlfriend.'

David lifted his gaze. 'No?'

'She wants babies and the home life,' I explained.

'Ah. I'd take a wild guess that he's not quite the sort.'

'Now that, my friend, is what I call an under-statement.'

Musical Wang Po

A few months later, Jimmy asked me to send Po a fax, telling him of a good investment opportunity and would he pop over. I was certain I could hear the plane taking off before the machined beeped. I welcomed him and his bodyguards into the apartment two days later.

Jimmy stepped out of the kitchen with Liz. 'Po, you remember Liz?'

'Yes, yes. Very pretty lady, know all about London.' They shook and chatted, Liz on her way out, a kiss for Jimmy at the door. Liz and Judy were going to an Opera, and no amount of nagging could get me and Jimmy to tag along. The three of us

settled around the coffee table, Big Paul leading the bodyguards into the kitchen for some food.

Jimmy handed Po a statement of the performance of Pineapple. 'I have a record company, here in London.'

'Record? Music record?' Po clarified.

'Yes.'

'Jimmy is better at picking good bands than he is at picking stocks,' I put in. Po was staggered.

Jimmy continued, 'And we need a contact in the Far East to help distribution there, and to make cassette tapes.'

'Tapes? Magnetic tape?' Po clarified again.

'Yes.'

'I have cousin who have factory for tape!'

'That would be very useful,' Jimmy suggested. 'And we would need a distributor ... to sell the tapes to the shops.'

'I ask, I think he do this,' Po offered.

'Even better,' Jimmy said with a smile. 'Now, I am looking to give you some shares in the company—'

'Give me? No, no, you always give, you no take. I buy share, I insist. It not good you always give.'

'If it will keep you happy,' Jimmy offered. 'The business is valued at two million pounds, so thirty percent is six hundred and fifty thousand pounds.'

'I give one million, it fair price for future business,' Po insisted, wagging a finger.

'OK,' Jimmy agreed with a nod. 'We then make directors loan to the business to grow it quickly. One million each.'

'Yes, yes.'

It was a quick deal. Still, with all the money he had made from us, not surprising at all.

'Tomorrow we'll go and look at the company,' Jimmy suggested.

Po looked at the company's track record. 'It grow very quick, many record number ten or smaller. Three number one.' He made eye contact. 'You pick song?'

'He sure does,' I said. 'He's very good at it.'

'I not know you music man,' Po said. 'You many good many things.'

'I try my best,' Jimmy joked. 'In this music business I have a partner with thirty-percent, I'll talk with him tonight.'

‘We make good offer,’ Po insisted.

With Po gone, meeting us later at the restaurant and the girls joining us there, Jimmy rang Oliver.

‘Oliver, how you doing, mate?’ Jimmy asked.

‘Good. Excellent in fact, wracking up a few hits.’

‘Listen, friend of mine, Hong Kong Chinese, he’s very keen to get into the British music scene and, to be blunt, wants twenty of your thirty percent.’

‘Well ... well I’m quite happy to hang onto them, Jimmy.’

‘He’s offering one million pounds for them.’

‘One ... million?’

‘And you’d still have ten percent and stay on forever as managing director. Listen, he’s not going to offer twice, and it won’t affect anything other than you dropping from thirty percent to ten. To make a million from dividends would take you the next twenty years probably. And any money you make from selling your shares are taxed at ten percent.’

‘Ten percent? What ... capital gains tax?’

‘Yes. So that’s nine hundred thousand pounds in your back pocket, and you stay on.’

‘Wow. Can I think about it?’

‘We’re over tomorrow, he insists on making you the offer. Think about it till then, but don’t take too long, this is a very good offer.’

‘Ill ... er ... see you tomorrow. Thanks, Jimmy.’

‘Bit sneaky,’ I thought I’d mention.

‘If he hangs onto thirty percent, then years from now he’ll be a pain. Not a problem, but a small wrinkle in my plans.’

The next day Oliver sold twenty shares for one million pounds, Jimmy handing Po ten more without the Chinaman noticing the origins of the shares. Pineapple was now global, and our cassettes would be made in bulk in Hong Kong, not saving us any money, but making money for Po in Hong Kong – which would come back around to us in cash when we wanted it.

Two million was injected as directors’ loans, the business now very cash rich, more staff hired and a better studio deal negotiated. We also hired a concert organising company. Once a week Jimmy and me would pop around to a small factory unit not far away from the apartment and pass tapes from one box to another. Each week we signed two or three new artists, each

having a hit song almost straight away; it was embarrassingly simple.

Two days after Po's departure we descended on a small company that produced an independent music magazine: Wrong Chord. I liked the name. The company was hidden away in a typical London mews, a non-descript yellow door. Jimmy pushed the buzzer.

'Yes?' came a girl's voice.

'I was hoping to see Jane O'Sullivan.'

'And who are you?'

'Were the owners of Pineapple Records.'

A silence preceded a buzz. We pushed the door and entered what looked like someone's kitchen. We walked though and to a lounge that had been converted into an office, numerous Apple Mac computers with flickering grey images, two women and a man sat working them, the curtains closed.

'I'm Jane,' said a woman in her thirties. She extended a hand to Jimmy.

'Jimmy Silo, Pineapple Records.'

'You've been doing very well of late,' she remarked. 'Tea?'

'No, thanks, just a quick visit,' Jimmy said.

'Oh. Then what can I do for Pineapple?'

'We'd like you to produce a magazine for us,' Jimmy said, getting straight to the point. 'Call it ... The Pineapple Slice, or similar.'

We laughed.

'What would this magazine be about?' she asked.

'Our bands, of course. Each one would give an exclusive interview on regular basis, let you photograph them back stage or at home, even the studio. Simple format, with an exclusive deal.'

She was mildly shocked. 'Oh. So ... you'd give us access to all your groups?' The employees were now listening attentively.

'Yes, an exclusive more or less, at least the best and first interviews.'

'You'd get them when they were sober,' I suggested. 'We'd *make them* talk to you.'

'Oh. And what basis —'

'A new limited company,' Jimmy explained. 'Pineapple has seventy percent of the shares, you thirty. We pick up all the costs

and overheads, give you some space in our offices, you manage it with a fixed monthly retainer. Risk is all ours.'

'With all your bands in there there'll be no risk,' she pointed out.

Jimmy gave her a card. 'Think about it, call me.'

I waved at the staff. 'Don't sit too close, bad for your eyes.'

Autumn 1990

Things seemed OK between Jimmy and Liz, but he indicated that their days were numbered, explaining that it was her choice, not his, because she had not managed to mould him into the man she wanted. I would have been surprised if she had influenced him in any way. All was going well in Kenya, at Pineapple Records and with the stock trading. Life was good and the days were ticking off the calendar. On a wet Monday I sat down opposite Jimmy and picked up a copy of the new magazine, Pineapple Music, now in its second month.

'Have a look, see what you think,' Jimmy said, his face hidden in a paper.

I flicked through the magazine, noticing now a music industry news review at the front, interviews with a few stars, then notices of upcoming releases, concert dates and venues. There were a handful of interviews, each covering four or more pages, and plenty of glossy colour photographs of the musicians.

'Have look at the advertising,' Jimmy suggested.

The back page was a concert advert, the rear inside cover River View safari lodge in Kenya. Then I noticed an advert for the Old Dogs mine clearance operation – an appeal for money, an advert for River View beach hotel, also an advert for the Chinese restaurant we used - making it appear as if stars favoured it. Virgin Airways had an advert, plus several musical instrument shops in London.

'What's the revenue?' I asked.

'About fifty percent of the cost of magazine at the moment,' he answered. 'Which is good, considering the main aim is to promote the groups. You see the inside front cover.'

I opened the page: Got talent, send us your demo tapes.

‘Should drum up some business,’ I approved. Weighing the magazine in my hand I said, ‘Chunky, too.’ As I placed it down I noticed several estate agent adverts for houses in Wales. ‘We moving?’

‘Yes, next year.’

‘Remind me again as to why?’

He put down his paper. ‘We’ll keep this place for when we’re up here, but we need a more ... defensive position. In the years ahead the intelligence services of several countries will take a great deal of interest in us, after that – further down the line – so will the public. We’ll spend more time in Swindon, and next year we’ll open a club in Cardiff.’

‘Yeah, well that don’t make much sense. I mean, it’s Cardiff, like.’

‘You’ll like it,’ he suggested. ‘And the new house. Besides, it has to be done in small steps. If we opened up a club in London, then first – it would be expensive, and second we’d not have a track record or plenty of clients, and third we’d not have the skills or the staff. You’d... not have the skills.’

‘So it’s a dry run?’

‘Of sorts. But if you want to be here you can be.’

‘You make it sound as if being here will be unsafe.’

‘It will be, to a degree. Got some people to piss off. Anyway, think about when you’re famous. How could you walk out that door in the mornings without a face full of paparazzi? In the new house we’ll have several access points and escape routes, here we don’t.’

I picked up the flyers, seeming to recognise one big house. ‘This is?’ I showed it to him.

‘Yes. And the land around it. We’ll go see it in a few days, after Mapley.’

‘Mapley?’

‘The old airfield in Swindon. We’re about to spend a lot of money on it.’

‘The Israelis are waiting to know where to transfer more money to.’

‘I’m going to make it look like an Israeli bank loaned me the money, paid back over thirty years.’

‘But then ... won’t we be losing it?’

‘No tax on a loan, for one. And two, I need a way of getting it into the UK without too many questions. It’s not like Kenya. Can you see the Kenyan Government demanding to know where all the charitable money came from?’

‘Hardly. Oh, while I remember, Rudd faxed to say that their Interior Minister went out to the airfield.’

‘And?’ Jimmy nudged.

‘He was surprised at all the money it was attracting, but pleased to fuck he was not paying for it. They’ve approved the Kenyan Rifles and sent an officer and some NCOs.’

‘Because *we’re* paying the wages for his staff,’ Jimmy commented.

‘Mac’s got adverts up in the nearest big town for recruits, lads aged seventeen to twenty-two,’ I mentioned.

Jimmy nodded approvingly. ‘In order to get anything done... you first need a small crack, then make it wider. But we’re two years ahead of where I thought we’d be. How much are *you* worth now?’

‘Three million, not including assets.’

‘Need more, take a few more risks on the trades.’

‘Fair enough, been quite risk averse,’ I commented. ‘Oh, I diverted the money from the traders we tip to Kenya, they’re all making it look like charitable donations. There are separate accounts for Mawlini and the orphanage, it goes there.’

‘Send most of it to Mawlini, the orphanage is getting embarrassing.’

‘Five hundred kids in there,’ I reported, lifting my eyebrows. ‘It’s been on Kenyan TV twice, had a minister visit it. No one over there can figure out why it gets so much money.’

Jimmy forced a breath, putting down his paper. ‘Let’s go to Swindon tomorrow, see if we can’t get three years ahead, eh.’ He lifted the phone and called David, asking for a visit.

When David arrived we explained about the loan and told him to get a move on. David could not see a problem, since they’d benefit greatly. He also could not understand it, which added to a long list of things about us he did not understand. I got a familiar shrug as he departed.

We arrived at Mapley at 9am, Big Paul driving us. Meeting us there was a local firm of architects and a council planning

officer, the council owning the land. The man from the council had been reluctant to meet us, but Jimmy assured him that we would be creating many local jobs. At 9.30am we met the architect, the council officer ten minutes late; he could not find his own airfield. With the rain easing off we climbed to the roof of the control tower.

‘Not quite Kenya,’ I said, avoiding the puddles.

Jimmy got straight to the point, stood in a cold breeze. ‘Gentlemen, I’ve taken over the lease of this airfield, and the lease allows for building upkeep. But I’m interested in more than just simple maintenance. We have a charity that we have adopted in Kenya, in fact several, but the one of interest trains Africans in first aid and mine clearance. We are also heavily involved with various mountain rescue groups here in the UK.

‘In the years to come we’re going to train British medics here before they go out to Africa. Things like first aid, jeep driving off-road, vehicle maintenance, flying, plus a range of other skills. For the mountain rescue groups we want a place where they can come and train for common skills. I know there are no mountains in sight, but they need training in first aid, jeeps, water rescue, stuff like that.

‘Our aim, Gentlemen, is to try and combine those training programmes here. For that we need an airfield, which we’ve got, some classrooms - which we can build, garages – which we can build, a small assault course to keep them fit, a running track, a swimming pool and an admin building for the managers.’

‘That’s quite ambitious,’ the man from the council suggested.

‘I’ve earmarked twenty million, and set it aside,’ Jimmy stated.

‘Twenty million?’ the young architect repeated. This could be his biggest account. Ever.

‘That’s for starters,’ Jimmy suggested. ‘Now, we’re going to need council permission before we do anything.’ He focused on the man and waited.

‘So, these people being trained here, they’re being trained for African work?’

‘Not just Africa, a variety of places. We’d also teach mine clearance here.’

‘Mine clearance!’ The poor little fella was shocked.

‘All done in the classroom,’ Jimmy said with a smile. ‘Nothing goes bang. And we’d be creating many new jobs, from security staff on the gate to mechanics and teachers. I think around a hundred local jobs could be created eventually.’

I handed Jimmy a document, the outline proposal, and he presented it to the man from the council.

‘It’s all in there, the outline at least,’ Jimmy explained. ‘We won’t start repairing buildings or planning new ones till we get the go ahead, and unless that go ahead is comprehensive – there is no point in us being here, is there?’

‘Would there be more traffic?’ the man from the council asked.

‘I should hope a lot more, but I will offer to pay to widen the roads.’

‘You’ll pay?’

‘Yes. I’m also interested in building a leisure centre on the edge of the airfield, or just outside, so that locals can use it as well as the people based here.’ He pointed to some bushes in the distance. ‘It’s close enough for people to walk from the local village.’

The man from the council was now far more interested. ‘You’d pay for it?’

‘Yes, it would be my leisure centre, but open to the public. A gym, a full sized pool.’

‘A full sized pool?’

I did not know what this guy’s problem was, but he was keen about the frigging pool and lukewarm about rescuers.

‘I’ll discuss it with the council,’ he promised and we sent him on his way.

Jimmy faced the young architect. ‘We’re going to spend some money with your company whilst waiting for the council to give us permission. So, I want a complete survey of this place, maps drawn up accurate to an inch. I want sub-soil samples and foundations checked right across the airfield. Work on the assumption that building work *will* commence within a few months.

‘Right, the hangars need inspecting – you can handle that and bill us. Water, gas, electric – I need a detailed map of it all and its capacities. Then, draw some sketches of new buildings: a two-storey office block, a classroom block and basic living

accommodation – think soldiers, barrack rooms. I want some communal barracks, some single room blocks. Oh, and a new fence you can price up straight away. Do a good job and you get the whole twenty million quid project.’

It was fair to say that the lad was stunned. We led him back downstairs as it started to rain. From the car we gave him written authority to proceed and an outline document, details of our accountants and solicitors.

Two days later the local council leader wanted to meet. The man had appointments in London, so we met in a hotel and repeated the story. This man, however, bought us tea and scones. We had a provisional go ahead, paperwork would take longer. We received a quote from the architect to repair the fence and transferred the money immediately. It was a very long, and very expensive, fence.

Within a week the architect and his boss came up to London on the train, and we entertained them in the apartment. They presented several large drawings and spread them across the dining table. The maps of the area we kept; the sewer diagrams, the electrical cables and the water pipes. The individual sketches of buildings we stopped to discuss, drawing over them and making modifications since Jimmy had a firm idea of what he wanted. We marked on the maps where such buildings should sit, what direction they should face, where doors should be placed. Then we broke the buildings into phases, because we knew that we could erect buildings faster than we could find warm bodies to sit in them.

A gatehouse was sketched and positioned; it would be the first project. Second would be better drains and water, third would be extra electrical cables laid ready. It turned out the electrical company would do most of that free, so too the water company. The hangars were booked an inspection by men with ropes and climbing gear.

We signed and approved a number of sketches, which would now be turned into formal drawings to be used by builders. A half-million pound deposit was placed with our accountants, the architects to be paid when a bill was presented. They had a provisional sketch of the leisure centre, but Jimmy asked them to be more military and less crèche. They took notes, drawing a

quick sketch in front of us, more along the lines of what we needed.

With progress being made on the airfield we asked Mackey Tailor and his gang to fly down, paying their tickets and hotel. They came around to the apartment on a cold Wednesday morning, dressed in “rescue red” anoraks.

‘Flight down OK?’ I asked, taking their coats and noting their climbing boots.

‘Aye, Edinburgh to Heathrow, just the hour,’ Mackey responded, he and two colleagues in the group. We settled them and distributed teas and coffees, Big Paul helping.

‘So,’ Jimmy began. ‘What progress?’

Mackey read from his list. ‘Bought six second hand long axle Land Rovers, distributed them. Some boys already had Land Rovers, so we checked. We worked a deal with the climbing company Regus and got four hundred reels of rope, karabiners, that sort of stuff – all at a good price. We got a lot of kit off BCB Survival First Aid, and everybody has a pack, so nay grumbling there. We got a deal on a hundred helmets, a few different sizes as well, so distributed those. And twenty more stretchers.’

‘So, all kitted out, yes?’ Jimmy asked.

‘Made good use of the money, got a good deal,’ Mackey emphasized.

‘I’d expect nothing less from a Scotsman!’ Jimmy told him, making us all laugh. ‘So, how about training?’

Mackey produced a thick document. ‘Had many fingers in this pie, I can tell yee. But we got a standard outlined and some semblance of agreement. We’ve made a start on grouping courses and fixing dates.’

‘I’ve taken over an airfield near Swindon,’ Jimmy informed them. ‘In years to come it will grow quickly, nothing much doing there for a year. What *will* be there in a year’s time, will be classrooms, hotel style rooms and barrack rooms, a gym and a pool, some climbing walls. We can run residential courses on first aid, motor maintenance, off-road driving, map reading and navigation, casualty movement, a variety of things. And they all come free to you and your boys. So what you’ll be able to do is to send groups down for various courses, anything from a week to a month. And those courses will have the standards agreed and mapped out, proper exams in classrooms for some subjects.

‘Keep in mind, guys, that people will also come from Cumbria, Wales and Cornwall, so we need to be central. I’ll also be using it for training medics to go out to Africa, because a lot of the courses they need are similar to yours, and I’d hope that some of your instructors would be employed to teach them as well.’

‘Employed?’ Mackey puzzled. ‘They’s mostly part-time volunteers now.’

‘If they want a job then there’ll be some going in Swindon. If not, we’ll bring in professionals, maybe some of our people from Africa.’

We showed them the maps of Mapley, sketches of buildings not yet off the drawing board.

‘What I need from you next, Mac, is to talk with the Welsh, the Dartmoor group and the Cumbria groups.’

‘Going ta be a full time job,’ Mackey cautioned.

Jimmy held his hands wide. ‘Would you like to do it full time, if I gave you a wage?’

Mac glanced at his colleagues. ‘Well, aye.’

‘Think about a salary, I’ll give you a budget for a car and all petrol, overnight hotels, stuff like that.’

‘Aye, will do, Jimmy. What do we do about the people asking for more kit?’

‘Used up the budget?’ Jimmy asked with a grin.

‘Aye, all of it.’

‘You’ll get double for this next year,’ Jimmy informed them. ‘But that’s conditional on you getting them interested in courses in Swindon, the first course around twelve months from now.’

‘There’s another angle here, boss,’ Big Paul put in. ‘The place in Swindon can be used for merc’ first aid courses and some security staff first aid courses. They need an advanced first aid course cert’ before they can work in some places around the world. Plenty of business there.’

‘You know the people running these courses?’ Jimmy asked, Paul nodding. ‘Go talk with them. They’d get a free building, offices and kit if they co-operate and train others at good rates.’ He faced our guests again. ‘So, Mac, you got a year to get everyone talking and some training programmes sorted, ready for the first day at school.’

We spoke for another hour about points of issue, plus unrelated subjects such as Kenya and our hotels, invites extended.

With our boot-clad guests departed for a little sightseeing and shopping, Jimmy said to Paul, 'Contact your old buddies at AMO, take them to Mapley.'

'How'd you know I was thinking of AMO?' he complained.

'I'm psychic, Dumb Fuck.'

'I thought I was Dumb Fuck?' I complained.

'You've been promoted to Chief Dumb Fuck.'

Empire building

Jack was summoned by Sykes on Thursday, the interest his superiors took in him now something that he quite looked forward to. He knocked and turned the handle. 'Sir?'

'Have you seen this?' Sykes loudly complained, waving a page about.

'Sir?' Jack called as he closed in on the offending item.

'Silo has a record business, a very successful record business!'

'Oh, I ... er ... didn't know he was interested in music, he never mentioned it.'

'I showed these details to an industry expert. He says that this company's success rate is impossible!'

'You think he may get tips?' Jack softly enquired.

'Of course I think he gets tips! And he's making a fortune!'

'Well, I ... er ... guess Magestic has a plan for it,' Jack offered.

Calmer, Sykes said, 'Well the P.M. is concerned about this, so are we. This is commercial interference, Jack: empire building.'

'Silo has been quite open about everything, always happy to supply an answer, sir.'

'Well I have a few questions myself,' Sykes threatened. 'Fix a meeting with Silo, 10am tomorrow, his place. It's about time we got to the bottom of this.'

I opened the door to Jack at 10.05am. 'Alright, Jack, kettle's on.' As Jack stepped past me I focused on the second man; older, thinner in the face and with stern features. 'Cheer up, mate, it might never happen.' He did not look cheered as he stepped past me, eyeing me carefully. I took his coat as he took in the apartment, even the ceiling cornice.

'Very nice,' he commented, making it sound like a complaint.

Jimmy emerged from the kitchen with a tray of drinks, placing it down onto the coffee table. When he straightened he offered a hand to Sykes. 'Mr Sykes.' They shook. 'Please, have a seat.'

Everyone eased into the leather sofas, Jack and Sykes opposite me and Jimmy.

'So,' Jimmy began. 'You have some questions about my businesses?'

Sykes got straight to the point. 'Do you get Magestic tips for the music business?'

'Some, yes. And some of it's down to the staff there, some down to me. What particular interest does James Bond have with that?' As Jimmy spoke I could detect the change in accent and style. He was now younger and coarser.

'It's an unfair commercial advantage,' Sykes pointed out. 'If followed to the *nth degree*, you'd end up owning the whole damned country.'

Jimmy gave it some thought. 'Well, I see your point, mate, but I'm aware of at least one other person in the UK who I think is ... of a similar bent. He's in the mobile phone business.' I could see our visitor's grey matter working away. Jimmy held his hands wide and said, 'What would you like us to do?'

That caught Sykes off guard. 'Well ... obviously we'd like to know what *your* intentions are, and others, if they are going to impact large UK corporations.'

Jimmy glanced at me, looking a little embarrassed. 'Well, to tell you the truth, mate, I kinda got into the music business because I thought I could meet tasty birds through it.' Sykes eyes widened. 'And we're thinking of opening a nightclub, for a similar end.'

'And by "end" he means *us two* getting our ends away,' I helpfully put in.

Jimmy continued, 'We only got Magestic tips on pop groups *after* I got into that business.'

'And what *is* your financial arrangement with Magestic?'

'Fifty percent of net profits go to charities he nominates.'

Sykes gave that some thought. 'And these charities, is there an agenda with them?'

'Oh, very much so,' I responded.

'There is?' Sykes queried.

I added, 'Oh, yeah. The medical rescue group were building up is very focused.'

'On what, exactly?'

I continued, 'There're going to be some nasty natural disasters in the years to come, floods, earthquakes, famine – plague of frogs and the five horsemen of the apocalypse. We've got to get them ready to help, then get them in place just as these events occur.'

Sykes seemed putout at the innocence of it. 'Oh. And do you know when –'

'Not yet,' Jimmy cut in. 'But I guess you'll know when we do.'

'And your connection to the Israelis?' Sykes coldly asked.

'I co-operate with my opposite number over there,' Jimmy explained. 'Doesn't look like he's quite giving over the fifty percent, you know. So keep that bit quiet.'

'Oh. And what about a certain cave in Baden Baden?'

'You got the diary OK, did you?' I asked.

'Yes. Thank you for the ... stolen goods.'

I added, 'Well, you're a super spy, mate. If you can't avoid getting caught, who can?'

'Quite. So, what happened there?' Sykes pressed.

'They got a tip off about the cave, plus a few sunken treasure ships off their coast,' Jimmy explained.

'The Germans estimated the gold value by the boxes, a modest two hundred million pounds.' Sykes waited.

Jimmy shrugged. 'There's a big haul off the Scilly Isles.'

'How big?' Sykes nudged.

'Dunno, but tonnes of gold, eighteenth century. And there's that sub.'

'So why don't you let your fellow countrymen go after it?' Sykes testily enquired.

Jimmy shrugged. 'Because Magestic knows that the Israelis will send us his cut, more or less.'

'And if we made a similar deal?' Sykes asked.

'I guess we'd wait for a letter from Magestic telling us to do just that, probably get one soon since you're here.' We both laughed, quite convincingly.

'I'm surprised he did not foresee my arrival,' Sykes testily stated.

'He did,' Jimmy responded.

'He did?'

Jimmy reached under the coffee table and handed over a letter. 'For you, boss.'

Sykes read the envelope. 'For Reginald Arthur Sykes, the worst cricket player in the dorm.' He fixed Jimmy with a stare. We tried to look embarrassed for him, grinning.

Mr Sykes / Prime Minister,

Your concerns about any empire building on my part are unfounded, yet understandable. I need to acquire substantial funds for the future, to assist with things that are not only beyond your reach, but beyond the remit of your respective offices. Consider, if you will, the following example.

A train will crash in a part of India that hosts track of a poor maintenance standard. The resulting chemical spill will kill tens of thousands and injure many more. A simple warning may go unheeded, most definitely miss-understood by the local authorities, so I will interfere directly through proxy agents such as Silo & Co. They will pay for the track to be fixed, points to be checked at the right time. Such an undertaking I deem beyond your reach, and an unnecessary distraction for you when I can so simply deal with it myself.

Further, I will not allow my proxy agents to affect those areas that I do not wish affected. Everything is part of a grand plan. Likewise, I will only give the UK an advantage over other nations where it is necessary within my plans, a plan of global harmony. Where you have a specific question you may ask Messers Silo & Co. If they do not have an answer it is because I have not deemed it necessary. Forgive my air of authority, but I know what the future holds, what great promises it offers and what great dangers lurk near.

Your servant, Magestic.

'Well,' Sykes finally said. 'I'll discuss this with the Prime Minister.' He tucked the letter away. 'It seemed to suggest that

you get more information than just simple stock market and music tips.'

'I do,' Jimmy answered. 'Committed to memory.'

Sykes eased back. 'The outcome with Saddam Hussein?'

'Lots of bluster for ten years, then the Yanks drop a bomb on him, his location given away by a General Masoud, who takes over and slowly turns the place around.'

'Crickey,' Sykes let out. 'Well, I'm assuming you don't discuss *that* down the pub?'

'Who'd listen?' Jimmy suggested with a dismissive shrug.

'You have no objection to answering questions?' Sykes asked.

'We've been asked to,' I explained. 'Jimbo got a file like a phone directory and had to commit it all to memory before we burnt it. Took weeks.'

'Took two months,' Jimmy countered. 'A lot of it made no sense, just dates and names. Last page said it was some sort of backup.'

'Backup, in case Magestic is not around,' Sykes realised.

'Could be,' Jimmy said with a shrug.

'Obtrobosky,' Sykes said.

Jimmy wagged a finger. 'He defects to the Yanks when Greece wins Eurovision.'

Sykes crossed his legs. 'The *already-mentioned* fall of communism?'

'Next year. But they kidnap Gorbachov, fight it out with tanks, and Yeltsin becomes President or Prime Minister.'

'Jesus, *he's* Mayor of Moscow. You said tanks?'

'On the streets of Moscow, brief civil war.'

'How does it turn out?'

'They sell a lot of oil and gas, go democratic, make a lot of dosh, they buy up Chelsea Football Club –'

'Chelsea? Russians?'

'They all end up very rich and we end buying oil and gas from them, and they win Wimbledon. They buy houses here and around Spain.'

'Any future conflicts with Russia?'

'Couple of small wars when the Yanks try and turn the former Soviet states like Khasikstan and Georgia into NATO members. Russians get pissed off with the encirclement, I think. But that's not till 2009.'

I could see Sykes' grey matter working hard. 'And the main threat to the UK till then?'

I tried not to grin; Sykes was trying to get Jimmy to do his job for him.

'All Islamic. At one point India and Pakistan go to war and fire off nukes at each other. The nice Asian gentlemen here start fighting each other. Quarter of a million die.'

'Quarter of a million?' Sykes gasped. 'When?'

'Not till around 2011, but it's fluid apparently. Magestic is going to send you letters to help you stop a few things. Well, hopefully stop it all.'

'You said Islamic?'

'There's an unhappy chappy called Osama Bin Laden, a Saudi. He went to fight the Russians in Afghanistan a few years back, trained by the CIA to help out. After that he formed a Wahabi - is that right?'

'Wahabist, yes.'

'He formed a Wahabist style group of mostly Saudis who will eventually wreak havoc around the world, attacking the Yanks and us. Apparently, they're all rich university kids with rich uncles who give them money. They start fires in New York sky scrappers, kills fifty thousand.'

'Fifty thousand?' Sykes repeated. 'When?'

'Not till around ... 2000. They hijack planes and land them down Piccadilly Circus,' Jimmy lied.

'Well, we've taken actions against things like that,' Sykes insisted.

'Apparently not, they still do it,' Jimmy insisted.

Sykes was puzzled, yet looked determined. 'I guess we get a tip-off before then.'

'Hope so, be a mess otherwise,' I said. 'Traffic would be nasty for a while.'

'Yes, quite. I'd like to send someone down -'

'Nope,' I said.

'No? Sykes questioned.

Jimmy said, 'We've been told it's you and Jack only, nothing written down,' Jimmy insisted. 'And if you can sort the boys from MI5, keep them out the building opposite, Paul looks rough as hell in the mornings.'

Sykes stood. 'And if we strike a deal about the gold?'

‘Not my decision, mate,’ Jimmy said with a shrug as he stood. He offered a hand and shook. ‘Pop round for coffee whenever you want, or we’ll take you lap dancing.’

Sykes raised an eyebrow. ‘I’ll pass on that.’

‘My wife could kill me,’ Jack said.

‘Stay if you want Jack, pick his brains,’ Sykes suggested.

With Sykes gone we checked the sofa at length, Jack helping. Big Paul came up with hand held scanners, checking the room.

‘Clear,’ Big Paul told us.

We settled down with Jack, Jimmy suddenly solemn and quiet.

Jack said, ‘You’re quite the actor. Had me convinced.’

‘The truth is often subjective,’ Jimmy softly responded.

‘You take it all ... quite lightly,’ Jack delicately mentioned.

‘Hah,’ I said, also now serious. ‘He spends twelve hours a day worrying, staring at the wall.’

Jack regarded Jimmy carefully. ‘Those attacks you listed, you can stop them?’

‘Yes, they’re the easy part.’

‘And the hard part?’ Jack asked.

‘Future American Presidents who believe they have a God given right to rule the world.’

‘You sound ... a little cynical about our American cousins?’

‘Really? Well I’ll give you an example. A guy will invent an engine, a diesel, that uses half the normal fuel. An American oil company will buy the patent for a million and sit on it for twenty years.’

‘Ah.’

‘Why don’t *you* buy it?’ Big Paul loudly asked.

‘I will,’ Jimmy replied with a sigh. ‘And they’ll try and shoot me.’

‘Fucking hell,’ Big Paul let out. ‘It’s all about money, isn’t it.’

Jimmy said, ‘If two American businessmen were falling off a cliff, one would steal the other’s wallet before they hit bottom.’ He turned his head a notch towards me. ‘Plague of *frogs*? It was a plague of locusts. *Five* horsemen of the apocalypse?’

‘I was trying to sound thick,’ I explained.

‘You succeeded,’ Jimmy said.

‘You said *bent* instead of *leaning*,’ Jack pointed out.

Jimmy nodded. 'I know, it was deliberate. And Paul here used to have a *plutonic* relationship.'

'What's wrong with that?' Big Paul asked. 'So long as you and the girl both want the same thing.'

We all stared at him as Roger, Liz's father, knocked. Big Paul let him in. Roger said he needed a word. We made excuses for Jack and Big Paul, then settled down with Roger.

'Was just yourself, Jimmy, I was hoping to chat to,' Roger delicately explained.

'I have no secrets from Paul, not where your fine daughter is concerned.'

'Oh, well, OK then.'

'She not happy?' I asked.

'Well, no, and Heather and I are a bit concerned,' Roger explained.

I took the lead. 'Roger, she wants a cottage in the country with a white picket fence, two kids and a cat and dog, a husband with a nine to five job that she's smarter than. Take a look at the big guy and tell me if he fits the bill – now or when she met him.'

Roger lowered his head. I had cut short a long conversation.

Softer, I continued, 'Listen, Roger, she's a great girl and Jimmy loves her to bits, we get on great as a four some, but not she - nor any other girl - is going to mould the big guy into what *they* want.' Jimmy glanced at me. I continued, 'And let me say something that you won't get from Jimmy, because he's too polite to say it. She does not appreciate the charity work we do at all, and she works at a fucking charity! Every time we mentioned what millions we were spending in Africa she went quiet. Not a fucking *well done guys*, but a kinda – *you should be spending that on our little cottage in the country.*'

Jimmy held up a flat palm to me. Facing Roger he said, 'I'm a driven man, Roger, and my charitable work means everything to me.'

'I know that,' Roger conceded. 'And I have the utmost respect for you for doing it. I just wish she could see it that way.'

I said, 'Her biological clock is going crazy, but I don't think Jimmy's there yet. *Some* ... might see Jimmy as being selfish, but anyone taking him away from Africa is the selfish one.'

Roger nodded to himself.

Jimmy mentioned, 'Whatever happens between me and Liz *will not* affect my fondness for my neighbours.'

Roger lifted his head and forced a smile. 'You're not that kind of person, we know that.' He heaved a sigh. 'She's bad at taking break-ups, she tends to build an ideal world in her mind.' He stood, and we followed him up.

Jimmy said, 'I won't be telling her to go. If she wants to be here a year from now she can be.'

'Thanks, Jimmy,' Roger said as he left.

With the door closed Jimmy faced me. 'Where did all that come from?'

'I'm not stupid, I can see the look in her eye when we talk money.'

He took in the apartment, his hands in his pockets. 'Judy around later?'

'No, back in the morning, noon I think.'

'Let's go out. Curry, lap dance, a few beers,' Jimmy loudly implored.

'Haven't done that for a while.'

'But not here, I'll show you Cardiff. Forget the bags, we'll drive back in the early hours.'

'And Big Paul?' I asked as we grabbed our jackets.

'Grab him on the way, I know a great curry house in Newport.'

A new house

The new house had been very well decorated, but stood very empty. It had been built speculatively, by a builder who had considered that it would have been easier to rent-out. After almost a year, and with no willing takers, he had put it on the market, a hefty price tag that was not attracting buyers. The recession was not helping either. Jimmy put in an offer below the asking price and got the property, bought by one of our holding companies. That way we could borrow against it and trade the money more efficiently; we liked to have our cake and eat it.

The day we received the keys our very young and very busy architect friend from Swindon came over. I put some clothes into a room earmarked for me, the place ready to move in straight away. My bedroom had windows that gave me a view of both the river and the distant hills and I liked it straight away.

The bedrooms were decorated in a style similar to those in the apartment; the same designer's hand could have touched both. My room offered a walk-in shower and bathtub in a large bathroom, a sofa and TV. The landing displayed doors to ten bedrooms, six at the front and four at the rear bisected by a traditional curved stairway straight out of *Gone With the Wind*. The lounge was huge, split by a central stone fireplace, the study perfect for our computers and filing cabinets; it already possessed two desks. The kitchen was bigger than our favourite curry house and offered an American style diner atmosphere, stools at a counter, grey metallic cookers awaiting some action. Pancakes came to mind.

I stepped outside and turned left to the garage, opening the electric doors and finding plenty of space inside, tool benches at the rear. Big Paul would be happy. A door between two garages hung open and so I walked in, rather walked up a narrow flight of stairs, finding Jimmy and Big Paul.

'Marked your spot?' I asked.

'My place,' Big Paul proudly announced. He showed me around.

The three garages, and the windows above them, gave the impression of three small flats, but this was actually one long apartment, well lit with natural light. The lounge was larger than Big Paul's apartment in London, the bedroom about the same size as his old one. The kitchen was bigger, a breakfast bar opening onto the lounge, and that left one other room, bare at the moment.

'Home from home,' I said.

'I was born thirty miles away,' Big Paul reminded me.

'Be able to visit your old haunts,' I suggested.

'New motor below,' Big Paul informed me, a nod towards the stairs. We stepped down and opened the end garage, revealing a shiny black Range Rover. I jumped into the driver's seat, Big Paul tossing me the keys, and we sped around the grounds, frightening squirrels back up their trees.

Jimmy closed in on the waiting architect. 'Right, got a pen and paper?' The young man waved his pen. 'Fence around the gate is OK, ornate and difficult to climb, rest of it is just bushes and trees. I want a solid fence all around, hidden to the outside world by fir trees eight foot tall. Think – privacy. I want cameras in the roof eaves, covering all angles, then cameras in trees at the edges of the property. I want a bank of monitors in the spare room above the garage, second set in the study – tucked into a nice wooden cabinet. Think – small cameras, small monitors.

'All trees with branches below seven foot, cut the branches down. See the two buildings –' He pointed towards the west. '- They were built with no particular idea in mind. I want two small and cosy flats. Behind the house you'll find bushes and a small pond. I want it all gone, nice patch of grass. I want a landscape gardener to make the grass here nice enough to play golf on. At the rear, hundred yards up, is a wet patch that becomes a large wet patch in winter. I want you to dig down to the spring, fix a pipe and send it towards the river, nice and dry on top.

'See the grass next to the river? I want drainage put in and the grass flattened. In winter it gets a bit soggy, no need for it to be soggy in the summer. I want a small wooden fence against the river so that kids don't run straight into the water. And I want two fishing platforms, wooden. Think – fly fishing. The attic of this place is huge, but has been left as a bare room with wires coming out of the walls. I want three nice apartments in there, same style as the garage apartment. And I want all this done quickly, money is not an issue.'

The young architect pulled a face, suggesting it was a lot of work.

'Hire some help, spend some money,' Jimmy told him.

I pulled up next to them. Climbing down I said, 'Nice motor.'

Jimmy informed me, 'We've got one of Big Paul's mates house sitting for a few weeks, till the building work is done. Then ... then I'll be here some of the time, up in town some of the time.'

I lifted my eyebrows theatrically. 'And I'll ... explain it to Judy.'

Jimmy gestured me towards the grass. 'If you're wise you'll stick at it, use the apartment.'

'You make it sound as if I'm not happy.'

‘You’re not, you’d rather have her there when it suits you.’

‘Well...’ I began, not finishing.

Jimmy suggested, ‘You’d rather she could jet off around the world with us when it suits you. In reality, her not being around is keeping it fresh.’

‘We’ve had a few pissy words about Liz.’ Jimmy did not respond. ‘She don’t blame you, but thinks that family life would be good for you and ... there’s only so much I can say to her.’

‘My advice to you is to stick with her, you can meet me in Swindon when necessary, and we’d still do Kenya together most of the time.’

‘Most of the time?’ I queried, not liking the implication.

‘Going to be more to do, we’ll have to split and do more trips each. Be opening a record company in New York soon enough, buying a nice apartment over there.’

‘Nice view of Central Park?’

‘Definitely.’ We walked on.

‘There’s something I want to make clear,’ I said. ‘Just in case it’s not already: I love Judy to bits, but the job comes first.’

‘Why?’ Jimmy asked, surprising me.

‘Why? Because what’s the fuck’s the point of settling with her and having kids if the world goes to fuck?’

‘A good attitude. What else?’

‘What else?’ I gave it some thought as we slowly ambled along. ‘Well, I’m not that keen on the old family bit, not yet.’

‘And if you were, and she would not give up her job? Or even wanted to go back to it after kids?’

‘Me, a house husband?’

‘Perhaps you should think it through. What you have is a girlfriend, and not even a live-in one. If you did, you would have a different attitude. And if you were changing nappies when I was jetting off around the world?’

‘Yeah, well ... that might piss me off a bit.’

Jimmy stopped and faced me. ‘You know what the biggest problem would be? Being out of the loop. At the moment you’re at the centre of things with me. But what if you’re out of contact? What if you sat at home with the kids thinking ... does the tube blow up today? Will that aircraft crash if I take the kids on holiday? I’m afraid I’ve ruined you a bit, because you’ll always want to be on the inside.’ He carefully regarded me. ‘Think

about what you'll feel if I have meeting here, important decisions taken, you in London with Judy. Could you sit at a restaurant with her, not knowing what I'm up to?'

'Well ...' I sighed. 'Probably not.' We walked on.

'Bit of a curse, working for me. But, there is a ray of hope for you. Years from now I'll hire someone to work for me, and you'll both live happily ever after.'

I snapped my head around, a huge smiling talking hold. 'Yeah?'

'Yes, young man.'

Space cadets

A week later we dropped in on the airfield to see how things were progressing. The expensive green fence was up, replacing the previously forlorn offering. A gate had been installed, an overweight guard hired from a local firm, and the gatehouse was coming along. It turned out that the expensive fence extended simply around the parts of the airfield accessible by the public. The adjoining muddy fields had not yet been fenced off, so we were safe unless the burglars had wellies. Just inside the main gate, on the left, stood a wooden building with a badge on it.

'What's that?' I asked, pointing at it.

'Local air cadets,' Jimmy explained. 'Gave them a new hut and access to the airfield. I gave some of the local pilots a few quid for fuel, they take the teenagers up.'

'Nice of us. Very ... public spirited.'

'Cadets grow up.'

'Ah.'

We drove in, and to the air traffic control tower. It had received a lick of paint and new glass, metal bars over the windows at ground level. Our young architect was stood waiting. He had been faxing so many pictures I now called him Rolf, short for Rolf Harris.

'Right Rolf?' I greeted him.

Rolf smiled and shook our hands. He unlocked the door and led us upstairs, the building's inside reminiscent of Mawlini. In

the bare tower, walled with glass, he timidly pointed out various parts of the project, not much of a public speaker.

A long muddy trench was water and gas, soon to be ready. A fenced off area beyond the space cadets looked like a giant flattened hedgehog; the upright poles markers for the building of the leisure centre. West of the tower were muddy foundations for the first admin building. It would sink half a storey, then rise two storeys with a flat roof, and be below the eye level that we now stood at. The aircraft hangars had been inspected by men with ropes and helmets, no problems found. Part of the apron was now displaying signs of a facelift, cracks dug up and filled in with concrete. And so far that was just about it.

‘These things take time,’ Rolf timidly explained, being very apologetic.

Two RAF types in blue uniforms took me by surprise as they pulled up. Jimmy waved at them, gesturing them up to us.

‘Wing Commander,’ Jimmy said as he shook the hand of the first man, ‘Wing Commander,’ to the second man.

‘That keeps it simple,’ I commented, shaking their hands.

The first man said, ‘I’m a fake, he’s the real thing.’

‘A ... fake?’

‘Air cadets,’ the man explained. ‘Wing Commander Russell here is from Lyneham.’

‘Oh,’ I said, no idea where Lyneham was.

Jimmy took charge. ‘Gentlemen. Next week we’ll take delivery of a Toucano two seat trainer.’ An image of the plane came to mind. ‘One of the men here, an amateur pilot, is familiar with them, and the local aircraft mechanics will keep it flying. It can then be used twice a month for thirty-minute joy flights. You’ll have a budget, the guy looking after it will ration the fuel. As for the glorious RAF, you’ll have permission to use the airfield with one day’s notice to the gate security people.’

I was looking lost.

Jimmy explained, ‘I was ... long ago, an air cadet.’

‘Ah,’ I said. ‘They’d have a hard fucking time finding a uniform for you now!’

The men in blue laughed.

Jimmy continued, ‘The RAF Hercules pilots like to practice at small airfields that they’re not familiar with. They land, troops pour out shouting “bang”, they get back in and fly off. You can

cross-train onto the Toucano and take up some cadets if you like.'

'You fly?' the men asked.

I nodded. 'Cessna 172.'

The RAF officer asked, 'Can anyone else use the Toucano?'

Jimmy made a face. 'Sure. Pay half the fuel, don't crash it, and try and double up with a cadet if you can.' He slid his gaze across to me. 'Toucano is an aerobatic bird, you can throw it around a lot. I guess some of the Hercules pilots would like to let their hair down.'

We diligently inspected several muddy holes in the ground, getting our shoes wet on the damp grass, chatted to the aircraft owners, then discussed a few plans and building layouts before we left.

As we drove off, Jimmy explained, 'In years to come we'll have a need for friendly Hercules pilots. This gets my name known.'

On the radio we listened intently to news about Yugoslavia. The war had begun, Jimmy shaking his head a lot and cursing under his breath. 'When The Brotherhood rises, Serbia will be our greatest ally, holding the Balkans against the Muslims. And in the mean time we're going to liberate Bosnia and Kosovo, who turn against us. And *Kosovo* will take us to within an inch of Word War Three.'

Liz became less of a frequent visitor, not much in the smiley face department these days. There was no official break-up, but I guess the new house was a subtle hint; when the man in your life buys a house 160 miles away you get the message loud and clear. Judy had the odd sulk about Liz and they often met up for lunch, obviously gossiping about us, but we plodded onwards with our relationship.

I drove Judy down to the new house one Saturday and met Big Paul's mate, ending up staying the night. It was a bit chilly and we could not figure out the heating controls, and there was no food in the place. Big Paul's mate, Ricky, went out for a take-away and the three of us sat wrapped up in the lounge making a mess. Judy loved the house and the grounds, but the trip was a mistake, her mind now on country houses snuggled up with me. We soon had "that talk", the one where "the future" is brought

up. She mentioned nice houses and kids, I mentioned travelling the world. We left it up in the air, and I realised that I was being evasive. I also realised that Jimmy was correct; there was no way in hell I was giving this up, or being on the outside.

One day, with nothing much doing, I read The Economist, focusing on a “hold” recommendation from an eminently qualified chap; Norwich Union would go sideways with very little volatility for the next year. He described it as “dull”, but with a good dividend paid. I was feeling mischievous.

I called McKinleys and bought five thousand call options. It was not a huge trade, but I rarely traded options. When the guys there asked what I thought the stock would do I was deliberately evasive. As soon as the phone hit the receiver I hit a button in the computer, faxes sent to fifteen recipients of our tips: “buy Norwich Union in next few hours, news may break in morning.” With a wicked smile I sat there watching the NU ticker change colour from red to blue. It was 240pence when I bought the options, now it nudged 250pence, a nice little jump for a dull stock. I made a coffee, glanced out of the window, then settled back behind the computer. 275pence, 278pence, 279pence.

An hour later it was 310pence and my options had made me thirty thousand pounds. I sold them in two blocks, the second lot at 320pence. With a grin I called up Reuters on the screen, surprised to see a story about Norwich Union: “NU deny merger with Aviva, admit talks.” I was gob-smacked, I had no idea. I had simply picked the stock to piss off the journalist, I had no idea they were in talks. The phone rang.

‘Thanks Paul, owe you one. Aviva say they wont go above 280pence.’

‘Well, you know, this’ll drag on and on,’ I waffled.

‘Thanks again, mate.’ That call was repeated half a dozen times.

When Jimmy and Big Paul returned I relayed what I had done. Jimmy rolled up The Economist and beat me about the head with it at length. He was not mad at what I had done, but that I had made so little money out of it. It taught me a lesson. Not how chunky the Economist was when rolled up, but how much influence we had. And I was certain MI5 were listening in, they and their mates in the city copying our trades.

Oliver from Pineapple popped around the next day, a director's board meeting held in our lounge.

'I think we need a New York office,' Jimmy kicked off with. 'Just a small office, start small and work up.'

'Could give some of the artists an American exposure,' Oliver enthused.

'And I'd find budding American artists,' Jimmy casually mentioned.

'You've got a knack for it,' Oliver admitted. He handed over the latest figures, clearly showing that the company was cash rich, a surplus of five million, two million of which related to director's loans into the business.

Jimmy scanned the figures. Easing back he said to Oliver, 'How'd you feel about a few months stateside?'

'A few months? Wife might divorce me.'

'How about ... a week at a time? Three weeks here, one there till it's up and running?' Jimmy asked.

'Well, as you know we're growing and busy...'

'Your assistant seems good.'

'Yes, she can cover when I'm not about.'

'Oliver, let me put it this way. If *she* wants to go to New York, and that operation ends up making more money, a few years from now she may be MD of the group. Do you want to take that chance?'

I was surprised at Jimmy, he was not normally so ruthless. I put in, 'What would your wife say to a year in New York?'

'She'd probably love it, we did a weekend there.'

'She's an architect, yes?' Jimmy nudged, getting back a nod. 'Does her firm have an office there?'

'They do.'

Jimmy said, 'Then, Oliver, you have a conversation ... to have. If you go, you get pay and half, plus living costs. With the money you've already made you should be living the life out there.'

'I guess I'd better have that conversation, since you seem quite ... *certain* of things.'

'In the meantime I want you on a plane, find an office and a company that can hire people. My solicitors have a presence in The Big Apple, so no problems there. There's no particular

budget, and we'll be popping over soon to buy an apartment or two. Use company money to buy an apartment, budget six hundred thousand dollars – that's four hundred grand.'

Oliver made a note. We were going international.

MI5

It had been a while since Jimmy had offered to be helpful to Sykes. No senior staff had popped around, but Jack sometimes had a small list of questions. Now Jimmy said it was time to lock horns with the "nice gentlemen" at MI5. Jimmy rang Jack and was put through to Sykes, asking that a meeting be set-up as soon as possible. I found it odd that they had made no direct approach and left us to do our own thing, Jimmy suggesting that they would always be a pain in the arse.

We headed for the MOD building on a bright Tuesday morning, Jack meeting us outside and walking us in. He was still in the basement, but now by choice. We were led into a large room on the third floor, humming wands checking us for bugs, a quick frisk given.

'I had a shower,' I told the man checking me. 'I'm clean. Still wet behind the ears mind you, but clean.'

Five senior men and one woman sat around a half-circle table, Sykes off to one side with Jack, two chairs laid out for us in front.

When Jimmy saw them he laughed. 'For the condemned,' he told me. We moved the chairs forwards so that we were sat at their table, getting back indignant looks.

'No coffee?' I grumbled.

'No,' came back from the senior man.

Jimmy did the introductions, right to left. 'Louise Kennedy, Bob Smoot, Paul Anderson, Steve Richey, Kanalf Rasmusen and finally Biddy Tucker.'

Our new friends were most put out, glances made toward Sykes.

'I told you,' Sykes pointed out to them without even looking up.

Kanalf offered, in a posh English accent, 'You pronounce my name better than this lot.'

Jimmy gave him a long sentence in Danish, impressing the man.

'What is it, exactly, that you want, Mister Silo?' Smoat testily enquired.

'First, *your* resignation.'

We were off to a good start. I had images of prison, and I only asked for coffee.

'Why?' Sykes loudly asked, suddenly very keen.

'An MI6 officer was shot and badly wounded a few years back, Tower Bridge Hotel.'

'What?' Sykes barked, on his feet. He pointed at the accused. 'What was *his* connection?'

'His gave the wrong intel' to Hamster the hapless gunman,' Jimmy told Sykes. Smoat was screwed, his face betraying that. 'And Hamster is in Cape Town as we speak.'

Sykes closed on Smoat, his mobile phone out. 'Get out,' he whispered with venom towards Smoat, the others staring at their colleague. Smoat stormed out, a glance towards us, Sykes following him out with his phone to his ear.

'So, how about that coffee then?' I asked, wishing to break the tension. Drinks were ordered, but I could have done with something stronger than coffee.

When Sykes returned he confronted Jimmy, 'You could have told us that before!'

Calmly, Jimmy replied, 'And I told you that I would answer questions, which you have not really presented yet. Have you?'

'Now we will, including who's got my favourite stapler,' Sykes threatened as he sat. Our hosts composed themselves, uneasy looks exchanged.

'So,' Jimmy began. 'Any ... questions for me?'

Sykes piped up with, 'Any more of these dirty?'

'Not in a way you'd like,' Jimmy responded. 'Although someone here will be arrested by the Yanks in a few years, for what they did last year.' Our five hosts glanced at each other. 'Of course, I could stop that.'

'How ... would you stop it?' Sykes asked.

'The Americans trust Magestic, I could ask a favour.'

'You deal closely with the CIA?' Anderson asked.

‘I don’t, my counterparts do. So ... questions?’

‘Let’s start with the obvious one - why are you here?’ Anderson asked.

‘Quite simple really: to accelerate a process. Magestic wants things moved along. He feels ... that some *small acorns* are growing, and are best dealt with now.’

‘Such as?’ Anderson asked.

‘That’s not how this will work; Magestic himself will tip you the important stuff, I will answer specific questions. If I know the answer, then it’s because *you* ... are supposed to know the answer.’

Anderson eased back and glanced at his colleagues. He held his hands wide. ‘IRA boss Kelvin, can he be trusted?’

‘Yes, they want peace.’

‘Shamus Callum?’ he added.

‘No, he’ll break away and form his own group.’

The lady asked, ‘Would a future labour government scrap trident?’

‘No.’

That seemed to interest her. She eased forwards and rested on her elbows. ‘Michael James Stannah.’ Two of her colleagues seemed quite put out by the question.

‘He still cares about you, and *no* ... he did not tell the CIA about your op’ as was widely believed. You colleagues led you to believe that because *they* wanted to shag you.’

She lowered her head for a moment. I guessed some recriminations were in order.

Anderson cleared his throat and asked, ‘Islamic threat?’

‘When India and Pakistan go to war their various populations here will attack each other for ... oh, about a week, then turn on the police. Marshall law will be declared, reservists called up, economy fucked, quarter million dead.’

‘And all this happens...?’ Anderson nudged.

‘At a point when *small acorns* have grown into big fucking problems, one of the main ones being the uncontrolled immigration of Muslims into this country. When the crisis hits there will be two million Muslims living here, many calling for Sharia Law and their own mini societies. In the meantime, anything you can do to stem that tide will reduce the number of coppers eventually killed on the streets of Bradford.’

Anderson asked, 'Magestic mentioned a global conflict in one of his letters.'

'Cause and effect: small acorns, tall trees. If the acorns are nipped in the bud – no pun intended - no tall trees, no World War Three. The first, and principle trigger is Pakistan. As is the second, third, fourth ... and fifth.'

'Pakistan is the key?' Sykes asked.

'Yes. Everything comes back to Pakistan; nuclear armed, at odds with India, integrated into the UK, yet Islamic and with a lawless border with Afghanistan.'

'Afghanistan?' the lady puzzled.

'As we sit here and chat, the vacuum in Afghanistan is sucking in many and disparate Islamic groups, who will sit and plot around the camp fire before heading to the west to blow themselves up ... and thereby getting their place in paradise with their thirty-seven virgins.'

'I thought it was twenty-three,' Sykes put in.

'That was before the oil crisis in the seventies. It's gone up with inflation.'

I laughed. I liked that one. Even Sykes seemed to possess a reluctant smile.

'Masterson Biotec, Doctor Hedges,' Anderson asked after a measured pause.

'Working for a *friendly* country.'

'Israel?' Anderson nudged.

'You might think that, I could not possibly comment.'

'Practicality of bio-weapons?' Anderson asked.

'Very low, not used.'

'What has Saddam Hussein got?' Anderson asked.

'Anthrax, chemicals, crude bio-weapons, nothing nuclear.'

'Chemical launch capability?' Anderson pressed.

'Yes, tried and tested on his Scuds. Could hit Israel easily enough.'

'North Korea?' Anderson asked.

'What about it?' Jimmy countered.

'Will they attack south?' Sykes put in.

'No.'

'Will they develop nuclear weapons?' Sykes asked.

'Yes, beavering away as we speak. They'll have half a dozen by 2010.' That caused a reaction, Sykes taking notes.

‘Will the Iranians develop nuclear weapons?’ Anderson asked.

‘Yes, they’ll use them against Israel.’

Our hosts were momentarily shocked, but also looked sceptical.

‘When?’ Anderson asked.

‘Again, cause and effect. Most likely, 2013.’ They still looked sceptical.

‘Are the Israelis aware of that?’ the lady asked.

‘Yes, my counterpart informs them of everything they need to know to stop it.’

‘It?’ Sykes queried.

Jimmy turned his head toward Sykes. ‘Driven in, not fired on a missile. Sneak attack.’ They looked even more sceptical.

‘I have a question,’ I asked. ‘Why don’t this lot *really* want your help?’

Jimmy turned to me. ‘Like Mister Sykes, they fear becoming less valuable. They are also fearful of being used by some unscrupulous operator like myself, a wise defence mechanism for those employed to be suspicious.’

‘Oh,’ I let out. ‘I’d be tempted to tell them to fuck off, but then the world goes to shit, so I won’t. I’ll just sit here.’

Kanalf finally asked, ‘Any future Russian threat?’

‘Some, of a kind. You’ll end up hosting a lot of people in London that they don’t like, for no reason other than nostalgia for the cold war, and the FSB will send agents to London to kill some of them.’

‘F – S – B?’ Sykes asked.

‘The KGB becomes FSB in Russia. Very soon.’

‘You know each assassination attempt?’ Sykes asked.

‘Yes, of course. I’m quite the helpful little fucker.’

Sykes shot him a look.

‘What was your purpose in coming here?’ Kanalf asked.

‘To get you ... *fine people* on the right track.’

‘Which is?’ Kanalf pressed.

I piped up, ‘Something about gift horses comes to mind.’

‘We are ... employed to be suspicious people,’ Kanalf pointed out, repeating Jimmy’s phrase.

Jimmy explained, ‘My purpose will be served if you send someone with questions and I answer them. You do not need to

believe the answers, nor trust or like my good self, you need only investigate the possibilities of the answers ... and save a few lives.' We stood. 'You may discuss, argue, debate and chat about me, but you will *never* ... fucking ignore me. Because if I don't start to see the kind of results I desire, I'll start replacing each and every one of you. And for the record, Mister Sykes, I have dirt on them all – not to mention the world's most precious bargaining chip: Mister Magestic. If you don't co-operate in helping yourselves, he'll ask the Prime Minister as to why.'

I put in, 'And for super spies ... you don't even know what type of coffee I like. So there.' We left with Jack, and I considered our nations super spies to be just an ordinary bunch of people, working in an office with office politics, packed lunches and tubes home, the same problems as anyone else. I also considered that Jimmy spoke to them like children, that he was really the one in charge and somehow disappointed with them, and I knew that feeling of fatherly disappointment.

The next day the Inland Revenue turned up at our accountants and asked for a copy of our accounts, a special investigation initiated. The lead man found a box waiting for him at reception, his name clearly labelled, and found our accounts inside. They had already been scrutinized at length by experts in tax law and we had made sure that there was at least ten grand's worth of bits in them that we had not claimed for.

Right from the start we had created limited companies to handle many things, especially the hotels in Kenya. A management company then controlled the limited companies and tied them all together. Our stock trading was a taxman's nightmare because we only paid Capital Gains Tax on what we earned, and that was on what money came back to us once the initial investment had been deducted. I had received a half million pound loan from Jimmy, paid back at five percent over twenty-five years; there was no tax due until I had withdrawn at least that amount. Most of the cash remained in the trading accounts, only of interest to the accountants and taxmen when we took it out. I had fifty thousand in my private account and five million in my trading account, nothing the tax man could do till I paid myself the profits above my loan. Those profits filtered through my limited company, which made large, tax-free charitable donations.

The Revenue scanned our books at length and admitted that they did, in fact, owe us money, but that we would have to submit a claim for it, which we didn't. They asked to see the trading accounts and records, but our solicitors successfully argued the case: we were taxed on profits, not daily transactions or some theoretical potential tied up in stocks that could plummet tomorrow.

As the Revenue were busy trying to find fault with our accountants number crunching, we were also busy at work. By time the Revenue had given up, twelve amateur magicians had changed their names to Magestic, in addition to three amateur clairvoyants in Bournemouth, Brighton and Blackpool beachfronts. This trio also seemed to predict global events with some certainty and enjoyed some success, not just the future fortunes of girls on a hen weekend.

Jack came straight around to see us. 'It would appear that "Magestic" is becoming a popular name with amateur psychics, especially those living in caravans.'

'Really?' I made a face and shrugged. 'Can't think why.'

Jimmy made a face and shrugged. 'Nothing to do with us.'

'The net effect ... is a lot of wasted time by *those* who might wish to investigate these matters,' Jack noted.

'Really?' I asked. 'Bugger.'

'There also seems to be many in Europe and the States,' Jack added.

I said, 'When it becomes a popular boys name, then we'll worry.'

'Might I ask ... as to why the smoke screen?' Jack nudged.

'Why does anyone need a smoke screen?' Jimmy toyed.

I told Jack, 'I wouldn't spend too much time on it Jack, you might... waste a lot of time and end up looking like a pillock.'

'And we wouldn't want that,' Jimmy added. 'We don't mind *others* looking like pillocks, but not you.'

Jack gave it some thought. 'Anyone making any serious claims about Magestic now, would look quite foolish.' He turned to me. '*I'm Magestic, and so's my wife!*'

I pointed directly at him. 'Monty Python, Life of Brian!'

Jack smiled widely and nodded. 'I made that joke earlier to Sykes, he liked it. We'll see how it grows. Oh, and the joke

about the number of virgins waiting in paradise for an Islamic martyr? Sykes has adapted that one as his own.'

Jimmy said, 'Plagiarism is the greatest form of compliment.'

Kenyan Rifles, 1992

We landed back in Nairobi in January, 1992, into a rain storm. Still, it washed down the dusty streets. We set off toward the coast in a very nice hire car, a large jeep, the sun burning off the surface water as we progressed. On the access road to our hotel we pulled over and got out.

The land either side of the road had been stripped of scrub, old huts and any junk. There stretched out two huge brown fields, almost a mile square, on either side of the road. Despite the lack of green grass I could discern the layout of the golf course, numerous muddy ponds nestling next to gentle mounds. In the middle of the mud stood a half built hotel, its size quite a shock. I had seen its drawings, faxed to us, but they had not clearly illustrated its size in my mind. The opposite side of the road displayed little more than a fence under construction, but also now offered several muddy lakes. This would be a small zoo, for visitors to get close to animals, especially orphaned youngsters. We drove on.

The hotels' main gate, and its security, were now both imposing and proficient; smartly dressed guards that appeared alert, a welcome issued. Reception was buzzing with guests coming and going, a local woman in a red jacket sat at a desk and busily selling the guests local tours. We queued up and booked in as if paying customers, although our credit card details were not necessary. With the new two-storey block finished we had decided to try it, us and our luggage now driven there in a golf buggy. Our rooms were on the second floor, small but tastefully decorated, and offered a balcony. Both of us stepped out onto the balcony at the same time, taking in the view.

'Nice enough,' Jimmy commented. 'I've asked them to raise the prices a bit as well, we're over subscribed.'

'They don't do locals any more,' I mentioned. We exchanged looks, shrugs issued.

‘It’s here to make a few quid,’ Jimmy commented.

To the sound of kids screaming on the beach, we strolled down to the dive centre, finding it full of people sat around the café area.

‘Jimmy!’ came a shout, and we closed in on two men from McKinleys, sat now with their wives. They greeted us warmly. And why not, their stay here was free, two places given every month to McKinleys. We sat and chatted for ten minutes; the two couples had stayed at the safari lodge first and loved it to bits, everyone in earshot getting a nudge to visit it, a ringing endorsement issued.

With Jimmy chatting to Germans, I inspected the new showers and the kit assembly room. ‘Wake up ya lazy fuckers,’ I said, Steffan and Lotti greeting me like a friend, and not their boss. ‘Wie Geht’s?’

‘Gute, yah. Sie?’

‘Same old money making machine. How’s the turtle?’

‘Good for the tourists, but a pain in the arse,’ Steffan explained in his accented voice. ‘It comes ashore at night and people call reception, worried about the fucking thing.’

‘Paint a sign on it: return me to ocean!’

‘And the younger elephant thinks it’s a fucking fish, always swimming towards Australia; every week a rescue to get the damn thing back in. The guests, they worry for it. One man, he tried to sit on its back in the water, nearly drowned the damn thing. Oh, we have a friendly shark now.’

‘A shark?’

‘It comes in most days, just at the outer breakwater, not so big but good for the divers. We feed it.’

‘If you feed it, it’ll crawl up the beach and want feeding every day!’

‘You’ll play golf here when its finished?’ Lotti asked.

‘Never played golf, but probably give it a go,’ I replied. ‘How’s the boat?’

‘Too small; six, maybe eight people sometimes.’

‘Get a bigger one, I’ll authorise it. Have them build a wooden jetty, land the boat there. When it’s not being used for diving offer up some fishing trips on it.’

‘I’ll talk with Rudd, he’s here tonight I think.’

I gave them a regal wave. 'Carry on, underlings.' I re-joined Jimmy and we jumped onto a golf buggy, following a track under the trees, past reception and towards the second hotel. Our fence had been extended around it and their dividing fence torn down. Large gates gave us access to their side and we powered through doing at least six miles per hour, a wave from a guard. Their grounds were being ripped up something savage, but at least the work was out of view of guests from our side. Many local men hacked at bushes and tree stumps, overseen by a young white manager. We stopped by the pool, waving the man over.

'I'm the owner,' Jimmy told him.

'Ah, I'm from the construction company for the golf course, we are doing both projects.' He gestured towards the empty pool. 'We have drained the water to the sea, now we make good the tiles and a new filter.' To me he sounded South African, but many white locals sounded like that to me.

'Extend the grass,' Jimmy ordered. 'From the hotel right to the fence and the sea, everywhere nice grass to walk on.'

The man nodded. 'The building is hard work, old concrete. Some walls must come down and we start again.'

'Take your time, do it right. Now, show us the roof.'

The man led us through the hotel, wires hanging out everywhere, bags of concrete lying about. The lifts were still working, taking us to the top floor, finally taking the stairs to a flat roof. I could immediately see the potential.

Jimmy ordered, 'I want a bar here, good quality, with food served. And some toilets.'

'It makes for a good view,' the man agreed. We all stepped to the seaward side and peered down, the wall waist high.

I said, 'Put up a small wire fence, stop people falling over when they're drunk.'

'Definitely,' Jimmy agreed with emphasis.

We stepped across to the golf course side, a commanding view offered of our new project. Many trees had already been trimmed or cut down, the area backing the hotel previously overgrown and untended. Now there would be an almost uninterrupted area of grass to the golf hotel, tracks for golf buggies. And the golf hotel looked even bigger from our viewpoint. Two hundred rooms. Shit!

‘We ever going to fill that place?’ I asked, some concern in my voice.

‘With good marketing, yes,’ Jimmy confidently stated.

The works manager put in, ‘The other man, Rudd, he has begun an advance membership, already two hundred people in the list.’

That surprised me. ‘Locals?’

‘Yes,’ the manager answered. ‘Here, if you want to do business you must be a member of the best golf course. It’s how you meet people. This will be the biggest and the best around Mombassa, and you have the hotels and the beach, soon the zoo. Everyone will want to be here.’

I was upbeat about our large and expensive complex as we headed back, a late afternoon swim on the cards.

That evening I was surprised when I walked into the restaurant, the bustle was not something I was used to down here. It was not too busy, no fighting queues at the salad cart, but the place buzzed. I spotted Jimmy and Rudd sat at a table, but got waylaid by the McKinleys group. As I broke free from them a call came, ‘Paul?’ I closed in on a black singer from Pineapple. ‘How you doing, mate?’ I offered, shaking the man’s hand. ‘How long you been here?’ His two lady guests smiled up at me.

‘Third day here, we were up at the safari lodge,’ he said in strong London accent.

‘Like it?’

‘The girls loved the cubs, but I like the elephants; *massive* man! But lots of flying bugs, man.’

‘It’s Africa,’ I pointed out. ‘You know, jungle, animals. Bugs!’ I finally made it to Jimmy and Rudd. ‘Full house in here.’

‘Yah, fully booked,’ Rudd reported. ‘Most from London, your magazine advertises the hotel.’

‘Seems to be working,’ I approved, accepting a beer from a waiter. ‘And you’ve been busy with golf memberships.’

‘Yah, soon full - everyone here wants to show off. And it is not cheap. I have the picture, from the artist, of the hotel. I put it in many magazines for golf in Africa. A lot of politicians are on the list.’

I made eye contact with Jimmy, a sly grin curling one end of my lips.

‘It’s nice to be connected,’ Jimmy softly stated.

‘How’s the orphanage?’ I knowingly enquired.

Rudd lifted his eyebrows theatrically. ‘Six hundred children: more teachers, more classrooms. The schools minister has visited twice, and local TV. They want money to go to other orphanages, they don’t understand why people give money to this place. Now buildings for almost a thousand children, and the local officials scratch their heads and their arses. It is the largest employer for the town here.’

‘Wow?’ I let out.

‘Some people from here, they go to the orphanage when they hear about it, but they give no money. They say it’s so clean and so big, it’s not like they expect.’

I laughed. ‘We’ll have to buy some rags for the kids and sit them outside.’

Rudd explained, ‘That’s what other orphanages are like, so the problem with the politicians. Two local orphanages have closed down, all children moved here.’

The next morning we set off for a quick visit to the “orphanage on steroids”. The farmland looked busy, many neat rows of vegetables, numerous pens for animals, Rudd having explained that surplus food at the hotel was brought here, leftovers for the animals, and that the orphanage now sold some food back to the hotel.

We drove into a new parking area and jumped out into the oppressive heat. The courtyard bustled with kids stood in neat rows, walking in one direction or another with military precision, all in their neat blue uniforms. Anna greeted us in the office, the room now well decorated and air conditioned, and she keenly showed us the hospital ward, no longer the “terminal” ward. Sickly kids were greeted and waved at, a few words exchanged. Two new nurses stood ready to take questions and we made like Prince Charles at the opening of a new hospital wing in the UK. Finally we climbed the stairs to the roof and took in the small town that was once a swamp.

‘Fucking hell,’ I let out, an uneasy glance toward Jimmy. Stretching away in front of me were ten buildings, all looking like barrack blocks, the foundations for even more stretching out behind. The orphanage now covered an area the size of six football fields. I blew out and faced Anna. ‘So, see anything of Cosy?’

‘Yes,’ she smiled, holding up her hand and showing off a sparkler on her finger.

‘Fast mover, our Cosy,’ I quipped.

Jimmy said, ‘Wedding in the spring, at the hotel, we’re invited.’

‘Where’s the old bat?’ I enquired.

Anna stopped smiling. ‘She is not well.’ I held my gaze on Jimmy, Anna noticing. ‘No, she will not have the blood, she will die.’

‘Why?’ I puzzled, finally finding some concern for the old bat.

Anna shrugged. ‘She says that she wants to go now.’

Jimmy focused on me. ‘And we *always* respect others wishes, especially about the time of their death.’

‘Who’ll run this place?’ I asked.

‘I will,’ Anna said. ‘I have now the license from the government.’

‘Got any experience of large military bases?’ I asked with a smile. Then I stopped smiling and frowned down at the roof, slowly turning around. In front of me was a large military camp, stuffed full of loyal kids brought back from the dead. Something Jimmy had said to me suddenly registered, something about raising an army that would sweep across Africa.

‘Kids ... grow up,’ Jimmy enigmatically stated.

‘Shit...’

Jimmy called, ‘Anna, I want the older children taught first aid and biology. I want a running track and games field created so that all the children can compete and have fun.’

I glanced at them both. ‘Somehow ... I think the school will produce some very good athletes.’ For the first time I noticed the orphanages name on a sign: Ebede. Jimmy explained it was ancient pre-Egyptian for “creator”.

With the strong sun keeping the hotel guests in the shade, we hit the water that afternoon, diving off the beach and finding the shark, hand feeding the friendly six-footer. That evening the hotel organised its regular barbeque on the beach, our man singing for the guests with his two backing ladies. Damn turtle clambered up the sand to see what was up and guests fed it lettuce from their burgers.

In the morning Rudd followed us to the safari lodge, Jimmy leading the way and shaving some time off the normal journey. We navigated first toward the new lodge, now almost complete, a new sturdy wooden bridge spanning the river at a narrow point. Passing local workers, we climbed the stairs to the roof bar.

‘Coming along,’ I approved, taking in the view. The first lodge was just about visible a mile away, the river meandering towards it. Below us, two hundred yards away, the river splashed off giant smooth rocks. ‘Much better view,’ I agreed. Turning full circle I appreciated the panoramic effect; the guests would be happy, and I found myself wishing Judy was here to see it.

Skids climbed up and greeted us. ‘Don’t you two ever have any work to do?’

Rudd was not about, Jimmy beckoning Skids to a confidential distance. All of a sudden the big guy had his poker face on. ‘Mossad agents will meet you in Nairobi next week, they’ve got a full brief.’ I was surprised, not aware of the subject matter. ‘You’ll be going into Sudan as oil engineers, so read the book first.’ Skids nodded conspiratorially. ‘If you get the main man there’s a hundred grand each.’

‘Important fella, is he?’

‘He could well be. His name is Osama Bin Laden, a Saudi with a few quid. And I want a loud bang; no one near him survives. Spray it thick. Oh, and this is not sanctioned from above, so not a word to anyone outside the group. Ever.’

‘What’s this raghead do for a living?’ Skids asked.

‘Sets off bombs on buses and trains.’

‘Not for much longer,’ Skids promised, a glance at me as he left us.

‘You mentioned Bin Laden before, to the Israelis,’ I prompted.

‘He starts the organisation, Al-Qa’eda.’

‘Ah, forerunner to The Brotherhood,’ I realised. ‘Will they get him?’

‘Let’s hope so.’

An hour later Jimmy was wrestling a growing lion cub, now the size of a Labrador; it seemed to remember him. The Cheetahs roamed freely, coming back for food every day, the lion enclosed and limited to the lodge area, not least because it was a bit lacking on the smarts department; when let out, the hapless lion

tended to chase jeeps and run away from Antelope. Damn thing should have been at the beach hotel with the rest of the weird wildlife.

We spent a pleasant evening with the guests, four wealthy couples, one of which was now on honeymoon. The lion cub, named Simba after the cartoon film lion, had its nails clipped by Jimmy, the docile beast doing the rounds and getting patted by all of the guests in turn. It eventually settled on Jimmy's lap. The staff brought out a newborn Cheetah orphan, to be bottle fed by one of the women, Simba restrained when he sniffed it. The evening was all about couples and I missed Judy. I also remembered our last holiday here together; I had gotten a little bored with her, and she'd got a bit pissy with me. I couldn't live with her, nor live without her, it seemed.

The next day we organised our own private safari, Jimmy driving a jeep to an area I had not seen before, a small escarpment with cliffs on one side. It gave us a view towards the border, across a wide valley, and I spotted Giraffe for the first time, the tall beasts absent from our own land. Later, in the midday heat, we spent several hours trying to rescue an orphaned elephant, eventually nudging it back towards its herd. It's mum and dad did not seem pleased with our efforts and we sped away.

Driving along the dusty road that approached Mawlini, we slowed to observe a white UN plane taking off, giant swirls of dust rising in the vortices created by its wingtips.

'Antonov,' I stated.

'AN24,' Jimmy agreed.

Stopping first at Doc Adam's clinic, we knocked and entered, finding the Doc with his hands full. Literally. A new life was about to enter the world, so we left him to it. The gate guards greeted us, looking us over with a professional interest before waving us on.

'I booked us into the hotel,' Jimmy said as we negotiated single storey brick buildings.

'What hotel?' I asked. It loomed into view. 'Oh, yeah, *that* hotel.'

At the hotel's gate we were subjected to another check by another guard, parking next to a line of UN jeeps.

'Best keep those from Rudd,' I suggested as we stepped down. 'He'll have one away.'

The man in question stepped out from the reception of new this two-storey hotel, clipboard in hand, and we followed him into the cool interior, brass ceiling fans working furiously. The reception desk was small, but not unlike any other hotel, a local man handing us two keys.

'They are the best rooms,' Rudd informed us, leading us to the second floor.

We turned the keys on rooms that would have been considered basic in Europe, but for this dustbowl of a base seemed positively luxurious. They offered double beds, air conditioning, clean bathrooms, writing desks and a sofa, plus a small balcony with a view over the dusty airfield. I dumped my bags, scaring a small Gecko on the wall, and inspected Jimmy's room. His balcony viewed the blue and inviting pool below, the outer fence beyond, Rudd leading us to yet another rooftop bar. We found it well attended, a real mixed bag of all sorts sat around white plastic tables. The crowd included UN staff, Red Cross, pilots in flight suits and two Kenyan Army officers in uniform. When we stopped to survey the scene they all glanced our way.

Rudd loudly called, 'Gentlemen, this is Mister Silo.' The Army officers stood up. 'He runs the airfield, owns this hotel and pays for everything.'

'Please,' Jimmy said, waving people down. 'Only stand if you want a free drink.'

With people chuckling, we approached the Army officers first and shook hands.

'How's the training going?' Jimmy enquired.

'Good, good,' the senior man responded in a booming local accent. 'Now twenty recruits.'

'What month of training?' I asked.

'They are in month six,' came back.

'Can they shoot straight?' I teased.

'Oh, yes, they are good with the rifle,' the senior man proudly stated.

'We'll see tomorrow,' I playfully threatened.

We pressed the flesh with the UN staff, all of whom had heard of us - at least had heard of Jimmy, and the Red Cross thanked us for equipment and services that I had no idea we supplied. I chatted to the pilots, two Russians, and surprised them with my basic Russian. Jimmy had them convinced in two minutes that he was Russian, his accent so pure, before buying everyone a drink. The Old Dogs turned up in their khaki green and joined us, cold beers all around.

‘It’s a strange hotel, boss,’ Mac commented. ‘No fucker pays for their room, just food and booze!’

‘Not yet,’ Jimmy told them. ‘In time.’

Mac added, with a sly grin, ‘But the bar *is* the hottest spot for a hundred miles in any direction! Friday-Saturday here is jumping. Local dignitaries love the place, can’t move sometimes.’

Jimmy pointed at Mac’s shirt. ‘I hope you don’t dress like that when they come.’

‘Oh, no, wees got some nice clothes. Wees got some Hawaiian shirts.’ The Old Dogs giggled like teenage boys. ‘Other month there was six UN nurses and two lady doctors up here. The rooms below were well christened.’

‘So, number of recruits on the mines?’ Jimmy enquired.

‘Forty in this batch,’ Mac responded.

‘Medics?’

‘Forty as well in the current batch, but ... well, we do the medical training. Doc Adam is snowed under with damn Somalis.’ They all grumbled in unison.

‘Recruit another doctor or paramedic teacher, leave Doc Adam at the clinic.’

Disgruntled, Rudd put in, ‘He’s paid to be here.’

‘I don’t care, I’m happy with him where he is,’ Jimmy insisted. ‘Right, what about the Army?’

‘Twenty lads doing well, all fit as fuck,’ Mac keenly explained. I figured that he was, at heart, a military man and enjoying training the recruits.

‘Did Doc Adam inoculate them?’ Jimmy asked with a frown.

‘Aye, in the first week - made them all sick for a day,’ Mac confirmed.

Jimmy and I exchanged the briefest of looks. Jimmy asked, ‘Are they good technically?’

‘They take a while, but once they got it they’re sorted. They shoot straight, some real marksman. Fucking Somalis don’t cut the fence any more, that’s for sure.’

‘I want the soldiers pushed, trained in all weapons, especially the AK47. Push them to their limits, no spare time. They drive well?’

‘They all get lessons, pick it up eventually,’ Rabbit put in. ‘Couple are real good, so we got them running errands to the town.’

Jimmy asked, ‘Would you say ... they could be deployed, and trusted not to do more harm than good?’

The Old Dogs glanced at each other.

‘Aye,’ Mac responded. ‘We kicked out two for stealing, some have had a punch in the head. They know what’ll happen if they screw around.’

‘Fine. Recruit another hundred.’

‘A hundred?’ Mac loudly questioned, the Old Dogs sitting up. ‘Jesus. The government approved that?’

‘The document from the government says ... sufficient numbers to defend base and area. Well, it’s a big area.’

The Old Dogs glanced at each other again. Even Rudd was surprised, if not concerned.

Jimmy instructed, ‘Start work on designing a compound for the Army, other side of the field, fence it off. They’ll want a barrack room or two, mess hall, classrooms, motor pool, admin block for officers, a bar of their own and a games room, a running track and a decent assault course. There’s plenty of room over there, so use it.’

Rudd was taking detailed notes as the Old Dogs sat quietly stunned.

Jimmy continued, ‘Once the current batch are trained I want them sent on jungle training, a two week course, and I want a climbing wall made up of concrete so they can practice climbing and rappelling down. Use it for the medics as well, moving injured people over obstacles. Then I want a rotation of four or eight soldiers sent to the safari lodge to teach them all about the animals here, and how to track poachers. When we’re ready I want a permanent eight-man unit on the edge of my property near the border, patrols set-up for poachers. If we’re paying to

train these boys then they can earn their keep. Right, medics: any of them suitable to keep on as instructors?’

‘Aye, Ratchet and Spanner,’ Mac said with a grin.

‘Come again?’ I asked.

‘Bob Ratchet and Jimmy Spaniel. Wees call them Ratchet and Spanner,’ Mac explained. ‘They’re Brits, ex-Army medics. They’s done some work for the UN.’

‘Offer them a job at the end of the course if you think they’re up to it.’ Jimmy turned his head a notch to our overworked Dutchman. ‘I want another building just like this one, basic rooms, for instructors and officers. It’ll be for these three, for Army officers and any new instructors.’

‘How many rooms?’ Rudd queried.

‘Fifty. And move it along.’ He sipped his beer. ‘Right, border fence.’ He pointed into the distance. ‘Somewhere over there is a border fence which, as you know, has not been repaired since Moses wandered past it. I want the Kenyan Government to give us permission to fix it, the section closest to us.’

‘Keep the Somalis out,’ Mac approved.

‘It’ll need patrolling,’ I noted. ‘They’ll cut it down. That’s miles away, out of sight.’

Jimmy glanced at me. ‘Mac, got any soldiers that can drive a jeep and patrol a border?’

‘Aye, couple,’ he approved.

‘The minute you have permission, start a small patrol. Women and children cross, groups of men don’t, men with guns are shot dead on the spot, buried under the spot. You make it clear to the soldiers that anyone with an AK47 strapped across his chest is fair game.’

Rudd piped up, ‘The government may not be happy?’

‘*We* ... are not shooting anyone, the Kenyan Army is,’ Jimmy pointed out. ‘If there is a problem, then first those officers over there will be brought to book, then their commander, then the Defence Minister. It’s their border, their men, their officers. We’re just paying them to do what they want to do, but can’t afford to do. Nothing more. And my reason for not wanting Somalis with AK47s near this base ... is to keep the Kenyan population safe from bandits.’

Rudd eventually nodded his reluctant agreement.

Jimmy eyed the Old Dogs carefully, as if assessing them. ‘Rudd, how much in the account for this place?’

Rudd took a breath and tipped his head. ‘Sixteen million pounds.’ The Old Dogs almost fainted, Rudd adding, ‘It comes in at more than two million a year.’

‘Fucking hell, Jimbo. What bank you robbing? And what yer got planned?’ Mac delicately broached.

I asked Rudd, ‘Have these three old wankers had a bonus lately?’

‘A bonus?’ Rudd queried. ‘No, just their pay.’

‘Give them each twenty thousand,’ I instructed. ‘As a *thank you* for their lack of whinging.’

Jimmy said with a grin, ‘I think that was a subtle hint to just shut up and get on with it.’

‘You just keep on telling us to shut up,’ Mac encouraged.

‘So, how’s Cosy working out?’ Jimmy asked Mac.

‘Aye, fine, he’s a hard worker. He’s good at talking with the UN and Red Cross, gets deals done and kit swapped well enough, flies us places to go get kit.’

‘You’re happy with him?’ Jimmy asked Rudd.

‘Very much so,’ Rudd responded.

‘OK, buy him a Cessna – second hand, then a second Cessna – also second hand, and paint it green, then stick Kenyan Rifles on the side.’

‘Border patrol!’ Mac enthused.

‘I don’t want Cosy doing it very often, just get him to take up the Army officers and show them the border, then ask for an Air Force pilot, pay his wages. Use the pilot for kit runs as well, dropping off UN docs about the place. Within a month we’ll have the Flying Doctor service up here, they’ll station just the one man to start with. So let’s make sure we can house and service three Cessna’s at least, and put a guard on them.’

‘We can use this doc for training?’ Rudd asked.

‘When he’s not busy,’ Jimmy suggested. ‘But with the refugees about ... he’ll probably be busy. Right, any problems?’

The Old Dogs glanced at each other, pulling faces.

‘Right, this meeting is adjourned till the morning. Get some more beers in.’

No sooner had the meeting adjourned than I noticed a UN official enter the rooftop. The greying man, dressed in a blue UN

waistcoat, greeted his own staff, but was clearly fixated with us. He walked over. Jimmy and Rudd stood first, the rest of us following them up and turning around.

‘You must be Mister Silo,’ the UN man stated. ‘Your size precedes you.’ They shook. ‘I’m Bob Davies, UN regional coordinator. I used to keep Rudd in check.’

We glanced at Rudd, the Dutchman now looking sheepish as we pulled up a chair for our guest.

‘Didn’t nick UN kit, did he?’ I teased.

‘We’re still awaiting the return of some items from 1983!’ Bob said with a smile. We all laughed, Rudd a little embarrassed. ‘Still, his heart was always in the right place. The *lost* items went to the poor.’

‘Very Robin Hood,’ I commented.

Bob carefully regarded me and Jimmy. ‘And you two young gentlemen you make millions on the stock markets and give most of it to charity.’ He waited a response.

‘We also live in penthouse apartments and shag lots of pretty girls,’ I mentioned, the Old Dogs laughing. ‘It’s not all hard work.’

‘No, I popped into the beach hotel and your safari park. Very nice.’

‘Not spying on us are you?’ I asked.

‘To a degree,’ Bob admitted with a confident smile, an air of authority about him. ‘Because I have plans for this place.’

‘You do?’ I asked.

‘Before *you* got involved I was busily trying to get the UN to take over this place and make it a forward operating base; it’s the only long runway for a hundred miles in any direction. Your involvement here nudged the UN into using it and finally approving my plan.’

‘*Your* plan?’ I asked, Jimmy none too concerned.

‘The UN has approved my request for a substantial spend here, next year,’ Bob explained.

‘Rabbit has planted next years’ runner beans, you ain’t digging them up!’ I warned, everyone laughing.

‘As you’re aware, this place is owned by the government,’ Bob pointed out, and I was worried. ‘So they’ve granted us permission to proceed. First, some repairs to the runway, landing lights, a fire truck.’

‘Sounds good so far,’ I cautiously approved, the Old Dogs listening intently.

Bob continued, ‘Then a group of warehouses at the far end, an admin office, a motor pool. We’ll use the far end of the runway, stay out of your hair. We’ll need our own gate at that end, get trucks in. And, the UN wants to rent this hotel from you, plus a few other buildings. Plus we’d pay you for food and water delivery.’

‘Sounds reasonable,’ I mentioned. ‘But keep Rudd away from your jeeps.’

Everyone except Rudd laughed, the Dutchman going red.

Jimmy finally spoke. ‘From next year we’ll be able to offer your new staff training courses: first aid, jeep driving, navigation, jungle training courses, and ordinance disposal.’

Bob responded, ‘I’ve already discussed it with the powers that be, and they’re keen. At the moment our staff training is spread far and wide. If it can be done in one place then it benefits us. And the UN would pay toward the courses.’

I was starting to see the benefits of our new symbiotic relationship.

Jimmy carefully stated, ‘We’re not looking to make a profit from you guys.’

‘Obviously, otherwise you would not have created all this,’ Bob pointed out. ‘I also popped into Ebeye orphanage. Quite... quite a lot of money you’ve spent there?’

‘If you have any staff who could help out there...’ Jimmy delicately nudged.

‘I’m sure we could find a nurse or teacher, or two,’ Bob agreed.

‘What’s this orphanage I heard about?’ Mac enquired.

Bob explained, ‘It was a run down AIDS orphanage with about sixty kids in it. Now it’s better decorated than most hotels in Kenya, with *six hundred* kids in it.’

‘Fucking hell, Jimbo,’ Mac let out.

Bob told us, ‘Prime Minister is due to pop down there next week.’

I was quietly concerned. ‘What’s all the fuss about? I thought they’d be happy with us?’

‘They are,’ Bob insisted. ‘But also confused at the rapid growth of it. It’s never been seen before.’

‘I don’t do things in half measures,’ Jimmy softly stated. No one at the table was in any doubt about that. ‘Where you *can* help me, is with a new group I’m going to set-up next year. A small group to start with, but growing rapidly – as you might expect from me. It’ll be called Rescue Force.’

A shiver went up my spine. This was the beginning.

Jimmy continued, ‘It’ll be a group of doctors and medics, but trained like commandos – self sufficient and tough, well kitted. When there’s a disaster somewhere around here, a flood, a famine, a small war, they go in to provide immediate medical assistance. But they need to be tough so that they don’t need rescuing themselves.’

I watched Bob’s curious reaction. There was plenty going on behind those eyes as he slowly started to nod to himself.

‘I’d be interested in seeing your plans on it,’ he said.

‘We’ve just taken over an airfield in the UK,’ I mentioned. ‘Near Swindon. We’re going to use it to train any Brits who want to come out and work in Africa.’

‘When are you in the cold and the rain next?’ Jimmy asked Bob.

‘A month.’

‘Contact us, we’ll meet and show it to you,’ Jimmy offered.

‘It could be used for our UK staff before they fly out?’ Bob asked.

‘Most definitely,’ Jimmy agreed. It was a date, and the start of something bigger than I could have imagined at the time.

The next day we inspected the troops, behaving like royalty, before joining them on the range. I tried the FN SLRs they were firing, a 7.62mm NATO cartridge, quite a kick compared to the American M16. I blasted a target with an AK47, a full magazine, making a sizeable hole in the wooden target. When finished firing we walked forwards, Mac inspecting Jimmy’s “smiley face” shot into the target. Bleeding show-off.

With a magnetic mine detector in hand and earphones on, I tried to find mines in the sandbox, stepping on one with a loud “puff”, a cloud of sand blowing up. Good job it was a dummy. We observed several controlled explosions, and followed by throwing grenades over a wall and ducking. I blew up an orange box.

In a surprising move, Jimmy took Rudd, me and Mac up in the Cessna that Cosy had just landed. I took right seat, confident that Jimmy knew what he was doing, despite the fact that he now told Rudd and Mac that he'd only had two lessons. Lined up on the runway, he started his take off run, and kept going, a gentle acceleration down the length of the runway. With the end of the runway looming, and me holding my breath, he gently eased back on the stick.

'When you have a heavy load, and want to conserve fuel, that's how you take off,' he told me as we climbed gently, turning right towards the border. 'Remember it.'

We reached the border quickly, turning north and following the track that represented the border with Somalia. Peering down at the brown desert we spotted camel herds, a few women walking with children, not much else of interest, returning to the base and circling, giving me an appreciation of the base from the air. Lining up with the runway Jimmy reached the end of the runway at five hundred feet, way too high.

'Let's practice an engine failure,' Jimmy innocently suggested. 'He knocked the engine off.' Silence. We nosed down, now halfway along the runway. The buildings loomed into view, along with the end of the runway. At a steep angle we dived, flaps finally selected. At 100 knots, a fast speed for a Cessna landing, he pulled back and slowed, running parallel to the tarmac in silence, touching down smoothly and halting quickly, a light touch on the breaks. We stopped ten yards from the end of the runway and the start of the sand, Mac and Rudd breathing again. Jimmy started the engine and taxied around to Cosy.

'Nice landing,' Cosy offered as we clambered out. 'How many hours do you have?'

'Years, not hours,' Jimmy corrected him.

And that was the first time I'd seen Jimmy fly. Rudd eventually recovered, Mac not too concerned. On the rooftop bar Rudd grabbed a beer, the Russian pilots complementing us on the landing; after all, they had a ringside seat and little else to do for a few days.

The Kenyan Defence Minister had heard that we were at the base, probably from his officers, and flew up specially to meet us. I was concerned, since this was our first contact with the

government, odd considering all the time we had spent in the country. Seeing the man from the rooftop I tried not to laugh at his uniform, or his baton, his minions trailing behind him. Idi Amin came to mind.

‘Rudd?’ Jimmy called without making eye contact, the three of us peering down at our unscheduled guest. ‘We both know you’re a good liar, and actor, so time to practice a bit.’

Standing, we greeted the Minister and his aides, his officers now tagging along with Mac, hands clasped behind backs. The Minister took in the view, his men pointing out things of interest. Settling about two tables pushed together, we ordered beers for us, and cold drinks for our guests.

‘I have heard much, Mister Silo,’ the Minister boomed. ‘Not least about the orphanage that you have taken under your wing.’

‘We do what little we can,’ Jimmy softly stated.

‘You, sir, are neither *little* in stature, nor generosity.’

I put in, ‘You should see his school pictures. In a line of kids he was as tall as the teacher!’

Everyone laughed, but I wasn’t joking; he was six foot at thirteen.

‘So, Minister, you made a special trip up here to meet us,’ Jimmy nudged. ‘A waste for time for someone as important as yourself to come and see little old me.’

‘You know, I am always weary ... of people who remind me how important I am,’ the Minister boomed. ‘It normally means they are doing something behind my back.’

‘We’re not politicians,’ Jimmy said with a grin.

‘No,’ the Minister agreed. ‘If you were, I would have felt the knife before now.’

‘That’s a cynical view of Kenyan politics,’ Jimmy lightly suggested. ‘I’m sure its all one big happy family.’

The Minister raised a pointed finger. ‘And you know what the police say about crime statistics - most murders are in the family.’

We all laughed.

‘So, *brother*, you must have some questions,’ Jimmy nudged.

‘We are obviously curious about someone who spends so much money in our country, and in such an odd manner. You see, the politicians here have very little to do other than to see

who will be first on your golf course. This leads to idle gossip and speculation.'

In fairness, the guy was coming across as far more intelligent than I first thought when I saw his colourful uniform. But he still reminded me of Idi Amin.

'What would you like to know?' Jimmy posed, seemingly amused by the banter.

'Why don't you tell me something about yourself, and how this all got started.'

'Quite simple, really. I had always fancied a safari lodge of my own, I'm an animal lover, so we came down here on holiday. When we drove past the orphanage we stopped to give some money, just a few dollars, but got talking to the staff. They complained about children with legs blown off from mines around Africa. I wanted to donate some money, and it seemed like a good cause. But I like to get involved with the charities I donate money to.'

I put in, 'That's why, in the UK, we give a lot to the home for fallen women.'

The visitors laughed loudly.

Jimmy continued, 'So I found Rudd here in the phone book and popped along to see him. He was very convincing about the need for Africans to be trained in mine clearance, and not to rely on outsiders. Rudd very kindly drove us up here and introduced us to Mac and his band of merry men, so we donated some money – but also gave some directions as to how we wanted it used. You see, I don't believe in simply handing over my money – I want to see results. When Rudd here stopped working for the UN we decided to give him a job - to make sure that the money that we donated would be properly used.'

The Minister said, 'There are not many people ... who need a full time employee to distribute their charitable donations.'

'As I said, I wanted to make sure the money was used effectively,' Jimmy responded. 'And since then Rudd has asked us to get involved with more and more projects, and we've been happy with the progress.'

'This building, sitting in this base, is quite a ... progression,' the Minister nudged.

'No good asking *me* about stuff like that, Mac here is the ideas man. He convinces us about what would help around here

and I sign the cheques. Personally, I think he and his men go unrecognised from the Kenyan Government over what they have achieved here.'

The Minister carefully regarded Mac. 'And now you help to fund our Army as well.'

Mac said, 'We need the armed men patrolling if we're going to bring in a lot of planes. The UN will move in next year, lots of expensive kit and we're close to the border. More and more Somalis coming over, be a town full of 'em soon.'

'Indeed.' The Minister again focused on Jimmy. 'You do not object to funding our military with charitable funds?'

'If this was any other African country ... I probably would. But your military does not go around starting wars or toppling governments, so I'm happy enough. If there is anything in this region that we could assist you with more?'

The Minister eased back and I could see the grey matter working away. 'We are a poor country, not a very big budget for the military. Less for border patrols, especially here.'

'Mac has asked your permission to fix the border fence near here,' Jimmy said.

'Yes, I have heard, and I am more than happy to see money spent in this area. It is just a little ... irregular for foreigners to repair our borders.'

'I respond to Mac's requests, and if there is a large base here training UN staff and others in mine clearance - then I want them safe. Very safe. Border repairs and patrols would also keep the locals safe - I've built a clinic just outside us here.'

'Yes, I have seen it. A fine building, a keen doctor who talks very highly of you.'

'That's just the money talking,' Jimmy suggested. 'So, anything more I can do to assist the Army in this region?'

'I liked the name, Kenyan Rifles. There was once a Kenyan Rifles, run by the British long ago. Perhaps you could become Colonel-in-Chief, taking them ... under your wing.'

'If you think it will help. How much funding would you like?'

'How much would you like to give?' the Minister countered.

It was like a tennis match, back and forth, the Minister not wanting to put a figure on it.

'I think in terms of men, rather than money. How many men are there, Mac?'

‘About twenty, won’t go far,’ Mac responded, quite the actor and an accomplished liar. ‘Just about protect the toilets.’

Jimmy gave it some thought. ‘Well ... I’ll fund the recruiting of a hundred a year, see how it goes.’ The Minister blinked. ‘What else would you need, Mac?’

‘Barrack rooms, classrooms, some jeeps. Could do with a helicopter or two for the border.’ That was cheeky, we hadn’t agreed any helicopters.

The Minister turned to Mac, but controlled his reaction.

‘Rudd, makes some plans, price it up, let me know the cost. Earmark two million for the first stage.’

The Minister commented, ‘You have deep pockets, Mister Silo.’

‘Long trousers, that’s why.’

The Minister and his men laughed.

Jimmy said, ‘So, Minister, if you provide some officers and instructors Mac can do the rest. But I would like it kept quiet. I don’t won’t to become known for someone funding the Army.’

‘Of course.’

‘There is one thing you can do for me. At the orphanage there are older boys with nothing to do after lessons, how about a Scout movement or Cadet movement for them?’

‘We have a rudimentary Scout movement,’ the Minister explained, seemingly pleased with the idea. ‘I will see what I can do. Now, I have a separate request.’ He eased forwards. ‘Would it be at all possible ... to be *first* to tee-off on the new golf course?’

Jimmy eased forwards as well. Whispering, he said, ‘I think, Minister, if I gave you that honour, your Prime Minister may think we’re planning a military coup together.’ The Minister laughed. Jimmy said, ‘If your boss does not want the first tee-off, it’s yours.’

With just Rudd and Mac remaining we sat back down.

‘Well done,’ Jimmy said. ‘You both get a medal for being sneaky shits.’

Rudd was concerned. ‘Might I know what the long term aim is here?’

Jimmy gave it some thought. ‘I see a lot of money going to African charities, and very little ever gets fixed. We also see a lot of harm caused by small groups of bandits who, for the sake just

a hundred well-trained men, could be swept aside. Then we could get medics into some inaccessible areas. I have my eye on the Congo, sorry ... *Zaire*, and you've both been there. You know as well as I do that we can't send in medics without military cover, and UN cover won't do it – they're not allowed to fire their weapons in anger. Some day, I hope, the Kenyan Rifles – trained, funded and modelled by us – will keep the bandits in the hills busy whilst we send in medics and mine clearance in the valleys below. I don't like mercenaries, they're too expensive, and there's not a single regiment in the whole of Africa that I either feel is trained well enough – or is disciplined enough - to assist us. So we build our own. Because I am not sending our people into places like Mozambique only to be kidnapped, raped and killed.'

'Fucking aye,' Mac approved.

Jimmy faced Rudd and waiting.

'Yah, I see your reasoning. The Army are normally are the ones doing the raping and stealing. And the UN drive shiny tanks with no ammunition.'

'It's no more complicated than that, but we have to proceed quietly.'

Back in the cold and frosty UK, two days later, David Gardener came to see us, hardly time to get the kettle on. He looked concerned.

'In an hour the ... *operation* begins,' he reminded Jimmy. He laid out a map on the coffee table, a street map of Khartoum, and I remember Skids joint mission with Mossad, the detail deliberately kept from me. We had the game on, Big Paul jealous at being left out if it.

A trill sound resulted in David reaching into a pocket, a bulky satellite phone retrieved. He answered it in Hebrew. 'Ten minutes.'

Jimmy pointed out the house in question. It backed onto the White Nile River, a mile north from the centre of town. 'Handy is across the river with a sniper rifle, he's been there all night.'

'Lying Up Position,' Big Paul noted.

The phone trilled again. 'Smoke canisters thrown into the main streets down town,' David reported.

‘Keep the cops busy,’ Big Paul stated, now clearly in combat mode. ‘Diversion.’

David kept the phone to his ear. ‘Smoke at the nearest road junction.’

‘Local diversion,’ Big Paul stated, Jimmy sat quietly.

‘Explosion ... front of house.’

‘Send them towards the sniper,’ Big Paul stated, studying the map intently.

‘Gunfire ... grenades ... building on fire,’ David reported. ‘Sniper at rear firing.’

‘Cut ‘em down,’ Big Paul whispered.

‘Children and women escaping house,’ David reported, Big Paul not commenting. ‘Machine gun fire, small explosion, sniper firing. House now well alight, crowd gathering nearby. Two men in canoe on river ... crossing river ... sniper firing at house –’

‘Covering fire,’ Big Paul stated. ‘And they can’t follow across the river, have to go the long way around.’

‘Canoe across, sniper withdrawing.’

We waited a long thirty minutes, everyone except Jimmy pacing up and down.

The phone went again, causing us to close in. David reported, ‘Team intact, no injuries, at withdrawal point Bravo.’

Jimmy touched the map, a point on the main road south of the city.

That night, close to midnight, we got a call; Cousin Bob had crossed into Hatty’s garden: Skids and company were now in Ethiopia.

The following day David returned. ‘Six male members removed from the charred remains, three identified as Saudis. Two more Saudis in hospital, burnt and critical, two teenage boys killed, plus one woman.’

It was a stark realisation for me; Jimmy would kill if he had to. And if this got out I’d be in prison till I was very old. With the stems inside me I’d live to one hundred and fifty, so it was not a pleasant prospect.

‘Get into that hospital, get names,’ Jimmy told David.

‘Local newspapers suggest that the Saudi King ordered the hit,’ David mentioned.

‘Given Bin Laden’s relationship with the king, not surprising,’ Jimmy responded. ‘Good.’

With David gone I said to Jimmy, 'Women and children?'

'When The Brotherhood gets going, hundreds of millions of women and children will die. Do the maths, and don't dwell on it.' I stared back for a moment. Jimmy added, 'If you could go back to when Hitler was a baby, could you reach into his cot and strangle him – as a cute baby? Well I could.'

It was an awakening for me; the war was getting closer to the front door. On top of that Jimmy suddenly suggested that we should not live at the flat, that he was moving to the new house the next day with Big Paul.

Judy knew about the new house, we'd spent the night there, but I had emphasized the flat below as being mine. Crunch time was looming and I had no idea which way I would turn as far as she was concerned. But that night I packed up a lot of stuff, helping Jimmy to pack up files. The computers would stay so that we could use them when up in London. The next morning we drove off early, two cars piled high with clothes and files. As we drove down the M4 motorway I felt like we were running away and hiding, that there might be a flashing blue light behind us at any second. I was in it now, in it up to my neck. I had supreme confidence in Jimmy, but there was still an odd feeling in my gut that morning.

Big Paul's mate, Ricky, was still in attendance and the new house was warm and welcoming. We made like a chain of ants and unloaded quickly, soon settled in. The smell of cooking dragged me towards the over-sized kitchen, a chef in attendance and the cookers working.

'I'm Cookie,' the chef said with a wave. Well, of course he was. I sat on a stool, soon joined by the others.

Jimmy explained, 'This is Cookie, he now lives here.'

'Live in cook?' I queried.

'And cleaner, with his dear lady wife, Sandra,' Jimmy explained. He faced Cookie. 'Pancakes, Cookie?'

'Sure, Jimmy, give me a minute.'

His wife wandered past with a bundle of clean sheets. At the apartment we had a cleaner that came in most days, and a cook that came when we called, but now there would be a natural progression: live in staff.

'Ricky?' Jimmy called. 'You after a job?'

'Doing what, Jimmy?'

‘Baby sitting this place, full time guard.’

‘Oh. Where’d I live?’

‘Where you are now, no cost, food thrown in,’ Jimmy explained.

‘Where are you now?’ I asked.

‘The outbuildings, up the back,’ Ricky explained. ‘The builders made a nice house out of ‘em.’

Jimmy said, ‘The pay is not what you could get overseas playing toy soldier, but you get a house with no bills - and all meals, so any pay is beer money. You get a car to use as well.’

‘C’mon, mate,’ Big Paul encouraged. ‘Easy number.’

‘Kinda got used to being here,’ Ricky admitted. ‘Wasn’t looking forward to moving out. Yeah, if you want me I’m in.’

‘First job,’ Jimmy began. ‘Go out tomorrow and get two Alsatian pups. You like dogs?’

‘I had Alsatis as a kid,’ Ricky responded. ‘Love them.’

‘Set aside a room for them, buy some wooden kennels,’ Jimmy suggested. ‘Oh, there’ll be another Range Rover here in the morning. Apart from bringing the dogs back, no dogs in the cars ever, or this house.’

‘He means the kind of women you like,’ I suggested.

Ricky laughed. ‘You noticed that as well, eh?’

Pancakes were placed down, a large stack. Yes, I could get used to this. We stuffed our faces with pancakes, followed by warm apple pie and custard for afters, before settling around the fire in the lounge, the TV on in a corner. The sofas here were very similar to those at the apartment and were now laid out around a large coffee table; a new meeting point had been established. Jimmy lifted a map of the local area off the coffee table and told me to study it intently. I started memorising road numbers and street names, areas of Raglan, Monmouth, Chepstow, Newport and Cardiff.

The next day was spent trotting back and forth to a nearby garden centre, many things ordered for delivery. We returned to find two lively Alsatian pups, six months old, darting about the grounds. Rolf the architect turned up late in the day and took us through a few small details that were still outstanding. Big Paul switched the cameras on and checked them, zooming grey images in and out, Ricky and Big Paul setting up a rotor to monitor them when we were in attendance. They would then

alternate night shifts. Ricky had also bought a long brown wax coat and hat for patrolling the grounds. We said he looked like a “tit”, then all bought them, Wellington boots an all. The country gents had arrived.

Cookie and his wife lived in the re-worked attic and I got Sandra to show me around, surprised by how spacious and light the rooms were. They had a long lounge, three bedrooms – one en-suite, and a separate bathroom and kitchen.

‘Kitchen doesn’t look used?’ I noted.

‘Not much, we eat downstairs, saves cleaning two sets.’

It turned out that Cookie was ex-Army, an Army chef. The couple lived-in for free and had all their food covered, which made their modest pay seem a great wage. I liked Cookie and his wife straight away; they had a great sense of humour and were always keen to help.

By the weekend we were settled in and secure; high fences, cameras, two bodyguards and two Alsatians that could seriously pee on a burglar’s shoes and nip at their ankles. By time Judy arrived on Saturday I was settled, not looking forward to “the talk”. I explained to her that I would go back and forth, but she could see how much I liked the place as I showed her around. I guess I was a bit too enthusiastic in the tour, but I wanted her to like it.

‘You talk as if it’s your place,’ she had mentioned several times.

After a nice meal, but with an awkwardness to it, Jimmy sat us both down. ‘OK, let’s cut through the crap and get this sorted,’ he said. I did not particularly want him to interfere, but I was also doing a really crap job of figuring out what I wanted, and how to communicate that effectively. He faced Judy. ‘You know what Paul really wants from you? He wants you to give up your job and follow us around the world.’

Judy was insistent that she would not give up her job and become a kept woman.

‘What if you fell pregnant?’ Jimmy posed. That caught her off guard.

‘Well, that would be different,’ she replied. ‘We’d have to sit down and discuss the future.’

Jimmy faced me. 'And would you give up the travel?' The bugger put me on the spot. 'No, you've already said you won't, and now we have offices in New York.'

Judy got the message loud and clear; I'd not be around even if we had kids. It was an awkward chat, but nothing Jimmy said was untrue. In our room I told her firmly I wanted us to stay together, but as the words left my lips I did not fully believe them. We snuggled up that night, and she drove off in the morning saying she needed space.

That evening we went for a curry in Newport, a lap dance in Cardiff, then hit the clubs. Walking between bars, Jimmy pointed out the place he would buy. It was a run down club next to an equally run down hotel, both now under offer, and would be connected together. It did not look like much at the moment, but they did have a lot of passing trade from the main thoroughfare. On Monday morning we went back to see it, the estate agent showing us around the club. It was surprisingly large inside, and split over three floors. The downstairs even had an old kitchen that looked workable. With Judy not talking to me, and Jimmy busy in Swindon, I got to work; estate agents, solicitors, Rolf the architect and local builders and decorators. Plus a firm that specialised in outfitting bars that gave me a lot of great advice.

I dragged down the owner of our favourite curry house and offered him a franchise; we'd have a curry house inside the club. I offered the man a great deal and he accepted. Po's restaurant staff had relatives in Cardiff and they came around to see the club. They would be taking up residence on the second floor, an area for registered club members.

The top floor would be reserved for VIPs, a door knocked through to the hotel's third floor. The hotel's top floor had twelve rooms to be knocked into six, two turned into self-contained apartments; the four rooms remaining would be decorated to a high standard. The twelve rooms on the next floor down would also be redecorated to a good standard, a large storeroom at the top of the hotel being earmarked as an exclusive bar for guests. We'd even have a small rooftop bar, but I was not optimistic about the weather here. Or the pigeons.

With a focused determination I got everyone working hard, the builders paid time and a half to work at night, in addition to day shifts. Some days I was there at 6.30am and back at

midnight. The structural work took only two weeks, since there was not that much wrong with the place to start with; a few walls knocked through, some blocked up, a few extra doors, a new metal fire escape at the rear, both for the club and the hotel next door. With the heavy work, and the dirty work, done the shop fitters and decorators moved in and the club started to take shape. Soon we had a curry house and a nice Chinese restaurant, the builders scratching their heads as to what the place would be like when finished. It made sense to us: you go into the club, have a few beers, have a curry or Chinese, a dance and a drink. Or you have a curry at the end of the evening. Well, it was Wales, what did these hairy-arsed builders know.

The ground floor was to be the area set aside for non-members, a large dance floor backed by a long bar. Off that main room sat four other rooms: Retro Room would have golden oldies blasting out, Chill Out Room would have no music at all - just seats, The Disco would offer contemporary dance music - yet a few years older than that played in the main area, and finally the Ladies Only Room. That was not a lesbian thing, as Big Paul had asked, but somewhere for women to take a breather away from unwelcome suitors. It would also sell subsidised drinks, so that pretty girls would populate the club without breaking the bank. Jimmy had it all worked out.

The second floor would be the preserve of members only, or selected guests. It was nicely decorated, possessed several chill out rooms - mini wine bars aimed at the older generation, and a room with a dance floor offering older tunes. Its toilets had been decorated to a high standard and included a small shop for any necessities; combs, hair gel, mints, condoms. You could even buy a new shirt or tie if you needed one.

The top floor would be the VIP area, a scaled down version of the members area; a small dance floor plus four smaller rooms, each again resembling wine bars. These rooms offered comfortable sofas, free newspapers, high quality toilets with another shop, hair washing equipment and hair dryers in the ladies toilets. Even the corridors of the top floor had leather sofas. My favourite touch was the internal camera system. Members on the second floor could watch monitors of the lower dance floor, the VIPs on the top floor could glimpse both the

members and the ground floor. And we were ahead of time in making half the rooms Non Smoking.

The grand opening had been well advertised in advance, but we organised a “soft opening” to test everything out. Po came over with the family, everyone from McKinleys travelling down by train – booked into local hotels, and Pineapple played a key role, most of their staff and many of the bands coming down. We invited those hospital departments that we had given money to, swelling the numbers; it would be a well attended Friday night. Jimmy also invited the local press, almost fifty of them, offers of free meals and free drinks hard to turn down for the snappers and scribblers.

Jimmy had hired the door staff personally, saying he knew a lot of them; they did not, however, seem to know him. He selected twenty full-timers and a few part-timers, others made up from a local firm; they would police the crowds outside. Twenty-four hour guards sat inside the club’s control room, dozens of cameras sending images back to the control room staff. And Jimmy’s briefing of the door staff was interesting.

‘I don’t want any men below twenty-five, no girls that look sixteen. All men must be in suits, only exceptions would be celebs - and then with discretion. No jeans, no t-shirts, no trainers – ever. You let one in you go straight away. You will not ... let in mates and family, birds you’re shagging, unless they’re smart. If I see someone in here I don’t like the look of I’ll find out who let them in - and sack you. You can’t get sacked for keeping people out, you can for letting the wrong person in.

‘Now, I’m worth a few quid, and I don’t give a fuck if this place is empty; anyone who gets in deserves to be in. And don’t be shy about turning people away; I have very good solicitors. This is a *private members club*, as the sign says. That means we invite people in, they have no right to come in. You patrol the line and pick out people you like the look of, your main aim being good looking couples aged twenty-five to forty. If someone gets stropy then tell them they don’t fit the club’s ideal member profile, point to the signs. Again, I’d rather have the place half empty than have idiots in here. It’s not your job to worry about profits, you worry about the quality.’

The club’s radio advert made me smile:

What ya doing, Dave?

Trying to split the atom with these tweezers.

Looks hard.

Yeah, but not as difficult as getting into that new club, Silo's.

We had eventually settled on the name "Silo's" because that was what everyone involved with getting it ready already called the club: "Silo's place". It saved on signage I suppose.

With the hotel open on just the top two floors, the remainder still under renovation, the new club opened 8pm on a damp Friday night, people who had not been invited foolishly queuing up like sheep; they'd have a long wait in the drizzle. As dutiful hosts we stood greeting people as they entered, Big Paul acting as an extra bouncer and sticking close. When most of those that we expected had entered we sat and tried a starter in the curry house, sampling the food. An hour later we moved upstairs and found many of the Pineapple crew in the Chinese. We sat with some of the bands, trying the food for an hour, Po joining us.

We nudged the bands upstairs, explaining that it was the VIP area, despite the helpful signs to that effect, and we enjoyed the kind of evening that would become common in the future; celebs, musicians and reporters mingled. The girls from the hospital went all googly-eyed at the singers and groups of people wandered next door to the hotel to inspect a room left open for that very purpose.

Po wanted to buy-in, but we explained that it was a non-profit operation. He took some convincing. Oliver from Pineapple could see the potential, especially when we informed him that this was a dry run for a larger London club. The musicians all got themselves photographed and would make it to the local papers and some of the tabloids. I chatted to some senior staff from the University Hospital, offers of financial help extended before entertaining Po's daughters. They had just completed their Phds and it took my brain a while to work out how old they both were.

'How old are you?' I asked with a frown.

'Twenty two,' they answered.

'When I first met you...'

'We were nineteen.'

Jimmy had told me they were sixteen. Bastard. I danced with both sisters, very close, making those around me jealous. And the girls had eyes for no one but me. It had been four weeks

since Judy had sulked off and we had not seen each other since; I needed consoling.

I asked Ling, 'What will Po say if he see us dancing?'

'He vely happy, he say he want us to be together.'

'He does?' Jimmy, you bastard, I cursed. 'Ling, can I show you the hotel?' We walked off hand in hand, but Suni followed close. I suddenly had no idea how to play this. In the apartment, reserved for me for that night, I showed them around, opening a champagne bottle for the giggly girls. They downed their drinks quickly, more requested. And I still had no idea how to play it.

'Is it true ... Chinese girls know how to give a good massage?'

'We vely good. Come.' They started to undress me.

Forty minutes later and the three of us emerged from the shower, dressing quickly before anyone noticed our absence. And the sweet innocent little girls were about as innocent as a Hong Kong prostitute approaching retirement after a busy career on a popular street corner. We re-joined the party, taking a while to dry-off properly. Back in the VIP area, Jimmy walked past and noticed my damp hair. He glanced at the girls and smiled, saying nothing. And he was still a bastard.

At 1am Jimmy took Po and his gang back to the new house, despite rooms booked for them here, the girls remaining fixed to my side like limpets. I told the club manager to lock up and headed off for round two. Yes, it was a good opening night.

With the girls asleep I wandered back into the club, finding a night security guard on each floor sat reading paperbacks. With everyone gone I got a feel for the place, walking slowly around and thinking about the work I had put into it, running a hand over cool wallpaper. I eventually found myself thinking about Judy, but I didn't care any more, the hurt had gone; a lingering guilt remained, but the hurt had gone. This was the turning point. I was single, I realised. Either that or right royally cheating with two babes!

The next morning we got a taxi back to the house, leaving me wondering what to say, and how Po might react. Having my hands cut off came to mind, other bits sliced away. As we pulled up I noticed Liz's car and my heart leapt; Judy could be with her inside. Oh, shit. There was nothing I could do, so we simply walked in. We found everyone in the lounge, Liz sat snuggled up

to Jimmy and no immediate sign of Judy. I quickly directed the girls into the kitchen for some food.

‘Need to get your strength back?’ Cookie asked. ‘Full English breakfast?’

I nodded sheepishly, the girls asking for croissants and coffee.

Jimmy stepped in. ‘More tea all round, Cookie,’ he loudly ordered, before stooping dead in front of me. ‘Good night ... was it?’

I felt like hitting him. ‘Liz ... alone?’

He nodded. ‘But I dare she may *chat* with her friends.’

‘What she ... er ... doing here?’ I delicately enquired.

‘She’s curious about the new house, wondering if I’ve suddenly changed. Just turned up this morning.’ Quietly he said, ‘Good job I don’t take after you, dirty stop out.’

‘Yeah, well you’re a lying toad. Can’t add up, can you!’

‘I never was very good with girl’s ages.’

Po wandered in and grabbed a coffee. ‘Hey Paul, good night, yes?’

I decided to bite the bullet. ‘Mr Po, I would like your permission to date you daughter, Ling.’

He made a face and waved dismissively. ‘You do better.’ Off he went, the girls cursing at him under their breath.

Well, to say I was deflated would have been an understatement. All that worrying. I faced the girls. ‘Ladies, if he does not appreciate you, I will. You are both intelligent and beautiful.’ That cheered them up, and we sat and ate breakfast together, extra helpings and sly gins provided by Cookie. Liz told Judy and that was that, I was dumped by fax. Four weeks after she drove off, and with no contact, I was dumped by a fax page from her airline. And if I wanted to query my booking with her airline I had thirty days, and was ATOL protected.

Saturday night we headed back down to the club, its official opening, Ling and Suni stuck to my side and causing many glances my way. We dumped Po, Liz and the sisters in the VIP area and went patrolling. One idiot smoking in the wrong room was giving the doorman lip, so I ordered the man out. No nonsense was our policy. Several people introduced themselves to Jimmy, the big guy standing out a bit. Most were OK, but one guy opened by saying that he was richer than us, God knows why, so we threw him out and banned him. Another older man

said he did not rate us, whatever that meant, and he was thrown out.

The music in one room was turned down a bit, the lights turned up a bit in several rooms - we wanted women with polyfilla faces to stand out. The doorman got told off for too many people in corridors, they had to nudge them into rooms. Some bars were packed and others quiet, the doorman told to regulate the numbers in each and even it out. Bar staff were moved where they were needed so that people did not queue up too long. One man complained that the smell of the curry house was making him hungry. We stared at him till he realised it was deliberate. And that curry house was packed out all night, often a queue, so too the Chinese. We happened across one guy stood loudly lambasting his ex-girlfriend so Jimmy hit him in the ribs, the doorman dragging the spurned lover out, now badly winded; this was a zero tolerance club.

Having surveyed the lower floors to our satisfaction we returned to the VIP area, and I was certain that there were twice as many women as men in attendance, well impressed with the quality of the Welsh ladies. The "ladies only" room had been packed, possibly because rumours of cheaper drink had got around, or possibly they were avoiding local Welsh men.

It was odd to see Jimmy accepting Liz so readily; they even seem touchy-feely. I got disapproving glances from her with my two Chinese consorts in tow, but I didn't care. Eventually, I spoke to Po about the hotels in Kenya and he again wanted in. They were not moneymaking operations, but he was sure we were hiding something. I finally placated him with an invitation to the grand opening of the golf course.

Jimmy took Liz, and Po's group, back to the house around midnight; I was booked into the same apartment, with company. The lower level closed at 1am, the second level remaining open since it was a private members club and we had an extension. Some of the smarter dressed, and better looking guests, from the lower floor were invited up, or nagged the door staff for access, and the members section buzzed for another hour or so, the VIP area comfortably attended, not too busy.

I retired around 2am with the girls, returning to the club around 3am and finding it still going strong. The lower level was now being cleaned, the member's section still hosting around

five hundred, its dance floor packed. At 3.30am I turned all the music off, opening windows and fire doors to get a cool breeze going, a subtle hint for people to sod off home. The crawling, limping and drooping drunk were helped outside, many resisting, the remainder politely told to go home. Several were asleep in corners and were woken, some carried downstairs, and it surprised me the state some people allowed themselves to get into. The last few refused reasonable persuasion, so got thumped and dragged.

In a move that we would continue, we invited the cold patrolling police in for a curry and Chinese leftovers meal, the food going quickly. I told the police that they could come into the curry house in uniform at 1.15am, the Chinese at 3am, whether the other patrons liked it or not; free meal, free hot cuppa.

As I patrolled around in silence at 4am I realised that I was now a nightclub owner. I also realised that being sober at 3am made you intolerant of drunken twats behaving like drunken twats. Stopping to use the urinals in the members' area I read the signs Jimmy had fixed to the walls above each position:

Know anyone using drugs in here? Tell us and we'll give you £1,000 in cash where we take action.

Know anyone dealing drugs? Tell us and get £10,000 cash if we take action.

There are 65 video recording cameras in here. Misbehave and we will hand the tapes to the police.

Know any ladies soliciting in here? Tell us and earn £1,000 cash where we take action.

Know a member of staff dealing drugs? £25,000 cash reward where we prosecute.

One guy had objected to the tone of the signs, so we threw him out. No one else could complain, not unless they were planning on using or dealing drugs. We were tough on the rules, very tough. It had been an interesting weekend, in many ways, my hard work brought to fruition and some new experiences gained. I had a glimpse of a future as a leader and organiser of people.

In the weeks that followed Big Paul became very popular in Army circles; he could get people in, and free drinks. We had tickets printed up and numbered; basic, members or VIP area. They granted access and gave the bearer four free drinks, small tick-boxes for bar staff to mark off. Big Paul journeyed far to

visit old chums and new young bloods, issuing tickets; he was the most popular trooper the regiment had ever seen, past or present. And every time we went out in the local area we all carried tickets in pockets; handsome couples and pretty girls being offered passes. And the quality of the girls Ricky dated improved by several hundred percent. Oddly, Big Paul resisted the temptation; he had his mind on reconciliation with the estranged mother of his lad.

The club organised functions on a Wednesday or Thursday night from the second week onwards. First was "Over Forty's" night on a Thursday, well attended. Second was what became a monthly affair, The Emergency Services Ball: police, ambulance, medics, and the fire brigade. Everyone received their first drink free by ticket. We organised a Falkland Veterans night and a D-Day veterans night, well attended downstairs. We even laid on coaches from other cities. The Jewish Night was moderately attended in the members area on a Wednesday night each month, David Gardener popping down and staying at the hotel. The Spicy World night was very well attended and became a favourite. For that event we organised a dozen chefs from all over the Orient and they cooked appetisers from The East, all samples free. But it attracted more men than women, plenty of couples. Once or twice a month we dragged down a singer for a mini-concert, usually packed out, and all new sign-ups were obliged to do a few sets.

And the coppers came in after hours, yellow jackets and hungry bellies. It cost us, but we kept the local plod on our side, complaints against our door staff falling on deaf ears.

Golf house open day

Po had been invited, but it was a bad idea. The wealthy little Chinaman had been staggered at the size of the hotel and golf complex, walking from one corner to the other before viewing it all again from the rooftop bar of the refurbished block. He thought it was worth more than it really was, and wanted in.

For the opening day we all dressed smart, despite the heat, informing Po that just local golf fans would be popping along. So who was in the limo with the bodyguards, we both wondered. Po gave me a look as he read the list of guests posted on a stand, Presidents and Prime Ministers from all around Africa attending. Fucking Rudd had been working overtime, I had no idea.

Then things got worse. Sykes wandered past with Jack. ‘Mister Holton. I see that you have half of the most important men in Africa here.’

We could well have done, I had no idea. ‘Really, I hadn’t noticed.’ And that was a mistake as well, because I sounded like I was taking the piss. Now neither Sykes nor Po were not happy with me, only Jack offering a welcoming smile.

Jimmy appeared with the Defence Minister, chatting like old buddies. We caught the tail end of it, something about attack helicopters, Sykes turning and focusing on me. The Kenyan Prime Minister wandered past and was introduced to me by people that I didn’t know. I shook his hand.

Introducing Po I said, ‘We have brought our Chinese business partners along. They are interested in investing in your fine country.’ Well, it seemed to cheer up Po a little. I gestured towards Sykes and made another mistake, my mouth moving faster than my brain. ‘And this gentleman is from the British Government, the Ministry of Silly Walks.’

The Prime Minister shook Sykes hand without understanding what I had said, and shuffled along. Sykes shot me a look that suggested we would not be let back into the country, Jack fighting hard not to laugh. I led Po out to the ceremonial tee-off, that honour going to an orphan from Ebede. As I cleared the crowd I stepped onto the green, nametag clearly displayed, and straight into shot of ten TV cameras and a dozen photographers. Oh crap!

Jimmy strode forwards, cool as ever, Rudd in tow and suited now. He took up station behind a bank of microphones. ‘Ladies and Gentlemen, distinguished visitors, golf players – good and bad, and golf widows sat at home.’ Sedate chuckling broke out. ‘Although golf is a leisure pursuit, this complex represents fresh investment in Kenya, jobs for local people, and a bar where local business can both meet new clients – and stretch the truth about their score card.’ More laughter swept the crowd. ‘I would like to

dedicate this new course to the orphanage known as Ebede, and as such the first ball will be struck by a young boy from the orphanage – who, I believe, has been practising hard.’

The young lad, aged around twelve, lined up and struck the ball well enough, sending it into the first water hazard. Jimmy said, ‘We will not be trying to retrieve that ball ... crocodiles!’ He waffled on a bit more, the elderly Prime Minister asked to hit a ball, followed by the Defence Minister; I guessed we were trying to keep everyone happy. Spotting Cosy and Anna in the crowd I waved, figuring they had brought the lad down.

A government spokesman said a few words, welcoming visitors from afar and making it sound like it was their golf course, the cheeky bugger. The local golf associations chairman said a few words, and I realised now that we must be members of the local association. Everyone was then ushered inside. With the crowds thinning out, and a group of suitably dressed locals lining up to be the first to play, I closed in on Cosy and fiancé.

‘All ready for the big day?’ I asked, the event booked for the beach in two days time.

‘Just about,’ Cosy responded. ‘Still very busy with new projects.’

‘Where are you honeymooning?’

‘We’re not going far, here and the safari park,’ Cosy answered.

‘You’ll like the new lodge,’ I suggested.

As a group, we turned and followed the crowds inside. Drinks were accepted, nibbles sampled, and I tried to play the dutiful host, although Rudd had organised everything with the hotel’s new manager, an American. Seeing the Old Dogs in suits shocked me; they looked like dog turds squeezed into nice flannel. Their faces were tanned and grizzled, and they looked very out of place. Only their nametags and job descriptions stopped security from throwing them out.

‘You look pretty,’ I quipped.

‘Don’t feel it in these monkey suits,’ Mac complained, loosening his tie. ‘If it wasn’t for the booze we’d be out of here.’

‘Where you staying?’

‘Got a wee room in the new block with three beds in it.’

‘Bit of a squeeze.’

‘Only room left, this gig a wee big over-subscribed,’ Mac grumbled.

‘I’ll catch you later for a beer,’ I offered, a couple of hundred-dollar bills discreetly issued. I passed Sykes and Jack, stood talking with some spy-looking types, and found Jimmy and Rudd holding court with the hotel manager, fielding questions from reporters. Seeing Po looking a bit lost I gestured him towards the roof bar.

The entire roof had been given over to a bar and pool, the pool a shallow central feature that was as much decorative as functional. Many people stood around chatting, many more stood peering out over the course, a great panoramic view offered. We walked to the edge and peered out ourselves, Po standing on a ledge. I pointed out the general area of the orphanage, then the zoo – now almost finished but without many of its planned exhibits in residence. We soon got back onto the topic of a partnership.

‘This complex will make fifteen to twenty percent annually,’ I explained. As Po mulled that over I added, ‘How does that compare to stock tips?’

‘Many very important African here. My company want business here, we buy from Tanzania.’

‘Oh, I didn’t know that.’ And I didn’t. Po’s family had a dozen businesses, one buying ores from Africa and elsewhere. ‘I’ll talk with Jimmy.’

The man himself led a group of reporters and a TV crew up to us, pointing out many things in the distance, in the direction towards the beach hotel. After ten minutes he escaped the posse and joined us, Rudd now shouldering that burden. ‘Seems to have gone OK.’

‘Well attended,’ I commented. ‘Grass looks good. Listen, Po was just telling me he buys Ore from Tanzania, he’s interested in doing some business down here, wants to buy a stake.’

‘It won’t make much profit,’ Jimmy told him.

Po said, ‘It good for connection and talk. I bring Chinese here, they talk African.’

‘You are welcome here anytime, you know that, no cost,’ Jimmy insisted.

‘No, no, I want name on wood here.’

Jimmy made a face and shrugged. 'What percentage do you want?'

'Maybe ... thirty percent?' Po risked.

'That would be worth nine hundred thousand.'

'I give one million. It deal?' He held out a hand.

'It deal,' Jimmy repeated after a moments thought, selling one third of the complex for what we had spent on the entire thing, all three hotels. This new hotel may have looked vast and grand, but it was scrubland grassed over and a basic hotel made to look posh. We were the ones getting the best deal, but Po was now happy. His name would be on the wood.

I noticed Sykes lurking. 'We'd better talk with Sykes, I took the piss earlier.'

'What did you do?' Jimmy asked, adopting his fatherly look.

'I introduced him to the Kenyan Prime Minister as being from the Ministry of Silly Walks.'

Jimmy smiled. 'He's a great fan of Monty Python, so I doubt he was insulted that much. C'mon, let's go be loyal subjects. Excuse us please, Po.' We collected Sykes and Jack and directed them to a table, ordering them cold drinks.

'Buying attack helicopters?' Sykes testily nudged.

'Why don't I start at the beginning,' Jimmy suggested. 'The UN are going to take over the airfield from me.'

That surprised Sykes. 'They are?'

'Yes, we'll keep a quiet corner for the mine training boys, who are here ... somewhere. Mac and the boys were concerned about the growing number of Somalis setting up camp around the base, so they asked the Army to send a detachment. They refused, so they offered to pay and train a small detachment for protecting the base, a nudge that way from the UN.'

'You're funding ... the Kenyan Army?' Sykes clarified.

'Yes, all nineteen of them,' I said. If Sykes did not feel silly, he looked it.

'They'll protect the UN, it's going to be a big base,' Jimmy explained. 'And as for helicopters, the cheeky Defence Minister is trying hard to milk us for all he can get. We've offered them a second hand Cessna painted green for border patrol, when we can find a pilot.'

Sykes seem appeased, to a degree.

'Come up there with us if you like,' Jimmy offered.

‘We’ve been, a few days ago.’

‘What did you think of the training?’ Jimmy keenly asked.

‘Very ... philanthropic of your sponsor,’ Sykes replied.

‘I liked the dummy mines,’ Jack put in. ‘Had a go. I know they’re only fake, but it gets your heart going.’

‘I set one off,’ I admitted. ‘And sorry about the *silly walks* bit, Magestic told me to say it. What’s the joke anyway?’

‘I went to college with the Python boys,’ Sykes admitted. ‘That’s what Magestic was quipping about.’ He wasn’t, I made it up on the spot. Still, it worked out OK.

‘Seen the orphanage?’ I asked.

‘Yes,’ Sykes admitted, but in a different tone. ‘Very impressive.’

‘Should have seen it when we got here,’ I said.

‘We saw pictures of it. Quite a transformation,’ Jack put in.

‘And this place is rather impressive,’ Sykes mentioned. ‘Your... *projects* are obviously doing well.’

Jimmy told him, ‘Magestic says yes to your question about this place.’

‘My ... question?’ Sykes puzzled.

‘Will we help you get one of you people in here to spy on the arms dealers and bug their rooms,’ Jimmy explained.

‘I ... wasn’t going to ask that,’ Sykes insisted.

We all stared at him, even Jack.

‘I might have thought it ... that’s all,’ Sykes insisted.

‘Magestic is never wrong, sir,’ Jack quietly mentioned, getting a look from his superior.

‘Well, the offer is there,’ Jimmy pressed.

Sykes took a moment. ‘How’s the new house?’

‘Great, close to my mum and the new nightclub,’ Jimmy replied. ‘I always wanted a nightclub in Cardiff, grew up around there.’

I considered that Jimmy’s response left Sykes with nowhere to go as far as further questioning.

Sykes sipped his beer slowly. ‘I’d like to pop to the safari lodge, if you don’t mind.’

‘Not at all, we’ll take you up there if you like. Fly, it’s quicker.’

‘Very well. And how are your ... poacher hunters?’

‘They got some cash from somewhere, because I just sold them a small farm on the edge of my property,’ Jimmy explained.

‘A farm?’

‘Not massive, but comes with a big stone house – big enough for the three of them. They said they’re going to retire to it in a year or so, but still do a bit of game work part-time. They like the game work; steady pay, outdoors.’

‘They’re going to, or have bought it?’ Sykes questioned.

‘Have done, week ago. Hired a few hands as well.’

Sykes seemed a bit put out, easing back and thinking. ‘I’ll let you know about the trip, have to check what crisis is back in the smog first.’ He seemed quite deflated and I almost felt sorry for him.

The revelry dragged on into the small hours and we finally walked down to the original hotel, booked into the two-storey block. We found Rudd and Big Paul in the bar and sat for a quick chat, Rudd’s wife wandering in, the kids in their hut. Big Paul and I promised to take their eldest diving off the beach to see the big shark. Two Pineapple staff said hello as they headed off to bed, Big Paul following soon after. The odd thing about our bodyguard was that we were always up later than him, and typically less drunk. And not in need of much protecting either, at least not yet.

‘Po has paid for this place,’ I mentioned as the bar emptied.

Jimmy nodded. ‘He’ll do some good business here. That’s what’ll make it worth much more for him.’

‘How much has he tucked away for us?’ I asked with a yawn.

‘Seven million.’

I took in the dark beach, the moonlight shimmering off the sea. ‘What’ll we earmark that for?’

‘Hong Kong medics. About two years time, but ahead of schedule.’

I nodded to myself. ‘Sykes was deflated.’

Now Jimmy nodded. ‘Won’t be a problem there for a while. He’s alright. And Jack spies on him.’

‘Rudd said the new hotel is fully booked for three months.’

‘Yep.’

I sipped my beer. ‘Might turn a profit.’

‘Pineapple have advertised it in the magazine a lot, should be fully booked and exclusive before long, we’ll keep putting the prices up.’

A man ducked into the bar from the beach and Jimmy moved quickly, straight for him. The man sidestepped, but Jimmy caught him around the throat, dragging him onto the sand. Startled, I stood up and checked the empty bar, the staff not facing us. With a dash I was on the dark sand in a second, to find Jimmy pounding the man so hard he would be killed, a sickening sound issued from the man’s body as his ribs broke. I wanted to stop it, but I was terrified. The final blow was to the throat, no way the man could have survived, and I was both terrified and horrified at what Jimmy had done.

‘Quick,’ Jimmy whispered. ‘Make out he’s drunk.’

I was in shock, and on autopilot. We lifted him up and walked down the dark beach, not noticing anyone watching. Stealthily, we crossed to the next cove, knowing exactly where the guard sat and avoiding him. Dragging our victim carefully along, Jimmy led us straight into the cool water, soon swimming clothed, both of us dragging the body. So far I had not even asked who he was. Or why Jimmy had killed him. At the breakwater we stopped, Jimmy smashing the man’s face against the rocks in a move that shocked me. I was operating on adrenaline.

‘Swim,’ Jimmy whispered. He led us out almost two hundred yards. ‘There’s a current out here, and with the blood our friend should be eaten before found.’ In blackness we let go of the body and started back in towards the pearl string of lights.

As the dark beach neared we spotted a couple strolling and halted, treating water silently till they passed. Swimming on, we checked the beach carefully before running up the sand. No one saw us enter our rooms. Jimmy changed quickly and towelled down the corridor floor and stairs, removing wet sandy footprints, not that they were uncommon.

‘C’mon,’ he called.

We wandered back down, saying hello to a couple, and onto the sand. Retracing our steps we discreetly kicked sand over the drag marks, doubling back again to the bar. In the bar Jimmy said, ‘OK, we go now,’ to the staff.

I finally asked, ‘Who was he?’

‘Truthfully, I’ll never know. But he would have tried to kill Rudd, attacking my infrastructure down here. Maybe even tonight. I soon as I saw his face I knew.’

‘Christ,’ I let out in a whisper. I blew out. ‘You sure he’s not a guest?’

‘If he is ... no I’m sure, I’ve been waiting for that bastard to turn up.’ We climbed the stairs again. ‘Get some rest, check the beach early.’

In the morning I found Jimmy on the beach at dawn. He reported, ‘No sign of the body, no tracks, no blood. And no one reporting a scuffle either. Relax, move on.’

‘Bit of a shock.’ That was an understatement.

He carefully regarded me. ‘And finding Rudd dead?’

‘More of a shock,’ I admitted, taking in the beautiful calm water. ‘Think I’ll go for a snorkel.’

‘If you find the body, drag it out or tuck it around the headland. I’ll check the registers.’

I never did spot the body; it was never recovered. And no one was listed as missing from the hotels. Watching Rudd with his family, and taking his boy diving, eased my conscience a little. But we had a problem; someone wanted us disrupted. Killing Rudd would not remove us, or give anyone an advantage, not that I could think of who might be behind it. Worrying thing was, neither could Jimmy, and he knew everything. It remained a mystery.

Cosy was told to watch out for strangers and keep an eye on Rudd, going armed where possible, which was right up his street anyway. Rudd was told that we noticed people watching, and to be cautious. He locked his doors when driving and installed extra security at his house, but no further problems surfaced. Po got his name up on the wood, and a photo, and an advert for his companies, planning on visiting often with the manager of a steel company that his family owned.

Apocalypse Now

One morning Jimmy threw a thick manual at me. ‘Study that. Quickly.’

It was the flight operations manual for a Bell 214, a Huey helicopter, as made famous by the Americans in Vietnam. When we got into the car I mockingly complained that I was not being given enough time. We drove to Mapley, just under an hour to get there, and found a Huey waiting, red with a white stripe. The brightly coloured helicopter was not quite *Apocalypse Now*. I headed over to it for my first lesson, Big Paul keenly tagging along.

Mapley was progressing, bit at a time. The expensive fence had now been finished and it encircled the airfield, the gatehouse ready and manned, regular patrols after hours by a local security firm, cameras set up – especially around the aircraft. And the leisure centre was growing skyward, albeit slowly. Even the Kenyans were faster than British workers.

The Air Cadets now had two gliders, winch launched, and we allowed them to be stowed in a hangar. Another hut appeared, this time Air Scouts, whoever the hell they were. The building closest to the control tower was ready, and rented out at a very modest fee to AMO Ltd, who Big Paul had dragged down. On the other side of the control tower a second building neared completion and would be used by Mackey Tailor and his rescuers. Two long-axle Land Rovers had been bought and were now stored at the back of a hangar, to be used for jeep training and off-road driving courses; Jimmy had spoken to a local farmer with a muddy patch of trees to rent to us. Extra holes had been dug and ridges put in place. It wasn't quite Mount Everest, but would do for beginners.

On either side of one of the hangars, which reached up forty-five feet, a concrete wall had been erected, purposefully sculpted by Mackey's group to simulate a rock face, small holes and ledges for sore fingers to grasp. It was split into four sections, each section progressively harder than the preceding. The top of the walls afforded plenty of metal loops to tie-off ropes, and a walkway for instructors to gaze down proudly at their student's progress. It was already in use by the scouts and the cadets, as well as their fellow cadets from the surrounding area. As I started the Huey, Jimmy met Mackey Tailor in a shell of a building.

'Two months,' Jimmy informed him.

'Be about right,' Mackey agreed.

'Accommodation block will be just over that.'

‘Wees had a good response to the wall, high enough for basic training and rope work. And we got the jeeps for basic driving, maintenance and off-road.’

‘And classrooms here,’ Jimmy finished off. ‘First available aid next door, all ready and waiting for you. How’d you like Kenya?’

‘Aye, lovely. A wee bit hot, but me and the wife loved the safari. That blinking lion slept on our bed the one night, silly thing. Bit of a tale to tell when we got back.’

‘And the beach?’

‘Lovely, aye. I tried diving, not so good with my head under the water. Blinking elephant took my lunch the one day, but a great trip all round.’

‘Good. What about kit distribution?’

‘I’m focusing on the Welsh lads, and down on Dartmoor. They’ve had a balance of kit and jeeps.’

‘Good. Budget will last?’

‘Oh, aye, no problem there.’

‘Natives friendly?’

‘They are when you offer some kit,’ Mackey replied with a grin. ‘Cave rescue boys from Chepstow came over here the other week, climbed the wall and liked it. Last section foxed ‘em, though.’

‘That’s because you’re a sneaky bastard,’ Jimmy emphasised. ‘Got to zig-zag, you old fox.’

‘Makes ‘em think. It makes ‘em think.’

‘What about the magazine? You think you could get enough for a monthly edition?’

‘Should be able to, lots a people with lots to whinge about. I got a lady in my village with an Apple Mac computer thingy, she does similar stuff, now be working three days a week on ours. Got a good price too, and she sends the disk thingy to the printer, he runs them out and off they go. Or at least they will next month.’

‘Advertisers?’

‘Couple, aye. Plus your lot, Pineapple and the Kenyan bunch. First edition has a big write-up about this place. But your lot, paying for the adverts, is covering the whole damn thing.’

‘That’s alright, it’s tax deductible. Right, let’s get some food in the village while Paul bends and brakes a helicopter.’

I thought I did very well, the Huey heavier than I was used to and twin engine, so more instrumentation to consider. It was also safer if one engine cut out. Big Paul sat in the back with headphones on, listening in and scanning the controls. When I landed the bird, two RAF pilots I recognised were waved over, jumping into the rear and fixing headsets. My second thirty minutes of tuition had been keenly observed by six pairs of eyes, and as I headed for lunch the RAF Hercules pilots had a go themselves. We met Jimmy and Mackey in the pub down the road, the only watering hole close by.

‘Sorted?’ Jimmy asked.

‘Yeah, no problem. More power, more kick, but heavier as well.’

‘Can we paint it green?’ Big Paul joked.

‘Yes,’ Jimmy replied.

‘Yes?’ I questioned, wide eyed. ‘We bought it?’

Jimmy nodded. ‘There’s one at Mawlini as well, so get familiar with it.’

‘Can I ... er ... have some lessons, boss?’ Big Paul risked.

‘Yes,’ was not the answer I had expected. ‘Right through to pilot’s license.’

‘Right through?’ Big Paul queried.

‘Extra heli pilots are always useful.’ He made eye contact with me. ‘Book him in for basics, give him the book.’

‘Fucking-A,’ Big Paul approved.

‘You familiar with them?’ I asked Jimmy.

He made a face. ‘Couple of thousand hours.’

Oh, was that all. Novice then.

New York, New York

We landed at JFK with business visas, Oliver over there already and picking us up in a hire car.

‘How you liking the Big Apple?’ Jimmy asked him as we drove towards the giant film set, Big Paul and me in the rear.

‘Like it a lot, wife loves it.’

‘How many times she been over?’ I asked.

‘Twice now, a week each time. And she’s got a placement here with her firm.’

‘Sounds like you’ve made up your mind?’ I noted.

‘You two firmly nudged me this way,’ he pointed out, a glance toward Jimmy.

‘It’ll be for the best,’ Jimmy said. ‘You’ll make a lot more money over here. Start advertising for tapes, ship them to me - air freight. How’s the company apartment?’

‘You’ll see now, we’re staying in a place her company let’s us use.’

We sank deeper into high-rise apartment blocks that became skyscrapers, easing into an underground car park off a very busy road. The lift took us to the twenty-second floor, pleasant music playing in the background, the four of us squeezed in with luggage. The apartment was certainly large enough, but smaller than the one in London, not as well decorated. It had views on two sides, one of Central Park. Big Paul would be sleeping on the sofa, Jimmy and myself each having a nice room with en-suite bathrooms. Many minutes were spent staring at the view and pointing things out, many films remembered.

The new office was reached after a ten-minute walk along crowded “sidewalks”, the red and green men telling us when to cross. They reminded me of the Superman movie. The new office was a rented suite, but as large as the offices in London.

‘Got enough space?’ I asked, noting just four cubicles with desks, a small oasis in a large sea of magnolia carpet. There was space for another twenty cubicles at least.

‘Next size down was too small, this gives room for growth,’ Oliver explained.

The staff were introduced to us; Human Resources and Advertising. They were handling the recruitment, after they themselves had been recruited, the plan for twelve warm bodies to start with, all with strong accents. We sat on sofas and made plans, Big Paul staring out of the window, peering down at the ant-like people below.

‘You going to open a club here?’ Oliver joked.

‘Yes,’ Jimmy responded.

‘Yes?’ Oliver repeated.

‘In time, it helps with the bands. Right, get a couple of the UK staff over here on three-month rotations - they’ll love it. Let’s get

this pushed along. And when you recruit people here send them to London for two weeks, *they'll* love it. It'll speed things up as well.'

Oliver nodded. 'If you wish.'

'You've got plenty of cash in the bank, so don't be afraid to use it,' Jimmy encouraged. 'Let's not worry about our UK bands making it big here, so much as US bands making it big globally, yeah?'

'Well, if you can pick them like UK bands –'

'I can. So let's get a relationship going with a recording studio and video company.'

'I've smoked out some already, priced them up.'

'Good. Right, we'll meet tomorrow night for food, someone else I'm meeting tonight.'

That evening we headed for an expensive restaurant, Big Paul warned about behaviour, and Jimmy scoped around for his mark, finally finding the man sat with another man. When the person in question finished his meal, and sat down at the bar, we sat nearby.

'Brits?' the mark asked, detecting our accent.

'Yes,' Jimmy responded. 'Over on business.'

'What business you guys in?' the man asked in a deep Texas drawl.

'Many. Hotels in Africa, game reserves, nightclubs in the UK, but principally we're stockbrokers. I guess over here you'd call them investment managers. This big guy is ex-Special Forces. Bodyguard.' Big Paul nodded, looking mean.

'Ain't so small yourself, fella,' they laughed. 'So what kinda investments you in?'

Jimmy produced a torn-out page from Investors Chronicle. It chronicled our successes.

'Most respected trader and guru,' the man read, he and his friend impressed.

'What business you guys in?' I asked.

'Oil.' I shiver went through me. 'I'm Ted, this is Chuck.'

Jimmy said, 'Tell me Ted, do you know any good lap dancing bars?'

'Heck, yes! And not far. Drink up, we'll get a private room and chat.'

With Big Paul holding a pile of cash for the girls, and being suitably entertained, we laid it on thick; Kenya, the nightclub, our man in Hong Kong. When they jokingly asked for some stock suggestions Jimmy offered them this:

‘I tell you what I’ll do. I’ll fax you stock tips for a year. If you like them, and make money, we’ll talk about a formal arrangement.’

‘A year?’ They were stunned.

‘I like to back-up what I say in advance,’ Jimmy told them. ‘Oh, you know a fella called Chuck Pederson, Governor of Texas?’

‘Hell, yes; I voted for him for the bum. He’s a member of my golf club.’

‘He’ll put you right about me.’

Ted pulled out a mobile phone and dialled, struggling to focus. After apologising for the hour, and being drunk, he asked about Jimmy. Putting his phone away, he said, ‘The good governor says you’re the best stock picker in the world, bar none. Have yourself another drink, buddy.’

Two days later we were on a ranch in the Republic of Texas, guests of Ted and his wife, the lady having big hair and a bigger accent. Jimmy saddled a horse and rode it around like he’d been doing it all his life, no way I was getting on one, and Big Paul keenly fired a variety of weapons. We had given Ted three stocks to watch whilst in the lap dancers, now they were rocketing north, our host a fistful of dollars richer. We did little other than get to know our host, eat a lot, drink a lot and listen to horrible jokes. I only detected one conversation that I thought was work related.

Jimmy said, ‘I got a buddy in the African section of British Intelligence – they’re big in Africa – and he gets to see who’s drilling oil, new discoveries before they get into the press. And my friend, he likes his vices.’

I could see Ted’s grey matter working, but he said little. We flew back to New York, since the other Texan we wanted to meet was there, a matter of bad timing. We called the Governor’s Texas office and got a message to him, a time arranged for a meet at a hotel with a political convention going on. We were ushered in, Big Paul waiting in the corridor and chatting to the

security detail. I let go of my red, white and blue balloon, its helium taking to the room's ceiling.

'Been a few years, boys,' the Governor let out, offering us seats and drinks. 'You shouldn't be such strangers.'

'I liked the autobiography you did,' Jimmy mentioned.

Chuck held up his hands and smiled. 'They sued that writer fella and won, and there's no proof I had a hand in it.'

'And now we can move on to the next project,' Jimmy stated. 'Got a paper and pen?'

The good Governor grabbed a pad, looking worried. 'Shoot.'

'I want you to find a small health insurance company in Texas, and buy it. Spend around twelve million dollars, get a loan if you like.' Our host was intrigued. 'Then I want you to buy a small community bank, in Texas, with an investment arm. Again, around twelve million. The medical insurance company will lodge its deposits with the bank, the bank will invest the deposits and ... make a good return.'

'A very good return,' Chuck confirmed. 'I'd be right in figuring they'd get some help?'

'You'd be right. And when they make this money, the premiums could be lowered, and the insurance company would grow fast, so too the bank. Then, the Governor of Texas, soon to be Senator, would be seen to care for all the people of Texas, not just those that can afford good healthcare.'

'Senator, huh?' Chuck considered. 'That's two years away. If... I was interested in it.'

'Chuck, the tips we've sent you are less than one twentieth of what we could have sent,' Jimmy explained, giving the Governor a moment to think about it.

'I was headed that way anyway. So what's your angle, Jimmy?'

'A friendly voice on the hill when I need it in years to come, nothing more complicated than that.'

Chuck carefully regarded us. 'I owe you fellas a big chunk of change, and I don't like that much, I'd rather we were square.'

'There'll be a number of investment opportunities in the years ahead; I'll be buying businesses here. When the time comes you can buy shares for more than they're worth, and they'll make you your money back in a few years.'

'Again, not much of a price tag,' Chuck complained.

‘I’ll be opening a charity here in a few years, you can contribute whatever will ease your burden and lighten your soul. In the meantime, I’d appreciate that bank and insurance company moving along. When I see that they’re open, you get a few more tips. Or, rather, the bank does.’

‘And a heck of a lot of voters get cheaper premiums. You ain’t dumb, Jimmy, you got it all worked out.’

‘Save your pennies for the future. Senator.’

We stood. ‘It was nice chatting,’ I said, getting a laugh from our host. ‘Keep the balloon.’

‘What’s your connection to my oil buddy, Ted?’

‘I get information about good places to drill,’ Jimmy answered, very matter of fact.

Our host’s eyes widened. ‘I know some people you should be in bed with.’

I said, ‘If your wife is anything like Ted’s, no thanks.’

Chuck roared with laughter, Jimmy giving me a look.

Jimmy said that he had done what he needed to do, the seed was sewn, so we flew back to London.

Every dark cloud

One Saturday at the club were stood as usual in the VIP area having a drink and chatting to girls. A frump of girl came bounding in and straight for Jimmy, grabbing his arm. His drink went flying.

‘What the fuck are you doing?’ Jimmy roared, bouncers and Big Paul closing in as Jimmy shook beer off his hand. ‘Throw her out!’

One of our female bouncers, hired for this very purpose, nudged the frump towards the door, but the frump was having none of it. *Get your hands off. That’s assault. I’ll sue you.*

The male bouncers joined in, edging the woman out, but she was not going, an elbow to the face of our lady bouncer that looked more accidental than anything. The men grabbed her arms and led her out, finally four people carrying her as she struggled, her fellow frump trying to stop them. Outside the club

the police closed in, the bouncers taking a step back. Frump wanted to press charges for assault. The police led her away to take a statement, other officers looking at the video footage, a slam dunk case. They told her to move on or she would be charged, eventually the lady moving off. And that was the start of it.

Next day she claimed assault again and her expensive solicitor insisted the police take the matter further. Senior officers, not having viewed the tape, started an investigation, enough for the local paper to run the story, complete with pictures of her bruised upper arms. Jimmy calmly called our extremely expensive London solicitors and slapped an injunction on the paper, as well as starting an action against the frump, the woman from a moderately rich family. The police reviewed the tapes and took statements, one of their own senior officers a witness against her, and dismissed the charges. Frump began suing us, taking time off work for “injuries and stress caused” and making it to the local TV channel. So we hit them with an injunction. They seemed to have an odd reaction, and ran the story again, defying the injunction. Our solicitors ramped up a gear and the police backed our side. We sued the TV station, placing one million pounds on deposit with our solicitors, a fact that made the local papers.

We invited in the editor of the local paper and showed him the tapes, informing him that our lady bouncer was now pressing charges and the police were taking them seriously. The frump was arrested, interviewed and released, but that just made her worse. The matter was now sub-judicial, which I read up on, taking a keen interest because Jimmy said it would be good training for the future.

As a matter of strange co-incidence, the BBC ran a documentary about the orphanage, an hour-long programme. Jimmy insisted that no money had changed hands, it was just a matter of odd timing. We all sat down and watched the programme on a Tuesday night, my good self absent from the programme. I didn't mind that, I was in the background when they filmed it and happy enough to keep a low profile.

The programme charted the nature of orphanages in Africa and then focused on what ours used to be like, they actually had film footage, then focused on how it had grown. The old bat was interviewed, and I was terrified what she might say. They had

older footage of her and ran that as well, showing the contrasts. I cringed when she said that she prayed for a miracle and got Jimmy Silo. Anna was seen nursing sick kids and organising games, the local staff filmed growing crops, followed by shots of Jimmy stepping down from a jeep in a short-sleeved shirt. The shot cut to the playground, Jimmy Swinging kids around, then a shot in the classroom, Jimmy teaching Maths in a local dialect. One girl did not understand, so he repeated it in French. They also got him talking German to Anna.

Next came an interview with the Kenyan Prime Minister, who harped on about how poor they were, but how grateful for Jimmy's help they were, mentioning a figure of twenty million. Even in dollars that was way too much. Jimmy was then interviewed sat on the roof, deckchairs and cold drinks.

'If you feed a hungry man today, he will be hungry tomorrow and no better off. But if you give a man a job, a skill or some tools, he can earn his food, grow his food or catch his food. I firmly believe that seventy-five percent of all money sent here is wasted, not going where it is needed. This orphanage has become a school, and that school will become a college and apprenticeships will be created. The children here came from the scrap heap, they won't be going back there. We teach them all day, discipline them hard, and they will leave with qualifications and a good attitude. They will not be a further burden to anyone.'

'It's a twelve hour day for them,' the interviewer nudged.

'We don't waste time here, because it's life or death. When they leave here they won't get the dole like in the UK. If they don't have a skill they starve, it's as simple as that. They were put here to die, to be forgotten about. That's not going to happen. If this orphanage closes tomorrow then the children here would have had an education on par with any in Kenya.'

'The schools Minister says that your upper class is ahead of local schools.'

'Lessons in Africa are normally just held in the morning - the kids go home and help in the fields after that. We push ours hard, with games in the evening that they are still learning from. We also have a scout movement and a cinema that shows educational films, plus a few Disney movies.'

'You've taken a very active role here?'

‘If I’m going to spend money then I want to see results, even if I have to stand over people.’

They interviewed Bob Davies from the UN, a glowing endorsement given, before following us up to Mawlini, where the mine clearing operations were filmed, African students filmed searching for dummy mines in the sandbox. Jimmy was filmed handing over certificates, the final shot from the hotel rooftop, taking in the whole base and two large UN planes, the commentary making it look like we paid for it all. I caught a shot of my hand, and that was all. Cookie and Sandra watched half of it and were amazed, Jimmy’s parents on the phone straight away, mine wanting to know where I was in the film.

Back in Cardiff the legal bill was mounting-up on both sides, but not a problem for us. Frump’s dad got involved, but his solicitors soon asked for money on account of a quarter million; we were insisting on a high court battle and our solicitors had dozens of experts and lots of expensive trips to Wales to pay for. When the other side’s solicitor told them they’d lose, and get a bill for half a million at least, they buckled; no money meant no solicitor. In an odd move, Jimmy offered to settle out of court, but through the solicitors. Frump was broke, having already paid their solicitors forty-five thousand, and daddy was in trouble. Jimmy accepted sixty-five percent of daddy’s business, a move I puzzled because the maths did not add up. We drove down to the factory we now had control of.

Stood outside, Jimmy said, ‘Timing is everything.’

I stared up at the sign, stunned into silence. ‘Johnson’s, making artificial limbs for Africa.’

Jimmy spent ten minutes talking with father and son, soon the best of buddies. Everyone would stay on in their current roles and we’d put in a one million pound director’s loan. We sent dad and son to Kenya, to see the orphanage and the airfield before they flew down to Mozambique to deliver a new batch of limbs. By time they returned they were members of our nightclub and regulars, not being able to praise Jimmy enough. Frump moved away.

It was a lesson in law, but also a lesson in how determined Jimmy could be, how almost ruthless he was at times. He told me that the scenario would repeat itself, that this was “my lesson” for the future.

Rescue Force

When Ratchet and Spanner completed their basic course they were asked to stay on. They politely refused, so Mac told them that Jimmy wanted to meet them personally, and they hung around. We flew out the next day, Cosy flying us up to Mawlini from Nairobi. Our take off slot had been between two lumbering 747s, and I was feeling inadequate. Jimmy was surprised that the men had refused, and I was very surprised that anything surprised Jimmy.

The rooftop bar was busy, now numerous Fanta sunshades over the white plastic tables. Mac sat waiting with Ratchet and Spanner, the target men in civilian clothes. They both appeared to be mid thirties, slim and tanned, and did not seem the military types, certainly a contrast to the ex-troopers I had met so far. They could have been desk clerks and pen pushers.

‘Warm day,’ I offered as we shook hands, ducking our heads under the sunshade.

Jimmy reached across and shook their hands. ‘Thanks for hanging around.’ We all settled. ‘So, gentlemen, what’s next in your career progression?’

‘We’ve got a UN contract,’ Ratchet explained, swiping away flies. ‘Zaire.’

‘Not the most pleasant spot on the planet,’ Jimmy pointed out. ‘You must be dedicated.’ He waited.

They glanced at each other. ‘It was what we planned on doing after we left the Army. UN work,’ Spanner explained.

‘So, you like to help Africans?’ Jimmy posed. ‘Because you’re certainly not doing it for the money.’

‘Well, I suppose all medics are like that ... to some degree,’ Ratchet suggested, seemingly uncomfortable with being put on the spot.

‘And in the next ten years, how many people could you help?’ Jimmy asked, checking his nails. ‘Maybe ... couple a week, because a lot of your time in the Zaire will be sitting around behind safe walls, a lot of travelling, a lot of moving on when the

gunmen get close. So ... what? You'll help a couple of hundred a year, thousand or two in ten years?'

'Hadh't really thought about it like that, Mister Silo,' Spanner admitted.

Jimmy said, 'How about I show you a way to help ten times as many. I'll fund your trip to the Zaire, not through the UN, and not just the two of you. I'll give you jeeps, supplies, local guides, unlimited medical supplies and some military support ... so that you don't get yourselves killed over there.'

They again glanced at each other, surprised at the offer. 'Well, that's ... very generous of you, Mister Silo,' Spanner said, both men seemingly intimidated by us.

'You're going there to help, so better to do the job properly, yes?' They nodded, Jimmy adding, 'So you'd rather save ten ... than save one, yes?'

'Well, yes,' Ratchet admitted. 'Who wouldn't?'

'Problem is this, guys. Those areas where you're really needed, are the areas full of gunmen; warlords and rebels terrorising the population. The UN doesn't go into those areas, so you'd be nursing people weeks after the gunmen had moved on.' He waited.

'You'd want us to go into those areas?' Spanner puzzled.

'Not unless I was sure you'd come back ... safe and well.'

'Well, then how?' Ratchet asked with a shrug.

'First, we'd need you to draw up some plans, of what you'd need to mount such an expedition, including a suitable security detail; jeeps, supplies, staff, local guides, the works. Could you put together such a plan if I gave you an unlimited budget?'

They straightened. 'Well, yes,' they both agreed.

'How long would it take?' Jimmy asked.

'Well, couple of weeks,' Spanner said.

'Couple of months,' Ratchet suggested.

'And you'd be paid more than the UN would during that time,' I put in. 'You have contracts with the UN?'

'Yes,' Ratchet remembered. 'Don't know if they can be altered.'

'They could,' Jimmy firmly stated. 'Take a look around you. Do you think I have any influence with the UN?'

They laughed. 'Some.'

Mac said, 'Some of them call this Silo Field.'

‘So, guys,’ Jimmy began. ‘You think you could put together a team?’

‘Yes,’ they agreed.

‘What about safety? Who’d you use for protection?’

‘That wouldn’t be easy,’ Spanner admitted. ‘Not many soldiers around Africa I trust. They’re generally the ones doing the stealing and raping.’

Jimmy nodded. ‘It’s a problem. That’s why I created the Kenyan Rifles; we’re training them up for missions like this, making sure we have well trained men – and well disciplined. But the first batch won’t be ready for a while, and your chances of staying alive would be very limited without them.’

The men glanced at each other. ‘When will they be ready?’ Spanner enquired.

‘Six months, maybe less,’ Jimmy answered. ‘You in a big hurry to put on blue hats and waste your time on the sidelines?’

‘What would we do for six months?’ Ratchet posed.

Jimmy sipped his beer. ‘Get your team together, get them trained, buy the kit, plan the mission. It all takes time, and the more training and planning you do, the fewer casualties over there.’

‘Lot a wounded medics coming back from Zaire, boys,’ Mac put in. ‘Not a place to make a mistake.’

‘Six months is not long,’ I suggested. ‘You got the run of this place. Have a holiday at the beach and a safari if you like, live it up, it’s all on us.’

‘Very generous of you,’ Spanner said. ‘Thanks for the offer.’

‘He’s a good man to work for,’ Mac firmly nudged.

‘So, guys, what do think you’ll do?’ Jimmy finally asked.

‘Well, if we can get out of the UN contracts we’d have a go at it,’ Ratchet suggested.

‘I’ll talk with the UN next,’ Jimmy offered. ‘In the meantime, welcome to the team.’ He reached into his pocket and produced two round shoulder patches, a logo of a large hand grasping a small one. The wording said Rescue Force Kenya.

‘Rescue Force?’ they queried.

‘I have plans for the unit, rescues launched when needed, a kind of rapid reaction unit. You’d be the first two instructors, so this is an auspicious occasion, gentlemen. And, if it grows as I

would like it to, you'd have helicopters and planes at your disposal.'

'Helicopters?' they repeated.

'Of course, you'd fly into some places,' I said. 'Either of you fly?' They shook their heads. 'We'd fund you learning, get your license.'

'Get our licenses?' they repeated.

As a matter of strange luck our green Huey roared past, landing on the apron.

'One of those,' I said. 'About eight weeks to get to grips with it.'

'Love to,' Ratchet enthused.

Jimmy said, 'So don't be in a hurry guys. If you're going to go skulking about the jungle, be well prepared.' He turned to Mac. 'I want a small building for them, two Land Rovers painted white, Rescue Force Kenya written on them. They'll answer to you and Rudd, Rudd will do the money.' Jimmy faced the men. 'Where you living?'

'Below.'

'Stay there as long as you need, move to the new block when it's ready,' Jimmy suggested. He handed them twenty thousand dollars each. 'Your start capital, gentlemen. First job; custom long-axle Land Rovers kitted for the Zaire. Find them, adapt them, paint them white. My men Rudd or Cosy will pay for all kit like that.'

'We've met them many times,' Ratchet said.

'I'll send you my thoughts on what you need, you send me yours and we'll meet in the middle.'

It was a done deal, Bob Davies from the UN cancelling their contracts and asked to observe their progress as model for further medical rescuers. We flew back to Nairobi and boarded a night flight to London.

Memo

To: Ratchet & Spanner, Rescue Force

Subject: Training

Guys, for the staff training, and you own ongoing training, I would suggest the following topics be covered.

- 1) Land Rover off-road driving, maintenance
- 2) Long range off-road navigation, vehicle, foot and aircraft

- 3) Medical skills (assumed in advance)
- 4) Mine clearance, ordnance disposal
- 5) Weapons clearance, identification
- 6) Geography (Africa)
- 7) Political history of regions to travel to
- 8) Current disposition of UN and other agencies for region
- 9) Liaison and contact methods for these agencies
- 10) Liaison with government departments, permissions (lengthy)
- 11) Inoculations
- 12) Withdrawal, escape routes, plans
- 13) Fitness

Send me your thoughts.

Sykes

A few days after getting back Jimmy announced, 'Time to recruit Sykes.'

'Sykes?' I coughed out a small laugh. 'No fucking way.'

'He has a weakness,' Jimmy enigmatically suggested, although he seemed cautious. He called Jack and asked for a meeting with Sykes in the old apartment.

The next day Sykes turned up at noon. I took his damp coat and made him a tea.

'Something important?' Sykes asked as he sat.

'I had a note from Magestic,' Jimmy said, his features sullen.

'About?' our guest asked after Jimmy failed to add anything more.

Jimmy took a moment, appearing saddened. 'Your health.'

Sykes froze and stared back. 'My ... health?'

'Had any discomfort ... using the toilet?'

Sykes closed his eyes for a moment, the colour draining from his face. 'What ... what does it say?'

'Bowel cancer,' Jimmy carefully stated after a moments reflection.

Now I closed my eyes. Sykes was not a friend, but I had gotten used to him, and this was awful. I faced Jimmy. 'Operable?'

‘Yes, Mister Sykes will survive the surgery, no chemo needed. But that’s not what will spoil Mister Sykes’ time remaining.’

‘No?’ I asked.

‘No,’ Sykes quietly said without looking up. ‘They’ll pension me off as soon as it’s diagnosed.’ His voice was breaking. ‘I’m ... due a check-up in a few months. And if *you* wanted me gone ... all you have to do is mention that to the right people.’

‘We could have done that before now,’ Jimmy countered. ‘But that’s not what we’re about.’

Sykes rubbed his face. He loosened his tie.

‘Mister Sykes,’ Jimmy called. ‘Mister Magestic has been busy with various biotech companies for many years. There is a cure, and he’s offering it to you.’

‘A cure?’

‘A complete cure, full remission, no tests failed, an advance drug from the future, available now to ... select individuals. And don’t even think Magestic has an agenda here. He doesn’t. You get the drug, you carry on, and we ask no favours. It’s between you and him.’

‘What ... kind of cure?’

‘A simple injection, with one problem.’

‘Side effects?’

‘No. If it cures you, you might be tempted to ... discuss the wonder drug. After all, it’s a cure for cancer.’

‘Why does he not make it widely available?’ Sykes puzzled.

‘Side effects,’ I said.

Sykes glanced at me, then back to Jimmy. ‘Side effects?’

‘You’d be fit as fuck afterwards, and live a lot longer,’ I explained.

Sykes puzzled that. ‘How is that ... a side effect?’

‘You might get noticed,’ I suggested. ‘People would ask questions, you’d have to avoid running the London Marathon.’

Sykes shot me an incredulous look. With his mouth hanging open, he pointed a finger at me, then Jimmy. ‘You two.’

‘Fit as fuck,’ I said. ‘Drugged up to the hilt. I run thirty miles a day as a warm up.’

‘First things first, Mr Sykes,’ Jimmy began. ‘First, go to a private clinic, perhaps abroad, get yourself tested. Then, when

you're sure, come back, the drug will be waiting for you. Do it quickly, you have that medical in a few months.'

'It's here, isn't it?' Sykes asked.

Jimmy glanced toward me. He nodded at Sykes.

'So Magestic knows my decision in advance.'

'It's still your decision,' Jimmy insisted.

'Sat on a toilet and screamed in agony lately?' Sykes pointedly asked, some anger in his voice. 'They'll pension me off, tell me *well done*, now go fuck off and sit in the garden!' He forced a breath, composing himself. 'I've got nine years left, and I trust Magestic more than the shits around me. If it's available, I'd ... I'd like it, please.'

Jimmy stood. 'Take your jacket off, please.' He stepped to the kitchen and retrieved a medical kit and a small vial. Sykes stood, rolling up his sleeve. Jimmy carefully drew out clear fluid, tapped the needle and removed air bubbles before injecting someone I once considered our arch nemesis. Jimmy added, as Sykes dressed. 'You'll run a temperature for a day or so, drink a lot of water, eat protein. After a few days you'll be hungrier than normal, an increased metabolism. Eat carefully, or you will put on weight quickly. You'll need less sleep, just four hours.'

I said, 'For the next week your piss will smell terrible, I found that out the hard way.'

Jimmy cautioned, 'Your bowel will hurt for a few days more, maybe longer, fixed in a month. When you go to work, look in the mirror and try and make yourself look rough, less ... well. You may need make-up. Have a holiday after two weeks, some sun, people won't notice the change so much.'

'How much of a change?' Sykes puzzled.

I said, 'That injection will take ten years off you. Literally.'

With his coat back on Sykes stopped near the door. 'You have a hold over me know.'

'You ... were due to be retired off in a few months,' Jimmy reminded him. 'Not much of a key player, are you, unless your health improves? And, more importantly, who can prove anything?'

Sykes regarded us carefully. 'I'd say *thank Magestic*, but I guess he knows.'

'He knows,' Jimmy said. 'Go and rest.'

With Sykes gone I asked. 'He'll be OK?'

Jimmy nodded. 'A great ally in the years to come.'

'It's a hell of an edge you got – cure someone when they're sick.'

'And I'll use it many times, even on people who won't know about it.'

We flew off to Australia, a tour of several cities before dropping in on Singapore, Bali, and finally Hong Kong, Po and his family treating us like royalty. I spent a glorious three days with the sisters, reluctant to finally leave them and return. The day we got back Sykes came down to the new house, on the train, Big Paul picking him up at Newport station.

'Well,' he asked, holding his arms wide.

'You're no better looking,' I suggested.

'We'll see what you look like at fifty-six!'

'He'll look just like he does now,' Jimmy suggested. 'If you're injected young, you stay young.'

'Crikey,' Sykes said as he sat.

Jimmy cautioned, 'The people around me don't know about the wonder drug, so not a word, just us.'

Sykes nodded. 'I feel great. Had to go to Switzerland last week, had a test there, no sign ... *at all*. And the pain's gone. I took a holiday as you suggested, even went jogging a few times – wife couldn't believe it!'

'Yeah, well, we don't need to know about that,' I said, images of Sykes skinny arse going up and down.

He laughed. 'How was the grand tour?'

'Great,' I replied. 'Like Hong Kong a lot.'

'Got a money making offer, boys.' He handed over a sheet detailing a salvage team, ex-SBS and Navy divers.

Jimmy walked into the computer room and returned with a cardboard tube, a map holder. He handed it over. 'All in there, three way split.' Sykes unravelled the maps. 'Pay my money to the Mine Clearance charity in Kenya.'

'This is the Scilly Isles wreck, yes?'

'Yes, plus the sub in Norway and a wreck off Guernsey. Total should be around sixty million in trinkets.'

Sykes looked up. 'Nice haul. Anything on the scale of the Baden Baden cave?'

'There's no pleasing some people,' I grumbled.

‘Step at a time,’ Jimmy suggested to Sykes. ‘Anyway, there are some scientific developments that Magestic would like to give the Government, so ask the PM if he’d co-operate. I’ll then guide you as to a few areas to dedicate some research money, but we’re talking decades.’

‘I’m sure they’ll be keen.’

‘Start with Stem Cell research - before someone else beats you to it. Whoever does makes billions.’

‘That anything to with...?’

‘Yes. So press ahead,’ Jimmy encouraged. ‘And there is one favour I’d like to ask. We could do with some protection.’

‘Protection?’ Sykes puzzled.

‘An armed guard. Can you imagine what would happen if any of this got out?’

‘Quite,’ Sykes responded, raising his eyebrows theatrically. ‘Easy enough to send you a man, I’ll tell the director we’re raining you in; he’ll like that. P.M. won’t have an issue.’

‘You’ll need a cover story, in case the press gets hold of it,’ Jimmy insisted.

‘We’ll invent a specific threat, put it in the book,’ Sykes suggested, none too concerned. ‘Oh, Jack’s got a long list of questions about the Balkan conflict when you’re ready.’

‘Be up in town tomorrow if he can meet us at the apartment.’

‘Fine, fine,’ Sykes said, studying the maps.

The next day a man turned up with a suitcase and a car, Big Paul and Ricky taking the piss something terrible. The man, Karl, had been a paratrooper, who became a copper, then spent time in Protection; politicians, minor Royals, military chiefs. He came armed with a 9mm pistol and, more importantly, an ID card that should prove useful. He was thirty-five, almost six foot and looked the part, eyes always taking in the detail. And he spoke like Big Paul; the military preciseness.

Whispering, I asked Jimmy if he knew him? He did, and indicated that things would turn out OK. By bedtime Big Paul and Ricky had given up the banter and accepted the new member of the household, beers around the fireplace. Karl was given the apartment opposite Cookie and Sandra, told he may have to share since it offered three bedrooms. For now he had a lot of space to rattle around in.

The following day the local police came calling, a tip-off about illegal firearms on the premises. Karl showed his ID, his holstered pistol, before telling the local police to fuck right off. They did. And it was as if Jimmy had anticipated the police visit. We called Sykes and he called the local Chief Constable, who then popped down himself. He could not explain where the tip-off had come from, a note had just appeared, but that he was investigating. We gave him a bunch of tickets for the club, for his officers, and off he went, certain that we had friends in high places.

But I was concerned. We had the Revenue on our backs after meeting MI5, now this. Someone out there had a problem with us, which annoyed me greatly. After all, we were trying to save the planet. I started thinking of Batman again, and how ungrateful the citizens of Gotham City were being.

Setting foundations

With the leisure centre at Mapley taking shape, Jimmy set about designing and building other structures that we could make use of in the future for the fledgling Rescue Force. The second building had been completed, positioned close to the air traffic control tower, and the first training courses organised by Mackey Tailor and his group were underway. We had met the man from the council again and asked for a footpath from the leisure centre towards the village, but it was already in hand. So too a roundabout and a road widening for a stretch some four hundred yards long, and not costing us anything.

With Rolf the architect and a colleague in tow, Big Paul showing Karl “his” Huey, we surveyed the foundations for a large square trench covering a wide area. Jimmy said it was for water rescue training, but I could not see how, it was only six feet wide and four feet deep.

Jimmy stood at an offshoot of the trench. ‘There’ll be a large pump here, sending water around the course at up to twenty miles an hour.’

‘Ah, raging torrent water training,’ I realised.

The course stretched fifty yards across and varied in width, Jimmy indicating that the variations in size would cause variations in water speed. There would also be many concrete bumps at the base, causing swirls and eddies. We walked around it as the first concrete was being pumped in by puzzled builders. It would also offer a section roofed-off at water level, so that anyone not paying attention would be swept under for a few yards.

Wiping our feet, we climbed the stairs of the newly finished barrack block. The top floor was split into two large dorms, room for twenty beds and lockers in each, communal showers and toilets at each end. The lower floors were similar to a basic hotel, except the rooms did not possess individual toilets or showers, they were found at the ends of the corridor as above. The ground floor was the same except for an extra room stuffed full of washers and dryers. The decorators were finishing off, soon to hand it over to us, the first users likely to be cadets on a week long camp, soon to be followed by Mackey's trainees. The guards at the gatehouse had little to do, so upkeep and management was now down to them; they were the key-holders and co-ordinated with the various groups using the facility.

From the top floor of the barrack block I had noticed a large hole in the ground towards the perimeter fence, and Jimmy now led us towards it. The hole was fifty yards long, twenty yards wide and already very deep. The sides nearest the rim had already been concreted – for safe access, metal reinforcing rods sticking out.

‘Scuba training,’ Jimmy explained. ‘There’ll be a concrete wall going up twenty feet, so the total water depth will be a good twenty metres when finished.’ He pointed. ‘Down there we’ll have tunnels and air-pockets, a small cave winding around.’

‘Cave rescue boys can use it,’ I suggested.

‘And police divers, and anyone wanting some dive training before they hit the ocean. We’ll have a club here, open to locals. Come and see the cave.’

‘Cave?’ I queried as we drove around the airfield to a far corner. This was Swindon, as flat as the Fens. Getting down from the Range Rover, and thrusting my hands into my pockets, I said, ‘It’s another trench.’ Laid out before me was an area the size of a

football pitch, nothing but brown mud, with what looked like a maze being dug.

Jimmy explained, 'We'll line it all with concrete, a concrete roof, dirt on top, make use of the land above as well as below. The cave will vary in height and width – room for one or two people at a squeeze, winding around with a few dead ends, some water traps. It'll be around three hundred yards long when finished, quite a crawl on your belly in the water and the mud. They'll paint the concrete dark brown, no light reflection, be spooky in there.' He pointed. 'Over there it will rise up twenty feet – down thirty, so you'll have to climb up then rope back down.'

'Be good for the cave rescue boys,' I said.

'The water level can be varied as well, so cave divers can use it for training. Should have people from all over.'

I pointed to the left. 'More water stuff?'

'No,' Jimmy said as we walked towards another trench. Halting at the edge of an area recently concreted over, he explained, 'Concrete patch on both sides, small ravine in the middle. They build small bridges from wood or scaffolding, get a wounded man on a stretcher across, two teams at a time, competing against each other. A lot of rope work.'

The assault course I recognised. Walking alongside it I commented, 'Not much of a challenge.' The highest barrier was no more than five feet and most obstacles possessed angled ramps.

'They'll do it in teams of five, one man on a stretcher.'

'Ah, now that would hurt.' I pointed at the side of the nearest hangar, at a wall of scaffolding. 'Problems?'

'No, climbing frame. You go up one side and across. They'll be a net, but also areas blocked off, some rope crossings. And when we're feeling particularly sadistic -'

'Do it with a man in a stretcher,' I finished off. 'Ouch.'

With muddy shoes we mounted up and headed back to the control tower. In the glass tower we leant against walls and discussed outstanding work with Rolf and his colleague; the trenches and concrete were quick and simple, low cost as well, the Greenhouse would take longer.

'Greenhouse?' I queried. 'Tomatoes?'

With a smile, Jimmy said, 'No, African training – heat and bugs, a few animals.' Rolf pulled out a drawing for me.

The outer layers would be thick Perspex, two sets about a foot apart, so that any sunlight would heat-up the inhabitants. Under-floor heaters would do the rest. The sketch indicated animal pens, cages and water features, an area set aside for camping, complete with a chimney, sturdy wooden poles for hammocks to hang off. It also possessed a mist-sprinkler system to keep the unlucky inhabitants wet and miserable for their stay.

Jimmy explained, 'We'll stick people in there for a weekend and see how they cope. Hammock making, washing in the pond, cooking, bugs all over the place, heat overbearing. If they crap-out here they'll freak in Zaire. And all night they listen to randy tree frogs, we'll put just males in there.'

The final building that we inspected was destined to be a garage and motor pool, as well as a training centre for drivers and mechanics. At the moment it was a patch of grass with pegs and string. We ducked into the AMO building, the building rented to the first aid instructors very cheaply, and met some of the staff. With grins they told us they'd had a new delivery and led us to the largest classroom.

'Ah, Frankenstein's monster,' I realised, the dummy from Medical Physics, Cardiff. This was the advance prototype.

They switched it on, checked fluid pressures and then directed me towards the naked, yet life-like Eunuch. I felt the skin, not that convinced, poked and squeezed limbs. They seemed about right. I poked the stomach, which seemed quite human, then lifted a leg and bent the knee.

'Take a pulse,' a man said.

I took a radial pulse. 'Rapid and shallow.'

'You know your stuff. Now a femoral pulse.'

I jabbed my finger into the groin, finding a pulse on one side but not the other. 'Is it broken?'

'No. So what's your diagnosis?'

I made a face. 'Crushed pelvis, left side, going into shock.'

'He's not stupid,' the man said toward Jimmy. He closed in on me. 'We can practice intubation, giving injections, taking blood, all sorts of diagnosis scenarios. But we haven't stabbed or shot it yet, a bit pricey for that.'

‘Yes,’ Jimmy firmly agreed. ‘But when this is obsolete you can practise stitching.’

‘We’ve shown it to the local fire brigade, the ambulance staff and some doctors, they were amazed. Some want to use it.’

‘Let them,’ Jimmy ordered. ‘More the better, get our monies worth. Cadets as well, St. John’s Ambulance.’

‘We going to sell it worldwide?’ I asked.

‘Eventually. Next one goes out to Kenya.’

With a grin, the AMO man said, ‘Fucking officials at the airport will freak, especially if you leave the pump running.’

‘You’ll have to Pay First class for it!’ another man joked.

Walking down to the apron, Jimmy took over the Huey. I sat left seat, Big Paul and Ricky in the rear. Jimmy didn’t hold a current license, so this was a risk. I did hold a license, but was not allowed to teach; so all round, it was a naughty escapade. He started it without a problem, wound up the rotor speed and lifted off, skimming the ground and gaining altitude, turning around the hangars, finally executing a rolling stop on the grass.

‘You should formalise the paperwork,’ I said through the headsets.

‘Yes, dad.’

I nudged Jimmy to move it a few yards, onto the concrete, that way the aircrews could wheel it away. ‘Sloppy parking.’

Ratcheting things up

Keen to keep Ratchet and Spanner happy, and on board, we returned to Mawlini six weeks after offering to fund them. Jimmy explained to me that he wanted to keep them at the base for at least a year, so we would have to try and drag things out. We landed with Cosy, Jimmy right seat and me uncomfortable in the back. Not uncomfortable because of any lack of space, but because I was not at the controls.

Mac greeted us in a Land Rover on the apron, a Russian Mi2 helicopter parked nearby, white UN colours. ‘They’re out flying, be back soon.’ He took us to their new building, Cosy off delivering supplies. “Rescue Force Kenya” the sign said, the

letters wrapped around the logo, now with a red cross in the background. The lower letters were Latin: "FOSSOR QUOD VIR."

'What's that mean?' I asked Mac.

'Fools and heroes,' Jimmy replied as we stood on the sand waiting.

'Not that inspiring for beginners,' I complained, Mac agreeing with me.

'It's perfect,' Jimmy explained. 'Since we want neither fools, nor heroes, but both.'

'Uh?'

'A fireman is foolish to rush into a burning building, a hero when he comes out.'

'That's clever,' Mac agreed as the distinctive sound of a Huey caused us to turn our heads. Whoever was flying came in fast, flared up and around, landing quickly and smoothly. 'That'll be Ratchet. He's shit hot, a natural.'

Five minutes later the pair stepped down from a jeep, sunglasses and baseball caps, and looking cool. Flying lessons will do that to you, and I remembered my own transformation.

'Right, boss,' Spanner offered, a round of handshakes given.

They showed us inside, not that the door had been locked. The interior was cool, neat desks and neat paperwork squared off to the desk edges, a third man sat at a desk and dressed in a white uniform with the shoulder logo. The man, in his late twenties, stood as we entered.

'Beer, mate?' he asked me, clearly an Aussie.

'Never say no,' I responded.

He shook my hand. 'Clive Dunnnow.'

'Clive ... dunno your last name?' I puzzled.

'If I had a dollar,' he sighed. 'Naw, mate. Dunnnow, "w" on the end.'

Spanner said, 'Clive's a paramedic, was Army in Oz. He flies a Cessna and he's got thousands of miles of jeep driving under his belt.'

Jimmy closed in on the man, a hand extended.

'Fucking hell, mate. What'd your mother feed you on?' Dunnnow asked.

'Kiwis,' Jimmy responded, making Dunnnow smile. 'Oh, and welcome to the team, I guess.'

‘Thanks, boss. Two more of us around about someplace.’

‘The bar ... perhaps?’ Jimmy teased.

‘Naw, mate, not in the daytime. Least not before 3pm anyplace.’

‘If we’re going to have a board meeting, let’s do it in a breeze,’ Jimmy suggested, so we drove around to the hotel. Settling around a table we sat partly under a Fanta shade and accepted cold beers, Jimmy thanking the waiter in his local tongue.

‘Fellas said you spoke a few languages,’ Dunnow noted.

‘It would be rude not to,’ Jimmy suggested. ‘So, how’s progress?’

Ratchet began, ‘We hired the mad Aussie here, plus a Brit doctor and a Dutch lady nurse built like a tank.’

‘Not Anna?’ I asked.

‘No, she’s called Hildy,’ Ratchet replied with a grin. ‘And Cosy says Anna gone all slim and muscles, lost the pounds.’

‘And Anna is German,’ Jimmy corrected me. ‘Got any jeeps?’

‘Got two good ones, think there are two more near Nairobi, should get ‘em at a good price. We’re fixing air intake pipes up the roof, proper roof-racks, extra spare tyre.’

‘Good,’ Jimmy responded. ‘How’s the flying coming along?’

Mac put in, slapping Ratchet on the shoulder, ‘Ratchet will pass first go. There’s a chief instructor down in Nairobi when he’s ready.’

‘I’ll get there too,’ Spanner quietly insisted.

‘Then make sure you’ve both got a PPL and checked out on Cessna, they’re common around here,’ Jimmy suggested.

‘That Russian helo’s a bit of a beastly,’ Dunnow said. ‘I’ve had a look inside.’

‘But reliable when treated right,’ Jimmy put in. ‘Good Russian engineering. So, what’s this doc’ good at?’

Ratchet answered, swiping away flies, ‘He’s thirty-five, a specialist in tropical medicines, spent a lot of time down here. We found him finishing a charity contract in Tanzania. The nurse was with him, both out of work. They don’t need any Africa training, and they’re good with jeeps.’

‘Get the doc’ on a Cessna if he wants to have a go,’ Jimmy said.

‘He showed some interest,’ Mac put in.

‘They’re probably over Doc Adam’s place,’ Ratchet suggested. ‘They help out a few hours a day.’

‘So should you,’ Jimmy suggested. ‘Keep your hand in, stay fresh.’

They nodded their agreement.

I asked, ‘What about navigation, you up on that?’

‘Better now,’ Ratchet admitted. ‘What with all the flying nav’ an all.’

Mac put in, smiling, ‘I design courses for them, test each of them. They only got lost a few times.’

‘Been teaching them ordnance?’ I asked.

‘Aye, they’re coming along, but just a few hours a week.’

Jimmy faced Mac. ‘Why not set up a one week trip for them, down to the village on the border of my land. Navigation, medical tent set-up, one day surgery, next village and back. Then the same for Tanzania. Let’s get them used to trips of that nature.’

‘Repeat it in a Cessna,’ I suggested. ‘Then the Huey.’

‘If we can get all *that* done, we’re almost there,’ Jimmy enthused. ‘But let’s make sure that everyone knows a Chinese pineapple grenade from an AK47, huh?’

‘We get some time at your hotels, boss?’ Dunnow risked.

‘Of course you can.’ Jimmy faced Mac again. ‘If they complete the test trips successfully, week at each place, but not together – groups of two.’

The doctor and his assistant stepped out and toward us. Yes, I considered, she was built like a tank. We stood and greeted them, Jimmy exchanging pleasantries with the nurse in Dutch before we pulled over chairs for them.

‘What’s up, doc?’ I said. The doctor, Doc Graham, was tall and thin, fair-haired, looking to me the public school type.

‘Just delivered a baby, actually,’ he replied in a posh accent.

‘Another frigging Somali?’ Mac nudged with some attitude, earning a glance from Jimmy.

‘Third this week; quite a camp building up.’

Jimmy faced Mac. Firmly, he said, ‘Mac, hire some labourers and put up a few buildings four hundred yards beyond Doc Adam’s, encourage the Somalis to use them, I don’t want them straddling the road or nestling against our fence. Then move those near our fence. Don’t be afraid to marshal them, get the

UN involved. If we're going to help them, then let's get them orderly. Get Cosy on it.'

'Aye,' Mac reluctantly agreed.

After sipping his beer, Jimmy asked Mac, 'Any progress on the border?'

'They started the fence, whole fucking half a mile of it.'

'Keep pushing them,' Jimmy encouraged. 'Spend some money. Get Rudd on it if you need to, he's got more time now.'

'Might I ask,' Doc Graham begin, 'why you spend so much money around here, yet have a problem with Somalis crossing the border?'

'I'll help Kenyans in Kenya, Somalis in Somalia. But when large populations start drifting to places with fuck all resources everyone suffers. How much water is there here for them?' He left the question floating. 'If there are gunmen terrorising villages ten miles inside their border, I'd rather deal with the problem over there, not refugees here.'

'How would you deal with the gunmen?' the Doc pressed.

'I've a feeling that Somali will disintegrate. When it does, no one will object to a buffer zone and refugee camp on their side of the border. I'll fix camps over there and send the Kenyan Rifles after the gunmen.' He sipped his beer. 'What you have to keep in mind about Africa, is that often a couple of hundred rebels cause a million refugees to flee their homes. I can pay for a million refugees, or I can shoot the fuck out of a few hundred idiots with AK47s instead of cocks – at a fraction of the price.'

'You have a strange way of looking at it,' Doc Graham noted.

'I have the correct way, the other way causes more misery and cost,' Jimmy insisted. 'In Zaire you have ten gunmen on a hillside terrorising a thousand people in the villages below. Ten gunmen are cheap to dispatch, helping a thousand displaced people is costly.'

'Seems fair enough,' Dunnnow suggested.

'Treat the cause, not the symptom,' Doc Graham agreed.

Jimmy continued, 'There are large areas of the Congo, sorry *Zaire*, that are like the Wild West, and we can't get in and help because of a dozen idiots with guns. My aim is to deal with the idiots and help the people at the same time. The UN will just help the people near them, whilst hoping the gunmen get bored and go home.'

‘They’re not much of a deterrent,’ Doc Graham admitted. ‘When do you think you’ll send us into Zaire?’

‘When I know you’ll come back out.’

‘I can’t argue with that,’ Doc Graham approved.

‘Fucking right,’ Dunnnow agreed.

Jimmy turned his head a notch to Mac. ‘Kenyan Rifles?’

‘First twenty are shit hot. We got some at your safari park. They got their own jeeps and they navigate OK.’

‘Fine. When this lot do a week’s trip - send four Rifles with them, one NCO. See how they work together.’

‘We get our own bodyguards,’ Dunnnow approved.

I asked Mac, ‘How many recruits in the Rifles?’

‘Thirty something. Bit tight till we finish their barracks.’

‘Send the existing lads out somewhere,’ Jimmy suggested. ‘Get them used to border patrol and sleeping rough. So, anyone need anything?’

‘We’re still awaiting some decent medical kits,’ Doc Graham suggested. ‘Equipment for minor field surgery.’

‘Deal with Rudd directly,’ Jimmy told him. ‘He knows all the suppliers down here, he can get us a good deal – paid for or otherwise.’ We laughed. ‘If you want anything from the UK then fax Paul and we’ll send it via airfreight. Gentlemen, I don’t mind spending money, I do mind pissing about. There’s plenty of talent here, so let’s get organised.’ He faced Mac. ‘Kick Rudd’s cage; I don’t care about the golf complex, but I do care about this. Right, have a drink, we’ll eat together later. Mac, Paul.’ He stood.

Away from the gang, we stood and took in the view. ‘Mac, I don’t like Somalis any more than you do, perhaps even a bit less, and the way the fighting’s going over there ... they’ll be a million of them crossing the border. Hire some staff, delegate, move the refugees to where they can be helped best, corral them, and fix that fucking border before we’re knee deep in refugees and getting nothing else done.’

‘Fucking Somalis ain’t what I signed up for,’ Mac complained.

‘I know, and I want you back on training, so get Rudd and Cosy on it - it’s their problem. Hire a refugee co-ordinator for Doc Adam. Hell, stick the person in his office and get him involved. Then we can all do what we’re good at, yes?’

‘Aye, I’m no good as a fucking diplomat, nor babysitter.’

‘We appreciate you,’ I told Mac, handing him a few thousand dollars.

Jimmy told him, ‘Don’t be afraid to kick some arse, you’re taking too much on yourself. Keep overall control – you’re the boss – but delegate more, yeah.’

He pointed to the road. ‘You can see where the damn road is by the huts along the side. Never used to be able to make out where it was for all the sand.’

‘Get some barbed wire,’ Jimmy suggested.

‘How much?’

‘About three hundred miles worth,’ Jimmy coldly stated. ‘Ask Rudd for a shit load. And I mean ... a shit load of it.’

We walked across the camp and to the Flying Doctors’ hut. As we progressed, scuffling through the sand, I remembered being able to see right across the camp, the Old Dogs huts a small oasis in sea of sand. Now we had to stop and find our bearings amongst the huts. I knocked and we entered.

‘Jimmy!’ the man called as he stood. Slightly overweight, balding and red-cheeked, his tatty green flight suit said “Tubby”. They shook hands.

‘This is my business partner, Paul.’

I shook the man’s hand. ‘I knew a Tubby once, the Dorset Tubby’s.’

He laughed like a drunken Santa. ‘I like you - you’re rude. Come, sit, have a beer.’

‘Don’t drink and fly, I hope,’ I teased as we sat around a cluttered desk.

‘Only at night. Then it doesn’t matter if you hit the ground!’

I raised an eyebrow. This man was a *fly by the seat of your pants* cliché in the flesh.

Jimmy testily asked, ‘Getting any work done?’

‘We go with the UN team three times a week, or they get pissed off.’

‘Let them, recruit a few more flyers,’ Jimmy insisted. ‘I’ll increase your budget. Get another Cessna, but I want you helping out the Rescue Force staff.’

‘They have a nice budget, deep pockets,’ Tubby grumbled.

‘So could you, when you start proving your worth to me,’ Jimmy suggested. ‘Start taking some of them with you on trips, get them some experience.’

‘As you see fit ... he with deep pockets.’

‘Where’s your better half?’ Jimmy asked.

‘She who must be obeyed ... is fixing a leaky Cessna in Nairobi.’

Jimmy faced me. ‘This drunken old twat may not look it, but he has more hours on Cessna’s than me. And he’s a doctor, although you’d want to check his license.’

Tubby laughed. ‘It was your charm that first attracted me to you!’

‘I thought Jimmy said it was the offer of a job for an out of work bum?’ I asked.

‘Well, that as well,’ Tubby said in a conspiratorial whisper.

Jimmy told me, ‘Tubby is old school, he can *hear* what’s wrong with a Cessna, and fix it better than most mechanics. He’s wasted as a doctor.’

A squeal caused me look over my shoulder, finding two pups in a basket. I lifted one out. ‘They look like Spaniels.’

‘More ... or less. The father’s pedigree is ... not known. Although Mac denies it.’

We laughed as I placed the pup down.

‘You knew Mac before?’ I asked.

‘Flew in a few times, although not by choice. Landed up the road once and taxied down here. Still, it gave the locals something to talk about, blew the dust out of their shacks. And now Mac is lord of all he surveys, thanks to you pair.’

‘We’re just getting warmed up,’ I told him.

He eyed me carefully, easing back. ‘We dropped in on the orphanage - me and the dear lady wife - to see what all the fuss was about. And may I say ... what ... *the fuck?*’

‘We don’t do things in half measures,’ I said.

‘Twenty million, on an orphanage?’

We did not correct him on the figures. I said, ‘It’s all tax deductible.’

‘So, anything you need?’ Jimmy asked.

‘Besides a cooler climate? No. For once I can say that we are over-supplied with what we need, and your man Cosy is painfully helpful. But ...’ He raised a finger. ‘But you might

consider a bigger plane, us and the UN whingers going out together, not following each other like Zeros attacking Corsairs.'

'Something like a Dash-7?' Jimmy suggested.

'Just like it,' Tubby enthused. 'There's a second hand one in Nairobi, they want a hundred and seventy-five grand.'

'Must have a lot on the hours for that price,' I scoffed.

'No, they're just a bit ... broke. Bit of a ... closing down sale.'

'Ask Cosy to buy it, get a certificate on it,' Jimmy ordered.

'But I want it available for my lot to do a few trips.'

'It'll be your plane,' Tubby emphasised.

'But I like to ... delegate,' Jimmy carefully pronounced. We stood. 'Join us for food later.'

'I never refuse a good meal.'

'Just don't start wearing a red flight suit and a white beard,' I suggested, Tubby laughing loudly.

Tubby became one of my favourite characters, a real flyer, and with a name like Winston Hiddcup we all stuck to Tubby. He took me up and taught me things that were not in the manual, and probably for good reason. He altered the engine beyond the manufacturer's guidelines, and the planes flew better. Winston was also the only person to approach Nairobi with a call sign instead of his aircraft's proper designation: 'Tubby to Nairobi tower, over.' And, most amusing of all, he had a dozen parking tickets from the Kenyan police for landing repeatedly on Highway 44 North, to visit his favourite café. His Cessna proudly displayed speeding and parking tickets, all unpaid of course.

That evening we entertained thirty people at the rooftop bar, someone having fixed up a sign saying "Sandy View Nightclub". The food was always on us when we visited, so everyone turned out, many new faces. We ate for two hours before the tables were moved back, seats placed around the edges like a high school disco. The barman's assistant became the resident DJ and played music from the sixties and seventies, a forlorn glitter ball hanging off a pole and a handmade laser lightshow sending fingers of light toward the stars. I had to laugh at the absurdity of it.

Doc Adam turned up with three nurses, and seemed to be in a relationship with at least two of them. That surprised me as well.

The Old Dogs were already merry and dancing like drunken fools, a bit strange for me to see them let their hair down, not that they had much hair. Doc Adam joined them, UN staff looking a little out of place dancing in their uniforms. The beer flowed freely as more UN staff turned up.

The UN staff normally ate downstairs, the hotel's restaurant now run by the UN, most of the rooms below taken by their staff, transient or otherwise. Some were now in civilian clothes, a few in uniform, UN baseball caps turned around. The staff brought out numerous punch bowls and I tried the concoction, figuring the glass I drank to be worth three vodkas. Like Jimmy, I did not get drunk, the stems prevented that; you had to pack away enough alcohol for it to be medically unwise to be truly drunk. By 10pm the bar was packed, over sixty people. At one point Cosy beckoned me to the wall. He was flying off early and so drank little, but now pointed down towards the pool. On the grass we could see an arse going up and down, two sets of legs.

Jimmy appeared at my shoulder, peering down with a grin. 'What you have to keep in mind, is that most of this lot have very stressful and unpleasant day jobs. They live in a desert, heat and flies all day, trying to help people they can't save, burying babies every day. If they didn't let off steam like this they'd go mad.'

I understood, but I had never experienced such revelry amongst doctors and senior staff. Even the Russian pilots were pissed and dancing. Bob Davies put in an appearance, sober, and chatted with us, retiring without having drunk too much. Two Kenyan Rifles, enlisted men, turned up and stood by the door, Cosy explaining that they were the bouncers, to stop people from hurting each other, too much, and to put people to bed; they were paid twenty dollars extra each.

A roar built up quickly over the sound of the Beatles and I looked up as a Cessna flew so low over the bar it lifted the UN flag. The crazy pilot banked hard, lining up with the runway - the landing lights now on, and touched down smoothly. Ten minutes later Tubby's wife joined us.

'Nice landing,' I quipped, my words drowned out by the Bay City Rollers.

‘This disco is bloody marvellous,’ he said, accepting a drink. ‘You can see it from ten miles out. Even the UN pilots line up on it.’

We all laughed, and I had to laugh at the absurdity of it.

Tubby said, ‘She lands with the lights off sometimes, she’s done it so often.’

By midnight a few patrons were sleeping in corners, picked up and taken below in a well-practised routine. The Old Dogs were still going, but wrecked and incoherent. Doc Adam was dancing with his ladies, stem induced endurance, and our Rescue Force staff were now in varying states of stupor, Doc Graham and the Dutch lady tank seemingly in a relationship. I had learnt a lot in a few short hours, speaking with everyone and getting to know something about them all. Still, I was never completely comfortable with the debauchery. By 1.30am the bar staff were ready to go home, the music turned off, the sleeping, crawling and wobbling patrons eased below by the bouncers. The Old Dogs were carried out, one UN man getting punchy with the Rifles. That was bad move; they were not just built, but as fast as lightning. They subdued the man and put him to bed as Jimmy cleaned up.

I joined him, picking up broken glass and bottles. ‘Well, that went well.’

‘Don’t judge them, they live in hell itself,’ Jimmy suggested.

With everyone gone, a night guard now on duty, we sat and finished the punch, finding someone’s watch at the bottom of the bowl.

‘This lot working tomorrow?’ I grumbled.

‘No, half day tomorrow, special occasion.’

‘You mean ... *we’re* visiting,’ I complained.

‘Yep, bit of an event around here, not that they need an excuse.’

‘A bit surprising,’ I admitted, glancing up at the stars, my ears still ringing from the music. ‘They’re mostly doctors.’

‘And still human. They deal with death every day, and for fuck all pay. You need to be more understanding with them.’

‘Doc Adam seemed to have his hands full?’

‘Yes, he’s a bit of lad now. Got an ex-wife and three kids in Nairobi as well. Still, he puts in fourteen hours a day minimum without grumbling, so can’t fault him.’

The next morning the base was quiet and we made good use of the peace to wander around and check things out. The Rifles were up and about early and we joined them for breakfast, making each man feel appreciated, Jimmy talking to most of them many in their native tongue. Most recognised him and greeted him like a relative. We inspected the foundations for their new camp, discussing the layout with the officers, before accepting an invitation to join a jeep patrol to the border.

Just under an hour of dusty road and burning heat brought us to the much talked about border, a solitary group of workmen in attendance, a line of Somalis walking down the road towards us. The Rifles NCO informed us that the refugees cut the fence as soon as it was repaired; not enough patrols yet. Seeing the state of the refugees I felt sorry for them, a little guilty about our efforts here. And I wondered how they made it to the airfield on foot, women and children walking in the heat, many of the women pregnant. If we wanted to slow the human tide here we'd have to spend some serious money. And putting down barbed wire to slow up pregnant women with kids did not sit well with me.

'Why don't we put a clinic over there?' I grumbled, pointing across to Somalia.

'OK. What else?' Jimmy nudged.

'A camp, some water?'

'And what will stop the gunmen from terrorising the refugees ... and our staff?'

'We'd need the Rifles over there,' I suggested.

'Doubt they'd get permission, not yet,' Jimmy suggested. He pointed to a flat area behind us. 'We'll stick a camp there, a fence around it, a border crossing here. The water table is not too bad for drilling wells.'

Back at camp I was dying for a beer, finding Bob Davies having lunch at the rooftop bar, the place cleaned and good as new.

'Good night?' Bob asked as we joined him.

'Didn't drink much,' I lied.

'No, you two were up early, rest are taking it easy.'

Jimmy told Bob Davies, 'I'm going to start doing something to help the Somalis here. A camp behind Doc Adams, another near the border.'

‘It is getting busy around here,’ Bob agreed. ‘But if you stick a camp on the border you’ll accelerate the process, encouraging them to head for somewhere safe.’

‘They’ll come eventually ... of their own accord,’ Jimmy insisted. ‘Better we plan for it ahead of time.’

‘The UN won’t help until after the camps are up, you know that,’ Bob cautioned.

Jimmy nodded. ‘Has to be done, or they’ll hang around the gate asking for handouts.’

A Cessna flew low over the bar, banked hard and landed.

‘Tubby’s wife?’ I asked.

‘No, Cosy,’ Jimmy suggested. ‘He went and fetched Rudd early, save Mac barking at him.’

With Bob’s lunch finished he headed off to do some work, Cosy and Rudd joining us ten minutes later.

‘Good flight?’ I asked Rudd, slapping an insect on the back of my neck and wiping my hand in my already grubby shirt.

‘Yah, no problems, clear skies,’ Rudd answered. ‘I take over sometimes when Cosy wants a sleep.’ Cosy shot him a look.

We settled them, ordering drinks and food, the Fanta shade cooling us.

‘Right,’ Jimmy began. ‘We need to tackle the Somali problem here, before it becomes a big problem. Rudd, I want half a million pounds worth of barbed wire.’

‘Jesus. I just ordered fifty thousand pounds worth, and I thought that would make you shout at me.’

‘We’ll use it, all of it.’ Jimmy produced a map of the area. With a pencil he marked a square behind Doc Adam’s clinic. ‘I want an area four hundred yards square made into a camp – tents and buildings, toilets and water wells. Enough tents for five thousand. Then I want you moving people from the huts along the road, into the tents and buildings. Oh, and recruit a refugee co-ordinator for Doc Adam. Tell the Kenyans *after* you’ve done it.’

‘They won’t be happy,’ Rudd suggested. ‘It may make the Somalis look like permanent residents.’

‘Don’t care,’ Jimmy carefully mouthed. ‘Next, as the road here touches the border I want another camp set-up, fenced off, tents for ten thousand to start.’

‘My God,’ Rudd let out. ‘You think that many will cross the border?’

‘Yep, trouble is heating up over there.’

‘What budget for this?’ Rudd asked.

‘Price it up step by step, then fax us. Start with drilling equipment, get water flowing at the border, then every twenty miles from there to here.’ Jimmy eased back and sipped his beer as Rudd and Cosy exchanged looks.

‘How’s the golf complex?’ I asked Rudd.

‘Making a profit,’ Rudd answered, as if that was a surprising fact.

Jimmy ordered, ‘Give the manager of the golf complex more responsibilities for the other hotels, let him earn his bloody keep, free yourself up. Cosy, handle the orphanage. Rudd, you take a step back on that. And the safari lodge manager can handle things there well enough. For the next month I want the Somali issue top of your list.’

‘Kenyan Government will need to be spoken to,’ Rudd cautioned.

Jimmy offered Rudd a flat palm. ‘If we do nothing ... what happens to the refugees here? They’ll drift across Kenya. I’ll deal with the Government when the time comes. We *do* first, we ask later.’

‘Tubby is going to buy a Dash-7 plane in Nairobi,’ I told Rudd. He made a note. ‘It’ll be used for everyone, make a more comfortable ride up here for you.’

‘Should I cross-train to it?’ Cosy asked. ‘I have a twin engine license.’

‘Yes,’ Jimmy agreed. ‘When Tubby does *his* training. Double up, save on costs, we’ve got some barbed wire to buy.’

‘How many Rescue Force staff we aiming at?’ I asked.

‘Ten, to start,’ Jimmy answered. Facing Rudd he said, ‘Keep the recruitment going, we’ll send them off to do something useful soon. Get more uniform jackets made up.’

Mac stepped into the bar and over to us, appearing unwell, and looking a little sheepish. ‘Er ... need me for anything today?’ he croaked.

‘No, take it easy,’ Jimmy responded. ‘I’ve brought these two up to date on what we need, you kick back.’

The barman called for Mac, holding the phone. When he returned Mac said, 'There's some Yanks here to see you.'

'Shit,' Jimmy softly let out, his head lowered. 'They're ahead of schedule.' Lifting his head he said, 'Mac, go arm yourself, get the Rifles here with weapons.'

Cosy jumped up. 'I have two weapons in my room below.'

'Go,' Jimmy ordered.

'Problem?' Rudd nervously asked as Mac grabbed the phone.

'CIA,' Jimmy responded, a glance towards me. 'This does not involve you, nor should you worry. I own a salvage company that helped the British Government recover a wreck, without telling the Americans. Now they're pissed.'

I wondered what the hell he was talking about, but Rudd was deflected from the truth for the moment. And what truth was that, I found myself wondering. Did the CIA know about our supposed link to Magestic? And which version of the truth did they know?

Jimmy told Rudd, 'Go about your business, we'll talk later.' Rudd headed downstairs. When Mac returned Jimmy said, 'Depending on how this meeting goes, you may be out of a job. Sit in the corner and come over when I signal you.'

Cosy re-appeared with two pistols, one handed to Mac and tucked into a shirt, then directed to sit with Mac. When the Rifles appeared Jimmy told them to wait on the floor below, out of sight, and wait his signal via the barman, exchanging many words in a local dialect. Five minutes later, with just the two of us sat at a table, four men stepped into the bar. The first two were in their late forties and had an air of confidence about them, if not arrogance. The second two were clearly bodyguards, and all wore sunglasses and baseball caps. The bodyguards remained at the door whilst the other two stepped purposefully forwards.

The first man stopped at our table, taking off his sunglasses. 'Mind if we sit, Mister Silo?'

'Not at all, Mister Potomo. Beer?'

The two men sat, smiling widely. 'You guys are good, real good. You knew we were coming.'

The second man took off his glasses, offering us a smug grin. 'And what's my name?'

Jimmy eased back and studied the man, as if perhaps he did not know. 'What was it that Mister Potomo's ex-wife called you during sex? Bot Boy?'

The men stopped smiling for just a second.

'He's good,' the second man said. 'But we don't have any secrets.'

Drinks were placed down, Jimmy exchanging a lot of words in a local dialect.

'You speak the lingo,' Potomo approved. 'Must have been down here a long time. Passport don't say that, though.'

'I'm a quick study,' Jimmy said with a forced grin. He sipped his beer. 'Now, what can I do for you nice gentlemen?'

'We figured you'd already know. We figured you'd get a letter,' Bot Boy said, sneering. For the most part, I was trying to figure out what the nickname signified in sexual slang.

'They should never have sent amateurs to do a professional's job,' Jimmy said to himself, looking away.

'Probably short of staff,' I helpfully put in.

The men stopped smiling.

'Why don't you get to the point,' Jimmy finally nudged.

Potomo said, 'We know you get tips for the financial markets, so now you'll co-operate with us.'

Jimmy slowly nodded to himself. 'And when you signed out of the Embassy, you said you were ... what, heading to Tanzania for the day?' The men glanced at each other, concerned. 'They won't know where to search for you, boys.'

'You must think you're better connected than you are,' Potomo coldly stated.

'You should have brought bodyguards with you,' I lightly suggested. The men glanced over their shoulders, their two security men gone. 'Can't get the staff these days.'

'Look over the wall,' Jimmy suggested, thumbing towards the front wall.

After a few seconds hesitation, Potomo got up and stepped over to the wall, glancing down. Mac did likewise, laughing. The two guards were stripped naked and pegged out in the dirt, held at gunpoint by the Rifles. Potomo was not a happy bunny on his return. 'You're fucking with the wrong people.'

‘Funny,’ Jimmy began, ‘I was going to say the same to you.’ He glanced towards Mac, pistols in the necks of our visitors a second later.

‘Over the side?’ Mac asked.

‘That would be rude,’ Jimmy responded as four Rifles burst out, weapons cocked and pointed at our guests. Jimmy sipped his beer slowly. Calmly, he said, ‘Mac, remove the gentlemen’s clothes, put them in their jeep, remove any spare clothes from the jeep – as well as sunglasses and hats, any water, phones, then send them on their way.’

Mac dragged one man away, Cosy the other, the men of the Rifles following close behind.

‘We got a problem?’ I asked.

‘Smoat wants payback, he tipped them off.’ He took a breath. ‘Not to worry, they won’t reach Nairobi.’ With me watching, and now very concerned, Jimmy grabbed the bar phone and made a lengthy call. Returning, he said, ‘Sorry about that, I had expected that incident to happen in a few more months. I must be getting old.’

‘Does it turn out OK?’ I asked, still concerned.

Jimmy nodded, unconcerned.

Mac and Cosy returned ten minutes later. ‘What was all that about?’ Mac asked.

‘The nice gentlemen from the CIA wanted to put a small base here, planes for operations towards Yemen and Somali.’

‘Like fuck,’ Mac said. ‘I ain’t playing with those fuckers.’

‘My thoughts exactly, and I told them before.’

The Rifles officer appeared and stepped over. ‘Was there a security problem, Mister Silo?’ he asked, concerned for us.

Mac told him, ‘They’re American; CIA. They want to put a base here.’

‘Here? Americans? I have not heard of permission for this.’

‘They will not get permission,’ Jimmy insisted. ‘I will talk with your Government, do not worry about it. But I do not like rude men.’

‘We sent them packing,’ the officer approved.

With just us remaining, I said, ‘Different story for Rudd?’

‘He’s not stupid, and Cosy will read between the lines. Rudd needs a story that he can accept. Go see if you can find him.’

I went and fetched Rudd from reception. Sitting, Rudd said, 'You stripped them naked and sent them off. They'll be problems?'

'No, I'll talk with their bosses, strike a deal to keep the peace,' Jimmy suggested. 'The people here think that the CIA want a base here.'

'Do they?'

'If they did I would move out,' Jimmy insisted. 'No, that was just a story for people less experienced than your good self.'

'What is this salvage stuff?' Rudd asked, reclaiming his beer.

'I have a boat, a salvage crew, former British Navy divers.'

'We've had some successes,' I put in. 'Found a wreck of Cyprus with a lot of gold in it.'

'But we helped the British Government recover a wreck in the Caribbean, Americans wanted a cut. I told them to go talk to the UK Government, but they hassle me still.'

'We'll have to give them some gold,' I put helpfully in.

Jimmy nodded. 'We'll keep them quiet.'

Rudd seemed placated. 'Are there wrecks here?'

'Here? Africa?' Jimmy asked. 'Never heard of any. Most are in the Caribbean, Mexican gold heading for Spain.'

'Must be exciting to dive for it,' Rudd admitted, sounding jealous. 'And I think these men will have an interesting four hour journey to Nairobi, especially stopping for petrol.'

We laughed.

'They won't come back,' Jimmy suggested. 'I hope so, anyway. Don't worry about it.'

Late that night we got a call from Skids, Potomo's jeep now in Tanzania. Jimmy put in a call to Jack, a message for Sykes about Smoat. We packed our bags and headed to the runway at dawn, our jeep pulling up behind a UN plane, an Antonov with its blades turning, no sign of our Cessna, or of Cosy.

'Catching a lift, are we?' I puzzled, shouting over the noise of the engines, the backwash bathing us in an aviation fuel scented wind.

'Detour. Come on,' Jimmy shouted.

We bordered the plane, Bod Davies exchanging a few words with Jimmy before he got off.

I strapped in as the aircraft took off and turned northeast. 'Where we heading?'

‘Dohar.’

‘Oh. Where the fuck’s that?’

‘Gulf. It’s a stop over to Afghanistan.’

‘Afghanistan?’ I queried. ‘Where the Russians were?’

‘Yep.’

I sat back. ‘Oh.’

‘Got to be done on the quiet, can’t have people knowing our intentions.’

At altitude the Russian pilot came back and thanked us greatly for our hospitality. Remembering how much this guy liked to drink, and the state he got in, I was not confident about our chances of reaching Dohar. Many of the UN staff wandered up and greeted us, and we got plenty of cold food on the four-hour flight, but it was not British Airways, a constant vibration in my feet and bum. We got off for the refuelling at Dohar, the UN staff all disembarking and just a handful of fresh faces boarding. The pilots also changed, two Pakistanis taking over. We set off for Afghanistan, Jimmy sat reading a book on Pushtan, whatever that was. He could not brief me because of people sat near.

We landed in the dark at some place called Khandahar, Jimmy explaining that the area around the airfield was full of land mines, so no wandering about. He handed me papers that explained who were in the local language, a type of Arabic script, plus letters from the UN. I tucked them away securely. Stepping down with our luggage I noticed very few lights on at the terminal building, a line of three UN jeeps waiting. And a real chill in the air. Our jeep was the last one, a local driver and a man with an AK47 strapped across his chest. Jimmy greeted them in some local dialect, sounding similar to the Arabic I was learning, and we set off.

‘Be there in time for food,’ Jimmy assured me. ‘Our meeting is all set-up with the Taliban leaders.’

I remembered the name, something to do with The Brotherhood, and I seriously hoped he knew what the hell he was doing. We trundled along poorly maintained roads with no illumination other than the vehicle’s headlights, my mind on Russian landmines, twenty minutes to a city where the houses and shops were lit, but not the streetlamps. Slowing and turning, we negotiated a set of high gates, guards shining torches in our faces and inspecting us at length, followed by a second set of

gates before we pulled up in front of a civic building that had seen better days, many armed men milling around, all wearing long grey robes and cloth hats. There was much flapping of hands and shouting at our arrival. We left the luggage in the jeep and stepped forwards, frisked at length. Finally we were ushered inside, walking along a marbled floor towards an inner room.

‘Do as I do,’ Jimmy said.

Jimmy stepped inside when beckoned, slipping off his shoes. I copied. He took off his jacket, retrieving a bundle of papers first, and hung it up. I did likewise. He let out a long sentence, but I did not try and copy, my sweaty socks now chilling my feet on the marble floor. We stood at the edge of an oblong room with a blue carpet laid out in the centre, two dozen men sat crossed legged around it, and were directed forwards, my cold feet padding across cool marble. Sitting down, we both struggled to get crossed legged, and the rest of this would be out of my hands.

Jimmy opened with a few words, much gesturing with his arms before switching to English, a local translating for the elder men at the top of the carpet. ‘I come from England with greetings. I know that your people are suffering from the Russian invasion, and I can help.’ He passed forwards a brochure for Johnson’s factory in Cardiff, illustrating the artificial limbs. It caused a stir.

A question was passed along, finally translated for us. ‘How many can you send to us?’

‘How many do you want?’ Jimmy asked.

That caused a bit of confusion and much debate. Finally the translator said, ‘There are thousands of people with one leg.’

‘Then I will send thousands.’

That was re-translated, and again caused a stir. As the debate echoed around the room, Jimmy passed up the other sheets, photographs of Africans undergoing mine training.

‘I can send experts to clear the mines, the latest equipment.’

His words were translated, the sheets examined as food was placed down on silver plates. The bread looked similar to that which our local curry house served, they even seemed to have a type of popadom, many small cups of white or green paste. Jimmy had not touched the food yet, so I dutifully waited. When the headman gestured towards the bread I copied Jimmy in tearing bits off, dunking it into the paste and trying it. The bread

was OK, the white paste a yoghurt, the green paste not unlike the mint at our local curry house. A brown paste was spicy, but nice enough, and I tucked in. Questions went back and forth, slowly translated, a hot broth brought out, everyone having a small china bowl of it. Again we dipped the bread in.

At one point the translator asked a question, 'Why do you wish to help us?'

Jimmy answered, 'A young man cares for his family. An old man has learned to care for his tribe, not just his family. A great man cares for those he has not yet met.'

It again caused a stir and much debate, some faces smiling back at us. Ten minutes later the translator asked me if I was married. I said, 'I am still practising,' getting a quick glance from Jimmy.

It was translated, causing much amusement. Even the old boy at the top found it funny. A translation came back down, 'You Westerners make a very simple thing, very complicated.' And I wondered if they would marry me off at gunpoint to some local woman behind a veil, a sturdy woman with black pointy teeth and facial tattoos.

At the end of the meal we were thanked, and thanked them for seeing us, Jimmy saying that the first batch of limbs would be sent inside a month, and ten mine clearance staff would arrive with equipment, co-ordinated through the UN. My feet were chilled, the circulation gone as I tried to get my shoes back on. We bowed and waved, backing out and to our waiting jeep, soon back at the airport, then to our Antonov. The Pakistani pilots greeted us, the engines starting immediately. We greeted UN staff, those sat closest, but did not recognise any of the faces, soon rattling down the runway and heading for Dohar.

'Went well enough,' Jimmy suggested.

'Quick visit.'

'The overland route would take a week. This way we're back before our presence here is noticed. Someone to see in Nairobi, then off to Zurich.'

We landed in Nairobi as the sun set the following day, still in the clothes we started out in, and headed straight for our usual hotel. We had no reservation, but they found us rooms straight away. After a quick, and much needed shower, we were changed,

reclaiming our usual table at the rooftop bar, earnestly stuffing our faces. An hour later I felt back to normal.

‘I don’t think my bum will be same again,’ I complained. ‘Fucking vibrations on that plane. Dunno how the pilots cope for long distance.’

‘Before jet engines they were all like that, or worse.’

‘So, we send limbs to Afghanistan, plus some mine boys from here...?’

‘Yep, for several years, building up a relationship. That way I can have some influence.’

I nodded. ‘Who we meeting here? Rudd?’

‘No, the boss of the two idiots, Potomo and company.’

I noticed Cosy sat in a corner. ‘That Cosy?’

‘Yes, ignore his presence, he’s riding shotgun.’

‘Oh. We expecting trouble?’

‘Never can tell.’

‘Who’s the contact?’

‘Tasker.’

‘Ah, you mentioned him before down here. Alleged boss of Judy - that wasn’t.’

Jimmy nodded. ‘He has a part to play. I have to make the CIA think I’m just a pawn, and with a poor moral compass.’

I took in the quiet bar, not seeing anyone watching us. ‘He supposed to turn up tonight?’

‘Next few days, now that we’re booked in. Kick back and wait.’

The next morning we made like tourists and sat on the sun loungers, swam up and down, sunbathed, had lunch, then beers at sunset; no sign of our contact, Cosy close by. The next day we repeated the exercise, no ladies of interest around the pool.

We were sat at a table eating, around 4pm, when a waiter called Jimmy to the phone. Returning, Jimmy said, ‘He’ll be here in five minutes. Just called to ask for a polite chat ... meaning he thinks we might shoot him.’

‘Guess he’s noticed his boys overdue by now,’ I commented.

‘Four naked men were seen in a jeep, closer to here than the airfield, so no one can accuse our people at the airfield.’

Our man walked out, glancing around before spotting Jimmy and walking over. Tasker was silver haired, in his fifties and

stocky. 'Pleasant spot,' he said as he sat. 'Your local, I understand.'

Jimmy beckoned a waiter and ordered our guest a beer, finally adjusting his chair so that he faced Tasker. 'So, you're missing some men, I hear.'

'A very dangerous game ... for those involved,' Tasker responded in a strong whisper.

'Very dangerous,' Jimmy repeated. 'For those involved with unauthorised ops.'

'You're screwing with Uncle Sam, buddy. A bad move ... for anyone.'

'No, not Uncle Sam, just you and a few others,' Jimmy countered. 'And one letter from Magestic to US Ambassador in London and you're in jail, *old buddy*.'

'I got the evidence about you, that's my bargaining chip. *That* ... gives me a very strong hand.'

'You're working under a great misconception, Mister Tasker. So I will spell it out for you. First, look over your left shoulder.'

Tasker did so. 'Is that ... Cosuir?'

'Yes, he's working for the British, a gun trained on you. Downstairs are two Mossad agents, two more gentlemen in a car outside.' Tasker looked less sure about himself as Jimmy continued, 'You see, the British and Israelis are well aware that I get Magestic letters, not least about the locations of buried treasure. And the Mossad agents caught in Baden Baden? They were sent there by me, the gold recovered to Israel. And you may have read about the salvage operation off the Isles of Scilly, a large haul of gold. That will go to the British Government. So you can see, my friend, that the various governments would not want anything to happen to their golden boy. If protecting me, and my tip-offs, means silencing you...' He gave a large shrug.

Tasker remained quiet for many seconds. After all, he had no way left to play his hand.

Jimmy said, 'Right now your life is not worth a phone call, nor nod of my head. I hope you realise that. But I have a use for you, it's not all doom and gloom.' He adjusted his chair. 'Listen carefully, because this is what you *are* ... going to do. First, you quit working for Uncle Sam. Second, you find a good underwater salvage team in Florida. Third, you contact me directly and I tell you where to find a wreck. You fetch it up, launder the money

and pay me my part. If that goes well, you get a second wreck ... and so on. And these wrecks will net tens of millions in gold.'

'You don't need me for a salvage operation like that,' Tasker pointed out, a questioning his tone.

'Ah, but I do. First, I need someone to ... shall we say, plug the leak. Those that know about me must be silenced.' Tasker glanced at me. 'Second, I need to motivate the man who will *plug the leak* with a lot of money. Third, many of the wrecks are in the territorial waters of other countries, so a certain amount of skulduggery is required.'

Tasker slowly sipped his beer.

I helpfully put in, 'Being tied naked to a tree, in lion country, is no fun at all.'

Tasker fixed on me for many seconds as he considered his options, eventually lowering his gaze and sipping his beer again. 'And the value of the first wreck?'

'Twenty million in gold,' Jimmy responded.

'Tailor knows about this, but he's also an ex-Navy SEAL diver, I'd keep him in the loop. That would just leave one other.'

'It's your call,' Jimmy casually stated. 'You have a week, then I tell Mossad you threatened me.'

I helpfully put in, 'There are lots of old wrecks in the Caribbean, and not just in the bars!'

Tasker smiled, sadistically, and stood. He turned and left.

Jimmy beckoned Cosy over. 'He'll co-operate with me from now on.'

'And your ... *dealings* with him?' Cosy pressed.

'He's found out about my blood, wants to cash in on it.'

'I'd be happy to take him out into the bush,' Cosy offered.

'No, there are uses I can make of him in the States. He's a dog, but sometimes you need to use a dog to help keep the nice people safe.'

'It was his men at the airfield, no base needed,' Cosy stated.

Jimmy nodded. 'They wanted a few million out of the orphanage fund. I refused.'

'They'll make problems here?' Cosy asked.

'No, his men met some lions,' Jimmy explained.

That concerned me; the men could have had families. And the bodyguards were just doing their jobs.

‘You’re an odd man, Jimmy,’ Cosy said. ‘Ruthless in the pursuit to help others.’

‘That’s true,’ Jimmy admitted. ‘And some day I hope your faith in me will be justified.’

‘My faith in you is stronger than anything I have felt before in my life,’ Cosy stated with some conviction. ‘And you look very well for someone who saved lives in the Second World War.’

‘You should not believe everything you hear, mostly you should believe your eyes,’ Jimmy responded. He handed Cosy a wad of dollars. ‘Buy some gifts for the children, some ropes to teach rope work – I know you liked to sail as a teenager.’

Cosy pocketed the money. ‘I enjoy teaching the children. Odd really, what journey we take to find where we belong. I guess all we need is the right ... person, to get us on the right track.’

‘Is Mary dying?’ I asked. Cosy nodded, seeming saddened. ‘And she won’t accept Jimmy’s help?’ He shook his head.

Jimmy told him, ‘The next time you see Doc Adam, ask him for the special serum, tell him I sent you.’

‘I’ll live a long time?’ Cosy asked.

‘A very long time, hopefully,’ Jimmy responded. ‘With Anna.’

With Cosy gone, Jimmy said, ‘Pack up, gone at dawn. What’s the date? Fifteenth?’

‘Yep.’

‘Cold and chilly Zurich.’

‘Listen ... those four men –’

‘Are four men, out of a planet that may die.’ He walked off.

Two days later we were kitted out in black tuxedos and bow ties, walking into a casino and attracting the ladies. We sat and had a drink at the bar, walked around placing modest bets, then spotted our mark, apparently a Colonel in the Pakistani Army – but now dressed like us. It looked like he was losing.

‘Colonel Hassim?’ Jimmy asked.

The man looked up. ‘Yes?’ he asked with a frown.

‘We met at an embassy function, I’m Jimmy Silo. Can I get you a drink, I have a business proposal for you.’

Hassim eyed us suspiciously. ‘Come,’ he said, gesturing towards the bar. We started walking. ‘So, are you MI6, CIA or Mossad businessmen.’

‘Does it matter?’ Jimmy asked as we reached the bar. Drinks were ordered and we sat at a table.

‘Why don’t you tell me what you are really after?’ Hassim nudged.

‘Well, let’s do this in reverse order, shall we,’ Jimmy began. ‘First, I’d put half a million dollars a year into any Swiss bank you nominate.’

Hassim’s eyes widened. ‘Very generous. And what would I do to earn this generous sum?’

‘You would try and stop Arab gunmen from crossing into Afghanistan, you would pick up Arab gunmen in Pakistan and send them on their way, and you would satisfy those that require satisfying by the odd shootout with Arab gunmen making it into the newspapers.’

Hassim was puzzled. ‘That’s is part of my job anyway?’

‘Then you’ll be getting extra income ... for taking a keen interest in your job.’

‘You’ll be on double time,’ I helpfully put in.

Hassim was still puzzled. ‘That’s it?’

‘Yes, that’s it. But I would like a good working relationship with you, the odd bit of intel.’

‘Intel?’

‘Again, Arab fighters heading towards Afghanistan,’ Jimmy insisted. ‘That’s all.’ He took out a wad of dollars and placed it under a napkin. ‘Twenty thousand dollars to play on the tables.’

Hassim took the money, checking no one was looking. ‘And we would communicate ... how?’

Jimmy handed over a sheet with fax numbers here in Switzerland that bounced around to ours in the UK, set-up by us yesterday. ‘Send a cryptic message to those fax numbers, ask for a meet here – or somewhere else if you like.’

‘Does the West have intentions on Afghanistan?’ Hassim probed.

‘No idea, I’m just a pawn in the game. But I would guess not, it’s a barren rock, no resources.’ We stood. ‘Been a pleasure.’ Hassim followed us up, Jimmy taking out a cheque. ‘Oh, nearly forgot. Your first half million.’

With Hassim stood staring at the Swiss banker’s draft, we headed straight back to our hotel and packed, a late flight to London – just an hour, Big Paul and Karl picking us up. In the

rain we drove to the old Apartment, parking in the basement and soon getting the kettle on as Big Paul and Karl hunted for bugs. They stopped for tea and a chat with us, before a more thorough search. We were clean. With no one particularly tired we headed to the Chinese, treated like royalty as normal, a few Pineapple staff in the top room.

The next day I called Jack early, getting him and Sykes around at lunchtime.

‘How was Kenya?’ Sykes asked as he sat, tea being arranged.

‘Hot and dusty,’ I responded. ‘But we got in a trip to Zurich and Afghanistan.’

‘Afghanistan?’ Sykes repeated, shocked. ‘What the heck for?’

I explained, ‘We own most of a factory in Cardiff that makes artificial limbs, we’ll be shipping them out there, fucking shed loads of people standing on land mines. Be sending African mine clearance teams as well.’

‘Russians left a mess,’ Sykes grumbled.

‘More than a million mines,’ Jimmy commented. ‘One in five families has a amputee.’

‘Nasty business,’ Sykes condemned. ‘You said Zurich as well?’

‘Bribed a Pakistani officer,’ I explained. ‘Intel’ on Arab movements into Afghanistan.’

‘Ah, yes, I remember,’ Sykes said. ‘Years to come it’s a hot spot, you did say.’

Jimmy told him, ‘Any intel’ we get - you get.’

‘Good of you,’ Sykes acknowledged.

‘Right, problems,’ Jimmy began.

‘Smoat is in jail,’ Jack put in. ‘Facing a hefty sentence.’

‘Which should be a firm deterrent to others,’ Sykes commented.

‘He told Tasker, CIA, whose boys I have now bribed into silence – I think.’

‘You think?’ Sykes asked.

‘I’ve offered him some wrecks in the Caribbean,’ Jimmy explained. ‘If he does co-operate, which I think we will, then my aim is to make the CIA think I’m financially motivated. That way they leave me alone. Can you, Mister Sykes, let me know if Tasker quits the CIA.’

‘I’ll take an interest in him,’ Sykes threatened. ‘Oh, heard a rumour that Cosuir is in Kenya?’

‘Bribed ... and on the team,’ I responded. ‘Good man, hard worker. We got him helping out at the airfield.’

‘There may be ... questions?’ Sykes posed.

‘He’s working for a registered charity,’ Jimmy said, his hands wide.

‘Why hire him in the first place?’ Sykes puzzled.

‘Double-back,’ Jimmy stated.

‘He’s watching whoever is watching you over there,’ Sykes realised.

‘He spotted Tasker’s men,’ I helpfully lied.

‘I never knew Kenya had quiet so much intrigue,’ Sykes joked.

‘What happened at the Scilly Isle wreck?’ I asked.

Sykes explained, ‘Good haul, around twenty-four million in gold, but a lot of the items are worth a heck of a lot more as jewellery. They’ll be an auction for them.’

Jack put in, ‘Her Majesty’s Government made a charitable donation of just about seven million to the mine clearance charity.’

‘Nice of them,’ I quipped.

Jack continued, ‘Got the gold out of that sub in Norway as well, be ashore today or tomorrow.’

‘What’s down in the Guernsey wreck?’ Sykes asked.

‘Three times as much gold as your other wreck,’ Jimmy explained. ‘French warship, with trunks of gold coins to pay their troops; Napoleonic.’

‘Ah, should be interesting,’ Sykes enthused. ‘Is all your money to go to mine clearance?’ Jimmy explained about Rescue Force and Swindon, Sykes saying, ‘Hell, we can organise a Government grant for the building work there.’

‘It all helps,’ Jimmy responded. ‘But hang onto most of it till I tell you what we want to spend it on.’

We agreed to show Sykes and Jack around Swindon in a week’s time. Jimmy answered a quick list of questions about the Balkans conflict, our visitors heading off. Little more than ten minutes later Dave Gardener appeared, more tea organised.

Laying out a map of Malta he said, ‘Crusaders and The Order of St. John.’

‘Nope,’ Jimmy corrected him. ‘British Navy, Second World War, gold heading to the Far East.’

‘A bit cheeky,’ David acknowledged, a concerned glance my way.

‘And I need the divers to dump sand back inside afterwards, it’ll be discovered in years to come,’ Jimmy warned. He used a ruler to fix the position. ‘It’s in forty-five metres of water, in a depression, on its side. There’s a hole where it was torpedoed, go in and left, short distance to the gold.’

‘How much?’ David asked.

‘Close to sixty million at today’s prices,’ Jimmy answered.

‘When you off to Oz?’ I puzzled.

David straightened. ‘We’re off in two weeks time, Sarah and family meeting us at the airport. And ... er ... thanks once again for all you did.’

‘Got a favour,’ Jimmy asked. ‘Ask your employers to send some double agents, Arab gunmen, to Afghanistan. There are some fundamentalist schools popping up, some training camps. I want on-going passive missions, intel’ back out every six months.’

‘Do you wish to brief the relevant people?’

‘No, that brief will do. Just smoke the place out, take no action. Anything further from Khartoum?’

‘No problems that I’m aware of, but the wounded disappeared from the hospital. Was that you?’

Jimmy was immediately concerned. ‘No. Make it a priority to dig into that, it could be a serious problem for the future. And the names we were interested in, keep an eye out for them in Afghanistan.’

With David gone I asked, ‘Problem with the targets in Khartoum?’

‘I expected the main man to survive, but be badly hurt, blinded. It’s ... variable. If he has one good eye it could cost a lot of people their lives.’

‘Bin Laden?’

Jimmy nodded. ‘At least he’s mad at the Saudis. OK, let’s head back, pop into Mapley.’

As we approached Mapley we had to negotiate road works, road widening at our behest, the leisure centre finally starting to take

shape. The staff on the gate greeted us, informing us who was in attendance. We pulled up next to the AMO building, noticing two jeeps covered in mud passing us.

‘Mackey Tailor’s jeep training,’ I noted.

We headed for the second building, finding a first-aid class in progress, twelve warm bodies. Everyone recognised us and stopped immediately; this was, after all, our first official visit. Much handshaking was followed by chatting, tea in plastic cups from a machine. Mackey himself wandered in with three other men, many greetings exchanged.

Jimmy took in all the faces then stood at the front with his plastic cup. ‘Gentlemen.’ They settled. ‘There is a facility in Kenya similar to this, and it strikes me that some of you may wish to visit. The training out there would be jeep driving, mine clearance – which is not relevant for Ben Nevis, first aid, flying. It may offer some fresh experience for some of you, so if there are four who can get two weeks off work, let me know and we’ll send you out there. In the meantime, I’m pleased to see this place finally being used; it’s a good sign for the future. Anyone got any questions?’

I man raised his arm. ‘When will the cave be ready?’

‘Soon, couple of weeks at most.’

‘And the water feature?’

‘A bit longer, needs a ruddy great pump.’

‘Can we canoe in it?’ a man asked, getting a laugh.

‘When it’s not in use, yes.’

‘What’s the big hole for?’

‘Scuba diving; there’ll be a school here. But that will take two more months or so. Have you been up in the Tucano?’

‘What’s that?’ they asked.

‘Ask at the hangar for Richey, say I sent you, thirty minute flights – but not directly after lunch.’

‘It’s an aerobatic plane,’ I told them. ‘Anyone want a go in the Huey?’

They were all keen. ‘First six men,’ I said, and led them out.

Jimmy closed in on Mackey. ‘Anything you need?’

‘Was thinking about moving down here, do the classes myself.’

‘How would your dear lady wife view that?’

‘She’s got relatives not far, so if it’s regular work...’

‘You’d need to recruit someone to do the running around,’ Jimmy posed.

‘Aye, well Tim’s interested in a job doing that – if you like him for it.’

‘You’d sell your house?’

‘Aye, but that may take a while.’

‘No it won’t, I’ll buy it when you’re ready, sell it when I can. You can buy down here when you’re ready, rent to start with, I’ll find a nice place local and pay your rent.’

‘That’s very good of you, Jimmy.’

‘I want to see some work out of you,’ Jimmy joked. ‘Tell Tim he’s hired.’

I threw the Huey around the grey sky, giving the men in the back something to think about, Big Paul in left seat. His own training was coming along, some of the bookwork a bit of a struggle, but I was helping. With an oil warning light flashing we landed, a note in the logbook and something for the mechanics to look at.

‘Broke it, he did,’ Big Paul told Jimmy as we drove back.

I grabbed a tea and slouched into the sofa, glad to be back. Afghanistan, the four men killed – it was a bit of a shock. Sometimes I lost track of what this was all about, the fight ahead, and enjoyed the good life a bit too much. But the good life was all for show, a means to an ends, part of a great master plan carefully unfolding before my eyes. And the final goal was chilling to think about. I was getting used to things, but also getting comfortable in the lifestyle when I forgot about the end goal.

Jimmy picked up a wad of faxes as thick as a phone directory and handed them to me.

‘Oh, thanks a lot,’ I said. ‘We need a fucking secretary.’

‘Funny you should say that.’

I eased up, a curious frown taking hold. ‘Yeah?’

The next day Sharon turned up. Thirty-five, average build, pleasant to look at, married with two kids and living up the road, sister to the owner of our favourite watering hole down the road. She had a degree in English, had given up work eight years ago to have kids, and had been working part-time at an insurance

brokers. From now on she would work nine to four at the house, five days a week. And the first briefing was interesting.

I explained the stock market trading and it blew her mind, not least the sums involved. Over coffee Karl annoyed me by saying who he was, and that took a lot of explaining. Big Paul was introduced as a driver, that was straightforward enough, and then I tried to explain the charity work and all the money we gave over to it, Sharon amazed. We slowly went through the hotels in Kenya, the safari lodge and the airfield. The subject matter was not difficult, the reasons as to why not so easy to explain. By the end of the first day she was just about briefed on most of our operations, she knew where the files were and which fax numbers we used – and how we took our tea.

Jimmy took over on the second day, patiently going back through everything we were involved with for our new employee, whilst I tried to clear some of the backlog. The nightclub was my assigned project, so I now had to deal with any problems, in particular ongoing minor building work. Sharon's first job was to receive and check faxes, putting them in the correct piles, and to type the spending figures into spreadsheets split by project, spreadsheets that I had set-up and that were typically accessed by the accountants. They would send a junior member down to keep them up to date and to retrieve the figures. That job was now Sharon's, the accountants to check the figures sent to them. By the end of the second day she knew all she needed to know, but skilful implementation and time saving would take much longer. She began answering the phone on the third day, a chore that we shared and, when we were out, was shouldered by Cookie, Sandra or Ricky – Big Paul forbidden to answer it.

By the end of the week we were just about squared away, a mountain of papers filed, faxes responded to, calls and messages attended to. The spreadsheets were collated and the overall figures studied, blowing Sharon's mind again; she kept thinking she had put the decimal point in the wrong place. My area, the club, was doing very well. At this rate the club would not only have paid back the start-up costs, but also the capital spent on the buildings in less than five years; we were packed out three nights a week, special functions on a Wednesday bringing in even more revenue. A monthly poker tournament was well attended.

Jimmy arranged computer training for Sharon, two hours a day every day; Word, Supercalc, Foxpro. On the first Monday of proper work for her, two weeks into the job, she suggested that we needed more computers. Jimmy dialled a number and a man called Gareth drove up that afternoon, the man apparently known to Jimmy, and we settled around the coffee table. Gareth was a tad shorter than me, thirty-six, fit looking but with a pockmarked face, sat now in a suit that did not seem natural to him.

Jimmy began, 'You were recommended to us by a guy in the pub, can't remember his bleeding name for the moment. Anyway, we want a few new computers, printers – good spec, 386s.'

'How many?' Gareth asked.

'Two in the office, one in my bedroom, one in Paul's, one for Big Paul and ... may as well get one for Cookie to play with. That's six. We'll need two half decent laser printers in the office, plus two deskjets.'

'That's a lot of money,' Gareth cautioned. 'I'll price them up. Are you looking for finance?'

'No, cash,' Jimmy said. He produced a thick wad of fifties. 'There's five grand towards the spend, see what deal you can get us.'

Gareth was stunned, accepting the wad. 'You ... er ... want a receipt?'

'No, I trust you. And we'll need you once a week to maintain the computers, here and our other operations. Maybe send you out to Kenya to sort out our operations out there, they're a bit backward.'

'Kenya? Wow.'

Jimmy faced me. 'Remind me to ask Rudd about computers out there.'

With that Gareth headed off to either buy us some computers, or skip with the cash. He returned two day's later, two computers boxed up in the back of his car, and set them up in the office, the software packages and Windows 3.1 installed. The additional computers and printers turned up bit by bit, and soon I had a computer in my room with a built in fax card, some of the sensitive work handled from there. I deliberately spent time with Gareth, finding him easy going and not ruffled by anything, the three of us often sitting around the coffee table and chatting over

tea. Even though we did not need them, we bought more computers off Gareth and got him to drive them up to Pineapple. Even the club got several computers, Gareth doing very well out of it. He played football in a local Sunday league and our lads - Big Paul, Cookie, Ricky and Karl - often joined in. They typically returned with mud in their hair and blood on their lips and knuckles, Jimmy shaking his head.

Gareth, and his entire family, headed off to Kenya for two weeks, kindly paid for by us, and we set about organising the grand opening of the leisure centre and other facilities at Mapley. The local council leaders would cut the tape, the local Member of Parliament invited along with the local press. With everything set, we drove down early on a sunny Saturday morning.

Mackey Tailor's team and the AMO staff were dressed smart, and even the private flyers were attending. A Swindon recruitment agency had hired the gym's manager and his assistant, then they themselves interviewed and hired the staff in turn, all youngsters that had been issued with red t-shirts and shorts or tracksuits, Mapley Leisure Centre embossed on the clothing. We conducted our own tour an hour before the visiting dignitaries were due to turn up.

The gym's reception occupied a corner close to the main road, changing rooms for the pool immediately behind it; each patron would either be a member or pay for a day ticket, passing through turn-styles to a small café on the left and changing rooms on the right. We walked through the empty men's locker room, inspecting the finishing and the lockers, then through the shower area to the poolside. The pool was a rich blue, dead calm at the moment, a thirty-metre oblong with two lanes sectioned off. The signs indicated 1.5m at the shallow end, but warned of 4m at the far end, three diving boards in a line; 1m, 2m and 3m.

'Four metres is plenty for basic scuba training and rescue work,' Jimmy indicated. 'They'll have classes in the evenings, weekends as well.'

I said, 'Local schools want to use the pool for competitions.'

'Thirty metres, that's why,' Big Paul put in.

We followed a solid wall on the airfield side, past the diving boards, and peered through windows facing the car park, a row of bushes immediately outside the glass. At the top of the stairs we found a small rest area with comfortable chairs, a number of

small rooms set-up for chiropractors and beauticians, their first three months rent free. Double swing-doors opened to the gym floor, a vast expanse. At the front ran three rows of treadmills, behind them three rows of cross-trainers, a line of rowing machines, stair-climbers, then a resistance machine section, off to the left a free-weights area. The kit that we had bought was the very latest, imported from The States, lots of confusing multi-coloured buttons and dials. The gym's lateral walls were mostly glass, viewing the car park on the left and the airfield on the right.

'Capacity for two hundred in here,' Jimmy stated.

'Comfortably,' Big Paul said, trying some of the equipment.

Through the glass we could see people gathering below and wandered down, greeting those we knew. At least the weather was holding. We held interviews with the local press before the dignitaries pulled up in their odd, funeral-style black cars, welcoming them standing alongside our centre manager. The Town Mayor cut the tape, a sedate and polite cheer from the locals, and we showed the bigwigs around the gym as the first members and day users were allowed in, kids soon jumping into the pool off the boards.

Following the bigwigs onto the airfield, we stopped at the climbing wall, would-be rescuers under instruction from some of Mackey's group. The elderly dignitaries strained their necks to peer upward, none accepting an offer to try it themselves. Mounting up for a total journey distance of two hundred yards, we stopped at the AMO building and showed off Frankenstein's monster. It looked more alive than some of the stiff attendants. Certainly had a better pulse.

All in all the day went well, I felt, the leisure centre well advertised. I spent time with the manager, making sure he knew what figures to send me; in addition to the nightclub, this was now my project to oversee. That first day a kid cut his toe, a woman slapped another woman she thought might be having an affair with her husband, and someone strained their back – removed by ambulance. It was a good grounding in the running of a gym, for all of us involved.

David Gardener turned up the next day, a pleasant day out of London, and revealed that there was close to sixteen million

pounds waiting for us. All things considered, we had no idea what to spend it on; everything was over-funded as it was. Jimmy had taken the first Israeli bank loan, twenty million, and bought shares at the bottom of the market, now sitting on double that amount. And Pineapple was making an obscene amount of money.

‘This has happened,’ Jimmy explained, ‘because we’re ahead of schedule on some things. I’ll bring forwards a few plans and see if we can’t get back in synch.’

After a leisurely lunch with David we got hold of Rudd, having tried his home, then the golf complex and finally reaching him at the original beach hotel, River View.

On speakerphone, sat around the coffee table, Jimmy said, ‘Are we keeping you busy?’

‘Very busy. Oh, we are half way through the delivery of the barbed wire. They are making it specially, there was not enough unless we exported it at thirty percent over. This way we get it at twenty percent under.’

‘You’re a good man,’ I loudly offered.

‘Listen,’ Jimmy began. ‘Got a pen and paper?’

‘Yes, go ahead.’

‘Ask the Kenyan Defence Minister if he can arrange for more land next to the airfield.’

‘That land is shit, it’s desert – no one wants it.’

‘Ask him for five hundred yards south and the same east, a square. As soon as they say yes, fence it off and put Rescue force inside. I want a hotel, a barrack room, a command centre – offices, and a motor pool.’

‘How big the hotel?’

‘Same size as the UN hotel.’

‘And the barrack room?’

‘Room for one hundred people,’ Jimmy suggested. ‘Office block should have twenty offices in it.’

‘OK. I found a man to co-ordinate refugees, hired him two week’s ago. He’s a Somali, living in Kenya, speaks good English. He did some UN work, he knows the job.’

‘Where’s he living?’

‘With Doc Adam, they are building extra rooms on the clinic, rooms for staff to live,’ Rudd explained.

‘OK, good,’ Jimmy approved. ‘What about the camps?’

‘We had no permission and the Government threatened to pull them down, so I bought the regional governor a new car. He can see that it’s better to have them in a camp than along the road.’

‘And now he can drive there and inspect it,’ I said.

‘What about the border camp?’ Jimmy pressed.

‘They liked that better, no problem there. The men I hired have drilled many wells, enough water. Small villages have grown up around the wells. I bought many old UN tents –’

‘Did you ... *buy* them?’ I asked.

‘Yes, of course. Some were old and being thrown away, so I got them. That first night there were only camels and a water pump, no people, one family the next day, now a few hundred. Bob Davies sends a food truck along, one a day, and there is a permanent jeep of Rifles there.’

‘OK, good,’ Jimmy approved. ‘Fence it off. Right, next, recruit a senior co-ordinator for Mac, another senior man for Rescue Force, both with African experience, ideally UN. They’ll do the paper work up there and be your new point of contact. Next, ask the Defence Minister if he wants some more money spent on the Rifles: recruits, jeeps. And ask him if he will accept former British Army training staff from the UK. While you’re at it, keep a look out for any good Land Rovers, put them in storage at the airfield for later.’

‘How many?’ Rudd queried.

‘Fifty or more. How many Rifles are there?’

‘Twenty in group Alpha, as Mac calls them, thirty-five in group Bravo, and now another twenty-five recruits.’

‘I know we have permission for a hundred, stretch that towards two hundred quickly. Tell the good Defence Minister that once they have enough well-trained men I’ll give them some helicopters.’

‘He’s already offered to send fifty regular Army up to the airfield -’

‘If we pay for them,’ I finished off.

‘Yah, of course.’

‘Accept his offer when we have the space for them. Get them one jeep between five men and put them through mine-clearance training, first aid, and jeep driving if they need it. And get new rifles for them. Oh, find out if the Kenyan Air Force want to put a small flight of aircraft at the airfield.’

‘You’re offering them sweets,’ Rudd suggested.

‘See what they say. How’s the golf complex?’

‘It runs smoothly, makes a good profit. The zoo is finished, looks OK, but does not make much money.’

‘That’s OK. What about the beach hotels?’

‘Both full all the time, many British singers there. Sometimes people are very excited by them – and I have no idea who they are.’

I laughed. ‘You need to get out more often!’

‘Rudd, find a nice office in Nairobi, room for maybe ten people, a desk for you and one for Cosy, two secretaries.’

‘Sounds good, my house is full of papers.’

‘And get yourself a mobile phone and a satellite phone, be easier to reach you,’ Jimmy ordered.

I said, ‘Get yourself a mobile phone, and a driver, then you can talk with people when driving.’

‘If you insist.’ We laughed at that.

‘All OK at the safari park?’ Jimmy asked.

‘Yah, fully booked, and the price has gone up. There are three new young lion cubs in the lodge; everyone feeds them in turn. Oh, they had a visit from a white Kenyan, man who owns a farm north of it –’

‘Schilling?’

‘Yes, you know him?’

‘Is he interested in selling his farm?’

‘Yes, I think so.’

‘Buy it, then convert his farm houses to quality hotel rooms. Keep all the staff on, get the safari manager on it. After we have it, people can spend a few days at each place. He has a good lake on his land.’

‘How much do I offer?’

‘Ten percent less than he is asking for,’ Jimmy suggested. ‘Negotiate. And ask him to come down to you in Nairobi.’

‘How big is it?’ I asked Rudd.

‘Half as big as your land now. It has a tarmac runway, I think. And the medics from Mawlini, they are on your land, giving medical help to the villagers.’

‘Good, that’s what we wanted,’ Jimmy approved. ‘Oh, while I think of it, Schilling has family near Mombassa, some farmland that I would like to get hold off. Smoke them out.’

‘I know these people, very arrogant colonialists,’ Rudd explained. ‘They own half of Kenya.’

‘Then let’s see if we can’t buy some of it at a good price,’ Jimmy responded. ‘In particular where they have greenhouses.’

‘I know it, miles of it along the roadside. What budget are you thinking of?’

‘Five million.’

‘I’ll need two secretaries!’

‘We don’t mind that, Rudd,’ I put in.

Sharon wandered in with an urgent fax, so we said goodbye to the overworked Rudd. Jimmy read the fax. ‘Did you know these men?’ she asked.

‘Only by name,’ Jimmy responded, glancing at me from under his eyebrows. ‘OK, thank you.’

Sharon withdrew.

‘What is it?’ I quietly asked.

‘A fax from Cosy. Kenyan TV reports two Americans killed in a car crash, Tasker and his mate.’

‘Christ, you think ... Cosy?’

‘No, I doubt it. No, this is ... something unexpected.’

‘Might just have been a car crash, you know how they drive down there.’

‘That would be unfortunate, because it comes soon after the disappearance of the other four. Now there’ll be a big investigation.’

Sharon came back in. ‘A Mister Sykes for you.’

Jimmy lifted the phone. ‘Mister Sykes.’

‘New secretary?’

‘Yes, and ... out the loop,’ Jimmy delicately indicated.

‘Understood. Seen the news from Africa?’

‘Yes, just got a fax and ... disturbed at the timing.’

‘Any clues?’ Sykes nudged.

‘Right now, wish I did. This was ... unexpected.’

‘People acting on their own?’

‘No, I don’t believe so. For now, an accident, and they do happen without foresight.’

‘Does this leave you exposed?’

‘Could do, the next few days will tell. Any discreet enquiries by your good self would help.’

‘Understood. I’ll get back to you.’

Jimmy placed the phone down, and stared at it.

‘Sykes knows about Tasker?’ I nudged.

Jimmy nodded, still focused on the phone. He dialled the safari lodge, confirming the location of Skids and company; with guests. ‘It could be Tasker’s boss. If so, he’ll come and see us.’ He brightened, lifting his head. ‘Ah, well. Onwards.’

It’s a big pump

We stood at Mapley with the builders and engineers, the square watercourse now full of water, the pump ready to be tested.

‘Been trying to figure out what the heck this is for,’ the head builder said. ‘I reckon canoeing.’

Over his shoulder I saw Mackey and four men advancing towards us with ropes, and dressed like they were off canoeing; red lifejackets and helmets, ropes slung over shoulders.

The builder spotted them. ‘Where’re your canoes?’

‘OK, switch on,’ Jimmy ordered, an engineer stepping into a green hut and turning the pumps on.

Water gushed from the pumps and towards the square, many minutes taken for the water to begin circulating.

Jimmy pointed at the first man. ‘Jump in.’

The man knelt down and tested the water flow with a hand, hesitated, then jumped in, soon swept along at jogging pace. At the roofed over section he was sucked under, spat out five yards further on, a yelp issued. ‘Fucking hell!’ came from the far side as he came back around, struggling to get out. ‘I can’t get out!’

‘That the whole point,’ Jimmy said with a smile. ‘Rescuers?’

Mackey’s men threw a rope, which the swimmer missed, getting sucked under a second time. Third time they caught him, struggling to drag him out.

Dripping wet, he approached as. ‘Fucking hell that’s deadly.’

‘And for specialist use only,’ Jimmy cautioned. ‘So, realistic... is it?’

‘Fucking hell, aye,’ the wet man responded. ‘Bloody difficult to get out. And that tunnel? Scary as shit – you just get sucked under and spun around.’

Jimmy faced the engineer. ‘Quarter speed, please.’

The pumps eased down, but the water had its own momentum and took a few minutes to becalm. The same man jumped in beyond the tunnel and was rescued first time. Satisfied, we took Mackey to the cave. The local police divers stood waiting, all kitted out, behind them three cave rescue groups waited. A white board gave an indication of the layout of the cave, two emergency exits marked.

Jimmy took charge. 'OK, gentlemen. What we have here ... is a training aid, not a fun day out. The first time through you might find interesting, then you'll know the course and get bored. The aim of this cave complex ... is training, especially beginners. That's not to say it's easy, it isn't.

'At the moment there are a few puddles inside, but we can flood the cave to around three quarters of its height before water hits the drains. Now, to best illustrate how this facility should be used we have two volunteers.' The men stepped forwards. 'They will be inside, somewhere, one with a broken leg, his mate not wanting to leave him. You nice gentlemen have been notified that they are hurt and stuck, the water level not known.' He gestured the two men into the entrance. Down they went, helmet lights switched on. Jimmy checked his watch. 'Team leader, get your men assembled and briefed, you have six minutes to kick off.'

The senior police officer took charge of the white board, teams made up and equipment checked, the cave rescuers part of the search team. Two collapsible silver stretchers were made ready, first aid kits, lights, air tanks and scuba gear.

When they were ready, Jimmy stepped forwards. 'OK, gentlemen, let's not make victims of rescuers. And don't forget, some sections are tight, some are flooded, and you'll need rope in there.'

The first man roped himself to the second, placed a scuba mask around his neck and checked his air. He gave a 'thumbs up' as he disappeared, the second man entering after the rope was tugged, a third making ready at the hole and reeling out further rope. Fifteen minutes passed, the second man surfacing, damp and dirty.

'Two stuck inside, verbal communication, no eyes on, one broken leg, full team extrication by stretcher.' He ducked back in.

Two additional men stepped forwards, a plastic leg caste checked, air tanks hissing as they were checked. In they went. A full forty-five minutes passed before a grubby individual surfaced.

‘Ambulance ready?’

‘Ambulance standing by,’ the team leader responded. ‘Condition of victims?’

‘Two adult males, hypothermic, one broken leg,’ was reported, notes taken.

We closed in as a third man exited the tunnel, wet and muddy, a stretchered man painstakingly removed. Finally the second victim crawled out, followed by the final rescuer, the victim released from the stretcher.

‘OK,’ Jimmy called. ‘Victims, how did the rescuers do?’

‘They reassured us verbally, that was OK, one stayed behind, checked our vitals. The stretcher was handled OK, a bit difficult up and over.’

‘A bit difficult,’ a rescuer scoffed. ‘That section is a bitch. I’ve been doing this twenty years, and I struggled.’ The other rescuers agreed.

‘Good,’ Jimmy loudly enthused. ‘It’s there to make you think. So, how would a novice cope?’

‘No chance,’ came several opinions.

‘Until they’ve had the right training,’ Jimmy suggested. ‘There’s a way around that doesn’t involve the up and over, that’s where you start the beginners. How do you rate it as training aid?’

‘Excellent,’ was the consensus.

‘It would be good for fitness training as well,’ the senior rescuer suggested. ‘I’m fucking knackered.’

‘OK, police divers,’ Jimmy called. They stepped forwards. ‘We’ve stuck a dummy in there. Go rescue.’ He turned a large tap with a squeak, cold water gushing in, up to half the cave height. When ready they gave the “OK” dive sign and descended into the black water, torches held ahead of themselves.

Twenty minutes later, and the heavy plastic dummy was retrieved. The diver stood in the hole, his legs submerged, and took off his mask. ‘That mid section is a bitch. You have to squeeze left, then right, then under, then finally you got to ease your tank off and push it through. Nightmare.’

The senior men thanked us, hands shaken, and we left the damp muddy hole for grown men to play in. For five minutes we observed the climbing wall from the Range Rover before setting off.

Incident at Baardheere

Many months had passed since Tasker's car crash and nothing had happened. So far, all evidence pointed towards a simple crash. We flew back down, this time with Big Paul in tow, Karl and Rickey house-sitting. At our Nairobi hotel we spent a day lounging around, Jimmy waiting for a contact, Big Paul scanning the lobby. No one came to call.

Feeling a little apprehensive, even Jimmy tense, we drove down to the golf complex and spent a few hours with the manager; all was in order and ticking along nicely. The other hotels were briefly inspected, nothing much requiring our attention, so we went diving, feeding the persistent turtle. That evening we sat around drinking, still no approaches made, but I slept with a chair wedged under my door handle. The following morning Tubby picked us in the Dash-7 at Mombassa airfield, the aircraft a Canadian built, rugged four-engine turbo-prop with room for fifty passengers at maximum. This one had been fitted out for thirty seats and some kit space at the rear, the flight up to Mawlini just an hour and a half and comfortable. I spent half that time right seat, Tubby keen to teach me the eccentricities of the Dash-7, not least that it required a crew of two, a requirement that was ignored. We came in to land behind a UN plane, swirls of dust spreading outwards towards the buildings.

Rudd and Cosy met us in a jeep, driving us to the UN hotel, and from the roof they pointed out the new Rescue Force compound; five hundred yards square of sand and scrub fenced off and just the one lonely hut sat in it, picked up by crane and dropped over the fence, it's old foundations still visible.

'Building work will start soon,' Rudd assured us. 'We've given priority to the Rifles for now.'

‘That’s OK,’ Jimmy told him. We stepped across the café and peered out the other side, numerous half-built buildings for the Rifles just visible across the shimmering heat of the runway.

Rudd explained, ‘They sent fifty regular soldiers up and we have them in tents at the moment. They are nearly all on border patrol, or helping to police the camps. Mac has kitted them out.’

‘So they get training?’ Jimmy asked.

‘Yes, day or two a week,’ Rudd explained. ‘The two new British officers are busy.’

‘How are they working out?’ I asked, having met both of them at Swindon.

‘Mac says they are Ruperts, whatever that means.’

We laughed. Big Paul explained, ‘A Rupert is an officer, public school twats.’

‘Ah, I see,’ Rudd said. He didn’t.

Cosy put in, ‘I got a batch of ten Land Rovers off a safari park, going cheap. They were already green, so we gave them to the Rifles.’

I pointed to a new steel-fabricated hangar. ‘What’s that?’

‘Kenyan Air Force,’ Cosy answered. ‘Two small planes for border patrol and training. I think they are called *Tucano*.’

‘That’s lucky,’ I quipped. ‘I’m familiar with them. We got one in Swindon.’

‘Good plane,’ Big Paul approved, having notched up twenty hours in them.

‘We pay their fuel and costs,’ Rudd explained. ‘Not the salaries yet.’

‘How many soldiers in total now?’ Jimmy asked.

Rudd responded, ‘Total ninety-four Rifles, fifty regulars. But thirty of those soldiers are seventeen year old recruits.’

‘I want the regulars integrated,’ Jimmy told Rudd. ‘Ask the nice Defence Minister.’

Our Huey came in to land, three men and one woman clambering down, all in white uniforms, and all seemingly knackered from their trip.

‘That’s Rescue Force,’ Cosy said. ‘They’ve done a few trips by Huey: they fly out, stay the night, do a surgery, fly back. They’ve done one by Cessna and one by Dash-7.’

‘Coming along then,’ I approved.

Mac stepped out with the two new co-ordinators, both men in their late forties and now heavily tanned, white crows-feet around their eyes. We shook their hands for the first time, although we had spoken to them on the phone many times, exchanging many faxes with De Silva and Coup. Sitting, we ordered cold beers all around, two tables pulled together, Fanta shades adjusted.

‘Since this is our first time face to face, welcome to the team,’ Jimmy offered the newcomers. They thanked him. ‘Has Mac’s paperwork improved?’

‘Lots,’ Mac quipped, everyone laughing at him.

‘You got some boys in Afghanistan?’ I asked Mac.

‘Ten of them to start with, former trainees,’ Mac explained. ‘They go in under the UN remit, but we pay their way and kit ‘em out.’

‘It’s not a pleasant spot,’ Jimmy cautioned. ‘If they’re not careful we’ll lose some.’

Mac considered that for a moment. ‘Lost six old trainees in Mozambique. That place is no picnic either.’

‘Can procedures be tightened?’ I asked.

‘Out of our hands,’ Mac explained, sitting back. ‘We train them, they go off to other groups.’

‘Perhaps we should have our own,’ I suggested, a glance at Jimmy.

‘We’d be sending people off to die,’ Jimmy cautioned.

‘They’d have a better chance,’ Mac suggested.

‘Mac, draw up some plans, I’ll review it,’ Jimmy offered. ‘Anything else you need?’

‘No, working smoother now with Long John Silver sharpening the pencils,’ Mac joked.

‘And Rescue Force?’ Jimmy nudged.

Coup answered, ‘All seems to be progressing rapidly. We found another four suitable people, two doctors and two nurses.’

‘What the nurses built like?’ I asked.

Coup smiled. ‘Slimmer than ... the normal requirement, no Russian shot-putters. Some locals tried to rob our Hildy, she put them in hospital.’ The assembled men giggled like teenagers.

‘I’ll want self-defence on the training schedule in the future,’ Jimmy told Coup with a smile. ‘How’s their ordnance handling?’

‘Getting there slowly,’ Mac admitted.

‘Coups, *ground them*, get everyone shit-hot on ordnance,’ Jimmy ordered. ‘At the moment they’re not tripping over mines, they soon will be.’

‘Did you get the dummy?’ I asked Coup.

‘Yes,’ Coup enthused. ‘Marvellous what the darn thing can do. It’s in constant use somewhere, I think the Rifles have it today.’

‘Don’t break it,’ I said. ‘Expensive bit of kit. You get the other medical kit?’

‘Yes, fully kitted now, full resuscitation packs,’ Coup answered. ‘It goes out in the field, some to Doc Adam.’

‘Sounds like we’re making good progress,’ Jimmy enthused.

‘What’s this new fenced off area for?’ Mac questioned.

‘Behind us? Just Rescue Force, room for growth. Behind the Rifles will be all for the Army,’ Jimmy informed Mac. ‘More room for you in here.’

‘Got more thirsty bodies than water, boss,’ Mac cautioned.

‘Rudd, drill some more wells, or get a water tanker in each week. Tell people to shower with a friend, or take soap in the pool.’

‘They’re doing that already,’ Mac quipped.

Rudd showed Jimmy a picture of what appeared to be rows of greenhouses. ‘They want three million.’

‘Acreage?’

‘Five miles by three,’ Rudd replied.

‘Some of that is swamp,’ Jimmy complained. ‘What houses are included?’

‘The main houses are outside that area.’

‘Tell them I *was* interested, but would need houses. Be tough with them, play up the swamp.’

‘What you buying now?’ Mac asked.

‘A large farm,’ Rudd explained.

‘Food for the masses,’ I put in.

Rudd added, ‘Schilling keeps calling, just to see how I am – and *how are my kids*.’

Jimmy and I exchanged looks. ‘How much does he want for it?’

‘He started with one million,’ Rudd explained. ‘Now we are at seven hundred and fifty thousand.’

‘Does he have back taxes?’ I asked.

‘Yes, he’s poor,’ Rudd responded.

‘Offer him seven hundred grand,’ Jimmy suggested. ‘Right, everyone, do what you need to do, back here at seven for food. Big Paul, go meet the Army. Cosy, stay please.’ With the others heading off, Jimmy asked Cosy, ‘Any rumours about Tasker?’

‘No.’ We waited. ‘They checked the car accident carefully - he was hit by a lorry that failed to stop, the driver arrested and jailed.’

Jimmy held his gaze on Cosy. ‘Anyone showing any interest in me?’ he pressed.

Cosy shook his head. ‘People gossip about you, you’re rich. Reporters sometimes ask, but no one from the community.’ He held his hands wide. ‘Was there something ... specific?’

‘No,’ Jimmy said after a moment’s thought.

‘Sorted an office in Nairobi?’ I asked.

‘Yes, me and Rudd are settled into it, two secretaries – saves a lot of time.’

‘How many kids at the orphanage now?’ I asked.

‘Just over six hundred. We have a few UN staff there; Bob Davies sent them. In total, thirty local staff.’

‘And the farm land feeds them all?’ I wondered out loud.

‘Oh, yes, and much more. We sell it at the market. And we sell it to your hotels.’

‘There’s probably some merit in teaching the kids how to grow crops,’ Jimmy suggested.

‘That skill will come in useful when they leave,’ Cosy admitted, a little saddened, if not concerned. ‘What are your plans about the older children?’

‘Give them jobs at the orphanage, the farm,’ Jimmy suggested. ‘When the time comes I’ll get a high school and put them through it. Some of the older boys I want for the Rifles, as soon as they’re sixteen.’

‘That’s a few years away,’ Cosy pointed out. ‘You’ll find them all jobs?’

Jimmy nodded. ‘Hope so. Hope many of them will join Rescue Force in time.’

Cosy took a moment. ‘So, it is not just a short-term project?’

‘Never was,’ Jimmy said.

A hundred miles away, UN Doctor Carol Nash desperately struggled to make her radio work. 'Mayday, mayday. This is Doctor Nash, UNHCR, northwest of Baardheere to anyone who can hear me. We're under attack by bandits, many dead and wounded...'

Bob Davies stepped into the bar and greeted us. 'Back again? You're here more often than I am.'

'Any word from Afghanistan?' Jimmy asked.

'Yeah, they got the limbs and we're distributing them over there, ten mine clearance boys working around the airfield – that'll take forever, they dig one up every six minutes!'

'So long as they're appreciated,' Jimmy said.

'They are, and we met to discuss that just last week. I reckon I could get you funding on twenty more.'

'When you're ready - we are,' Jimmy indicated.

A barman stepped over. 'Excuse, sir. Telephone.'

Jimmy took the call, rushing back. 'Our air patrol near the border just picked a UN distress call, Baardheere. A Doctor Nash?'

Bob Davies' faced dropped, Jimmy in the stairwell a second later as I nudged Bob to the stairwell. We rushed down, shouting at people in the corridors as we went, soon a tail of people following. More joined in as we sprinted to Air Traffic Control, Handy's office now equipped with two radios, long distance and short distance.

Handy hesitated, taking in the faces, then reported, 'Lady Doctor reports they're shot the fuck up, dead and dying.'

Bob Davies said, in a strong whisper, 'I was best man at her wedding.'

Jimmy took a moment, forcing a breath. 'There're a few laws, procedures and principals standing between us and them.' He turned to me. 'Get that Huey fuelled and ready to go. Move it!' I darted out, passing Mac outside.

'You'll go after them?' Bob Davies whispered, his voice going.

Mac appeared at his side, out of breath. 'What's up?'

'Mac, you and the old dogs, my bodyguard Paul, Cosy, and the best Rifles you can find – get kitted for an airborne rescue just across the border in Somalia. Go!'

Mac and Handy ran out, collecting Big Paul and Cosy, and heading towards the Rifles' armoury.

Jimmy grabbed Bob Davies by the shoulders. 'You should take a walk, this'll cost you your career.'

'I've got to do something.'

'It's a four hour drive - they'd be long dead. Leave it to us, we have the kit and the skills.' Jimmy straightened, taking in the airfield. 'We'll get arrested afterwards, but that we'll face that at the time.' He faced Bob again. 'By time I'm airborne I need a route and co-ordinates for them. Use the radio, maps over there.' Jimmy picked up the phone. 'Coup, I need everyone ready for an emergency mission immediately, surgical kits, get to the airfield. Move it!'

Jimmy ran downstairs, Rudd rushing over.

'What is it?' Rudd asked in a panic.

'UN patrol across the border has been ambushed – dead and wounded, we're going in.'

'We are?'

'Stay and co-ordinate. Get the Russian pilots of that Mi2, get them airborne.' Jimmy ran to the flying doctors hut. 'Tubby! Tubby stuck his head out the door. 'Get the Dash-7 ready for a combat rescue, we got UN stuck in Somalia.' Tubby jumped into his jeep as Jimmy headed towards the armoury, finding six of the Rifles, their former British officers keeping them in neat lines. Jimmy addressed them both. 'This is a volunteer only job, a rescue in Somali, lots of shooting. You got ten seconds.'

'I'm in,' the first man offered, the second agreeing with a little trepidation.

The Old Dogs emerged from the armoury with green waistcoats pocketed with magazines, M16s being checked, Big Paul and Cosy sporting waistcoats over their civilian clothes.

Jimmy accepted a weapon. 'Listen up. Rifles and Cosy in the Dash-7 with Rescue Force. Get water, med kits. Paul, Old Dogs, on me.' Jimmy ran off across the sand at a brisk pace, between the huts and to the Apron, where I sat with the Huey turning over. Jimmy jumped into left seat, his weapon stowed, the remainder of the men clambering into the rear. I pulled back on the cyclical control with a dry mouth, remembering my first few lessons. Now I was flying a Huey into combat, and it still hadn't dawned on me yet, everything was moving so quickly.

As we lifted off Jimmy got his headset on. 'Head southeast, fast as you can.' He depressed the transmit button. 'Silo for Davies. You on Bob?'

'Tower receiving,' came back. 'Heading one-three-five magnetic, one hundred ten miles.'

'Silo to tower, get that Mi2 up in fifteen minutes – make sure the back is empty. It's faster than we are, so is the Dash-7, so don't let them take off till a staggered time is worked out - we're the slowest. Try and fix a position on your people. Out.'

I set the heading and put the nose down, sand and bushes flashing by, trying to remember my drills. The horizon was a blur of sand, little in the way features or reference points.

Jimmy turned his head toward the rear, 'Get your headsets on.' He waited. 'Right, listen up. Bunch of UN medics in a vehicle convoy shot the fuck up, dead and dying, someone still working the radio. We'll all get there at the same time, but our job is to keep the Somalis busy while the Dash-7 and, hopefully, that Mi2 pick up people. It's a hundred ten miles, one hour or so, so kick back. We'll need to recon' the area, fix their location. And fellas, anyone you don't like the look of – you open fire. We don't need to touch down, we're top cover. All clear?'

'This breaking a few international laws?' Handy asked, sounding none too concerned.

'Lot's of them. If you survive, I'll buy you a beer.'

We crossed the border, our own barbed wire, and even one of our patrols below. They must have wondered where the hell we were heading. So did I. I concentrated on the heading, checking RPM and oil pressure, going through my drills, scanning the horizon for other aircraft.

After five minutes I tapped the near-full fuel gage, exchanging a look with Jimmy. 'I think it's enough. Just.'

'It's enough,' Jimmy reassured me.

Ten minutes later the radio came to life, but weak and distorted. 'Tower to Silo, over.'

'Silo, here. Go ahead.'

'Tower to Silo; four UN vehicles, twelve people, believed five miles northwest of Baardheere, over.'

'Silo to tower, roger that.'

'Tubby for Silo,' crackled out.

'Go ahead, Tubby.'

‘Tubby is airborne, lots of bodies on board, room for ten wounded, over.’

‘Silo for Tubby, what’s the state of the Mi2?’

‘Rotors were turning as we took off, over.’

‘Silo for Tubby, here’s the plan: we provide armed cover, you land and let the troops out, they secure the casualties, the Mi2 takes back the casualties. I don’t aim to be on the ground more than ten minutes, over.’

‘Best laid plans of mice and men. Tally-ho!’

I couldn’t help but smile at the crazy old bastard. And here I was, about to lose my license. Forever!

Fifteen minutes later Tubby was back. ‘Dash-7 at six thousand, little Huey low and left.’

I peered up. ‘There they are, much faster.’

Jimmy pressed the transmit button. ‘Tubby, go re-con, over.’

‘Roger.’

As we came up on the hour the radio crackled into life. ‘Tubby for Silo.’

‘Go ahead.’

‘Mi2 up your arse, two miles back. We’ve been over the target area, jeeps in a line on the side of the road, lots of bodies, can’t seen anyone else nearby.’

‘Anywhere to put down?’

‘Long road north of them, bit of a taxi around to them, but doable. Over.’

‘Wait my signal, circle at one thousand, flaps down, land on the fly.’

‘Silo, this is Yuri, over,’ came an accented voice.

‘Go ahead Yuri.’

‘We can now see you.’

‘Slow down and stay back, maintain five hundred feet.’ Jimmy turned his head to the rear. ‘Doors open, get ready!’ The doors opened with a blast of air, maps fluttering wildly, the smell of aviation fuel filling the cabin.

I pointed, ‘They gunmen?’

‘Yes. Starboard, fire as we pass!’

I banked the Huey as we passed two trucks packed with armed locals, Big Paul and Mac opening up. It was over in a second and I levelled out.

‘Slow down,’ Jimmy suggested and I eased the nose up, revs down. ‘That looks like them, go port ten degrees.’ We flew over the line of vehicles low and fast. ‘Two people sat up, they’re alive!’ Transmitting, he said, ‘All aircraft, survivors on the ground, land when ready, land when ready!’

‘Tally-ho!’ crackled over the radio.

I circled around, slowing as we all stared down at isolated mud-brown houses, kids running out and looking up, women dressed all in black. We swung left as the Mi2 came in and landed right next to the jeeps, a huge plume of dust blown up.

‘Contact! Dead ahead!’ Jimmy shouted. He opened his small window hatch, thrusting his weapon through, soon firing, hot brass shells bounding off me, and the instrumentation. ‘Back around, slower pass.’

I circled around to the left, coming in over houses and towards the crossroads we had seen the trucks. The front windscreen on Jimmy’s side cracked, my foot-well glass shattering. ‘Fucking hell!’

‘Steady!’ Jimmy opened up, followed by the guys in the back, the trucks turning around in small circles.

I flew back along the road at a steep angle of bank and focused on the Mi2. We passed him low on the our left side, a pilot out and dragging someone along, the Dash-7 blowing up a storm of sand two hundred yards away. We climbed and levelled out, that crazy bastard Tubby taxiing along the road and turning towards the Mi2. As we watched, he disappeared in a cloud of sand, emerging facing the way he came, people jumping out the side door and running back towards the UN trucks. I climbed another hundred feet for a better all round view. Beyond the trucks I could see the Rifles in green, the medics in white attending the bodies, soon two carried to the Dash-7, more carried to the Mi2.

‘They’re getting the bodies as well,’ I noted, communications limited with our doors open. It took little over four minutes to load up the bodies, no indication yet of any survivors. I pointed. ‘Are they firing at something?’ We banked left and dipped down, flying over the Rifles. They appeared to be firing towards a distant house, so we opened up, circling around it, no way to talk to the Rifles.

‘Yuri to Silo, we go.’

‘Roger, fly above one thousand Yuri,’ Jimmy suggested.

‘Tally-ho!’ crackled over our headsets.

We turned about and watched the Dash-7 head along the road, blowing up sand clouds. He turned the corner as if driving a car and went full power, a huge plume of dust rising up. For a few seconds he looked like the space shuttle launching. In seventeen seconds he was airborne, banking hard and climbing.’

Jimmy turned to me. ‘In case you hadn’t noticed, we are slow and alone, a long way from home.’

‘Fuck, yes,’ I said, nosing down and heading north, adjusting my course to a reciprocal heading.

‘We got the fuel?’ Mac asked.

‘Just about,’ I said.

Jimmy pressed transmit. ‘Tubby, contact tower. How many survivors?’

‘Don’t know about the survivors, two here being worked on by the docs, so at least two. I’ll call the tower at altitude. You OK down there?’

‘We’re low and slow, one hour to the border,’ I said.

‘Yuri for Silo,’ came an accented voice.

‘Go ahead.’

‘Silo, we have two alive, rest are dead, over.’

‘Roger that, fly safe. Out.’

Our radio crackled for the next forty minutes, but we could not make it out, a roar caused by our extra ventilation holes. I had a wicked breeze blowing up my right trouser leg, but not the left, and it got annoying. And we were alone, nothing but parched brown soil beneath us, the odd house, some trees. And now an oil warning light. I turned my head to Jimmy, he could see it as well.

Jimmy said, ‘Guys, we got an oil warning light. Might just be a bit warm, or we took a round somewhere important. We’ll keep going as far as we can, then ditch this. From here it’s a days walk to the border.’

‘With bandits for company,’ Rabbit put in.

Jimmy pressed transmit. ‘Silo to any call signs, over.’ We waited. ‘Silo to any call signs, over.’

‘Tubby to Silo, over.’

‘Go ahead Tubby!’ Jimmy shouted.

‘Jimmy, look up. Can you see me?’

‘There,’ I pointed. I pressed transmit. ‘Tubby, you’re ten o’clock high, three miles.’

‘Standby.’

The crazy bastard dived down towards us, turning around behind us. ‘Got you. You lot OK?’

‘A few holes, oil warning on for twenty minutes,’ I responded.

‘If you go down I’ll fix your position,’ Tubby offered.

We flew on, counting the minutes and counting down the miles, Tubby circling overhead. And it was comforting to know that he was up there. Big Paul practised with miles per hour ground speed, to distance to the border. At five minutes to the border he volunteered his mental arithmetic.

‘Border ahead,’ I shouted over the sound of the wind as a fuel warning light came on. Facing Jimmy I said, ‘We keep going?’

‘Yeah. If it catches fire we’ll jump.’

Mac passed forwards a canteen and I took several deep gulps, totally parched, my shirt soaking, my hair damp. Both my arms ached, not used to such lengthy flights. Beneath me I recognised the road, a wave of relief passing over me.

‘That camp is coming along,’ Jimmy mentioned in passing. I looked at him like he was crazy. An audible warning caused the guys in the back to peek at the instrumentation. ‘That warning is just to tell us a service is due, and that the windscreen wiper fluid is low,’ Jimmy suggested, getting back a few rude comments.

‘Jimmy, you smoking?’ crackled over the radio.

Jimmy turned his head, a nod to Big Paul. Big Paul grabbed a handle and leant out, looking behind us.

Back in he nodded. ‘We’re on fire boys.’

‘We’ll get there,’ Jimmy insisted. He pressed transmit. ‘Silo to tower, over.’

‘Tower here, go ahead.’

‘Silo for tower, have fire truck ready, we’re coming in on fire.’

‘Tower for Silo, land it now.’

‘Silo for tower, get the kettle on.’

I recognised the terrain, soon a glimpse of the hotel in the distance. ‘Two minutes. When I touch down, you go.’ I got all formal: ‘Romeo Foxtrot One to tower. Permission to land, over.’

‘Rome Foxtrot One, permission granted, over.’

Jimmy turned his head to me, an approving nod as more rude comments came from the back. We touched down within spitting distance of the fire truck, everyone out and running with their weapons, stopping and straightening as we looked back. A steady stream of smoke issued from the engine as the mechanic ran forwards, the housing uncoupled on one side, the plume increasing, but soon doused.

‘Any landing you can walk away from,’ Mac suggested as we turned.

‘Fucking ... hell,’ Big Paul let out, his shirt soaked in sweat.

In a line of six we walked forwards, Tubby landing behind us, the Mi2 now in front of its hangar. Sticking our noses in we soon wished we hadn’t, a thick layer of blood everywhere. We reached the start of the huts as Tubby shut down his engines, not many people about. An open-top Rifles jeep came out for us and we sat on the sides, soon to the hotel, and to the crowds. Leaving our weapons with the driver, we progressed slowly through the gates, exhausted and parched. Just inside the gates, on the grass, eight bodies were lined up, covered in blankets, many UN staff milling about, women crying.

It stopped us dead for several seconds. I didn’t even notice the pats on the back, they registered a few seconds later. People were saying things, but my brain was fogged. Inside the hotel I noticed the improvised medical centre in the restaurant, four people being worked on, intravenous drips set-up, our Rescue Force doctors and nurses knelt over them.

Bob Davies stepped out to us as we stood sweating in the heat. ‘Four alive, three should make it. We’ll ... fly them out when stable.’

‘Nash?’ Jimmy asked.

‘She’ll make it, round in the leg.’

Jimmy nodded. ‘Small victories.’

‘You took a hell of a risk, Jimmy.’

‘Fools and heroes, Bob. Fools and heroes.’

Mac softly said, ‘Fools to go out, heroes to make it back.’

Tubby appeared at my side. Whispering he said, ‘Good flying, lad.’

‘You too. That Dash-7 workable?’

‘Undercarriage may need some work. I won’t ... be filling in the logbook.’

Jimmy said, 'Hardware can be replaced.' Doc Graham stepped out, blood on his white tunic, Jimmy shaking his hand. 'Well done today.'

'You too.' He forced a big breath. 'That was a hell of jaunt.'

'That ... was what we are all about, my friend.'

Graham faced me. 'I never knew you were a combat pilot.'

'Me neither,' I agreed, as Rudd walked up.

We stood and watched the wounded get stretchered out, collecting our people and nudging them upstairs, cold beers ordered. Exhausted, soaked in sweat, we sat and sipped the cool beer, subdued, our staff's white tunics splashed with blood, the bar empty except for us.

Jimmy lifted his glass. 'Ladies and gentlemen, I give you ... Rescue Force: fools and heroes.'

'Fools and heroes,' echoed back, drinks raised.

'Fucking hell, Jimmy,' Rudd let out, shaking his head.

Cosy stepped out, walking over to us. He sat and stared at Jimmy.

'Good work today,' Jimmy offered him.

'I had faith.'

'Anyone hurt?'

'One of the soldiers took a round in the arm. He'll be OK.'

Jimmy looked about the bar. 'Where are those two officers?'

'With their men,' Cosy responded. 'Something of a celebration going on.'

'Good,' Jimmy enthused. 'They're bonding with their men.'

After a few moments silence Jimmy ordered food for everyone. The two Russian pilots appeared, raising their arms and shouting. Jimmy eased up and hugged them, getting them drinks, thanking them in Russian as I stepped to the wall, a welcome breeze found. Down below, the bodies were being removed. On the airfield I could see the wounded being loaded into a UN Antonov, soon to be in Nairobi. I closed my eyes and lifted my face to the sun for a moment, enjoying the heat on my face for a change.

'How does it feel?' came Jimmy's calm voice.

'The sun?' I asked, my eyes still closed.

'No, that feeling of ... risking it all to save a complete stranger.'

'Pretty good, I think, I not quite sure. My brain is frazzled.'

‘You flew well today, you should be proud of yourself.’

I lowered my head and turned around. ‘I don’t know how to... define it. Just kinda stunned.’

‘Get some drink in you, you’ll relax.’ He stepped towards the gang. ‘Ladies and gentlemen, I would like you all to know that I am proud of you - except Rudd.’ They laughed. ‘Proud of what you did today, not least going on such a reckless mission. Some of you ... are lazy fat bastards –’ They laughed at Tubby. ‘- yet heroes when the calling came, concerned for strangers.’

Tubby said, ‘I was concerned you’d stop buying me beers!’

They all laughed. Jimmy said, ‘I’m sure there were other reasons. Mac, Rabbit, Handy – that may well have been your last combat mission, you’re old enough to retire off now.’

‘Fuck off!’ came back.

‘And doctors, you did an excellent job today, the official christening of the new unit, the first test passed with flying colours.’

‘We get a pay rise?’ Dunnnow asked.

‘No, so fuck off,’ Jimmy said, making them laugh. ‘Got to buy another Huey, so that’s coming *out* of your pay.’

‘Pauley broke it!’ came a voice.

‘This’ll get in the papers?’ Dunnnow asked.

‘What, the invasion of Somalia? The breach of the border, the lack of a flight plan or permission, the major international incident, the shooting up of Somalis by Kenyan soldiers?’

‘We in trouble?’ Doc Graham asked.

‘Hope not,’ Jimmy said. ‘Might get some help from the UN to keep us out of jail.’

‘Should get a fucking medal,’ Mac complained.

‘Rudd, get a medal made up, a Rescue Force medal for ... operational valour under fire. We’ll award it with ... a ten grand bonus for everyone who went.’ They cheered. ‘Now, I know you’re all a bit stunned, but any good doctor will tell you that excessive alcohol always helps in these situations. So drink, that’s an order.’

In their filthy clothes they downed several beers as they ate, gradually relaxing, the Russian pilots soon hammered. UN staff came up and thanked us, Tubby’s wife scolding him at length, a drink poured down her blouse by Jimmy. The two new British officers turned up, already a bit drunk, congratulated at length by

Jimmy, more beers bought. The music was never turned on, but the staff behaved as if it had been, soon most of them hammered. The bouncers put people to bed, earlier than normal, leaving just me and Jimmy. And I had drunk a lot.

‘Get to bed early, and be smart in the morning,’ Jimmy suggested. ‘Be a big fucking inquiry.’

‘You’ll handle it,’ I confidently suggested.

‘Today could have gone either way,’ Jimmy admitted. ‘But I was proud of you, young man.’

‘A few years back, well ... fuck, I would have never have believed what I’d be doing. And without you I’d be on the tube going to work.’

‘Sorry.’

It took my brain a while to catch up. ‘No, stupid, I don’t mean I want to be on the fucking tube.’

‘I know,’ he said with a grin. He lifted his head to the stars. ‘This’ll make the British papers, your mum will see it.’

‘That’ll be a talking at,’ I suggested.

‘Drink plenty of water, get some sleep, scrub up, meet me downstairs at 5am.’

We both eased up.

‘Spending tomorrow around the pool,’ I threatened.

Before dawn I went for a swim, the pool full of dead insects; I didn’t care, I needed a swim. I stood under the poolside shower long enough to rid myself of all the insect body parts, towelling down thoroughly, not a soul in sight, not a sound. With my cleanest-looking clothes on, short-sleeved shirt and slacks, I wandered down and found Jimmy, a few tins of meat pilfered from the empty kitchens, self-service tea. We ate and chatted for an hour in the dull dawn light, Rudd walking in and finding us as the sun put in an appearance on the horizon.

‘Press and Government on their way, it made the TV news yesterday.’ Rudd waited our reactions.

‘They need us more than we need them,’ Jimmy finally said, none too concerned.

‘Maybe they’ll be happy with us?’ Rudd asked.

‘Maybe,’ Jimmy acknowledged. ‘Oh, I wasn’t joking about the medal. Have it made out of gold and worth some money.’

Rudd nodded. 'I'm starting to appreciate what they can do, your rescuers.'

'This is just the beginning, Rudd. Just the beginning.'

Half an hour later the Rifles senior officer wandered in. I was concerned;; we probably got the poor guy fired for using his men. 'Do you have a minute?' he tentatively asked.

'Of course, have a seat. Tea?'

'No, thank you. I have a message from the Defence Minister. He says to tell you that *he* himself has admitted to approving the rescue mission, and that he ordered *myself* to assist you in any way. You will not be any trouble.'

Jimmy glanced at me without the officer noticing. 'That is very good of the Minister, and good of you to help me like that. If we survive this day, I will reward those that help me. How is your soldier?'

'He will be OK, Doctor Adam is looking after him.'

'Then he is in good hands. Later today I will thank your men. How do the men view these new English officers?'

'Ah, they like them a lot - quick and brave men. When they returned they only had concern for the men, buying many beers in the bar.'

'I'm sure that you would have done the same. I did not choose the English officers for the mission. In fact, I asked for you,' Jimmy lied.

'I would have been happy to serve,' the officer acknowledged, although I had my doubts about that. He left us to finish our tea. With the sun up fully we heard a plane land, soon followed by a second.

'Time to face the music. Rudd, go see everyone, tell them about the permission before any press get near them. Get everyone smartly dressed.'

Rudd headed off. I asked, 'Press be here?'

'The Press around here ... don't have much to do,' Jimmy emphasised.

'So we're story of the year. Great.'

'Get used to it. Start practising your supercilious smile.'

'I'll not pick my nose in front of a camera.'

We stepped out, placing on our sunglasses, and walked across to the apron, soon our field of view blocked by dozens of Government officials, followed by dozens of reporters. The

Rifles sent over a dozen jeeps and we led everyone to the rooftop bar, offering drinks ourselves because there were no waiters around. Standing, we began interviews with the Press, the photographers taking many snaps from the rooftop walls, a great vantage point, TV cameras now filming the airfield.

The Defence Minister, Mister Idi Amin look-a-like, thanked us, shaking our hands as cameras snapped. We thanked the Minister for providing us his permission, and his soldiers. Technical questions were asked; the route, the distance, the time, the aircraft involved, the fire on the Huey coming into land. I got the impression that they believed Big Paul was hanging out the back fighting the fire. The Old Dogs appeared, looking a little hung over and lacking coffee, which I organised quickly. Rudd appeared ahead of the Rescue Force staff, the best of them bright and coherent, the worst of them an embarrassment, Cosy avoiding the press. With the white jacket medics about we were largely ignored, the white uniforms making for good TV. The former British officers stepped out looking smart, so too their men, lined up for pictures against the backdrop of the airfield. An hour passed quickly, the Government officials heading back, the Press as well if they did not wish to walk back to Nairobi. The bar cleared of visitors, many coffees now ordered. We sat and took a break, Cosy joining us.

‘All over the breakfast news, all around Africa,’ Cosy informed us. ‘Oh, more press jeeps pulling up.’

‘Gawd, round two,’ I grumbled.

‘Round two ... is often the important one,’ Jimmy suggested. He stepped to the wall. Turning, he loudly said, ‘Look sharp people, it’s the BBC. Get the coffee and water down you, shoes shined, attitude sorted.’

Cosy disappeared, the BBC TV crew coming up to us. As background shots were filmed, the damaged Huey zoomed in on, the interviewer took names and details, the mission front to back. For the interview we stood against the wall, the backdrop a cameraman’s dream.

When it was my turn to speak, I repeated Jimmy’s earlier words, ‘We work closely with the UN, we eat and drink with them, share this base and share equipment, so we know a lot of them personally. When we heard their desperate cries for help over the radio we acted instinctively.’ A minute later I said, ‘We

took a lot of incoming fire over the UN vehicles, my helicopter damaged, and I had to nurse it back to the border.'

'On fire?'

'We were only on fire for the last fifteen minutes.'

Back in the UK, Jack relayed the story to Sykes, the Deputy Director staring up with his jaw hanging down.

With the BBC gone, I went back down to the pool, the man with the net having fished up the dead insects. I walked straight in clothed and floated on my back.

'Are you OK?' came a woman's voice, oddly distorted under the water. I turned my head, finding an attractive UN nurse kneeling at the pool edge.

I eased up and stood, the water to my waist. 'Just needed a dip, love, the Press a bit much. You coming in?'

'No costume,' she carefully mouthed.

'Who cares, I run the airfield.'

'Which one are you?'

'Paul, the crazy helicopter pilot.'

She glanced around, then stripped down to bra and panties, easing in. 'Oh, that's good. Who'd have a thought to put a pool in the desert.'

'I did.'

'And you gave twenty million to an orphanage?'

'I was overcompensating for not having any kids of my own.'

'I've heard a lot about you. And Silo, he's the big one, right?'

'Yep. He's muscles, I'm brains and looks.'

She laughed, but forced herself to stop. 'Yesterday was terrible, I knew some of the dead.'

'Somalia is disintegrating, best stay out of there, love.'

'Just got here. I was in Central America.'

'So what do you want to be when you grow up?' I asked.

She smiled. 'I quite like this work. The pay is not great, but the work is satisfying.'

'Have you thought about Rescue Force? They're recruiting,' I nudged.

'Never heard of them till I got here. They seem very good, whizzing about in helicopters.'

'We teach most of them to fly. And the pay is better than for the UN.'

'You making me an offer?' she toyed.

‘Oh, no. I only do that in my office, and in my swimming trunks.’

She giggled as a sandwich hit the water between us. I looked up, faces withdrawing from the wall as she threw it out of the pool. ‘Your fan base?’ she asked.

‘They’re jealous because I’m talking with you and they’re not.’

‘You’re fabulously wealthy, you can have your pick.’

Bob Davies walked out and straight around. I jumped up and out of the pool.

‘How’re your people?’ I asked, dripping wet.

He stopped and forced a breath. ‘Better than if they had been left over there.’ Despite my sodden state he hugged me. ‘I owe you one. The UN ... owes you one.’

I pointed at the nurse. ‘She’s got the day off.’

‘You’ve got the day off,’ Bob repeated to her. We shook hands and he headed off, damp on the front.

I jumped back into the pool. ‘So, what’ll you do on your day off? You ever flown in a Tucano?’

After I dried off and changed we had lunch, Sue’s first time in the rooftop bar. Jimmy and Rudd were handling things, not least some aircraft repairs. Jimmy went and spent many hours with the Rifles, money given to the heroes, more money placed behind their bar, everyone in the Rifles feeling wanted and needed. Mac and the Old Dogs had a new swagger about them, a youth recaptured, and Big Paul was teaching the Rifles some boys-own special forces stuff, efficient ways to despatch unwary local camels. Jimmy and Rudd joined us at the poolside around 3pm, taking a breather, a few UN staff now doing lengths.

‘That water is not hygienic,’ Rudd complained, stood with hands on hips, studying the pool. ‘We have a pump and some chlorine, but I don’t think they use it.’

‘It cools you down,’ I suggested. ‘Chill out.’

Jimmy introduced himself to Sue, sat the other side of her, soon a debate about Central American politics and the UN role there. Bob Davies walked out an hour later, grabbing a white plastic chair, Sue a little self-conscious.

‘You here tomorrow?’ he asked.

‘Could be, if you need us?’ Jimmy replied.

‘Got the investigation team coming down, they’ll want statements.’

‘We in trouble?’ I asked.

‘No, they’re focused on the deaths,’ Bob explained. ‘You saw the gunmen near our jeeps?’

I eased up, back into work mode. ‘Couple of open-back jeeps with half a dozen gunmen in each.’

‘Any markings, flags?’ Bob nudged.

I explained, ‘We flew in fast, us firing at them, them firing back - bit of a blur. Your wounded will have to help you there, Bob. How’s Doc Nash?’

He hesitated. ‘Stable, but ... won’t be walking well after.’

Jimmy asked, ‘Her old man in the UN?’

‘Desk job in Nairobi,’ Bob replied.

‘And probably nagged at her to do the same,’ Jimmy added. ‘Now he can say *I told you so*.’

‘I’d like to think that he’s ... bigger than that,’ Bob responded.

‘But...’ Jimmy added, leaving the word floating.

‘It’s between them,’ Bob stated.

‘And also the man who nagged her to do this posting,’ Jimmy added. He eased up. ‘Her leg will probably heal, and I plan on having a word with Mister Nash in Nairobi.’

‘Why?’ Bob delicately asked.

‘Because I understand what it is to send people into harms way,’ Jimmy softly stated.

Bob squinted back at us for several seconds. Turning away he said, ‘I’ve lost people before ... but it never gets easier. When I was a rank lower I didn’t have to handle the dead and wounded, now everyone comes to me. Two more were shot dead in Northern Somalia.’

‘Might want to re-think your strategy over there,’ Jimmy suggested. ‘And we’ll be here tomorrow. I’ll limit the booze tonight as well.’

‘That ... would be a good idea,’ Bob agreed before he left us.

Jimmy stripped off, down to his boxer shorts, and eased down into the water.

‘You two work out a lot?’ Sue asked.

‘Hey, stop looking at other men,’ I joked, following Jimmy into the water, unhygienic or not. After some nagging, Rudd

found trunks and joined us, Sue doing lengths. The three of us hung onto the poolside, chins on our arms, chatting away.

Sue joined us for food that evening, a quiet affair with all alcohol banned, Rudd and Cosy flying back down to Nairobi to do some work. Big Paul ate with the Rifles and “the Ruperts”, the Old Dogs drinking in their hut. Jimmy made his excuses early on and disappeared, leaving me with Sue, a romantic drink under the stars. She showed me her room on the third floor, which was tiny, so I showed her mine on the first floor, just about three times bigger. I explained about the pet Gecko on the wall – it ate the insects – then threw her onto the bed.

An hour later we elected to have a moonlight stroll, finding the base quiet, but soon gravitating back to the bar, a late snack and a few drinks, the bar almost empty thanks to our prohibition rules.

At 6am we showered together, Sue and the others normally having to share communal bathrooms, and she headed off to do UN work, the inspectors due early. I drove over to the Rifles and retrieved the slumbering Big Paul, crashed out in a barrack room after a lot of drinking. I dumped him into his own room and told him to shower, our hung-over bodyguard joining us downstairs later for self-service breakfast, the first UN staff stirring as the sun warmed up the morning. Bob Davies joined us for coffee before heading off to greet the UN plane as it landed.

We made our statements at length, trying to be as helpful as we could, the inspectors amazed by the tale. Big Paul wound them up with a tale of trying to hang out the Huey’s door and using a fire extinguisher on the engines. It made it to the investigators paperwork, and we did not correct them. They did not grasp the laws of physics that kept a helicopter in the air, the downdraft produced: a fire extinguisher would just result in the user getting it in the face. The Old Dogs made statements, a denial made of Cosy going on the mission. Tubby loudly explained how he valiantly landed and took off, more technical detail than was necessary, and the Russian pilots gave their account.

Our Rescue Force staff made statements of a different nature; a list of wounds and identifying clothing, action taken, medical treatment given - who was pronounced dead, and what time. Our doctors were all ex-UN, familiar with the procedures, and current

medical license holders. They signed statements about who was found dead or alive. It was all very sobering. The investigators thanked us and moved onto a wider investigation involving the UN staff, Jimmy telling everyone to go back to normal training. We thanked them again and pinched a Cessna from the flying doctors, soon heading southwest towards the safari park.

Landing on the improved grass runway, we surprised those of our local staff who lived next to the airfield, stepping down to a dull amber sky and the threat of distant rain clouds. We pinched a jeep, threw our luggage in the back, and drove twenty minutes to the new lodge, the staff at the airfield calling ahead. No more than ten steps of dried grass were crossed before a lumbering young male lion bounded towards us. Jimmy held his arms wide and ran at it, the young male turning and fleeing. It stopped to look back and check us out, soon sure that we were not a threat. It jogged up to us, now the size of an adult Labrador, rearing up and placing its paws on Jimmy's shoulders as he ruffled its main. At least he did not roll around the floor with it this time. It followed us inside, a younger cub nearly tripping me, the ball of fur around four months old and snipped at by its larger friend.

'Sorry, sir, we were not expecting you,' the deputy manager offered, looking worried.

'That's OK, we don't need rooms here,' Jimmy told him.

'We don't?' I asked.

'No, stop with Skids and Co at their new place.'

Stepping into the cooler interior we noted ten guests sat about. I checked my watch: 4pm, jeep treks would be over by now.

'Jimmy!' came a shout, our financial officer from Pineapple. He stepped briskly towards us, handshakes given. 'Christ, I saw it on the news. You guys OK?'

'Yeah, yeah,' Jimmy offered. 'Who you here with?'

'Wife and eldest.'

'How you finding it?'

'Great place, nice rooms. The rooftop bar is good, been having our meals up there. Did our first safari today, saw the elephants and plenty of lions.'

'Plenty of lions in here, mate,' I quipped, the younger cub darting about, the elder shooed out by the staff. We greeted the man's wife, many guests standing and walking over, shaking our hands for some reason that eluded me; we played dutiful hosts,

everyone welcomed, and stood posing for photographs for ten minutes before heading upstairs. The process was repeated, two singers from Pineapple making a fuss of us, Big Paul loving the attention, before we grabbed a table and ordered steaks and beer. More cameras flashed, but at least they asked nicely first.

Jimmy beckoned one man over, a rotund fifty year old. 'Don't I know your face?'

'Might have met in London, I work at the Independent - Jimmy Rosette.'

'Pull up a seat, and your wife.' They joined us, enough room on the large table, chairs dragged over. 'You eaten?'

'No, we'll eat around 7pm with the rest, you go ahead.'

'Bleeding starved,' I said. 'Spent all day yesterday talking to hacks – no offence.'

'Perhaps you'd better not let me spoil your meal then.'

'Not at all, you're a guest,' Jimmy insisted. 'And if you want a story that's fine.' Jimmy gestured towards Paul. 'This fella is ex-SAS, so no photos or names, he might not like it.'

'Oh, right you are.'

Big Paul tried to convince him about the fire extinguisher story.

'Wouldn't the downdraft disperse it?'

We all laughed, Jimmy explaining, 'He climbed out to see just how much we were on fire, no extinguisher.'

After that I went through the flight details at length, the warning lights, the shot-up glass, the drafty cabin. Big Paul added plenty of detail, the hack taking notes, Jimmy discussing the politics of the situation, the dead and wounded, the state of Somalia and the refugees.

'What day you leaving?' Jimmy asked his namesake.

'Day after tomorrow, we did a week in your beach hotel – very nice. Even played a round of golf.'

'If you want, I'll get you up to the airfield tomorrow, you can play hack.'

'Well, that's very good of you. Are you sure?'

'You should be asking your dear lady for permission,' I cut in.

'I'm used to it,' she said. 'Thirty years married to a reporter.'

'I'll arrange it for 8am in the morning,' Jimmy offered. 'Go get some snaps, talk with Bob Davies if he's there, then our Rescue Force boys.'

‘Rescue Force sounds almost ... paramilitary?’

‘It is: they’re trained to be tough, they get mine clearance and bomb disposal training, making them very self sufficient. We aim to send them into places that others would wisely avoid.’ Jimmy placed down his drink. ‘One of the greatest tragedies about Africa, is that a handful of rebels can terrorise thousands of villagers, yet everyone is trying to send money to help the villagers – no one is dealing with the rebels.’

‘An interesting viewpoint,’ Rosette commented as he took notes.

‘The taxpayers of the world can send ten dollars to feed the displaced, or spend one dollar on a company of soldiers to remove the rebels. That’s what it comes down to. Year after year we’re sending money to Africa when we should be sending soldiers, and not through the UN. We need soldiers that will be aggressive with the gunmen. Somalia is falling apart, Rwanda will be the next place to go. And what will the world do? Try and use a sticking plaster on a festering wound, one that needs lancing, not debating about.’

I was starting to see what Jimmy was up to, giving this guy an exclusive, but *our* exclusive. We spoke for another hour, Rosette and wife off for a nap and a cleanup before their evening meal, and we grabbed a jeep as the light started to fade, heading for Skids’ farm.

Jimmy found it in the pitch black, Skids coming out onto the porch with a rifle, unsure about who was visiting. ‘Get the kettle on for your employer.’

‘Right, boss. Come on in.’

We met the other two men in their huge lounge, a high cone of a ceiling, thatched just like the first lodge.

‘Very nice,’ I commented, doing the tour, three large bedrooms peeked into. Two local ladies, in their early twenties, walked out from the kitchen, placing down food. ‘All the creature comforts.’ With the ladies smiling and withdrawing I stared at Skids, hands on my hips.

‘What?’ he said with sheepish grin, turning away. We settled around an open fire, a dog asleep at our feet.

‘You met Big Paul, ex-Regiment?’ Jimmy asked.

‘No,’ they said, greetings exchanged, years served and squadrons attended swapped back and forth.

‘He’s my driver and bodyguard,’ Jimmy explained.

‘You don’t need a fucking bodyguard, Jimbo,’ Skids commented. ‘And what’s this we been hearing about a helicopter assault into fucking Somalia.’

We relayed the story for thirty minutes, making the men jealous.

‘Should have had us doing that,’ they grumbled.

‘What, you country gents?’ Jimmy said. ‘Colonial farming stock.’

‘We ain’t much of farmers,’ Trev suggested. ‘Live here, work over your place.’

‘You may have more land to cover soon,’ Jimmy informed them. ‘I’ll be getting Schilling’s land.’

‘That’s a good spread,’ Skids suggested. ‘A good ravine and river down towards the lake; make for a good camping spot.’

‘How the Rifles working out?’ I asked.

‘They’re good boys, we’re teaching them,’ Skids enthused. ‘All fit as fuck.’

‘Much poacher business?’ I asked.

‘Naw, not now. They know we’re here,’ Trev put in.

‘Any gossip ... about Tasker’s accident?’ Jimmy asked.

‘Why, did you have a hand in it?’ Skids quickly retorted.

‘No, hence the question,’ Jimmy carefully mouthed.

‘Black fella with one eye and some booze in him driving a fucking great lorry, simple accident,’ Skids explained.

Jimmy slowly nodded. ‘Seems that way.’

Skids and Trev exchanged glances. ‘Any gossip on the *other* matter.’

Jimmy shook his head. Softly he said, ‘I’d be happier if there was. It’s ... too quiet.’

‘Either that, or we’re all better than we think we are,’ Trev enigmatically suggested, making Jimmy smile.

Skids put in, ‘We figured we’d create a small sanctuary over here, orphaned animals, arrange tours from your place.’

‘Sounds good,’ Jimmy agreed. ‘And you’d want some money for the tours, of course.’

‘Gotta earn a crust,’ Trev said with a shrug.

‘I have no problem with that, you can do what days you want on my side, but plan ahead and let the manager know. He might want to recruit some proper guides, not lazy land owners.’

‘Planning on retiring here,’ Skids informed us.

‘Pipe and slippers on the porch?’ I asked. ‘Don’t seem to suit you.’

‘Better than cold old fucking UK, mate,’ Trev suggested.

‘And you can work part-time at my place when you need a few quid,’ Jimmy added.

‘You grow your own here?’ I asked, getting nods. ‘And the ladies?’

‘They tend the garden out there, some livestock,’ Skids explained. ‘Could easily be self sufficient, so don’t need to earn much.’

‘And no one shooting at you,’ Jimmy noted. ‘Seems like a plan. Oh, I’m going to do the main road with tarmac, might extend it down here.’

‘Be quicker and better access,’ Skids agreed.

‘If you’ve got cots or sofas, we’ll crash here,’ Jimmy suggested. ‘Got any booze?’

We built up the fire, warming the high ceiling lounge, and swapped war stories for many hours. Trev headed off to bed, working in the morning, the final two staying and chatting a few hours more. Big Paul crashed on the sofa, Jimmy and me taking a stroll before sitting on the porch.

‘The incident in Somalia, you knew it would happen?’ I asked.

‘More or less.’

I took in the stars. ‘You ... could have taken right seat.’

‘You needed the experience. It will help in years to come and, for a lot of what we’ll need to do we’ll need the press - and the public - behind us. And for you to have credibility with people like Rescue Force, you needed to show what you can do.’

I sighed. ‘My brain was on autopilot. If I had been thinking straight I probably would have told you to fuck off. I should have, a stupid stunt like that.’

‘It was necessary,’ Jimmy quietly insisted.

‘Fucking fuel tank was empty when we landed, gears probably shot for lack of oil.’ I yawned.

‘That’s just the beginning. You’ll need to be much tougher in the future, more confident.’

‘What’s next on the agenda?’ I idly asked.

‘Chinese Government, via Po.’

‘Any burning helicopters involved?’

‘Oh no, it’ll be far more dangerous than that.’

We laughed quietly.

‘Could just retire down here, ignore the world,’ I joked.

Jimmy sighed. ‘That had crossed my mind.’

Back in Blighty we received a few requests for interviews, selecting those that we wished talk to, Rosette at The Independent given plenty of time. He produced a two page spread, the net effect being an awareness of Rescue Force and the problems in Somalia, not to mention the crazy pair of Silo and Holton. The staff at Pineapple Records were amazed, and our first visit back to the club quite odd, many handshakes and much congratulations. Some nice gentlemen from the Foreign Office popped along with a few questions about our incursion into someone else’s sovereign territory, but did little other than to confirm the details.

A month after our return a writer sent a letter to Pineapple, trying to track us down, since the address at the house was hidden from public records, we were not on the Electoral Roll. Pineapple passed on the letter, the writer having lost a brother-in-law at Baardheere. He wanted to write a book and Jimmy agreed immediately, inviting the man down, full access given, plane tickets supplied for several trips to Kenya, everyone told to co-operate with him. We’d be in print for Christmas.

The Chinese Government

As we sat at the bar of the Mandarin Orient Hotel, Po was confused and concerned.

Jimmy explained again, ‘I wish to do business in China in the future; there will be many good opportunities over there. This place will go back to China in ’97 – that will open up Chinese markets. Tomorrow I’ll go and talk with them, their embassy here.’

‘They expect you?’ Po puzzled.

‘Yes, I sent them a telex,’ Jimmy explained, but I didn’t remember any being sent.

We sat and chatted, work and pleasure discussed, Po’s cousin now a regular visitor to the golf complex in Kenya. And Po was sitting on a large pile of cash for us, a very large pile. Jimmy indicated that it would soon be needed. As we said goodnight to Po, planning on meeting the next evening, it registered that no one had discussed the mad helicopter rescue. I guessed they’d not heard about it here, and was quiet grateful for that, since it was starting to drag a bit; there are only so many ways you can re-tell the same damn story. We whiled away the time with lengthy massages downstairs, a sauna, then propped up stools in the bar till it closed, chatting to high class hookers, but not tempted to buy some trade.

The next day Po’s Rolls was waiting, at our disposal for the duration of our visit. We jumped in dressed smart, and asked the driver for the Chinese Embassy, setting off in thick traffic. We drove for fifteen minutes, pulling up in a street of old colonial-style buildings, next to a particular building with its windows covered in metal grills, a Chinese flag flying. I had been practising my Chinese language skills, but knew that I could not hold a conversation, certainly not one concerning the subject matter of today’s meet. My chest heaved an involuntary breath as we approached the door and its two uniformed guards.

‘I am expected by the Ambassador,’ Jimmy said in Chinese.

A door clicked open without the guards having done anything and we stepped in. A man held the door for us, bowing his head and gesturing us onwards, Jimmy striding forwards as if he knew the way. We walked along marble floors, many attractive Chinese vases displayed on antique wooden tables, pictures of Mao on the walls. At the end of the corridor we were met by two men in smart black suits, both wearing identical glasses. I could not judge their ages well, but guessed they were in their late forties, and could have been twins.

Jimmy extended a greeting, and we were shown into a side room, very posh but not very functional. It reminded me of my first visit to the old apartment in London. We sat on period chairs, a low coffee table between us and the hosts, whoever they were. Jimmy turned his head to me, ‘This is the Ambassador, and

this is Security Minister from the mainland.' The rest was mostly in Chinese.

'Welcome to the Embassy of the Peoples' Republic,' the Ambassador offered, tea poured into small cups.

'I thank you for your time in seeing us,' Jimmy responded.

'You are a most honoured guest, Mister Magestic.'

My heart skipped a beat, even without the full translation.

Jimmy asked, 'How have you found my stock market tips?'

'Very ... accurate,' the Ambassador responded. 'And may I compliment you on your Chinese. You seem to have a Beijing accent.'

'The accuracy of the tips was not the question ... I asked.'

The Ambassador glanced at his colleague. 'The tips were ... most profitable.'

'And the other information?'

'Of great benefit, and many lives were saved,' the Security Minister offered.

'Do you have a question for me, Mister Ambassador?' Jimmy asked.

'We are naturally curious as to ... your abilities.'

'Ambassador, please speak your mind. You are curious ... as to my motives.'

'As you can imagine,' the Ambassador politely agreed.

Jimmy smiled. 'Is Ho Sin upstairs, watching us?' Our guests blinked. 'My abilities, gentlemen, are a thousand times more than you realise. Before my arrival, did you not discuss that I may be a clairvoyant? Did you not discuss also, Ambassador, your daughter's wedding?'

The Ambassador seemed most put out.

'So, gentlemen, *do you* ... have a question?'

'Who are you please?' the Security Minister politely asked.

'I am a time traveller,' Jimmy bluntly stated. He let them think on it. 'Your future, is my past. I know everything that will happen in the next twenty-five years.'

'And who do you work for?' the stunned Ambassador asked.

'I work for myself, and there is no point my trying to explain my motives, since self-praise ... is no praise. Instead, as the years roll by, I will demonstrate my skill and help your country, as I help others. When, in time, you trust my motivation through ... observation of actions, then I will discuss my motives.'

‘And in the meantime...?’ the Ambassador asked.

‘I will answer questions that you have, that benefit your country, save lives, make some money, but do not compromise the security of any other nation. As I can see your future, so can I see the future of others. Now, if you have questions about your countries future, you may ask them.’ He waited, our hosts glancing at one another.

The Security Minister asked, ‘Will the British resist the handover of this colony?’

‘No, it will go smoothly, and everything will be fine here afterwards, a prosperous integration.’

The Ambassador glanced at his colleague. ‘Will there be any major wars that involve the People’s Republic in the future.’

‘In 2015 a Republican American President named Oliver Sanchez will attack China to ease deficit payments to your country.’

‘Attack us?’ the Ambassador questioned, clearly horrified.

‘Yes. He believes that by attacking you they will not have to repay their dollar debt, at a time when OPEC switches from the dollar as reserve currency.’

‘OPEC ... switches reserves?’ the Ambassador puzzled.

‘Yes, when the US economy suffers, and people wish not to be a part of bad dollar politics.’

They gave that some thought. ‘You know when major floods will occur in Yantze River?’ the Security Minister asked, an odd question.

‘Yes, and every earthquake, some very serious. Also outbreaks of infections that kill many people.’

‘You ask for nothing ... for this information?’ the Ambassador posed.

‘I will ask for many things, only one of which is compulsory for my continued assistance.’

‘And that is?’ the Security Minister asked.

‘You will, with my help, create a medical rescue body, a group of trained specialists that can fly quickly to a disaster area inside China and render medical and rescue assistance. In years to come, I will also ask that this force extends help to other nations in this region, extending the Chinese hand of friendship and diplomacy.’

‘This ... is a very odd price to pay for your continued assistance,’ the Ambassador pressed.

‘Many things that I do, well intentioned, will not be revealed until closer to the time. That way security is maintained.’

‘And when do you say that we should create this rescue body?’ the Security Minister asked.

‘You must have a representative ready for the day after tomorrow, to liaise with myself and my good friend Wang Po – who knows nothing of who I am. That is his car outside. I will tell the liaison everything that he must do, and I will show him my facilities in England and Kenya as examples. A diplomat would do, someone who can travel easily without suspicion.’

‘And what is your relationship with this Po?’ the Security Minister asked.

‘In the future, his children have a destiny in the success and future of China. I provide him stock market tips and assistance in other business ventures, so that his family will have the money they need to carry out certain tasks to the benefit of China. But gentlemen, there is one question that you have not asked about ... time travel.’

‘What is that?’ they puzzled.

‘Why go back in time?’ Jimmy posed.

They were still puzzled.

‘I travelled back to prevent World War Three and the destruction of this planet.’ That one woke them up. ‘If I fail, we all die. Soon, you will have to decide if you trust me, because failure in that belief may set in motion a series of events that are unstoppable. Now, do you have a medical kit here?’

‘Medical kit?’ they puzzled.

‘I wish to give you a sample of my blood.’

‘Your blood?’

‘My blood will cure all diseases known to man, including cancer and AIDS. And I am more than a hundred years old.’

They were stunned into inactivity for many seconds. After some debate they found a medical kit, a sample taken, Jimmy doing it himself, the vial placed in the fridge.

‘When your scientists have analysed the blood, we will meet again and I will describe to you how to get on the path to curing all diseases.’ He handed them a card. ‘Do remember that the British Government will be watching, so communication must be

private, face to face, and preferably on your soil – not by phone or fax. Oh, I'm staying at the Mandarin for the contact.'

We thanked them for the tea and headed out, leaving me wondering what the chitchat would be about after we left. I had a feeling it would not be the Ambassador's daughter's wedding plans.

In the Rolls Jimmy said, 'I've just woken up the biggest tiger on the planet.'

'Hope you know what the fuck you're doing.'

We had a restful afternoon shopping, exclusive stores with few shoppers and many helpful assistants, then back to the hotel for more relaxing massages. The Rolls took us to a restaurant we had not visited before, also owned by Po, and I re-acquainted myself with his daughters, Suni now in a relationship. That left Ling, my favourite. Unfortunately, a BBC correspondent was dining out with friends and colleagues and introduced himself, discussing the Somali incident, Po all ears. There was nothing for it but to ask them to join us, tables moved, one big party.

Po was amazed by the tale, but also concerned that his stock pickers might have got themselves killed. Jimmy chatted at length to the various correspondents about world politics, Africa and Rescue Force, Ling asking for the full story of what happened; she and Po did not even know that I flew. To placate the BBC Jimmy invited them down to the Cardiff club the following weekend, we'd all be back in the UK by then.

I enjoyed my time with Ling, I always had done, and we hit the shops the next morning, Jimmy off with Po on some dull tour inspecting offices and factories. We met up again at around 6pm, heading for a black-tie Gala, raising money for the local Red Cross. We were on the top table, and Po would be making a donation from us all. And I should have had some foreboding about the gala. As we arrived, the timing down to Po and his driver, only the function room staff idled about the entrance. I thought we were early and could have a drink first. We were ushered in, several posters advertising various UN projects around the world, and I still hadn't twigged.

At the entrance to the main hall, Jimmy said, 'Paul, stay close. Po, meet us at the table please.'

With a puzzled frown I let go of Ling and followed Jimmy, straight into applause, a standing ovation as we walked across

the room. And me, I wondered who they were applauding, looking towards the stage. When people started shaking Jimmy's hand, then mine – pats on the back issued – I realised this was a UN event. Cursing Jimmy under my breath, I tagged along behind, right up onto the podium. And the microphones.

Jimmy tapped a microphone, issuing greetings in more languages than I had fingers and toes. Finally, in English he said, 'This is just like my high school graduation, only I can't see the biology teacher I had sex with.'

I closed my eyes; statements like that were normally down to me. The audience laughed, then settled.

'Ladies and gentlemen. First, I would like to thank the organisers for inviting us, a free meal and some booze is always appreciated, since we've got some aircraft repairs to pay for.' He waited till they settled again. 'Second, I would like to introduce Mister Wang Po and his lovely daughter Ling, somewhere here at the back. They will be making a donation later. Mister Po is a generous benefactor of my charitable interests in Kenya, often staying at River View golf complex. He makes donations, we make the holes bigger for him.' Even I laughed at that one. Poor old Po. 'Third, I would like to point out that I *do not* have a pilot's license, and that Paul here passed his helicopter proficiency just six months before the incident in Somalia, making his flying skills all the more impressive.' He stood to one side and gestured towards me, a rapturous applause given.

Back at the microphone, a full thirty seconds later and now serious, Jimmy continued, 'In Kenya, the medical rescue team I have set-up is called Rescue Force, a tough bunch of doctors and medics being trained to go just about anywhere. Their motto, thought up by the medics themselves, is *fools and heroes*. You have to be a fool to risk your life for a complete stranger, a hero once the act has been completed – dead or alive. In the middle... in the middle sits a period of transition, a period where we stop and think for a moment – just a fraction of a second – where our mind weighs up the danger, the chances of survival, the merits of what we are doing, and why. We then have two ways of turning. We can rush in, or we can back off. A sane person should back off, a crazy person would jump in without knowing the reason behind why they jumped in. So what makes that transition, from ordinary person ... to hero?

‘For most it is a subconscious decision, a decision that risking your life, or giving your life for another, is part of a greater good. For those that I employ I hope it is more than that. I hope that when that transition point is reached, that they feel more in touch – more connected – to the rest of mankind. Unfortunately, the oldest and most primitive instinct ... is to look after our own kind, our own tribe, our own family. But look around you. How many nations, tribes and families are represented here today? Close to fifty I guess. And what I wish for, with my rescuers, is that in that moment of transition they are connected to the planet that they live on, connected to the people – all of the people, and that the moment of transition, from fool to hero, is a point where you lose your family, your tribe and your nation, and see those that need rescuing as ... as part of the whole, not as individuals. I hope, that when my rescuers take that first dangerous step, that they are trying to rescue mother Earth itself. And what cause is better to die for than that?’

Everyone stood and started clapping again, leaving me thinking what the hell I might say. At least there were no TV cameras around.

Jimmy added, ‘When the UN staff drove across the border to Somalia they made their decisions, in fact they made their decision when they put on the blue uniform and signed up. They signed up to something bigger than themselves – they signed up to help everyone, to help us all.’ He pointed at the nearest table. ‘Can I trouble you for two glasses please.’

I bent down as a lady offered me two champagne glasses.

With a glass in his hand, Jimmy said, ‘Could I ask you all to stand please.’ Every stood. ‘What we did was foolhardy, but we survived. We were fools to try it, heroes when we got back. But the real heroes were the ones that we went over there for. Ladies and gentlemen, I give you ... the United Nations.’

We sipped our drinks, soon people placing down their glasses and clapping politely. Jimmy turned to me, a gentle nod towards the microphone, in fact a question: did I want to speak or not. I stepped forwards.

‘My name is Paul, and when I grow up I want to fly helicopters.’ They laughed. ‘If the UN bosses are here – the day after the incident we had a few drinks and I met this UN nurse...’ They laughed more. ‘Sorry about that.’ From the corner

of my eye I caught Jimmy laughing. I took a moment. 'After the incident, Bob Davies – your Regional Co-ordinator - was badly shaken. And that surprised me, because up to that point I didn't equate people in blue uniforms to... real people with families, wives and children. But when I was flying that helicopter, and we were getting shot at, I was responsible – responsible for the people in the back of the helicopter. And to tell you the truth, it was not a feeling I liked, having their lives in my hands. If I made a mistake it would not just be my death, it would be a few people I liked as well. And it took a few days, and a few quiet moments, to realise just how big Bob Davies' helicopter is, how many people he carries around, and how he feels when he has to write that letter back home to someone's family. He doesn't ride around in combat helicopters, but Bob Davies makes me look like an amateur.' I raised my glass. 'To UN commanders everywhere.' They joined me in the toast, Jimmy leading me down, people greeted and hands shaken. It took almost ten minutes to reach our table and find Po and Ling.

As we sat, Jimmy whispered, 'Bob Davies' boss is over there.'

Po was moved to tears, a hand on Jimmy's arm. 'You big big man.'

The first speaker gave a breakdown of who could not attend and who was unwell, and we all switched off, booze downed. They ran into details of donors, upcoming functions, events and issues, thirty minutes of it. Then came new member donors, Jimmy sending up a startled Po.

Po was welcomed onto the podium, the mike adjusted down. He issued greetings in Chinese and English. 'On behalf of my family, my business and Jimmy Silo, we donate one million pounds.' He handed over a cheque to applause, soon back with us. And it was all his million, none of our money.

'Where's the speech?' I teased.

'No, no. I no good speak like you.'

Bob Davies' boss, a UN bigwig, wandered over and pulled up a chair.

'Mr Patterson,' Jimmy greeted him.

'How come we haven't spoken before? Patterson asked, clearly from Southern Ireland.

'We only go to the good lap dance bars,' Jimmy suggested.

Patterson laughed. ‘Shhhh, my wife’s over there. Thanks for what you did, Bob keeps me up to date with all the tales.’

I said, ‘Shouldn’t believe all you hear about us.’

‘Twenty million pounds on an orphanage? That’s a world record.’

‘It wasn’t twenty million,’ Jimmy suggested. ‘Dollar conversion errors, more like ten.’

‘And that amount again at the airfield,’ Patterson noted, his figures way out.

‘We always wanted our own sandbox, ever since nursery,’ I suggested. ‘Now we got the biggest sandbox anywhere, and they throw in the flies for free.’

‘It’s not all hardship up there, my people request postings there – pools and bars,’ Patterson pointed out. ‘And more planned.’

‘They may as well be comfortable,’ I said. ‘Makes up for all the sand and heat.’

Jimmy asked Patterson, ‘You pulling back from Somalia?’

‘No, the US Marines are going in.’

‘That’s a mistake,’ Jimmy grumbled. ‘The Somalis need their own people taking charge.’

‘Your camp on the border caused a stir; there are fifty people a day joining it now. What gave you that idea?’

‘I figured that I would recruit and train some of them, send them back in. It’s their country.’

‘How ... exactly?’ Patterson pressed.

‘I’ll pick out the able bodied men and train them as medics, some as soldiers – a free Somali regiment, kit them out and send them back in.’

Patterson was concerned. ‘That’s not something we’d support, especially not a militia.’

‘Best get used to it, or work around me,’ Jimmy threatened. ‘I’ll do what I can, the way I think it’s going to work.’

‘I wouldn’t mind discussing that with you at length.’

Jimmy handed over a card. ‘Glad to meet, anytime. Come to the house in the UK, or stay at one of our places in London.’

‘Kind of you, I will.’ Patterson headed back to his wife.

A few others wandered past and said a few words as food was served, modest portions, so we decided to head for a restaurant, eating and chatting to the small hours. Back in our hotel I carried

a giggling Ling into the lift, many strange looks from the staff, and threw her onto the bed.

In the morning we met Jimmy at breakfast, Po having turned up early, and we all settled down to eat and chat again, just like family. We were still there at 9am, the restaurant clearing, when a smartly dressed Chinese gentleman with glasses approached us, a card placed down for Jimmy. He looked officious in his sombre black suit.

Without glancing at the card, Jimmy said, ‘Everyone, this is Mister Han, he will be my new liaison to the Chinese Government. Please, have a seat.’

Mr Han exchanged pleasantries with Po, then explained in English, ‘My Government will be interested in joint ventures with your shipping and ore business.’

I had no idea what that involved, or meant, but Po was shocked rigid, so too Ling.

Jimmy said, ‘I am sure that Po and his family will prove excellent business partners.’ He faced Han squarely. ‘Have you a bag packed?’ Han gave a polite head tip. ‘UK visa?’ Again a polite head tip. ‘And visa for Kenya?’ Finally a third head tip. ‘Excellent. We will pay for any necessary expenses. If your Government wishes them itemised we can do that.’

‘Thank you.’

‘We leave on the 4pm flight, I have reserved a seat – in the name of Han.’

Han was momentarily surprised, but controlled it. ‘I will meet you at check-in, 2pm.’ He stood and tipped his head, backing out.

Jimmy faced Po. ‘I asked them to give you some contracts.’

‘You ... ask them?’ Po was dumfounded. ‘Chinese Government contract... only very big, no small.’

‘I’m only just getting started,’ Jimmy explained. ‘Wait till I get you some very big contracts. Now, go home, we must pack. I’ll see you in London in one month.’

I kissed Ling goodbye, and she helped Po out, the poor fella mumbling to himself. ‘So how big a contract will the Chinese give Po?’

‘In their terms ... a tiny percentage of a small amount. In his terms, a contract a hundred times bigger than his last one.’

‘And we’d make a few quid, no doubt.’

‘No doubt. All we have to do now ... is sell Sykes on the idea of a Chinese Government official tagging along, without him shooting us.’

‘Yeah, that could be a problem. Let’s get him a stuffed animal at the airport.’

We met up with Mister Han at check-in, sitting next to each other on the flight; economy class. Jimmy and Han spoke quietly in Chinese and I read a book, a Wilbur Smith; the cover had a picture of an African savannah, so it had appealed to me on the bookstand. Karl and Big Paul met us at the airport the next morning around 11am, two vehicles, driving us to the house. When Jimmy explained to Karl who Han was he did a double take, insisting Jimmy explain it to the authorities. Han was also a little surprised by the armed Government officer riding shotgun for us.

Han had a room allocated, Jimmy showing him around the house, explaining things in Chinese, a stroll down to the river and a lengthy chat about fish as I tackled a mountain of faxes and letters. Sharon was keeping on top of things, but that often only meant that the right fax or letter ended up in the right pile, she could not action anything. The spreadsheets were up to date and I scanned them quickly, pleased with the ability to just read figures as net differences between last month and this month; up five percent, down six percent. It made life a lot easier. Later, Han came with us to our favourite curry house and sampled the Indian food, pleased with the meal.

With a call into Jack, he and Sykes came down the next day, unaware of our new houseguest. We welcomed them into the lounge like old buddies, food ordered. Han was already sat, but stood and bowed as Sykes entered.

Sykes shook his hand. ‘You work for Mister Po?’

‘No,’ Jimmy cut in with. ‘Please, sit before you have a heart attack.’

Sykes was concerned. ‘Jimmy?’

We all settled. Jimmy began, ‘As you are aware, Magestic has sent letters to the Russians, Chinese and others. This is not just about England, it never was. The Chinese Government has been receiving letters about natural disasters, mine accidents, internal crimes and terrorism, and things of that nature – no more. Mr Han is a diplomat of the People’s Republic.’

Sykes took a moment to compose himself. 'Well, on behalf of Her Majesties Government, we greet you ... and welcome you to our country.' He turned his head a notch to Jimmy. 'Might I enquire as to Mister Han's ... status and function here?'

'He'll be staying in a room upstairs,' Jimmy lightly explained, Sykes working hard to control his reaction. 'And that ... closeness of proximity will allow the smooth communication of information two ways. In particular, the Chinese Government will be creating their own small Rescue Force unit modelled on mine. Mr Han will be journeying with me to Kenya.'

'And is that ... to be listed as the primary function?' Sykes questioned.

'I would guess so, the rest is down to you,' Jimmy replied. 'I will await the Government's guidance on any ... status problems, and abide by them – of course.'

'I'll ... need to discuss this higher up,' Sykes warned.

'It is also my intention to assist ... in the smooth handover of Hong Kong, with a minimum of *mistrust* on both sides. And, I am sure, that the handover will go smoothly, to the benefit of all parties.'

'That's ... good of you,' Sykes offered. 'Might *we* talk in private?'

'Of course,' Han offered. 'I will visit again this beautiful river and very green land.' He bowed his head and left.

'Jesus, Jimmy,' Sykes let out, easing back and loosening his tie.

Jimmy offered Sykes a flat palm. 'Consider this. In 2015 America is on its arse, China the major player. Who ... do you want as your best buddy?'

'It reverses that much?' Sykes asked, clearly concerned.

'Yes, and by time we get to 2015 China is more American than America.'

'The communist government falls?'

'No, it transforms slowly, still socialist, but a MacDonalds on every corner, private finance, mortgages, you name it. And Hong Kong is the key. It acts like a giant cancer that infects China, turning them capitalist from the inside out, and quickly.'

Jack asked, 'And future military problems with China?'

'None. They react, they don't provoke.'

'And your agenda with them?' Sykes asked.

‘To influence them of course. And Magestic is already persona grata. Is that not a good position to be in?’

‘Of course,’ Sykes finally admitted.

‘Tell the powers that be that Karl is shadowing Han,’ I suggested. ‘Which he will be; he shadowed him down the curry house last night.’

‘I hope you know what you’re doing,’ Sykes softly let out.

‘I say that all the time, not least when in helicopters getting shot at,’ I put in.

‘I’m surprised you risked your necks like that,’ Sykes admitted.

‘We’re not indispensable,’ Jimmy suggested.

‘No. Quite,’ Sykes agreed. ‘How much do your staff know?’

‘Nothing,’ I said. ‘Nor families or friends, nor girlfriends.’

‘I should hope not,’ Sykes said with a fatherly look.

‘And we’ll give the Government a few more wrecks,’ Jimmy suggested. ‘Besides, they got the gold index, what more do they want?’

‘And between us, they’ve been more active in the gold and currency area than admitted,’ Sykes offered. ‘An extra five billion tucked away.’

‘There’s no pleasing some people,’ I said.

‘Monty Python, Life of Brian,’ Sykes stated, and we laughed.

‘On a more serious note,’ Jimmy began. ‘A very much more serious note, next year Rwanda will disintegrate following the assassination of Juvénal Habyarimana, their long serving President.’

‘That’s left of Kenya, yes?’ Jack asked.

‘West ... of Kenya,’ Sykes corrected him.

‘Yes,’ Jimmy confirmed. ‘A civil war will break out and a million will die within weeks, refugees fleeing.’

‘A threat to Kenya?’ Sykes asked.

‘No, but I’ll help the refugees. The problem ... is a million dead.’

‘What about UN peace keepers?’ Jack asked.

‘Already there, and ineffectual,’ Jimmy suggested. ‘It would require something more substantive, troops that will open fire and keep the peace.’

‘Can it be prevented?’ Jack asked.

‘No, it can only be ... dealt with at the time. Any show of force ahead of time would simply push back the start point. No, there is only one way of dealing with it, and that’s to get there just after it starts, after some bloodshed - but not too much, a combined effort with the UN.’

‘Why wait till they start fighting?’ Jack puzzled.

‘Sometimes, you need to let the two sides punch each other on the nose to clear the air,’ Jimmy explained. ‘There is no alternative. The Americans will be nudged along similar lines.’

‘I’ll chat to the relevant department, get more eyes on the ground,’ Sykes offered.

‘You may explain to Her Majesties Government, that failure to act will ... make me less available in the future.’ Jack and Sykes exchanged looks. Jimmy added, ‘And the US mission in Somalia is doomed. Someone, is not paying attention over there.’

‘The new President?’ Sykes asked.

‘I would assume so. I guess a cage needs rattling.’

Jack went through a list of questions, some very detailed questions regarding Bosnia, and we thanked our visitors for popping down.

Sitting back down I asked Jimmy, ‘Will Rwanda upset Kenya?’

‘Some tourists may stay away, there’ll be refugees. Most Hutu’s, those persecuted after *they* massacre Tutsis, they’ll head west or south, not east.’

‘We only got eleven in Rescue Force,’ I pointed out, some disappointment in my voice.

‘Rescue Force is for later. This is a UN problem. Still, it will keep them busy. And we’ll start to do something soon about the other refugee camps in Kenya.’

‘Going to be stretched, not got the manpower for it.’

‘It’s too soon,’ Jimmy sighed. ‘We’re not ready.’

When Han re-entered the house, having his own key now, he asked, ‘You do not tell your government the full story.’

‘They know what they need to know at this stage,’ Jimmy explained. ‘The full truth, told early, would not be appreciated, nor actions taken. They must learn to trust me step by step, to build up a confidence over many years.’

‘And the Americans?’

‘Get only letters, I will not make direct contact with them yet.’

‘May I ask why?’

‘I was waiting for this Democrat President, his second term. Timing has to be right.’

‘And if you are killed ... in crazy helicopter stunt?’

Jimmy smiled, then forced it away. ‘I won’t be, I know the future... remember.’

‘So why make a full disclosure to my government?’ Han posed.

‘Your lot are less complicated, and they don’t swap Presidents and policies every few years. If I make a deal with your government today, I can be sure that it will still be in place in ten years time.’

We showed Han around Mapley airfield at length; the water feature, the climbing frames, the cave, the off-road driving, the climbing wall and the first aid lessons. Photographs and notes were taken, flights then booked to Kenya.

Arriving at Nairobi airport a few days later, the officials did not understand Han’s reason for the visit, senior men called in – as well as ourselves. Han explained that he would view Rescue Force with a view to making a Chinese equivalent, and that seemed to do the trick. Rudd and Cosy were waiting outside, having sat around for an hour, and we set-off for the airfield by jeep, two vehicles in convoy. Arriving at sunset we were allocated rooms, meeting at the rooftop bar for food, the planned tour starting proper the next day. The next morning, dressed in a white shirt and beige trousers, sunglasses and hat, a camera carried, Han looked like a lost tourist. And he took some explaining.

‘Coup, this is Mister Han, a Chinese diplomat,’ Jimmy explained. ‘They’ve been impressed with what they’ve heard about our fledgling outfit and are interested in creating their own version of it.’

‘So soon?’ Coup puzzled.

‘You’re reputations ... precede you,’ Jimmy added.

Word of the visitor spread, so too his reason for being here. We showed Han our people undergoing various activities, our staff more earnest than normal, certainly swearing less. The half-

built buildings in the Rescue Force compound were photographed, a diagram handed over. Han puzzled the new swimming pool, but found the mine disposal fascinating, most of the ordnance being disarmed or blown up being of Chinese origins, a fact that Mac pointed out several times. Without wishing to show Han the Rifles, we jumped into the repaired Huey for the short trip to the border camp. I made sure to land away from the camp, but still blew up a storm of dust. With the rotors winding down, we stepped across the parched sand in oppressive heat, a family of camels in the distance staring at the loud monster that was our Huey.

I found the camp an odd place, since it had strong barbed wire fences surrounding and enclosing it, yet offered several open sections for easy access. Jimmy explained that it was to protect the women and children from men, but there were very few Somali men around, and the first group of males we came across were Ethiopians that we employed to maintain the water pumps. We plodded across hot sand and through the barbed wire, two Rifles jeeps parked up, their vigilant occupants waved at. We noticed four of our people under a large tent, Graham and Hildy, Ratchet and a new doctor, a long line of keen customers sweltering in the heat. We ducked our heads and stepped inside.

‘Having fun?’ I asked.

Doc Graham took a minute out, a welcome drink downed. ‘Mostly women and kids, malnutrition, foot sores from walking, the odd disease. Overall, they’re not the worst I’ve seen.’

‘Any security problems here?’ I asked. ‘Got a nice big fence.’

‘We heard that a woman was dragged off, and they found her body a few days later,’ Doc Graham explained. ‘The Rifles shot at a few armed men trying to cross the border a few days back. As far as African refugee camps go, quiet.’

‘I’d call that Dodge City,’ I suggested, a glance at the line of wailing kids, the women seemingly nervous of our presence.

Jimmy introduced Han, surprising our medics a little. They all shook Han’s hand, their own mucky hands wiped down jackets first, and all looking a little perplexed. Opening a backpack Jimmy had brought with him, Jimmy handed out tinned pears to the line of women. Opening one, he spooned out the liquid, feeding it to a child as others closed in, soon half pears being wolfed down and much appreciated.

We thanked our staff, telling them to carry on, before blowing up another dust storm and frightening the camels. Back at base we held a Rescue Force update meeting in the bar, cool drinks appreciated. And no sign of Sue the UN nurse, posted onwards somewhere I figured.

‘How many medics can we recruit at best?’ Jimmy asked Coup.

Coup replied, ‘We’re mostly word of mouth, people who know people around Africa. Little point in advertising the jobs in the papers, too few would notice the adverts.’

‘OK, then let’s get twenty Kenyan nurses ... who are under thirty and fit,’ Jimmy ordered. ‘Many will drop out, so we may get ten good ones. If you repeat that process four times a year, we’ll get forty good nurses. Advertise anyway, across Africa, modest budget, see who turns up. And I’ll do some advertising in the UK.’

‘We could pinch some Rifles,’ Coup suggested. ‘They drive well, good mechanics, they’ve studied ordnance disposal – so all they need is basic medical training to be an extra pair of hands.’

‘Fine, ask some if they want to move over – five or six, no more.’

‘We could recruit in Hong Kong,’ I suggested, Han keenly listening. ‘They speak English, got UK passports.’

‘Not a bad idea,’ Jimmy approved. ‘I think Po could help with that. Rudd, get some temporary tents set-up, good quality.’

Rudd said, ‘We have four new cabins coming, they are living accommodation cabins, not offices. A factory in Nairobi makes them; self-assembly homes. You can get six or eight people in them.’

‘Sounds workable, get ten more,’ Jimmy suggested. ‘How are we with the barbed wire?’

Rudd explained, ‘The Kenyans were surprised. We’ve gone thirty miles in each direction so far. Some is already fenced, so we are improving the old fence as we go.’

‘Keep going,’ Jimmy ordered. He faced Coup. ‘I think the refugee problem will only get worse, now talk of a civil war in Rwanda. I want as many bodies as we can get without watering down the skill level. I think, as far as refugee camps go, that one doctor to four nurses is probably about right.’

‘So prepare for lots of extra mouths to feed,’ I warned Coup. ‘Talking of which.’ I faced Rudd. ‘How’s that farm?’

‘A price has been fixed, houses included, two point five million,’ Rudd explained.

‘Use the excess money in the orphanage fund,’ Jimmy suggested, surprising me. And surprising Rudd.

‘How can we justify the spend, it is a nominated charity?’ Rudd queried.

‘First, the children will attend classes there on farming, and I’ll set-up a college of farming, which will recruit from the orphanage. And second, the produce will be sent to the refugee camps – so it’s all linked.’

Rudd nodded his acceptance. Cosy said, ‘I would like to be involved with the farming college.’

‘Fine,’ Jimmy offered. ‘I want the white managers let go, recruit blacks and make it a non-profit farm. A ... peoples collective.’ Han lifted his head. ‘But I want instructors from England, good people, a few months at a time, latest skills. And if you want you can offer residential scholarships to locals, one or two years, pay them a modest wage while studying. We can get some cheap fertilizer from my Hong Kong friend, Po, his family ship it.’

‘I’ll close the deal,’ Rudd suggested.

‘Right, it’s too damn hot to sit around here, so let’s meet again at sundown. Tell Mac I want a word.’

The staff wandered off, Han stood with his hands clasped behind his back, peering out at the various buildings and activities.

‘You want a big ramp up for Rwanda?’ I knowingly asked.

‘Yes, just wish I could do more. I also wish I could go back and fix the Second World War, but I am here ... and now.’

Mac turned up ten minutes later, a beer ordered and half downed quickly. It was a hot afternoon.

‘Mac, there are things I’d like you to do besides the sandbox.’

‘We got a pool cleaning boy!’ Mac stated.

‘And he’s probably younger and better looking,’ I put in.

‘What you after?’ Mac asked, easing back and relaxing.

‘In the future, most of the money - and therefore the good kit and people - will be focused around Rescue Force, not the

sandbox. I'd like you more involved with that, some foreign trips.'

'More pay,' I added.

'Doing what ... exactly?' Mac asked.

'You'd be temporary head of Rescue Force –'

'Temporary?' Mac challenged.

'Some day I'll recruit a doctor to do it, you'll not know the medical ins and outs.'

'No, I wouldn't,' Mac agreed.

'You won't be able to assess if a doctor is any good or not,' I helpfully suggested.

'Aye. So ... what'll it involve?'

'You'll be in overall charge of the base, as now, but not touching ordnance training hands on. Coup would be under you, De Silva would work for Handy or Rabbit, and you'd plan Rescue Force training and operations along military lines. You'd need to pop to other countries to recruit, oversee projects, etc.'

'Less booze, and more shined shoes,' I playfully warned.

'That's no joke,' Jimmy pointed out, but Mac was not put off.

'What about the Rifles?' Mac asked.

'You'd plan their training and deployment as now, but in general terms, leave the detail to their officers.'

Mac scratched his stubble.

'And you'd need to fucking shave,' I suggested.

'If you don't take it, I'd have no choice but to appoint someone from outside, and they'd eventually end up *your* boss,' Jimmy pointed out.

'And we wouldn't want that,' I pointed out.

'You two fuckers play poker together?' Mac asked.

'No, not nearly enough deception involved,' Jimmy stated.

'Well, it's more of the same, but more pay,' Mac said with a sigh. 'It is a promotion, of sorts. Aye, if you think it's best I'll do it.'

'It is,' Jimmy suggested. 'Get yourself a white uniform, and start thinking like a general. Your title is Director of Rescue Force Kenya. With a sub-title of Base Supervisor.'

'I thought sub-titles should be in a foreign language?' I queried.

'Mac can't speak any other languages, so I simplified it.'

Mac stood. 'I'd best tell the lads, they'll be gutted.'

‘Or glad to see the back of you!’ I said.

Han rejoined us. ‘May I ask, at what point would Chinese rescuers be needed here?’

‘Not for many years, it would cause more questions than is prudent. But in years to come China will need ore from Africa, and so will be heavily involved here. And I will assist in that process, since I’m already well known here.’

Han bowed a “thank you”.

The next day we set off for Mombassa, a long hot drive, stopping at the orphanage on the way. Mary was still hanging in there, now in a Mombassa hospital where she could be cared for properly, her life expectancy measured in months. Anna led us up to the roof, Han keenly taking pictures, even though this was not related to Rescue Force.

Jimmy explained to Han, ‘When I arrived here this was an AIDS orphanage, sixty children dying. Now six hundred, and no one is dying.’

Han stood taking in the vast spread of buildings and the neat rows of regimented children in blue uniforms. ‘The blood?’

‘Yes, the blood,’ Jimmy confirmed. ‘I injected Anna, she injects the children.’

Han studied Anna carefully, the good doctor confused and concerned. To Jimmy he asked, ‘May we send doctors here ... to study?’

‘Yes, of course you can,’ Jimmy replied. ‘Anna, Mister Han is from the Chinese Government, and they are very private people, good with security.’ She lightened a little. ‘In the future they will be of great benefit to us, and to Africa.’

‘There were twenty new children yesterday, all dying,’ Anna informed us in her accented voice, an invitation in her tone.

Jimmy gestured her below and we entered the ward. She was not wrong about the kids, they were in a terrible state, still wearing the rags they must have come in with. Two local nurses were dismissed, Anna fetching needles. Jimmy gave blood as Han carefully observed, Anna injecting the children in turn, the big guy reassuring them in a local dialect.

Through the courtyard we walked slowly toward the new blocks, each teacher stopping their group and indicating who we were, a strange chant of thanks given, Jimmy shouting back a few words and waving. Beyond ten sets of parallel blocks, all

identical, we poked our heads into classrooms, the kids standing and issuing a loud and harmonious greeting. In one classroom, made up of older boys, Jimmy took over the lesson for a few minutes, part English, part local dialect, Han keenly observing. At the end of the brief interlude, Jimmy introduced Han, asking the boys to locate China on a globe. For the first time I saw Han's cheeks crease into a wide, but brief smile.

Cosy caught up with us at a jog and keenly showed us the farm, neat rows of vegetables being grown, some older boys and girls tending them. A farm classroom was now occupied and we listened in, a lesson on irrigation. And for the first time I felt oddly proud of myself for my part in all this, proud of the progress that was being made, the hope for the future that the kids now possessed.

In late afternoon sun we ambled back, more harmonious shouts of greetings offered, waves given back. We thanked Anna, big hugs exchanged, and made ready to leave, but Jimmy stopped and spun around, a curious frown as he again approached Anna. With Cosy stood close by, Jimmy placed a hand on Anna's abdomen, a glance at Cosy as joined us. Cosy stood staring at Anna as she smiled back at him. In the jeep Cosy sat and stared, a question for Jimmy.

As we pulled off, Jimmy said, 'A girl. Call her Mary.'

'Congratulations,' I quietly offered.

Rudd questioned that statement, Cosy saying, 'I think Anna is pregnant.'

'She's a doctor,' Rudd said, noting the caution in Cosy's voice. 'She'll be fine.'

'You'll have to book some time off,' I told Cosy. The father-to-be made no comment as we drove down to River View.

We booked-in, Han taking a good look around before joining us at the beach bar. The elephants caused him to stop and do the tourist bit, snaps taken. The next day was a chill-out day, diving trips organised, Han wandering around the golf complex and reading Po's advertising material.

Over drinks at the beach bar, around 4pm, Han noted, 'You have made a lot of money for yourself.'

Jimmy did not take his gaze off the ocean. 'The golf complex is a meeting point for African leaders, and men of importance. If you wish to influence Africa, you must influence those men.'

Without influence, you cannot change the course of Africa. And in answer to your question, yet to be asked, I give away eighty-percent of all I earn.'

Rudd did not know that. 'Eighty percent? Wow.'

Han considered Jimmy's words. 'African leaders, they like to talk business at a golf club?'

'Yes,' Jimmy answered.

Rudd put in, 'It's where all the business is done.'

Han appeared as if he had just learnt a valuable lesson, nodding his head gently as he thought about it. Obviously, golf hadn't reached the communist party hierarchy yet. As we sat there, the staff brought out a tiny lion cub, housed at the nearby zoo, and Jimmy handed it to Han, followed by a bottle. A little unsure of himself, Han fumbled to feed the cub, soon a loud munching and sucking noise created. And another smile came from our Chinese stiff.

Jimmy turned his head toward the path that lead down to the beach, Po's relatives now wandering down; mum, dad and two young girls. He called to them in Chinese, beckoning them over. I quickly moved chairs around, not disturbing Han, the two girls rushing to the cub then halting dead, awaiting permission. Han spoke softly, almost a whisper, addressing the girls in Chinese as they stroked the cub. The parents sat, warm greetings for Jimmy offered. In a whisper, Jimmy explained who Han was, shocking the couple, the daughters now chatting away and Han responding. It looked like the parents wanted the kids pulled back, but Jimmy reassured them, settling them and organising drinks.

Jimmy faced me, away from the rest. 'Timing ... is everything,' he whispered.

I glanced at the scene, the kids and Han, the lion cub, the staff bringing it over, and tried to piece together what he was up to. Nothing came to mind. I reached across and lifted Han's camera, wound it on and took several snaps, getting the girls in. In that instance I was tempted to snap a man sat with a woman at the end of the beach bar. For some reason he registered with me as being a little suspicious, but Jimmy had a clear view of the man and must have clocked him, so I ignored my feelings.

Jimmy asked the girls, in Chinese, what they wanted to be when they grew up. One said a doctor, the other a scientist.

Jimmy commented to Han, 'Scientists are very useful, since inventions can change the world.'

Han regarded Jimmy carefully, then the girls. In Chinese, Han asked the parents if the girls could hold the cub. They readily and nervously agreed, Han instructing the girls; one to hold, one to feed the cub. He lifted his camera and took several snaps, offering to send them on via Po in Hong Kong. Jimmy beckoned the father over, seats rearranged so that the girl's father now sat between himself and Han. A sedate three-way chat began.

With the family and Han off to clean up for evening meal, Rudd and Cosy off inspecting things, I asked Jimmy what he was up to.

'Convolutd,' Jimmy responded. 'We'll get the Chinese Government on board, Po involved, some money made, Chinese Rescue Force started. Han will bond with that family and Po, improving relations. Han ... lost a daughter, then a wife – it's just him in his flat, which is why they chose him for this.'

'So Han gets a ready made family and relaxes a bit,' I realised.

'And the daughter who wants to be a scientist makes a major breakthrough later on. He now suspects that, so the Chinese Government will give her a research grant, and I'll give her the idea, making it look like it was her idea all along.'

'What does she invent?'

'An electric car ... that gets its energy from the road surface.'

'How the fuck could you do that?' I puzzled.

'Wait and see.'

'And Cosy?' I asked.

'They'll have two girls and they'll stay together. Oh, there's a *very* ... tasty singer in the bar. You know her – Katie Joe?'

I was on my feet. 'She ... is here? She, fucking wonderfully beautiful ... she with the body?'

'Yep.'

I hesitated. 'Should I ... you know?'

Jimmy laughed. 'The frontal assault would put her off.' He stood. 'Let's go play managerial types. Don't stare into her eyes – or down her cleavage. It will take two days, take her to the orphanage tomorrow, don't seem too keen. On the beach tomorrow strip off, do the lion cubs and kids, ignore her. Take a kid for a trial dive.'

‘First time you gave me instructions like that I almost wrote them down.’

‘A word of warning,’ Jimmy said as we walked towards the restaurant. ‘If you do get together with her they’ll be tabloids in the bushes.’

‘Well ... what do you reckon?’

‘I reckon ... it’s your call.’

‘If I can fly into Somalia, I can do this,’ I confidently suggested, suddenly feeling less confident.

Playing at being the managerial types, we both pressed the flesh with the guests and I practised a few languages. I ordered a table moved – very managerial like, and chatted to the kids present, finally clocking her hidden behind a baseball cap, her hair up, no make-up on. At her table I greeted an older woman, asked if all was OK, smiling and nodding at Katie. As I was about to walk off she called my name, taking off the baseball cap.

I gave it a second. ‘Christ, Katie. Sorry, didn’t recognise you. How’s the record doing?’

‘Don’t you keep track of them?’

‘No, just monthly meetings, sorry. Abroad a lot.’ I sat. ‘Anything you ladies need?’

‘Mum wants to meet Jimmy,’ she toyed, grinning, and getting a slap on the hand from her mum.

I called over Jimmy, who said hello and sat. ‘Katie’s mum wanted to say hello.’

‘You don’t look old enough to be a mother,’ Jimmy began. ‘And I happen to know that “Joe” is short for Joslavich, yes?’ He exchanged a few sentences in Slovak with mum.

Han approached us. In my best Chinese I asked if all was OK. He nodded and responded, and I understood his sentence. In Chinese, Han asked if the family could join us, Jimmy uttering *of course*, Han withdrawing.

‘Sorry about that,’ Jimmy offered. ‘Working trip.’

With Jimmy chatting to mum I made my excuses, being cool, and went off to shower and change. Later that evening we ate with Po’s family, Katie still at her table, still hiding behind the baseball cap. I made a fuss of the kids in full view, even bouncing them on my knee. At one point I said hello to the Pineapple staff, the couple not noticing Katie till I pointed her

out. When I sat back down they said hello to the object of my desires, already having met her before. Han seemed far more relaxed, chatting away to Po's family, part in Chinese, part in English. He even encouraged the children to practise their English. It was all happy families, Katie just visible from the corner of my eye.

When Katie and her mum got up to leave they stopped, Katie heading over. 'Could I have a moment?'

'Sure,' I said, easing up and gesturing her outside. Mum headed back to their hut.

'There's some contractual stuff I'm not happy about, I was wondering if we can chat about it.'

I was prepared and ready. 'Katie, this is not the time and place, nor am I going to undermine the authority of Oliver Standish or anyone else at Pineapple, certainly not till I have all the facts and full briefing. If you want a drink, a chat about something other than work, a ride on the fucking elephant or a midnight swim I'm happy to oblige, because I hope to get some relaxation in. If you want to talk business, meet me back in London.' I gave her a card. 'I have guests, so you'll excuse me.' As I walked off I thought *midnight swim*? Where the fuck did that come from? Jimmy studied me as I sat, a question in his look. I said, 'On target.'

Katie appeared with her mum an hour and half later, this time looking far more feminine. We were still sat at the table, most guests having moved to the bar. Jimmy had been fetching fruit as the ladies entered, probably just passing through to the bar, and he invited them to join us. They accepted, chairs brought over, Katie the other side of Jimmy to me. The big bugger was in the way, but that was probably a good tactic.

Jimmy explained to the Chinese that Katie was a very famous singer in England, Katie probably relieved that the Chinese on the table had no idea who she was. We got onto the story of the mad helicopter dash, Jimmy relaying it, Po's family both amazed, and very concerned for us. Han told Katie and her mum, Jean, that he was an official of the Chinese Government, visiting to see how we run our refugee camps.

'Refugee camps?' Jean puzzled.

Jimmy explained about the camp that we had set up on the border, some about Rescue Force. I didn't know about Katie, but

mum now seemed very keen on us. Po's family eventually made their excuses, wanting to get the kids to bed early, and I insisted on a kiss on the cheek from both girls. Han retired, a moderate drinker, leaving just the four of us, the room now empty except for us, a sea of plain white tablecloths.

Jimmy asked Katie, 'Would you do a number for the guests?'

'Sing?' she queried.

'There's a microphone next door,' Jimmy explained. I knew there wasn't. She hesitated. Jimmy continued, 'Look at this way. You make the guests happy, they come back and spend more money, that money goes to the orphanage.' It was below the belt, Jean nagging her daughter on. She relented and we stepped next door to the bar, two-dozen people sat around, mostly couples. And there in the corner sat a brand new karaoke machine.

She switched it on. 'Hope you can hear me. I normally only sing in the shower, so you have been warned. But I do a good impersonation of that ... Katie something.' She pushed a button and started a slow number, everyone in the room recognising it, then slowly registering just who she was. Faces lit up, hands were held, loving looks exchanged. She performed four numbers, then a track that had not been released yet – no background music and an exclusive, cameras now snapping. And I was hooked. As she finished her last number I turned to find Jimmy with a larger lion cub, resting on his forearm and sniffing the guests. Katie got a round of applause, thanking everyone, signing a few autographs, and allowing herself to be photographed with couples.

When she approached I said, 'Thanks for that, adds a ... quality to the place. Drink?'

'Though you promised me a midnight swim?'

I smiled widely. 'Ah, yes, sorry about that. It just kind of popped into my head.'

'Come on then, promises are for keeping.'

Nervous now, I followed her out, Jimmy noticing and grinning as he introduced the cub to guests. At the water's edge she stripped to bra and panties in the dark, I stripped to my shorts, and we plunged into the black water.

After two strokes she issued a scream. 'There's something in the water. Something hard.'

I figured it was the damn turtle and got between her and it, lifting the damn heavy thing up. 'Leave us alone,' I told it as she laughed. Fat chance of that. I turned my back on it and lifted her up, holding her as if we were crossing the threshold after marriage. She clasped her fingers around my neck. I got the odd nudge from the turtle as we chatted, finally seeing it going ashore. 'OK, it's on the sand now. It comes ashore at night and breaks into huts. Very ... slowly.'

'My hero. Could have been a shark.'

'No, the friendly shark hangs around at the breakwater.'

'What?'

'Ever been scuba diving?'

'Tried it once.'

'Tomorrow,' I said. 'I'll take you out if you like.'

'We're driving up to your safari park.'

'I'll fly you up in the afternoon,' I insisted. 'Driving is a pain.'

'I've heard about your flying,' she gently chided.

'I only fly like that when my friends are in trouble,' I stated in serious tones.

'You're quite the James Bond; money, action –'

'Beautiful girls in the casino.'

'They say you like one girl at a time, for around a year or so.'

'You been checking up on me?' I teased.

'It was in Pineapple Music magazine.'

'What?' I asked, Katie laughing. 'Tease.' I tickled her, causing her to run ashore, flicking me with water.

She put her trousers back on. 'Is that roof bar still open?' she asked, pointing towards the second beach hotel.

'It is for me.'

I put my clothes on wet, sand everywhere, pinching a golf buggy and heading through the trees at a racy six miles per hour. I shouted a local greeting to the guard at the gate, the gate permanently open, and pulled up at the block's reception. Walking in I waved at the receptionist, getting back an 'evening sir.' The bar was still open, two sets of couples which I greeted and welcomed, practising my German on one older couple. As Katie leant on the wall, looking out over the black ocean in a cool breeze, I fetched two beers.

'Nice to get away from London for a while,' she quietly stated as I neared, not looking around. She lifted her gaze to the stars.

I placed down her beer and she took a sip, hugging it like a mug of hot chocolate. 'Does the pressure get to you?' I softly asked.

'Your guy at Pineapple was a great help at the beginning. That first briefing – I thought he was joking. Get a paper shredder, nothing in the bin, keep the curtains closed all the time, change your phone number.'

'Price you pay for the money.'

'Yeah, well it's affected mum a bit. She's happy for me...'

I took in the view towards the smaller hotel, the string of lights, and remembered something Jimmy had said. 'Katie, you have a wonderful opportunity ... to live the life and make a lot of money. And with that money come choices, choices that the people buying your records don't have. You could probably retire now on what you have.'

'Hardly,' she scoffed.

'Most people in the UK get by on fifteen grand a year. How many years could you keep going on what you've made?' She remained silent. 'And down here, fifteen grand would keep you going for ten years.'

She turned and faced me. 'Why do you two give so much to charity?'

I shrugged and made a face. 'What's the point in making money just for the sake of it? Stack it up in the bank and say *hey, my pile's bigger than your pile*. That's for people who like to measure their cocks.' She slowly lifted a teasing eyebrow. Hiding a smile I said, 'We like to do things with our money. That way, if the plane crashes on the way home, we'll have achieved something.'

Placing down her glass on a table she said, 'Drive me back, kind sir, it's chilly.'

I drove her back at six miles per hour, the wind in our damp hair. Pulling up at her hut, her mum opened the door. A peck on the cheek was my reward for being a kind sir. '8am at the dive centre I told her,' flooring it - and screeching off slowly and quietly.

At 5am I headed down for a snorkel in grey half-light, feeding the damn turtle, then seeing how long I could stay down. My watch said four minutes. Ashore, Jimmy was sat with a self-

service coffee at the dive centre café. 'I can hold my breath for four minutes?' I said as I ran up, my feet covered in sand.

'Maybe a bit more with practise; trick is to get the CO₂ out of your lungs, to keep forcing it out.'

After drying off in the chill dawn wind, we raided the kitchens for stale sandwiches and made ourselves scrambled eggs, the first staff arriving at 6am. At 7.30am we returned to the dive centre, a sleepy Steffan opening up.

'Don't you two know how to have a relaxing lie in?' he grumbled.

With little else to do, we made ready the kit for both us - and the day's guests - as Steffan sat watching, feet up and cradling a coffee mug.

'You want a job?' he asked.

Lotti turned up at 8am, and looking less than fresh, soon followed by a fresher looking Katie, her mum in tow.

'We just had some biscuits from yesterday,' Jean said. 'Have a late breakfast after.'

Jimmy made them both a coffee, sitting with Jean as I showed Katie the equipment, going through signals and procedures. She slipped a wetsuit on over her bikini and I carried her tank to the water's edge, the ocean dead calm this morning and very inviting.

She put a hand over her eyes and scanned the horizon. 'Beautiful. It's so calm today.'

I led her out to waist depth, the turtle closing in and circling as I helped her get her tank on. Air pressures were tested, several loud gushes disturbing the tranquil scene. With the water to our necks we placed in our mouthpieces and let air out of our buoyancy jackets, slipping below the surface and to the quiet underwater world. Kneeling, we watched the turtle circle for a few minutes before lowering into the press-up position, examining hermit crabs. Gripping the neck of her tank, I helped her out to the edge of the rocks, still only three metres of crystal clear water. We both pointed at a Moray Eel, observing small fish darting about till I noticed the dark grey shadow of our resident shark; it was attracted by the sound of our bubbles. From a pouch in my jacket I pulled out a plastic bag, fetching out a dead fish. Tucking the plastic away I held out the tempting fish. The shark darted past, eyeing us carefully. It made four passes,

getting closer each time, finally snatching at the fish and swimming off with a blur of speed. It would not be back for a while.

Again in the press-up position, we crawled slowly back towards shore, examining tiny creatures fixed to small rocks and shells. Jimmy and Steffan passed us, swimming quickly out towards the breakwater. In water shallow enough to feel the gentle waves above us we examined again hermit grabs and tiny jellyfish, brightly coloured shells and worms. Lifting to my knees I eased off my flippers, helping Katie take off hers. We stood up in water to our waist, regulators spat out.

‘Cold?’ I asked.

‘A little chilly, but I’m OK.’

I cleared matted hair from her eyes. ‘Now that’s a photo the tabloids would love.’

We trudged up the soft sand, Han stood observing us on the beach. He smiled and waved.

‘You want a go?’ I asked him. He glanced at the calm water, taking his time to think about it. ‘Come on,’ I encouraged, Han falling into step with us. At the dive centre Katie got into the warm showers, Han stood with hands clasped behind his back examining the equipment.

‘I saw your bubbles,’ Jean said.

‘You having a go?’

‘You wouldn’t get me with my head under the water,’ she scoffed.

‘I could teach you how to go down on an old wreck,’ I offered, getting a slapped wrist.

Katie appeared in damp jeans and sweatshirt. ‘I’ll shower properly in the chalet, catch you after breakfast.’ She led her mum away.

Han took a little persuading, but finally relented. I found a wetsuit his size and squeezed him in, carrying his tank to the beach. He breathed through the regulator a few times above water, then knelt down, getting used to this strange new world. I adjusted his equipment and his buoyancy, leading him off into the bay. Twenty minutes later we surfaced, Han smiling widely; it was ‘vely’ good. I got him warmed up in the showers, a hot coffee downed, and now I could not shut him up. He took a poster down with Lotti’s permission, a chart of the local fish and

their names, English and Latin, pointing at those we had glimpsed - and what they were called.

Shrill calls preceded Po's nieces bursting upon the scene, rushing to Han's knees. Han showed them the poster and keenly described in Chinese the fish he had seen, the parents looking on proudly as they approached. The Chinese wandered off as a group, chatting away. At noon we were all packed, a convoy of jeeps waiting, Rudd and Cosy driving us to the airfield. We paused briefly at the orphanage, a view from the road as we headed to the local airfield. I noticed our Dash-7 as we pulled in. Stepping down from the jeeps, Tubby walked around to us.

'I've cleaned the windscreen for you, sir. You taking her up, sir, or you want me to ferry you and your guests?'

With a false smile I said, 'You take it, it would be rude for me to ignore my guests sat in the back.'

'Right you are, sir.' Tubby boarded the Dash and I exchanged a quick look with Jimmy; this was his work. We boarded with Han and the ladies, Po's family dragged along without too much persuasion, everyone's luggage put into the hold.

After a short one-hour flight we bumped along the grass airfield, a smooth enough landing for grass. Leaving the Dash, I gave Tubby a dollar.

'That you very kindly, sir. I'll buy something for the orphans. You want me to carry your bags?'

Cursing under my breath, I jumped into a jeep, soon to the lodge. As we walked up the path to the lodge the lumbering young lion bound over, and I remembered what Jimmy had done to impress Liz. I stepped onto the grass and dropped down to my knees, the lion jumping on me without hesitation, the two of us rolling around. With the juvenile killer lion, the one afraid of Antelope, on top of me, I called for help. Katie walked over, taking a snap, kneeling and stroking the fearsome beast. For her the lion quietened down, sniffing and licking her hand. Still on my back I noticed many faces and cameras on the rooftop bar. I eased up and brushed off, the lion grabbing my leg playfully, Po's young nieces kept away from it. Inside the cool and dark interior of the lodge I found a younger cub and handed it to Han, the girls now excited.

With the current guests greeted we all gravitated to the large rooftop bar, Jimmy and me playing the dutiful hosts again and

making everyone feel welcome. Lunch was ordered, Han nursing the cub, the girls taking turns to hold it. I then did a double take as something moved past the wall. A few seconds later a giraffe's head came over the wall, a guest offering it some salad.

I walked over to it with Jimmy. 'Where the hell did that come from?'

'Skids nudged the herd closer and closer, week by week.'

'He pinched them?'

'There's no fence, they're free to go where they please. And we nudged the lion pride further out.'

Katie and Jean joined us, taking snaps of the giraffe whilst offering the animal salad. I peered over the side, two youngsters coming in closer, more adults nearby, our young fearsome lion terrified of the very tall visitors and keeping his distance.

Jean said, 'Should we not feed them, keep them wild?'

Jimmy replied, lying, 'We try and move them off, without any luck. Besides, animals like these die from disease or predator every day. Nature ... is not so wonderful.' He pointed towards Skids farm. 'Over there is our sanctuary, rescued animals, most of whom go back into the wild.'

Our party remained on the roof till the sun fell behind distant clouds, the bar offering many different views from many different angles, many guests simply sat staring into the distance for hours, some with binoculars that we provided. A call caught everyone's attention, people rushing to the eastern wall, fingers pointed. A bloody great crocodile lay on the bank of the river below, not normally glimpsed here. Cameras snapped away, binoculars were passed around, Han providing a chair for the girls to stand on.

'No midnight swimming,' I whispered into Katie's ear.

At sundown the staff organised a barbeque, a Maasi troupe walking over, soon a show of dancing and jumping, some spear throwing - a few of the guests having a go, followed by a Maasi sing along. Our daft lion seemed fascinated by it all and sat watching, now on a leash, getting many bits of meat tossed to him. With a full complement of guests in attendance the place bustled, thirty-six guests, plus six from the smaller lodge. When the Maasi headed off, a bus waiting for them out of sight of guests, everyone gravitated again to the roof.

I finally got Katie alone in my room around midnight. The mini-bar got raided and we sat talking for hours, eventually cuddling up fully clothed. She fell asleep quickly, leaving me staring at the ceiling fan for many hours before nodding off. At 5am I found her lying on her side, so I snuck out quietly, finding Jimmy playing with the lion, the armed night guards still on duty and stood nearby.

‘Well?’ he asked.

‘Snuggled up clothed.’ I shrugged, self-service tea fetched, a sandwich in plastic.

‘You’ll get there.’

As I sat I said, ‘Did you clock that guy at the beach bar? He’s here, sounds American.’

‘And?’

‘Anyone of *interest*?’

Jimmy took a moment. ‘No.’

I left it at that, returning to Katie around 7am and snuggling up. She stirred, stretching out. ‘Mum will be fussing now.’

‘Dirty stop out,’ I whispered, getting a gentle elbow.

‘Tabloids will link you to me, guests will talk,’ she said, her voice a little horse.

‘I have bigger concerns, love.’

‘Like...?’

‘Like a refugee crisis.’

She turned over. Finally, she said, ‘Odd, when you think of it like that. I stress over the latest picture of my arse, you stress over saving lives.’

‘It’s a size six arse.’

‘No, eight. You’re crap with girl’s clothes,’ she playfully scolded.

I laughed. ‘Want a cup of tea?’

‘Oh, yes please.’

I fetched a mug of tea from the kitchens, kicking the damn lion away to stop it tripping me. As I turned the key on the room I noticed again the man from the beach bar, having a lonely cigarette down towards the river. I hoped he did not like early morning swims. Katie sat up cross-legged and accepted the tea.

‘So, where do we go from here?’ she softly asked.

‘Safari at 9am.’ She gave me a look. I asked, ‘Where do you want to go from here?’

‘I thought you were more of the *take charge* type.’

‘Not when it comes to women; I tried that ... and lost one.’

‘Lost ... how?’

I sat against the headboard. ‘I wanted her to give up her job, live off my money, travel the world in style.’

‘Silly girl. Might be nice to be a kept woman.’

‘And your last boyfriend?’ I delicately pressed.

‘Don’t you read the tabloids?’

‘Not really.’ I waited.

‘He ... had a decent job, but worked a lot of hours, couldn’t come with me on trips and tours.’

‘Oh, dear,’ I theatrically let out, getting a quick look. ‘Where as I... can go where I want, want I want.’

‘You applying for the job?’

‘What’s the boss like to work for?’ I teased.

‘Moody, miserable sometimes, still trying to figure out what she wants.’

‘I’d want you to do a charity concert down here,’ I lightly suggested.

‘I want to see you shower,’ she said. I blinked. ‘Go on, strip off and shower while I watch.’

‘Yes, boss. But it’s time and a half.’

Now as lovers, now as a couple, we joined the 9am safari with our Chinese gang, three jeeps and a few other guests, including lone smoker and his wife. In the humid heat we bumped along to the river bend, a view of the old crocodile, then onward to elephant country, a large herd shadowed for an hour. A picnic lunch was laid out on trestle tables, Trev riding shotgun with his M16 slung as guests stood about nibbling snacks.

For some reason I found myself watching lone smoker as he stepped away from the group, a cigarette enjoyed at length as he took in the countryside, the man always tipping his head back when he exhaled. I saw the flash of movement, the reaction, and registered it a second later. ‘Snake bite!’

Rushing for the man I found Jimmy there first, kicking away the cobra. We grabbed the man and helped him back, his leg unable to prop up his weight. Trev had the first aid kit out in a flash, Jimmy tearing the man’s trouser leg and revealing the bite. We were an hour from anywhere, I realised. Jimmy grabbed a vial, then a needle, and extracted the pale liquid. It looked like an

official vial, as I was familiar with, but Jimmy injected the man above and below the wound, a glance at me from under his eyebrows, a final shot into the man's arm as his face contorted in agony. The man's wife was concerned, but not hysterical by any means.

Jimmy jumped into a jeep, started the engine and revved it, knocking the radio on. 'This is River View safari park to any Rescue Force mobile. Man down, snake bite, anyone able to respond, over.'

'River View, this is Romeo Foxtrot One,' crackled back, surprising me. I might have guessed a jeep somewhere on the land, and an outside chance of that.

'Romeo Foxtrot One, this is Silo, man down, extraction required. What's your location?'

'Jimmy, we're ten miles north of the lodge, passing the Maasi village, over.'

'We're ten miles west of the lodge, the usual picnic site.'

'Roger that. Inbound. Out.'

Jimmy knocked off the engine. 'Help's on its way,' he told the injured man's wife.

Little more than five minutes later we could hear the distinctive resonating drone of a Huey. As I watched, a Huey painted white, not green, approached at speed. It climbed steeply and I saw the large red cross on the side; the Rescue Force logo. It slowed as it climbed, its tail flipped around and a slide back down towards us. Ratchet! It was on the ground inside of thirty seconds, Doc Graham and Hildy bursting out. They grabbed lone smoker and carried him back to the Huey, easing him inside with his wife, quick instructions from Jimmy shouted. The door closed and they powered away, dried grass filling our field of view. It was soon all quiet again, the gang shocked.

'Ladies and gentlemen,' Jimmy called. 'Snake bites are rare, that is our first casualty, other than a member of staff – and *they* enjoy it. So please *do not* let it spoil your stay.' He repeated the reassurances in Chinese, encouraging people to finish the picnic. People grabbed food and drink, but sat back in the jeeps, wary now of the grass beneath their feet.

The tour continued on schedule and without further incident, people more interested in tales of Rescue Force than cute animals. We arrived back to a pile of paperwork for the

insurance company and lawyers, just in case. The manager phoned the hospital in Nairobi and they reported that lone smoker, in the register as Cramer Keely, was doing well.

High drama

Ratchet set a course for Nairobi, not the nearest hospital that could treat a snake bite, a minor debate as to where to set down. He had fuel for Nairobi hospital, just, arguing that if the guy was stable they should fly to Nairobi, because whatever small hospital they landed at would send him there anyway for further tests. With Keely stable and coherent, Doc Graham relented and agreed on Nairobi, less hassle for the patient overall.

They flew on, a forty minute flight, Keely monitored by Doc Graham and Hildy, his wife reassured. As they neared Nairobi they contacted the airport's tower, informing the tower of their flight path and altitude, requesting that the hospital to be notified, staff standing by. It was all straight forward enough. They landed on a patch of grass, powering down quickly, but with the fuel warning light now on. That warning gave them twenty miles at least. Keely was put on a trolley and wheeled away with Doc Graham, Mrs Keely in tow, as Ratchet went and phoned Rudd. And there began on opportunity.

Rudd called the press and talked up the dramatic rescue, the helicopter rushing the man to hospital just in time, out of fuel on landing. Money may have changed hands. A fuel truck was organised for the next morning, the Huey snapped at length as it sat on the grass, our team milling around in their white uniforms. Rudd offered the chief resident a donation to the hospital for a proper heli-pad, a cool twenty grand. There were soon pictures of the chief physician thanking our team in the local papers. Once the Huey was re-fuelled, it took off whilst being filmed by several local TV stations, making the evening news. And the hospital, they cut down a tree and painted a large "H" onto parched brown grass, a less than effective use of the money.

The next evening, Keely and spouse returned, flown out by Cosy. Jimmy met them downstairs, welcoming him back in front of quite a small audience.

‘On behalf of the company, we offer our deepest apologies, and will be refunding the cost of your holiday, flying you back to the States first class whenever you’re ready.’

Keely was on the spot. ‘That ... won’t be necessary, thanks.’

‘How’s the leg?’

‘They say ... that I did not get a full dose of venom. I was lucky.’

‘Can I get you a drink. I think the bar does Snakebite.’

People laughed, Keely on the spot again.

‘Thanks, but I’d like to just rest.’

‘Of course, anything you need you just let the staff know.’

Keely limped away with his wife. Jimmy found me, Katie and her mum upstairs, sunbathing on loungers.

‘Snake bite man is back, good as new,’ he announced as he sat down.

‘He alright?’ Jean asked without lifting her head.

‘Yeah, fine now.’

‘Lucky our chopper was near by,’ I mentioned, a quick glance at Jimmy.

‘This *is* their main training ground, because it’s our land,’ Jimmy pointed out to me, and those in earshot.

I went back to my sunbathing, holding hands with Katie. Later that night, around 1am, I snuck out for a few beers while Katie was asleep. Jimmy was sat in the bar, the dog asleep at his feet, a night guard patrolling outside.

‘All quiet?’ I asked as I pulled myself a pint.

‘Yeah,’ Jimmy let out, the dog raising its nose for a second as I sat. We chatted for ten minutes, before a shadow in the lodge stepped into the light. Keely.

‘Trouble sleeping?’ Jimmy asked our new companion.

‘Mind if I ... join you?’ Keely asked, sounding as if he wanted to do anything other than that.

‘No, please do,’ Jimmy offered. ‘Drink?’

‘No. Thanks.’ Keely stared across at us in the dim light. ‘You moved quickly yesterday. Probably saved my life.’

‘It did ... save your life.’ Jimmy emphasised. ‘Otherwise, people might think I had something to do with your death, Mister Bob Donnelly.’

‘Ah,’ I let out loud, tipping my head back.

‘You’re a great actor, I’ll give you that. So why the charade?’

‘What charade?’ Jimmy questioned. ‘I was behaving as I would to any guest, and for all I knew you just wanted a break down here. Would have been rude of me to break your cover, you might have been spying on someone.’

Keely stared back. ‘You know what my remit is?’

‘To find out what all this Magestic nonsense is all about. And before you ask, yes, Magestic made sure we had serum and a helicopter stood by for you.’

Keely stared back for several seconds. ‘I’ve had nothing but... malice towards that invisible guy since the start. Why save me?’

‘Magestic does not judge others by their own poor standards,’ Jimmy pointed out in a sombre tone.

Keely finally asked, ‘In high school I burnt my hand. How?’

Jimmy lifted his gaze to the stars. ‘You tried to set fire to your ex-girlfriend’s house, immediately regretting it and putting out the fire before anyone noticed.’

‘You little fire bug,’ I said. ‘Tut tut.’

‘That Somali rescue ... you knew you’d come back?’

‘There is always random chance, it’s not that clearly defined. I could trip in the shower and be killed. *We are not* immortal.’

I faced Jimmy. ‘Are you going to introduce me?’

‘Paul, this gentlemen works for the NSA. The President’s new National Security Advisor tasked him with checking out Magestic. Well, debunking him actually.’

‘There’s no pleasing some people,’ I said with a sigh.

‘But he *will* be very positive towards us in future.’

‘I will?’ Keely challenged.

‘You haven’t asked yet *what* I injected you with,’ Jimmy coldly stated.

‘Is your pee ... a bit dark and smelly?’ I delicately enquired.

Keely sat upright. ‘What did you inject me with? It had to be anti-venom to save me.’

‘I injected you with the same stuff that we were injected with many years ago. Paul here can run a marathon in under two hours.’

I said, pointing at Jimmy, ‘And he’s *much* faster.’

Keely waited, a look of horror on his face.

Jimmy explained, ‘It’s a drug that Magestic had designed in a lab, with his knowledge of future medicine. You, Mister Keely-Donnelly, will live to be very old, very fit ... and immune to all diseases known to man; cancer, AIDS, the works. You’ll be running marathons on your hundredth birthday. Just the one small problem.’

‘Indeed,’ I let out.

‘What ... what problem?’ Keely asked.

‘Well, Uncle Sam – having heard about the miracle drug in your system – might want to lock you away in a lab and experiment on you, extracting blood when necessary, some tissue samples, you know. Since you have a cure for cancer in your blood, they’d be keen to copy it, and to sell it.’

‘Make a buck,’ I said. ‘As well as not letting you *yourself* ... make a buck from it.’

We sat back and let him think on the implications.

Jimmy finally said, ‘All I need to do, is tell them to run a blood test. And all you need to do, to be sure that I am telling the truth, is wait a few days before getting on a treadmill.’

‘You hope to blackmail me?’ Keely asked in an angered whisper.

‘You’ve been a sceptic up to now, Bob. Now you’re living proof, which you’ll come to see. The best proof, is one that you can feel when you wake in the mornings. Oh, and the AIDS orphanage – it has a serious lack of...’

‘Kids with AIDS,’ I finished off.

‘If there’s a cure for these diseases, why keep it hidden?’ Keely demanded.

‘A minute ago you were doubting Magestic existed,’ I pointed out. ‘Now you want to know why a fictional character is not helping the world. Make your mind up, Bob.’

Keely eased back.

Jimmy said, ‘The answer that you are searching for ... is this. In a few years we’ll make it appear that a research lab found a cure with some success, then more success. An overnight cure

would cause questions, followed by exposure, followed by civil unrest.'

'Pointer believes that Magestic is an astronaut,' Keely stated.

'What do you believe?' Jimmy asked him.

'A clairvoyant; no way in hell an astronaut time traveller could know everything he does, certainly not my high school pranks. Or that helicopter yesterday. Too much random chance, as you said. How the hell would a time traveller know when I got bit by a snake, date and time and place.' It was a question I wanted to know as well, but would never ask.

'Historical records,' I suggested.

'I rolled a dice to decide when I'd be here, another dice on my choice of safari. I'm a hell of a sceptic.'

'So what will you do now, Bob?' Jimmy posed.

Keely glanced at the dark savannah. 'Certainly get on a treadmill, that's for sure.'

'And then?' Jimmy nudged.

'Then ...' He took a breath. 'Then ... if you're not lying, I'm in for a routine drugs test in a few weeks. Anything odd showing up would be investigated further. I'd ... be screwed.'

'I am not as heartless as you may think,' Jimmy suggested. 'There is a way out.'

Keely stared back. 'Which is?'

'I told you, there's an orphanage full of kids who've been injected. And I'll be happy to co-operate with your government, sceptics or not. I'd like to meet with your boss, ideally the Joint Chiefs, but without the President present.'

'Without him?'

'Yes, without him. President's come and go, the security of America remains constant. And politicians tend to do what's best for short-term popularity, not what's best for the long term.'

'You sound like me after a beer,' Keely admitted.

'Then maybe ... we are not so different.' Jimmy took a moment, a sip of his beer. 'In 2013 a future Republican President will invade Venezuela for its oil. You'll lose people in the jungle every day for five years, twenty thousand in total, and every country in South America will turn against you.'

'Be a fucking disaster to try and grab their oil,' Keely admitted.

‘But it will happen. On the other hand, I could show you where to drill in the gulf, a deposit bigger than anything found so far.’ He let Keely think on it. ‘In 2015, another Republican President will attack China –’

‘China?’

‘The aim being not to pay them what you owe them after OPEC stops using the dollar as reserve currency. Twenty million Americans will die, your economy screwed. And in 2025 the planet is struck by a natural disaster that wipes out just about everyone. Now, you can sit there and doubt, or you can make some plans – just in case. Oh, and your son in the Marines, he was due to be killed in a war, a war that *did not* happen in 2000.’

‘Iraq,’ Keely coldly stated.

‘Yes. And ... you’re welcome.’

‘Did you kill Tasker?’

‘No, I was planning on using him. I prefer to ... persuade, than to harm.’

‘We taped a conversation about the gold, Tasker and his buddy.’

‘I know.’

‘And Potomo?’

‘What you must keep in mind, is that the Israeli and British Governments get a great deal of assistance from me. They don’t like people threatening me, or trying to bribe me.’

Keely gave that some careful thought. ‘We tracked movement in a Mossad safe house in Djibouti, just before and just after the Khartoum job. The shooters, were they British?’

‘You might think that, I could not possibly comment.’

‘The Israelis get shipwreck tip-offs?’

‘Yes. And the British.’

‘Any pay us a cut,’ I put in.

‘A cut?’ Keely puzzled. ‘You take a cut?’

‘What do think pays for the orphanage?’ I testily asked.

‘And if you gave us that gulf location...’ Keely nudged.

‘Then the orphanages of Africa would be well funded for a long time,’ I finished off.

Keely let out a breath. ‘You’re an enigma wrapped in a puzzle.’

‘With a soft chocolate centre,’ I added. ‘Oh, and the Chinese guy we’re here with, Han, he’s from the People’s Republic.’

‘My boss will love that,’ Keely wistfully stated. ‘What’s their angle?’

‘This is a round planet, Bob; water spreads out evenly. You can’t fix one part without fixing the whole - it doesn’t work. And by the way, I’ve told them already the exact date and time of your future attack on them.’

Keely shot upright. ‘You did? What the hell for?’

‘To prevent it, of course,’ I said. ‘Why else?’

‘It’s a disaster,’ Jimmy suggested. ‘One that you *will not* make.’

‘You trying to set future security policy for America?’

‘Yes,’ Jimmy firmly stated, stares exchanged. ‘Magesic will tell the Chinese and Russians of any future threats well ahead of time, pieces on the chessboard will be moved. Stalemate. Because, what I have not revealed yet, is the final battle. In that final battle you, the Russians and the Chinese will be fighting side by side.’

‘Against?’

‘You’re a sceptic, Bob, you’re not allowed to know till you’ve *seen the light*,’ Jimmy pointed out.

Keely glanced at me. ‘And the outcome?’

‘We lose.’

‘We lose?’ Keely loudly questioned. ‘Even with the advance knowledge?’

‘Yes, Bob. We can get you to 2025 well prepared, that’s all. And even getting you that far will be a miracle of biblical proportions.’ Jimmy sipped his beer. ‘Consider the Second World War. Advance knowledge would have given the Allies an edge, shortening the war, but millions would still have died. It’s the same principle. Global war is tricky, no matter how well prepared you are, Bob.’

With Keely, or Donnelly, off to bed, I asked, ‘Why don’t we bring Big Paul down here for bodyguard stuff?’

‘Slight of hand,’ Jimmy replied. ‘We ... are here, those watching us know that we are here, so Big Paul can run errands for me in the UK.’

‘Ah.’

‘And we don’t need a bodyguard when I know what the threats are, Dumbo.’

The next day Mister Donnelly, acting now as a guest, asked for transport to the airport, reports of a sick relative back home, Cosy fetching him in a Cessna at no extra charge.

I took Katie on a long drive to the edge of Schilling's land, soon to be ours bar the signing, and enjoyed a peaceful picnic on an escarpment, mixed herds munching on the grass in the valley below us. The clouds kept their distance, a cooling breeze blew up the ridge, and we chatted away in peace for hours, Trev and the driver asleep in the jeep. It was a magical few hours.

Returning to the lodge, we found Rudd arriving; Cosy had flown him back up from Nairobi. Rudd said hello, not recognising Katie, and I tried to explain what he did for us. In the bar we joined Jimmy and Katie's mum, the dear lady a little sunburnt, aching, and feeling sorry for herself. Han and Po's family were off doing the tourist bit and, hopefully, bonding.

'Schilling has signed,' Rudd informed us.

Jimmy explained to the ladies, 'We just bought the next biggest park north west of here.'

'We saw it today,' Katie put in.

Jimmy told Rudd, 'I want a lodge on that escarpment, same design as this one. Then I want a traditional style hotel where the river nears the lake, a small lodge at the rise above the river bend – you'll see it on the map, and finally another small lodge where he has a swamp, built on stilts and high up, a view out over the trees.' Rudd took notes. Last, but not least, I want another two lodges here, ten rooms each; the river bend and the rise east of the plain, edge of our land.'

'How many people could we handle then?' I asked Rudd.

'Two hundred and fifty at a time,' Rudd answered, raising his eyebrows.

'That's a lot of building work,' Jean noted. 'Will that spoil the place?'

Jimmy explained, 'My priority, is to boost Kenyan tourism revenue. Jobs first. Besides, each of these lodges will be ten or twenty miles from the next building, small dots on the map.'

'I'll use the same people,' Rudd suggested. 'Same design, different scales.'

'Is Cosy still here?' Jimmy asked.

'Yes,' Rudd replied. 'You want him?'

Jimmy gave a nod. 'Tell him when you see him I have some business in Ghana for him. We'll be buying a hotel on the beach, backed by mountains and rain forest, best of both worlds.'

'Sounds nice,' Jean enthused.

Rudd announced, 'There's now an Oxfam hut at the airbase, talk of Medicine Sans Frontier.'

Jimmy nodded towards Rudd, then turned his head to Katie. 'Any areas here ... that you think could be improved?'

'A nice pool?'

'Would be out of place,' I said. 'I don't think the Kenyans would like it, this is national park land, we have to stick to their rules. This lodge is all wood, for instance.'

'Schilling's could have a pool, there's an old pool there already,' Rudd suggested.

'Fine, fix it up,' Jimmy agreed. 'Oh, and start on fixing the roads, fast access back and forth.'

We signed the documents Rudd had brought up, the paperwork done, the money allocated. At least Schilling did not run out on his wife, they'd be retiring to the coast, a penthouse apartment with all mod cons. Guess he'd had enough of the savannah, its heat and its bugs.

Skids stepped into the bar, a ball of fur in each hand; Cheetah cubs. 'Lions got mumsy, we'll raise these in the sanctuary,' he said, handing one to Katie, the second to her mum. 'Drop them in when ready.' He withdrew.

'Will they go back to the wild?' Rudd wondered.

'Tricky,' Jimmy said. 'The mother teaches them things we can't teach them. Only hope would be a mum that's just lost her cubs. She'll either adopt them, or kill them. But if you raise them, then keep them hungry – dropping in antelope kid - they'll kill and eat it, developing the skill. Even then they got a rats chance in hell.'

A member of staff brought out two small bottles of milk and the dried hide of a dead Cheetah. He put the teet through a hole in the hide, handing it to Katie. She placed the cub onto the hide and it dug its claws in, attacking the teet as I took a picture.

'Guess it was hungry,' Katie said. I took the second bottle and pushed the teet through a second hole, Jean handing over her cub, soon two noisily sucking cubs being observed by everyone.

'You used to do that,' Jean told Katie.

‘Mum!’

We tried, and failed, not to laugh.

Jimmy told me, ‘Day after tomorrow we’ve got some work to do, two days out.’ Katie was now listening in; we’d overlap on her final day. I figured Jimmy would not drag me off unless it was important, so did not argue, certainly not in front of Katie. ‘Rudd, I’ll need you Cosy and Mac, and the Dash.’

War preparations

We boarded our Dash on the estate’s grass airstrip, overnight bags in hand, the gang already on board and waiting. The paint job on the Dash was now as per the Huey, white with red crosses and our logo, Rescue Force in large letters on the tail; you couldn’t miss it against the backdrop of green savannah.

I took right seat. ‘Spent that dollar I gave you?’

‘No, sir, I’ll be cherishing it as a souvenir of your generosity.’

‘Cheeky bastard, I pay your wages.’

‘Who’s the bit of totty?’ Tubby asked as we taxied, bumping along the hard dirt.

‘British singer, famous over there.’

Jimmy asked Rudd, ‘Got us permission for Tanzania?’ Rudd displayed a fax page. ‘Flight plan?’ Rudd nodded.

‘What’s in Tanzania?’ Mac asked, sporting a new white Rescue Force jacket.

‘The future,’ Jimmy enigmatically stated.

Tubby lined up on the end of grass strip, nose facing south, and powered up with a roar, brakes off and bumping forwards. We pulled up sharply and banked, climbing to the west, the lodge soon visible a mile away in the two o’clock position, the original lodge under our nose. And somewhere down there was the girl of my dreams, a girl who even managed to be attractive and sexy when she sneezed. I felt a twinge of the heart strings, heading off to work with her down below, but I knew what Jimmy would say - after he had slapped me about the head at length. I sighed, the ground below getting further away as we climbed.

Tubby gave me a run down of the aircraft's instrumentation and technical data, and at altitude he handed over, checking the map and having a chocolate bar. I programmed the course and altitude into the autopilot, checked the instrumentation, then let the computer handle it. A GPS display caught my eye and I checked it against the map, scraping off melted chocolate flecks. With a giant, yet beautiful cumulonimbus cloud blocking our view north, we skirted south of it, soon a view of Lake Victoria on the horizon.

Two hours later I spotted Lake Tanganyika. I checked again the GPS and the map, and adjusted the course slightly. We were heading to Kigoma airfield, but it had no tower, so a radio announcement of our arrival was unnecessary. Jimmy tapped me on the shoulder, displaying three fingers and a slow circle of his index finger: circle at three thousand. I knocked off the autopilot, eased back the throttles and let the nose drop, descending to three thousand feet and circling the small town below us, the brown suburban sprawl perched on the eastern shore of the lake. It did not look inviting. The runway was visible in the centre of the town, with what looked like a white Antonov on the apron.

I tried the radio. 'Circling aircraft to Antonov aircraft on Kigoma airfield, receiving over?'

An accented voice came back. 'Circling aircraft, this is UN Antonov. Receiving, over.'

'Antonov, what is wind direction, over?'

'Circling aircraft, land from the north, cross wind is ten miles per hour from the lake, over.'

'Antonov, thanks, be with you soon. Rescue Force Two Out.'

'Two?' Tubby challenged. 'What's One?'

'The Huey, it was first.'

'That crappy old Cessna was first, and this is much bigger and better – *it* should be One.'

'You don't even work for Rescue Force,' I pointed out.

Still arguing, I took our Dash around and lined up on the runway, Tubby correcting my glide path. Over the internal tanoy I instructed, 'Please put your seat-back tables in the upright position, extinguish cigars and belt up.' I made contact with the runway smoothly, taxiing around to the UN Antonov and a waiting fuel truck. With the engines winding down we stepped out into the heat and stretched, the fuel truck pulling up and

demanding cash. Rudd paid the man, enough fuel to get us back the next day.

A UN jeep approached a minute later, Bob Davies at the wheel and his window wound down. 'What you lot doing here?'

'Any good restaurants?' I asked, a hand over my eyes and scanning the rubbish dump that was the town.

'Not really,' Bob answered. We clambered aboard, leaving Tubby with the Dash. 'This place is more basic than Mawlini.'

After just a hundred yards we stopped at the dilapidated old tower, not looking like it had seen any action since the Second World War. Stepping through glass and weeds, we climbed to the roof, a very familiar journey for us.

I put my hands on my hips and surveyed the field. The runway looked to be in reasonable shape, a few cracks with weeds, but the edges of the airfield were strewn with litter, a few burnt out cars. I even noticed a dead donkey, kids throwing stones at it. At least they weren't flogging it. 'Nice spot.'

'We going to use this dump?' Mac asked.

'Yes, I want to be closer to Central Africa.' Jimmy tapped Cosy on the shoulder and pointed to a building in the distance. 'That's a hotel, of sorts. Buy it. Advertise for a local Mister Fixit, an ex-pat who needs the money.'

'We're going to fix this airfield?' Cosy asked.

'We sure are,' Jimmy said. 'Gentlemen, what we did in Mawlini ... we shall do here, with a little help from Bob, who is looking forward to a nice hotel here with a pool and rooftop bar.'

'You'll have to keep the locals at bay,' Bob cautioned with a grin. 'They'll steal the props off your engines when they're turning.'

'This is the order of things,' Jimmy explained. 'Cosy will get that hotel, find a local man to use, arrange security for this place. Then we tackle the fence, making it like Colditz, more security men to stop them stealing the fence itself. We'll send those self-assembly cabins by truck when the place is secure, ten will do to start with. We'll fix up this tower and get a radio installed, and I'll ask the Tanzanian Government for a detachment of soldiers – paid for by us. Then we can think about a Rescue Force detachment here, recruiting local nurses and any wandering medics. We'll build a nice hotel with a pool and roof bar, making

it all available for the UN, who are up the road in a compound – but may be tempted to move down here. Any ... questions?’

‘We’ve done it all before,’ I said.

‘How much time do you want me down here?’ Rudd asked, Mac turning his head. He was interested in that as well.

‘Some at the start, to get it going, that’s all,’ Jimmy explained. ‘Mac, they’ll be under your control from Kenya till they’re big enough - and get their own boss. Bob, anything you want here?’

‘Sheds – secure ones, bigger apron, landing lights.’

‘OK, first things first,’ Jimmy said, leading us down.

We drove out of the airfield, a lone police officer at the gate sat resting on his rifle, off to see that man’s boss. The town was a mess, worse than most small towns that I had seen in Kenya, and felt much hotter. The ferry landing area bustled, something of a market in progress, and we tooted our way through, finally finding the police building. The Ford Granada outside did little to inspire me, a bored and warm looking guard welcoming us with a nod and a toothy grin. The door opened to a wide room with long benches, numerous ceiling fans out of kilter, locals sat fanning themselves. It looked like the waiting room doubled up as their court building. Bob pointed towards a corridor and we followed his finger. Jimmy knocked on a door labelled up as Commander and turned the handle, greeting the occupant in a local tongue. The police commander, dressed in a blue shirt and dark blue trousers with a stripe down the side, recognised the UN uniform.

Jimmy announced, ‘We ... are from Rescue Force medical charity, our aircraft is at the airfield.’

‘Welcome to Kigoma. How can I help you gentlemen?’

‘We’d like to hire some guards for the airfield, for two days, and more in the future,’ Jimmy explained.

‘For the aircraft,’ the Commander realised.

‘Yes,’ Jimmy replied. He handed over five one hundred dollar bills. ‘Will that be enough for now?’

‘Oh, yes, yes. I will send some good men straight away.’

‘Who will sleep in their cars, near the aircraft,’ Jimmy pressed.

‘Yes, yes.’

‘Then why don’t you join us for some food and drink,’ Jimmy offered.

The man lifted his hat with an enthusiastic smile. 'I know the best hotel.' I figured he meant the most expensive.

He led the way, his dusty police car soon leading us through dusty streets and to a better part of town. We parked in pleasant gardens and walked through to an open courtyard of well-maintained grass, even a fountain, a few white faces sat about, Bob Davies shaking hands with one of them. The waiters pulled two tables together for us and we settled, a pleasant spot, warm but shaded, beers ordered.

Jimmy explained some of our intentions for the airfield, the Commander having many "cousins" that could help, Jimmy breaking the conversation to practice his language skills on the waiter and ordering us all chicken. Easing back and relaxing, we chatted to each other or the commander as we ate, picking his brains on local facilities. It sounded like he would prove very useful. After lunch we again endured the heat and bustle of the town, before journeying along a lonely road through parched brown countryside, a slither of distant blue lake visible on the horizon, and to the existing UN compound for a quick visit. Heading further south later again, we kicked up dust along the lakeside road and progressed into scrubland. Dismounting at a dust bowl of a spot, we stretched our legs, a local boy whipping a donkey along and waving.

Jimmy said, 'I reckon Rwanda will implode within a year. When it does I want to be able to house some refugees here.'

'Sold that to the Tanzanians, have you?' Bob asked.

'If I make a compound, with no refugees, there's no problem. If, and when, refugees head this way I can house them ... and at that point the Tanzanians will be pleased to fuck that I'm paying for it, and not them.' He faced Bob squarely and thrust his face forwards. 'Would that not be the case?'

'If there is a civil war, then the Tanzanians will be glad of all the help they can get,' Bob admitted. 'The lake acts like a motorway, it's better than the roads around here.'

'You be wanting a mine school down here?' Mac asked.

'No, don't think so,' Jimmy answered. 'If we create external mine training detachments they'll be where they're needed, like Mozambique or Afghanistan.'

Away from the gang, and facing the lake, I stepped up to Jimmy, who seemed to be fixed on the shimmering blue line on the horizon that was lake Tanganyika.

‘I can hear their screams,’ he said without looking around. ‘I can see the skulls piled high.’

I took in the horizon. ‘It’ll be bad?’

He sighed. ‘It’ll be ... very bad. And people will write reports on what they *could* have done, what signs were missed. Bla ... bla ... bla.’

I took off my sunglasses and wiped my brow with my sleeve. ‘Will they listen?’

‘In some ways, but I’ll have to offer some inducements.’

‘Bribing people to save lives. Seems ... wrong somehow,’ I quipped.

‘They mean well, for the most part,’ Jimmy said. ‘I’ll give the UN some money, get some people in place, do what I can.’

‘Can’t be averted?’ I asked.

Jimmy took a while answering. ‘No. The egg needs to be cracked ... to repair it.’

Scanning the local terrain with interest from the jeep, we headed back to the hotel we had eaten at earlier, rooms already booked, some doubling-up required. Cosy headed out by himself to smoke out the town, Bob Davies flying off in the Antonov. With the local police at the Dash, three of them, Tubby got a taxi and joined us at the hotel. Actually, he asked for the best hotel and ended up with us, complaining of being abandoned, despite prior arrangements. We ate and drank to the small hours, Cosy returning and briefing Jimmy on who was who, and who could arrange what; the police commander and his brother, a local businessmen, captured most of the town’s action. We had the right man.

The next morning we took snaps of the airfield, sketches were made, plans discussed, input taken; everyone had their say. When everyone was satisfied, Tubby fired up the Dash. We taxied without permission from air traffic control, Tubby taking the piss and trying to contact the tower’s ghosts of the past. The Dash disturbed the kids playing with the dead donkey as it roared along the runway and lifted its nose, banking hard to the left, circling around and fixing a course to the east as we climbed.

Just over two hours later I landed the Dash on our grass airstrip, bumping along and reversing the engines with a roar, a short landing routine practised. Back at the lodge I found Katie and her mum sat having lunch, no safari today, Jean feeling a little unwell. I caught up with what they had done yesterday: an injured young elephant had been captured by the staff, now being housed over at Skids farm till it recovered; they had both hand fed it. With storm clouds looming we headed below with the rest of the guests, sitting in the bar and watching the rain, soon a rainbow visible in the distance, the bar floor now displaying several small puddles. With mum off for a sleep we retired to our hut for some 'I missed you' time. Following the downpour the humidity was up and we both shined with sweat, in and out of the shower many times.

With a scratch at the door I opened it naked, the lion pushing in. Laughing, we let the fearsome beast lay on the bed, muddy paws an all; bedding needed changing anyway. We lay back and chatted at length, our feet tickling the lion's belly.

A knock on the door was followed by Jimmy's voice. 'You in there?' I opened the door a crack, a well-worn newspaper thrust through. 'You've made the tabloids.'

Back on the bed I scanned the paper, finding us on page five. 'Katie and new love go wild on safari', a background of tiger stripes to the title. I curled a lip; wrong continent, no tigers. I laughed at the title, Katie not so amused. I read the detail with a finger, finding nothing that I objected to. They had me down as a rich stock market trader, hotel and nightclub owner. They detailed the helicopter rescue, giving me a good write up, listed my address as Belgravia and that I went to School in Richmond and Kingston Polytechnic.

'Bastards!' I cursed.

'What it is?' Katie puzzled.

'They found out I went to Kingston Polytechnic,' I said with a smile, getting an elbow.

They had her age wrong, she was not twenty five till next month, and her song had peaked at number two, not three as described. It left me wanting to give her a good talking to, but I resisted; I found it very odd the kind of things that she was sensitive to. Good job they did not have her down as a size ten, she would have killed herself.

‘It’s OK,’ I offered, heading for the shower. She re-read the detail many times.

‘Paul,’ she called from the bedroom. ‘There’s something I need to tell you.’ I stepped out and towelled down, waiting. She continued, ‘The man I was seeing, we ... only broke up before I came away. I ... needed a break.’

I stepped over, bent double and kissed her on the forehead. Whispering, I said, ‘A few miles west of here there’s a civil war, thousands killed each day. I don’t give a rat’s arse.’ I returned to the bathroom and cleaned up.

When I had uttered the words I was putting on a front, a defence mechanism, but as I gave it some thought, considering Rwanda, it put things into perspective. Remembering something Jimmy had said, I took a breath, focusing on my image in the mirror. ‘Live each day with her as if tomorrow you’ll die. You just might.’ She jumped into the shower without a word and I evicted the slumbering lion, a toe up its arse. Dressed, I shouted that I’d be in the lodge, and stepped out.

I found Jimmy sat with Han. ‘That story don’t bother me,’ I said with a shrug as I sat.

‘It’s just the beginning,’ Jimmy cautioned. ‘Everything you do with her will be scrutinized.’

Han was concerned. ‘The British newspapers will be a problem?’

‘No,’ Jimmy told him. ‘Always hide a big lie behind a smaller one. The more exposure we get, the less likely people are to consider who we really are, and the less likely they are to believe such a tale as time goes on. It’s easy to believe a complete stranger is a spy or a threat, not so easy to believe someone you have known a long time to be such a threat. And if people see that we have faults, they won’t believe us a threat, even when we’re accused directly.’

‘An interesting approach,’ Han noted.

Katie checked in on her mum, packing her own case and helping to pack her mum’s. She joined me in the bar, nodding towards the damp grass outside. We went for a stroll, and had an awkward chat.

I finally had it straight in my mind. ‘Katie, I like you a lot, I want to see you, but I won’t put up with any showbiz crap. I don’t mind reporters or stories, they can say I have a small dick –

I don't care. I care more about you fussing over it all. If you're that miserable in the limelight, then quit and get a job as a secretary and I'll still see you – I'm not after your money or a fucking trophy girlfriend.' When finished, I felt quiet proud of myself; there was a time when I could not have got a coherent sentence out to someone like her.

She said she needed time to think, and I was fine with that, I had a few other problems in the queue ahead of her. We strolled back, had a quiet meal with Jean, and she headed off to bed early, back in her own hut with her mum. I was up early as normal and drove them to the airstrip, Cosy flying them back to Nairobi. After a wave goodbye I thought that was that.

Landing back at Gatwick, two day's later, we found a sprinkling of reporters, but I was ready. Han slipped away unnoticed, Jimmy inviting the reporters and photographers to the bar upstairs. We bought them all drinks, sat and chatted at length about more than just Katie. I didn't try and deny anything, but played it down a little, handing over a reel of film that Jimmy had taken of the various locations, but without any shots of the happy couple. Jimmy offered a free two-weeks in Kenya for whoever ran the best story with the best pictures of the lodge. One reporter asked for a story about our stock market success and Jimmy readily agreed, a date and time fixed to visit the old apartment and the house, plus a trip to McKinleys. When we left the reporters, not a single one tried to follow us, all said goodbye like old buddies. And they all got invites to the club.

'Cats and dogs,' Jimmy said as we headed to the multi-storey car park. 'They are what they are, and we'll use them more than they use us.'

Karl was waiting with Big Paul, Han already in the car. Karl said, 'I clocked the press and left you to it.'

'A wise move,' Jimmy approved. He apologised to Han for the delay and we set off in two Range Rovers. It took a minute to realise that both vehicles now offered tinted glass.

Karl said to me, 'Picked up your bird two days ago, Paul. Dropped them home.'

I faced Jimmy.

'I arranged it; got them out the back way,' Jimmy explained. 'And Karl, dope, explained who he was.'

‘They were most impressed by the service,’ Karl offered with a grin. ‘Oh, and Big Paul broke that nice vase in your flat, not me.’

‘It’s a fake,’ I pointed out. ‘Twenty quid.’

‘Really, he’s been sweating it,’ Karl explained.

‘Tell him a grand is coming out of his pay,’ I said.

We got back to a mountain of waiting faxes, Sharon having put the press calls and messages in a pile. I binned the lot, made a cuppa and slouched into the sofa with a sigh, the rain hitting the windows. Jimmy copied my actions almost exactly, slouching down, but handing me a fax. I read the detail: Keely wanted a meeting.

‘Is he going to play ball?’ I softly asked, focusing again on the rain lashed windows, Kenya seeming a million miles away, a certain picnic coming to mind.

‘More ... or less. They’ll always be tricky, more so than the Russians and Chinese. They feel that they have a God given right to rule the world, and that’s the fault of Hollywood. Successive generations of Americans have grown up believing that no matter how severe the problem or disaster, there is always an eleventh hour solution by a small group of people.’

‘Superman to the rescue,’ I scoffed.

‘Superman can’t change the attitudes of several generations, and that’s the problem. They’re stuck in their ways, the politicians linked to big business, big business struggling to compete with Asia and starting to fail. It’s a slow moving train wreck. By 2012 there’ll be an obesity problem, a financial crisis, mass immigration of Hispanics, a massive deficit.’

‘And telling them that won’t fix it?’

‘No, because each President will do what’s popular, not what’s best for the long term. It’s a beauty contest, not a spelling quiz. Oh, Katie be around tomorrow.’

I frowned at him. ‘She will?’

‘She’ll call later, invite her down.’

Guess who’s coming to dinner

Two week's later, and with Katie and me in a steady relationship - steadily avoiding the press, Keely was due to visit. We were ready for him.

A uniformed police officer and two of Sykes boys were on the gate when Keely's vehicle arrived, leaving them in no doubt that the British Government were in residence. Karl met Keely and his two colleagues at the door, brief frisks given. Inside our porch they were scanned with hand wands at length, finally let through. Stepping into our lounge they were met with more faces than they had expected to meet. Ben Ares sat with David, Sykes sat with Jack, and I sat with Jimmy. As our three new guests stood there, Cookie came out with fresh tea, coffee and warm scones, retiring quickly.

Jimmy eased up, slowly followed by the rest of us. Gesturing around the room, he said, 'Mister Keely, this Ben Ares and his local liaison - I believe you've met Ben. Mister Sykes you know, this is his liaison to us, Jack. Everyone, this is Bob Donnelly, NSA, and with him today we have William Host, Bob's immediate boss and equal sceptic, and finally Hurst Adater - if I pronounce it correctly. Please have a seat.'

Glancing at each other, and appearing uneasy, our guests sat, jackets adjusted, legs crossed, unhappy stares adopted. Jimmy offered Host Columbian coffee, the brand he favoured, and Adater a green tea, before he himself sat.

'So,' Jimmy began. 'Four allies represented here today.'

'Four?' Keely questioned.

'I consider myself neutral - I certainly don't take direction from the UK Government. So four. And everyone in this room has a working knowledge of Magestic, and the role of Paul and myself, so no need to be shy. But more than that, all the nations represented here today work closely in many matters. All best buddies.' Pointing at Keely's leg, he asked, 'How's the leg?'

'Not so much as a scar,' Keely admitted.

Host said, 'Let me be clear about something. We *will* take exception to our staff being injected with unknown drugs.'

'It was necessary to save his life, basic anti-venom would not have worked,' Jimmy calmly explained. He carefully mouthed, 'You're welcome.'

'What have your big-brained scientists found?' I asked.

Keely glanced at Host, saying, 'So far, all they can agree on is that it's way beyond them. According to their studies ... I should be dead.'

'How's the running?' I asked.

'I did a marathon a few days ago, a good time, but I ached after.'

'The drug will boost your muscles, your bones and joints take longer,' Jimmy pointed out, Sykes remaining quiet. 'So, what can I help you gentlemen with today?'

Keely half turned his head to his boss. Host began, 'We've decided to adopt the approach of ... *co-operative scepticism*. What that means, in effect, is that we go through the motions and proceed as if this is all on the level.'

Ben asked, 'Do you think our people stupid?'

Sykes added, 'And *our* best minds. Do you think we are fools, perhaps?'

'We ... have are our own course to set,' Host suggested. 'We all take orders.'

'How true,' Sykes sarcastically noted. 'Of course, Magestic *has* boosted the UK economy considerably. So, you take your time, gentlemen.'

Host did not like that, and I hid a smile, a glance exchanged with Jack.

Jimmy said, 'You'll need at least a year to have any hope of analysing Bob's blood, so why not come back in a year.'

Host liked that even less, his surprise evident. 'Well ... we're here now, and want to get this sorted.'

'Sorted ... how?' Jimmy asked. 'Sorted ... to the point where you have everything you want? Sorted to the point ... where you have Magestic himself in a lab under the microscope, truth drugs applied, fingernails cut out.'

Sykes put in, 'Any attempt to interfere with Magestic, his staff or projects would be met with the stiffest resistance by my government.'

'And my government,' Ben added.

'Is that official?' Host challenged.

'I spoke to our Prime Minister yesterday,' Sykes stated. 'It is *very* official.'

'I speak for my government,' Ben added.

‘I see,’ Host said, giving it some thought. ‘Well, as I said, co-operative scepticism.’ He turned his head a notch to Jimmy. ‘We’d like to send a team to the orphanage.’

‘On condition,’ Jimmy stated.

‘Conditions?’ Host queried, not happy at the suggestion.

‘Yes. First, you must buy some toys for the kids, pushbikes, and games like chess or draughts – something educational. Then, I want two doctors based there for a year, helping out. And as they are *helping out* they can study the kids without worrying the staff. Fair enough?’

Host agreed, ‘Fair enough. When?’

‘I’ll fax them later,’ Jimmy offered. ‘So whatever day is good for you. And you’ll make a startling discovery early on.’

‘Which is?’ Host nudged.

‘If one person is injected, they can extract their own blood and inject others. It works. Not a hundred percent, but it still cures a lot.’

Host glanced at Keely. Keely asked, pointing at himself, ‘If I inject someone with my blood ... they get cured?’

‘Mostly, yes,’ Jimmy agreed. ‘You can inject a bunch of your soldiers and judge the effect, it’s quite safe.’

Host seemed very curious about that fact. ‘And if passed on and on –’

‘Would be watered down, still some benefit. Why don’t you experiment in controlled conditions.’

Host faced Ben. ‘You’ve experiment with it?’

‘Yes, on test subjects,’ Ben admitted. ‘It loses fifty percent of its potency each time, but even after three stages it can cure most things.’

Host faced Sykes. ‘And your lot?’

‘No. It was offered, and has been considered, no decision yet taken. Good old British red tape and politics, I’m afraid. But we’ve seen the orphanage.’

Host faced Jimmy. ‘And other nations, like the Chinese you told Keely about?’

‘They have samples, but they don’t have your scientific advantage. If you and they begin at the same time you’ll be there five years ahead of them.’

‘And they started...?’ Host nudged.

‘A year ago,’ Jimmy answered with a grin.

‘I haven’t mentioned the Chinese to the politicians yet,’ Host admitted. ‘They might want you shot.’

‘Why?’ Jimmy calmly asked. ‘I’m not American, no secrets were stolen, and it was not American technology that designed it in the first place. It’s the Chinese who should want me shot, it’s their future invention, part of their planned long distance space programme.’

‘The ... Chinese developed it?’ Host puzzled, a horrified look.

‘After 2015 the good old US of A is on its arse, financially ruined. Everyone looks to China then, British kids learn Chinese. You best get used to it, or...’

‘Or?’ Keely repeated.

‘Or you get a move on and become less of a sceptic,’ Jimmy toyed. ‘Then, maybe, I’ll help you out.’

Host faced Sykes, thumbing towards Jimmy. ‘And why does the Brit’ Government support his attitude?’

‘Something about *gift horses* ... comes to mind,’ I said. ‘Besides, you can only be worried ... if you believe the outcome.’

‘Exactly,’ Sykes smugly stated. ‘You cannot be affected by something that does not exist. Either Magestic has the power, and you’re doomed, or not. Make your mind up, old chap. Besides, our government has been offered a long term financial forecast.’

‘That’s interference,’ Host complained. ‘It’s taking sides!’

Ben sighed. ‘For God’s sake, you either believe or you don’t.’

I helpfully put in, ‘Take a dump or get off the potty.’ Jack and David hid their grins.

Sykes added, ‘There’s one thing very clear about what you’ve said, and that’s that you already take this seriously *and* believe. The rest is just posturing.’

‘I ... believe the accuracy of the letters,’ Host admitted. ‘What I don’t know ... is what the agenda is here. We’re not going to let down our guard.’

‘Mister Host. William,’ Jimmy began. ‘Magestic could tell the Chinese and Russians about every secret project you have. And you’d never know.’

‘If he knows,’ Host challenged.

‘He knows,’ Jimmy insisted. ‘Aurora Eclipse?’

‘Jesus,’ Host let out. ‘This is why I don’t like it! Some fucker out there knows all our secrets.’

‘And *their* secrets,’ Sykes pointed out. ‘It works both ways.’

‘And the Chinese know and respect that,’ Jimmy explained. ‘I shocked *them* as well. Right now they’re worrying we’ll tell you stuff about them.’

‘And will you?’ Keely asked.

‘That which is relevant, yes,’ Jimmy answered. ‘Which is why you get terrorist tip offs. Any threat to Europe or America will be flagged up straight away.’

Sykes put in, ‘We’ve decimated the IRA, they’re talking peace.’

Ben added, ‘And *we* have averted many terror attacks. And the money Silo has made from us, that goes to an orphanage in Africa, twenty million pounds! You judge the motivation.’

Jack put in, ‘We monitor Mister Silo’s finances. Eighty percent or more goes to charity.’

‘And he visits him mum often,’ I put in. ‘We could get her up here if you like.’

Host smiled, reluctantly. He eased back and sipped his coffee. ‘Pointer thinks Magestic is a fucking astronaut. But one of ours would never help the Chinese.’

‘You never know,’ Jimmy began. ‘Maybe Magestic *is* Chinese!’

‘That would upset the White House,’ Keely admitted. ‘How does our new President do, anyway?’

‘Not too bad, two terms, then gets impeached for shagging several young interns.’

The quiet guy on the end registered a pulse. ‘You know ... which interns?’

We all laughed at him, even Host.

Jimmy offered, ‘I’ll tell you if you promise to bring back disco.’

‘Now that ... I could back,’ Host agreed. ‘Hot pants and wide shirt collars!’

‘War in Vietnam!’ Sykes pointed out. ‘It was not all fun.’

Host pointed at Sykes. ‘Tell me you’re glad about the demise of communism and I’ll call you a liar!’

Jack turned his head to Sykes. ‘He’s got you there, sir.’

‘The good old days,’ Sykes reflected. ‘You knew where you stood. And no one ever made you prove your expenses.’

‘I hear that,’ Keely put in, earning a look from his boss.

Jimmy said, ‘Ben once accidentally set fire to his own tank —’

‘Hey!’ Ben objected.

Jimmy added, ‘You claimed it was hit by an enemy shell!’

Everyone laughed. ‘And Mister Host ... he once screeched away from an ambush with the guy he was protecting stood on the pavement. He didn’t realise till he’d gone a mile.’

Host smiled, shaking his head. ‘I was concentrating on the driving. The guy *was not* happy.’

Everyone tried the tasty treats that cookie brought in, chicken and lamb tikka, a ten minute break taken.

Host finally said, ‘So where do we go from here.’

Jimmy responded, ‘Well, since you’re American, we thought we’d make it look like you’re taking the lead.’

‘So long as we’re not paying for it,’ Adater stated.

Keely faced Jimmy. ‘You must already *know* what we do?’

‘You set-up a very secret Magestic working group, its aim being to get the most out of the information, and ask me nicely for help in financial areas, and others. And then, bit by bit, we try and fix things. Unfortunately, each new administration will have its own agenda, reversing policies.’

Host glanced at Adater. ‘There are ... groups that don’t share all they know. The Air Force is good at hiding stuff. We’ll create two groups, the political one, and the real one.’

Jimmy took a breath. ‘Let me be clear about something, gentlemen. Of all the problems that the world faces in the next twenty years, most result from American political choices; bad choices, for bad reasons. Future Presidents will enact what they think are good policies, without thinking through the consequences. I have already helped to stop Iraq invading Kuwait, but that is still a work in progress. The Bosnian conflict is a sideshow and a distraction; you’re supporting the wrong people. When you’ve set-up your Magestic group I’ll give you a briefing. Problem is, the people in that group won’t sleep much afterwards.’

Our guests adopted solemn stares. Jimmy continued, ‘Mankind has from now till 2025 to sort a long list of problems. If you knew what was on the cards between now and then you’d

vomit. If you knew what was going happen in 2025, you might just give up now.'

'And there's no solution to 2025?' Keely asked.

'There is no ... simple solution, even if you started planning yesterday. And with all the best planning, hundreds of millions will still die, the world economy ruined. 2025 can be approached with best preparation, it cannot be fixed.'

'A meteor strike?' Keely asked.

'No. But I suppose the effect might be similar. And NASA could do nothing. There is no fix, but for security – let's label it as a meteor strike.'

'Mankind survives?' Adater asked.

'Yes, but the world will not be a pleasant place. And I will not be revealing 2025 to you ... till closer to the date, there is no point, nothing would be achieved.'

Host said, 'Maybe the scientists could figure a solution? They should have the chance to try!'

'It's not a complex problem, and science will not help,' Jimmy explained. 'And don't take too long on the blood analysis, there'll be some nice diseases wiping out millions after 2012. In the meantime, we need a good smokescreen. We need more people called Magestic offering forecasts, some quite accurate.'

'There's already a lot of those,' Keely unhappily stated. 'We wasted a lot of time on them.'

Jimmy instructed, 'You need to plan ahead, for when this leaks out – and it will. If there is a clairvoyant in the States who is half decent in his predictions, it will act as a smoke screen should anyone see Magestic in a document. I'll provide the guy some tips.'

Host said, 'Pointer hid the original Magestic with a "g" behind Magestic with a "j".'

'Learn from it,' Jimmy suggested. 'Hide it from Congress. In the meantime, I'd appreciate some help on Rwanda. Next year it falls apart and a million will die, that's almost twenty percent of the population.'

'May I ask,' Host began, 'why the heck we're getting sidelined with something like Africa?'

'Because nothing I do is without cause and effect. And there is more oil in Africa than you realise.'

'Rwanda has oil?' Keely asked.

‘No. Remember, cause and effect. An unstable Africa is no good for pumping oil. Wars and refugees ... cause instability. Nothing I do ... is a distraction; quite the opposite. Even the orphanage is vital, and the golf complex. They are all small steps on a long path.’

We fed our American guests, then sent them off, further meetings promised. Sykes and Jack were thanked, a meeting arranged in London for a few days time. That left Ben and David.

Settling back around the sofa, Ben said, ‘You tell different groups different things.’

‘Yes, they don’t know who I really am.’

‘Why trust *us*?’ Ben challenged.

‘First, you keep tight security, and second you have the most to lose from disclosure. The Chinese also know the truth.’

‘The NSA seemed ... positive,’ David tentatively suggested.

‘Administrations come and go,’ Jimmy countered. ‘And the Yanks are crap at keeping secrets, especially one this big. So we’ll create a false Magestic, then another, and one they may even believe is the right one. And even then they’ll be a pain in years to come.’

‘And if they expose you?’ Ben pressed.

‘You lose Israel, I lose the planet,’ Jimmy carefully mouthed. ‘Even if I tell you what will happen, it needs me bringing together various factions. And I’m the only one they all trust. You don’t learn open heart surgery from a book, it takes practice and a bit of flare for it.’

‘So perhaps you should not take part in stupid helicopter stunts,’ Ben firmly suggested.

‘Unfortunately, without the reputation and credibility we can’t do some of the important stuff. I’m working to a plan of twenty thousand steps, that helicopter jaunt was one of them.’

‘So, Paul being a hero and having superstar girlfriends is part of it?’ Ben challenged.

With a smile, Jimmy said, ‘Very much so. Fame will allow us to talk to the right people at the right time, to influence them, to move them a few degrees left or right. You can’t influence the people on the top table ... unless you’re sat on the top table.’

‘I’m taking one for the team,’ I said with a straight face. Their looks did not suggest they agreed with that. With a grin, I said, ‘Anyway, how was Oz?’

‘A bit odd?’ David admitted. ‘It was interesting to find long lost relatives, and my grandfather’s grave. But they were not that friendly, I doubt we will keep in touch. Still, was good to see where Sarah lived.’

‘You all sorted with her now?’ I delicately asked.

‘Oh, yes. Like it never happened.’

‘We have some more money for you,’ Ben put in.

‘Make a charitable donation to Rescue Force, it’s a registered charity now,’ Jimmy told him. ‘We’ll pop over soon and give you some more blood, get that moved along for you.’

‘Why?’ Ben challenged. ‘If the Americans are researching it? We can’t compete with them?’

‘Do you want to be dependent on them?’ Jimmy asked. ‘Besides, you’ll have some injured people to help between now and then, it’s great for burns.’

Ben commented, ‘You seem to take this all ... very lightly?’

‘Couldn’t live, otherwise,’ Jimmy responded. ‘If we took this too seriously we’d blow our brains out. Besides, we have to play the roles, without the people around us being suspicious. Sticking our faces in front of TV cameras will be our greatest asset in years to come. Can’t do that whilst being a miserable git, we’re not Serbian politicians!’

You wouldn’t want to work for us

The book about the Haardheere incident, aptly titled “The Haardheere Incident”, was ready, having been carefully edited by Jimmy. The writer had been promised block sales, but in turn had to make a few changes. At the outset he was told that the part of the about the rescue had to cover no more than thirty percent of the book, and the rest had to be about the UN mission in question, backgrounds of the people killed or rescued, the nature of UN mission in Somalia and the wider civil war in

Somalia; a balanced view. Jimmy and I had scoured through many early versions, and things like ex-SAS became ex-Army.

The staff in Kenya had been spoken to, small changes to the story agreed to by all: Cosy was not on the mission, and Jimmy did not “order” the mission. The book made clear that Jimmy had asked about the mission’s possibilities, and Mac and the others had agreed to its practicality, Bob Davies warning of the legal status of such a trip. My part had been made a little more glamorous, the fact that I was terrified left out. We came across as caring, nervous, yet resolute.

It was ready for the shops for December 1st, a block of ten thousand purchased by us on pre-order from the distributor. Aside from that, it found an immediate audience, since it offered action, adventure, suspense, rescue, plus factual backgrounds. The middle of the book displayed twenty pages of black and white photographs, as well as a few maps. It started to sell well. We sent a hundred copies to Mawlini, a thousand to high schools in Kenya, had them stacked up for guests at the hotels and safari parks, and five thousand distributed by Mackey and his contacts. The UN itself got a few thousand copies, and everyone ended up reading what Jimmy wanted them to read.

The book sparked a TV programme in the UK, because no matter which way you looked at the UN patrol on that day, it seemed ill advised and doomed, a ghost of blame floating around at the loss of life. More than thirty additional UN staff had been killed in the meantime in Somalia and the brief US intervention had been a disaster.

Coinciding with the release, we ran a few adverts for Rescue Force staff, recruiting from the UK and Europe, one page adverts sent to all of Mackey’s contacts, as well as every hospital, police station and military base in the UK. We received twenty-five serious enquiries, and we made the work sound less than inviting: “Rescue Force Kenya. The pay is not great, the training is hard, the conditions are harsh, the danger is always present.” Seemed we were after crazy people.

A few doctors showed their interest in a year out in Africa, some nurses with a similar feeling. The advert attracted six ex-army medics keen to have a go, a few rescuers after adventure for a year or two, and several foreign doctors already familiar with Africa; Dutch, German and French. They all met up at

Mapley on December 15th, for a talk by Jimmy in the AMO building, Mac flying up with Doc Graham. The pay and conditions were described, not putting them off since the advert had made them clear. The chance to get a pilots license and helicopter license excited many, and Mac gave a slide show of the base and its activities. Questions were answered at length, yearly rotating contracts offered. At the end of the day only one dropped out, a nurse. We signed up twenty-four new bodies, five of which would be sent straight out, the rest would need training at Mapley, starting on January 5th. Some of the recruits would need jeep and off-road training, others would require first aid training despite being doctors: they were specialists and had not touched first aid for a long time. Doc Graham would handle the first aid. All would have to take fitness, geography, swimming lessons where necessary, and helicopter drills. A four -week course was planned, then off to Kenya for another four-week course at Mawlini. But it was not all hard work for our new recruits. After a five day acclimatisation at the beach came a five-day study safari; they would need to know a hyena from a lion, a mamba from a python.

New year

After planning on spending Christmas with the various family groups, we decided celebrate New Year in Hong Kong. Katie was keen, it would get her away from the press, and she would take her only family, her mum. Po booked us a block of fifty rooms and we invited most of the senior staff from Kenya, many from Pineapple, some staff from the club and others we knew. We would be there ten days, the staff from Kenya for five.

On the 28th we touched down, picked up in a convoy of three Rollers and taken to a hotel that had just been completed, part owned by Po. Of its twenty glass-fronted floors we had the first three reserved for just our group. Oddly, the better quality rooms were lower down, not the penthouse, and the room I shared with Katie was big enough for us all, complete with a Jacuzzi offering a view on two sides; as you sat in the tub, a hand held control opened or closed the blinds, offering a great view out over the

bay. After dumping our luggage, hanging a few things up in the bag labelled as 'Pressing', we went for walk to explore the large hotel. What we had missed, coming up in the lift, was the central core.

The centre of the hotel resembled a Roman amphitheatre, with two rows of guest rooms opening onto balconies at the top and offering strange internal views. Each balcony housed hanging plants creeping down the white walls, so too the walls of lower levels. Below us ran a walkway right around the courtyard, four doors off it plus lifts and stairs, so we wandered down. Chill-out Room was just that, a large room of sofas, tables, fish tanks and a long bar. Next came Retro Room and I smiled widely, Katie noticing the name. We ducked our heads in, the room empty at present, noting a large central dance floor – 70s style, multi-coloured squares surrounded by a brass railing. We walked on, finding The Disco, a similar layout to the previous room, but with a dance floor fashioned around a DJ booth, numerous large TV screens on the walls.

'He's copied your club,' Katie noted as we tried door number four. This was a traditional British pub, dark wood, a typical bar - even British signs on the walls. 'Christ, this could be my old local.'

On the next floor down we found four restaurants; a Chinese, a Thai, an Indian and an American diner, the central courtyard occupied by a café with many tables and chairs, a fountain in the middle above a small carp pond. A call preceded Po and his gang approaching.

'How you like?' Po keenly asked.

'Very good,' I said. 'Where did you get the idea?'

'You give me good idea. We open one week before Christmas, very full. Not only people for room, many people come for disco and food. For New Year we have hundred percent. You look down?'

'No, we're walking around now.' We left Po and tackled steps signposted for Gym, Sauna, Pool, Health. One floor down we discovered a large blue pool surrounded by many glass cubicles, sauna, steam rooms, as well as beauty therapy and massage. 'Right,' I said 'We've got time, let's get our trunks.'

Having retrieved our swimming costumes and towel bags, we took the lift directly down to the basement and into the massage

rooms. It appeared as if you had to book, but when the lady took my room number she ushered us straight in. Face down, side by side and fingers intertwined, we enjoyed a long and relaxing massage, chatting away as four ladies worked on us. In the sauna we found Cosy and Anna, her pregnancy visible and congratulations given, and sat chatting away for ten minutes. They both looked odd with their heavily tanned faces and arms, but pale white bodies.

In the pool we found Rudd, his coloured wife, and three half-caste kids. The kids were splashing about as if in an ordinary pool, not appreciating that this was supposed to be a five star hotel. I had only met his wife once before, and her accent was hard to follow, Kenyan Creole English. Ratchet and Spanner emerged from the steam room, spotted us and jumped in, wading across.

‘This going to be a regular thing then, boss?’ they nudged, and I introduced Katie.

‘What do you do, love?’ they asked, no idea about her.

‘Secretary, in Pineapple Music,’ she responded, and they believed her, swimming off and trying to drown Rudd’s kids.

Dry now, we headed for a drink in the British bar, finding Mac, Handy and Rabbit, dressed smart but casual in blue blazers. I put a thousand dollars on the bar for them.

Mac snatched it and pocketed it quickly. ‘It’s a free bar, idiot.’

‘It is?’

‘We pay with our room keys, and our rooms are all inclusive like,’ Mac explained.

‘That’s Handy.’

‘No, he’s Handy,’ Mac corrected me.

Following Jimmy’s example over the years, I made sure that they were feeling wanted, needed and welcome, then sat in the corner with Katie for a quick drink. Back in the room we stripped off and fired up the Jacuzzi, ignoring the blinds. Any paparazzi with a long lens could have taken a valuable picture. As we sat there, Katie’s legs across mine, I took in the view across the bay, the million twinkling lights, the neon signs of businesses below us and the brightly lit boats on the water; Hong Kong at night, one of my favourite places.

‘You like it here,’ Katie stated, noticing my gaze.

I smiled. 'Always did, right from the first trip. I like the lights at night.'

'It's a good hotel, be ... lively over New Year.' She sounded cautious.

'Be mostly Po's family and staff, a lot of ours,' I reassured her. 'A photographer wouldn't get in, and if they did they'd be roughed up and thrown in the bay. Relax, around here they don't know you.'

'Your staff don't know me either.'

I wasn't sure if she was happy with that or not. 'They live in a camp in the desert. And I should warn you, I had a fling with Po's daughter a year ago, she's bound to be here.'

'Was she over sixteen at the time?' Katie teased.

I tickled her feet. 'Ling, is twenty-three ... and a Phd graduate.'

'Why did you break up?' It was a typical girly question, and I half expected it.

'She has a life here, I have a life in the UK - nothing more complicated than that. If she was in the UK I would have stayed with her - I don't trade them in very often, remember.'

Katie became reflective. 'I felt bad that first night, at the beach hotel. My ex was calling a lot and I was in the sea with you.'

'You must have been unhappy with him ... to do that,' I ventured.

'No,' she sighed. 'I just wanted a stronger man. He ... let me lead him around,' she explained. 'When he had the time, that was. He couldn't have done a trip like this.' She took in the view as I massaged her feet. 'When we flew back I felt bad, then Jimmy's people were there, car with tinted glass, armed police officer driving. And I thought ... this is more of what I need, not an empty flat, and me fitting around when whoever I'm seeing is off work.'

'When I met Judy, Jimmy put a baby elephant in our bed,' I said with a smile as I remembered back. 'We fed it from milk bottles and it peed on our feet in the bathroom.'

'You ... think about her?'

'No, she probably has her own herd by now.' She slapped me. 'Oh, Judy? Not really, I had the same problem as you. Rich people should stick to other rich people.'

‘I’m worth three million, and I thought *that* was rich. You spend that a month in Africa.’

‘Po is very rich, him and his family, and more on the way,’ I said.

‘On the way?’

‘Jimmy won him some contracts from the Chinese Government. They’d pay for this hotel ten times over – and *you* wanted to pay for the damn room!’

‘I still don’t know exactly what Jimmy does, you know, the private stuff. It all sounds dodgy.’

‘He brokers secret deals between governments and corporations - they know they can trust him to act as honest broker,’ I lied. ‘And a small percentage of a large amount is a lot. But most income still comes from stock market trading - he’s the best there is. He gives tips to people like Po, and they trade them and make a fortune, paying Jimmy a cut. First time we gave a tip to Po we thought he might put ten grand on it. He stuck a million on it.’

‘Wow.’

‘And the hotels make a good profit, so too the club in Cardiff, and Pineapple is doing very well – Jimmy has a good ear, he picked you out from a box of fifty tapes.’

She glanced at the distant lights. ‘I almost didn’t send the tape in, I was thinking of going back to college.’

‘And now look at you; rich, in Hong Kong with a real catch of a guy...’

She eased up and straddled me. ‘Prove it.’

Dressed smart in our eveningwear, and arm in arm, we took the lift down to the third floor, opening to the disco area. We stopped first at the Chill-out room, finding the Pineapple gang meeting up before their meal, two Americans in the group. Kate greeted many, soon chatting away, and I fetched drinks, sitting with Oliver and his wife.

‘So how’s New York?’ I asked.

‘Great, so is this place,’ she answered. ‘Anywhere is better than dreary old London.’

‘Nairobi isn’t, love. You settled over there?’

‘We’ll stay there as long as you like,’ Oliver emphasized. ‘Got a good circle of friends, good social life.’

‘How’s the office?’

‘Growing rapidly, and we’ve had twelve top ten hits in three months. Some of the Brits starting to do well over there as well.’

‘You’ve done alright as well,’ Oliver’s wife said, a nod towards Katie.

‘Really, I thought that *she’d* done alright. And it’s your fault, Oliver, for encouraging her to go out to Kenya.’

‘Where’s Jimmy, haven’t seen him yet?’ Oliver asked.

‘Probably talking dull business with the Chinese.’

‘He’s fluent,’ Oliver stated. ‘How many languages does he speak?’

‘More than I have fingers and toes, but I’m getting there as well. My Chinese and Russian is not bad, some local Kenyan.’

‘No more helicopter stunts?’ his wife asked with a disapproving frown.

‘No, no more since.’

‘We read the book on the way over, amazing tale,’ Oliver said. ‘Can I visit that place?’

‘Of course you can, you know that. Just let us know.’

‘We’ve done one safari, a year ago or more, fancy another,’ Oliver suggested.

‘You wouldn’t recognise the hotels, especially not the beach hotel,’ I told them. ‘The golf complex is great. Oh, and we’ve bought some more land in the north. If it’s ready, stay there, different scenery and a few different animals, nice escarpment.’

‘We got friends in New York that want to visit, we’ve whetted their appetites,’ Oliver indicated.

Katie kissed and hugged Oliver and his wife before sitting on my knee. We chatted for ten minutes, the Pineapple gang going for a Thai tonight. In the British bar we found the Old Dogs again, but now in black tuxedos.

‘Mutton dressed as lamb,’ I said loudly.

‘Like ‘em, they wuz in the room,’ Rabbit said, adjusting his sleeves. ‘Jimbo fixed ‘em for us.’

‘The gang is in the Chinese –’ I began.

‘We’re off for a curry first,’ they insisted. ‘Casino after.’

‘Casino?’ I questioned.

‘Yeah, Jimbo gave us some chips,’ Mac explained. ‘He’s more generous than you!’

‘You pinched a thousand dollars earlier!’

‘Had to, you don’t dish ‘em out often,’ Mac playfully grumbled.

Big Paul wandered in with two of Po’s bodyguards.

‘Should have known,’ I said. ‘War stories over a curry.’

‘Can’t fucking relax with the bosses about, can you,’ Big Paul complained, leading off the Old Dogs.

We left them to it. In the Chinese restaurant we found many familiar faces, the two young girls that visited Kenya racing forwards. I knelt and hugged them, getting kisses on the cheek.

Katie bent double and said hello, and the girls sprinted off. ‘They were in Kenya?’ she whispered.

The girls’ parents said hello, bowing and shaking our hands before introducing some of the extended family. I practised my Chinese. We waved at Rudd’s family, sat with Cosy and Anna, then greeted Doc Graham, Dunnnow, Ratchet and Spanner, all stood with drinks in hands.

Dunnnow stepped forwards. ‘Hey, love, didn’t bring a friend with you, did you?’

‘He suffers from memory loss. Ask him his name,’ I nudged.

‘What’s your name?’ she finally asked.

‘Dunnnow.’

She looked at me and I explained his name, Ratchet pulling him away in a headlock. I greeted the manager of our Cardiff club and his wife, laughing about the design of the hotel, wondering if it might catch on. Han stepped forwards, done out in a black tuxedo. He took Katie’s hand, bowed and kissed it.

‘Han was in Kenya as well.’

‘I remember,’ she said, telling me off with a look. ‘Do you work here, in Hong Kong?’

‘No, Beijing.’

‘Han is a secret agent for the Chinese Government,’ I suggested. ‘He didn’t walk into the hotel, he scaled the walls.’

Han smiled. ‘Your expectations of me ... flatter me.’ Facing Katie, he said, ‘I am but a humble diplomat.’

The two girls appeared at his trouser legs, a pile of photographs handed over. He offered them to us, pictures of the lion cubs, the hotels, and the safari lodge.

‘Your take good pictures,’ Katie politely told Han.

‘I told you, super spy. That top button ... a microphone.’

She shot me another look, the photographs returned as Katie's mum appeared with Jimmy. Jean appeared a little nervous of the group, a little out of place.

'The Old Dogs are in the curry house,' I told Jimmy.

'Old ... Dogs?' Jean queried, wide eyed, a surprised stare from Katie.

Jimmy explained, 'The old army instructors, it's their army name.' Now *he* shot me a look.

Hiding a grin, I took Jean by the arm and found a seat, Katie the other side of her mum. Jimmy took an age chatting to people so we ordered starters, a variety brought out and placed down, samples taken. I explained the system to the ladies. With many smartly dressed children running between tables, I grabbed one of the girls I knew and lifted her to my knee, asking her to speak some English to Katie's mum, the adorable little girl keen to practice. Then she tried to teach us chopsticks, at length and quite patient, also quite loud, Jean now enjoying herself. A flash caused me to turn, Han taking snaps. When the girls' mother came over, Jean asked if she could take her home to England.

Easing up, I asked Han to sit at my place, and when returning slipped down next to Katie. In a whisper, I asked Katie what Han and her mother were talking about. Seemed they both had a passion for roses, even competitions. I suspected Jimmy's hand in this somewhere.

A well-known BBC correspondent walked in, a small gang in tow, Katie recognising the man. She stepped over to them, introduced by Jimmy, and chatted for ten minutes as I discussed the hotel layout with Po. For someone who did not like the attention of the press, she had a funny way of showing it. I considered that what she really wanted was publicity that suited her, to write her own story. It would always be a source of annoyance.

The evening went well, but both of us ate too much, a trip to the disco put off in favour of crashing out on the bed and cuddling up. Dozing, we eased up around 3am, ordering room service. After a tea we fired up the Jacuzzi, sat watching the lights till our skin was wrinkly, Katie back to bed. I read a book.

Katie was a bit groggy for the tour the next morning; interesting things to see and do around Hong Kong. We tagged along, many viewpoints visited, shopping centres with lifts that

were not for the faint hearted. At one point Jimmy led Katie and me to a jewellery shop, the move making me immediately nervous. The staff greeted us, Jimmy pointing them toward a wall poster of Katie, then back to Katie. The staff, and shoppers, twiggged at the same time, the manager fussing over her, snaps taken. Katie loved it; selective popularity when it suited her. On the spot, I bought her an expensive necklace and something for her mum.

After lunch we suffered a boat trip around the bay, the usual tourist lectures given, ending up on a wharf housing Po's family yacht, a monster of a boat some hundred and fifty feet long. Today's tour had been split into three groups for manageable size, and now all three groups joined up again and boarded the yacht. With the late afternoon air warm enough we stood drinking on the quarterdeck.

Han and Jean turned up late. 'Where've they been?' I asked, now intrigued. We closed in.

'Mister Han showed me around a private garden,' Jean keenly explained. 'Fabulous gardens, ponds, vines. Could have spent forever there. Then on to another one full of the most amazing roses.' She took my arm. 'When we got there they were closed, so Mister Han told them I was Jimmy Silo's sister.' She shot Han a playfully scolding look. 'And they opened up in a panic.'

Katie gave me a concerned look. I explained, 'He does a lot of business down here.'

That night we repeated the previous evening's format, this time trying the Thai restaurant. I sighed when I noticed the wall poster advertising jewellery, but it took the guests an hour to recognise Katie. When they finally twiggged she allowed herself to be photographed, some autographs given. We left just as Mac put a moustache on the poster. If he hadn't, I might have. I made my excuses and found Jimmy, needing a chat.

'Need some advice,' I said, sitting in the chill-out bar.

'Women problems, are no problems,' he firmly stated.

'She fucking whinges about the paparazzi, then courts publicity when it suits her.'

Jimmy sipped his beer. 'You member that first house, in Richmond?' I smiled as I thought back. 'And the first time we went for a proper drink, met those two girls?'

'Yes, Sarah.'

‘Sophie,’ he corrected. ‘How times have changed. Back then you would have been glad for any bit of skirt. And now look at you: you’ve got the UK’s best looking girl crazy about you, and you don’t appreciate her.’

‘It’s not that I don’t appreciate her, it’s...’

‘That you don’t appreciate her.’

‘Well...’ I sighed and sipped my beer.

‘Offer a man half a million, and he’ll be happy. Give him a million and take back half a million and he’ll be very unhappy. It’s all relative, and you need to take a good look at what you have, compared to a flat in Richmond – where you may have stayed for ten years.’

In a quiet, and reflective tone, staring into my beer, I said, ‘There’s no pleasing some people, is there?’

‘This is a learning curve for you, a valuable one. Try and understand the mind set ... of the glamorous – it’s something we’ll touch upon many times in the future. We won’t be hounded in quite the same way – no up-skirt shots, but we will be hounded. She wants, and needs, people to tell her she is beautiful and successful, and singers like her measure success partly on the charts and the money, but also in what the tabloids say about them. Harsh comments hurt them. And no, they never learn to deal with it. You need to try and find out how she ticks, how someone *like her* ticks, and use it as a very pleasant training exercise, or I’ll beat the crap out of you at length.’

By time New Year reached us we had all had enough food and booze; belts were loosen. We took it easy New Year’s Eve daytime, ready for the big show; we’d be on Po’s yacht, a prime location for the fireworks and a view of the colony. Most were tipsy well before midnight, but it went off well, a spectacular fireworks display that went on and on, the children staying up. With a palatial cabin reserved for us we stayed aboard, the rest put ashore around 1.30am. We enjoyed breakfast in the room, Jimmy knocking around 11am.

‘You decent?’ he called. I answered the door in a robe. Jimmy said, ‘Be flying off in a few hours, pack your bags.’

‘Where we off?’ I puzzled as Jimmy stepped in.

‘Beijing of course, surprise visit.’ He addressed Katie, ‘You want to see Beijing, your mum is keen – see some of the palaces?’

‘What ... today?’

‘Yep. But don’t worry, the plane will wait till we’re ready.’

‘Oh ... well ... yes, if mum’s keen.’

‘See you at the hotel when you’re ready.’ He closed the door.

‘The plane ... will wait for us?’ Katie repeated.

My stomach turned. I had faith in Jimmy, but we were risking them grabbing us, making up any story they liked. And I was taking Katie there as well, putting her in harms way. I was reasonably sure that the UK Government would get us out if necessary, but the butterflies persisted.

At the airport Han gave us all paper passes, a red and blue stamp, and we boarded a small China Airlines 737. The cabin crew asked us to sit in the middle, over the wing - an odd request to my mind, and closed the doors. Then it dawned on me that it was just the four of us, and Han.

With Katie’s mum asking questions, Jimmy said, ‘They laid on the plane for me; try and show how much they appreciate me. I’m negotiating mining contracts in Africa, worth a lot to them.’ I swallowed, but smiled reassuringly at Katie.

Three and bit hours later we touched down into a foggy Beijing, not seeing the runway till six feet above it, a bit of a bump. At least there would be no rush to queue for the exits. Han got up first, politely waiting for us, and we stepped out in single file, the terminal just visible through the fog. A blast of freezing air caught us off guard as we stepped across to the walkway, soon into the terminal, but no other travellers visible in the section we occupied. Han lead us down a flight of stairs, an official checking passes and handing them back, and out into the freezing cold and to a dated black Mercedes. Jimmy had insisted we bring warm clothing, the ladies now chilly.

As we drove off I soon realising that we were part of a four-vehicle convoy, traffic stopping for us at various junctions as we rushed through. Not much of Beijing was glimpsed, the fog getting worse as we drove. I think we crossed a bridge a one point, and we certainly passed through some security gates. Pulling up, Han opened the doors and we braved the chill wind for a few steps before entering a building, a government residence. Our luggage clattering along the floor behind us caused us to turn, sombre officials following us in with it. With no lift apparent, we climbed stairs panelled with dark wood, the

air getting warmer as we progressed, and to a series of apartments around an internal courtyard. Jean had her own room, but with twin beds, Jimmy had a suite and Katie and I had a large apartment with a double bed; a small double bed.

‘Dinner in one hour, downstairs,’ was the last thing Han told me.

After a good look around at the dated furniture and décor we unpacked a few things, Katie turning the radiators up fully.

Five minutes later Jimmy knocked. ‘Warm enough?’ he asked Katie as he entered.

‘Just about,’ she offered. ‘What is this place?’

‘It’s a government residence inside the Forbidden City - a place that very few ever get to see, certainly not tourists. We’ll get you a tour in the morning, fog permitting, a tour that you can be sure none of your friends have ever taken, or ever will. Now, cup of tea?’

‘Oh, yes please,’ Katie urged.

‘Follow me, then.’

Jimmy collected Jean and led us downstairs, along a Spartan corridor and to a large lounge, a woman with a white lace apron stood waiting under a painting of Mao. He gave her a sentence in Chinese and she trotted off as we sat around a low central coffee table. ‘This place is normally used for senior officials from other provinces when they come to visit, some foreign diplomats.’

I took in the room, Spartan décor of dark wood panels, a row of bookshelves, several sideboards, and not much else. Seeing my look, Jimmy fetched a large dusty book, placing it down and opening it to a page near the front. Swivelling the book around to us he held a finger at a scrawled signature. Addressing Jean, he asked, ‘Know who used your room once?’ We all peered at the scrawl. ‘Khrushchev.’

‘Khrushchev?’ she repeated. ‘In my bed?’

‘They changed the sheets,’ I offered.

‘And the bed, probably,’ Jimmy added. ‘It was 1962.’

‘I remember him on the telly: the Cuban missile crisis,’ Jean put in, studying the page as a tray of tea was brought out.

Jimmy directed our little helper, and she placed down three small cups for everyone, tealeaves placed in each, but from different silver pots, hot water added. With the lady standing

back, jimmy stirred the teas, adding a little cold water. 'Now, from left to right, try it.' We did as asked.

The first was sweet, a bit of an after taste. The second tasted a little like mint to me, and the third a little more traditional.

'Well?' he asked. 'What's the first one?'

'It's fruity,' Katie said.

'Jasmine, and you won't find that in the UK. Next?'

'Mint,' Jean suggested, getting a nod.

'And finally?' Jimmy posed, trying his again.

'A bit like normal tea,' I suggested.

'Normal tea, is either Indian or Sri Lankan,' Jimmy explained. 'This is from the far west of China, north of Delhi across the Himalayas. None of these you'll find in the UK.'

With small cups in hand we eased back and tried more, chatting about our favourites.

Jimmy said, 'This place may not look like much, but not even a British Prime Minister has ever been here, this is living history. It's a bit old and creepy, but we're honoured.'

Han appeared after we had downed several cups of tea. 'I hope you are all well.'

Jean said, 'I signed your visitors book, under Khrushchev.'

Han was horrified, stepping closer to look as Jimmy laughed. The book was untouched. 'I will never quite understand the Western humour. We may eat now if you are ready.'

'Lead on,' I said.

Our dining hall was oddly long and thin, a sturdy table in the middle, more of the same dark wood panelling on the walls, pictures of Mao and other leaders. Two ladies attended us, and they now wheeled trolleys from some unseen kitchen, soon a starter of crab soup, nice enough, everyone chatting away and Han keeping Jean occupied and engaged. Our main courses were like nothing I'd ever sampled in a Chinese restaurant, Han pleased to describe the detail and make-up of each dish. But they were tasty enough, especially the duck, the rice palatable and the noodles very tasty, almost spicy. After four courses we were all stuffed, warm and contented. We retired to the lounge, noticing some furniture moved around, a group of musicians sat tucked into a corner. Two traditional dancers appeared wearing facemasks, and the guys in the corner started up, our own private show.

Han gave a quiet commentary, the meaning and origins of five separate acts unfolding like a storybook: the king wanted a shag, but got killed by his son, was the short version. When finished, Jimmy clapped, followed by the rest of us, Jimmy stepping up to the performers and thanked them in Chinese, asking questions of instruments and costume. A very pleased troupe scampered off backwards, bowing. We chatted for thirty minutes before Han retired, offering to pick us up around 8am, breakfast at 7am. I took Katie up to bed around 11pm, but she was right off the idea of sex in these rooms. Khrushchev did not do it for either of us.

We rose early, a knock from Jimmy at 6.15am to make sure we were awake, and fumbled to make the bath run hot, sharing the water and dressing quickly in the chill room. Breakfast was basic, but enough of it, more teas sampled. Han would be taking the ladies on a tour, Jimmy and I would be talking business with the Chinese Government. My butterflies came back.

Jimmy emphasised, 'Ladies, this tour you'll be getting, no one from the UK has had it before, ever, nor probably will again. I've arranged it specially.' They were impressed, and intrigued. Han picked up the ladies and bade us farewell, a separate car waiting for us; the condemned. As I got in I wondered if we'd ever leave China.

A five-minute drive brought us to a dull grey office building, armed guards stood outside like gnomes, more armed guards opening the car doors. I followed Jimmy inside, sticking close. He greeted the first man by name, surprising him, then repeated that exercise three times more as we progressed along Spartan corridors of grey walls, the odd picture of Mao, picking up people as we went. We descended to a basement, strong doors opened by soldiers, an echoing clatter of shoes on stone behind us. Inside we found a low ceiling room, low for us at least, and several men sat around a large table. Jimmy pissed them all off by shaking hands and naming each one in turn. With our hosts not looking happy, he faced me.

'This is Lee Wen, the Chinese Security Minister.'

I practised my Chinese greetings, hoping I had not called him something rude. He gestured us to seats and everyone settled, the door finally closed. The rest was in Chinese.

'You must have many questions, Minister,' Jimmy began.

Wen composed himself. 'First, my government thanks you for the hospitality shown to our representative, and for the continued advice that you provide.'

'You are most welcome.'

'May I ask, if you are in contact with the British Security Services?'

'Every day, sometimes twice a day.'

Wen glanced at his colleagues. 'And the American Security Services?'

'When they lower themselves to talk to me. The NSA visited recently, but remain ... wary.'

'Wary?' Wen repeated.

'They do not like that which they cannot control, especially when it comes to security matters.'

'A prudent approach.'

'Indeed.'

'May I ask an obvious question? Why, do you say, that you were sent back through time?'

'To prepare the world for the disaster of 2025.'

'And that disaster ... is what?'

Jimmy took a moment. 'An old man ... begins as a baby. Through his life many things will affect him, choices he makes, and choices that are made from him. His journey is a long one, a simple decision taken in his youth possibly affecting the rest of his life. For me to teach you, we need the life story, not the conclusion at the deathbed. Have you white boards and interpreter as I requested?'

Wen shouted an order, and four white boards were brought forwards, placed near the table. Jimmy stood, taking off his jacket. On the first board he put a diagonal time line, from 1989 to 2025. On the second he put a vertical line and a series of marks in blue. The third board went green, a financial chart, and the final was a crude map with continents as squares. The Chinese assembled around the table got their paper and pens ready.

Some of the words Jimmy used had to be in English, not much of a translation into Chinese, certainly not one he knew of. Even the translator struggled with some of the financial terms used. An hour later and Jimmy was almost finished, a sombre conclusion of parts given in English for my benefit: any

gathering of refugees in the Middle East after 2010 would give rise to a terrorist group called the Brotherhood, who would start by blowing up all the oil wells, then go on to blow up just about anything, and anyone else they could get hold of, eventually reaching Europe.

A conflict in Afghanistan was certain, the destabilisation of Pakistan was certain afterwards as a consequence, followed by an increase in terror attacks against India and a subsequent nuclear war with India. That war would create refugees en mass, hence the Brotherhood. The task force sent to re-take the oil fields would lead to a wider war in the Middle East, eventually involving China and Russia and a global conflict.

If all that was avoided, the American economy would suffer and they would invade Venezuela, attacking China in 2015. If that was averted, plagues would sweep the earth, global warming would be debunked after a cold snap killing many, financial disasters would cripple the world's banking systems and large scale fraud would reduce confidence; people would go back to gold coins. If that lot was averted, 2025 would kill hundreds of millions, and the Brotherhood would rise in force.

I could read the charts and understand some of the detail, and even that small detail made me feel ill. This was the first instance that I had seen a complete timeline; Jimmy had kept it from me for security reasons. Now I was starting to understand why - I wasn't ready before. And this lot were not ready either. Ties were loosened, throats were dry, and Jimmy firmly told our hosts to have a tea and toilet break. Many stepped out, others debating detail in whispers, papers tapped, the boards attacked with pointed fingers, lines were drawn on charts.

When everyone returned, Jimmy grabbed a large map of China and hung it over a white board. He drew a line down the middle of China. 'After 2025, you can only hold the land to the east of that line.' It did not please the audience. 'I came back to prepare you, I cannot offer you a solution. And I will only entrust the information, of what happens in 2025, to your Prime Minister.'

They fired a barrage of questions, Jimmy going back over the charts. Seemed like they figured they could find a solution to some or all of the points listed. Each point was answered with a

counterpoint, each verbal volley shot down, the firer silenced. It dragged on for almost an hour, till they were exhausted.

‘Does China survive after 2025?’ Wen asked.

‘Yes, it fairs better than most’. That cheered them a little. ‘But reduced in size, constant Muslim terrorism, very little global trade, outbreaks of disease. And gentlemen, just getting you there will be extremely difficult. After 2020, global climate change has an effect, floods and droughts. Let me suggest to you now that you invest in submarine technology, nuclear submarines – but not military; research vessels, submarines that small groups of people can live in.’

Wen finally said, ‘May I ask ... *who* sent you through time?’

‘Not yet. In time I will answer.’

‘And your ... motivation?’ Wen posed.

Jimmy took a breath. ‘A ... difficult question. Do you nurse an elderly relative close to death? Or do you ask ... why bother? Do you tackle a difficult mathematical problem because it must be solved, or because of stubbornness, or an arrogant belief that you can solve it – once started afraid to give up and face your own failure? I think, a little of each.’

‘Your colleague, he is an understudy?’ Wen asked.

‘Of sorts, but he has a destiny, so I keep him close.’

‘You take many risks,’ Wen noted, wagging a finger.

‘Take a look at the board, and find me a time when there are no risks.’

Wen adjusted his suit. ‘You ask for nothing for yourself ... in return for all this information?’ he challenged.

‘I ask you ... to help yourselves, to help me save the planet. You will survive 2025, and so will the world. What remains, is how well prepared we all are for the challenges that come before, to better be able to handle that which comes after. That preparation should have started ten years ago to be effective. You, gentlemen, are on the clock.’ He put his jacket on. ‘We will meet again the day after tomorrow, please draw up accurate charts and a list of questions. In the meantime, I have guests to attend to.’

Wen followed Jimmy up. ‘Han has noticed that you do not let this *burden* affect you?’ Jimmy gestured Wen to a corner, whispering in his ear. Back at the table Wen, took time to consider whatever it was Jimmy had said, idly adjusting the

papers in front of him. Lifting his head, Wen finally said, 'We will have the questions ready. Please enjoy your time in our fine city.'

I was glad to be out in the fresh air, the day clear and the sun out, and very glad to see Katie again, practically carrying her up the stairs. Ghosts of Khrushchev or not, I tore her clothes off. At midnight I slipped out, finding Jimmy sat reading in the lounge.

'Can't sleep?' I asked as I sat. The tea was fresh, so I poured myself one. Mint.

'She warm enough?' he asked as he closed his book.

'Got one of my t-shirts on in bed, socks. Very ... glamorous.' I eased back. 'Did today ... go as planned?'

'Yes. But this meeting *is* a whole year ahead of schedule.'

'Now that I know the timeline, should we discuss it more...?'

'And you have some input?' he toyed. 'If only.'

'I may have some ideas,' I said defensively.

Jimmy regarded me coolly. Looking away he said, 'The past fifty years, plus other historical factors, have given many in the Middle East a certain mindset. They suffer repression at the hands of their own governments, yet their own governments deflect that blame well ... and towards The West. You then have the Israeli-Palestinian conflict causing even more resentment towards The West. All you need is the right spark to set-off large parts of the Middle East, where the rich get richer and the poor stay poor. That will eventually manifest itself as The Brotherhood, who will raise an army of a million suicide bombers, a very difficult thing to fight against, since you can't use tanks or planes ... or even nukes. They sneak up, and blow up; very effective in urban areas.'

'What if The West and China and Russia unite, like you said?'

'The Brotherhood will still surge across Europe and wreck the economy. What you have to keep in mind, about the modern western economy and banking system, is that it's very finely balanced – and everyone max's out their credit cards. You only need a small dip in the economy to be in real trouble, and over the next fifteen years the UK, and many other countries, borrow their way into growth, hit a crisis, then try and borrow their way out. The one thing politicians are good at is leaving a mess behind for the next lot; boom and bust.' He sighed. 'We live in a

fragile modern society, no stomach for long wars, no resources for it either. And there is the problem of Middle East oil.'

'The Brotherhood blow it up.'

'Causing an immediate financial crash, which will last decades. No, young man, there is no simple solution. And even if there was, it would mean getting many groups together to co-operate, and at the moment they hate each other.'

'What'll you do?'

'Well, unless I get a bolt from the blue, I'll get the world to 2025 in as best a shape as they can be in.'

'Should we put pressure on the Israelis to find a peace?'

'It's too late for that. Besides, such a peace would help by maybe five percent. No, the Brotherhood is not about the Palestinians, it's more complicated than that.'

'So when do *I* do something useful?' I asked.

'You already are, don't sell yourself short. You're making a difference.' With a grin he said, 'A small one, but a difference.'

I let out a long sigh. 'I'm sure you'll pull a rabbit out the hat.'

'Oh, I have a very big rabbit in the hat, would make a hell of a difference to the world, but ... not to the Middle East. And we don't dare reveal that the Muslims take over the world, because they'd take comfort from that idea and rise up now.'

The next day we made like tourists, visiting the sights, six plainclothes officers in tow. The ladies did not mind, they had felt quite honoured on their exclusive trip around the Forbidden City, and private close-ups of new Panda cubs at the zoo. Don't know why, but Katie liked being treated like a princess. We ate out that night, a restaurant that Jimmy picked, surprising Han with his local knowledge. We chose our fish and lobsters whilst the creatures were still alive, watched them cut-up and cooked, then ate them. It was a good job no one ordered beef. The next day the ladies were in for a coach trip to the Great Wall, we'd be going back into the lion's den.

After a gruelling three hours of questions and answers in the bunker, Jimmy ordered a break and some food. Over noodles, our host, Wen, asked about the interaction of Chinese and American economies.

In English, Jimmy explained, 'You will build up a trillion dollar reserve by 2008, and will thereafter influence American fiscal policy by becoming a principal lender back to the US

financial markets. That feedback will cause a housing bubble, then a financial bubble. Wide-scale fraud will cost you billions, and the devaluation of the dollar will cause you to lose thirty percent of your dollar reserves.'

'And the solution?' Wen nudged.

'You must be a cautious lender, to ease the peaks and troughs of the bubbles into gentle hills. Instead of making three hundred percent on property over five years, make one hundred percent – after building a lot of properties and slowing down the property market. If property grows by ten or fifteen percent a year people will still be happy. If it grows by thirty percent there will be a bubble and crash. What you must keep in mind is that if people make ten percent a year, every year, they are happy – and so are the politicians. If they make a hundred percent, then lose five percent, they're very unhappy at what they've lost and the politicians get the blame.'

'An interesting phenomena,' Wen admitted.

'I'll tell you when to buy western property, when to build, and when to sell. Not for the maximum profit, but to avoid a global financial crash. You will become too dependent on the US; when they crash, you follow them down.'

'And the solution to that?' Wen asked.

'Internalisation and diversification; build you own internal consumer markets and property ownership market, then align yourself with India, Brazil and Russia – less association with the US. You need more hydroelectric dams, more nuclear power stations and a move away from oil by 2015, electric cars and buses and trains. By then oil will be \$140 a barrel, unless I change it.'

'You ... will change it?' Wen puzzled.

'I know where all the future oil will be found, including large oilfields in China that you don't know about.'

Wen's eyes widened. 'Here? Large oil fields?'

'Yes,' Jimmy said with a thin smile. 'Unfortunately, it will be unwise for you to tap them yet. Timing ... is everything. Oh, do you have a map of the coastal area of Hong Kong?'

Wen barked an order, a map brought out.

With a pen Jimmy marked eight places. 'There are sunken ships with a lot of gold at each location. My cut is twenty percent.'

‘How much gold?’ Wen asked, studying the map.

‘At today’s prices, three of four hundred million.’

Wen grabbed a man and ordered underwater surveys, pronto!

Jimmy grabbed a map of China and searched for several locations, marking them. For each a local map was procured and marked. ‘Buried treasure and significant archaeological sites.’ He tapped a particular site, carefully mouthing, ‘Very valuable.’ More men were assigned to the map’s hidden goodies.

Wen admitted, ‘You are a very useful person to know.’

With Jimmy again standing, more questions were fired at him, diagrams were drawn over, and I noticed a difference from the first meeting; they no longer looked like they wanted to kill and eat us, they were treating us like allies. They were still despondent at not finding solutions, but they very happy that they had the tools to give them a chance at navigating their way through the problem. They certainly did not lack commitment. Time and again they would attack a problem, working and re-working it till a best position was found.

At 4pm Jimmy called a halt, reminding them that we had guests, and offering another meet in the future, giving them time too formulate strategies in depth, and a lot more questions. They would also have time to fetch up the treasure from the ocean’s depths, and those on land.

We returned to the ghostly mansion and began packing, the ladies arriving with Han around 6pm, stories of the Great Wall and photographs they had taken, a few moans about the traffic and the coach. Jimmy settled them with a tea, listening to the tales. He then asked them to pack quickly, since the plane would leave in two hours. At midnight we landed in Hong Kong, the air considerably warmer than Beijing, Han saying goodbye at the airport; he had made the trip with us just to be polite. The ladies went straight to bed as we met Po, who had come back to the hotel especially.

‘Good visit Beijing?’ he expectantly asked as we sat in the Indian restaurant. Big Paul was now sat with the bodyguards, looking a bit sheepish. I made a mental note to find out why later.

‘Yes, good visit,’ Jimmy acknowledged. ‘I am sure you will get some additional contracts.’

‘We negotiate now, for two weeks,’ Po explained. ‘Good contract, ship Tanzania ore and Sudan.’

‘We’ll be doing a lot of work in Tanzania in the next year,’ Jimmy told Po. ‘Charity work.’

‘You want money for it?’

Jimmy offered him a flat palm. ‘When the time is right, you hang onto it for now.’

‘Is Ling ... OK?’ I ventured.

‘Yes, yes, she no worry about your pretty girl,’ Po explained, a dismissive wave of his hand. ‘This girl, she make many hits for us, I look. Pin-apple make good money.’ We did not correct his pronunciation.

‘Everyone fly back OK?’ I asked.

‘Yes, yes, all go to airport with my car, all very happy – I give gifts.’

‘What gifts?’ I asked.

‘Chinese jade, very nice.’

‘I’m sure Mac will appreciate it,’ I offered.

Po pointed at us. ‘Your people, they take many thing from room, I must say all is OK in hotel.’

‘What things?’ I asked. ‘Like ... beds?’

‘They take towel, robe, pillow case,’ Po listed off. He shrugged. ‘It small money, but hotel manager much paper form.’

We tried not to laugh, too much, and I wondered if the light fittings were still there in Rudd’s room.

Jimmy told Po, ‘In the month of May there will be African leaders conference at the golf club. You should be there.’

‘Yes, yes. You say when, we make stand of information,’ Po keenly insisted. ‘You friend, Han, he make good friend my family.’

Jimmy nodded. ‘I hope so. You’ll be seeing more of him in the future.’

After the meal we cornered Big Paul in the British bar. ‘So what did you do?’ I asked, assuming he must have done something.

‘He spent the night in the cells,’ Jimmy explained, although I didn’t know who had told him. ‘Apparently, the posh lobster restaurant does not allow guests to swim down to the bottom of the tank for the lobster they want. Union rules I guess.’

‘Sorry, boss. Had a bit to drink.’

‘Po got him out, and wangled the charges dropped,’ Jimmy calmly explained. It could have been worse, and neither of us cared much. We left the next day with bulging cases, towels and robes pinched.

Part 3

Tropical snakes in Swindon

The car park at the leisure centre was quiet as we passed, a sprinkling of cars, probably just a few families swimming. It was midday on a Wednesday, so I hadn't expected the car park to be well attended. I received the centre's attendance figures every week, knowing already that the weekends here were popular, if not bustling. Monday and Tuesday nights were full in the gym, the rest of the week easing off as the days progressed, Friday night quiet. I moved the scuba clubs to Thursday and Sunday nights to even things out.

The gate security staff greeted us, and we picked up Mackey, now acting as full time airfield co-ordinator, his name often causing confusion with the other Mac. We drove the short distance to the rescuers training building and parked, Mackey showing us around a new permanent admin room, now with a young secretary, and two computers from our IT guy, Gareth.

'Can you understand his accent?' I teased her.

'His accent is hard sometimes, his handwriting is the problem.'

'I'm learning to type stuff into the computer directly,' Mackey said defensively. He led us next door, coffee in plastic cups sipped around the latest dummy; this one made breath sounds as it "died" slowly, liquid or blood squeezed out of two new lower orifices.

'The dummy had a write-up in a medical journal,' one of the AMO lads explained. 'Now every fucker wants one.'

'Not at twelve grand a piece, they don't,' I put in.

'Army was here the other week, they want one,' the AMO staff told us.

'I'm going to donate two to them,' Jimmy mentioned. Facing Mackey, he asked, 'Where's our gang?'

'Spread around,' Mackey answered. 'Some out driving. We send them out on a hundred mile round trip, nay motorways nor dual carriageways allowed, so they're all back roads and maps.' Finishing our coffees, we thanked the AMO lads, ambling out of the building and to the finished greenhouse, six unlucky trainees now in residence.

'How's this working out?' I asked as we approached.

‘Good,’ Mackey enthused. ‘Wees stick ‘em in for a week, but no one’s quit yet.’

The door of a brick building opened to a changing room on the left and small training room on the right, wall posters of bugs, a few plastic bugs scattered about a tabletop.

Mackey explained, ‘They change clothes on the left, putting on khaki green lightweights, taking in just what we let ‘em, backpack with enough supplies.’ Taking off his coat, he turned the handle on the next door, leading us into a warmer room, the misted glass of the greenhouse now visible. With a grin he said, ‘There’s a wee steam generator under the floor, keeps it moist and uncomfortable in there.’

Jimmy hung up his jacket, so I copied, Mackey ducking his head and opening the door to an escaping pawl of mist. We ducked in quickly and closed the door, the air as warm as anything I had felt in Africa. But it was also moist, almost like a sauna, and a strong odour registered on your tongue. It was not something I recognised, but an unpleasant earthy smell. A shrill call shocked me, a small monkey the other side of fine wire mesh on the left, a large zoo style cage. On the right ran a long line of glass exhibits, numerous snakes visible, and again reminiscent of a zoo. As we advanced across compacted brown dirt we stepped around a tree, Jimmy pointing out a tree frog and a Stick Insect. I picked another Stick Insect up off the floor and placed in on the next tree, saving squishing it. Five yards in and the room widened, a lazy wave issued from a lady trainee in a green hammock strung between two trees.

‘Having fun?’ I asked.

‘Getting used to it,’ she said. ‘Haven’t had a bath or shower for five days.’

Stepping around a large bush, we found the rest of the trainees sat about a central fire, cooking pots hung from branches. Smoke rose to a fan in the roof apex, some natural light entering. Their green khaki shirts all displayed large sweat marks around their armpits, and I noticed that they all appeared very tired, almost downbeat.

‘Getting much sleep?’ I asked.

‘Got the tree frogs for company,’ one said. ‘But *they* don’t keep you awake. It’s the crawlies that wake you, something trying to crawl up your nose!’

‘Even in the hammocks?’ I queried.

‘They crawl along the ropes,’ a man explained.

I pointed at a man in grey khakis and a hat. ‘You the vet guy?’

‘Bristol Zoo,’ the man answered with a smile. ‘I pop in two hours a day. *I* ... get to go home!’

‘He teaches us what’s deadly, and what is just plain fucking dangerous,’ a trainee said. ‘Get ‘em wrong - and we get a rain shower.’

‘Rain shower?’ I asked.

They pointed at the sprinkler system running along the room above head height. ‘It rains every day,’ they glumly explained. ‘Then, just for fun, the security staff hit the button in the night. You wake up wet.’

‘Good practise,’ Jimmy told them. ‘But you’ll be heading to a desert to start with.’

I pointed at a yellow snake crawling towards us. ‘Lunch?’

‘It’s our pet python, Monty. Harmless, unless you’re a mouse,’ they explained. ‘Mackey drops us in a live chicken or piglet for lunch. Or a rat, just to freak us.’

A man asked, ‘That helicopter rescue, stuff like that common out there?’

‘Yes,’ Jimmy answered. ‘There’re a few civil wars brewing, you’ll see some action. And we’re opening a base in Tanzania.’

‘Didn’t bring Katie Joe in with you, did you?’ another man asked.

‘No, but you’ll meet her at the graduation party, she’ll be here,’ I explained. ‘So don’t fail the course.’

With our faces now moist we left them to it, bracing the cold outer room and the relatively freezing outside world of Swindon, a long way from the Amazon. Big Paul brought up the car and we drove the short distance to the climbing wall. Six of our trainees were lowering an injured man in a stretcher, two people abseiling down either end of the stretcher. As they neared ground level the stretcher dipped on the left, a whistle blown.

‘Head lower than feet. Start again!’

To curses and expletives we stepped inside the hangar, four trainees sat in the Huey, my old instructor pointing out things of interest to them.

‘Take five,’ I told our people, closing in on my instructor and shaking his hand, greeting him warmly. With Jimmy chatting to

the trainees, I jumped into left seat and closed the door. 'Seems like a lifetime ago I first sat here.'

'You've done well though.'

Scanning the instrumentation, I said, 'I took off without permission, no external checks, no flight plan, and flew at low and dangerous speeds, flying on with a fuel warning light, a temperature warning and a fire.'

'I read the book twice. I think the fire was oil on the hot engine, not a fuel fire.'

'I think so too. It was dosed too quickly.'

'You're my most famous student. And I get some work from it!'

We laughed. 'Good, you milk it.'

'Stuck a picture of you up in the briefing room, some pictures from the book. All the cadets around here want to meet you, you're their local hero.'

'How's Big Paul doing?' I knowingly asked.

'Failed the first three attempts. He can fly OK, but he's not good on checklists. Ask him a question and he knows, it's just that coherent forethought.'

'Keep him at it,' I said. 'He'll get there.'

'One of this batch has a lapsed PPL. He's good, he could pass on this.'

'Yes?' I queried, giving it some thought. 'Do what you can, push him through, extra pilots are needed down there. Pop around the house at some point, don't be a stranger.'

We moved on to the cave, not knowing if there was anyone booked in, but finding a cave rescue team, two men on the surface.

Shaking their hands, a man reported, 'Fucking family of rats have moved in – very realistic!'

'They'll keep you on your toes down there,' I suggested. 'How many in the hole?'

'Four down there; two seniors and two new lads that wanted a go. We come midweek, no chance at the weekend, busy as fuck. One of your girls freaked out down there?'

'Yes?' I questioned, concerned.

'She went back in the next day, completed it.' He shrugged and made a face.

‘This isn’t compulsory for them,’ I stated, staring into the muddy entrance. ‘Just extra toughener and sickener stuff. They’re more likely to be in a helicopter than a cave.’ Turning, I said, ‘You have fun.’

Stood on the side of the leisure centre pool, shoes covered in blue plastic over-socks, we observed five minutes of basic water rescue, trainees towing each other with floats and lifting people out of the water, kids splashing about on the other side of a rope.

In the café we settled with Mackey. Jimmy told him, ‘When this course is complete, do a review and assessment, then we’ll advertise again. Any group more than ten and we’ll put them through. And the next batch will include non-medics, but trained up to the AMO standard of patrol medic.’

‘That’s at least a week’s basic first aid, then three weeks with AMO,’ Mackey noted.

Jimmy nodded, supping his coffee. ‘I think a course of ... sixteen weeks at least would be needed. Why don’t you work one out and send it over to me. But add two weeks for tropical medicine training at the end, and some basic patient care, at least a week. If someone doesn’t have a medical qualification, they must be shit hot at driving and navigating.’

‘What about the mine clearance school?’ Mackey asked.

‘A year away,’ Jimmy answered.

Driving away, I asked Jimmy, ‘Why don’t we spend more on this, get more people?’

‘It takes time, not money. First we have to find the people, then they need training, then a few years experience, then they can be useful instructors. Most of it they’ll learn on the job in Africa, and you can’t teach that here. A good instructor is a five year process from the get go.’

Kigoma, February, 1994

The Dash touched down smoothly at Kigoma airfield at noon, taxied around and halted. Stepping out into the heat I gazed skyward with a pilot’s interest; one half of the sky threatened a

hell of a downpour, the other half clear. Stepping away from the Dash, with my bag over my shoulder, the first thing I noticed was the background noise; drilling, hammering, banging, metal on metal clanking. It was the sound of earnest labouring.

The rubbish had gone, that inside the airfield, so too the poor dead donkey, and the remaining rubbish outside the perimeter was being picked up by locals and thrown onto a truck. The fence was up, enough barbed wire to deter all but the most determined of locals. I noted soldiers in jeeps, some on foot. A half built hangar was reaching skyward with its metal frame, a dozen huts now lining the western fence, and the concrete foundations for something large and rectangular were being attended my numerous local builders.

The toot of a horn caused me to turn, finding Rudd in a jeep. Jimmy, Mac and I jumped in, Tubby refuelling the Dash. We made the short trip to the tower, jumping out and admiring the wondrous transformation. It even had a radio mast. Inside, we noted local workmen drilling and hammering in downstairs rooms, before climbing the newly painted stairs up to the tower, Rudd politely asking the workmen to leave.

‘Not bad for two months,’ I said, staring out at the busy airfield. The runway cracks had been repaired, the edges had been flattened, grass now being seeded and watered, a mischievous flock of sparrows hoping along behind.

‘It’s good progress, Rudd,’ Jimmy offered. ‘That new year break did you good.’

‘I had the practise at Mawlini,’ Rudd modestly suggested. He pointed through the glass. ‘The fence is done, patrols set-up. We have the huts with water piped in, no gas or electric yet, but soon. It’s not far, the nearest connection, but they’re slow. The hotel foundations are laid, the hangar foundations as well.’

‘Don’t forget the pool,’ I said.

‘No room, I’m afraid,’ Rudd said. ‘Not much space.’

‘Put it on the roof,’ Jimmy suggested. ‘Bar *and* pool then.’

‘You are serious?’ Rudd challenged, Jimmy nodding. He shrugged. ‘OK. You want to see the hotel outside?’

Mounting up, we drove though the impressive new gates, three hundred yards in a straight line along a road lined with tatty houses, and to a period colonial hotel on the left, local workmen

attacking it in force. Cables and tools were carefully negotiated as we entered, things being ripped out and replaced in earnest.

‘Twenty rooms,’ Rudd explained, shouting to be heard. ‘They’ll be nice enough when finished. All the downstairs windows will have bars, the doors secure, a guard at the front.’

‘Good work,’ Jimmy approved. ‘Let’s go see the camp before meeting the politicians.’

Rudd navigated us through the bustling town streets, tooting his way through quite aggressively, and south along a dusty road. We passed the UN camp and kept going for another ten minutes, soon to flat scrubland, the lake visible to the west. High gates were opened for us by a solitary police officer, letting us through to a large expanse of not very much, but very secure. Pulling up next to a lone hut we jumped down.

Rudd said, pointing, ‘Five hundred yards square, one water well, one hut, an expensive fence and a guard, resident Meerkats – but they don’t pay us rent.’

Jimmy scuffed the soil with his foot, testing it. ‘Get some large UN tents, then some family size; store them at the airfield. That’s all for now.’

‘How many tents?’ Rudd queried.

‘Enough for fifty thousand people.’

Rudd stopped dead, a glance at me. ‘You think that many refugees will come?’

‘I make money ... by being able to see trends,’ Jimmy explained, scanning the horizon. ‘It’s a skill I can apply to more than just the stock markets. If I’m wrong, the tents will be used elsewhere - Africa is not short of refugees.’ He faced Mac. ‘How many Rifles now?’

‘Just shy of two hundred, and the fucking regulars apply to join it now. Better pay, better kit, better training.’

‘Better leadership,’ I said, making Mac smile.

‘Aye, if you insist. We’re getting the pick of their best lads.’

‘Good,’ Jimmy offered him. ‘And the Somali helpers?’

‘Right fucking bunch; we find one good one out of ten. They kill each other, rape the women, and beat the kids. We got twenty-five half decent lads, rest I wouldn’t trust.’

‘Form them into a unit,’ Jimmy suggested. ‘First aid training, weapons training away from the base, mine training in the base. Feed and clothe them, chuck them a small wage. Motivate them.’

‘Kenyans don’t like ‘em much,’ Mac cautioned.

‘Educate the Rifles ... to care about everyone. Get them on some simple refugee work, other than pointing their weapons at women and children, and keep the discipline tight.’ He faced Rudd. ‘Ask the nice Defence Minister if he would like a squadron of Hueys for the Rifles.’

‘They don’t have the pilots,’ Mac put in.

Jimmy nodded reflectively. ‘We’ll have to get contractors to start with, maybe advertise overseas. Some of the regular Kenyan officers could be trained up.’ He faced Rudd again. ‘Make the offer anyway, we’ll worry about the pilots later.’ Turning back to Mac he asked, ‘Rescue Force progress?’

‘Got eleven originals, your new five plus nineteen in training, thirty something Kenyan nurses and four lads from the Rifles.’

‘How they making out?’ I asked, already knowing the answer. This chat was not about facts and figures, we got the faxes; it was about connecting to our people and getting their input.

‘The five you sent over know the job anyway, just a matter of getting the mine training in. The second nineteen are progressing slowly but surely, some good at one thing, others good at another.’

‘Make up teams of four people,’ Jimmy suggested. ‘Aim for a doctor, a nurse, a basic medic and a driver or mine specialist. That way we cover everything.’

‘Aye, was thinking along those lines.’

‘And a helicopter mobile team would have two more, pilot and navigator, or just two in the back and stick to four,’ Jimmy added. ‘Jeep teams should be four, plus overnight kit.’

‘The Kenyan nurses are OK,’ Mac added. ‘But slow on the jeep training, the mines ... and no fucking way they want to fly anything.’

‘That’s OK, but keep pushing them,’ Jimmy said. ‘Everyone has to pass ordnance and jeep.’

‘Dunnow got his Huey license the other week,’ Mac added. ‘And I dunno how he did it.’

‘And there is Oxfam and Medicine Sans Frontier at the base, interested in this place as well,’ Rudd put in.

‘Fine, provide them with huts,’ Jimmy ordered, checking his watch. ‘Best go meet the Tanzanians.’

Forty minutes later we pulled into the best hotel Kigoma had to offer, the car park now quiet full. Ambling through the pleasant gardens we took in the bloom, finding our hosts sat in the courtyard restaurant. They stood, Jimmy greeting them and shaking their hands, introductions made. I had no idea how I might pronounce their names a second time, should I have to, and couldn't remember who was who either. The waiters pulled tables closer and we sat facing each other, two groups of four.

'Your reputation precedes you, Mister Silo,' the Minister said in a deep baritone voice.

'Have you played golf at River View?'

'Indeed I have,' the Minister enthused.

'Then I shall arrange a free stay for you and ... any guests you wish to take, wives or girlfriends.'

Our hosts laughed at length. 'You are too kind, Mister Silo.'

'Have you reviewed my proposals?' Jimmy asked.

'Very much so. And the airfield here is quite new and different, many jobs of employment for the local people.'

'I hope it helps the local economy,' Jimmy offered. 'And there will be permanent jobs as well. Now, for the airfield – is there anything that you are not happy with?'

'No, no, nothing at the airfield is a problem, don't worry.'

'And the refugee camp?' Jimmy nudged.

'Well, how can we make a decision about refugees ... when there are no refugees? You see?'

'I think there will be problems in Rwanda, so I am planning ahead. If nothing happens, we have a big fence around a nice family of Meerkats.'

The Tanzanians laughed. 'A well protected wildlife project!' the Minister joked. 'If you wish to have an expensive fence around some dirt we do not have an issue with that.'

'And if there are refugees?' Jimmy pressed.

The Minister stopped smiling. 'Then my government would meet to decide at the time, but we would not be happy to see refugees here at this place – it is a poor area, there would be trouble.'

'Indeed. But if there *was* trouble, then having a good fence around them, and outside of town ... may be wise.'

'In that case ... perhaps some wisdom to it, yes.'

‘I ask only for an agreement in principle, that if there were refugees causing problems here, I could house them outside of town. Could your government see any problem with that?’

‘I do not think so, but it is a strange request.’

Jimmy eased back. ‘Would your Air Force like a small aeroplane from me, a gift, so that they can patrol the lake?’

‘That would be very generous,’ the Minister offered.

‘When you have a pilot or two, I will get the plane for you straight away. And we’ll pay the fuel.’

‘Most generous. You live up to your reputation, Mister Silo.’

‘I am generous ... to those who help me, Minister.’

The minister nodded slowly, and I wondered if a bribe was about to be offered. ‘I will look forward to visiting the golf club again.’

‘You and your friends will be my guests, all costs paid, and your airfare.’

‘Most generous,’ the Minister repeated.

I guessed that was the bribe, or part of it. We enjoyed a cold drink, a chat about the lake traffic, and about Tanzania, the minister and his group heading back for their flight thirty minutes later. We were not far behind them.

We flew directly to Mawlini, the limit of our fuel, landing in the dark and testing the improved runway lights. Tubby’s wife was right about the rooftop bar, you could see it ten miles out. We dropped bags in rooms and headed up, a lengthy process of greeting our staff and being introduced to those who knew us either by reputation, or distorted story. It was thirty minutes before we sat and ordered food, Tubby stepping out with his wife.

Jimmy called him over. ‘Tubby, how would you like to switch to Rescue Force?’

Tubby glanced at his wife and they sat. ‘What’s brought this on, you’re bursting at the seams with new warm bodies?’ I was taken by surprise as well.

‘We need experienced people, not keen beginners. We need people who are ... seasoned.’

‘What, both of us?’ Tubby asked.

‘If you’re both interested.’

‘Oh. Doing what?’

‘General duties, the same as everyone else. You’d have to do the mine clearance course, we know you can handle a jeep, some crossover time on Huey – which you should fly through – no pun intended.’

Tubby and his wife glanced at each other.

‘OK,’ Jimmy began, let me make it easy for you. ‘You’re sacked from the flying doctors, effective immediately.’ They blinked.

I faced Tubby. ‘So, what do you think you’ll do next?’

‘I think, squeezing into a white uniform,’ Tubby said, sat wide-eyed.

Jimmy handed over a wad of dollars. ‘Have one tailored. And... welcome to the team, you start in the morning. Pay is twenty percent above that which you were on, because you fly the Dash. Sue, we’ll pay for your crossover to the Dash and Huey.’

‘Sounds bloody good,’ she offered.

Jimmy explained, ‘Rescue Force is being re-organised into teams of four, with a doctor in charge of each. You’ll both have teams under you, a nurse and a driver, one other.’

Tubby made a face, looking pleased with the idea.

‘OK, employee, you may go now,’ Jimmy dryly commented.

With Tubby standing, and bowing theatrically, Mac walked in with Rudd. They joined us.

‘Tubby and Sue have joined Rescue Force,’ I told Mac.

‘They have?’ Mac puzzled.

‘Just hired them,’ Jimmy explained. ‘They’ll train on the Huey, and Sue will fly the Dash as well.’

‘More pilots than planes,’ Mac pointed out.

‘Oh, three more Huey’s arriving in the morning,’ Jimmy told Mac with a wink.

‘I’ve paid for them today,’ Rudd mentioned, accepting a beer from a waiter.

‘Four Hueys,’ Mac thought aloud. ‘A squadron!’

‘Best think up some squadron manoeuvres then,’ I told Mac.

‘Oh,’ Jimmy added. ‘Three RAF Hercules here in the morning.’

‘RAF?’ Mac repeated. ‘Passing through?’

‘No, dropping off a MASH unit. They’ll set-up in the Rescue Force compound for four weeks, practice their skills on the

refugees at the border - a joint exercise - so play nice with them. Your opposite number is a Colonel.'

'A fucking ponsy Colonel?' Mac grumbled.

I studied Jimmy carefully for several seconds. 'If these Army medics see Rescue Force close up, then when they leave the Army...'

'May be tempted to come our way,' Jimmy finished off. 'Mac, you may want to organise a few competitions; driving, map reading, a joint exercise or two by Huey.'

Rudd asked, 'This new small building, it's a clinic for Doc Adam inside the base?'

'No,' Jimmy corrected him. 'I want a surgical bay here and a few beds for injured people, in case we get some of our people hurt. I want a base ambulance as well. And Mac, let's practise for a worst case scenario, like a Huey dropping onto a hut – mass casualties.'

Mac nodded. 'Lot's more planes and bodies these days. Some fucker's going to clip a Huey one day!'

At dawn, the tower received contact from the RAF - they were inbound, the sleepy drivers of the fuel truck and the fire truck made ready. The Hercules aircraft circled ten minutes later, as I stood in the rooftop bar with Jimmy and Rudd, the Dutchman up early.

'We should send jeeps?' Rudd asked.

'They're supposed to be completely mobile and self-sufficient,' Jimmy pointed out. 'They have their own jeeps in the back, tents, the works.'

With mugs of tea in hand, we stood watching, a few early-bird UN staffers interested in what was up. The first Hercules landed in what looked like a hundred yards, its tailgate down, its momentum halted with powerful reverse thrust, four jeeps soon driving out of the rear. With the jeeps halted on the apron, the Hercules powered up fully and took off on a dime, climbing steeply. If the people on the base were not already awake, they were now. The second and third Hercules repeated the process before disappearing to wherever they were going, the fuel truck and its sleepy driver not needed. Twelve jeeps sat on the apron, packed high with kit. They drove, steadily, around to the Rescue Force compound as we observed them, being allocated their own

patch of sand. With the Rifles keenly watching through the fence, the jeeps unloaded, soon a few tents set-up, one large tent at the centre. Thirty minutes later and they had their own small camp, jeeps parked in a neat line. One jeep drove off, straight around to us. We soon had three guests.

‘Colonel,’ Jimmy offered, shaking the man’s hand.

‘This is Major Dunn, Captain Susan Fleet,’ he introduced.

‘Grab a seat, we’ll get you a coffee,’ Jimmy offered. With a waiter closing in, we settled.

‘You’re Paul,’ the Colonel said towards me.

I nodded. ‘And this is Rudd, our administrator in Kenya.’

‘Good flight?’ Jimmy enquired.

‘Long ... flight,’ the lady corrected. ‘Hercules are not built for comfort.’

‘Where did you refuel?’ Jimmy asked.

‘Cyprus and Djibouti,’ the Colonel answered. ‘That’s where they’re off to now.’

‘We heard this place was comfortable,’ the Major noted. ‘Is that a swimming pool behind the hotel?’

‘Yes, but you’re not allowed any creature comforts,’ Jimmy explained, a glint in his eye. ‘Your bosses called ahead.’

‘It’s every soldier’s duty ... to try and break the rules,’ the Colonel playfully suggested.

‘Then Friday night is *get falling down drunk* night,’ I told him. ‘And believe me, these UN doctors could drink you under the table.’

‘We’ll organise some competitions for you,’ Jimmy informed them. ‘Against our lot. Your soldiers can shoot with the Kenyan Rifles, on their range, if they want.’

‘How far is the refugee camp?’ the lady asked.

‘Thirty miles,’ I said. ‘Ten minutes in a Huey.’

‘But you won’t be able to go there in uniform,’ Jimmy told them.

‘No?’ they queried.

‘No, some of the Somali women freak out and run away when they see uniforms,’ Jimmy explained. ‘You won’t be able to treat many of them in uniform. But we have jackets you can borrow when you go.’

‘We had a go on your dummy the other week,’ the Colonel mentioned. ‘Marvellous training aid. The staff gave me a simulated heart attack.’

‘And how did you do?’ I nudged.

‘Not that well, was waiting like an amateur for damn thing to give up agonal breaths and its dying pulse.’

‘A common mistake,’ Jimmy agreed. ‘The varying stages of shock are good if you stab it in the leg. Bit of a mess with the fluid, but the stages are accurate.’

‘We only have the two of them, so we won’t be stabbing them,’ the Major told us.

‘We’re working on a repair kit so that you can stab and shoot them,’ Jimmy explained. ‘For now it’s *return to the shop*. There’s an early version here, still in use somewhere.’

‘There’s a lot more here than we realised,’ the Colonel noted. ‘Quite a small town. I dug out an old picture of this place before coming out.’

Rudd keenly put in, ‘Now we have Red Cross, Medicine Sans Frontier, Oxfam and UNHCR. Oh, and the flying doctor service. And of course the mine training school.’

‘We’d like a go at the mines,’ the Colonel asked. ‘Hear you have good dummy mines?’

‘They make a bang if you miss them,’ Jimmy emphasised. ‘Keeps you focused. We’ll get your people in the sandbox when you’re ready.’

Rudd said, ‘There is a water tap on the side of the hut nearest you, toilets next to it. And the main buildings have water and electricity if you need it.’

‘But really,’ Jimmy began, ‘you should be digging latrines in the sand, you know, practising being tough soldiers an all.’

‘Like I said,’ the Colonel responded, his nose in the air. ‘Every soldiers duty to break the rules.’

At 1pm we were sat having lunch with Tubby and his wife, when the distant drone of Hueys caused us to lift our heads. From the south, a line of three Hueys came into view, already painted white and sporting red crosses and Rescue Force logos. The drone grew as they neared, causing other people to stand and watch, our new helicopters flaring and slowing before landing on the apron next to our lonesome resident Huey. I walked to the

wall and stared down, four white Hueys now sat in a neat line on the apron. Slowly, my head nodded itself, a smile taking hold. Rescue Force was now indeed a force.

I made my excuses, and drove around to meet the transit pilots, some I already knew from Nairobi airfield, accepting the aircrafts log books and maintenance schedules. From the rear of the Hueys we unloaded spare avionics and fabric sand covers, all stored in the hangar. There were now four Hueys, but just three resident team members who could fly them; Rachet, Spanner and Dunnow – and they lacked experience. Tubby and his wife would have to convert quickly. When a phone in the hangar went I was called over, summoned back.

‘Pack up, we’re heading down to Mombassa,’ Jimmy explained in the hotel reception. ‘Mary passed away a few hours ago.’ He lifted his head and sighed. ‘Before I spoke to her.’

Tubby fired up the Dash half an hour later and we boarded, a little subdued for the two-hour flight. Cosy met us at Mombassa field and we headed over to the hospital to meet Anna, and to make arrangements. Mary’s last six months had not been pleasant, but that was her wish; Jimmy would not inject her. Anna had respected that wish as well. Still, we’d paid her private medical bills, so she got the best care, but Jimmy chided himself for not seeing her earlier. It was four months since we had popped in to see her last, and we both felt a little guilty.

In Mary’s empty hospital room, Anna stood weeping, her pregnancy now clearly visible. ‘She would not let me help her.’

We took in the empty bed, and I felt bad for having taken the Mickey out of her when we first met; and for the next few years. Facing Rudd, I said, ‘The newspapers should give her a good write up.’ Rudd nodded.

Jimmy added, now holding Anna’s hand, ‘Contact the government - I want some official representation at the funeral. And I want a nice plot inside Ebeye grounds for her, nice big headstone. We’ll do the service there, so have all our people drive down; I want all the white jeeps. Day after tomorrow, 9am sharp.’

Anna softly said, ‘The people you arranged are at the orphanage, two American doctors and two nurses. I’ve said nothing to them.’

‘I’ll speak to them later, but let them help out.’

With Rudd and Cosy busy making arrangements, we drove to the beach hotel, just the two of us in a hired jeep, passing the extensive orphanage on the way but not stopping.

‘You feel bad about her?’ I asked.

‘Would have been proper for me to have spoken to her again, but I think Anna helped Mary ... go.’

I turned my head. ‘Yes?’

Jimmy nodded. ‘Mary was in pain, probably asked for a release.’

‘I wouldn’t want to hang around like that.’

‘We all say that, till we get like that,’ Jimmy wistfully noted. We booked in to our hotel - just a few spare huts available, and then for just a few days – before meeting up at the beach bar. The afternoon was hot, the sky clear, the ocean calm inside our breakwaters, two elephants at the water’s edge entertaining the guests.

‘Eight years we’ve been coming to Kenya,’ Jimmy noted, staring at the inviting ocean.

‘Doesn’t seem that long.’

‘It was two years ago you were here with Judy.’

‘Christ, two years,’ I realised.

With a sigh, he lifted up and used the bar phone. Sitting again, he said, ‘I’ll have to chat to the American doctors down here, I’m not going up there, not today.’ He glanced at the guests enjoying themselves on the beach. ‘Her death ... is a milestone in my plans. With the arrival of those Hueys, we’re a full two years ahead of schedule. And I wasn’t going to make use of Kigoma for another three years.’

I considered his words. ‘Does that mean ... that the sequence of events is altered somehow? Improved somehow?’

‘Partly, but cause and effect is a tricky thing. If I do too much too soon I alter my own predictions ... and start tripping over things I can’t plan for.’

‘Might be a good thing,’ I offered.

He swiped away a fly. ‘Or a bad thing.’

I glanced around, making sure no one was close by. ‘Given what you said about 2025, I can’t see how it could be any fucking worse!’

‘No,’ he slowly let out. ‘No, it can’t alter that.’

Half an hour later the doctors appeared; civilian clothes, but with white utility waistcoats. They recognised us straight way, walking over and sitting, drinks ordered.

‘I’m Rick Telling, this is Don Koblinkski,’ the first man offered. ‘And we’re ... well briefed.’

‘Where’re you staying?’ I asked.

‘Mombassa, we drive in.’ They took in the beach. ‘Nice here, very nice.’ Facing Jimmy, Rick said, ‘The orphanage was quite a surprise; almost eight hundred kids. You ... trying to adopt every damn stray kid in Kenya?’

‘More or less,’ Jimmy replied, still facing the ocean. ‘More the better.’

‘Some of the relatives of the kids have reclaimed them,’ Rick pointed out.

‘That’s the law,’ Jimmy softly stated. ‘And maybe good for the kids too.’

‘Locals now send a few kids to study there. Day school.’

‘Yeah?’ I asked. I hadn’t known that.

Jimmy turned his head to me. ‘The new farm - it sends food out for free school lunches to the local schools.’

‘Cool.’

Rick said, ‘You’re a bit of a puzzle, Mister Silo. You’re built like a pro-ball player, you got more money than God, and you spend most of your time doing charity work.’

Without turning his head, Jimmy asked, ‘Did you get into medicine to help people, to ... make a difference?’

‘Not really, it was a career choice. Money. I got a military sponsorship and stayed on working for Uncle Sam; biochemistry and immunology.’

‘Don’t waste too much time thinking about the blood,’ Jimmy suggested. ‘You won’t crack it.’

‘No?’

‘No. Just test the cause and effect, do the epidemiological studies. Cracking the blood will take till 2015 at least.’

‘If someone made it, they could ... just tell us.’

‘And would you understand it?’ Jimmy asked. ‘If you can’t demonstrate the science, you’ll never get FDA approval.’

‘Well ... true. But there are other uses,’ Rick pressed.

‘As and when you convince me of them, I’ll assist,’ Jimmy stated.

‘You know the science behind the blood?’

‘No, but I know some about its uses. And potential *abuses*.’

Don eased forwards. ‘You must know, that if the world gets hold of this, the population growth would be unsustainable.’

‘Finally, an intelligent comment. Yes, I realise that, so does the creator of it. Which is why it was not released to the world many years ago, and won’t be ready till 2015 - and then expensive.’ Jimmy took a sip of his beer. ‘Gentlemen, I have no intention of flooding Africa with it, because the food crisis would lead to war, death and destruction. Selective groups will get it at selective times, that’s all. And around 2016 fifty million people worldwide will be lost to strains of flu, thereby trimming the population a bit. And the one drawback with the blood ... is increased appetite.’

‘To replace all the damaged cells every day you need more protein,’ Rick noted.

Jimmy nodded, still a little subdued. ‘Your purpose at the orphanage, gentlemen, is to record the effects of direct injection. And to let Uncle Sam know about side effects on older kids – which are nil. Oh, you can make use of this place on the weekends, and the golf club if you like.’

‘Wouldn’t mind having a look over Rescue Force,’ Don told us. ‘We both read the book the other week.’

‘We’ll be flying back up in four days if you want a lift. Now, any questions?’

‘Are there variations of serum?’ Don asked. Jimmy shook his head. ‘You, Keely, the kids ... all the same?’ Jimmy nodded. ‘And it reduces fifty percent if passed on.’

‘Yes.’

‘Are top-ups needed?’ Rick asked.

‘No, it works like an infection, self-replicating in the marrow. At heart, it’s a retrovirus that invades the marrow cells and makes a core change to its DNA. The active element changes the design of your body.’

‘Clever,’ Don noted. ‘What about weaknesses?’

‘You have to pack away a lot of beer to get drunk!’ I said.

They laughed.

Jimmy said, ‘Here’s an interesting side effect for you: drug addicts... don’t get high, or enjoy the drugs.’

They glanced at each other. Don realised, 'You inject a drug addict, they're cured.'

'Nope. You inject a drug addict, *they* inject themselves with so much dope to get high it kills them off.'

'It removes ... the ability to enjoy drugs,' Don thought out loud.

'Is it passed on to offspring?' Rick asked.

'No. Only in rare cases.'

'So, even if the Africans were injected, the next generation would need more of it,' Don realised, Jimmy confirming with a nod. 'It wouldn't alter the development of mankind's gene pool. Anything else?'

'I understand, that cigarettes are not as addictive.'

'We'll be keeping it from the tobacco companies then,' Don joked.

'And it *does not* cure obesity, quite the opposite,' Jimmy explained to a backdrop of screaming kids. 'Inject a fat American woman and she'll go to thirty stone quickly, but won't die from pressure on the cardiovascular system - a significant burden on your health services!'

'That's a drawback,' Don unhappily noted. 'And someone like you... in later life?'

'Fit and healthy, so long as I look after myself, fat and healthy otherwise. And with a life expectancy of an additional fifty years. Now, good doctors, can you imagine your own population getting hold of it. Because if widely used, it would destroy America.' They sat up and took note. Jimmy added, 'In a single generation, ninety-five percent of your population would be fat, and over forty. What would that do for you? Health insurance would have to extend beyond normal percentiles. You'd ... be bankrupt.'

I faced Don. 'So I guess you'll be keeping it under wraps, huh?' From their looks, I figured that would be the case. When they had left us I said, 'You know, I had figured they'd pinch it, use it and sell it. They don't dare.'

'They'll try and cut out the disease curing properties, but the increased appetite and extra protein is essential to replace damaged cells.'

'Why was it developed in the first place?'

‘No special reason, just science advancing as time went on. When the war came it was mass produced for soldiers, and used on the wounded; there was no great plan to make a wonder drug.’ He stood. ‘I’m going for a walk, catch you later.’

The morning of the funeral we wore ill-fitting suits hired from Mombassa. The Rescue Force senior staff had driven down overnight and now stood in their whites, Jimmy having directed the twelve jeeps inside and onto the grass. Our staff stood lined up in front of their vehicles, Tubby out of the way at the back. The managers and senior staff of the hotels were lined up, many from the UN attending – including Bob Davies, the Red Cross and other NGOs represented, thirty orphanage staff, workers from the orphanage farm and fifty staff from the new farm. Added to them were thirty police officers and twenty government officials, including the Schools Minister and, quite oddly, the Defence Minister. I doubted Mary would have approved of him at her funeral. The local TV station stood perched atop a dated van, and filming.

The coffin was slowly driven in, a local undertaker leading the way on foot, a choir of some two hundred children singing in a local tongue, another three hundred of the older children lined up in the distance. To the echoes of the children’s singing, the cortège crawled around the main square and to the prepared plot, a large marble headstone freshly engraved. Her small coffin was eased out by four undertakers, carried slowly to the plot, and lowered down.

Jimmy advanced to a small podium with a microphone, Anna and Cosy nearby. He made a lengthy speech in a local tongue before switching to English. ‘Ladies and gentlemen. We are here today ... to say goodbye to Mary Van Der Schull, born in Rotterdam in 1937. Mary survived the war, her father bringing her family to Africa to escape the ravages of a wasteland ... that was Europe in 1946. From South Africa the family moved to Angola, Mary’s father working as an engineer in the mines for many years. Mary trained as a nurse, and worked for the Red Cross for nearly thirty years, retiring to Kenya. But when she came here, she soon realised that she could not sit still when there was work to be done. She founded this orphanage in 1976, calling it Ebede, using what little money she had. She worked

part-time to make money for the sick children, and asked for handouts from anyone who would listen. It is remarkable that she kept the orphanage going as long as she did, with so little.

‘Mary was one of the first people I met when I first visited Kenya, and I wanted to help. I felt ... drawn to this place. It is just a pity I could not have arrived sooner, and given Mary more help. Today, she would be proud of what the orphanage has become, and the way Anna runs it. It has grown from sixty children, to over six hundred, and more arrive all the time. The children are taught each day, they are even taught how to farm, and we now have a link to a farming college for students to study at. Mary’s legacy ... will be a happy and successful one. You need only look at the children, to realise what success she made of this place. They are her living legacy.

‘Some day, one of these children may go on to great things: to be a great businessman, a politician, or a leader of the Kenyan people. From small acorns ... mighty oaks grow. Some day, one of these children may have an aptitude for science, and make a breakthrough to benefit the world.’

I noticed the two American doctors, their grey matter firing up.

Jimmy continued, ‘There is no difference between an African child and a western child when they are born. The difference comes from an education, followed by an opportunity. I will give every child here an education, and guarantee a job for them at the end of it. Any child that passes a university entrance exam will receive a sponsorship from me. And any child that graduates as a teacher will be welcomed back here to work. It is my intention to prove to the world that the children of Kenya have as much potential as the children of any other nation; they just need a helping hand. When this service is over, I invite the members of the government and the press to look around at length. Thank you.’ He made way for a local priest who gave the sermon and concluded the funeral.

Through the bustling crowds I found Rescue Force. ‘Long drive?’ I asked Tubby.

‘We rotated it,’ he said. ‘Set off midnight.’

Doc Graham closed in. ‘Guaranteed jobs? For seven hundred?’

Tubby turned his head. 'They spent twenty million on this place.'

'Twenty million?' Doc Graham questioned.

'It's not all been spent,' I explained. 'Sat in the account ready for later. Anyway, when some of this lot are older they can join you lot, we already teach them first aid and biology.'

'What's this farm?' Tubby's wife asked.

'Fifty miles up the road, large greenhouses.'

'Oh, I know them, flown over them many times.'

'We bought it, made a farming college,' I explained. 'Now every school kid for miles gets a free lunch.'

'You do a lot for Kenya,' Sue noted.

'We also make a few quid from it; the hotels are booming. Besides, got more money than we could spend. Better to do something useful with it, might crash a Huey next week.' I winked at her.

It took Jimmy an hour to get around everyone, plenty of time allocated to the Kenyan Government, an interview given to the local TV station, more questions answered for the press. I chatted to Anna and Cosy, Rudd and his wife, the teachers, and even the American doctors. People finally began leaving, the children marched off in neat lines. Jimmy joined me, and we thanked the Rescue Force staff, the vehicles leaving in a long column. After our farewells to Anna and Cosy we drove out, down to the hotel and a welcome change of clothes. I hit the cool water five minutes later with mask and snorkel.

The next day we collected the two American doctors, the Dash picking us up, Doc Graham and Hildy being let off; they were on their way to the beach hotel for a four day romantic break. Five UN staff, plus two Red Cross workers, joined us for the trip, the Dash being quite the ferry now. Our rooms at the airfield were waiting, some of my clothes still there. In late afternoon sun I sat down to eat, no sign of Jimmy.

At the sandbox Jimmy pointed out the mine training area to Doctors Rick and Don. 'It's got a few training mines in it, try walking across.' They were not keen. 'That's the thing about the unknown, it's frightening, even when we're told that it's safe to proceed.' They glanced at each other. 'I know you gentlemen were asked to sniff around up here, to see if there is anything interesting to uncover, anything ... *buried* in the sand. Problem

is, will it be a gold nugget, or a landmine?’ They again glanced at each other. Jimmy turned back to the sandbox. ‘Given your chosen professions, I would stick to your original remit and leave the spy work to the professionals. *They* ... can find their way across that sandbox without getting themselves killed.’

‘You ... warning us off about something?’ Rick asked.

‘You fine gentlemen are in no danger from me, you never were. Neither was your countryman, Mister Potomo. Problem is, there are three governments and two private bodies represented at this base, all spying earnestly on little old me - and my activities. If only they’d just ask, it would save time and money for them. Still, they like their games, not least because they all have a great deal invested in me, and hope to make a lot from me in the future. They are ... naturally protective towards me. And gentlemen, just a short distance away there are some real mines, a real border and some wide open lonely spaces where just camels dare. Tread carefully, gentlemen.’

Don and Rick glanced at the outer fence, clearly unsure of themselves, as Jimmy walked off.

I was halfway through a dodgy steak when Jimmy stepped out. ‘What’s on the agenda?’ I asked as he sat and beckoned a waiter.

‘Preparations. Rwanda is just a short month away.’

A man in his sixties stood up and walked over. Jimmy stood to greet him. ‘You made it, Hal.’ They shook.

‘Been here all day, had a quick look over the place,’ Hal said in a deep American drawl. I reached across and shook his hand as he sat. Hal asked, ‘You the lad in the book?’

‘The Baardheere Incident, or playgirl?’

Hal laughed. ‘Good attitude. Never take life seriously if you’re a pilot, especially not the way *you* fly.’

‘What’s wrong with my flying?’ I toyed, feigning hurt.

‘You shoulda set down at the border, you could a damaged the bird, ya bum!’

‘Hal was in Vietnam,’ Jimmy pointed out. ‘A young Huey pilot.’

‘Ah, I’d love to pick your brains,’ I said.

‘What d’ya think I’m here for, sonny?’

I faced Jimmy, he explained, ‘Hal will be adding some *experience* to the inexperienced.’

Two new faces stepped out, hardened men in their fifties. Jimmy pointed them toward a free table. 'Get yourselves some food and drink.' They nodded and sat. Facing Hal, he said, 'We got four young bloods here who need an edge, and they got four weeks to shape up.'

'How many hours a day d'ya want me at them?' Hal asked.

'They have other training duties, but aim for four hours a day, three days a week. And two hours each weekend. Set some exercises, but don't bend the choppers - we'll need them soon.'

'Gotchya.'

Ratchet stepped out. 'You after me, boss?'

'Hal, go kick this guy's arse around the sky for two hours.' Hal stood up and led a perplexed Ratchet out.

Mac stepped in, a glance at the two new faces before sitting down. 'You want me, boss?'

Jimmy pointed. 'Those two refugees are ex-trooper instructors, and they'll be joining the Rifles. Go bond.'

Mac stepped over. 'What you two sorry looking fuckers doing cluttering up *my* airfield?' he loudly asked, making me smile.

Jimmy's food arrived quickly, his order probably put ahead of someone else. 'Is this ... camel steak?'

'Yep, fucking good as well.'

He tucked in. 'Not bad. Been a while since I had some.'

'They added it to the menu because the chef likes it, so do most people around here. So, that guy Hal will train up the lads? Combat manoeuvres?'

'Things like ... how high you need to be to avoid damage from an Ak47, rolling stop, heavy takeoff, landing at an angle, the works. He's been flying since 1967. Oh, got some winches coming, be fitted soon. They can then practice winching. Around here it's flat and sandy, Congo is full of trees *sixty feet* tall!'

'He can teach me *the salute*; in and turn to a podium, nose bow, turn and out.'

'And *the funnel*. Down between trees with twelve inches to spare. He can convert Tubby and Sue, then they can get signed off in Nairobi. He's qualified to sign them off, but they need a Kenyan license.'

Thirty minutes later Jimmy called Mac and the two new guys over. 'You bonded yet?' he asked as they sat.

‘They’ll do,’ Mac grumbled. ‘Might have to kick ‘em out of bed in the morning, though.’ They shot him a look.

‘So, gentlemen – the three of you – this is what I want done. I want you to make the best use we can of the Rifles. They’re fit as fuck, no problem there, they can run and walk – they’d put *you* to shame. But they also need to be able to fight, to shoot and skirmish in small teams, and to go into the bush quietly – not sounding like a herd of elephants. This ... is your scenario:

‘We send fifty medics into the Congo, to a small village. Up in the hills are two hundred rebels, who’ve each had an hour’s intensive training on how to point and shoot. They’ve got a size ten on one foot, a size eight on the other, a belt keeping up trousers five sizes too big. But they do know how to skilfully rape and kill the village women below. The job of the Rifles - of the *best elements* of the Rifles - is to go up into the hills and kill every last fucker they can find. If someone has an AK strapped around their chest, they die. I want a group of twenty professionals who will think nothing of taking on two hundred idiots. Your budget ... is excellent. There are now sniper rifles, even M82 fifty calibre, M4s, night sights, you name it. If there is something you need, ask for it. And make use of the medical Huey’s for practising insert and extraction, be some winches on them soon.’

‘Timescale?’ one of the men asked.

‘Probably six months to a year. If anything, the medics are waiting on them to provide cover. I want you to sit down with Mac and the two Ruperts already there, draw up a training plan. Pinch the best forty and whittle them down to the best twenty, then give them better kit and a ten percent pay rise – motivate them.’

‘Do you fly?’ I asked the men. They shook their heads, so I made eye contact with Jimmy and shrugged.

‘Gentlemen,’ Jimmy began. ‘Would you like to learn how to fly a Huey?’

‘Aye,’ they both keenly agreed.

‘Mac, get them up a few times a week. And I have a ... *bit of kit* heading this way for the Rifles, to give them an ... edge. You guys familiar with an Mi24?’

‘An Mi24!’ Mac whispered. ‘How the fuck we get permission for that?’

‘It’s the Kenyan Army,’ Jimmy said with a shrug, hiding a grin.

‘I *got* to have a go at that,’ I told Jimmy. ‘It fully armed?’ Jimmy raised his eyebrows theatrically and nodded. ‘Would have been useful on that raid.’

‘We read the book,’ the guys acknowledged.

‘It’ll put the shits up any bandits on the border!’ Mac said. ‘Where’d it come from?’

‘Angola, it was going cheap,’ Jimmy said very matter of fact. ‘There’s an Mi2 in Tanzania going cheap as well, might grab that. But I prefer Hueys; small and nimble.’ He faced Mac. ‘Oh, see if those Ruperts want to qualify on the Huey’s. When we’ve got four Huey pilots I’ll buy the Rifles some Huey’s, M60s in the doors, or GPMGs.’

‘You planning on invading some small countries?’ Mac asked.

Jimmy turned to him. ‘I’m not sending medics into the Congo, or other places, till I know they’re going to come out safe. If the bad guys are in the hills, harassing the medics below, then we do some of our own harassing. And starting soon we’ll send Rescue Force into Somalia. If they scream for help, we go in hard, not like Haardheere. This aint the UN, *we* ... shoot back.’

‘Damn right,’ I put in.

Jimmy sipped his beer. Facing the two newcomers, he said, ‘When you go over to meet the Rifles, don’t forget that the officers have been here longer, and *you will* respect them and the Kenyan officers - lazy gits or not. When making plans, let them think it was their idea, always ask for opinions before doing your own thing anyway – keeps everyone happy. This bar is available to you, getting falling down drunk is fine, but if you clobber someone I’ll clobber you. If you settle down, this is a permanent position, you stay as long as you like. Mac here is seventy-two.’

‘Fuck off!’ Mac playfully snarled as everyone laughed.

‘Oh, I’ve got a million rounds of Russian 7.62mm coming, use it up. I want everyone over there firing at least a hundred rounds a day.’

‘We could make up a live-fire course in the desert,’ one of the newcomers suggested.

Jimmy nodded. 'Mac, stay, you guys ... have a wander around, then report to the Ruperts.' With just Mac remaining, Jimmy said, 'Things are hotting up in Rwanda, I think we have a month before they simmer over. So I want intensive training in all areas, tire them out, but motivate them. All beginners in Rescue Force I want up to speed; assume you have a month and plan around that timescale. Do what you can with them.'

'The Kenyan nurses are fit as fuck, keen with it,' Mac put in.

'Push their driving, give them some self defence training.'

With Mac heading off, I questioned, 'Charitable money ... for a fucking Mi24?'

'Rudd put it through a few accounts, so no one will find it. And when we're ready, the Chinese have a few old ones we can pinch.'

The MASH officers stepped out, Jimmy waving them over. 'How you guys getting along?'

'Spent all day in the border camp,' the Colonel said. 'Hot as hell.'

'Any interesting medical conundrums?' I asked.

'Some Ethiopians fell out with some Somali men and hacked each other up before the Kenyan Army stepped in, so we had two emergency surgical procedures, some serious wounds. We got two in our unit now, one might not make it.'

'Don't make a habit of taking them back with you, use the clinic over the road,' Jimmy cautioned.

'Why?' the Major queried.

'When you leave ... where do they go?' Jimmy posed, his hands wide.

'See what you mean,' the Colonel offered.

'There's fuck all around here for long term care,' Jimmy explained. 'A refugee needing ten weeks in intensive care ... is fucked.'

'The hospitals in Nairobi wouldn't take them?' the Major asked.

'They might, if you could get them down there. But conditions down there are not great unless you got the money.'

'What happens in that clinic – to the seriously wounded?' the Major asked.

'Stuck in a tent around the back, fed twice a day from a local nurse with two hours training. And no, I'm not building a

hospital here. It would fill up quick, empty out slowly. Once you've taken someone onboard it's very difficult to turf them out. This is Africa, guys, get used to it.'

'Then what's the main purpose of Rescue Force?' the Colonel asked.

'Minor wounds, refugees on the move, disasters, basic refugee camp medicine – that's all we can tackle. No open-heart surgery I'm afraid. The team are being trained up as a fast and mobile unit, airborne; go in, help for six weeks, get out. In time I'll make it global, fly people to disasters, earthquakes, floods. The residential part of our work, that which you can see here in the camp, is about what they do when not heading for a war zone or disaster. Same for you guys – it's training.'

'We rarely train on live people,' the Major said. 'But most of our staff get placements in UK hospitals. That's their *on-the-job* training.'

'You can train your people down here anytime you like. We've got the clinic, the border camp, and always someone wounded at the border.'

'Yes, all the right ingredients to build up experience,' the Colonel noted. 'What's this new base?'

'Kigoma, Tanzania,' Jimmy explained. 'We wanted to be closer to Zaire, and there's a civil war hotting up in Rwanda, so we might get a flood of refugees.'

We sat and chatted for an hour before the officers joined some of our doctors to talk shop. The next morning Hal was up early and I grabbed him, an hour spent throwing a Huey around. I screwed up the first few attempts at a rolling stop, but got the heavy take off down. Hal furnished me with a great many useful tips, like a plastic bag or bottle always – for peeing in while flying, a small towel to wipe away the sweat. They were small things, but all helped to make long flights more comfortable in hot climates, because if you were not comfortable you were a danger to yourself and your crew. He even showed me how to get a temporary hover so that I could jump out if necessary, something he once did for real; he'd written off ten Hueys in his time.

April, 1994. War in Rwanda

The Dash landed us at Kigoma the day before the assassination of the Rwandan President, something we did not prevent. We were sat eating in our refurbished hotel, just outside the main gate, when the news came through; wide scale fighting had broken out. We drove back to the airfield, the base's concrete hotel just about finished, the large hangar up, another ten huts placed ready for the UN, a row of tents laid out in a corner, one large UN tent erected. The airfield's perimeter was now crammed, a large white Antonov sat on the apron.

Doc Graham and Hildy were walking across towards the tower, so Jimmy pulled up next to them. 'War's broken out, get the staff here ready.' In the tower Jimmy dialled Mawlini. 'Mac, I want a full mobilisation, all Rescue Force staff to Kigoma. I want jeeps driven, Huey's flown, rest of the staff in the Dash. Tell De Silva to execute dispersal plan Kigoma Alpha.'

Jimmy rang the UN camp. 'This is Jimmy Silo, Rescue Force. Let your staff know war has broken out in Rwanda. Thanks.'

I stood taking in the airfield, feeling a little useless, so I figured I'd grab the Russian pilots and move the Antonov; we'd be busy in the morning. I explained to them that the Dash and four helicopters were coming in, so they fired up the engines and moved forwards a hundred yards, ready to taxi around and take off the next day. Returning to the tower, Bob Davies pulled up. 'You ready?' I asked him.

'Kind of relieved,' he admitted. 'I stuck my neck out for Jimmy and moved people around, ordered extra *everything*.' We climbed the stairs together, Jimmy sat staring at a map of the lake area.

Jimmy shook Bob's hand. 'Glad you could make it. You ready?'

'Pulled lots of strings for you, so I hope you're right about this.'

'I predict trends for a living. Besides, you got money for the kit and supplies.' He faced me. 'Drive to the camp, check if they're ready.'

I grabbed one of the Rescue Force jeeps and set off out the gate, left at the crossroads in the town and south towards the

lake. With the lake in view I followed the lakeside road, past the UN camp and to our well-guarded patch of dust, Meerkats now evicted. Two police officers stood manning the gate and let me through, five huts in a row and three large tents laid out, behind them a hundred smaller tents. All it lacked was people. As I pulled up and jumped down I noted a solitary family in a tent; guess we were open for business. In a hut with a large red cross I found four UN staff.

‘Warm enough?’ I asked as I entered.

‘Finally got some customers,’ a man said.

‘Yeah, well war broke out a few hours ago.’ They stood and closed in. ‘But let’s hope you don’t get a camp full.’

‘There is fighting in Rwanda?’ a woman asked, concerned.

‘Yep. You staying here or heading up there?’

‘I’m supposed to move to Rwanda in a week,’ she explained in an accent, possibly French.

‘It’s a bloodbath at the moment, love,’ I warned her. ‘Anyway, what do we need to make this place ready?’

‘The supplies are up the road,’ a British man pointed out. ‘Give them a nudge, get them down here in a day or so. Guess nothing will happen for a while.’ I left the warm hut and stepped into the bright sunlight, noting immediately a second family wandering in. I had a jeep full of water bottles so offered them two, the simple drinks much appreciated.

‘Thank you,’ the young father offered.

‘Your English is good.’

‘I’m a doctor,’ he said as he led his family to a tent.

I blinked, stood staring for many seconds. Reaching the jeep I stopped and turned around, walking back over to him as his tired family sat in the shade of a tent. ‘You want a job here?’

‘A job?’

‘You’re a doctor, and we need medics. What was your pay in Rwanda?’

‘Five hundred dollars a month.’

‘You’ll get the same here. You’re now deputised by Rescue Force Kenya.’ I gave him five hundred dollars. ‘Come with me.’

Glancing at his family, and staring at the money in disbelief, he followed me. At the jeep I fetched a white cap with a red cross on it, placing it on his head. There was a small medical kit in the back of the jeep, so I handed him that, plus two more water

bottles. 'Look after your family, then introduce yourself to the UN staff, then stand at the gate. Tell the police you work for us. OK?'

'Yes, yes. I will do it.'

'I'll be back later, don't go anywhere.' Driving back to the tower I relayed the story to Jimmy.

'Grab some kit and supplies from here, take them back.'

I loaded the jeep with food, medical supplies, some soft plastic mats, a foldable camp bed, a block of water bottles and a Red Cross flag. Back at the dustbowl I placed the flag over a tent near the family, observed by the curious UN staff; the flag would be visible to people entering. Unloading the supplies I placed them into the new medical tent, setting up the camp bed.

I told the man, 'Our people will arrive tomorrow, lots of them. Then we'll have a proper medical tent. In the meantime, why don't go see that other family.' As I stood there, the doctor wandered off towards the only other inhabitants, but something caught my eye. I turned and found a bus at the entrance, a single deck coach. The gates opened and it trundled in, stopping next to my jeep. A man stepped nervously down.

'Sorry to ask, this ... is place for Rwanda refugee?'

'Yes, and you're welcome.' I shook his hand, startling the man. 'Don't be afraid,' I shouted, waving them off the bus.

The nervous families stepped out as I tackled the water bottles, finding them tightly encased in plastic. I offered one to each family as they milled around in a daze, leaving me puzzling what was wrong with them. In ten minutes they were sat under the smaller tents, flaps closed in some for privacy, the UN staff taking names. As I watched, the bus driver parked the coach in a corner before grabbing a tent for himself; not even the driver was going anywhere soon. I mounted up and sped back.

'Graham, Hildy!' I called, a toot of the horn. 'Get you medical kits, your jeep, and get to the camp – they're coming in by bus load!'

'Wounded?' Doc Graham asked.

'They looked just tired and dehydrated, that I could see. Oh, a Rwandan doctor there, I hired him.' As they drove off I climbed the tower stairs. 'Fucking bus loads pulling up at the camp.'

'Just the start,' Jimmy softly stated, sat glancing at a supplies list. 'The local authorities have been told to direct them here.'

At nine o'clock I returned to the camp. Parking next to the medical tent in the dark I stepped down. 'Fuck ... me,' I muttered, ten coaches stood end to end. Whoever they were, they had not just hopped onto a bus today; this exodus was pre-planned. I ducked into the medical tent, illuminated now by dull paraffin lamps, some extra illumination coming from the electric lights on the huts.

Doc Graham eased up and stretched his back. 'Couple of beatings, one gunshot wound. This lot are the better off; they bribed their way out today. Got some babies due within the week.'

'The gang will be here in the morning,' I informed him as I took in the dark shadows of people lying on camp beds.

'Who's coming down?'

'All of them to start with. Eight weeks. Huey's will be going over the lake.'

'And into Rwanda itself?'

'Dunno, yet. Depends on the conditions. You got everything you need here?'

'We'll sort it in the daylight, nothing urgent at the moment. We'll sleep in the jeep since they're coming in steady. And this lot will move on, they're well off. They won't stay.'

'No?'

'No, they'll drive south. The poor people will be across the lake in Zaire. I grew up there, not far from here. I visited this lake a few times.'

'Might get the chance to fly back in.'

'It's a dangerous corner of the world these days,' Doc Graham reflected as another coach arrived. 'Some of these buses will go tomorrow, some families across to Zaire. I don't think we'll get genuine refugees for a week or two this far down. By then they'll be healed – or dead.'

I patted him on the shoulder, said hello again to the new recruit – wondering if he'd stay, and drove back. At the airfield, the Dash sat on the apron, twelve of our staff now here and settled into two huts, the stoves fired up and the tea on.

'Any news?' they asked me.

'At the moment it's just coach loads of the better off, a gunshot wound and some minor stuff.'

A tanoy sounded. I didn't even know we had one. 'Wounded coming in by UN plane, ten minutes. Triage in the main tent.'

People got up and grabbed their kit bags, tea downed quickly, and filed out. I found Jimmy in the tower.

'Wounded?' I puzzled, UN staff manning the radio and landing lights.

'UN planes landed in Rwanda, around Goma, fetched them out as I requested through Bob. I've offered the UN our medics here. We'll set-up a forward base south west of Goma in a day or so, another over the lake.'

'It's happening quickly,' I noted.

'Was on the boil already. A lot of Tutsis were rounded up and killed in the past weeks, many crossing over to the Congo – sorry, Zaire.'

Tubby climbed the stairs. 'You after me?'

'Move the Dash onto the grass, Antonov coming in with wounded,' Jimmy ordered.

Tubby fired up the Dash, landing lights blazing, turned ninety degrees and moved forwards ten yards onto the grass. It would need a push back in the morning. The large Antonov appeared in the dark night sky, its own landing lights on, and touched down a minute later. On the apron it lowered its rear ramp, our staff moving forwards with stretchers. I wandered down to the triage tent, soon wishing I hadn't. I had felt naively sorry for the coach parties, but compared to this new batch the coach parties had it easy; there wasn't anyone being attended without a gunshot wound, many with horrific machete cuts, some with hands cut off. I knew we had given the local hospital a lot of money, I just hoped now that the buggers would earn their keep.

With the wounded out, the Antonov took off with a roar. I asked Jimmy about fetching Doc Graham, but he said no. Feeling useless again, I went and fetched supplies as and when our doctors asked for them, some of these medics fresh from completing the basic course; it was a long way from the greenhouse in Swindon. After an hour I made teas and handed them out, the drinks most appreciated, along with fresh hand wipes and water bottles. One patient was covered over, obviously dead, and one would need an arm amputated at the local hospital, so I drove him there with a nurse attending the sedated man.

The hospital was basic, a single storey building from what I could see in the dark, a few UN staff hanging about with the extra doctors we had employed, brought in from other towns. Two more wounded turned up while I was there. By midnight the triage tent was empty, the floor blood stained, twenty wounded now convalescing in smaller tents and attended by Kenyan nurses. In our hut I was surprised by the upbeat mood.

‘All OK?’

‘There’s no roof top bar!’ they complained.

‘It’s not quite finished,’ I explained. ‘But it’ll have a pool up there.’ They cheered. ‘Get some rest, don’t know when the next plane is due. Oh, someone relieve Doc Graham at the camp tomorrow.’

With no flights due I drove Jimmy and Tubby to the hotel down the road, the place now nicely decorated. We found Bob Davies in the bar with a cup of tea and a sandwich, his head in a file.

‘Your people moving up here?’ I asked him as we sat and ordered drinks.

‘Some of them, yes, but we’ll keep the storerooms down the road. Who was on that last plane?’

‘Thirty wounded,’ I reported. ‘One dead, a few amputees, rest will make it.’

‘We have a thirty-forty minute flight from the war zone here,’ Bob noted. ‘Not a bad compromise.’

‘Compromise?’ I asked.

Jimmy said, ‘I have some help coming in, but they won’t go near the war zone, or Zaire. This is the closest safe spot, except Burundi or Uganda, and they won’t play ball.’

‘You’ve caused a stir,’ Bob told Jimmy. ‘First time for the Chinese here, or ... anywhere for that matter.’

‘Some other surprises tomorrow,’ Jimmy said with a glint in his eye. I knew who he was referring to, but said nothing.

‘We’ve secured the forward base in Zaire, south west of Goma, thirty miles, half decent airstrip,’ Bob informed us.

‘Less than an hour in the Dash,’ Tubby said. ‘Two in a Huey.’

‘Hueys won’t fetch wounded to here,’ Jimmy explained. ‘Mi2s, or fixed wing. Huey’s will go snatch inside Rwanda.’

Tubby seemed concerned. ‘Unarmed?’

Jimmy shook his head. ‘Protected. *Well* protected.’

I got a few hours of restless sleep, up early and keen to help out. Jimmy had returned to the airfield without telling me and caught an hour in a chair, many calls made and received overnight. With the sun threatening to put in an appearance the radio crackled to life.

‘Kigoma tower, receiving over.’

I picked up the handset. ‘Kigoma tower receiving.’

‘Kigoma tower, UN flight 104 inbound. Wind and traffic update, over.’

‘104, pattern is clear, wind is nil. Land from the north. Out.’

The UN Hercules touched down smoothly five minutes later, the runway lights left on in the dawn half-light. With no space on the apron it offloaded whilst on the taxiway, a long line of Chinese military medics dressed in white emerging, all lugging large rucksacks that looked bigger than they were. We drove out, directing them to three huts ready for their arrival. Jimmy called them together, greetings extended in Chinese, instructions given; toilets, showers, food hut, triage tent, tower. In orderly groups they occupied the huts, ten in each, the Hercules taking off as the sun warmed distant clouds to a welcoming amber dawn. I grabbed blocks of water bottles from the jeep and handed them out, practising my Chinese, but this lot all spoke at least some basic English, a requirement for this trip, some proficient with their English. Jimmy instructed them to sleep for three hours, and we left them alone.

Back at the tower we sat and made tea, watching the sun come up. When the radio crackled into life it was the Royal Air Force.

‘Kigoma tower, British Air Force, permission to land, three aircraft.’

‘Kigoma tower, negative on three aircraft, apron full, one aircraft at a time only. Wind is nil, land from north to south.’

‘Kigoma tower, roger. Out.’

The lead Hercules came in from the north, a short landing and taxi around to the apron. It’s ramp soon lowered, four familiar jeeps driving out and halting ten yards in front of the tower. With the second and third aircraft circling at two thousand feet, the first Hercules lifted off and banked to the west. We soon had twelve jeeps parked waiting and I walked out to them.

‘Don’t I know you from somewhere?’ I toyed with the Colonel.

‘We had a whole week back in the UK, then this. Still, it’s a bit of action and experience I suppose.’

I sat on the front of his jeep and waved him forwards, directing them to a corner of the airfield. ‘That’s your corner.’ Pointing across the airfield I listed, ‘Mess hut, water, toilets, are all back over the other side. That big tent is the triage tent, already knee deep in blood.’

‘Yes?’ they queried.

‘Thirty dead and dying were brought in last night.’ I pointed. ‘That line of tents are for the recovering. Over there, you’ll see twelve huts in a row. First two are Rescue Force, next two are UN, last three are Chinese.’

‘Chinese!’

‘Yes, so play nicely. Few other foreigners turning up today. If you want a hut, grab the fifth one from the right.’

I left them to put up their tents and play soldiers, walking slowly around the taxiway and back to the tower as the sun broke through the clouds. Through the fence I could see the tin-roofed shacks of our neighbours, mostly rusted, and thought about the poverty here. The Dash was being pushed back so I jogged over and helped out, Tubby off for supplies from Mawlini, one UN worker catching a lift. To the sound of the Dash starting up I entered the tower, Bob Davies now awake, but cradling a coffee mug lovingly with both hands.

‘The Army has its corner of England in a far off land,’ I said as I made a fresh tea. Five minutes later Bob dragged us to the food hut and we became the first customers of the day; egg and bacon.

The British Army officers joined us there fifteen minutes later. ‘Most important place on the base,’ the Colonel said as he sat, five other officers with him. He ordered six breakfasts, mugs of tea.

I looked over my shoulder at him. ‘Are you here ... while the lower ranks are fixing the tents and kit?’ I toyed.

‘We’re scouting the area and having a command meeting,’ the Colonel lightly replied. ‘And never a good idea to think about anything on an empty stomach!’

Ten minutes later, the five most senior Chinese officers stepped in, welcomed by Jimmy. He directed them to seats behind the British and ordered food for them. Sitting with them,

he chatted away at length in Chinese, surprised glances coming from the Brits. The first of our lot crawled in looking rough, ordering food and sitting where there were spare seats, soon happily chatting away to either the Brits or the Chinese and taking the piss in equal measure. Returning to the tower with Bob Davies, we sat and glanced at phone messages from Rudd in Nairobi and Coup at Mawlini. It was an hour before the first UN flight made contact.

Jimmy grabbed the tanoy microphone. 'British Army medics to standby, wounded coming in. British Army medics to standby. Senior Rescue Force staff to assist.' He grabbed the radio. 'UN flight, offload your wounded at the top of the runway, not the apron.'

The white Antonov touched down with a puff of burnt rubber. It slowed toward the end of the runway, turning slowly to the right and halting, its rear door lowering as the British Army stood ready to attend, two of our jeeps driving around to them as we observed the action from the tower using binoculars, many of the Chinese curious. The wounded were carried off the plane, some walking themselves out, and disappeared into the drab green Army tents. The Antonov powered up with a roar and crept slowly around the taxiway, halting at the apron for refuelling, a line of blue UN bodies let off.

'The Brits have surgeons,' Jimmy idly pointed out. 'Those officers at breakfast – all top surgeons. We only have people with basic surgery. Chinese have five surgeons, five assistant surgeons.'

'What about blood?'

'Got some here, some coming in. But the local hospital is supposed to be covering it, a blood donation drive. The donors get a few quid, so they should get enough.' He straightened. 'Take a good look out there - this is an excellent learning opportunity for you. In the future we'll do this in a large way; this is just the warm up, the first step.'

'Considering how far away we are, and the fucking fuel costs, is it the most efficient way to deploy?' I asked.

Jimmy explained, 'This is not just about saving lives in Rwanda, this is about saving the planet. And if we can get the nice British soldiers down there to play nice with the Chinese, and get themselves photographed, then those snaps will be worth

more than all the lives in Rwanda put together. Think about the big picture, young man.'

'Good job I brought some cameras then, isn't it!' I said, Jimmy tipping his head and saluting me with his tea mug.

An hour later another planeload arrived, allocated to the Chinese, the tanoy message given in Chinese. The triage tent filled up quickly, thirty white uniformed medics of the Peoples Republic attending thirty wounded, soon joined by the remainder of Rescue Force. I reversed a jeep close, opened the rear and waited for movements to the local hospital, ferrying three there, six taken to the camp to convalesce. Making myself useful, I spent two hours ferrying yesterdays' wounded from the smaller tents and to the camp. On the way back I stopped at a junction as a beautiful sight came into view, ten of our white jeeps in a line, two white lorries snaking along. When they neared I pulled out, waving for them to follow me, locals stood puzzling all the activity.

At the airfield I directed the jeeps and lorries to a quiet corner and parked them tightly together, soon greeting familiar faces and new staff, thirty in total. Only then did I notice the Kenyan flag on the jeeps, a new feature. I called everyone together, Jimmy walking over. He mounted a jeep bonnet and welcomed everyone, pointing out the base facilities. The first floor of the hotel was operable and the new group were told to make best use of the rooms. The first ten, all nurses or basic medics, were told to grab three jeeps and follow me to the camp straight away.

Returning from the camp, now housing an estimated one thousand, I climbed the tower. 'Camp's busy.'

'I've put Doc Graham in charge of the camp,' Jimmy informed me.

The radio crackled to life, a familiar voice. 'Rescue Force Hueys to Kigoma tower.'

I picked up the handset. 'What kept you, Ratchet?'

'Three refuelling stops. Permission to land, over?'

'Pattern is clear, wind light, land in the north east corner against the fence, over.'

'Get the kettle on. Out.'

We stepped out onto the roof, gazing to the northeast, a distant rumble growing. Jimmy pointed, soon a Huey visible, then its companions; four in a line. With a dull resonating drone

they circled the field, rudely announcing their arrival to the towns folk, landing in sequence on the parched brown grass in the corner.

I waved down at Rescue Force staff. 'Send two jeeps over!' As we observed, more people climbed out of the Hueys than I had anticipated. 'Is that ... Hal?'

'Looks like it.'

'What the fuck's he doing here?' I thought out loud.

'Helping out, I guess. Three pilots, four Huey's.'

We met them on the grass in front of the huts. I shook Hal's hand. 'What you doing here, *old man*?'

'Ya need a first rate mechanic to keep these flying, and I'm the best there is.'

I glanced at Jimmy.

'Fine,' Jimmy offered.

We settled them into a fresh hut, all the flyers and mechanics together, the men quite boisterous considering their tiring journey. They were given till the morning to rest and recover from the long flight, and I discovered that the first night of their trip had been spent on the grass airfield at our safari lodge. I sat on a bed and chatted to Dunnaw about the rigorous flight. A subject of much mirth was Hal, peeing into a bottle and throwing it out of the window. Problem was, they were over a town at the time. To the sound of an aircraft landing, I left them to rest.

The Dash taxied around to me, straight onto the grass and scaring a local solidier from his post, missing the fence by four feet. Mac stepped down first, then Sue, followed by ten more staff.

'Welcome back to sunny Tanzania,' I offered Mac with a handshake, leading them towards the huts.

'Mawlini is empty,' he emphasized. 'Just the mine lads left. Frigging ghost town up there.'

'Mac!' Jimmy called from the tower roof. We stopped and turned. 'You, Tubby and Sue: second floor of the hotel. Dump your kit and come up.'

Mac joined us in the tower five minutes later, files under his arm, a tea offered.

Jimmy began, 'We're a bit disorganised at the moment, so this is the plan.' Mac readied a pen. 'Doctors mostly here, nurses mostly at the camp for after care. We've got the British and

Chinese surgeons here, so this is first base for seriously wounded. If someone turns up at the camp needing surgery they're driven here. The small tents here are for twenty-four hours observation of the seriously wounded, then they ship out to the camp. This place is principle food hall, showers and bogs, but that hotel rooftop won't be ready for weeks. Right, 8am and 8pm every day – on the dot, commanders meeting in the hotel restaurant, which isn't working yet. British, Chinese, our lot, anyone else like the UN, Red Cross. When I'm here I'll help, but it's your meeting. Tell them what the stats and plans are, ask what they need and what their gripes are. First commanders meeting in thirty minutes, for our lot it's all team leaders and above, Ratchet is in charge of the flight detail. But for now, quick shower, bit to eat.'

We rang the camp and got the team leaders up to us, soon many warm bodies in the spacious hotel restaurant, tables moved together and people sat around it. With water bottles laid out, fresh tea and coffee being made, Jimmy called the group together.

'OK, let's just say welcome to anyone we've missed before, and get down to business. Like first day at school, please stand and state your name, skill area, and where you live on the base.'

He gestured first to Bob Davies; UN co-ordinator, in the hotel up the road. Bob's assistants introduced themselves, names and functions given, followed by the British Army officers, the Chinese officers, ten Rescue Force team leaders plus Mac, finally myself.

'OK. Let's start with the simple, but important stuff: showers. There's a shower and toilet hut, and we have no rules as to who can use it and when, but try and spread your people out during the day and night, don't all try and shower in the morning. But let's say that from 9am to 10am is *ladies only*. Those of you in this hotel, give your key to your staff in turn and let them shower here – there're plenty of rooms.

'As for this hotel, any senior officers from the British or Chinese may take a room here, or share a room here, there are enough. There are also very comfortable rooms down the road at our hotel, but just about ten left. Those huts outside get very warm in the day, not great for people to sleep in if they are on night duty. Since we don't anticipate flights after 10pm we can

have most people sleeping at night, but some cover for the patients here – mostly nurses.

‘Five days from now Rescue Force moves to Zaire, or part of it does, and our helicopters will be deployed there, a little more space for people here. This base is the first port of call for the seriously wounded, they will then be moved to the camp, and we can make use of the local hospital; they have extra supplies and doctors that we’ve donated. Right, for those that don’t know, the offices below the air traffic control tower is where I, Mac and Bob Davies work out of – and Mac is in overall charge of the airfield. If you need any supplies, problems fixed, come and find us.

‘Now, as you will have seen, we split the arrival of the wounded into countries and gave each of you a batch to look after. In the long term, that will not be practical, so I would like each of you to create a first and second team – your best surgeons and doctors, so that we can rotate the duties. If a plane comes in, the duty “A” team takes it, rotating to the next “A” team, then the “B” teams. That way everyone gets some rest. If too many wounded turn up, the other teams step forwards *as a team*, step down *as a team*. Now, Rescue Force cannot offer surgeons, but we have forty nurses. Those nurses will be split into groups of eight or ten, covering the night shifts here and at the camp, and supporting the other groups. Typically, a night shift may be eight nurses and one doctor on call, that position rotated. We have two specialists in tropical diseases, so make use of them if you need to. We also have six nurses trained as midwives, so they’ll handle the births at the camp.

‘Now, there are several nationalities here, a few more arriving, so by all means wander around and talk to other nationalities, chat about procedures. Treat it like an international medical symposium, but without the boring lectures.’ Jimmy lifted a map of the local area. ‘This is Kigoma.’ He listed everything of interest, then hung the map on a wall, giving the floor over to Bob Davies for a thorough briefing on the situation in Rwanda and surrounding countries.

When Bob was finished, a white board was brought forwards and specialities listed; tropical medicines, orthopaedics, obstetrics – I knew what that meant know, surgeons, burns specialists, etc. Everyone had an idea of what the skill base was,

and where they were housed. The British had three surgeons capable of amputations, one assigned to Rescue Force, one of our doctors - expert in African medicine - attached to the Chinese.

A box of satellite phones was brought in, each Rescue Force team leader given one, the phones already programmed with a few numbers, mainly Mac and Coup. Warnings were given about miss-use; the calls would be itemised.

Jimmy gave everyone a chance to ask questions of facilities and supplies, answers supplied. I was nominated as dog's body, to fetch supplies from the town when needed. First job was a hundred cans of coke and fanta, more toilet paper. I would also act as official photographer and started with the group. This first meeting had taken an hour, the next operational meeting set for 8pm. The group was thanked and dismissed as the local police chief appeared.

'How is everything with you?' he asked in a deep and accented voice.

'We need more space,' Jimmy told him. 'The houses near are squatters?'

'You want them moved?' the commander offered.

'No, I will give them money to move, I don't want anyone forced out,' Jimmy emphasised. 'Go around and tell them all that they can get money to move out. If a few days we will go around with a lorry and workmen and clear the empty shacks, yes?'

'OK, OK, good. What money for the people?'

'Five hundred dollars each, and a basket of food and water.'

'OK, OK, I tell them.'

Jimmy handed him ten thousand dollars. 'No one ... is to be forced out, or I will not be happy.'

'Yes, yes, I will make everything good.' He left us.

'Fucker's going to shove them out and keep the money!' I said.

'No he won't, because you'll be there.'

'Oh, right.'

'We want the area to the south and east, fifty yards in each direction. That'll give us access to that main road over there.'

Through the window I could see soldiers with blue UN helmets. 'Our trusty UN peacekeepers are here.'

'The Rifles drove down, we'll need their jeeps and trucks,' Jimmy explained as we walked out.

The Rifles parked in a line near the tower, their lorries on the grass. We greeted the two British officers, the two ex-SAS instructors and six Kenyan officers.

‘Keep them on the trucks,’ Jimmy shouted. He gathered the officers. ‘We only need a detachment of ten men and an NCO here, rest to the camp down the road for now. Officers will be billeted here, this hotel, the detachment in one of the huts.’ They selected a squad to remain, then turned about and followed us down to the camp, another monstrous line of vehicles upsetting the locals. Inside the camp we drove to a far corner, at least two hundred yards from any tent, and halted, stepping down. Jimmy directed the thirty vehicles to park up against the fence, the officers and NCOs called forwards, an area marked out for tents.

We stayed and helped out, Jimmy greeting almost every soldier in the Kenyan dialect, a tented city up after an hour, being observed by a hundred refugee kids. Barbed wire was taken off a truck and laid around the tents on two sides, making an enclave.

Jimmy told the British officers, ‘Patrol outside can be armed – watch out for looters, patrol inside unarmed, do a night watch. Amongst these refugees there’ll be some desperate people, so a bit of robbing and raping going on. A week from now we start operations in Zaire for your best lads. 8am and 8pm every day there’s a command meeting in the hotel at the airfield for officers, you’ll find me at the tower. Phone in the hut by the gate. Settle in, get some rest, send a jeep to the airfield twice a day for supplies.’

I took their pictures, some of the tents and some the Rifles before heading back. An hour later I stood with a coffee mug in the tower as an Antonov landed, disgorging thirty seriously wounded. I was still there after sundown when the last flight arrived, an Israeli Hercules. With Jimmy off somewhere, I drove out and greeted them, fifteen medics, a mixture of doctors and nurses. They threw their packs into the jeep, then followed me to the huts as their plane took to the sky. I offered them hotel rooms, but they were happy enough with two huts for now, so I performed the well-practised speech on areas and facilities; who was in which hut, supplies and meetings. Their senior staff attended the 8pm meeting and were welcomed to the gang, only the British managing to look surprised. The Rifles’ British

officers bonded straight away with their counterparts, stories and histories swapped, bases visited and people known discussed.

The only gripe at the meeting was a need for more beds and tents for the wounded here, a few extra tents brought up, more jeep shuttles organised. As we broke the meeting, a heavy helicopter caught everyone's attention, the mighty Mi24 landing on the apron, it's lights blazing, the British Army keenly interested in the "enemy" attack helicopter.

With its rotors winding down, I walked over and greeted its two pilots, a British ex-SAS trooper, and a Ukrainian national. 'Got planning permission to park that thing there?'

'You look like the infamous Paul Holton. I'm Mickey, this is Yuri.' We shook. Mickey was stocky and fifty, Yuri slender and with sunken cheeks.

'How did you end up flying this thing?'

'Was a merc, and one day this *fell* into my possession. I sold it to a warlord, but stayed on piloting it for him for a decent wage. Yuri was looking for work, and had been an engineer on these back in the Soviet day. Kinda got stuck with each other. When the warlord copped it I ... borrowed it back.'

Jimmy pulled up in a jeep, two Rifles jumping down. He ordered them to watch the helicopter, asking our two new recruits to hop in. At the hotel up the road he found them rooms, then bought them a drink at the bar. 'Our head man, Mac, is ex-Regiment, you may know him.'

'I do,' Mickey replied. 'He's been doing the mines around Africa for a long time.'

'You can meet him tomorrow, kick back for now. Oh, money in your UK account as requested.'

Mickey slowly nodded. 'When we off causing trouble?'

'Five days or so, need a work up period. And your munitions coming in by plane in a day or two.'

'What's the range?' I asked.

'Book says five hundred with extra tanks, but if we're heavy - little more than three hundred miles.'

'So you'll be based near Goma,' I said, getting a nod from Jimmy.

Jimmy began, addressing Mickey, 'We'll be sending our Hueys in to pickup wounded and get UN staff out. You're top

cover. We'll also want you to disrupt the Hutu Army as they happily massacre Tutsis.'

'Disrupt?'

'Fly-bys, shoot up the road. Don't need to engage them unless absolutely necessary. Besides, there'll be American copters about, they may be tempted to shoot at you.'

I sarcastically said, 'We could always paint it white and put a big red cross on it.'

They stared at me, wide-eyed, then roared with laughter. 'I'd love to see the look on their faces, especially when we open up on them. A medical Mi24!'

The next day I ran errands, and the following day, soon into a routine. I got through to Katie on the phone each evening, asking her about her day; shopping, lunch with her mum, recorded a new hit single. She had seen the news and worried about me, but I explained that I was nowhere near the fighting.

I spent my evenings in the huts typically, the previously clearly defined national groups starting to melt at the edges a bit, and now some decent gossip. We had a young British officer dating one of our lady doctors, Dunnow was dating a British nurse, two British NCOs had adopted two Kenyan nurses, and one of ours was dating a UN worker. Only the Chinese had had yet to mix it up a bit, but we were not hopeful. Booze had found its way in, in quantity, and the place started to resemble Mawlini. The senior officers had their own club in the hotel down the road and often played poker for money. A basketball hoop had been erected next to the hangar and a court marked out, a small football pitch marked out between the apron and the runway, games annoyingly interrupted by planes trying to land. The Chinese fielded a team, and won every game easily. Pissed off with that, we got a Rifles team down and thrashed them – only to be accused of bringing in the Tanzanian national team. I fetched fanta and coke often, I even did the beer run on occasion.

The Mi24 got its ammunition, and shot up the middle of the lake for practise. The Hueys went out with Hal everyday and all the pilots got some serious practice time in, including night flying. The Rifles put two men on each Huey, strapped into open doorways, and they practiced hot landings and hot extractions away from the town. We then found a deserted island down the lake about ten miles, so built a small hut on it, placing ten Rifles

on it to simulate wounded. Wooden targets were placed about to simulate the enemy.

So one fine morning the four Hueys and the Mi24 took off, the senior staff on a boat off the island with binoculars. The Mi24 flew in first, a fast assessment made and radioed back to the Hueys. The first Huey came in fast, hoping to blind the bad guys with a dust cloud, the Rifles opening up on the wooden targets as they approached. Rescue Force staff burst out, grabbed several simulated wounded and left in a hurry, the remaining Hueys repeating that manoeuvre. With the last man away, the Mi24 reduced the hut to shreds. We were ready.

The next morning, around half the Rifles and ten of our jeeps crossed the lake by ferry in turn, the Hueys and the Mi24 setting off – full of Rescue Force staff and kit, and the Dash flew the command staff over to a place called Kigeli, south west of Goma and not far from the border. The remaining staff boarded a UN Antonov, leaving just twenty nurses behind; huts were given up to whoever wanted them. Two hours later we landed at the new airfield, plenty of space to set-up camp on lush green grass, just two UN Antonovs in attendance, a few UN jeeps.

The airfield offered a central concrete runway, weeds growing out of cracks, but no tower, and little in the way of facilities other than tents. I wondered what the hell Bob Davies had meant by “secured” it. It turned out that the local police and army were on the perimeter, supplies were brought in by locals and “sold” to anyone who wanted to buy them, water raised from a well.

The Dash off-loaded its passengers, those passengers with little to do till the vehicles arrived. We waited for the Antonov, helping to off-load large tents, and set about raising them at the edge of the field, the kit from the Hueys placed inside. Two lorries trundling in caught our attention and they pulled up to us as we stood catching our breath: barbed wire, courtesy of Rudd. With gloves on, we offloaded the reels, carefully, before making a nice secure barrier between the tents and the perimeter, an enclave five hundred yards long.

The Dash returned with more people and kit, including five Rifles – blue helmets and M16s. We stuck them on the perimeter straight away.

At 3pm, with the sun low, the vehicles arrived in convoy, both Rescue Force and the Rifles. Four-man tents were set-up quickly,

holes dug and fires started, pots hung, jobs delegated. At sundown we were ready for the night; tents, wire, armed patrols, food and drink. The Antonovs came and went, wounded loaded and sent back to Kigoma, nothing we could do till we saw sight of the fuel trucks.

In the morning a local fuel truck turned up, paid in cash by Jimmy, and provided the jeeps with plenty of diesel. The first patrol was sent out to scout the local area and buy food, a second patrol sent to the nearest UN refugee camp, some five miles north. One patrol returned with vegetables and live chickens, the other with horrendous news of the camp. Three jeeps were loaded up, a few tents, and sent to the camp, finding plenty of business straight away, some wounded sent back to us to be shipped out. Doc Graham felt it unsafe to stay after dark and pulled back our people, to return in the morning.

The next day two aviation fuel trucks arrived, a day late, and we launched the first aerial patrol, a flyover of the camp and quick trip to the border and its lake, a flight past Goma before circling back. The news was of blocked roads, people trying to leave but being stopped by the Rwandan Army – who had pointed their weapons into the air and fired at the helicopters. We held a meeting as a UN tent sprung up, followed by a second tent across the airfield, more UN jeeps arriving all the time. We had more barbed wire than we needed, so ran a line around the rear of their tents, now fifty percent of the ill-defined perimeter covered.

A call came in around 3pm to the UN, and they rushed over to us; some of their staff were cut-off and being threatened. It was quite surreal, like someone reading the detail of a training exercise for us. With twenty staff to extract we fired up the four Hueys – I'd have to take one, the Mi24 readied. Each Huey had a single member of the Rifles in a blue hat, leaving space for seven or eight wounded, more at a push. With doors open, we lifted off in a line, everyone on the ground keenly observing.

En-route I was focused, checking my heading as I took point, occasional radio contact made, scanning the instrumentation, checking fuel and distance. Crossing the lake was reassuring; it meant my navigation was OK. I focused on a ferry stop across the lake and adjusted my heading, radioing the correction to the others, checking Mickey was still with us and relieved at the

sound of his voice. Using a small towel I wiped my face, then drank from my bottle.

A small town in the two o'clock position was a navigational marker, causing me to transmit, 'Five miles!' We climbed steadily over gentle, lush green hills, their serene image so far away from what I knew was happening on the ground. Over a rise I could see a tight valley and my target. 'Mickey, two miles dead ahead of me. Smoke it out.'

The Mi24 dived down in front of me, its image shrinking into the distance. 'Compound, white people ... maybe twenty, some locals, some wounded, soldiers on the road outside, three jeeps.'

'Be a love ... and move the jeeps,' I ordered. 'Rescue Force, holding pattern, high right and circle.' As I lifted the nose and eased right, off the original heading, I could see the Mi24 turn and slow, lining up on the jeeps. A flash, and a field threw up brown mud, a twenty-yard wide pawl of dirt and grass. Passing the compound, a half-mile to my left, I could see the Army heading off to harass someone else. 'Mickey, go high and circle. Rescue Force, follow me in, touch down in sequence.'

With a heaved breath I licked my lips and slid sideways down into the compound. The way this thing was painted, they could be in no doubt as to what we were. With Hal as a ghost in the left seat I checked the crosswind, the obstacles, the camber of the soil, and eased down with a bump, waving people forwards straight away. Over my shoulder I could see four UN workers and four locals clambering in, my maximum load. Pointing at a girl I indicated the left seat. A UN lady worker picked up the kid, opened the door and placed her into the seat. The instant the door was closed I pulled back, immediately feeling the extra weight: a heavy take-off scenario. Nudging slowly forwards, towards an open field and with just a few feet of clearance and the benefit of ground effect, I picked up speed. The field afforded me a good hundred yards to play with, and I lifted the nose before the trees worried my passengers. 'Use the field for heavy take-off, circle till everyone is full,' I transmitted.

Mickey was high above and circling like an angry bird of prey. I circled at two hundred feet, low enough to take a round, so I kept a careful eye on the terrain below. Ratchet was soon up and behind me, Dunnow next, Spanner last. As soon I saw him

skim the grass I headed off. 'Heading back, any problems?' They all reported in, no dramas. 'Mickey, two miles up front, please.'

'Bank right!' came back almost immediately. 'Crossroads full of soldiers.' We skirted around them.

The lake came into view five miles out, and I was now navigating by the setting sun: due west. I passed Goma, north of the town, turning southwest beyond it at the border. With the ghost of Hal in the left seat, disguised as a terrified little girl with a snot nose, I felt confident; fuel, heading, warning lights. Yes, I felt oddly confident, I just wanted to reach across and wipe her damn nose.

'Rescue Force Hueys to forward base?'

'Forward base?' came Jimmy's reassuring voice.

'Inbound, five minutes, no details of casualties, but I think we have some.'

'Jimmy, it's Ratchet. Got two critical.'

'Roger that, we're ready. Land in usual place. Out.'

I touched down smoothly, knocking off the engine as helpers rushed forwards bent double. None of my group seemed injured, but some were helped out. I walked around to my co-pilot and lifted her out, getting a smile.

'We wuz in da air.'

'We wuz,' I repeated, handing her to a nurse; someone else would wipe her nose. I stretched my back and took in the beautiful cloud formations in the distance, amber turning red, as the other pilots stepped up, the Mi24 winding down a hundred yards away.

'No worries, mate,' Dunnnow offered with a huge smile.

'No worries with an Mi24,' Ratchet pointed out. 'Otherwise, those soldiers would have put holes in us on the ground.'

We waited for Mickey and Yuri, then ambled along chatting, over to the command tent and Jimmy.

'Well?' he asked, looking us over as we lined up.

'Worked like we planned it,' I said, glancing at the guys.

'Mickey?' Jimmy asked our Mi24 pilot.

'Stuck a missile in a field, scared off the soldiers, no one hurt,' Mickey reported.

'Good. Get some food, some rest, 6am start.'

As a group we wandered to the mess tent, discussing the heavy take-off. We found Hal sat there, he had just arrived, and

recanted the story at length, picking his brains on maximum loading and heavy take-offs. I hadn't even noticed the TV crew, or the reporters.

The next morning we were ready at 6am, radios monitored at the command tent. Jimmy took a message, then called for me and Ratchet, Mickey and Yuri. He placed a finger on a crossroads next to the border. Facing Mickey he said, 'There's a company of regulars here, stopping traffic and killing at random. Drop 'em. Paul, Ratchet: fly at one thousand behind them, and pick them up if they get a mechanical fault. Oh, there's supposed to be a gunboat on the lake, shooting up people crossing the lake. It's the bonus prize. Go!'

Thirty minutes later I observed puffs of smoke from the Mi24, flashes on the ground at the crossroads, an exchange lasting five minutes. When Mickey banked away I followed, heading northwest towards the lake. After two passes to identify the gunboat, it was sunk, and we touched down within the hour.

As Ratchet and I walked away from the Huey, the sounds of other helicopters caught our attention, a line of Huey Cobras coming into view, followed by a few Hueys - but green, and some Bell 500s; the US Army had arrived. Don't know what they thought an Mi24 was doing on the airfield, but I'm sure they spotted it. Now I noticed a line of green trucks across the airfield, twelve of them, soldiers milling around and setting up tents. And the truck near our mess tent had a French flag on it. We ducked in, grabbing coffee and free bench space, French and American accents present, green clad soldiers.

Hal waved us over to him. 'This bum thinks he can fly,' he said, thumbing towards a US Captain, and not me. We sat, greetings exchanged.

'I read the book,' the Captain offered. If I had a dollar.

'Yesterday's trip was interesting,' I emphasised. 'Got more in the back than I bargained for, heavy lift off - but fortunately a flat field for a hundred yards.'

'Lucky.'

'Classic heavy take off,' I said 'As taught to me by the very excellent Hal here.'

Hal tipped his head in salute. 'Be invaded by GIs soon, some of whom think they can fly.'

'Was that an Mi24 I saw?' the Captain asked.

I nodded. 'It's Kenyan Army, we use it to ... ease the extractions. It does have a certain ... deterrent effect.'

'Our boys will be all over it.'

'Ten dollars a tour, ask for Mickey.'

Jimmy walked in, people stopping and looking up. 'Rescue Force pilots, from tomorrow you should have top cover from US Huey Cobras.' The pilots glanced at each other, Jimmy calling me. 'Paul?'

'Excuse me.' I stepped out.

'There's a TV crew and some journalists. The staff have already exaggerated yesterday's trip, so go be modest – at length. Oh, casualty figures are ten thousand wounded a week, twenty thousand a week crossing over.' He left me to it, so I headed off to find the press.

The TV crews already had footage of yesterday's landing, and today's return, so I sat in the Huey and answered questions, reliving yesterday's trip, playing up the Mi24 – Kenyan Army – fighting off the soldiers as we picked up the wounded under fire, dodging ground fire on the way back. I just hoped no one was about to start a new frigging book. The one line I gave that I thought was a bit naff in reflection, was "I don't ask my staff to do things that I wouldn't do". Christ, I didn't even want to clean a snot nose, let alone amputate an arm. I hoped it would be used in the correct context.

Walking back to the command tent I noticed Mac stepping off the Dash. When he reached me he fell into line. I said, 'I thought you were here already?'

'Nah, keeping the base at Kigoma going, sorting the supplies for here. But they're settled now, Bob Davies is running things smooth enough for now, Coup's over there.'

'Doc Graham OK?'

'Busy as fuck, six thousand in the camp - Tanzanians rounding them all up.'

'How many will it take?'

'Oh, good twenty thousand at least. Bit of a queue at the bogs!'

Reaching the command tent we ducked in. Mac updated Jimmy at length, then Jimmy updated Mac on the situation here, namely that we were staying permanently, a small outpost. Jimmy had put a call into Rudd and Cosy, so more barbed wire

was on the way, Cosy would pop over and find local builders. With Zaire's capital, Kinshasa, a very long way away, and little local representation, no one cared what the authorities thought about it. We were in Zaire, and staying put. And I was now grounded.

The next day I tackled some of the paperwork, made and received calls, and attended a clever UN fax-computer-laptop thing that was powered by wiring it to a jeep with its engine running. Faxes went out to Rudd, and poured back in to the constant sound of helicopters taking off or landing. At mealtimes I listened to tales of daring rescues, the US Army providing cover, Ratchet proudly picking up a few bullet holes. Our jeep patrols ventured out, the Antonovs streamed in and out, the Dash dropped in once a day with supplies, and I manned the fax machine.

More barbed wire turned up from Kigoma, needed because of local pilfering, and we finished the perimeter, a crude gate installed. A builder from Burundi came to see me and I gave him enough work to last the rest of his life. He came back the next day with twenty men and ten trucks, another twenty men the day after and more trucks. Foundations sprung up, not least for a tower and command centre building, a toilet block and a barrack room. By the end of the week he had sixty men working, at night sleeping in tents nearby. We paid in cash each day, and moaned at the slow progress. Actually, by African standards, their progress was miraculous.

Then we got our first casualty, a nurse at the camp up the road hit by a stray round aimed at someone else. She was evacuated to Kigoma, her prognosis not good. A medic was stabbed in the hand, by a refugee not happy at waiting, and so the Rifles had to go out with each patrol; I had to fax Coup, he had to call families.

At the end of the second week, Mac was sent back to run Kigoma, Coup sent back to Mawlini to handle things there, and Doc Graham was given command of Forward Base as far as Rescue Force was concerned; few Huey flights were being made now, no more heroic tales emerging. A large French-African peacekeeping force was sent in to the west of Rwanda, the killing slowed down and Jimmy told me to pack my stuff. Our work was done for the moment.

Flying out by Dash, we took six staff back to Kigoma with us, creating a permanent detachment there. They were called Rescue Force Tanzania and told to recruit locally. The hotel was finished, the rooftop bar and pool well attended. With a great many photographs of Chinese, British and Israelis working together hitting the newspapers, and TV footage shown around the world, we gave the visiting medics a timescale of two more weeks before pulling out; they would have been at Kigoma for just over four weeks, many hundreds treated. Jimmy invited up the Tanzanian Government and press, making a big thing of how helpful the Chinese were. The politicians thanked everyone, and got themselves photographed.

The next day we fired up the Dash and flew a few UN staff with us to Nairobi. After a four hour briefing with Cosy and Rudd we jumped on a 747 bound for Heathrow. We joined tanned tourists ducking our heads into the plane, emerging into the damp chill of London. Two cars were waiting, Jimmy insisting Big Paul went with me as I headed for the apartment to meet Katie, Jimmy heading off home.

I had been gone just over three weeks, and standing on the balcony in a chill wind it did not seem real. I found myself considering just which was my real life, that of my life here in damp old England, or flying around Africa in helicopters. I certainly knew which one I preferred. The TV news of Rwanda held my attention for ten minutes before I went out and bought several broadsheets, scouring every detail of the war; places I knew, organisations and people I knew.

Katie turned up that evening, mad as hell at me for performing helicopter rescues under fire; I had made the news, she had seen the news, and I wished I was back in Zaire.

Back at the house, two days later, I reclaimed my room; bags thrown down in a heap, pancakes ordered from Cookie. Karl sat with me and we played catch-up, tales of helicopter rescues, refugees, the Mi24. Sharon stepped in with a scrapbook full of newspaper cut-outs for me, then gently mentioned that there was so much paperwork I wouldn't be able to see my desk. Ten minutes later I found Jimmy and Sharon in our office. I placed down my mug of tea, sighed, and set about the paperwork. At

4pm Sharon said goodbye, Jimmy and me working on till 1am, food brought in at regular intervals.

Many of the faxes were confirmations of things done or bought, and needed only a quick eyeball to see that it looked in order, my initials in the corner. Sharon would enter the summary to a spreadsheet and I would review it again, the accountants going back over it a third time. The nightclub was my responsibility, so too Pineapple at the moment, and even the Kenyan hotels, Jimmy busy with the war.

At 1am, Jimmy said, 'Beer.' We raided the kitchen, beer and microwave burgers, settling around the coffee table. 'How's Katie?'

'OK. Bit of a whinge at the helicopter stunts.'

'The writer of the first book has started on the second.'

'What? Just for that one mission?' I challenged.

Jimmy smiled. 'No, it'll be called Rescue Force: Mission Rwanda, and will cover the whole deployment, which I'll scale back in two weeks, we'll go back down. The book will make the deployment look less smooth and more troublesome, more of a... struggle. It'll follow Doctor Jane Hicks, from when she signed up, through Swindon and Mawlini training, and on to her deployment. A human interest story – she's a rising star down there.'

'And my flight?'

He made a face and shrugged. 'Glammed it up a bit. Book will be ready quickly, that writer is out there now at Kigoma, taking snaps. Oh, we picked up three more casualties.'

'Who?' I asked, immediately concerned.

'Dunno wrote off a Huey –'

'He what!'

'Not his fault. French chopper came in one way, American choppers the other, he was caught in the middle, so slammed it into the deck. He picked up a back injury, this Jane Hicks was thrown out, nearly sliced by the rotors, two nurses with broken arms.'

'Shit,' I slowly let out. 'It's a write off?'

'Hal is chopping it to bits for spares, which was necessary anyway. Rotors are salvageable, so is most of it, just the frame busted up. Even the gearbox will come out.'

‘That’s something, I suppose. The cost can be offset against the spares.’

‘Dunnow is back flying, stupid sod,’ Jimmy mentioned.

‘What are the daily operations now?’ I asked.

‘Mostly jeeps to the camps, more wounded than anyone could cope with, still flying the worst to Kigoma. Some rescues inside Rwanda, but that’s mostly down to the French and Americans now. Battalion of British peacekeepers in there as well, it’s slowing down a bit. So far and estimated fifty thousand dead, way under what I thought there’d be.’

‘Yanks get a Magestic nudge?’ I knowingly asked.

Jimmy nodded. ‘And Sykes got the Foreign Office to nudge some African leaders, get the peacekeepers ready early on. I got Kenyan and Tanzanian peacekeepers ready in the first week, they entered from the east. We’ll pull back our people in two weeks, make a big fuss of them, a parade in Nairobi. Rudd’s already on it, we’re flying Kenyan press to Kigoma and Forward Base, plus any foreign press that want a look. Some days there’s more fucking press than white uniforms!’

‘Any new recruits?’ I idly enquired before sipping my beer.

‘A few in Kenya, four I think, eleven here – but mostly Europeans. Mackey has been advertising for us around Europe; French, Dutch, Belgians. We’ll start a course at Swindon in a few weeks. The detachment at Kigoma is permanent, they’ll do their own local recruiting, and the Forward Base – under Doc Graham – will recruit locally, but not Hutus.’

‘Not ... Hutus?’ I puzzled.

‘It’s complicated. The Hutus pushed out of Rwanda will kick up a rebel army, attacking Rwanda and Tutsis indigenous to Zaire. The Tutsis will fight back, their leader going on to become future president of the then DRC, so we have to switch sides and stay in his good books; we have to walk a fine line. A year from now we’ll meet the good General, helping him along against the Hutus, who will – through no fault of their own – go on to be rebels and a right pain.’

‘And after we pull back?’

‘Steady build-up and training, we’re split three ways now, a strain on resources, but lots of real work being done, experience being accrued. And *that* ... is the important bit. We’ll have to start tackling Somalia soon as well.’ He sipped his beer, then

reached across and dug out a newspaper, passing it over. 'Chinese have been busy. Three wrecks dredged up ... and I mean *dredged* up. They took a great big barge that normally clears shipping channels and dug up the area around the wrecks, no divers. The boats timbers were smashed to pieces, the gold and silver sieved out.'

'Does the trick,' I said as I scanned the paper. 'Archaeologists happy with this stuff on land.'

'Very big haul: chariot of gold, lots of emeralds. It's all heading to a Beijing museum.'

'Says here it's priceless,' I queried.

'It's *ten million* priceless, since they can't sell it. The gold from the wrecks they can. They've given ten million to Tanzania towards the refugees there -'

'Making themselves look good with *our* fucking money!'

Jimmy laughed. 'It serves our purposes just as well. They chucked Rescue Force Kenya another ten million. With the money in Tanzania I'll buy an Mi2 helicopter and get some *out-of-work* Russian pilots, stick it in Kigoma. Anyway, how's the club?'

'Down a little on takings, it's settled after the initial buzz of opening, but still a great profit,' I reported. 'Pay for itself in a few years.'

'The singers keep it full,' Jimmy noted.

'When do we tackle one in London?'

'When we can get the property. The ideal one won't be available for another ... three years at least. Although...'

'Although?' I repeated after a moment.

'They eventually sell the hotel because of poor business and poor maintenance, so...'

'We could help them to ... suffer less business, a flood, some cockroaches...'

'I don't feel bad about doing something like that, because the owners will do nothing but suffer hardship for the next three years, then go bust and lose a lot of money. If they sell to us now ... then they're much better off.'

'Get Hotel Inspector Big Paul up there,' I said, and we laughed.

'Pineapple figures OK?' Jimmy idly enquired.

‘Obscenely profitable, States doing well,’ I reported. ‘Oh, Johnsons in Cardiff is costing us a bit.’

Jimmy shrugged. ‘Limbs to Afghanistan and Africa. It’s a tax write off. And the Students Union wants more money.’

‘They what?’ I challenged. ‘Cheeky fucks.’

‘It’s a good thing, lots of Russians and Chinese students seeing London. I’m going to start Russians going to New York soon, then a round the world 747 carousel ride.’

‘Round the world?’

‘London, Moscow, Beijing, San Francisco, New York, London. Students can stop off for a week at each place, or miss one out. We’ll start on Russia in a few years, still a mess over there at the moment.’

Faulty Towers

At the two hundred room, five storey Madson’s Hotel, Chelsea, Big Paul ripped a pipe out of the wall on the top floor, water gushing out. ‘Help!’ whispered. ‘Anyone? No, best leave then.’ He returned to his own room unseen.

A knock on the door came half an hour later. ‘Sorry, sir, we need to evacuate the hotel,’ the maid informed him, the corridor full of flustered guests.

‘What? What for?’

‘We’ve got a burst water pipe. Sorry.’ He packed and left, picking up a letter at reception; a free stay in the future.

Three days later he was back, dressed smartly. At 2am he slipped into the storeroom behind the kitchens, a sandwich box full of cockroaches scattered behind fridges, a few dead mice and a two dead sparrows. In the loft he stepped carefully across rafters, opening a plastic bag and dropping four dead pigeons into the main water tank; the hotel inspection was due the next day, the inspector ten grand better off. For some strange reason the large hotel was closed down for seven days, another inspection fixed for that date. It made the London papers.

The day before the inspection, Paul and Ricky climbed over the roof from a nearby building, entering the near empty hotel from a skylight. Only night clerks and cleaners were about on the

lower levels, no guests. All was quiet. In the roof space they planted numerous dead pigeons, a few in the water tank, lifting the new netting. Dropping to the floor below quietly, they entered an open room, a few cockroaches sprinkled into the bath. With most of the doors left open they repeated the exercise in several rooms, a few towels stuffed around toilet bends. On the back stairs they disabled cameras as they went, no one in attendance to monitor the screens in the hotel's main office. In the kitchen storeroom they again scattered cockroaches, a few dead mice placed strategically. On the way out they stopped, glanced at a pack of milk cartons, glanced at each other, then grabbed numerous milk containers. They reversed their path back up, cameras enabled, milk spread into the carpets of each floor, plus many rooms, the cartons removed. Back over the roof, they slipped quietly into the next building.

The hotel failed the inspection, shut down for thirty days, all guests contacted or turned away. It was a disaster, the hotel again making the papers. The next day an estate agent, a young lady, contacted the owners; a buyer from Kenya was interested in a London hotel in Chelsea, and were they interested. The owners vowed to fight on stoically, but suggested a price none the less. The cheeky estate agent returned the next day, having asked for the offer price plus a hundred grand, and could she have a bigger cut if they sold. The owners had now warmed up to the idea and they walked around to the estate agent's office as she faxed River View golf complex. Ten minutes later an agreement in principle came back, depending on timescale. The owners sat in a coffee shop and weighed their options, returning to the estate agents and sending an agreement for an immediate sale. They got back a fax detailing our expensive solicitors in London, the money sat waiting. All they had to do was to walk around with their own solicitors and sign, which they did the next day. We now had a large, but run down and closed hotel in Chelsea, owned through the proxy company that controlled the Kenyan hotels. The hotel's junior staff were let go, the senior staff offered positions, then given indefinite paid leave.

Jimmy stood in the empty hotel with a removals company, a builder, a cleaning company and Rolf the young architect. 'Beds, bedding and fittings go to Kenya. Desks, tables and chairs as well. All of it. Carpets in the bin, wallpaper off, roof fixed, loft

converted. When I return I want a very empty, yet very clean hotel. Rolf, you're in charge.'

Withdrawing

We landed back in Nairobi just twelve days after leaving. Rudd picked us up in his jeep and drove us straight up to Mawlini, giving us a chance to catch-up as we went; the back of the jeep became a mobile office. By time we reached Mawlini Rudd was dosing, Jimmy driving, but we had covered all the paper work. We grabbed rooms in the quiet UN hotel, the Rescue Force hotel bar closed for now, not least for a lack of thirsty patrons. It was 2am and dead quiet, so we simply went to bed.

At 6am I found Jimmy in the quiet restaurant, a few UN staff about, mostly on stopovers. At 7.00am we drove around to the Rifles, taking time with many of the men as they ate breakfast or exercised. They had all been injected by Doc Adam – without knowing – and so went for a long run at 5.30am every morning, something of a regimental tradition now. We spoke to the senior officer about deployments and training, finding one man shot and wounded in Zaire, but recovering well. They had thirty men deployed at Forward Base, forty at Kigoma on rotation to Forward Base, and plenty of bodies left here. Their new base was impressive and growing, six long barrack rooms, three storeys high, classrooms and lecture halls, a motor pool with large garages for jeeps, an officers quarters and command centre, a bar and two very busy restaurants. New recruits were coming in thick and fast from around Kenya - a good job a precious commodity down here. A new selection process had been set-up near Nairobi to pick the best men; we wanted intelligent men, more than fit, since we could cheat on the fitness. At 8am we dropped in on Coup, Rudd already in the office and going through paperwork. We sat and stretched out.

'Right,' Jimmy began. 'Let's talk about an orderly withdrawal and re-organisation. We want to leave a decent group in Zaire, a detachment in Kigoma, but *all of them* back here for ... a quick rest.'

‘Got four new bodies, but no fucker to train them,’ Coup pointed out.

‘Put them on the ordnance for now, the Rifles instructors can take them driving.’ Coup took notes. ‘Doc Graham will eventually stay in Zaire, so let him have his pick of twenty nurses, four doctors when ready. The Rifles stay in Zaire, the Huey’s withdraw for now.’

‘And the scrapped one?’ Rudd asked.

‘That stays there, we’ll cover it over. At Kigoma we’ll have two doctors and ten nurses to cover the camp after the break. But make sure that everyone comes back the day after tomorrow for a parade in Nairobi, then a small holiday before getting back to it. Contact Forward Base and get the Hueys back to Kigoma today with the Mi24.’ Coup took notes. ‘Tell Mac we’ll be with him tonight, get the Dash up here.’

‘It’s here,’ Coup pointed out.

‘Grab it, don’t let it leave.’ Tubby opened the door. ‘Talk of the devil.’ We stood and greeted him, handshakes exchanged. ‘We’ll fly back down with you.’ Tubby sat in the corner. Jimmy continued, addressing Coup, ‘You’ll need to get started on recruiting locals in Zaire, especially nurses, some local doctors. Same for Tanzania, looking to get administrators for both.’

‘I know someone,’ Tubby put in. ‘Former diplomat, knows the region very well. He’s got to be ... mid fifties, has a small plane at Nairobi aero club, beastly wife.’

We laughed. Jimmy said, ‘His name?’

‘Mitchell Lawson-Smythe,’ Tubby said, putting on an accent.

‘I know him, tell him he’s hired.’

I asked Tubby, ‘Will he re-locate to a shit hole like Kigoma?’

‘If it gets him away from *her*...’ Tubby suggested.

‘That just leaves Zaire, and we need a local facilitator, black market.’

‘I know a man down there,’ Rudd put in. ‘UN warehouse manager in Bakuva.’

‘Be busy at the moment then,’ I suggested.

Rudd shook his head. ‘No, the UN are re-organising, two warehouses into one. I think I could get him, he asked about a job before. He’s from Zaire, a black.’

‘Fine,’ Jimmy said. ‘Oh, Rudd, grab that Mi2 helicopter in Tanzania, beat them up on price.’

‘I have some Hueys lined up, former South African Army,’ Rudd informed us. ‘The Kenya Army, they’ve offered some Air Force pilots that don’t have much fuel to fly and nothing to do. They already fly helicopters.’

‘Good,’ Jimmy approved. ‘Get the Rifles five Hueys, plus spares, grab their pilots when we have the aircraft. Oh, and the Mi24 is now official Rifles property.’

‘Mickey and Yuri stay on?’ I keenly asked.

Jimmy nodded. ‘They can train others.’

‘Replacement Huey for us?’ I asked.

‘Not till we have more qualified staff.’ Jimmy turned his head to Tubby. ‘You made a start, lazy git?’

‘An hour here or there, o’ exalted one. Been *busy*! But read the book.’

‘Zaire will be scaled back, so you’ll have the time,’ Jimmy told him. Facing Coup, he asked, ‘All building work here finished?’

‘Finished, but no bodies to put in them,’ Coup replied. ‘The four new guys are rattling around in that hotel. They eat over at the UN. Oh, you seen the new ranges?’

‘No?’

‘The SAS lads built a small village outside the perimeter, couple of miles up the road; houses, ditches, targets. It’s a live fire range, used every day just about.’

‘That’s OK, I asked for something like it,’ Jimmy acknowledged. ‘How many Rifles in total?’

‘Two hundred and fifty,’ Rudd answered. ‘You want recruitment slowed up?’

‘No, not at all, keep it going,’ Jimmy quietly urged. ‘Soon we’ll split them by tasks.’ He faced Tubby. ‘Had any experience of flying paratroopers?’

‘Can’t say so,’ Tubby responded. ‘Will they be jumping out of the Dash?’

‘Yes, but that’s six months away. I’m going to give the Kenyan Parachute Brigade some money for fuel and practice. We’ll put the Rifles through para’ school, then they can go onto the Dash for small group insertion.’

‘They did a good job in Zaire,’ Tubby admitted. ‘I had my doubts, but without them our lily white colonial arses would have been exposed.’

‘I think Somalia will only get worse,’ Jimmy informed everyone, still grinning at Tubby. ‘And we’re exposed here.’

‘Hardly,’ Tubby scoffed. ‘The reputation of the Rifles has reached Somalia, they avoid our stretch of sand now.’

‘Good,’ I said. ‘How many in our camp at the border?’

‘Five thousand, and growing,’ Coup reported.

‘How many Somali men have we recruited?’ Jimmy asked.

‘About fifty,’ Coup answered. ‘But not much training going on with everyone away.’

‘Get the Rifles teaching them, driving and shooting,’ Jimmy suggested. ‘Any trouble at the camp?’

‘The Rifles shot some Ethiopians,’ Coup answered. ‘Armed with machetes and robbing the women.’

‘We’ll recruit more Somalis inside their borders,’ Jimmy suggested. ‘I’m going to make contact with their government, what it is, and the local warlord, get some relief work going over there.’

‘UN has just about pulled out,’ Coup cautioned.

‘Which is exactly why *we* should go in,’ Jimmy insisted. ‘We can set a perimeter, then the UN can return.’

‘You out to bring peace to the region, Jimmy?’ Tubby asked.

‘I’ll do what I can,’ Jimmy told Tubby with a fixed stare. ‘Right, Coup, Rudd, advertise around Africa for more doctors, we’ve got eleven in England about to start a four week course. Once they’re here, find another forty Kenyan nurses.’

‘The profit from the beach hotels is coming here now?’ Rudd queried.

‘Yes, then the profit from the safari lodges when completed; all funnelled into Rescue Force.’

‘There is a lot of money left in the mine operation, not being used,’ Rudd noted. ‘Millions.’

‘Siphon it off for the Rifles. You got the Chinese money?’

‘Yes, ten million pounds.’

‘Chinese?’ Tubby questioned. ‘Ten million quid ... from the Chinese?’

Rudd explained, ‘The Chinese Government donated the money to us.’

‘The ... red Chinese Communist Government?’ Tubby loudly queried.

‘Fine upstanding people,’ I said.

‘You two ... are into some strange stuff,’ Tubby suggested. ‘Someday, you’ll have to explain it to me.’

‘Someday,’ Jimmy repeated with a smile. ‘Right, make plans to bring the gang back, all of them. Ask the nice people at UN for a plane.’ We stood. ‘Rudd, with us.’

We walked out into the morning heat, sunglasses placed on, and towards the mine school.

Jimmy began, ‘Rudd, talk to the politicians, and Bob Davies when you get a chance, about us operating in Somalia – similar mandate as Zaire. Then make contact with the Somali Government about permission, for what that’s worth. But get it anyway.’

Rabbit was greeted in his office, asking about Zaire and sounding a little jealous at being left out. His operations here were now running smoothly, three courses a year with forty people on each course, a hundred and twenty new mine clearance workers a year. We now had forty deployed into Afghanistan, working hard at clearing Russian mines; but two killed, and two maimed. Jimmy had resisted creating our own mine clearance group, since we’d have the added burden of many injuries and deaths – and the insurance, red tape and payments associated with it; it would be down to the UN and others to operate the staff we trained.

We packed small bags and boarded the Dash an hour later, ferrying twelve UN workers down to Kigoma. I took right seat and handled the take off, getting used to the tricky flap settings; there were so many of them. Remembering my first flight on this runway with Jimmy, the old Cessna, I decided to practice a heavy takeoff. I eased forwards the four throttles on the apron and taxied around at speed, not pausing, and slowly gaining momentum. We passed take-off speed just over a hundred yards along the runway, this aircraft designed specifically for short take-offs, but I did not pull back on the stick, I kept going. With the end of the runway looming large - our high speed now dangerous on the ground, Tubby glanced at me, and I eased her gently up and over the UN sheds, a gentle climb angle as I banked to the west.

‘Heavy take-off practice,’ I said, catching his look.

‘You’re not in Huey now, boy, and we’re not overloaded.’

I set the autopilot at altitude, a heading for River View safari lodge. Easing out of my co-pilot's chair and joining the passengers, I chatted to the staff - who had all read the book. At least now I had some new tales to tell. We refuelled at our grass strip before setting off for the longest leg of the five-hour flight, arriving over Kigoma as the sun touched the horizon. Tubby landed us smoothly, space on the apron to park for a change. The Hueys, three of them, were sat on the grass against the fence, the Mi24 nestled into a corner and looking menacing in the half-light. We disembarked with the UN staff, walking to the hotel, an hour before the next command meeting was due, assuming they were still being held. Rooms were allocated to us on the top floor, so we dumped our bags, had a quick wash, grabbed a leisurely tea, then walked around to the tower, finding Mac and Bob Davies attending paperwork.

'Jimbo!' Mac greeted, standing. 'Heard you were on your way. We pulling out?'

'Most are, some nurses will stay.' Jimmy leant across the desk and shook Bob's hand.

'Why you moving them back, only been here four weeks?' Bob playfully criticised.

We sat. 'First, for a rest. Second, a parade in Nairobi.'

'A parade?' Mac repeated.

'For everyone in Kenya to see what a great job you're doing, Mac,' I said.

'You're pulling back for that?' Bob questioned.

'Publicity ... is our life blood,' Jimmy emphasised. 'We need the people on our side and backing us, or we're nothing in the future.'

'Your writer guy has been around,' Bob informed us.

'Not *my* writer guy, we allow him access. He's going to do a book on the deployment - you'll both be in it.'

Bob and Mac exchanged looks. Mac asked, 'Rest of the gang driving over tomorrow?'

'Yes,' Jimmy replied. 'Four jeeps left over there, two left here - and about twenty collecting dust in storage at Mawlini. After we re-group we'll need to decide on rotations. Doc Graham wants the command job in Zaire, so that's his, and we've got two administrators coming; one for here, a local for Zaire. But I don't

intend to keep more than eight here in the short term. Those jeeps that drive back ... will stay back.'

I checked my watch. 'You still do command meetings at 8pm?'

'Yep, they's twice a day regular,' Mac responded. 'Although we do sometimes have a wee drinky at the evening session.'

'How're the national groups doing? They playing nice?' I asked.

'Very much so,' Bob answered. He eased back, 'When Jimmy said that he would get them here I was doubtful, even more doubtful about them working together, but they're inseparable.'

'Got a few romances on the go as well,' Mac put in with a smile. 'But no Chinese. And the China boys, they fetches some food from the market twice a week and cook us all a meal. Bloody good grub, considering the local supplies. And your hotel up the road - wees call it the honeymoon suite. The couples book rooms when off duty, get away from here.'

'Even got an Israeli guy with a English doctor!' Bob put in.

Jimmy checked his watch. 'Let's go meet and greet then. Mac, pack afterwards, out in the morning.'

'Bugger, gunna miss Chinese Night tomorrow,' he said, shaking his head.

The restaurant now housed numerous notice boards, maps and even personal messages for people passing through. Even though finished, it had not yet been used for any meals, the focus still being the cosy mess hut. A handful of people sat chatting, but jumped up and issued greetings when they recognised us, loud welcomes offered. The British Army officers now sported beards, as did some of our lads, a few items of uniform having been customised. The Chinese officers wandered in on time and greeted us warmly, so I practised my Chinese on them.

The senior officer stopped dead and loudly proclaimed, 'No, no, my sister is not a goat!' Everyone focused on me, I must have looked horrified, then they burst out laughing. The man added, 'Your words are correct, I make the small English joke.'

We greeted our staff as they crawled in, the flyers loudly proclaiming their welcomes, hands in the air. The Israelis looked neat and tidy, the best of the groups, but took the piss none the less; we were "part-time workers".

‘When we heard someone wrecked a helicopter we thought it was you!’ they offered.

With the UN staff now ambling in Jimmy called everyone to order. ‘Ladies and gentlemen, bearded layabouts, fools and heroes. On behalf on myself, and those around the world who have yet to appreciate you, I thank you all.’ They clapped each other, rude comments exchanged. ‘As most of you know, day after tomorrow is exit day; four weeks comes around quickly. From tomorrow morning there will be no more UN flights bringing wounded here, and the situation in Rwanda is getting better by the day. There is an American field hospital -’ They booed at length. ‘- at Forward Base, so the wounded will get some proper treatment for a change.’ They booed again. ‘So long as they can afford the bills!’ They laughed.

‘You’ll be happy to know that photographs of your hard work, and international co-operation, have gone all around the world.’ They glanced at each other, a few approving nods exchanged. ‘You will have also seen a writer skulking about taking snaps. He’s the guy who wrote *Incident at Baardheere*, and he’ll write another book about this mission – so I hope he got all your names down right. I will send each of your units a draft – just to check. And yes, Dunnow, your ... *mishap* will be in it.’

They laughed at him, scrunched up papers thrown at our Australian Huey pilot.

‘For Rescue Force staff, because they are *volunteers* – no *governments* nudging them along – there will be a parade in Nairobi.’ The Rescue Force staff cheered. ‘And ... a fly by. So Dunnow, you’ll be in a jeep that day.’ He protested his innocence.

‘So, I want all Rescue Force staff packed up tomorrow afternoon, ten nurses will remain at the camp. The rest fly out tomorrow, so Huey pilots – *and* Dunnow – you can leave in the morning when it suits you, Mi24 back to Mawlini. International military groups: your planes should fetch you day after tomorrow, and once again *thank you* ... for all you have done here, for the lives saved, but more than that ... thank you for showing the world that your governments may not get along, but the medics of the world do.’

They applauded.

‘And let us not forget the people who made it all possible, the United Nations.’

Bob gave a regal bow, getting a few rude comments.

Jimmy concluded with, ‘If you have any operational matters, please carry on, I need to stuff my face.’

We climbed to the rooftop bar, our first time, and found it just about full, many greetings shouted, people waved back at. The pool was empty, but lights illuminated it from below, the blue water now inviting. We grabbed a free table and sat, ordering food and beer. Our flyers appeared at the door, Dunnow diving into the pool and exiting the other side, sitting down at a table with the nurse he was seeing and creating his own puddle.

‘I thought he had a bad back,’ I quipped.

‘They say ... swimming is good for the back.’

Tubby’s wife, Sue, appeared with the soon to be famous Doctor Jane Hicks. Jimmy beckoned them over.

‘Please, have a seat, ladies,’ Jimmy requested. Addressing Jane, he said, ‘Have you met the writer?’

‘Writer?’ she puzzled.

‘The guy who wrote *The Baardheere Incident*.’

‘He’s here?’

‘Yes, was a day ago. He was after you.’

‘Me? But I wasn’t there.’

‘No, he was after you for a story on this mission, a *human interest story*, someone who had just joined, got caught up in a bit of action, you know.’

‘Well, why me?’ Jane puzzled.

‘They went through the files and picked you out, not sure why. So he’s going to want some background, and an opinion of someone like yourself – looking through the eyes of a new recruit; books like that should be good for recruitment in the future. So at some point in the next few months you’ll be sent to the UK for a week to go through it with him. In the meantime, when you’re back at Mawlini, I want you to create a timeline of what you’ve done since seeing the advert for us.’

‘Oh. Well, I keep a diary,’ Jane offered.

‘Excellent place to start. And he’ll want some career history from university.’

‘You’re going to be famous,’ Sue approved. ‘Not just for falling out of a chopper.’

‘I didn’t fall, it was *his* fault,’ Jane said, an accusing finger pointed at the back of the soaking wet Dunnnow. ‘Bloody Wombat fly-boy there.’

Over the meal we got to know Jane, innocuous questions asked. It turned out that she had been involved in a bad accident after medical school and had spent six months in hospital – the wrong side of the medical chart, lost her mum to cancer two years later and that her dad died in a road accident a year before joining us. And now I quietly realised why Jane had been *picked out* by someone; this was a genuine human interest story.

For many hours we chatted to the staff, getting around a great many of them, still at the bar when people checked watches and headed off in a semi-disciplined manner. By midnight it was just about empty, two of the Rifles taking up station; not to secure the bar or even the hotel, and certainly not to remove drunken revellers, but because the rooftop bar gave a commanding view of the base. Jimmy chatted to them both at length, and I stared up at the stars, thinking about a great many things, including Katie. And why I missed her down here, yet often longed to get away from her in the UK. It was one of those puzzles of the human condition that I would never solve.

At 6am I said good luck to Hal and the flyers, jealously watching them lift off in sequence, the Mi24 following. I’d bet we were not popular with the towns folk, their shacks must have been shaking. The Dash was made ready at 9am, Tubby and Sue at the controls, twenty-two of our staff to be taken back, plus Mac and us. We said goodbye to the national groups, who had come out to see us, then headed off into the sun, this time a genuine heavy take-off with all the kit on board. An hour and a bit later we over-flew our Hueys en-route, Tubby informing us, and people peering down. Three hours, and we landed at the grass strip.

After a toilet break, time to stretch legs and for people to smoke, we re-boarded the flight, now fuelled, and continued on up to Mawlini, landing in the late afternoon sun, my favourite time of day up here; the sand adopted an amber glow, so too the sky, and a calmness descended. Off-loading on the apron, our staff dumped their kit in their rooms and headed straight to the bar, some to the pool. Mac reclaimed his office, and we helped him and Coup tackle the paperwork for an hour, satisfied that the

major problems had been dealt with. Coup pointed us towards the garage and we inspected ten old jeeps that had been enlivened with a good wash, and a coat of paint by the Rifles. They all worked, so we would have plenty of jeeps for the parade the next day. But since Nairobi was a four hour drive, we sent down two Rifles in each jeep that evening. The men were in on the parade, and had spent the past few weeks practising their marching. From what I could see, their display team was definitely ready.

Making ourselves unpopular, we stopped alcohol sales, reminding people that they were up at dawn for the flight down. Our second batch of staff would fly direct to Nairobi, staying in a hotel for the night, the jeeps hopefully arriving tonight at the same hotel. There would just be time for a quick carwash in the morning and, hopefully, a shave for some. Coup and De Silva had been furnished with white jackets, so too Rudd and Cosy, to swell the numbers. The twenty remaining Kenyan nurses would take pride of place, and Rudd had made up thousands of small Rescue Force flags to give to children, large Kenyan flags to be draped over jeeps. Since the President would be there, I was nervous about the discipline of our lot. But at least they would all be tired.

At Dawn we lifted off, thirty in the Dash with us, some lying on kitbags at the back, a short hour and half flight to Nairobi. A bus waited with Rudd and Cosy and we headed over to the hotel, finding the street almost blocked by white jeeps double parked, twenty-three that I could see. The staff were still having breakfast, the restaurant packed, just a few surprised looking guests wondering what the heck was going on. Our lot were not only clean, but clean-shaven thankfully, and the hotel had cleaned their jackets overnight.

Jimmy called them to order as our busload stepped inside, the hotels other guests inconvenienced. 'We'll be leaving here in thirty-five minutes, please use the bathroom first, have a cold drink and keep a bottle in the jeeps.'

'Where are we going?' an elderly guest asked, making me smile.

'We'll drive around to the rear of the Government buildings, then driving around the city centre *very slowly*, not least because I want two Kenyan nurses with Kenyan flags sat on the top of

each jeep. A convoy of Rifles will be behind us. Back at the Government buildings we'll halt and park up, getting out and being welcomed back by the President, lots of photographers and TV cameras. He will ask you questions of why you joined, what happened in Zaire, etc. The Rifles will then march past. There will then be a reception inside for us, and the officers of the Rifles. The men of the Rifles will be inspected at the rear of the Government buildings. Oh, when we halt there should be a flyby. Dunnow is up there, so keep low. At least we won't be presenting him to the President. Any questions?'

Everyone was happy enough. On the dot we mounted up and drove in convoy to the Government buildings, two nurses in the back of each jeep, Rudd supplying the flags, and already signs of crowds gathering. At the prescribed minute we helped the nurses onto the sturdy roof racks, flags held across knees, and set-off at a snails pace, police outriders stopping traffic ahead of us. At the end of the first road we turned onto a main avenue, finding the pavements jammed with spectators, many children stood waving flags.

At a crawl, we advanced as a long white snake, twenty-three gleaming jeeps, the windows wound down and the crowds cheering more enthusiastically than I would have guessed. We reached the front of the Government building, a red carpet and podium set out, thousands of people stood on the gently sloping grass and steps. The first vehicle pulled up ten yards past the podium, causing the rest to halt in sequence, jeep number twelve pulling around and remainder double parking. The nurses were helped down, not that the fit ladies needed any help, and we formed up, Jimmy insisting that the staff went up and around first. Each got a handshake and a thank you, a few words exchanged, before waiting below the podium in a line. Half way through that process the Huey's flew over, circling twice. When they came back around slowly I puzzled just what the hell they were doing. They flew in slowly over the vehicle free avenue at a hundred feet, turned and performed the podium bow flawlessly, then flew on. Bastards. Hal had taught it to them in Zaire. As I stood there, teeth clenched, I thought, fuckers!

The President gave his speech, welcoming us all back, the Rifles marching along in style and to great applause. The government officials led us inside and to the reception, drinks

offered. Hundreds mingled in the large room, many Kenyan officers in uniform, dignitaries, the Defence Minister I recognised. The Zimbabwean President came as a bit of a shock, and I avoided him, finding Jimmy.

Whispering, I said, 'The Zimbabweans are here?'

'Yes, and the next African Union meeting will be held at the golf course. He, will be an honoured guest.'

'Are you *trying* to upset Sykes?'

The Kenyan President approached us, his aides whispering in his ear. 'Hello again, and thank you for all you have done.'

'It was an honour to help,' Jimmy said with a bow as he shook the President's hand.

Out of the corner of my eye I caught the Zimbabweans closing in, and held my breath. The Kenyan President introduced Jimmy to the Zimbabwean delegation.

Jimmy said, 'It is an honour to meet you, Mister President.'

'Not many of your countrymen feel that way,' the man said in a slow and deliberate voice.

'Since they have *unfairly* imposed sanctions, I will lift some of my own, and welcome you and your government to stay at my golf lodge any time you like, free of charge.' I blinked.

'That is most gracious. I have heard about it, and about you, Mister Silo. Today we looked at the farming college you have set-up. I note, that you dismissed all the whites there.'

'Africa, is for the Africans, sir.'

'But you own much land here.'

'All profits stay in Kenya, they go back to the people,' Jimmy explained.

'An interesting approach, for a British white man.'

'May I suggest, Mister President, that if I were to ship medical supplies to South Africa, through your fine country, that they be ... borrowed along the way.'

'That would not please the United Nations, who see fit to impose sanctions upon us.'

'I would not be breaking any sanctions, since your countrymen would be stealing the convoy, sir.'

'You make thieves of us, for a good cause,' the President said with a chuckle. 'Another interesting approach. We will visit the golf hotel soon, maybe to talk again.'

'I will make myself available, sir.'

They wandered off, leaving me wondering just what the hell Jimmy was up to. Sykes would be fuming.

The function went on for half an hour before Jimmy started nudging white uniforms out. Everyone's kit was already stowed in the jeeps, so they could drive off immediately. We left Rudd, Coup and De Silva to bond with the politicians and spread the good word of what we did, and grouped-up outside. Jimmy called them together.

'We have one more function to perform in Mombassa –' They groaned. '- where we'll stay the night, then you have six days off.' They cheered sedately, still a big crowd around us. 'It's a three hour drive, so let's get started people.'

Half an hour into the trip I could see our Hueys in a line, a mile or so north of us and heading in the same direction. I knew Jimmy had a surprise arranged, but he would not give me all the details. We drove past Mombassa, on the road to the hotels, people now asking about the golf complex – was the presentation going to be there? We pulled into the old River View hotel at 2pm, the day hot, and I noticed the car park empty, enough room for all of us with some jeeps on the grass. Jimmy assembled the puzzled faces, leading them through to the beach bar. For a moment, I oddly thought that I recognised some of the faces in the water.

Jimmy stood on a bench. 'Ladies and gentlemen, fools and heroes. The next presentation – has been cancelled.' They glanced at each other. 'This hotel is empty except for a few people you might know. You are booked in for six days, the bar is free.' They cheered. 'Oh, and last one in the water is back on duty tomorrow!'

The Kenyan nurses stood around looking puzzled as our men rushed to the water fully clothed and jumped in. I considered what the paying guests might say, Jimmy informing me that they were none down here, as the British Army Colonel and his Israeli counterpart walked out.

I shook his hand. 'You look familiar.'

'Thanks for all this, very kind of you,' he offered. 'Top notch spot for the team.'

The Israeli major shook my hand. 'My family have flown down, Jimmy paid for it.'

'I'll take you diving if you like, it's better than Eilat!'

‘I’d like that.’

Dunnow, Ratchet and Spanner walked out. ‘This where the party is?’

‘Get yourself a cold one, mate,’ I said in an accent. ‘It’s all free!’

Jimmy tapped me on the shoulder, then pointed. I recognised the figure in the bikini coming towards us; Katie. Oddly enough, I was very happy to see her and rushed across, picking her up to whooping calls and rude comments from the guys; *get a room!*

‘When did you get here?’ I asked with a huge smile.

‘Got here late last night. Jimmy organised the surprise, mum’s over there under a tree.’ As she said it I recognised some UN staff.

‘Best say hello then.’ I lead her off to the trees.

I emerged from our hut with Katie around 7pm, joining Jimmy and Jean in the crowded restaurant, the Kenyan nurses still looking a little bewildered and out of place, most people now in civilian clothes. ‘The children playing nice?’ I asked as we sat, Katie getting many glances from the gang, especially the British soldiers.

‘Yes, all happy enough,’ Jimmy explained. ‘Got some excursions organised as well; a day shopping in Mombassa, some boat fishing, a little diving.’

‘No Chinese?’

‘No, they’d not appreciate it much – they don’t drink, and their bosses wouldn’t appreciate it either if we drove them from the straight and narrow path of good communist values.’

I noticed Cosy and Anna and waved. ‘Rudd not down?’

‘He’s holding the fort,’ Jimmy said as a waiter closed in, the man soon taking our orders for drinks and starters.

‘You’re looking a bit pink, Jean?’ I noted.

‘Caught the sun today, was only out for an hour or so,’ Jean said as she examined her arms.

We ate with a boisterous background, half the gang over at the second beach hotel. Two hours later, with just a few late arrivals finishing up, we discussed what to do, the karaoke already in full swing next door and the soldiers murdering songs with terrible, yet high-spirited renditions. I dared not ask Katie, so Jimmy eventually asked her. My good woman surprised me by readily agreeing, and we stepped next door.

Jimmy grabbed the microphone, firmly nudging soldiers to the rear. 'Sit down, shut up and settle down ... or I'll sing.'

'No!' they shouted.

'Ladies and gentlemen, Rescue Force staff, British and Israeli medics ... I give you Katie Joe.'

She got a rapturous applause, many wolf whistles, and seemed to be loving the attention, leaving me shaking my head. She chose one of her songs, the machine deliberately hosting all of them, and enthralled the crowd, many people coming in and standing at the back, more standing near the restaurant entrance. After each song she got enthusiastic applause and shouts, then selected the Bay Watch theme song, Rescue Me. Within a minute everyone was joining in; I figured we had a new theme tune. She performed another six of her songs, a few others artists she liked being selected. After the last song she said, 'OK, if anyone wants a photo...'

People grabbed cameras and moved forwards. Just about everyone got snapped with her, some soldiers snapped with her on their knee. And yes, I did mind, I minded a lot, but I could not figure out why.

For the next few days I took her away from the hotel, drives down the coast with Jean and Jimmy, sometimes just us. We found isolated beaches where no one knew us, small fishing villages, and cafes where a dollar got you a good meal. At one beach, a popular spot north of Mombassa, a UN worker recognised us and said hello. I didn't mind, it made a change from autograph hunters after Katie. We sat and had a meal with the man and his wife, a "couple" chat, not just about work or music. It was nice to be normal for a change. One day we took out the senior Israeli officer, his wife and two teenage daughters, the girls in awe of Katie. Happening across a small animal sanctuary, they said they were closed to visitors. I told them I was the owner of the golf complex and they opened up sharply, the manager taking time to show us around.

The last day of the "enforced rest" consisted of a conference in the morning, followed by a dispersal meeting, after which groups would set off to their given, or chosen, assignments. We all walked around to the golf hotel at 10am, to find a large marquee behind the hotel, waiters in neat red waistcoats stood ready to

serve us cold drinks. Tables and chairs had been laid out under the shade of the tent, enough for everyone, plus a podium and a few white boards. But the difference between this, and a stuffy old conference in the UK, was a grass floor, a view of trees through open flaps, and a lazy old three legged lion sat in the sun and getting patted as people walked past. Apart from that, I considered it was just like a conference in the UK.

People settled themselves, grabbing the fizzy water already provided on the tables, and sat looking very pink and sore for the most part. There were only six Kenyan nurses present, the remainder had been sent off already, and all now wore white Rescue Force floppy hats and t-shirts. Mac sat at the front with Rudd, Cosy and Coup in a line, and I sat off to one side.

When everyone finally settled, with a little nudging along, Jimmy took the podium, but without the use of a microphone for the thirty-five people present. 'I hope you can all hear me.' He rested his elbows on the podium. Right, we're having this meeting *here* so that some people can head off straight away to their assignments, chosen and imposed, and without having to trek up to Mawlini and back. And this is – just about – the first time we've all been together, I think.' He straightened and put a hand in his pocket.

'First, I would like to make it clear, to old members and new recruits, that Rescue Force is not just about Africa. The group got started here, and is working and training here, but I hope that in the future, not too far away into the future, that the mission we ran to Zaire could be duplicated into missions for other countries. My aim is to add people and skills in the future that help missions to other parts of the world.' He stepped forwards. 'I want us to be able to send rescue teams to the Pacific region after an earthquake, to flood areas, to large scale forest fires, to civil disasters where we could help. Now, the first item on that list was earthquakes. When there's a quake, buildings collapse, people get trapped and injured, the local authorities cannot cope, and there is a serious lack of after care, not least because the local hospital is just a pile of rubble.

'Such a mission would involve a rapid reaction, air transport of jeeps, travel to remote locations – possibly on foot, and rendering what assistance we could to the wounded and the displaced, co-operating with other NGOs and the UN as we do

now. The additional skills required for such a mission would be climbing skills: to climb up and over collapsed buildings, caving skills: to go under collapsed buildings, and the use of specialist equipment such as thermal cameras to see if we can find people buried under rubble. At the airfield in England that we run, we have both climbing and caving facilities, and will offer courses there at some point in the future.’ He pointed at the four new recruits who had driven down from Mawlini. ‘These new recruits have been through those basic courses, they did so before arriving here. So, all in all, we already have many of the skills needed to perform other tasks and missions, we just need to improve upon them.

‘I want everyone here to know that if they wish to work *just in Africa* - that they can do so. But I also want to emphasise to everyone that there will be many opportunities in the future to work in areas that are not just hot and dusty, not just Africa, and that there will many on-going courses in the UK and other places. I would hope, that a year from now, we could send teams to an earthquake disaster zone.’ He grabbed a sheet of paper and scanned it.

‘OK, training standards. After we return to Mawlini, Mac and Coup will be working out training and re-training standards so that no one loses their edge. The doctors will prepare tests for the nurses, both written and practical, and all non-doctors will get a test twice a year - *at least*. Within a year, those tests will be necessary for staff to remain with us. I have computers arriving in Mawlini as we speak, many of them, and we have devised a computer programme that’ll run the tests. You can load a question and an answer, then sit someone down and get them to go through it; the answers they get wrong come back up at the end.

‘In order to keep our doctor’s skills fresh I have arranged for senior registrars from London to come down on occasion to discuss the latest techniques, and to run lectures and exams. Coup will help to make copies of medical magazines and papers that are of interest, and get them to you. My aim is this: if a doctor spends a year with us, and then applies for a job in a hospital, that doctor should be completely up to date in all areas – especially new drugs – and their time with us should be no reason for anyone to turn them away, or judge them less than a

hospital doctor applying for the same position. Quite the opposite. I would hope that, in years to come, hiring a former Rescue Force doctor would be an advantage. To that end, you'll be going back to school at regular intervals, except Tubby -' They laughed. '- since we recognise that he's a better flyer than a doctor.

'I will, on a regular basis, run courses for all staff to learn basic field surgery. Unlike your counterparts in London, you may have to amputate a limb in the jungle to save a life. To that end, I have some experienced combat surgeons lined up, people who learnt how to make do with very little. We will also be arranging a number of other courses designed to make you more self-reliant should something go wrong, i.e. flying across Africa with Dunnnow -' They laughed. '- and crashing into dense jungle, ten days to walk out and be rescued. We'll be running jungle training courses, survival courses, and also *escape and evasion* courses. What that all means, is that if you crash in a jungle, surrounded by hostile warlords, you have a good chance of surviving and making it back. Since we are now running airborne missions over isolated areas, those courses will start soon, and they *will* ... be compulsory.' He glanced again at the sheet.

'Right, communications. The jeeps will all be fitted with CB radios soon, decent radios with a range of around ten miles or better. Team leaders will keep satellite phones for *emergencies only*; they're about a pound a second to use. I have some short-wave radios coming, good enough to link Mawlini with Forward Base. Just remember that they're not secure, anyone can listen in. Kigoma will be known as Rescue Force Tanzania, because I aim to develop a Tanzanian version of you, and a Tanzania version of Mac.'

The group laughed. 'He's unique!' came a voice.

Jimmy continued, 'A year from now Kigoma will not be run from Mawlini, but we are all part of the same group. Zaire will go a similar route on a national level. Now, we've bought an Mi2 helicopter in Tanzania, where it will stay for the most part, used in the short term for runs into Zaire. It can hold twenty at a push, ten or twelve with kit. Zaire *will not* ... have the Hueys for a while, except Dunnnow's old one. I hope that in six months we'll have more trained pilots and a few more Hueys. The Mi2 will be assigned to Zaire support and re-supply in the meantime.

‘Fitness tests. *No one* ... who joined before the last four recruits, will be required to pass a fitness test ... for one year.’ They nudged Tubby on the shoulder. ‘But we will start to look at fitness in general, and exercising at base. Remember, you are training for more than just Africa, you may need that fitness in the future.

‘OK, new staff. We have hired two new versions of Coup, but better looking; one for Kigoma, and one for Zaire. Their roles will be administrators and facilitators – they buy the beer. They will be starting very soon, and are already experienced in the region and with UN movements. The new guy in Zaire is a local, and well connected – he’ll be needed over there. In the UK we have eleven new staff lined up for the start of training, including some non-medics. Those guys will have to pass a first aid course to a very high standard, as well as intubation, drugs, trauma, and minor surgical techniques. With that in mind, new white jackets are being designed with job descriptions and skills printed onto them.’

Dunnnow raised his arm. ‘What’s mine say?’

Jimmy smiled. ‘The principal trade will be on the back; doctor, nurse, driver, medic, director, administrator. On the arm will be two flags, Kenya and your original country, plus any specialist skills. Helicopter wings will be fixed to both arms if you fly helicopters, normal wings if you fly fixed wing.’

‘Mine’ll say nurse then,’ Dunnnow winged.

‘That’s better than *fucking Wombat fly boy* -’ The tent reverberated with laughter. ‘- which is what they call you now. Would you prefer... combat pilot, perhaps?’

‘Well ... yeah.’

‘Well ... *fuck off*. First and foremost, you’re a nurse. If you become a full-time flyer you can change it. And the first time you’ve got a tasty bird in your left seat – I’ll ground you permanently. Clear?’

Dunnnow sulked, but did so with a grin.

‘OK, Zaire: Doc Graham has expressed a desire to head up that detachment. Anyone else *wishing* to go there?’

One of the new recruits raised an arm. ‘I’m half Belgian, I have lived there, near Goma.’

‘You got the job, but first you’ve got to pass ordnance and jeep. After that, three-month rotations as long as you want to

stay. Anyone else?’ Six more raised their hands. ‘Doc Graham, choose one more doctor.’ He pointed at Jane Hicks. ‘It’s a done deal, but everyone will get a chance at a month there, to see some action. OK, which doctor wants Kigoma?’ Five raised their. ‘Anyone with a local interest?’

One man said, ‘I was stationed there for five years with the UN, I know the area.’

Jimmy pointed at him. ‘You’re hired – for now. Pick one other doctor for the first tour.’ The man nominated a second doctor. ‘OK, that covers detachments. When we’re back at Mawlini we’ll need a rotation set-up for the border camp, in your teams; doctor, nurse, driver and medic. We will, in future, have one or two Rifles driving for each team. When they’re not driving they provide security.

‘OK, structures. Nurses will be graded as nurse, senior nurse or team leader. In some cases, like refugee camps, a team leader can be a nurse. To that end, we are promoting the six nurses at the rear to team leaders. Ladies, please come forwards.’

Mac stood up and met the line of nurses, shoulder flashes issued, handshakes given, applause started.

‘Ratchet, front and centre,’ Mac called, Ratchet easing between seats. ‘You’re team leader for the flyers, those two refugees behind you.’

‘More pay?’

‘No, now fuck off and sit,’ Mac told him. ‘The rest of the team leaders, get your shoulder flashes after, new jackets up at the base.’

Jimmy said, ‘All doctors who *do not* have a pilot’s license - we’d like you to think about it, so that you can fly back and forth. Huey pilots, do your Cessna licenses very soon. Cosy, finish converting to the Dash when you can.’ Cosy nodded. ‘OK, Coup has some admin, Mac, Hal and Paul, a word please.’

We stepped out into the brilliant sunshine, the lion rolling over for a good tickle, but not getting one. We bunched up.

Jimmy began, ‘Hal, we’re all very grateful for what you did training the lads and helping out, you’ve been invaluable. I know you had just a short contract with us, but I was wondering if we could persuade you to hang around a bit longer.’

‘Doing what?’ Hal asked.

‘There’ll be five new Hueys for the Rifles, ten pilots to train – and these will be combat pilots, the Hueys armed, so right up your street.’

‘Well ... how long?’ Hal asked.

‘Could be six months of work,’ Jimmy warned him.

‘Come on, Hal,’ I encouraged. ‘Where we going to find someone like you around here?’

‘I gotta place going stale in Arizona,’ Hal mentioned. ‘Neighbours gunna think I bought it over here!’

‘I know you’re retired,’ Jimmy said. ‘So you can work your own hours.’

‘I’ll buy ya a drink on a Friday,’ Mac put in. ‘Let you win at poker.’

‘*Let me* ... win. I cleaned ya out, ya bum!’

‘Come on, Hal,’ I nudged. ‘Or we’ll feed you to the fucking lion.’ We all glanced at the dopey lion. ‘Not *that* one, obviously.’

‘Well, I could sign on for another three months, I guess,’ Hal finally agreed.

‘That’s more like it,’ I said. With a threatening finger, I said, ‘And if you teach those three arseholes in there to fly better manoeuvres than me again...’

Hal raised his hands in surrender as we laughed.

‘We need you, Hal,’ Jimmy emphasised. ‘And what’s more ... you make Mac feel younger when he’s around you.’

‘Ya bunch a rude fuckers,’ Hal said as he walked back inside, Mac following.

Jimmy said, ‘He was terrified.’

‘Of what?’ I puzzled.

‘Of going home to an empty apartment in a small town, and playing cards with old men. He’ll stay as long as we want.’

‘So why the nagging?’

‘My words ... cost nothing to utter, but will make him feel wanted and needed for a long time.’

The lion farted, rolling onto its back and studied by us for a few seconds. Shaking our heads, we ducked back inside.

Within an hour our jeeps started to pull away, the parking area freeing up vehicle by vehicle. Those bound for Kigoma or Zaire headed to Mobassa field and the Dash, the rest drove to Mawlini in small groups, some people with holiday leave heading up to Nairobi airport for trips back to Europe. Many of the nurses had

spent a day on the beach, got bored with that and headed for home in Mombassa or Nairobi, returning a day or so later. One even lived up the road and knew the hotel bar staff. Now they boarded an air-conditioned coach for the journey back to base.

Jimmy and I played dutiful hosts and drove Katie and Jean to Nairobi the next morning, arranging to see them again in a week in the UK. In our hire jeep we drove around to the hotel we used to stay at in Nairobi and picked up Big Paul, recently qualified on the Huey; he had flown down from the UK the previous evening. With me taking the piss out of him and his flying, we began the long but familiar drive up to Mawlini.

The next morning Jimmy put Big Paul with Hal for two hours, the other Huey pilots switched to Cessna training, something else that Hal was good at. All in all, we had eight people on Cessna training, our poor old plane getting plenty of use. We cut corners, and costs, by putting people up with Hal, Tubby or even Jimmy, none of them qualified or licensed to instruct. Back in the UK we would not have dared.

Rotas were set-up for deployments, people put into courses for re-training, and new equipment delivered and installed, short-wave radios tested. We got a fella in Oslo a few times, but mostly we made contact with Kigoma and Forward Base. The CB radios worked fine on the jeeps, the Rifles getting them fitted at the same time, although they already had the kit that the Kenyan Army used, the same specification as the British Army and old enough to be hand-me-downs. And each time that one of our jeeps now left the base for the border, a member of the Rifles tagged along, armed.

The paperwork was attacked, procedures re-worked and adjusted at length, plenty of input from the staff taken on board. The Rescue Force hotel was occupied in strength, people moving over from old rooms elsewhere, and the hotel's bar and restaurant brought into use, its pool filled with water from a tanker and made ready – dead lizards fished out. By the third day we had re-organised, caught our breath and recovered from the Rwanda deployment.

As arranged, Po and Han flew into Nairobi that afternoon, flown up by Tubby in the Dash on a supply run. Po had his family bodyguards with him as normal, men we already knew, but he also brought along two men he had hired to start Rescue

Force Hong Kong; Hou and Lou. They looked Chinese, but spoke with a bit of an American accent and were very westernised. I greeted Han in the new rooftop bar, practising my Chinese.

Han responded, 'Your Chinese is improving, at least it would be if my sister were a goat.'

Jimmy, and Po's group, burst out laughing as I curled a lip at Han.

I told him, 'I preferred you as you were. Don't go changing on my account.'

Two tables were dragged together, plastic seats brought over, Mac and Coup joining us with paper and pen as orders for drinks were taken.

After the group had taken a few sips of cool beer, Jimmy addressed Han. 'How did your government like the publicity you got?'

'Very much so,' Han responded. 'The pictures were in all the papers for many days, all China proud of our people's contribution.'

'It's amazing what a small group of people can achieve,' Jimmy noted, Han bowing an agreement. 'So, Rescue Force Hong Kong. Po, have you found a building?'

'Yes, yes, old building, small money, some land near, but only small.'

'How many floors?' Jimmy asked.

'Only ten,' Po responded.

'More than enough,' Jimmy suggested. 'We'll construct a climbing wall up one side, it'll become world famous. One floor should be for offices, one for classrooms, one for a gym, and one floor can have a sandbox.'

'Sand box?' Po repeated.

'Like here. An area of sand floor, twelve inches deep, with practice mines in the sand.'

'Ah, yes, yes.'

'And some apartments on the top two floors,' Jimmy added. 'But the majority of training would be done on the mainland.' He turned his head a notch to Han, who nodded a signal back. 'So all staff must be checked by the mainland police before you hire them. They'll also train here, and in England, so all staff must speak reasonable English. Since this is where most of the

advanced training will take place, Mac and Coup will show around our two new administrators ... at length.'

'What money you want transfer?' Po asked.

'All of it.'

'All?' Po questioned. 'It twenty million!'

Mac and Coup exchanged looks.

'Rescue Force is one big family, and the money will be used in many countries, not just Hong Kong. Most of the money will be held in reserve for future years. OK, Lou and Hou, I don't think you should try and administer anyone unless you have tried some of the tasks yourself. So we'll put you in the sandbox, get you on a jeep trip to the border, a flight in a Huey – where you can take control, and a go on the dummy.'

'Dummy?' Lou queried.

'First aid training dummy,' Jimmy explained. 'Not a rubber doll.' They laughed. 'But keep in mind that the temporary director of RFHK will be a doctor from here, before one is hired. That person, we'll need in around six months, ideally someone who has worked for the UN or Red Cross overseas. You can advertise in three months time, and your first batch can train here whilst the building is made ready.'

'We advertise job, many hundred ask,' Po put in.

'Aim for twenty doctors, thirty nurses to start, some drivers and mechanics,' Jimmy suggested to Lou. 'Here we organise our people into teams of four; a doctor team leader, a nurse or two, a driver mechanic, sometimes a basic medic. One doctor to four nurses works well in the refugee camps, sometimes a nurse team leader of just other nurses.'

Lou asked, 'You split primary care and aftercare?'

'Yes, the aftercare is often one doctor to ten or twenty nurses in the camps. But the primary role of Rescue Force in the future will be rapid reaction assistance, not long term care. If there's an earthquake somewhere then we go in for ... what, two weeks. After that you won't pull anyone out alive. It's about ... the initial help. Here, we get involved with camps because we don't have any earthquakes ... and the medical staff need to keep practising. So, Mac, Coup, show our guests around please, then get them trying a bit of everything.'

'I want look too,' Po insisted.

With just Han remaining, I asked, 'Dredged up the wrecks?'

‘Yes, all wrecks recovered, some on land we are not finding.’

‘Get me a better scale map,’ Jimmy suggested.

‘I have with me. But what do you desire we do with our rescue medics?’

‘Nothing for now, just watch the Hong Kong branch grow and learn from it. When you take over Hong Kong in ’97 they’ll operate independently, but be interchangeable with your teams. And never forget, that to send teams to other countries they must *appear* to be independent of government or political interest; many countries will not allow Chinese medics in. Ever. Fortunately, most countries that suffer earthquakes are poor, and in the future your government will be an important economic partner for them, making things easier.’

‘We have learnt well the lesson of Kigoma,’ Han stated. ‘The political gain of just thirty medical staff for four weeks. My government now understands the benefit of your ... wisdom, in this area.’

‘Then suggest to your government that if your medics train here on a regular basis, alongside other nations, I shall do the... *flag waving*.’

Coup brought a fax out and handed it over, withdrawing immediately, Jimmy thanking him and glancing at the detail.

Facing me, Jimmy said, ‘The Somali Government in exile, in Italy, have granted us permission to run relief operations into Somalia. So have the Kenyan Government, and the UN. There’s a provision from the exiled government and the Kenyans, that we can take all reasonable steps to protect ourselves over there.’

‘Mi24 ... protect ourselves?’ I knowingly asked.

‘Most definitely. And Rifles helicopter borne assault ... protect ourselves.’

Han asked, ‘You wish ... an incursion in Somalia? The Americans did not fair well.’

‘Never fight an insurgency in the towns, you lose the advantage. In the desert you can see them coming, and our weapons can hit the enemy a mile away, they cannot.’

‘What happens in Somali ... in the future?’ Han enquired.

‘Nothing but fighting, terrorism, poverty and famine - which is why I’m getting involved. If I don’t, then The Brotherhood will rise up there in the years ahead.’

‘Will you request our assistance?’ Han asked.

‘Not for many years, and then not soldiers.’ Jimmy turned his head to me. ‘Go ask Mac to start patrols ten miles inside their border, jeep and airborne. There’s a village thirty miles in, we want a clinic built here – Doc Adam involved.’

I headed off and found Mac and Coup, giving them the good news: we were invading Somalia, certain that it would be the talk of the base that evening.

Mac said, ‘Rudd bought more fucking barbed wire than would stretch around the world. Wees gone sixty miles in both directions already, probably more. The section of the border here – not a fucking gerbil could get across! And we aint used up a quarter of the wire yet.’

‘Good job you reminded me – get a report of the *miles per week* they’re doing,’ I said. ‘And I think the Rifles get their Hueys tomorrow.’ No sooner had I uttered the words I was made a liar, a line of five green Huey’s circling and landing on the apron next to the Mi24, and our three Hueys. We stood and watched them landing, the problem immediately obvious.

‘Need some more space,’ Coup said. ‘I’ll extend the concrete, a second hangar.’

‘We’ll need an office over there, and a weapons store – these Hueys will be armed,’ I told him. To Mac I asked, ‘What we got that we can stick on Huey?’

‘There’s plenty of GPMGs, they’ll sit nicely on the side.’

Jimmy appeared with Han, walking and chatting.

‘Jimmy!’ I called. He looked over. ‘What we sticking on the Army Hueys?’

‘Just GPMGs,’ Jimmy shouted back. ‘Got the Mi24 for rockets.’

I faced Mac and waited, a question in my look. Mac said, ‘I’ll check the mountings, get boxes for the ammo.’

That afternoon, a patrol went ten miles inside the Somali border, the area mostly barren and void of towns or villages. The patrol was made up of one of our jeeps plus two open-top Rifles’ jeeps, the Rifles’ vehicles now fitted with GPMGs either side. No gunmen were spotted, a few surprised Somalis offered water and medical check-ups. The Army Tucanos ventured fifty miles inside the border, one lone jeep of gunmen noted. With the sun low on the horizon a dozen trucks trundled into base, spares and

supplies for the Hueys, interchangeable with ours, and a squad of Air Force mechanics familiar with helicopters, but not Hueys.

Over a beer I said to Jimmy, 'Why did the Yanks still go into Mogadishu, you warned them?'

'I warned them ... half-heartedly, knowing they'd go in. Now I know they won't return, which is what I want for the region.'

'How much land are we going to patrol across?'

'All of it.' Wide-eyed, I stared back over the rims of my sunglasses. Jimmy added, 'Why do you think I created the Rifles. Look, over there it's a mess - it's a country for the taking, the largest group just five hundred men strong. There's also oil if you know where to look, and some minerals that the Chinese will want.'

'We're going to fight?'

'Yep, step by step, inch by inch. And we'll have some help along the way. Don't worry.'

'Won't people ... *puzzle* our involvement?' I cautioned.

'*We're* ... not involved, the Rifles and Rescue Force are. We're sending in Rescue Force to help people, and we need protection to do that. A lot ... of protection.'

At dawn the next day the two unarmed Kenyan Air Force Tucanos went up, flying into the rising sun and spotting a three jeep convoy of gunmen west of Baardheere. Jimmy sent the Mi24 up on a "live-firing" training exercise. The assault helicopter bore down on the convoy and left no one alive, the vehicles left burning, returning from the exercise without mention of the border, but all of the helicopter's ordnance expended. We had started operation "Somali Freedom".

The next day we made contact with the warlord most responsible for the Baardheere area, through the UN, arranging to meet west of Baardheere to discuss building a clinic on his turf. Rescue Force jeeps drove out, waited, but there was no sign of our would-be host. They returned without contact, a UN official present in the convoy. What I discovered later was that the warlord's convoy had met up with another warlord's convoy from the south east of his patch, tipped off the day before. When the two groups met they exchanged fire, a Rescue Force jeep just happening to be near by, reportedly in the wrong place at the wrong time. Our people called for backup when they heard

gunfire, the Rifles' jeeps escorting them out. From the confrontation between the two Somali groups, no one would emerge alive, our ex-SAS instructors and a chosen platoon of Rifles making sure of that, but using just AK47s and RPGs. Men from both tribes swore revenge and would go on to make several trips towards each others territory, none to return. Baardheere would become bandit free very quickly.

On the fifth day we flew with Po's group down to Nairobi and said goodbye, heading in opposite directions. Eighteen hours later I lifted a mug of tea in the house, rain pelting against the cold window glass. As I stood there, staring at the dark green grass, I remembered childhood trips to the cinema on a Saturday morning, films of adventure in far off lands, then coming out to the rainy reality of London. Stewart Granger came to mind, King Solomon's Mines, and Sheba: she who must be obeyed.

The next day Sykes and Jack came down, keen to talk. And to whinge. And to complain. Sat opposite us across the coffee table, Sykes testily noted that the Chinese Army's presence at Kigoma was "overlooked".

'Did you not get the memo?' Jimmy asked.

Sykes stared back. 'Did you send one?'

'Er ... no.'

Sykes brow pleaded. 'Then that will be why Her Majesties Government were reading about in the morning papers!' he unhappily noted.

'And the net effect?' Jimmy asked.

'Was a lot questions.'

'Well, since the Red Army is not about to convert any of *our lot*, the influence *our lot* must have been good on the Chinese. Certainly broke down some barriers amongst the general population's perception of the Chinese. And what's more, the Chinese had a UN remit.'

'We found *that* out a day ago,' Sykes unhappily reported. 'I suggested as much to stop too much wailing in the corridors of power. And rumour has it you stayed inside the Beijing diplomatic area.'

'We did,' I said. 'A bit chilly, a bit old, but it did have a book signed by Khrushchev.'

'Khrushchev?' Sykes repeated, his interest piqued.

‘Yeah, some sort of guest register,’ I added. ‘Bit of a problem with the Chinese when Katie’s mum put her coffee mug on it –’

‘She what?’ Sykes whispered.

Jimmy laughed, Sykes shooting me a look. Jack tried to hide his grin.

‘The book is intact,’ Jimmy told him. ‘And I have a photo of the page, you can have it.’

Sykes forced a breath. ‘Well, Chinese aside, that just leaves the small, but considerable problem, of the Zimbabwean President.’

‘Next year ... the African Union meet will be at my golf complex.’

‘Yes?’

‘Yes. And you can slip some people in if you like. As for Zimbabwe, I will become best of friends with their government, much to the *organised* consternation of the British Government-’

‘Organised?’

‘And will, at a future date, when I am the last person they will suspect, assist our good friend with meeting his maker.’

‘You’ll ... what?’ Sykes whispered, Jack now appearing worried.

‘I think you heard it right the first time.’

‘Jesus, Jimmy. If you got caught –’

‘I won’t. And yes, you – the British Government – will probably get the blame.’

‘We’d better not!’

‘Only by those back in Zimbabwe who would lament their late leader, which won’t be many, and only for a day or so.’

‘Jesus,’ Sykes let out, a glance toward Jack. ‘When?’

‘Couple of years. So ... no discussing it higher up.’

‘And ... after?’ Sykes nudged.

‘A quick return to democratic normality, whites reclaiming farms, western mining companies returning to *fuck over* the blacks and take their ores for next to nothing.’

Sykes glanced at me. ‘The mines lost out, so too the farmers.’

‘Which brings us to Zaire. As we speak, not a million miles from our Forward Base the future President of what will be The Democratic Republic of Congo is living. I *will* ... be making friends with him soon enough, offering assistance and asking – eventually - for some mining rights.’

‘Mining rights? In Zaire?’ Sykes puzzled.

‘Yes. And all the profits go back to the locals, not rich western corporations.’

‘That will put those ... *rich western corporations* on a collision course with your good self!’ Sykes noted.

‘I know you’ve got my back, Mister Sykes, which is why I sleep well at night.’

Sykes eased back, glanced at me, then back to Jimmy. ‘And the reasoning behind this?’

‘Two fold. First, if the sub-Saharan green belt is poor and war-torn in future years, then Muslim terrorists will move south. Second, there’s a shit load of oil and ore – as yet undiscovered – in the Congo. The West will need it, and I’ll have a hand in its control. If not, it goes to China. And if those western mining companies have control they’ll put in on the open market, so it’ll end up everywhere apart from where *we* need it to go.’

‘Can I tell the powers that?’

‘Any story you like.’

I put in, ‘And we’ve just invaded Somalia.’

‘Did another rescue?’ Jack keenly asked.

‘No,’ Jimmy cut in. ‘We’re going to take it. All of it.’

Sykes exchanged a worried look with Jack. ‘How, when not even the Americans could hold a position there?’ Sykes challenged.

‘Kenyan Rifles and Rescue Force,’ Jimmy responded. ‘Watch this space for ... oh ... the next three years. And we’ll have a shopping list and some assistance nagged for.’

‘And why, in particular, would we help? It’s a dangerous bowl of dust!’

‘First, because World War Three kicks off after a group of terrorists form up in ... oh, let me see ... Somalia. And second, because there’s oil to be discovered. Third, if nothing is done, the pirates operating out of Somalia will choke up the trade routes for decades, making Suez an expensive route for shipping.’

Sykes carefully regarded Jimmy for several seconds. ‘You’re in Kenya, now Tanzania and Zaire, entering Somalia. You’ve got that region sewn up. Why all the effort there?’

‘In years to come it’s a very important area. First, need to move a few chess pieces to see the field of play. It’s about small acorns ... and giant oaks. Trust me, and be there with me.’

‘If I mention oil, then that’s all I need to do. I’ll suggest it’ll be discovered in what ... ten years?’

‘That’ll do nicely,’ Jimmy sarcastically offered.

The next day I was sat reading a helicopter magazine when I noticed an article on police helicopters and aero-med rescue helicopters in the UK. A thought struck me. With Jimmy out somewhere, I dialled Swindon police and got through, eventually, to the Chief Constable, mentioning Mapley airfield.

‘I see, from a magazine I just read, that you don’t have a force aero-med helicopter?’

‘No, not yet,’ the man responded, still not sure why I was calling.

‘How about I buy you one?’ I offered.

‘But us one? They cost half million a piece!’

‘Really? In that case, I’ll buy two, but on condition you station them at Mapley. There’ll be no cost for the base, and we’ll throw in some fuel for you.’

‘And you are ... the owner of the airfield?’

‘No, I’m the silly sod who flies crazy helicopter rescues into Somalia.’

‘Ah ... you’re that one. I read the book.’

If I had a dollar. ‘So, what do you think?’

‘I’d ... I’d say thank you. We’d need to get the paperwork sorted, licenses, etc, and then some pilots.’

‘You can contact me through the airfield, so as soon as you’re ready we’ll hand them over. In the meantime, pop down to the airfield and pick yourself a corner, we’ll get the ball rolling.’

I rang Jack at the MOD, and he found out where police helicopters were procured from; BO105 helicopters came from Germany and through a civil servant. So I spoke to that guy, and he knew exactly what I was talking about, since some helicopters had been bought through charitable donations. I ordered two, and asked if he wanted the money upfront. He refused, saying my credit is good, and would order up two straight away, each conversion to UK police standards taking around six weeks.

When Jimmy returned I told him what I have done. He just said, ‘Northeast corner for them,’ and sat with a tea.

‘Well...?’ I asked. ‘Good idea?’

‘Yes. You should have had that idea ... a year from now.’

‘Oh. Well, I guess I’m ahead of myself,’ I proudly noted. ‘Oh, fax from Rudd about motorbikes?’

‘Good. Thirty off-road bikes for the Rifles, ten for Rescue Force.’

As he sipped his tea I asked, ‘Border patrols?’

He nodded. ‘And further in. Bikes can go where the warlords Toyota pickups can’t easily follow.’

‘So, anyway, aero-med helicopters in the UK - something we should be involved with?’

‘Very much so, but not for two years. When we have a substantive Rescue Force base at Mapley we’ll stick our doctors in their choppers, cover the motorways in some areas. First, we need Mapley ready.’

‘I read in some paper that there’s loads of medical students without work, they could work for us for a year?’

‘If they haven’t yet done a placement – at a teaching hospital – then they’re not licensed to practice medicine. They would have to be treated as nurses. If they have done two years on a ward, and between jobs, then different matter – then their junior doctors.’

‘Yeah?’ I gave that some thought. ‘Still, it’s better than doing fuck all for a year.’

‘Definitely. Ask Mackey to advertise to the universities, like Cardiff. Good thinking, Boy Wonder.’

A new nightclub

I stood in the Red Room at the Madsons Hotel, now renamed to Silo’s Club. ‘Fuck me it’s a barn!’

‘It can hold three thousand or more,’ Jimmy suggested, Rolf the architect taking in the room’s dimensions, Big Paul and Karl examining an old bar area.

I scanned the balcony that ran around two sides of the vast room, then stood taking in the stage. ‘We keep a stage for bands?’

‘Oh, yes. Get all the groups in here, plus newcomers.’

‘Stage is a bit crap,’ Rolf put in.

‘Rip it out and replace it,’ Jimmy ordered. ‘I want a modern sound system, speakers in all the corners. And while I think of it, two new fire escapes against the north wall.’ He pointed at the old bar. ‘Keep that, but improve it, then I want a long bar right down the middle of the room, where we’re standing. If someone is stood at the bar chatting, they should still be able to see the stage – more or less. I want a door through to the kitchens, then a hundred tables in here; this room is not for people stood about, they book tables.’

We walked around to the main entrance. Jimmy said, ‘This will be the members and VIP entrance, so reception stays as a reception, for hotel guests as well obviously. All rooms from the third floor up stay, rest will be knocked through into bars and rooms as in Cardiff, average capacity two hundred per room.’

In the old restaurant Jimmy said, ‘This all goes, so does the smaller function room behind. This will become the main public room - with bars and rooms off it – just like in Cardiff.’ We stepped inside. ‘In here I want the roof taken down over the area that matches the second floor function room, a balcony so that people can look down. So, try and imagine this:

‘You walk in through the public entrance, cloakrooms on the right, then the main room. Off the main room are individual rooms – with dance floors - and a chill-out room. Back of the main room: two sets of stairs going to the balcony. Off the balcony will sit a Chinese franchise, and an Indian, plus two more wine bars. To the left of the main room will be the member’s area, the Red Room plus the rooms off the balcony, plus eight smaller rooms. On the third floor we’ll position the VIP area, eight interconnecting rooms, two dance rooms. On the right of the members area, above the Chinese restaurant, will be poker tables for members, a reading room with papers, cloakroom. The toilets must be large and well decorated, the member’s toilets better than the downstairs, the VIP area better again. Each toilet must have a small shop selling essentials, as in Cardiff. Now, just like Cardiff, the hotel only takes room bookings for members and VIPs on a Friday and Saturday.’

Rolf scribbled notes. ‘Same format as Cardiff.’

‘But a greater emphasis on members,’ Jimmy said. ‘And more VIPs. So, draw some pictures, do what you’re good at, come down to us with them.’

Footsteps behind us preceded the arrival of the man hired to manager the place, Anosh Yogu, a tall and olive skinned man. I called him Yogi from the outset.

We shook. 'Find it all right?'

'I don't live far, walked past this place many times,' he said in a London accent.

Jimmy told him, 'Your contract starts today, so go straight down to Cardiff and spend the next three nights there. Then contact Rolf here and go through some of the designs, get a feel for the place, come back up here and walk around. We'll meet at the house once Rolf's drawn his pictures.'

Rolf handed over a card to Yogi.

'You're not called Rolf?' Yogi queried.

'No, they call me that because I draw pictures – Rolf Harris, the TV painter. But everyone in the office calls me Rolf now; Paul's faxes to me are always addressed to Rolf. I have two new customers that call me Rolf as well.'

We laughed, leaving them to it.

“M” Group

Keely and Host, NSA, requested a meeting in the States, but Jimmy refused, so they arrived in the UK on a fine day in June. We welcomed them into the lounge, Sykes and Jack sat waiting with David.

Host said to Sykes, 'Am I to assume that you and Jack are the UK's "M" Group representatives?'

'You are ... for now,' Sykes responded.

'And David for Israel?'

'Yes,' David answered.

Everyone settled themselves.

Host added, facing Jimmy, 'I'm surprised that you haven't got any Chinese or Russians in here.'

'I would, if you were man enough to see the big picture.' He held his gaze on Host. 'They'll join this group in future years, once you have ... matured some.'

Host glanced from Sykes to Keely, back to Jimmy. 'Meaning what ... exactly?'

‘First things first: you mucky gentlemen picked up a few bugs at the airport; CIA bugs. Jackets outside, check the pockets. Keely, your nice big pen - snap it.’

Keely glanced at Host then snapped his pen. ‘Son of a bitch.’ Looking deflated, they placed their jackets outside, checking themselves carefully. When they returned they both apologised, and cursed the CIA at length.

Jimmy said, ‘Gentlemen, if what we discuss gets out, there would be wide scale panic and economic collapse. Everyone, must take great care in the future.’

David snapped his pen. ‘Bugger! Waste of a good pen.’ He put his jacket and briefcase outside, Jack and Sykes checking each other carefully. I even checked myself. Big Paul placed a “white noise” device on the coffee table and turned on the radio, Abba now playing in the background for the meeting whether the participants liked it or not.

Jimmy began, ‘As you can see, gentlemen, all is not well in the Land of The Free. A more ... serious approach will be needed before details are divulged and discussed.’ He handed Host a page. ‘There are three spies inside the CIA that the FBI would love to arrest, I’m sure. There are also details there of several CIA operations that are either illegal, misrepresented or complete screw ups that were hidden from the White House. Make their eyes water, Mister Host, then explain that they face more of the same if they persist in any showing interest in us.’

‘With pleasure,’ Host answered.

‘One more thing, regarding the CIA, and the late Mr Potomo. Should anyone investigate that matter in earnest, all evidence points back to you, Mister Keely.’

‘Me?’

‘Yes, it was ... unfortunately necessary. Photographs, documents, fingerprints. So I suggest that you paint Potomo as *dirty* – which he was - ahead of such an investigation. Pre-empt it, so the CIA don’t dare dig it up.’

‘Thanks a lot, *buddy*,’ Keely let out with a snarl.

‘Motivation is everything,’ Jimmy said with a grin. ‘Now, once you’ve selected a secret “M” Group, I’ll brief them on the next ten years or so, then you can make a start on fixing the evil empire. I *will not* ... brief the group fully till the group is fully ready. And secure. And that will need Presidential assistance.’

‘Talking of politicians, what’s your relationship with Chuck Pedersen, soon to be Senator Pederson?’ Host asked.

‘I’m courting a number of your politicians, so that they help us in the future,’ Jimmy explained.

‘He’ll be President some day?’ Keely asked.

‘No, Senate Majority Leader when the time is right – and when we need their votes.’

‘Any British politicians like that?’ Sykes asked.

‘No. I treat the American system differently because it’s fractious; President, Congress, Senate, lobby groups. The Chinese are great to make a deal with because it’s one big octopus. American politics is four separate octopi, five if you count the Pentagon, which often does its own thing.’

‘And what exactly is Pederson doing for you at the moment?’ Host nudged.

‘Healthcare.’

‘Healthcare?’ Host repeated, his brow pleaded. ‘What would that have to do with the grand scheme of things?’

‘It eases tension, and the pressure on a certain future President, at a time of economic crisis – and when he should be focused elsewhere. Pedersen has his own healthcare company, its funds invested in a bank -’

‘And the bank gets tips from you or Magestic,’ Keely finished off. ‘So the premiums will be subsidised?’

‘Yes. It’ll grow to be a large company, and Pedersen will get the political benefit, so I have him by the balls. *We* ... have him by the balls.’

‘Let’s talk oil,’ Host said, crossing his legs. ‘Strategic oil.’

‘A good topic. Middle East oil will last to 2025, but consumption obviously rises. By 2008 it’s seventy dollars a barrel –’

‘Seventy!’ Keely let out.

‘It touches one-forty at one point. By time we hit 2015 its one-twenty, unless...’

‘Unless what?’ Keely asked.

‘Unless we manage it, of course. I can selectively release oil discoveries that will keep supply steady and prices stable. What’s needed is a plan of action that you’re all happy with. Unfortunately, should I reveal them all now, the world economy

will be boosted, oil prices will fall – and so too the dollar economy – then the boom and bust cycle will *bust* big time.’

‘It must be managed then,’ Host agreed.

Jimmy explained, ‘We’re just leaving a recession, the next one is due in 2007. Unfortunately, the next British and American Government will do quite well and the economy will boom, followed by a bust that screws this country for a long time – or at least it would have done if I had not got in there first. It will still need... managing.’

‘When does oil become a problem?’ Sykes asked.

‘Around 2015, notwithstanding war in the Middle East, which would have an immediate effect. Between 2010 and 2015 I’ll go head to head with the oil companies. On the one hand we’ll bribe them with new oil discoveries, on the other hand they’ll do what they can to screw up the development of electric cars. So I’ll help China develop electric cars, and they sell them all round the world.’

‘Whoa there buddy,’ Host said, a hand held up. ‘China dominates that market?’

‘Yes, because you fine gentlemen will be ineffectual in releasing electric cars to the US market. By 2017 two thirds of all electric cars driving – very quietly - around the states ... are Chinese made. Unless...’

‘Unless we can alter that,’ Keely unhappily noted.

‘And good luck with that,’ I helpfully offered, getting a look from Keely.

Sykes asked, ‘Is there enough oil to even things out to 2025?’

‘Just. But it’ll be peaks and troughs screwing up the plans, and oil will be so expensive that the economies *will* take a battering. Well, those economies that don’t switch. France goes all nuclear and electric, so they’re fine. Japan is fine, they go all electric way ahead of anyone else. China does well, it’s just the States that lags behind.’

‘So, any directions that you think we should be moving in politically, regarding future oil?’ Host asked.

‘An intelligent question,’ Jimmy noted. ‘Well, there’s plenty of oil in the Amazon. Just the one small problem.’

‘Just the one?’ Host repeated, wide-eyed. ‘We don’t dare push for oil exploration of the Amazon! Every green nut and tree hugger will be on us.’

‘There’s plenty in the Gulf,’ Jimmy added. ‘But the largest source outside of the Middle East is Africa, that much neglected patch of dirt.’

‘But not by you,’ Sykes put in.

‘No,’ Jimmy admitted with a smile. ‘But in order to drill for African oil you need to remove the gunmen, the corrupt politicians ... and then just deal with the harsh conditions, the malaria and the snakes. And, when an oil pipeline is finished, it will be blown up more than a nymphomaniacs rubber doll.’

‘Should the US be thinking about military options in Africa?’ Host asked.

‘Yes ... and no,’ Jimmy responded. ‘Leave Africa to me, just assist when I ask. I’ll achieve more with fifty men than you ever will with a division. And if you’re feeling generous, a few old Huey Cobras for the Kenyans would be nice.’

‘An oilfield would be *nice*,’ Keely nudged.

‘You show me yours, and I’ll show you mine,’ I quipped.

‘As I said,’ Jimmy began, grinnig, ‘extra oil now would cause economic expansion at the wrong time. But I’ll swap you the Hueys for a small one.’ He fetched a map and marked the spot and depth, handing it over. ‘Keep in mind that most future oil finds are deep, very deep. So work on the technology.’

‘Any oil in the Artic or Antarctic?’ Jack asked.

‘No,’ Jimmy answered him. ‘But a great deal of time and money will be wasted looking for it.’

‘Falklands?’ Sykes asked.

‘Some, but difficult to extract, not least with Argentina and the South Americans complaining about it.’

‘So when the time is right,’ Host began, ‘we get new oil fields to keep things going.’

Jimmy nodded. ‘But should your future President know about the oil, at a time of economic crisis, he’ll want to torture me for the information – which would be unfortunate, for him. You gentlemen, need to learn to lie to your political paymasters.’

Keely glanced at his nails, Host making a face and saying, ‘We would never do such a thing.’ The rest of us smiled widely, except Sykes, who shook his head.

‘Let’s talk bio-fuels,’ Jimmy suggested.

‘What’s one of those?’ I asked.

Jimmy explained, addressing the group, 'Some crops can be turned into a vegetable oil, and a fuel. When oil gets expensive, scientists improve the process, and it finally becomes economically viable. So mid-western farmers switch from wheat, so too the Brazilians, and before you know it food prices are soaring. You need to begin the science now, ahead of time, it *will* be relevant in the future.'

'How does Brazil do in the future?' Jack asked.

'A super-power of the South Americas,' Jimmy answered. 'They do *very* well. When the world goes to shit they're in one of the best positions of *any* country. Anyway, I want some money from the two rich countries represented here, in proportion. Consider this a formal request.'

'For what?' Sykes asked.

'Afghanistan. As we speak Islamic fighters are building small training camps in the political vacuum; a small acorn. Uncle Sam will eventually have to go in and deal with them, which pushes them across the border to Pakistan, which destabilises Pakistan causing a war with India, which goes nuclear, followed by refugees heading to Basra in Iraq, followed by the rise of The Brotherhood, which go on to blow up all the oil fields before invading Europe and... destroying Europe, the world economy taking a few knocks towards ... zero.'

'What will money do?' Host queried.

'Bribe the Afghanis to kick out the Arabs, nothing more complicated than that. And no, there is no military solution. If you go in you make it worse. So, some bribe money over the next five years. Call it ... *international development aid*, but only released when and where I say, and to whom I say. And I want the three of you to create a new and combined Pakistani intelligence unit, to monitor who is going in and out of Afghanistan. But let me be clear about one thing, gentlemen - very clear. If the Afghan situation is left to itself, we lose the Middle East and Europe.'

'And America?' David asked.

'Has a great big ocean and a strong navy,' Jimmy replied. 'If they can live without Middle East oil and the European economy, they'll do just fine.'

'Hah!' Host let out. 'Can't survive without either, and you know it.'

‘That’s not correct,’ Jimmy told him. ‘You could survive. You’re economy would be screwed, but you could survive with extended Martial Law.’

‘And what kind of existence would that be?’ Keely scoffed. ‘If the economy dropped five points people would starve! What you’re suggesting is that the economy reduces to zero and starts again from scratch.’

‘Might not have a choice,’ I told him, getting back a cold stare.

David asked, ‘What’s the most pressing *short-term* matter?’

‘Afghanistan,’ Jimmy responded. ‘The small acorn *must not* be allowed to grow.’

‘And the Balkans?’ Sykes asked.

‘A huge distraction, as I’ve said before. But by 2010 Serbia is getting ready to join the EU and NATO, so all’s well that ends well.’

‘And Iran?’ David put forward.

‘Will have several secret nuclear facilities by 2009, a crude bomb by 2013.’

‘Which they try and sneak into Israel,’ David said.

‘No.’

‘No?’ David queried.

‘I’ll discuss that alone with you at some point.’

‘Should you keep separate interests in this group?’ Host complained.

‘You came in bugged!’ I firmly pointed out. ‘So ... yeah!’

‘For now,’ Jimmy told Host. ‘When your house is in order I’ll know. Before that ... we risk disclosure. Come back to me when your “M” Group is secure, sanctioned and respected.’

Kandahar

Under the pretext of a trip to Kenya, we slipped onto a UN flight to Dohar, arranged by Bob Davies, soon heading back towards Afghanistan. I was nervous. Everything I had heard about this place from Jimmy suggested that it was trouble, but that was the future. This was like Germany in 1938.

We touched down at Kandahar Airfield, this time in daylight, and I wished the lights were out. It was a mess, parts of old Soviet jets scattered about; it reminded me of Kigoma. Stepping down and walking towards what passed for a terminal, I could see someone had used it for target practice. A row of jeeps met us, now honoured guests – of sorts. We waved goodbye to the UN staff we had travelled with and mounted up, leaving me wondering if we'd ever get out again. We drove down a long straight road from the airport, and I noticed a team of our mine clearance students, stood working in blue body armour. I pointed, Jimmy focusing on them.

The short trip to the city centre was a duel between our drivers and unwary cyclists, a game of chicken as people dodged the traffic, woman dressed in full length blue Burkhas. Our convoy pulled through tall gates, which I remembered from the last trip, then around a few dilapidated buildings and to a civic building. With the vehicle doors opened for us we stepped out, soon led up steps and across marble floors to a similar room to last visit. For all I knew it could have been the same room. After a small exchange from our escorts we were ushered in, shoes kicked off, and led onto the carpet, a row of five old men sat at the head of the carpet.

Jimmy issued a welcome in Pushtan, getting a smile back and a gesture towards the carpet. This time, however, food was brought straight out, an interpreter joining us.

'Welcome,' the headman offered. 'We find you in good health?'

'You do, and we thank you for your interest,' Jimmy responded. 'How does the mine clearance progress?'

'Your people find ten or more a day, but still more each new day. They will be old men before all Soviet mines are removed.'

'I may be able to send more people, and I would like to create a school here to teach mine clearance.'

'We would be most grateful of that. When can you begin?'

'There are many things I wished to talk of today,' Jimmy explained. 'I wish to make a hospital here, and in other cities. We will send doctors, supplies and money.'

'That is most generous.'

'What of the false legs?'

‘They are in desperate need, your shipments go in a few short days.’

‘I can send more, but first let us talk of some ... problems. My friends in the English and American Governments are not happy with my help here.’

The old men discussed that, finally asking, ‘Why are they not happy, they send us money and food?’

‘They hear that Arab gunmen come here, and they take pictures with the aeroplane that flies very high. These Arab gunmen, they make war against the West. Why should the west send you money if you welcome these Arabs?’

‘These are most disturbing and surprising words, since we do not help these Arabs.’

‘But you do not remove them. They sit here making plans, training at camps, then go to The West to put bombs on buses full of women and children.’

The old men again discussed what Jimmy had said. Finally, they asked, ‘You will not help us with the Arabs here?’

‘I will always help you, even if my government is not happy. But if the Arabs were not here, I could get you a thousand times more help.’

That woke them up a bit, a heated debate going on. ‘You say we will receive more aid? What aid?’

‘More food, more supplies, hospitals, doctors, and money, hundreds of millions of pounds.’

That got their interest, and as I sat there dipping my broken bread into the green sauce, the debate raged. I tried the lamb stew, Jimmy joining me.

Finally they seemed to be in agreement. ‘We will be happy for your assistance in hospitals here and more men to clear the mines. On the matter of the Arabs will we meet to discuss it and send word through the mine clearing men.’

‘I will send men to create a hospital, then put in the supplies and find doctors. And I will ask the people who make the false legs to work faster.’

‘We thank you for your assistance.’

With my last mouthful shoved in we reclaimed our shoes, soon heading back through the traffic as our plane was refuelled. A blast in the distance caught my attention, and I hoped it was safe disposal of ordnance and not one of our guys stepping on a

mine. We boarded without incident, soon heading south as the sun set on the horizon.

A long thirty-six hours later we landed back in London, Han and Sykes asked to meet us at the apartment. The lads swept for bugs at length, a full hour before Han arrived. With the radio on, Jimmy laid out a map of Afghanistan on the kitchen table, everyone closing in. On the map, Jimmy detailed the Taliban advance in future weeks and months, arrows drawn alongside dates, Jimmy asking Sykes to tip off The Northern Alliance in detail. Next came the tricky bit.

‘Han, I want you to supply weapons to The Northern Alliance.’ Han was a little shocked, as was Sykes. Jimmy continued, ‘I want ten thousand AK47, twenty DSK, a great deal of ammunition, thousands of RPGs, mortars and rockets, hand held radios.

‘Why?’ Sykes demanded.

‘If my plans in Afghanistan don’t work out, The West will need to invade. If we invade, Pakistan destabilises, goes to War with India ... and it’s all over. Trust me ... when I say that *nothing* is more important than Afghanistan in the next twenty years. If this is not done right, we lose the planet, gentlemen.’

Sykes forced a breath. ‘Well, the Northern Alliance are preferable to the Taliban taking full control.’

‘When the Taliban are on the back foot we’ll broker a peace,’ Jimmy suggested. ‘That leaves no one in overall control, which would be impossible anyway.’ He faced Han and waited.

‘I will discuss this with my government,’ Han offered, nothing more.

‘Make sure they understand what’s at stake,’ Jimmy emphasised. ‘If the Brotherhood rises in Afghanistan, they will mobilise the Muslims in your western provinces. You’ll fight a civil war ... and lose.’

Scorpion base

We arrived back at Mawlini in August 1994, and I questioned the logic in the timing, at length, since it was forty degrees in the shade; the only thing blocking the sun over the base being the odd unwelcome sand storm. Staff made use of the pool at length, but no one was foolish enough to try and sunbathe at midday. Jimmy had issued a decree shortly after arriving, and all operations halted from noon till three, the working day starting at 5am when it was coolest. Being a desert, the temperature fell dramatically overnight, so a 9am dip in the pool was very refreshing. But you had to make sure you got there after the pool boy had cleaned, or you'd have unwelcome company in the water with you. Many a robe, towel and fluffy slippers from a certain hotel in Hong Kong could be spotted on the poolside, and bed sheets were strung up between posts, parts of the pool and the parched brown grass area shaded over and looking like a giant clothes line.

When the bedding from the old Madsons hotel had arrived no one had quite known what to do with it, so they had rung us. Jimmy instructed that the rooms should have several beds each where possible to double up for transit staff where needed. Some beds went by truck to Kigoma and onto Zaire, to Forward Base. Since most of the beds were in better condition than those purchased locally, people grabbed them and swapped, Mac now slumbering peacefully at night in a king-sized bed. Most of the hotel rooms had received a much-needed writing table, bibles still in draws, and excess bedding was delivered to the two refugee camps; the small camp behind Doc Adam's clinic and the border camp. Nothing was wasted. Tables, and posh wooden chairs, from the restaurant at Madsons now sat outside many huts and were used when the huts themselves grew too hot, numerous Fanta shades procured from Nairobi, an odd eclectic mix of furniture. Many a meeting was held outside and the hangars were cleared of aircraft, their cool interiors used for training.

When I glanced at the secret "enemy engagement figures" I was shocked, an estimated one thousand Somali gunmen killed, most raked by the Mi24. Two Somali warlords were now on board and their areas were jointly or collaboratively patrolled; gunmen waved to, not shot at. The five Army Hueys were now in regular use, existing Kenyan pilots cross-trained, and also taught combat manoeuvres by Hal, whose three-month extension had

been extended, again. Our Rescue Force flyers had all passed their fixed wing pilots licenses at first go, and gone on to advanced training; long range navigation, twin engine flying, night flying, and basic maintenance. For the most part they were now back on Hueys and running regular trips into Somalia, sometimes performing patrols for the Rifles in our tired old Cessna. As we pushed further into Somalia there were more regular engagements and incidents, the wounded evacuated; two members of the Rifles had been killed, a handful injured. The two Rifles killed had been shot in an ambush just five miles across the border, gunmen pretending to be refugees. We altered the incident's position by five miles and made it look like a border incursion, the incident all over the Kenyan TV news. The result was a call for more action against Somali gunmen, the Kenyan public firmly behind us.

With military supplies due to arrive from the Americans any day, we took a trip in a Huey to the new clinic west of Baardheere. In a repeat of the much-glorified initial rescue, I flew the first of three Hueys toward Baardheere, two green Army Hueys following. I flew secure in the knowledge that a fuel truck sat there waiting and no one should be shooting at us. I crossed the border, and our expensive barbed wire fence, and checked my heading, knowing the area below to be just about bandit free these days. We flew over a jeep convoy, one white jeep and two green jeeps as normal, then spotted a Tucano high above us, contact made and greetings extended; they reported no gunmen, and I was certain that not even hardy Somali goat herders would be daft enough to venture out in this heat. A Somali named Abdi, and three Rifles, accompanied us, Jimmy left seat, big Paul in the rear and armed.

This Somali, Abdi, had a future, so Jimmy had explained, and he was being given as much experience as we could afford him as the leader of the small Somali Rifles, now one hundred and fifty strong. Since we had moved into Somali we had found the recruitment simple enough: "Do you want a job, some food and water?" Only a fool would have said no. The Somalis loved the military training and lifestyle, but we had to weed out the killers and rapists early on. When such a group of men was identified they went on a mission with the ex-SAS lads and never returned; we had a zero tolerance for our lads raping or killing for fun.

Two members of the Rifles had also met with accidents, but off duty, several being kicked out. Something Jimmy was adamant about, was that anyone with a taste for rape and murder would not simply be let go to wander around Kenya.

An hour into the flight, and nearing our destination, I contacted the clinic by radio, informing them of our arrival and getting an update on any “action” in the area. We set down behind the clinic, a cloud of dust created by the three helicopters. With the rotors winding down I stepped into the heat, stared at by inconvenienced goats, Abdi and the Rifles close by and armed to the teeth. Jimmy led us forwards, Big Paul babysitting the Huey.

The clinic stood out from the other buildings around here with their mud construction; this was breezeblock and cement, two storeys, thirty yards long. It sat flush to the road, members of the Rifles visible on the roof. At the front of the clinic I noted barbed wire sections funnelling any approach on foot, a machine gun post both sides of the road. Stepping inside, we entered a large waiting room, long benches full of veiled women with their kids, ceiling fans working furiously. Jimmy led us off to the left, past a receptionist station enclosing three of our nurses in uniform sat working. We passed an open door, a glance in at an injured boy being worked on by a UN medic in a blue waistcoat. Finally we found the administrator’s office, knocked on the half open door and entered. The nametag said, ‘Dr Hoskins.’

I recognised his face and we shook. ‘Warm enough for you?’

‘Not too bad in here, and it cools down a treat at night. Cold drink?’

‘Oh, yes!’ I told him as Jimmy and I sat, receiving two cold cans of Fanta, noisily opened and noisily slurped. ‘So, how’re tricks?’

‘Word is spreading that we’re here, many women coming to give birth, plenty of gunshot wounds that are days old and infected. Oh, Doc Adam is on a house call - you want him called back?’ Jimmy shook his head.

‘Much fighting?’ I asked.

‘No,’ Hoskins emphasised, shaking his head. ‘Around here they know that anyone holding an AK47 is fair game. Some warlords jump out of their jeeps up the road and get their sons to drive forwards; had a few unfortunate mishaps.’

‘Such as?’ Jimmy asked.

‘Armed men bringing their wives here to give birth; they got spotted and shot-up en-route,’ Hoskins reported. ‘We treated the newly made widows and orphans.’

‘Are there signs up?’ Jimmy asked, concerned.

‘Yes, now there are, and now they know. But some idiots came past the other day thinking they could rob this place. Buried around the back here somewhere. The Rifles don’t piss about. Abdi and his mob come past a lot, and they warn the locals off giving us problems.’ The Doc eased back. ‘You know he chopped some guy’s hand off?’

‘What for?’ I asked.

‘Robbing women refugees on the road.’

‘Fine,’ Jimmy said. ‘Fuck ‘em. We don’t allow that, and we won’t make a difference here unless we have zero tolerance. There’s no point in fixing the symptom unless you attack the cause, otherwise you’d be sat there for decades and we’ll be no further forwards in stopping the casualties pilling up.’

Hoskins asked, ‘Got anything planned for the local politics?’

‘They can organise themselves anyway they like,’ Jimmy responded with a shrug. ‘I’m not here to tell them to be democratic or western ... or any crap like that. But I will do what I can to stop rape, robbery and killing. So if we see jeeps of gunmen we’ll open fire, not question their political style at the town meeting.’

‘What’s the town like?’ I asked.

‘We don’t go in there. That’s their turf and their politics - as you say. If they want help they come out to us, some UN patrols going in.’

‘We have roadblocks all around the town,’ Jimmy mentioned. ‘No export of gunmen, nor import of weapons.’

‘Must be working, that camp near the border is shrinking a bit,’ Hoskins said. ‘I know we send them food convoys as well.’

‘From the farm near Mombassa,’ Jimmy explained. ‘Some from the orphanage,’ he added with a smile. ‘Kids are excellent at growing crops in excess!’

We chatted for ten minutes, got a feel for the operation whilst noting problems and gripes, then exited back through the waiting room, the nurses thanked for their efforts. Circling around the building we entered the heavily fortified Rifles compound, a mud

wall enclosing numerous tents, watched over by a tall machinegun tower. They jumped up and to attention, greeted in a local Kenyan dialect by Jimmy and told to relax. We sat on camp beds in darkened, and sweltering tents, and chatted to the soldiers, listening to what they had been doing, what engagements they had been involved in. A sergeant explained the reward system for the locals; two hundred dollars for an AK47, four hundred for a loaded RPG, etc. The good citizens also earned themselves a basket of food. So a few times a day a local would approach and ask for money for a weapon, handing one over to be checked before being paid. Turned out that kids would nick their parents AK and sell it, making us laugh. A DHSK heavy mounted machine gun was offered to the Rifles, a price of two thousand dollars fixed, and now it was back at base and part of the Rifles' arsenal. Any Chinese pineapple grenades bought were dropped into a deep hole with their pins out, a dozen resounding thuds echoing around the clinic each day. Anti-tank mines were taken out into the desert and disposed off in a shooting competition at two hundred yards, a betting pool run each day. All in all, we were removing weapons and gunmen each day, clearing a strip along the border.

With the Hueys fuel topped up, Jimmy checking his watch, we collected Abdi and the Rifles and set-off in a cloud of dust, heading fifty miles further east and to a meeting of two friendly warlords, plus a new guy. I found the target compound after climbing to a thousand feet, the compound simply a ring of barbed wire a hundred yards square with tents and jeeps in the centre. A number of Toyota pickups were parked in a line outside the perimeter when we landed, our guests early, Jimmy again checking his watch. When the dust cloud had dissipated we stepped down and walked across to a large command tent, many Somalis sat inside around the edges of a square carpet.

'As-salaam alaykum,' I offered, getting a welcome in return. I sat crossed legged and thought back to Afghanistan as my eyes adjusted to the darkened interior of the green Army tent.

Jimmy offered a lengthy welcome, then sat beside me, Abdi sitting behind us. Singling out the new warlord, Jimmy spoke to him in Arabic, a translator on hand. 'We welcome you to this group, and hope we can work and live together in peace in the future. I have invited you here because we will soon approach

your towns and villages, and what we offer you is of great value. Look around you. These leaders have accepted our peace, our gifts, and are wise enough not to raise arms against us. What we offer you is the same.'

'What do you want with our lands?'

'Nothing, other than to move across them unhindered. If you help us we will give you money and food, if you do not we will make war on you until all of your soldiers are dead, and you and your family are all dead. And we make war from the air.'

'Why would we give up our lands to an outsider?'

'We are not asking you to give up your lands. The leaders here rule their land, we do not interfere. We only stop armed men on the roads if they rob and kill. We seek peace for this land, so that your people do not come to our border with Kenya with heavy hearts. If you are a good leader, your people will love you, not run away in fear.'

Jimmy explained the upside, then told the old boy that we would move across his land inside the month, regardless; he could welcome us and take the food and money, or fight us. After a little more persuading from the other leaders the old guy agreed to try it. Jimmy handed over a hefty bag of gold necklaces on account. A map was produced and the location of a clinic agreed upon; the old boy could now tell his people that *he* had secured the clinic for them. The first food truck would arrive tomorrow. It was done deal, people standing, hugs given, the visitors bade a safe journey home. With this new territory now accessible to us we were almost two hundred miles into Somalia along the Ethiopian border, whilst keenly avoiding the Mogadishu region to the south.

We played at being generals and inspected the dusty camp and dusty men, chatting to everyone and thanking them for their efforts, asking about food and supplies. Big Paul was close by and playing at bodyguard for a change. One man asked about Adbi, was he an officer?

'He is the leader of the Somali Rifles, and never forget that this is their land, not ours,' Jimmy had answered.

As we thought about heading back, a heavily armed patrol returned to the camp, two jeeps armed with 105mm recoilless rifles. We walked over to them. I had not seen the anti-armour weapons before and had a nose, asking questions of the soldiers.

The two ex-SAS instructors jumped down, goggles off and clothes dusted down, explaining that they had been “procured in the field”.

‘You killed the original owners,’ I corrected them.

‘Can you prove that,’ they challenged with cheeky smiles.

‘What’ll these do?’ I asked.

‘Hit a Toyota pickup at half a mile ... and leave no one alive.’

I pointed at the RPGs. ‘And those?’

‘We found them lying around,’ they suggested with less than sincere looks. A trooper faced Jimmy. ‘We intercepted an arms shipment, sent it back to base; Chinese made AKs still in the brown paper and greased, shit load of ammo, plus mines.’

‘Mines?’ Jimmy repeated.

‘Anti-tank,’ they responded.

‘If one of our jeeps goes over one of them...’

‘You’d lose a jeep load of medics,’ they pointed out.

Jimmy beckoned the two men closer. ‘I don’t want our medics anywhere near a mined area. If in doubt, draw a line on the map. And try and find out who the mines were for, offer big rewards, torture if you have to.’

‘Convoy was on the road to Mogadishu,’ they said. ‘So probably Aideed.’

‘If it was Aideed, he’d land them by sea,’ Jimmy pointed out.

‘This lot came over the Ethiopian border,’ they countered.

‘Maybe even bought over there.’

‘Get me some serial numbers,’ Jimmy firmly ordered.

‘Anyway, soon have a few Huey Cobras to back you up.’

‘Yanks coming back?’ they puzzled.

‘No, these helicopters are ... being donated to us to use.’

‘Fucking ‘ell.’

‘Will Aideed come up here after us?’ I asked Jimmy.

‘No, he’ll hang around Mogadishu,’ Jimmy answered. ‘But there’s a warlord this side of Mogadishu who’s a right arse – no negotiating with him.’

‘Stick a Huey Cobra up his backside,’ they said.

Jimmy slowly nodded to himself. ‘How are the boys doing?’

‘Fit, aggressive, good shots, never tire out. They’re a fucking dream to work with. We’re pounding the bad guys and taking fuck all casualties.’

‘Keep it that way,’ Jimmy said threateningly. ‘Hit them from a distance, we don’t want the Kenyan public whinging. Stay out of the towns, this is a war of attrition - see whose supplies run low first.’

‘We’re doing the hearts and minds,’ they said. ‘Food and money, and we got the Somali translators to let them know we’re not going to shoot them or nick their goats.’

‘Keep Abdi involved,’ Jimmy told them. ‘He has ... leadership potential.’

Big Paul chatted to the troopers for a few minutes, and I guessed he was a little jealous of them. But, as he said later, he was living in luxury in the UK and they were sleeping in jeeps in the desert. The Huey’s blew up another dust storm as they lifted off, dangerous because you could not see the other helicopters. I set the heading and climbed to a comfortable height, soon heading back towards Baardheere. But after five minutes a dust trail in the two o’clock position caught my eye, so I turned toward it and climbed.

‘Is that ... a tank?’ I asked Jimmy. ‘One of ours?’

‘No it fucking well isn’t!’ He pressed the radio button. ‘Emergency! T72 tank heading towards the camp. Any ground mobile, come in.’

‘This is Kenyan Rifles camp, Sergeant Nkomo,’ came a slow and deliberate voice.

‘This is Jimmy Silo. There is an enemy tank coming towards you from the northwest, five miles out. Evacuate the camp and spread out.’

‘Receiving and understood,’ came the calm voice.

Jimmy turned to me. ‘Climb, zig-zag, get behind it!’

I climbed as ordered, banking hard one way then the other, soon passing the tank and circling behind it. As I did I could see the Rifles opening up on it with the GPMGs from the Hueys behind. They were not having any effect, but I figured the tank crew would have a headache afterwards.

Seeing a jeep patrol heading towards an intercept course with the tank, I had an idea. I hit the radio. ‘Jeeps on the ground, I’m going to create a sand storm, set a trap and get ready.’ I nosed down and dived straight for the tank from above and behind it. At a hundred feet I pulled back and flared, almost bouncing off the tank’s armour – earning a look from Jimmy. The effect was

to create a clear area around the tank, a blanket of dust preventing the tank from seeing anything else. The turret opened and a startled looking man peeked up at us.

Jimmy turned his head. 'Abdi! Shoot!'

Abdi hung out the side and fired at length, a spurt of blood suggesting that he had hit his mark. The next part I had not anticipated.

'Abdi! Jump!'

I blinked, glancing at Jimmy as he directed me forwards. We closed with the tank till I could see the blood splash clearly, soon a blurred image of Abdi jumping down. He hit hard, rolled and stopped on the engine cowling, soon upright and moving forwards, his AK thrust into the open hatch and fired at length. With the tank not halting he eased his upper body into the turret. The tank jerked to the left and halted, our momentum carrying us forwards. I pulled back on the stick and swung around in a wide arc.

'This is Jimmy Silo, the tank has been stopped, the crew killed, Abdi jumped onto it. Salvage the tank – don't shoot.' He faced me. 'Set it down.'

With the dust settling we ran forwards, jeeps closing in from all sides. Abdi pulled a body out of the tank and dropped it unceremoniously onto the sand at the feet of Big Paul, soon a second as the ex-SAS boys rushed forwards.

'That's an Ethiopian tank!' they shouted.

'These men are Ethiopian,' Abdi added from up top.

'Heading for Aideed,' Jimmy thought aloud. The other jeeps had now pulled up, quiet a crowd gathering. Jimmy jumped up onto the tank, climbing to Abdi. He raised Abdi's arm like a triumphant boxer. 'Abdi! Tank killer!'

The men cheered, and I could see exactly what Jimmy was doing, but joined in enthusiastically anyway, the two British instructors left looking a bit perplexed. Oddly, I noticed Big Paul cheering Abdi.

We finally made it back to Mawlini, a smiling Abdi stepping down to odd looks from the ground crew; the news had reached back here already. We took him to the rooftop bar for a cold, non-alcoholic drink, many people closing in and asking about the helicopter-tank duel. We neglected to tell them that the tank's crew were just moving it and had no idea how to fire the

weapons – not that it had any ammo, that would have spoilt a good story with boring detail. Abdi was not just the leader of the Somali refugee men now, he was their proven hero and respected around the camp. As I saw him enjoying the fame I remember my own transformation from geek to hero. Little did I know what Jimmy had started with Abdi, or how it would end.

We now owned a second hand T72, one careless owner, but no ammo and no spares, and no one who could drive it, but that was just detail. As we stood celebrating, the sun low in the sky and making my favourite place amber, a drone of helicopters caused me to turn and point. A line of Huey Cobras became distinct against distant clouds to the south, soon causing me to face Jimmy with a look of childish surprise.

‘Twelve of them,’ he said.

They approached slowly, landing in turn on the edge of the runway, across from the apron, nowhere else for them to set down. All we needed was a drunk Russian pilot in an Antonov and we could have lost them all in a terrible collision. When the sand settled, people peered down at the line of sleek but menacing helicopters.

With Jimmy at my shoulder I said, ‘We don’t have the space.’

‘Nope, but they’re extending the wire beyond the Rifles outer fence by five hundred yards, going to concrete it over and put up hangars.’

The American pilots, wearing green flight suits, were picked up in jeeps and brought around, soon with us on the rooftop bar. And now that they were close I could see that they were grey haired and overweight; commercial transit pilots.

‘Where the hell were you a few hours ago!’ I asked. ‘I took on a T72 with an unarmed Huey.’

The first man stared at me, then Jimmy. ‘You’re the big guy with all the money, so you must be the crazy fucker, yeah?’

Jimmy and I exchanged looks and shrugs; the man had us right. We got them beers and told them the story before Hal and Mac appeared. Mac beckoned me forwards, so I leant towards him, getting a hard slap around the head, a kick in the shins from Hal.

‘Stupid sod,’ they said. ‘A tank? You fucking mad?’

‘We just been asking that,’ the American pilots told Hal, soon a three-way conversation breaking out and people talking over each other.

After twenty minutes of drinking and chatting, Jimmy picked out four men from their name tags and beckoned them to a quiet corner away from their colleagues. ‘Guys, I know you’ve only been paid to deliver the Cobras off the cargo ship, but I’d like you to hang around a while, help us out and make yourselves some money in the process. I need some cross-over training for the Kenyan pilots, some weapons training, some live mission *on-the-job* training for the guys.’

‘Live mission?’ one queried.

‘You would take out a Kenyan pilot on patrol across the border. If you’re engaged - then you return fire.’

They glanced at each other, and I could see Hal in their eyes. They were not as old as Hal, but flyers were flyers, and they’d do anything to stay flying.

‘What’s the pay?’ one asked.

‘Four thousand dollars a month tax free, plus all food and beer and accommodation, plane tickets home,’ Jimmy offered.

I figured we could have got them for nothing, and they readily agreed – whilst trying not to appear too keen.

Jimmy said, ‘I need a week’s intensive training given. And I mean *intensive*. Then I need you to nurse maid the Kenyans till they’re up to it, which means you go deep into Somalia.’

We had our pilot instructors, and some mates for Hal.

A line of trucks pulled in around dusk, spares for the Cobras, plus ammo, the ammo now being stored with the real and dummy mines outside of the camp in a well-guarded bunker. All we needed now were some trained pilots. Hal had spent a year on Cobras, we discovered, and he would be helping out.

The next morning, just to make things worse, two Kenyan Air Force Pumas flew in to join their colleagues. Now the airfield truly was snug and cosy. The American pilots moved their aircraft one at a time, space made, four left on the apron for training, the remainder covered in spare bed sheets. And we ordered up a shit load of concrete from Rudd, diverting barbed wire from the border and to us.

As I had lunch the next day I glanced down at the base, realising that we could film our own dodgy Vietnam War movie

right here. Some of the staff expressed concerns about the militarising of the base, but we reminded them that it had always been a Kenya military base, and that we had occupied it, not the other way around. With most of the helicopters tucked away, and the Pumas used for ferrying our people into Somalia, a level of normality return. Jimmy spent time with Abdi, teaching him a philosophy of the campaign in Somalia – his philosophy, and more and more Somalis joined their version of the Rifles. The small Rifles camp, behind the clinic west of Baardheere, grew quickly, concrete and breezeblocks sent over with timber. New buildings erected, tents were laid out, guard towers erected. When it was half-decent and secure, the Somali Rifles were moved over there en-mass, just under two hundred of them armed with their standard AK47s, but wearing green Kenyan uniforms with Somali flag shoulder patches. And Abdi, he was given Captain pips for his shoulders, his cronies getting Lieutenant pips.

Our staff were sent over to train them in mine clearance, ordnance clearance, and all the military skills. They got their own jeeps, their own flags painted on the sides, their own areas to patrol with, but they usually never ventured out without a Rifles' jeep tagging along behind. Captured Toyota pickups were painted green, bullet holes patched up – blood washed down, Somali flags painted on doors.

I had made the British tabloids with my tank stunt, that wasn't really "my" tank stunt, and Katie was pissy on the phone again. She was off for a tour of America and asked if I could join her out there. I explained that I was tied up here for at least another week or two, which I wasn't, but said I'd try and get away. And as I put the phone down I realised something that had always been there: flying around in helicopters was preferable to a dinner date with her.

A week after the T72 incident we received a signal from one of the British officers working with the Rifles. He had found an abandoned airfield with a concrete runway in the middle of nowhere, twenty miles to the nearest town or village. We looked on the map, noting that it was further south than we had ever penetrated, a hundred miles from the border but only thirty miles north of several large coastal towns and just eighty miles from

Mogadishu. The danger was obvious; the large towns on the coast were full of thousands of gunmen.

With a UN Antonov sat on the apron we made the decision; a quick airborne seizure of the airfield. We loaded the Antonov with soldiers, tents and supplies, fifty men, and sent it on its way. The Dash was made ready, medics selected and kit organised, tents stowed. As the Dash lifted off, myself right seat and Jimmy in the back, a massive road convoy was organised; trucks of the Rifles, Rescue Force jeeps, water tankers, fuel tankers, barbed wire trucks, spare ammo for the Cobras. Four Cobras were fuelled and made ready, soon setting off for the new forward base, cheekily named River View by the men already there.

The Dash circled the new airfield an hour later, confirming its isolation, also the poor condition of it; there was little left apart from the runway and a lonely control tower. With the Antonov taking off again, having already unloaded, we touched down smoothly, but dare not try and taxi anywhere, the concrete pathways cracked and strewn with rubbish, a fair amount of rusted ordnance visible. In oppressive heat, we fixed hats and sunglasses, navigating carefully around the old ordnance and towards the tower.

As we slowly progressed, watching our step, I considered just what a death trap this place was, not least because of no water for twenty miles in any direction. Everywhere lay rusted old cartridge cases, some large shells, bits of barbed wire, tin cans that had obviously been used for target practice, everything sharp and rusted. And deadly. We passed a bleached white goat's skull, bleached bones and a shoe. Staring down the length of the runway the optical illusion was pronounced; a shimmering haze above the ground, a clear thin strip of sky, then distant hills above the sky, as if the hills floated on air. I considered that, in this temperature, you'd last a day at most without water.

Whoever had abandoned the tower had also used it for target practise, the building pockmarked and looking like it had been hit with RPGs. Of all the control towers we had taken over, this one was the worst, large holes in the walls, the structure itself in doubt, part of an aluminium aircraft panel shading a nice big snake.

Jimmy called the British officer over. 'First things first: stick a man up that tower with binoculars.' A man was despatched.

‘Second: clear a small area, check for mines and ordnance, stick everyone in it. Then we want a complete mine check of the airfield.’

‘Rabbit’s got a graduating class,’ I put in, already panting in the heat. ‘They finish in a week.’

Jimmy said to the officer, ‘Radio back, get the entire class out here with their kit; a *live* final test.’

I set about the tower, cleaning out the rubbish with two men of the Rifles. With dried branches we swept out broken glass and made two rooms habitable, apart from the large holes in the walls. An hour later the drone of helicopters caused me to climb to the observer on the roof and pinch his binoculars. A line of helicopters appeared through the shimmering heat; a Rescue Force Huey, two Army Hueys, a line of Cobras and the two Pumas. Blowing up their own dust storm, and disappearing behind it, they landed in a line on the sand just west of the runway, all sat facing the runway; what had been an isolated airstrip now bustled with life. The Pumas flew off straight away, for additional supplies, patrols were set-up around the perimeter, and tents were erected in the area close to the tower. Jimmy wandered around taking men off guard duty and putting them on ordnance clearance, soon a few dull thuds echoing around as minor ordnance was disposed off.

A jeep pulled up tooting heavily. We walked over to it. ‘Sir, sir.’ The soldier held up a sign: minefield! We put the man aboard an Army Huey and he made ready a GPMG. The Huey lifted off and slid forwards the short distance to the area where the sign had been discovered, climbing to around two hundred feet, a hundred yards away from the target area. The soldier who had found the sign opened up as we observed. It took a good minute before a cloud of dust blew upwards: a mine. Three more mines were destroyed using this stopgap method, the Huey landing again. At least we had confirmed their location, every spare body now put on ordnance clearance.

As the sun lowered towards distant Kenya, the Antonov returned, Rabbit and his entire class unloading with backpacks and tents.

‘Nice spot. Got some mines, have we?’ Rabbit quipped.

‘Just found a minefield, southwest corner. It had a sign up,’ I reported.

‘That always helps,’ Rabbit sarcastically noted. He put his team on the concrete and told them not to raise their tents yet; they’d be under the stars tonight. He assembled the group as if a lecture was about to be given, then drew a map of the airfield in a patch of sand. The students suggested courses of action, methods, and procedures. A command structure was soon set-up, communications tested, team leaders nominated, groups formed. They checked their supplies, made themselves comfortable and decided to do nothing till morning save check a small area in front of the tower in the remaining daylight, electronic metal detectors buzzing around, but hampered by dozens of small calibre bullets.

At midnight, the road convoy contacted us by radio, well and truly lost. A Huey went up and found them, giving them directions. They pulled in at 2am and parked on the access road, everyone told to sleep in their trucks because of the mines, much needed water distributed. Dawn brought a beautiful amber sunrise over distant low hills, which I watched from the top of the tower; we had slept rough under the stars, some kit pinched from the Rifles, Big Paul snoring happily away. Back down at the jeeps we accepted cups of tea and sat chatting to the lads as the light improved, scorpions stamped on intermittently or scolded with tea.

‘The Kenyan lads call this Scorpion Base,’ Jimmy informed me. The name fitted; this was the worst pile of hot sand and rusted metal I have ever come across. This shit tip made Kigoma look like a holiday camp.

Rabbit was kicked up and out of his sleeping bag, grumbling and cursing at length, his students rising. They were split into teams, no time for breakfast, the area between the access road and the tower checked first. When we were happy with that patch of sand the trucks were moved in and unloaded, sent back in a convoy of ten vehicles, that many again remaining. Rabbit’s students worked hard all day, despite the heat; in the body armour they wore it must have been unbearable. Thuds echoed around all day, most of the ordnance being very old and rusted ammunition left lying around, nothing more recent than ten years.

Conserving aviation fuel, a few local patrols were sent up, nothing more than camels sighted, one lonely goat herder

frightened. Upon their return, Jimmy grabbed two American pilots and asked them to run a deep patrol down the south access road, to the edge of the coastal town and back again. With the Cobras dispatched, I questioned the logic of that move, since we'd be letting the bad guys know we were here.

Jimmy led me to a quiet patch of concrete. 'If you stay here you'll lose Katie.'

'Where the hell did that come from?' I questioned.

'There'll be trouble here in a few days.'

I pointed south. 'Those Cobras – they'll be seen.'

He nodded. 'And the Somali warlords will think there are Americans based here.'

'And following their previous successes –'

'Will want a scrap,' Jimmy finished off.

'How many –'

'Five thousand,' Jimmy cut in.

'Five ... thousand!' I whispered. 'We got fifty Rifles and some odd and sods!'

'We got the advantage. They ... are coming to us, along a long straight road with no off-road access to this base. It's the funnel from hell.'

'And we have the new Cobras,' I noted, taking in the bases activity. I took a breath. 'If I stay it'll be all over the news.'

'Yep. And she'll be worried, when she should be happy performing concerts.'

'Which will make her question the logic of dating *someone like me*.'

'Very much so. So you should think about leaving.'

'And you?' I challenged.

'If you go, I go.'

I took a minute to consider his words. And meaning. 'If I stay, do I get some *necessary heroic exposure*?'

'Not to a significant degree, no.'

'Oh. Then we stay...?'

'Because I know the lay of the land, and how the battle will go,' Jimmy explained. 'We have the advantage.'

'If I leave, and *you* leave, our people are in danger!' I testily pointed out.

'I can brief them and run the battle from Mawlini.'

‘But if there’re some developments, some quick tactical knowledge will be needed here,’ I challenged. ‘How many will we lose if we stay?’

‘Handful, it’s a helicopter battle.’

‘And if we go?’

‘Two dozen,’ he finally admitted.

‘And if things don’t work out?’ I pressed.

‘All of them.’

‘I think you got your answer,’ I said as I walked off. War had been declared, a line in the sand drawn, and not just here. My line in the sand included the precious princess in New York as well.

An hour later the Cobras returned, nothing to report. Jimmy sent them to another large town, northeast of the first, as we requested Mac’s presence at the aptly named Scorpion Base. Grabbing the two trooper instructors, we sent them down the road to investigate two ridges and rocky outcrops, and would they be any good as defensive positions. Whilst waiting in the heat, I rubbed a stone down a wall of the cooler tower interior, the stone marking the wall like chalk. Stepping outside I found a clear patch of concrete and made a large drawing of the airfield, people soon stood watching and making comments. I extended the drawing to include the access road, enough scale of drawing to include the ridges Jimmy had told me about, the ridges that the troopers had gone to investigate.

When the patrol returned they were buoyed up. ‘Fucking excellent defensive position: long straight road the other side, see anyone coming two miles away.’

‘What about behind us?’ I asked them, already knowing the answer.

‘It look’s flat, but its full of rocks and ridges – and a two mile walk through the middle of hell to get around us. So no – no access to the rear.’

Jimmy said, ‘Then stick your best people either side of the road at those passes. If anyone is coming to have a go, that’s how they’ll approach.’

The men were dispatched in six jeeps, the bottleneck sealed quickly. I marked their presence on the map, Rabbit now marking mined sections in green and red spray paint that the mine clearers always carried. Stood staring down at he map I

realised what Jimmy was up to, brilliant in its timing and audacity. The Somalis had seen the American Army come and go, taking casualties, and were over confident. The road access here was terrible for the attackers, excellent for the defenders, and we had the added advantage of re-supply by air. To kick things off, our Cobras were out teasing the local warlords and revealing our position, an invitation to the stupid; no western officer would have attacked up that road unless he was mad.

Mac flew in late afternoon, but now in green fatigues - and armed. Handy was with him, plus another fifteen of the Rifles. And Hal.

As Jimmy greeted Mac I approached Hal. 'What you doing here, Hal?' I asked, my tone unfriendly.

'You need experienced pilots,' he countered.

'Hal, the local warlord has five thousand men, we got less than fifty, and I'd like to see *you* die of old age in your bed.

'And I'd like to be anywhere other than that comfortable bed.' He pushed past me and towards the helicopters. I watched him go, secretly glad that he was here, but also afraid for him; he was becoming a father figure to me.

We led Mac to the floor plan and described the layout in detail, Mac agreeing that the airfield was easy to defend. Jimmy exchanged a look with me.

'What?' Mac asked when he noticed.

'We got some intel,' I said. 'Local warlords know we're here.'

'There goes the neighbourhood. You think they'll attack?'

'Most likely, and soon,' Jimmy told him.

'They got nothing other than Toyota pickups!' Mac put in.

'They got five thousand men,' I quietly told him.

'Ah...' Mac rubbed his chin. 'We got the Cobras ... but.' He faced the north of the airfield. 'It's fucking flat all around.'

'Lots of rocks and gullies back there,' I told him. 'No vehicles coming in that way.'

'Mac,' Jimmy began. 'You have complete tactical control here, this is *your* battle.'

Mac put his hands on his hips and studied the map for many seconds. 'We got mines on the trucks?'

'Two hundred, plus what they're digging up now,' Jimmy informed him. 'So another thirty rusted old fuckers.'

Mac called all senior staff together; Rabbit, Handy, the English officers, the trooper instructors, the Kenyan officers and our pilots, including Hal, a look exchanged with me. All stood around the edges of the large drawing.

Mac put on his posh voice. 'Gentlemen, we've got intel' that the warlords south of here are not so happy about our presence. So what we can expect is either a sensible probe of our defences, or they'll all come up for a Sunday picnic, en mass. And let's not underestimate them - they've got thousands of boys to pick from. Fortunately, this pile of scorpion shit is the kinda place no sensible fuck would want to be, and we got just the one access road, long and straight.'

Big Paul knelt on the drawing, 'We've been out to this point, it's a death trap for anyone coming up that road, a narrow passing through rocks. Got a similar set-up the other way, the boys are out there now and nothing will get near without us knowing.' He stood, backing up.

Mac called Rabbit over. 'Stop clearing the mines for now, go out later and plant some along the edges of that south road, starting two hundred yards beyond the choke point.' Rabbit nodded as he studied the drawing.

'Helicopter boys,' Mac called. 'I know this aint what you lot signed up for, so this'll be volunteer only. If, and when, some unhappy chappies come up that road we'll hit them from the front, pushing them off the road.'

'And ... *boom!*' Rabbit let out.

Two of the pilots seemed reticent, Jimmy leading them to a quiet spot. 'Guys, if there is some action here, I dare say they'll be a book written about it. Make sure I got the spelling of your names right for the book, so when everyone in America reads it - we don't mix you up with the other pilots.'

They returned keener to participate, glared at by Hal for their lack of balls. A plan was drawn up, contingencies allowed for, input taken from all sides. The plan was enacted, making the assumption that we'd have company in a day or so.

At sundown we went on alert, a jeep of armed men shot-up at the south ambush site. It was pushed off the road, no evidence left, the bodies buried, their weapons pinched. Knowing that the men would be missed, hopefully, we took to our tents and ate a lengthy steak meal cooked up by the Rifles, a lone inquisitive

camel in the wrong place at the wrong time. At one point Mac bit down on something hard, pulling a 5.56mm round from his mouth, shouting at length at the cook as we laughed. We all chewed slowly and carefully from that point on.

At dawn, Hal took our medical Huey up, since we figured they'd not shoot at it. He circled north a mile out, nothing spotted but camels, then completed a radial search to the south, a lone jeep spotted two miles down the road, but not moving. With no hostile threats appearing we continued to clear ordnance in haste, making the base safe for people to move around in. One of the trucks had a few cement bags, we had plenty of sand, and so I helped patch up holes in the tower. When done, Mac and his command staff moved in, a trestle table set-up and maps spread out, additional maps pinned to the wall. Short range jeep radios, as well as aircraft radios, were placed into the tower, a good view afforded of the runway, a cooling breeze felt by the operators, whose view was unhindered by glass.

That afternoon, as the sun lowered, a three-jeep Somali convoy approached the south choke point, the detail learnt from us all keenly clustering around the radio. They stopped a hundred yards short, had a look about without setting off any mines, and advanced slowly. We were in some debate as to when to open fire, hoping they would pass the crest of the rise first and not set off any mines; fetching them out of the minefield and hiding the debris would prove difficult. I also suggested that they might want to negotiate, a serious point. Jimmy said he knew of the southern warlord, and there was no negotiating with the guy. I was over-ruled.

On the crest of the rise they halted, studying the base with binoculars, our helicopters clearly visible to them a mile away. Then they spotted tracks leading off the road, and towards the small clumps of rocks. That was not allowed, so the Rifles opened up with GPMGs and RPGs, a one sided shootout that lasted two minutes. The bodies were checked, the vehicles moved, but then we got the bad news; another two jeeps had been spotted down the road a mile and had seen the action. They turned about and drove off at speed, no doubt to report the engagement.

'OK, gentlemen,' Jimmy began, 'we've had our time in the shade. They'll be coming in the morning.'

The Rifles ventured out at dusk and laid dozens of grenade traps around the front of the rocky outcrops, one improvised device made up of four anti-tank mines and two grenades, and buried at the side of the road. We were as ready as we could have been, the helicopters checked again and again, engines run for ten minutes after sundown. With the black sky full of stars we sat and waited, the horizon bereft of any distant points of light. Nothing; it was us, and the stars.

At 10am the next morning visitors were announced, a line of jeeps a mile long, a second convoy coming up the east road. The pilots strapped in, started their engines and idled, waiting the signal as we again huddled around the radios. The lead Somali vehicles approached as if nothing was amiss, but stopped a hundred yards short of the ambush point and turned side on without setting off any mines. Two DSHK fifty calibres opened up onto the rocks and surrounding area, our lads keeping their heads down. We warned the helicopter pilots about the mounted fifty calibre machineguns, anti-aircraft weapons, and tactics were hurriedly changed; they'd be keeping their distance.

After ten minutes of intermittent firing at the rocks, two jeeps drove around the DSHK, miraculously not setting off any mines – much to our annoyance, and advanced, their occupants firing wildly in all directions, RPGs loosed off. At the crest of the rise they hit the large improvised device; we could hear the blast in the tower. Mac ordered up the Cobras. They took off in a line and headed north, circling around to the west and approaching the road from the south. In formation, our helicopters shot-up several trucks at the tail of the convoy, blocking the road, and any possible retreat for our unwelcome guests. As the Cobras advanced north they fired intermittently, but consistently, at the Somali jeeps. The DSHK decided to head for the bushes, driving straight over anti-tank mines, echoes reaching us a few seconds later.

‘Both of dee Dushkas is gone,’ came a slow Kenyan voice.

Mac grabbed the radio and ordered a strafing run. The Cobras circled above us with a deafening resonating drone, visible through a hole in the roof, turning south again and lining up on the road. Over the ambush point they opened up intermittently, advancing a full mile along the road as mines exploded on either

side, many jeeps trying to drive back down the road, but clogging it further.

‘Turkey shoot!’ came an American accent.

Mac ordered them to the east, the helicopters using their remaining ordnance on a smaller convoy there, taking some fire from another DHSK. With all ordnance expended they landed to re-arm, a lengthy process since we did not have armourers present; the guys did it themselves in the heat of the day with all sorts mucking in. As they were rushing to re-arm, two Army Hueys lifted off, four GPMGs each hanging out of doors. They approached the road at two hundred feet, a hundred yards west of the road, and fired down at length as they passed, circling west across the desert before returning.

When the Cobras were finally re-armed they lifted off in a line and circled wide, rejoining the road a good four miles south, coming into view of a bottleneck of vehicles, something of a meeting taking place. They fired cannon and rocket, decimating the jeeps and trucks, circling and attacking again at length. Returning to a northerly compass bearing, they fired at any jeeps that looked intact before landing.

Jimmy said, ‘They won’t be any more use today. Shut ‘em down.’

A few brave Somali gunmen had walked towards the rocks, setting off grenade taps, the rest engaged by the Rifles – who had a policy of not taking prisoners, something I voiced my opposition to. From the tops of the rocks the snipers picked off individuals with ease, using M82 fifty cal’ rifles to kill people a thousand yards out.

At sundown the firing finally stopped, nothing worth shooting at still visible. The lads on the rocks were replaced, brought back in a buoyant mood – if not bloodthirsty, stories told of the exchange around the cooking fires. Just one casualty was treated by our doctors, the man suffering a ricochet. Still, it needed minor surgery and gave them something to do. I walked around the groups of men with Jimmy, keeping everyone informed, checking on the men’s spirit – which I soon realised was wholly unnecessary. They were buoyant. I finally sat down on a wooden box next to Hal’s bedroll and accepted a bottle of beer.

‘Fucking turkey shoot,’ he said. ‘Crazy of them to come up that road.’

‘Crazy ... if they knew what we had,’ I countered.

‘They saw us fly over on day one. They know.’

‘Brave of them to come then.’

‘Brave ... and stupid,’ Hal countered. He took a sip. ‘If they were defending their homeland ... well, that’s one thing. But these are warlords and gangsters, extortion and rape.’

I studied him for a few seconds. ‘How was it in Vietnam?’

‘To start ... a great big adventure; you believed the hype and the propaganda. But a year in you soon realised that people didn’t care if we won, they just wanted home. After that ... after that it gets tough, risking your neck when people around you are saying it’s a waste of time. I flew mostly rescues, so never a moral dilemma. And when I got back I did a little commercial helicopter work, logging, remote areas, didn’t talk much about the war. Then, after five years, I signed back on for another eight years, staying with the National Guard after that, some commercial work. Eventually got a training stint in South America, semi-official Army work.’

‘And now look at you. Bedding with the scorpions, risking your balls again.’

‘This aint the same. If Jimmy’s here it’s because it’s the right fight – I learnt that early on. The people around you ... they’d follow you pair anywhere.’ He took a sip. ‘I can see what Jimmy’s doing here; he’s chopping up the warlords, building a free Somali Army, putting in clinics and food. It’s what we should have done – *hearts and minds*, but we’ve never been too good at that. You’ll do more than we could have done with a fucking aircraft carrier.’

‘Jimmy does ... have a way through problems,’ I agreed before sipping my beer, wondering who had smuggled it over. Beer was apparently banned in Somali, and our staff had been banned from importing it.

‘Right now, out there, there’s some young lads bleeding to death in the sand,’ Hal noted, issuing a sigh. ‘But there’s no other way; *they* live by the sword, they can die by it. Their choice.’

‘Given the job situation around here ... not much of a choice.’ I sipped my beer. ‘You know, when I was young I never understood the whole soldier bit, never wanted to join up, paint my face green and run around a muddy field saying “bang”. And

if I met any soldiers I had nothing in common with them. When we came out to Africa my opinion hadn't changed much, the soldiers I could see here were worse than the rebels; *they* were the ones doing the raping and killing. But then we started to recruit our own young lads, teaching them the way we wanted it done, disciplining them hard. If a member of the Rifles rapes a refugee ... he fucking disappears. And in time I could see how useful they were, well, essential really. If we send medics into shit-holes like this then they'd be kidnapped, killed, raped. And when we deployed into Zaire I was finally proud of the Rifles, even concerned that *they* were now in danger, never mind the medics.'

'You're developing an old head in a young body,' Hal noted, sounding tired.

'What's waiting for you in Arizona, Hal?' I softly asked.

'Nothing. A great big ... nothing. An apartment, a few old friends scattered far and wide, some nice sunsets. And if I let it, sunsets will be all I have left.'

'Hal, you can stay as long as you like,' I offered. He slowly turned his head. 'All we need to do ... is to get out of this scorpion infested shit hole in the sand ... *alive*.' We clinked bottles, smiling.

The next day a few Somali jeeps drove up and down the road, viewing the carnage and burnt out vehicles, but never getting close enough to fire at, or worth sending up the helicopters for. One hit a mine. The sun set with everyone hot and thirsty, but in one piece. Jimmy discussed the road with Mac, then sent groups of four out into the desert to use their ears. And he gave me an Ak47 to sleep with, which did not bode well as a sign of things to come.

Around midnight the distant crack of gunfire could be heard to the south. Radio messages came in from the rocks on the southeast choke point; firing half a mile west of them. The exchange did not last long. Half an hour later a jeep burst in tooting its horn, the medics rallied, a man shot in the leg. His team mates relayed the battle: ten Somali men had walked parallel to the south east approach road till they met the four Rifles, who opened up at ten yards, killing most, it was believed. A relief patrol of eight men was sent to that section, but no further shots were fired.

At dawn the patrol moved forwards and checked the bodies, finishing off some of the wounded and removing weapons, but reported back movement ahead, a lot of movement. We called a command meeting. Mac illustrated the place where the enemy was now advancing towards us on foot, a natural gully that would lead them to within a hundred yards of us. He decided to use the two Army Hueys.

They lifted off, surely alerting the attackers with their distinctive sound, then flew away northwest as if returning to Kenya. Five miles out they turned south and stayed low, circling around and coming at the gully from the south. To mask their approach we started two more engines. Our helicopters benefited from as much surprise timing as we could create, but at the end of the day they were very loud. They flew two hundred yards apart in tandem, firing down into the gully; anyone on the ground seeking cover from one Huey would be hit by the other. They radioed back the detail of many men hit as they turned overhead, but also described around two hundred men in the gully, more further south. Mac called them back and ordered them to land, ordering up the Cobras.

With Hal leading the advance, the Cobras fired cannon and rocket into the gully, firing again at men advancing in the open further south, but not as effectually. After a second pass they landed, cutting the attack short. At the base's chalk drawing we grouped, Hal indicating that the Somalis were too spaced out for another attack like that; we were just moving sand around. The snipers on the rocks reported that they were making progress, some Somalis picked off, but not enough. Mac put twenty men at the head of the gully, leaving our rear exposed. The mine clearance lads were issued weapons and placed around the perimeter, just in case, many complaining about their enforced enlistment.

Jimmy had an idea, and took me and Mac to one side. 'We can't play the long game here,' Jimmy began. 'Need to rout them before we get worn down. How about this: we put just about all the Rifles left, right and front of that gully, but unseen. Cobras go down the gully, keeping the Somalis heads down, Hueys behind at ten feet and blowing up a dust storm. When that's happening, the Rifles move in close in their squads. The team at the head of the gully attacks down it, those on the sides provide

cover. They go half a mile then come back, hopefully convincing the Somalis we're more men than we are.'

'Be casualties,' Mac warned, taking off his cloth hat and wiping his brow. 'Close in fighting. But we can't let 'em walk up and knock on the door either.'

'Try it,' Jimmy encouraged.

Mac organised the teams, one of the English officers offering to lead from the front, the two trooper instructors leading their teams left and right of the gully. The Cobras were made ready, and the two Army Hueys would be blowing up a dust storm two hundred yards apart once the Cobras had passed. From the tower I watched the Cobras lift up and turn, noses down, tails up, the first Cobra little more than ten yards beyond the road when he opened fire. His fellow Cobras followed, around five hundred yards between each, the Hueys waiting at five hundred feet like hovering birds of prey. When ready, the radio signal given, the Rifles advancing on the gully, the Huey's dived down and picked up speed. As they reached the gully they dropped to little more than treetop height, their door gunners firing down at point blank range. Even from where I stood the dust cloud was visible, swirling outwards. In the gully, the Somalis must have been blinded and deafened. With the drone of the Cobras fixing them a mile to the west, I could hear small arms fire, the odd dull thud of a grenade. It had begun, so I rushed down to the radio.

I could not make out what was going on. 'Two left of you! Stay down. RPG over there! Man down.'

After ten minutes Mac ordered an update from the English officer, now codename "Rupert". 'Mac for Rupert, update, over.'

'Rupert for Mac, hundred yards in, routing them, several minor wounds. Out.'

It was agony waiting, and I paced up and down what little bare concrete the room afforded.

Fifteen minutes later came, 'Request air strike, several good targets.' Hal was sat waiting and lifted off quickly, positioning himself just behind "Rupert" at a hundred feet. As we listened in, topographical descriptions were given, compass bearings and distance, Hal firing, Rupert reporting successes or misses.

Then came 'Cas-evac chopper needed!'

I sprinted out. A doctor and male nurse were waiting ready and we took off in record time, a few standard checks by-passed.

I flew the short distance over the road and down the gully, but was directed right and towards the west, soon noticing a man stood waving his arms. I set down side-on to them, two wounded men loaded before I pulled up quickly. The doctor got to work as I made the very short trip back to base, at least short in a Huey, jeeps would never have reached the position. I set my Huey down close enough to the medical tent to buffet it, the wounded out quickly with many hands attending. I slid the Huey ten yards left across the apron and halted, easing down the revs but keeping the engine ticking over at a minimum setting, letting Mac know that I stood ready for another trip. I could hear the aircraft radio chatter, but little else as I sat there. But each minute that passed as I sat idly on the apron meant that no one else was seriously injured.

When the recall was finally given I fetched five walking wounded. Disgorging my wounded, I shut down the Huey and eased out, a jeep pulling in with men covered in their green ponchos; two members of the Rifles killed. I took a few seconds to stare at the boots sticking out of the ponchos, Rabbit at my side, then ducked into the medical tent to see if I could be of any use. Everyone that was alive would stay alive, I was firmly told.

The Dash landed an hour before sundown and loaded the wounded and the dead, some supplies dropped off, namely two hundred cans of Fanta and more medical equipment. I didn't get a chance to chat to Tubby before the Dash pulled off, heading immediately west for Mawlini. For the first time I thought about what the outside world was doing, or saying about this. I guessed I was dumped, but I did hope that her concerts went well. If I had known what the press was actually saying I might have been annoyed, not least for my parent's sake.

The soldiers involved in the advance all returned to base, quenching their thirst and treating minor wounds. As I stood there I marvelled at the Rifles as they restocked their ammo pouches, cleaned themselves off and headed keenly back out with confident smiles. Mac called another mother's meeting.

'Report,' he told Rupert as we all listened in.

Rupert was soaked in sweat and dust, breathing heavily and swigging from a water bottle. He stepped to the area of the drawing in question, people moving back, and knelt. 'The Cobras killed and wounded many ahead of us as we got into position; the

Somalis were already turned around. The Hueys blew up the sand, so we ran forwards in squads; tripped over a few and killed them at point blank range. By time the sand settled we were in amongst them, and we shot them with startled looks on their faces. We kept the momentum going, the Somalis leaving the gully and being picked off by the teams on the sides. I halted at four hundred yards and we fired on those we could see, calling in the Cobras where the Somalis had bunched up. When we pulled back they were scattering.' He stood. 'I reckon we killed three hundred.'

'They won't be back today,' Jimmy suggested. 'Might even take a few days to re-group after today's losses.'

'Recruitment won't be so easy for 'em,' Mac said. Louder, he said, 'OK, food, water, ammo, clean weapons, check helicopters. Then we wait.' The group dispersed.

Ten minutes later an unknown aircraft circled, an unarmed civilian plane. We called it up on the radio; Kenyan TV news. They asked a few questions, so we gave them the statistics, an estimated five hundred dead on the Somali side. Actually, by that time it was more like a thousand, that number again wounded.

A calmness descended over the airfield as the sun lowered, and it became almost peaceful, the air still. I guessed it was just the aftershock, a comparison to the earlier action. With not much daylight left, Hal took up a Cobra and scanned the area, engaging jeeps four miles down the road. He had spotted a bridge over a deep ravine and took out the bridge; further visitors would have a long walk around. Around the campfires, the Rifles were again buoyed up and swapping war stories, despite the dead and wounded. The mine clearance students were sleeping in groups on the perimeter still, and I found our medics in high spirits, their own fire going.

'You guys holding up?' I asked as I sat on a crate.

'No problem, this is what we signed up for,' one man said. 'What did your advert say: shit pay, hard training, harsh conditions, always in danger.'

They laughed, leaving me wondering about their sanity; they actually seemed to enjoy this kind of experience. We chatted away, more beer appearing from somewhere, and they left me in no doubt about their morale; some questions about their sanity, but none about their morale. On the tower's roof I found Jimmy

eating meat from a tin can, a small paraffin lamp going. He handed me one.

‘This going ... as expected?’ I asked.

‘About the same.’

‘And tomorrow?’

‘They come up around the east road.’ He handed me a satellite phone. ‘Call your parents after, the British news will be... interesting.’

‘Ah, fuck. What they saying?’

‘That we’re trapped in here.’

‘I’d call Katie, but I haven’t a clue where she is, or the hotel number.’

He produced a piece of paper with a number of the hotel, and her room number.

‘Expensive to call using these,’ I said. ‘I’ll call her ... you know.’

He glanced at his watch, pressing a button to illuminate the dial. ‘It’ll be 2pm in the afternoon in New York. She’ll leave at 6pm for the concert, worried. Call her now, then your parents.’

‘Yes, boss.’ I made the call, and told her me and Jimmy were in Kenya, not in Somali, and the press were wankers. I wished her luck, told her not to worry, and to have a good concert. Then came my parents, deeply worried at the news. Again I told them we were fine, but admitted we were in Somalia. Handing back the phone I said, ‘All done, everyone lied to.’

‘There are good lies, kind lies, and cruel lies.’

‘Mine were kind lies,’ I quipped, a glance up at the stars.

A dull thud echoed towards us, a mine detonating along way off; someone had stepped on a mine on the road, so it could not have been one of ours, maybe a wounded Somali trying to get a jeep working. I got two hours sleep as I sat against a concrete wall, then sat watching the sky slowly change colour, the stars becoming less distinct. Soon we had a pink hue rising, like a giant pink eye opening. I stood at the edge of the roof and peed off it as others stirred. Hal walked out to our medical Huey and started her up, and I noticed Jimmy gone. Downstairs I found him with Mac, coffees made, one handed to me.

‘Hal off?’ I asked.

‘Recon’ east,’ Jimmy said. ‘It’s their next option.’

We heard the Huey pull away, the radio checked and acknowledged. Five minutes later came, 'Stand to! Attack from the east imminent.'

Mac lifted an AK47, stepped out and fired into the air. Everyone was awake. The jeeps were made ready, men assembled, the command team grouping around the floor map as Hal landed back on the apron.

With the rotors winding down he came jogging over. 'There're thousands of them, a big camp about seven miles due east, even looked like a fuel truck and a water truck.'

'I'd hit the camp first,' Jimmy said to Mac.

Mac ordered up the Cobras, then a check of ammo and stocks. As the Cobras lifted off a glint caught my eye, the fucking Kenyan TV plane again. What timing, I thought, as they passed over, seemingly following the line of Cobras.

Mac asked Jimmy, 'What time's that flight due?'

'Now,' Jimmy told him, checking his watch.

'Re-supply?' I asked, Jimmy nodding.

The Antonov contacted us on the radio and we lied a little: all safe to land, no hostiles near by. I think that one qualified as a "good" lie, good for us at least. The heavy transport landed, its tail ramp lowering on the apron as we stepped forwards to grab supplies. Twenty additional men of the Rifles stepped out and jogged over and we directed them to Rupert. From the back of the Antonov, pallets emerged, being pushed off, the small wheels allowing us to nudge them forwards; it looked like enough supplies for a month. Wooden boxes were soon broken open, revealing a range of weaponry I had not seen at the base so far. 81mm mortars were unpacked and checked, placed over shoulders and lugged to the tower, soon followed by mortar ammunition. Mac directed the mortar men to set-up ten yards north of the tower, facing the east. A large pile of empty sandbags did not bode well, but I carried them over and plonked them down. More mortar ammunition appeared, and I glistened as I helped out.

In total, the Antonov left six pallets before powering up and pulling off, bathing us in warm air and sand, the sand sticking to my hairline. I opened a large box to find many smaller boxes, the smaller boxes opened to reveal tinned meat. I organised an ant-like chain of men, and the goodies began to be either stacked up

in the tents, or against the tower wall. More mortar tubes appeared until eight were set-up in a line stretching north from the tower, ten yards apart, Mac ordering sandbags filled and handed to the mortar crews.

Ammunition boxes were carried away and placed on jeeps, the lower pallet boxes revealing a dozen additional sniper rifles. I grabbed two men and we carried the sniper rifles to the tower, placing them on the roof, as well as the top of the old glass tower. Sandbags were organised quickly and passed up, and I laid out a rifle on top of each sandbag, fetching the ammo and breaking open the cardboard boxes. Jimmy put his head out to see what I had done, and just nodded before disappearing. I told Rupert what I had done and he gave me four marksmen. Water was stowed on the roof ready, tinned meat stowed and cover in a broken box; Scorpion Base's sniper section was ready.

Back at ground level, I walked along the line of mortars as the men got ready, a sergeant taking charge and barking instructions as I helped move a few more ammo boxes. Soaked in sweat, I joined the men filling sandbags and carried two of the hefty sandbags to each mortar position, noting that the men were using them to steady and support the mortar's tripod legs.

'How far can they reach?' I asked the sergeant.

'Two miles, sir.'

'Two miles,' I repeated, a hand over my eyes as I scanned the distant rise. I figured the rise to be just about a mile as the Cobras reappeared, one limping in and setting down short, just inside the perimeter. As I observed them, the pilots got out, one man opening a cover panel. It was knackered, not a good sign before today's attack. Figuring they knew more than I did, which was true, I carried on filling sandbags, more passed up to the section on the roof, my earnest efforts lauded by Mac.

The pallets were now just broken boxes, everything distributed or stored as the Dash appeared. It came in steeply, full flaps, a short-landing manoeuvre, soon on the apron, its door opening. Skids and Co stepped down, green fatigues and utility waistcoats.

'No lions here,' I told them, wiping the sweat from my eyes. 'Just scorpions.'

'News says you're cut off,' Skids queried.

'Cut-off by road maybe, it's full of dead Somali gunmen.'

Jimmy stepped out, greeting the guys and shaking hands. He led them towards the mortars. 'Mortars, ridge, bad guys over the ridge heading this way. Get some radios.'

'Fire control,' Skids noted. 'How many Somalis out there?'

'Couple of thousand,' Jimmy casually mentioned. They blinked. 'So go armed. Take a Kenyan with you, a separate radio for updates, map and compasses, some water, off as soon as you're ready please.'

As Skids and Co introduced themselves to the mortar sergeant, I asked Jimmy how this would pan out.

'It's not set in stone, it could go either way,' he answered. 'Get a military compass, one you can see through and mark a bearing, get up on the roof and call the fire when necessary.'

Hal approached, wiping his oily hands with a rag, his face shiny with sweat. 'We need parts for that bird, don't have 'em here, doubt we have them at base either.'

'OK,' Jimmy told him. 'Stand ready for cas-ecav.'

A compass was found for me and I climbed back up the tower. Fixing the rocks on the east road I made them 105 degrees magnetic, the next distinct outcrop 45 degrees. In turn, I gave each soldier a look through the compass, noting places from 45 to 105 degrees, their area of fire.

'Arc of fire, sir,' one corrected me.

Through the binoculars I followed Skids group as they jogged through the scrub and up the rise to the left, almost dead on my forty-five degree mark, informing my four men that Skids' group was out there. All was ready, the breeze cooling my sweat, many men running about below me.

Turning my ear to the wind I could detect the distant crack of gunfire. It seemed to be coming from the east road. I focused the binoculars, certain now that I could see movement there. A clanking sound caused me to turn, a soldier with a huge toothy grin and a huge fifty cal' rifle clambering up.

'Dee officer man say to come here, sir.'

I moved one man down and made a space for the newcomer. Kneeling beside him I asked, 'How far can you shoot?'

The man made a face, 'Maybe ... one tow-sant metre, sir.'

I pointed at the east road, at one of our jeeps. 'You could hit that jeep?'

'Maybe, but better more smaller, sir.'

It was a good range. As I refocused the glasses I could see our men at the rocks running back, jumping onto the jeep and pulling off; the position was being abandoned, most of the men digging in across the road in my two o'clock position. From there they could hit any vehicles as they approached along the arc of the road, from side on to head on as the vehicles aspect changed. To my left the ground looked rough outside the perimeter, many small ridges in the rocks, some wide-open spaces that would have to be crossed by any attackers. And all of a sudden I was thinking like a soldier. Through the binoculars I scanned the ground in front of me and tried to figure out which would be the easiest approach route for the Somalis.

A glint caught my eye and I noticed a jeep on the crest of the rise, the east road. I considered that over there a Somali warlord was staring at me with his binoculars and thinking: that bastard Paul Holton is over there, I'd better not chance it. I stepped to the edge of the roof. 'Jimmy?' Jimmy stuck his head out. 'Indians on the east pass, and on the war path, watching us.'

He climbed up. Pointing at the bend of the road he said, 'Any Somali vehicle we hit, and stopping on the road, will send its men across this patch of land.'

It was my one o'clock position. 'We can cover that,' I confidently offered.

He faced me. 'It's not as easy as you may think, young man. They move, run, duck and hide.'

I nodded. 'Will that fifty cal' stop a jeep?'

'Yes, if it hits the engine. Check the coloured ammo.' He dropped down.

I opened the ammo box for the M82 and noted the different colours.

'Careful, sir, it go bang.' The man pointed. 'To go through steel, to be normal, to see in the dark, sir.'

'Cool!' I climbed down and hunted around, finding more heavy ammo for the M82 and lugging it up. Noting now the blistering sun overhead, the day heating up, I grabbed four collapsible chairs and placed them between the men, wedged against the sandbags. From the men's private kit I pulled out ponchos and strung them out, soon most of the men in shade.

'Good, sir. More dee better see dee enemy.'

The Cobras lifted off again behind me, three of them, and headed northwest, away from enemy. I watched them with my binoculars as they circled north a few miles out, disappearing behind a low hill. Five minutes later the indistinct echo of explosions registered with me, damn hard to pin down its direction, leaving me turning my head like an animal hunting prey. I figured they were probably hitting the Somali marshalling area again.

Below me, Mac was saying, 'Wees hit the camp twice now, fucking thousands advancing towards us!'

Jimmy responded with, 'There'll be senior leaders in the camp, and the men advancing are too spread out. Besides, I don't want to lose a chopper to an RPG.'

The lone Somali observer on the east road now had some friends backed up behind him. He mounted up and slowly advanced, disappearing in a cloud of black smoke a second later. I snatched the binoculars down, the bang registering two seconds later; our people had left a little something behind. As I acquired the image of the road again a second bang registered, smoke coming from behind the rocks, a vehicle tripping a mine. There was nothing left of the first jeep save a wheel and, despite the relatively bare scrub, I could not see the rest of it. But I could see two bodies some twenty yards away. Another jeep pulled forwards, men jumping down and checking the roadside.

I tapped the M82 gunner with my foot. 'What's your name?'

'Beko, sir.'

'Beko, you see that jeep?'

'Yes, sir.'

'Try and hit it, please.' Beko let off a round with a deafening bang and I saw a man on the left spin around and fall. 'Go five yards right.'

Beko let off another loud shot, the vehicle's windscreen smashed, a man dragged out.

'What you shooting at?' Mac shouted up.

'Men on the rise, got two, smashed their jeep!'

'What they doing?' Mac asked.

'Looking for mines along the roadside.'

'Harass them,' Mac suggested.

'Beko, same shot exactly.' A bang preceded steam rising from the jeep's engine. 'Good shot, you hit the engine. Go up and over

the jeep. Fire.’ A puff of sand exploded out of the road in front of a second jeep, three men falling down. ‘Good shot.’ The rest of the Somalis pulled back, the fallen men being dragged back by their comrades, alive but wounded.

A puff of black smoke caused me to focus near the rocks as a whistling sound increased, finally a blast throwing up sand a hundred yards in front of me.

‘That was cheeky.’

‘Mortars, sir. They av dee mortar.’

Mac shouted up, ‘Can you see the firing position?’

‘Yes.’

‘Direct our mortars onto it.’

I turned towards the mortar line. ‘Mortar Sergeant!’ I pointed at the nearest man. ‘What’s his name?’

‘Nketi, sir.’

‘Ket, aim for the right of the rock, and fire.’ The man checked the direction and distance settings, then dropped a mortar down the tube. As the bang of mortar firing rung in my ears I lifted the binoculars and watched the shell drop short and right. ‘Ket, you are short and right. Fire again when ready.’ The second round was closer, but this side of a nice big rock. ‘Ket, you are ten yards short. Fire when ready.’

As he fired, I again heard the same whistling sound of an incoming mortar, hoping their spotter was crap. I was right, a cloud of sand a hundred yards away. And my round landed behind the rock. I saw no dead or wounded, but no more mortars came in.

‘Sergeant! I want this man for me only.’

‘OK, sir.’

‘Ket: twenty yards right, fifty yards longer. Fire when ready!’

He lobbed another one, the mortar exploding as a group of men walked forwards. When the smoke cleared I figured twenty men had either been killed or wounded.

Mac stepped out. ‘Well?’

‘I zeroed the crest of the rise with the fifty cal’ and the mortar, wrecked two jeeps and killed twenty, got their mortar as well.’

‘If anything comes over that rise, hit it,’ Mac shouted up.

I noticed Big Paul pulling up in a jeep. He positioned the jeep carefully, then waved to me. ‘Pauley, tell me where these rounds

land.' He fired a long burst with a GPMG and I could see an oval of sand puffs on the rise.

'Rocks, left edge, hundred yards short, fifty yards left.' He seemed satisfied with that and walked into the tower.

A cheeky jeep drove quickly over crest, too quick for a mortar. 'Beko! Fire!'

Beko fired and missed. The jeep stopped after a hundred yards, men jumping out and into a gully.

'Cheeky buggers.' I lowered the glasses and faced the mortar line. 'Keti? Second mortar tube, not yours; I want the same setting, but a hundred yards right, hundred yards short. Fire when ready.' The second tube lobbed a mortar; long and left. 'Keti, second tube, ten yards to the right, twenty yards shorter.' They adjusted their settings and fired, the cheeky men's jeep blown to pieces.

'Sir. More jeep come.'

I quickly focused on the rise. 'Keti! Tube one - fire two shells! Quick!'

Keti fired tube one, missing the first jeep but sending the second souring through the air. His second round damaged a jeep following the first.

'Keti, tube two ready ... fire!' My timing was good, damaging the newcomer's jeep and forcing it off the road. 'Keti, tube two, five yards right, fire two rounds.' Whoever was in the ditch was killed, both jeep loads by the look of it. I shouted down, 'Mac!' Mac stuck his head out as I said, 'They're coming over the ridge, left of the rocks, fucking hundreds of them, spread right along.'

'Wees gunna let 'em get in close first, catch 'em from the rear forwards. Watch that road.'

'It's blocked in three places. Are there mines this side?'

'No!'

'Bugger.' As I observed the crest, left of the rocks, I became less confident, and less cocky. Everywhere I looked there were small groups of men carrying either AK47s or larger weapons. One group seemed to be carrying a DSHK.

Facing the mortar section I said, 'Tube three, fire one round.' They fired, and I watched without the binoculars, the puff knocking a group down. 'Tube three, one hundred yards closer, fifty yards right. Fire when ready.'

Through the binoculars I watched the men carrying the DSHK. They were knocked down, then seemed to be helping each other, then carried on. 'Tube three, twenty yards right, thirty yards shorter. Fire when ready.' Bingo, scratch one DSHK.

'Any luck?' Jimmy asked.

'Got a Dushka thingy.'

'Good work. How far are they?

'Just touching where Big Paul fired the GPMG to.' Jimmy ducked back inside.

Beko said, 'I see dee man, sir.'

'Where?'

'Where dee mortar kill dee man, sir. Only dee one man, sir.'

'Wait till they get closer,' I suggested, now conscious of ammo levels, which I did not have a clue about, but figured we should go steady with anyway. I licked my parched lips, then grabbed a warm Fanta, the contents exploding out with a hiss.

Every ten minutes I lobbed a mortar at the road, damaging or destroying jeeps, before Mac and Jimmy climbed up and scanned the eastern ridge with glasses, discussing strategies. Before they climbed back down they told me to use the snipers on the closest men only. I asked Beko what range he thought was best, getting back four hundred yards, which was where the advance gunmen were now sneaking along. With the sun burning the back of my neck and my forearms, I ordered all snipers to fire at the closest men only. Volleys cracked outwards, men falling in the distance. And rounds started to crack inwards as well. I lay down next to Beko and got comfortable, small bits of tissue offered by the soldier next to me. I plugged my ears, deadening the effect of the monstrous M82. Wiping sweat from my eyes, I concentrated on the road.

A hot half an hour later, mortar tubes one through four opened up, their shells landing beyond the ridgeline, just a dull rumbling echo coming back our way, that damn Kenya TV plane back. The Cobras lifted off for a third time today, circling south and out of sight, again hitting the Somali camp and the road beyond, trucks and buses, even their water tanker. I heard them land, but did not look around as I concentrated on the road approach. And somewhere out there was a half-decent sniper, the odd round pinging off the tower.

Big Paul and three others fired intermittently with the jeep mounted GPMGs, moving them in an arc backwards and forwards and saturating a wide area. After each firing session, Big Paul would wet an empty sandbag and place it over the barrel, returning to the tower. Before I knew it the sun was low, my elbows sore after many hours on the hard concrete roof.

Jimmy came out the tower and said, 'Maximum effort before we lose the sun, get the men closest!'

I studied the parched soil till my eyes hurt, directing the snipers, hitting a few dead bodies more than once. As we tried to pick them off, men in the distance were walking back over the ridge, right into a hailstorm of mortar fire edging its way towards us. When the sun touched the distant hills behind me the firing ceased. I hadn't realised how thirsty and hungry I was. 'Every second man, get some water, food and rest,' I ordered, and headed down.

In the command room I found a large paper sketch of the area, Mac, Rabbit and Jimmy stood over it with English officer "Rupert". 'How we doing? We discouraged them yet?'

'Killed Aideed's right hand man,' Jimmy casually mentioned. 'We got a transceiver hidden up on the rocks, been listening in to all their comms' traffic. Got a lot of his commanders, and wrecked all his transport, which is what I wanted out of this.'

'They're dirt poor,' Mac said. 'Can't afford to lose so much hardware, this'll set him back years.'

'It was the hardware I wanted, more than the people,' Jimmy explained. 'If Aideed and the other warlords stop paying them, the lads out there will fuck off back to the goat herd.'

Hal eased up from a chair. I had not seen him tucked away in a corner. 'We got at least fifty trucks and jeeps, and they don't have fully comp' insurance. Ten miles east is a bridge over a nasty gully; I took it out.'

Rabbit put in, 'So a long fucking walk back to Mogadishu!' He handed me a beer bottle.

'Will they attack again in the morning?' I asked.

'Like fuck,' Mac said. 'They're bosses all fucked off an hour ago, comms' traffic is down to just stupid questions now.'

'Like ... what do we do now, boys?' Rabbit joked.

For the first time I noticed Abdi. He took off his headset and turned around as our mortars fired again. 'They are talking of leaving.'

'Who the mortars targeting in the dark?' I puzzled.

'Skids has the main group targeted,' Jimmy explained. 'They're not sure about leaving.'

'And they won't be getting any sleep *this* night,' Mac suggested.

We didn't get much sleep either, mortars and intermittent machine gun fire streaking through the dark. At dawn the snipers fired at anything that moved – which were Somalis running away, the mortars now silent, Skids and Co back with us. The Cobras and the Hueys went up, targeting any vehicle that looked salvageable, as far away as twenty miles out. They reported a line of men walking back towards Mogadishu - an impossible distance, the other side of the wrecked bridge.

Teams of Rifles went out and checked bodies, the odd shot fired at a wounded Somali, and came back in with five captured weapons per man, dumped down in a large pile before heading back out; it took all day just to clear the area up to the eastern rise. Blown up Toyotas were nudged off the road by our jeeps, damaged jeeps pushed off the road by groups of our men, then damaged some more. We worked tirelessly all day to clean up and check the area.

With an hour of daylight remaining I joined Hal on a patrol. We flew directly east over the rise, and for the first time I could see the damage to the Somali vehicles, most of whom seemed to have tried their best to find the mines, many parallel tracks in the sand along the road, hundreds of bodies - and body parts. All along the road, mile after mile, we found abandoned or damaged vehicles, eventually reaching their marshalling area, the damage evident, the ground heavily pockmarked. I could not begin to count how many bodies, or comprehend what it may be like on the ground and close up.

We flew on to the east, following the road, damaged vehicles every fifty yards, some bodies. Reaching the bridge that Hal had destroyed we circled, a dozen bodies visible in the ravine below the naked bridge supports, still some stragglers walking along the road. It turned my stomach. Despite my temporary command of the sniper section, I was no soldier.

Back at base, fires were now going, camel steaks cooking, people sat about relaxing, some catching up on much needed sleep. In front of the tower a bonfire of pallet wood was roaring, many seats spread around it, most of the command staff present, and Abdi. I sat next to him.

Facing me, he asked, 'What did you see from the air, Mister Paul?'

'A lot of death. Got to be a hundred vehicles down that road.'

'From death, comes new life, the hope of things new,' Abdi responded in his accented voice.

I wasn't sure I agreed with that. 'And what *do you* ... see for the future of this country?'

'When I was in the doctor house, the doctor man said that the deep cut must heal from the bottom to the top. We can heal only from the bottom. Now, we are the bottom, things is very bad. But Mister Jimmy, he knows how he must fight with his head. He knows the mind of Aideed, he knows they will come to us here. Aideed was the fool, Mister Jimmy was the wise man. Two dead men in the here, two thousand dead follower of Aideed. All Somali will know this. Friends of Aideed will make war on him. And we will sit like the vulture and watch who lives.'

I nodded; the kid had it all figured out. At least, the kid had the philosophy that Jimmy had given him, and that I trusted.

When Rabbit and Skids made jokes about the killing, Abdi seemed a bit put out.

Jimmy said to him, 'Don't tell off the dog because he has sharp teeth. The dog is what he is, strong and brave. We need dogs, and we need doves.' Abdi nodded his understanding.

In the morning we continued the process of cleaning up, Rabbit's crew back on ordnance clearing. At 10am a plane came in, circling the area, that damn Kenyan TV flight again, but this time landing after several passes. Reporters piled out, a Kenyan TV crew walking forwards. Jimmy marshalled the new American pilots, and Hal, closer.

'I will make a statement, briefly, because we still have a lot of work to do here,' Jimmy began. 'Then Paul will take you up in a helicopter and show you the battlefield. Starting at the beginning ... we brought our doctors to Somali, and opened clinics, because there was a great need, much suffering here with the civil war, some of the warlords treating the people very badly.'

Many of the warlords have struck deals with us and we have built clinics in their areas, the UN and Red Cross returning in strength. We moved to this abandoned airfield in the hope of using it for re-supply, building clinics to the south of the airfield.

‘The day after we arrived, armed men drove up to the airfield and opened fire. The next day more men came, and we were forced to defend ourselves, the Kenyan Rifles doing an excellent job. Two days after that we were subjected to an all out attack by five thousand armed men in more than three hundred vehicles. The Kenyan Rifles put up a valiant resistance, suffering two killed and a handful wounded. But the only reason we are still here, and able to talk to you, is the Cobra attack helicopters you can see.’ He pointed at the unserviceable one. ‘That one was shot down. We are only here, because of a handful of veteran American pilots, most of whom are over fifty, some in their sixties. Against the odds, they repeatedly flew missions till they ran out of ammunition or fuel, re-loading their own aircraft, refuelling their own aircraft, and then taking off again, sometimes flying five or six missions a day.

‘General Aideed sent three hundred vehicles and five thousand men against us here. These retired American pilots killed two thousand gunmen, and destroyed two hundred and fifty vehicles, which are still strewn along the road behind me. Four helicopters, and four men, held off Aideed’s army.’

I felt a book coming on. And I considered just how modest the men would be in front of the cameras. Would any one of them correct Jimmy on his stats, or mention the Kenyan pilots that flew with them. I could not bear to listen and went and fired up the Huey, the press sent over to me ten minutes later. With the doors open, safety ropes employed, we lifted off. I flew them low and slow down the south road, almost seven miles, then doubled back, heading along the east road another twelve miles before turning about. They got good shots of the carnage at the Somali campsite, then a view of the rise and all the bodies. Landing, they were shocked, but in no doubt about the stats. As I walked back to the tower with the press, the stats were growing with every step. Jimmy told them it was not safe for them here and we packed them back into the plane. I was glad to see the back of them.

Hal came over as I approached Jimmy. 'Well, what was all that horse manure about?'

'Your country took a hit in Mogadishu,' Jimmy began. 'You, and your friends, are going to help me restore some public pride, or I'll kick your fucking arse.'

'Oh,' Hal made a face. 'You made heroes out of us. Why?'

'You did the job well, Hal, you and your boys. I only stretched it a little ... for a good cause. And I'm going to need you and your buddies to pop back to the States for a week. That, is not negotiable.'

'Ticker tape parade?' Hal baulked.

'No need to contact anyone, the press will come to you, and you tell the truth – my truth. If not, we'll have to let you go, Hal. Go and give it some thought, chat to the guys.'

'Best have a shave and a bath before meeting the press in the States though,' I told him.

'You're still a bunch of rude fuckers!' He turned and walked off.

The next morning the Antonov took many people back, leaving just the rifles and their officers with a lot of bodies to bury and jeeps to move off the road, not that the road could be used without bridges. The Dash picked up the rest of us and I took right seat from Sue, recanting the story for Tubby on the way back.

As Jimmy and I sat down with a stunned looking Rudd in the rooftop bar, Mac fielded questions from the press below.

'What we going to call this book?' I asked Jimmy.

'Kenyan Rifles: Battle for Scorpion Base ... I reckon.'

'I watched the news every day,' Rudd put in. 'I thought you'd be dead. The aeroplane with the TV crew - it showed pictures of the vehicles heading towards you. Forty-five soldiers, against five thousand?'

'Not quite true,' I pointed out.

Jimmy stood, so I glanced over my left shoulder. It was Mister Idi Amin look-a-like himself, the Defence Minister and his cronies.

'Minister,' Jimmy offered as he extended a hand. We sat, more drinks ordered.

'Mister Silo,' the Minister said, shaking his head. 'When do I pick up the newspaper without seeing a story about you. This...

adventure is incredible. The name of the Kenyan Rifles will be written into stone after this: fifty men, against five thousand. Unbelievable.'

I felt like telling him just *how* unbelievable.

'I shall make sure that the families of the dead men are looked after,' Jimmy told the Minister.

'As generous as ever, Mister Silo. And we are in your debt.'

'No, Minister, it was your men who saved me. I ... am in your debt.'

'But these men were chosen by you, paid by you, trained by and you, and equipped by you. So, we shall call it even, no?'

Jimmy smiled widely. 'We'll call it even. And I have a favour to ask. The men of the Rifles who fought at this battle, they deserve a campaign medal, some of them medals for bravery.'

'I will look into it personally, rest assured my friend,' the Minister promised.

'Does your government *worry* ... about things I do in Somalia?'

The Minister took a moment. 'There was a time when we worried greatly about the Somali gunmen coming here, to our country. After this battle, our people beat their chests, and our politicians rejoice. And one story I liked in the papers, not true I am sure, is that the men of the Rifles cut the heart out of the dead Somalis and eat it.'

I blinked.

'As you said, I am sure that it is not true,' Jimmy said with a smile.

After the Minister had left us, Bob Davies came in with his boss, Patterson, the Irishman I had met briefly in Hong Kong.

'Fucking hell, Jimmy,' Bob let out as they sat.

'I'll second that,' Patterson offered. 'Fucking ... hell.'

'I know,' I said. 'Same shirt for five days!'

Bob said, 'You wiped out the armies of the three largest warlords. General Aideed's friends north of him are attacking Mogadishu as we speak, trying to unseat him.'

'The more they fight each other now, the less I'll have to do later.'

Patterson asked, 'What exactly *are* your plans over there?'

'Stick a clinic in every town where they're needed. And, should any gunmen bother the clinics, shoot them full of holes.'

Bob and his boss exchanged looks. Bob said, 'You've altered the politics of the region, not even the Americans did that.'

'The Americans had a short-term goal, I'm more ... long-term.'

'You seen the news in Europe and the States?' Patterson asked.

'No, why?' Jimmy casually asked.

Bob pointed at me. 'Your girl gave an interview, every reporter in America after her, her concert details all over the news.'

'She'll fucking love that,' I unhappily noted.

'She said that she had spoken to you on the phone and that you were safe and well,' Bob explained. 'She's been on CNN and breakfast telly, more coverage than the fucking President.'

'Good for record sales,' I idly noted.

'My superiors want to invite you to New York,' Patterson informed us.

'Tell them I'm washing my hair,' Jimmy suggested.

'Why?' Bob puzzled.

'Some people talk, some people take action.'

'Some wash their hair every fifth day,' I said, Rudd laughing.

'We'll be able to use that new airbase?' Bob finally asked, easing back into his seat.

'I could do with some help clearing up the mess and the bodies. Once the mines are cleared, it's all yours.'

Patterson asked, 'Hotel with a pool?'

'Yes. The Scorpion Hotel.'

'Down in Nairobi they're holding street parties,' Bob casually informed us. 'Some Somalis there being attacked.'

'The Kenyans were pushed around a bit,' Jimmy reflected. 'A reckoning was always on the cards. But now many of the Somalis can return, we're in two hundred miles.'

The gang joined us in the bar one by one, Skids and Co included, and the party begun, beer thrown over people not joining in. Even I felt tipsy, or maybe just tired.

In the morning my mouth was dry and my head hurt, the first time I could remember since getting the stems. I said to Jimmy, 'Did I make a call last night?'

'No, I got a call on the satellite phone, CNN after you.'

'Oh shit, was I —'

‘A bit pissed? Yes, my boy. But the music drowned out what you told them to go do up Katie’s arse.’

‘Oh, crap.’

‘She called this morning, happy as fuck with all the publicity and loving you to bits for it.’

‘Bloody marvellous,’ I snarled.

‘Hal and the boys flew down to Nairobi yesterday, straight after we got back. Be landing in the States in a few hours. Oh, I may have suggested ... a joint interview, her with Hal.’

‘What? What the fuck does Katie know about the mission?’

‘She’s met Hal before ... at the beach, for an hour,’ Jimmy said with a grin.

‘You’re an evil bastard sometimes,’ I told him. ‘I was going to dump her.’

‘Can’t do that now, press be all over it. Oh, and that song of hers – *I worry when you’re not near* – it may be getting a new video makeover, a few helicopter shots.’

I wagged a threatening finger.

‘It’s good for business,’ he stated, grinning. ‘So milk it, young man. Milk it!’

We kicked back for a day, plenty of swimming and lounging around, and I resisted his nagging to fly to the States; if it had been vital he would have said so. We drank a lot of beer, and we slept in large and comfortable Madsons beds. On a TV in the restaurant we got CNN, the four pilots and Hal interviewed with Katie. At least Rescue Force was getting some publicity, but one TV newscaster seemed to make out that Rescue Force staff had been armed, and that this was their battle.

A call came from Host, “M” Group USA; the President was taking a very keen interest in what had happened, and what we were doing in Somalia. CIA were all over it, but Jimmy was not concerned. Rudd dispatched a huge convoy, not least of concrete and breezeblocks, and Scorpion Base would get a makeover. All of the Rifles who had served were recalled, brought back and given a few days off, all thanked, all hands shaken. We flew out that night.

The next morning I stood in the lounge of our house, mug of tea in hand, peering out at the lush green grass, the Alsations retrieving tennis balls thrown by Ricky. It gave the reporters at the gate something to photograph, I suppose. I would have

spoken to them if they wanted to talk about Somali, but they were more interested in Katie.

Bit and pieces

We drove out the gates at 6am in the morning, no press about, and headed to Mapley airfield, pulling in at 8am after a service station breakfast. The weird “above ground” scuba pool was popular with visitors and we planned on trying it ourselves, but first drove around to the Wiltshire Police Aero-Meds. We found two blue and yellow BO105 helicopters on their pad, a hundred yard square of the northeast corner now fenced off for them. We hit the buzzer on their gate and said it was their landlord. Pulling up, the officer emerging was mildly shocked to see us.

‘Get the kettle on,’ Big Paul told the man, leading him back inside.

We invaded their spacious lounge, finding two flight crews, plus a doctor and a paramedic sat in green flight suits reading magazines.

‘No pile ups on the motorway?’ I quipped, sitting next to the lady doctor.

They sat upright and stared for a few seconds, the senior man walking out and greeting us, shaking Jimmy’s hand. They made us tea, soon a barrage of questions, the story of Scorpion Base recanted. I asked them questions of the BO105, technical questions, details of incidents attended, flight times, etc. We were all kindred spirited chopper nerds, even the medics. Comfortable with the people and the surroundings, we stayed for an hour. They offered me a ride in the BO105, so I offered them a ride in a Huey – jokingly refused. We found out that they all used the leisure centre, receiving free staff passes, and were grateful. They’d even tried the climbing wall on a day off, and the Tucano, one of their medics a diver who used the scuba pool often. And the officers were amazed that we had not tried it ourselves yet.

We left them to their magazines and drove the short distance to the aforementioned scuba pool, already a few people in attendance – paying users. Allowing them in first, we checked

out the lower windows, observing the divers through twelve inches of glass. Jimmy took a call and the dive was postponed, Sykes needed us in London, pronto, Host and Keely in town. Karl drove us along the motorway and to the old apartment, kind of nice to be back, nothing out of place. I got the kettle on as Karl and Big Paul searched for bugs, electric gizmos switched on, wands waved around, phones dismantled. We were clean as far as they could tell.

‘Sykes sweeps it regular,’ Jimmy told us. ‘One of his trusted boys lives downstairs now.’

Thirty minutes later Sykes turned up with Jack, soon followed by Host, Keely and another man, some senior CIA guy called Hadley – who looked the part; tall, athletic and silver haired, and with an air of authority about him. We fetched tea and coffee for our guests.

‘Not being bugged by the CIA this time?’ I asked Host.

Hadley was not amused. ‘The individuals responsible for that have been dealt with.’

I faced Host and waited, a teasing question in my look.

Host said, ‘President has been busy, asses kicked. Mister Hadley here is CIA representative to “M” Group.’

‘Then perhaps Mister Hadley would like to kick things off,’ Jimmy casually suggested.

Hadley eased back and studied Jimmy for a few seconds. ‘Right through the incident in Somalia we had satellite images taken, high altitude passes. I’ve studied it at all at length, including the propaganda aspects.’

‘And don’t forget *the timing*,’ I added.

‘Oh, no, that was a big part, if not the most important part,’ Hadley agreed. Facing Jimmy he said, ‘All carefully mapped out ahead of time.’

‘Of course.’

‘And you needed us to take a hit in Mogadishu,’ Hadley noted.

‘In years to come, Hollywood will make a film called Black Hawk Down, easing your collective consciousness’ and making a minor setback seem like a glorious victory.’

‘Some see it as *more* than a minor setback,’ Hadley said.

‘You went into the city,’ I pointed out. ‘Tight streets, and every other Somali with an AK under the mattress. And we did warn you.’

‘Yes, well I’ll be paying a bit more attention to the warnings in future,’ Hadley threatened.

‘Pity people had to die to get to that point,’ Jimmy noted before sipping his tea.

Hadley stared back for several seconds. ‘Yes. But coming back to your involvement in Somalia. When you started edging into that *lovely country* everyone figured you’d get your fingers burnt -’

‘How wrong they were,’ Sykes said without lifting his head.

Hadley slid his gaze across to Sykes, then back to Jimmy. ‘As I said, I studied the battle from every angle. It was the perfect spot, you knew they’d come out to you, and you knew how they’d react step by step. Would I be right in assuming your main aim was their command structure?’

‘In part, also their vehicles and hardware, expensive to replace,’ Jimmy answered.

‘So you shot up all the jeeps, hard to replace in a place like Somalia. Interesting. Your aim was to weaken them, a war of attrition.’

‘Yes. The Rifles will patrol the desert highways, where they have a massive advantage, and leave the cities and towns isolated. We’re already intercepting weapons coming in, some quite expensive hauls *pilfered*.’ Jimmy slid his gaze across to Sykes. ‘Ethiopians selling bits and pieces, their army officers.’

Sykes nodded. ‘Sudan as well. You got a tank I hear?’

‘Yes, a T72 in poor condition. Still, it’ll put the wind up a Toyota pickup driver.’

Host said, ‘Your Mi24 was not seen at the battle. Why?’

I had not even considered the Mi24, it has slipped my mind. I was keen about the answer as well.

‘Two reasons,’ Jimmy began. ‘First, I wanted the ageing American pilots to take the credit, and second, whilst the warlords were sending their people out to us the Mi24 demolished their houses and compounds at night. I think we killed three of the warlords we were after.’

‘We got reports of car bombs,’ Hadley noted. ‘So, that was your lot? Farouk was killed for definite, perhaps Hasim as well, certainly his sons.’

Sykes said, ‘But you won’t move on their turf?’

‘No. Street fighting will produce heavy casualties on all sides.’

‘Then what?’ Host asked.

‘Many years of small moves, building up the Somali Rifles till they can form a government.’

‘So you will interfere at the political level,’ Hadley pointed out.

‘Of course, since there is no government there. One has to be built, a credible one that will last. If not, most of the world’s terrorists will emerge from that region in future years, including the Brotherhood, who’ll attack south into Kenya.’

Host asked, ‘The Kenyan Rifles, they’ve been injected?’

‘All of them.’

‘How do you rate them?’ Hadley asked.

‘They’ll hold their own, man for man, against any western army.’

‘And if Kenya gets expansionist ideas in the future –’ Hadley began.

‘They won’t,’ Jimmy cut in.

Hadley stared back. ‘And where does this all end, in Somalia?’

‘As a peaceful Islamic state, with some oil and minerals, and a good relationship with The West.’

‘After the battle the other week, the State Department and the White House sat up and took notice, more so than Rwanda,’ Hadley reported. ‘I think you’ll find that we take a greater interest in your activities.’

‘Excuse me, dopey fuck,’ I said, getting glared at. ‘We’ve been trying to persuade you to do just that.’

Host hid a smile as Hadley stared back. Hadley eventually said, ‘Well, now I’m involved ... full time.’

‘So, how do you think it’ll turn out with me and Katie?’ I asked, Jack and Sykes hiding their grins.

‘You’re the experts on the future,’ Hadley testily noted. ‘Don’t you know?’

‘No,’ Jimmy said. ‘I know, but he don’t, otherwise there’d be no point in living, would there, with no surprises. I mean, if I said she was pregnant -’

‘What!’ I barked, spilling my tea.

‘She’s not,’ Jimmy said with a smile, everyone laughing. ‘Honest, she’s not. Relax.’

‘Jesus,’ I blew out, breathing heavily. ‘Helicopter battles, fine, but babies...’

‘So why the ageing pilots?’ Hadley asked with a smile.

‘Throw you a victory, of course. After Mogadishu your dear President would have been less inclined to get involved with such matters in the region, which needed countering. In a few years I’ll need some troops around Somalia. And when Hollywood wants to make a picture about five ageing veterans, I’m sure you gentlemen will ... help out.’

Hadley considered that. ‘You need anything for Somalia?’

‘Couple of stealth bombers?’ Jimmy risked.

‘I doubt it,’ Hadley lightly countered. ‘No good bases for them nearby.’

‘Money always helps,’ I said. ‘Some av-gas.’

‘There is one thing,’ Jimmy began. ‘But it’s a bit ahead of time. Could you help to build a harbour? I’m going to seize an area on the coast in the north, an airfield close by, but I’ll slowly build a harbour wall, big enough for heavy cruisers and cargo ships. Once seized, that area is yours to hang onto, you’ll need it in years to come. Directly opposite Yemen.’

‘A long harbour wall?’ Hadley considered, a glance at Host. ‘And the area inland?’

‘Sealed off by the Rifles, no local terrorist action, no threat to the workers.’

‘You say we’ll need it,’ Keely asked. ‘For what action?’

‘A variety, but they are all actions that would happen if Magestic fails to stop a few things. If all goes well, nothing more than an extra deep water stop-off till 2025.’

‘And then?’ Keely nudged.

‘Then it’ll be the only base in the Middle East that’s safe from terrorist attack. It’s isolated, access by air or sea only.’

‘I’ll send in a report,’ Hadley offered. He took a breath. ‘You’ve not been involved in the Balkans.’

‘The Balkans War ... is something that upsets me. It’s ... such an unnecessary waste of life. And more to the point, in time you run the risk of the Balkan Muslim states turning against you. But, in ten years or more they’re all peaceful and joining the EU and NATO, Serbia included.’

‘Serbia? In NATO?’ Hadley questioned.

‘They’re accepted into the EU in 2012, NATO three years later. So you see why it upsets me.’

‘And the flashpoint coming up,’ Jack put in.

‘Flashpoint?’ Hadley questioned.

Jimmy explained, ‘When Kosovo is liberated, an innovative group of Russian peacekeepers seize the airport and don’t let you have use of it. You’ll come within an inch of World War Three, when your commanders order NATO forces to shoot the Russian peacekeepers. If they do shoot, we lose the planet, guys.’ Hadley made a note on his pad.

Sykes said, ‘The British commanders have been told never to fire on Russian peacekeepers, no matter what. And even to *prevent* Americans firing on them.’

Hadley snapped his head around at that, staring at Sykes for a moment. Facing Jimmy, he said, ‘The President was *interested* in your connection to Republican Senator Pedersen. He asked if there were *others* like him, obviously interested in any ... political level interference?’

‘Gentlemen, it is not political - it’s economic. In years to come, when your fine country has been left to rot slowly, I’ll help fix the economy. And ... you’re welcome. As for Pedersen, you see what we want you to see.’

‘He’s a distraction,’ Host stated. ‘Hidden enough, but not enough, knowing we’d find him and waste time watching him while the real work goes on elsewhere.’

‘And that *real work* ... I don’t know about,’ Jimmy said.

Jack said, ‘Our security service, MI5, wasted hundreds of man hours down dead ends. It was easier to just ask Jimmy things.’

Sykes put in, ‘And if some old man with a white beard and a cheery disposition turned up calling himself Magestic, predicting the future, we’d not waste our time on investigating him. We know what we need to know, and we’ve grown used to that. We don’t need to take the toy apart to enjoy playing with it.’

Jimmy said to Sykes, 'Our American cousins like to feel in control, of everything. They see that as their God given right, as the strongest nation. They've not realised that the strongest kid on the block is not always the smartest, and when they face economic ruin they'll blame everyone else but themselves.'

'Is economic ruin certain?' Host asked. 'Even with Magestic's help?'

'Pretty much so,' Jimmy responded. 'Too many different groups pulling too many ways. Which is why I like the Chinese Government. I give them instructions, targets, and they keep to them within a percentage point.'

'You help them ... economically?' Hadley queried.

'Of course. You're heading for ruin, so I'll need their help to fix things after you've given up answering the phone.'

Hadley eased back, thinking. 'What's the single biggest economic problem?'

'There is only one: the oil dollar.'

'I've read a hundred scenarios about that tipping point,' Hadley admitted. 'One's bound to come true.'

'OPEC will drop the dollar as reserve currency,' Jimmy explained. 'Your currency dips fifty percent or more, people holding dollars will buy more American goods – which is good for a whole month – but you can't buy what you need because it's just become too expensive.'

'I've read up on that scenario,' Host said. 'And there's no easy solution.'

'Nuclear power, electric cars and buses, internalisation of your markets,' Jimmy carefully stated, Hadley taking notes.

'And if you had the President's ear?' Keely asked, earning an odd look from Host.

'You're forgetting that your dear President struggles to get anything done now, let alone radical changes with my advice. But, if there was a super-secret group of power brokers, nominated by me, bi-partisan, industrialists and bankers, media moguls, some foreigners ... well, maybe.'

Hadley folded his arms. 'If they were to be nominated by you or Magestic, then you already know they can be trusted, you've already got a list, and Magestic already knows the outcome.'

'Listen, mate,' I said. 'Don't get into temporal paradoxes will you, we'll all get headaches.'

‘The future is not guaranteed,’ Jimmy pointed out. ‘A slip up, and it all goes bang.’

With the American delegation gone we chatted to Sykes and Jack for ten minutes, as much about wrecks and treasure as anything else. Sykes had six ex-SAS instructors that he now recommended for us, Jimmy accepting the list. They’d be on the Government payroll, but used by us to train the Rifles. Sykes extended thanks for the police helicopters and the use of Mapley by just about everyone, a new project discussed that involved the Fire Brigade.

At the end Sykes said, ‘Will they ever listen, the Americans – in time?’

‘Look at Somali as an example, and give it plenty of thought,’ Jimmy enigmatically stated.

With our guests gone I said, ‘America - Somalia ... reverse psychology?’

‘Sometimes, the best way to get a girl’s attention, is to ignore her and chat to her mates.’

‘Talking of which, some advice would be useful.’

‘I’d say ... fly out there, meet Hal, do some interviews, do some more interviews with Katie – get the Rescue Force message across, then come back. Oh, and donate some money to Vietnam vets’ groups with Hal. And, at the end of the day, Katie’s good for you – enjoy it.’

I blew out. ‘Yeah, you’re right, as usual.’

He produced the ticket from his pocket, first class Heathrow to New York, leaving in three hours. ‘Buy some clothes out there, use the Pineapple apartment, I’ll get Oliver to pick you up.’

I nodded. ‘That pregnancy joke –’

‘Was just a joke,’ he assured me. ‘You won’t have kids with her. Now go.’

Stateside

Karl dropped me at Heathrow in just the clothes I wore, credit card and some cash in my pocket, plus my passport handed to me. I booked in with no luggage, no hand luggage either, a cute

smile from the young lady serving me. In the Departures Lounge I bought a small bag, then a toiletries bag, filling it with essentials, finally sitting down in the First Class lounge with a paperback I had bought, a book about President Reagan. I got to the bottom of the first page.

‘Paul!’ It was one of our bands.

I closed the book, stuffing it into my pocket. ‘Off anywhere nice?’

‘New York, man. You?’

‘New York as well.’

‘Ah, off to see Katie.’ They sat and surrounded me. Where were the Rifles when I needed them?

After ten minutes of childish chat about “stuff, like” a police officer in a suit came over, flashing a badge. ‘Mister Holton, can we have a word please.’ The man led me to a room labelled as Staff Lounge, making me puzzle the sign. The officer sat with his colleagues. ‘Karl gave as a call, said to rescue you if the passengers got overbearing.’

I sat and accepted a mug of tea with a grin. ‘Thanks. They’re signed to my record label, lovely lads, but I don’t speak *street talk*.’ We chatted about airport security, a bit about Somalia and Mapley, and the time before take-off passed quickly. They escorted me to the plane and said goodbye. Fortunately, the young lads were in economy, and I didn’t recognise anyone in my immediate vicinity as I sat. After take-off I pulled out the book, back to page one.

‘Mister Holton?’

I looked up, a silver haired man in a blue blazer, seemingly headed to the bar. ‘I’m Jacque DuVille, Deputy Director of Red Cross Francais. If you feel like a drink...’

I eased up. ‘Funny you should say that.’

We settled in a corner of the bar on the upper deck, and he thanked me at length for all we had done. We chatted at about Somalia, Zaire and other places, plus his family, his chalet in Switzerland. I picked his brains on UN and Red Cross structures, even drawing a little family-tree diagram of the outline structures; I wanted to know who was who and how it all worked. It passed three hours quickly, Jacque wanting to get some sleep before landing, he would be straight into UN meetings, but would rather be skiing with his family.

I remained in the bar, the booze helping to deaden my senses. At one point the co-pilot stepped out and recognised me, asking to join me with a coffee. We chatted about 747s, aircraft in general and all the quirky incidents he had been involved with flying, including a mouse and a sparrow on the flight deck. He could not stay long, and headed back. I lifted the book, getting to the bottom of the first page before being interrupted, a wide false smile breaking out across my face.

At immigration they asked me the nature of my visit. Well, I had been drinking all night and had not slept. 'A few TV interviews, dinner at the Whitehouse, usual crap.'

The man stared at me for a few seconds, then glanced at my passport stamps. 'I see you're a well travelled man. Do you have a business interest in Africa?'

'Mercenaries, attack helicopters, invading small countries, that sort of thing.'

He called his superior; I guessed I looked a bit tired and drunk. That man ran my passport number through a computer. He had to look twice at what came up, the first man focusing on it. I guessed I was on every watch list they had.

The senior man handed me back my passport. 'Sorry for the delay, sir. Welcome back to America.'

I guessed my credit was good and walked through to collect my luggage, before I realised I didn't have any, then headed out. Oliver was waiting with four burly bodyguards.

'Tired?' Oliver asked as they shepherded me to a car.

'Could do with an hour in a decent bed.'

We drove straight to the apartment that I had stayed at before, chatting about everything Katie had been up to, her face all over America. Anyone would think she fought that damned battle in Somalia. Still, the little dear was making us money. The bodyguards diligently escorted me up in the lift. I turned the key Jimmy had given me and closed the door on the security, thanking them and tipping them. In the lounge I found Katie's mum, Jean, stopping dead. 'Jean?'

'Made it then. I went shopping for you, shirts, socks, pants, all in your room.' She gave me a hug.

'You're staying here? And Katie?'

'We were in the hotel, but it all got ghastly with the press, so we came here.'

‘Oh, well I need some kip. Jet-lagged.’ It was noon and I crawled into bed, soon smelling Katie on the pillow.

I woke up with a cold hand on my privates, hoping it was not Jean.

‘Hello stranger,’ Katie whispered.

‘I thought it was Jean for a minute.’ I eased up. ‘What’s the time?’

‘Four-thirty.’ She peeled off her one-piece dress and eased in, nudging me to the cold section. Cuddling up, she said, ‘I’m not working tonight, but we got an invite somewhere, couple of places I think.’

I kissed her on the forehead. ‘Whatever you think, I’m easy,’ I said, yawning.

An hour later I was washed and suited, stood looking down at the bustling streets. A phone trilled, and I remembered the mobile Oliver had given me, finding it in my jacket pocket. I pressed the green button. ‘Home for fallen women, you picking up or dropping off?’

I could hear a loud, long laugh. ‘Paul, President Harvey. Can you talk?’

‘I got the right visa stamp, you can’t kick me out yet.’

He laughed again. ‘I wanted to invite you to the White House, you and Katie.’

‘Need a ratings boost, do we? Be seen with some good-looking celebs’ instead of stuffy politicians?’

He laughed at length. ‘Tomorrow, 3pm if you can make it. I believe your better half has a TV interview here.’

‘Just like her, pinch the White House to give an interview.’

He laughed again. ‘Let us know tomorrow, enjoy New York, bye.’

I pressed red without needing to, and put the phone in my pocket, Katie stepping out of the bedroom with wet hair. ‘We’ve been invited to the White House.’ She screamed like a ten-year-old girl and ran over, hugging me. ‘Tomorrow afternoon.’

‘I’ve an interview in the evening, you should come to that as well.’

The key turned in the door and Jean entered. ‘Here’s a telegram thingy.’ She handed over two yellow waxy envelopes, both addressed to me.

I tore them open, Katie stood keenly observing as she dried her hair. ‘Two invites to chat shows ... er ... tonight.’

‘Let’s do O’Brian, I like him,’ she said as she examined the telegram.

‘Fine, you’re call. Is there food here?’

‘I could whip something up,’ Jean offered.

‘That’s best thing I’ve heard since getting here. Go, cooking wench, work your magic.’

I sat for forty minutes, eating and glancing down at the busy streets, the kitchen wall glass on one side. Katie came and went, a dozen calls made and received. If I had let it, that would have annoyed me, but I switched off and ate. Jean showed me the press coverage, keeping a detailed scrapbook. The papers had the four different helicopter stunts that I had taken part in, and photographs of me that, for the life of me, I could not work out who had taken. Some were of me sat in a Huey, some clambering down. One was of me holding the snot nose kid in Zaire. The only consistent elements to each picture were large sweat stains in my shirts, and my cheap sunglasses. Katie took a call, from Jimmy. Returning to the kitchen table she looked a little deflated.

‘Problem?’ I asked.

‘That was Jimmy,’ she explained, her serious head on for a change. ‘He says they’ll ask about all the money you give to charity, and then ask me how much I give.’

‘Ah. Well, lie a little.’

She took a breath. ‘Jimmy said he could back date some of my royalties, make it look like I contributed all along, if I donate something now.’ She paused.

‘And...?’

‘And I’m going to do a series of concerts for Africa,’ she adamantly stated.

‘Good for you. I’ll tell them you’ve always contributed when you visited Kenya, no big deal – we don’t expect other people to contribute as much as we do.’

‘I’m going to donate half a million,’ Katie told me, Jean controlling her shock. She faced her mum. ‘I’m going to make a million a year from now on, or more, its OK.’

‘I’ll give it back to you afterwards,’ I offered.

‘No ... no I want to contribute,’ Katie insisted. ‘And I’m going to do the concerts.’

A limo picked us up at 6pm, a long wait ahead of a live show at 8pm. Guess they wanted to make sure we didn't get stuck in traffic. I signed a contract allowing them use of the footage and copyright, and agreed to not swear or try and promote any commercial products, etc, etc. A nice and busty make-up lady tried to make me look even younger, but I was heavily tanned and there was little she could do, or needed to do; I looked younger than Katie. We walked out to applause, Katie in a tight-fitting sparkly dress and looking gorgeous, me in a suit I had found in the closet. And, oddly enough, I was not at all nervous. We sat on a couch, the back wall a painting of a New York skyline.

‘Welcome, Paul and Katie.’

‘It's Katie and Paul,’ I corrected him. ‘She's the boss.’ The audience laughed. ‘And she's more famous and better looking than I am.’

‘Much ... better looking. How're the concerts going?’

Katie chatted about the music business, then he asked if she worried for me. ‘I get to hear about the danger after it's happened, so I don't worry ahead of time.’

‘Paul, you first grabbed the headlines with a miraculous *spur of the moment* rescue of UN workers in Somalia, most of whom – sadly - lost their lives. One was American doctor, Sally Nash, two month's pregnant at the time – which she didn't know until the check-up after getting back. Ladies and gentlemen, Doctor Sally Nash and family!’

A man and woman walked out to applause, the woman cradling a baby. I stood as they neared, not recognising the woman, Katie following me up. As I sat again I found myself holding the baby.

‘You didn't just save one life that day, you saved two.’ A screen came to life, a picture of my battered Huey, the front glass smashed. ‘On that fateful day you provided cover for the other rescuers, yes?’

‘We kept the gunmen busy by letting them shoot holes in us,’ I said. ‘When our other aircraft were on the ground we dived at the gunmen, the men in the back opening fire on them.’

‘Allowing the other aircraft to land and get away,’ the host said. ‘You put yourself in the way to buy them time, getting a formal merit from the UN Secretary General.’

I handed back the baby, leaning across Katie. ‘Did you name him Huey?’

‘We thought about Dash – after the Dash 7 that I was rescued in,’ she said, everyone laughing.

‘Good job you were not in the Russian made helicopter!’

‘Sally is now working in a clinic in Buffalo, New York. How many times were you shot, Sally?’

‘I was hit three times.’

‘But you managed to get that fateful distress call out, saving your colleagues. Four made it out alive, eight unfortunately did not.’ The picture changed, that of me helping down the snot nose kid at Forward Base. ‘And this, this is Zaire after you again went into the war zone and brought out a UN team under fire, your doctors setting up camp and helping the refugees there.’ The husband took the baby away out of shot. ‘And most recently, you attacked a Russian made tank – with your helicopter. How did that come about?’

‘We had just met with a local warlord, to ask him if we could build a clinic on his land. Flying back we could see the tank approaching a Kenyan Army patrol, of just lightly armed jeeps.’

‘No match for a tank.’

‘No. So I dived down and got above the tank, creating a sandstorm.’

‘So the tank couldn’t see anything.’

‘The tank slowed down, and one of the soldiers jumped out of my Huey and onto the tank, killing the crew.’

‘He jumped?’

‘I flew so low I clipped the tank, then he jumped.’

‘Surely saving the Kenyans in their lightly armed jeeps from the tank. And just a short time after that came the battle at Scorpion Base. With a name like that – I’m guessing it’s not Hawaii?’

‘Hot as hell, no water for twenty miles, scorpions and snakes. And hostile warlords nearby.’

‘And why did they attack you?’

‘When the local warlords saw our American made helicopters they thought we were American, so came out in strength to kill us.’

Our host was horrified. ‘They thought ... that you were American, so attacked?’

I nodded. ‘General Aideed sent five thousand men towards us.’

‘And how many men did you have?’

‘Forty-five.’

‘Forty-five ... against five thousand!’

‘But we had the Huey Cobras. Without them we would have all been killed.’

‘You could have left by plane?’

‘My partners in our medical charity, and I, have a simple philosophy: don’t send your staff where you’re not prepared to go yourself. When we knew they were in danger we stayed.’

The audience clapped.

‘And with just four *dated* combat helicopters, and four dated pilots, you fought a running battle for five days, inflicting a serious defeat on General Aideed and his warlords. Has Aideed lost face in Somalia?’

‘Very much so, his neighbouring warlords are making war on him as we speak.’

‘And the pilots we’ve been hearing so much about, they’re in their fifties and sixties? One was in Vietnam.’

‘Hal, yes, he fought in Vietnam. He also taught me a lot about what I know about Hueys.’

‘Ladies and gentlemen, Hal Becker!’

Hal walked out, dressed smart. I stood up and greeted him with a big hug, soon sitting again.

‘So, Hal. Was Paul a good student?’

‘Well, the first thing he did was to rip out the page of the manual that listed things *not* to do with a helicopter.’ The audience laughed. ‘And that red fire warning light, he thinks that means *go faster*.’ They laughed more, so did I. ‘I used to have a wife who drove the car till it stopped, no gas, then called the Auto Club to see what was wrong with it. He’s like that with helicopters, fly ‘em till the rotors stop and wonder why the ground is coming up so fast.’

‘Paul, what was Hal’s contribution at Scorpion Base?’

‘Well, on the third day he took off his flight suit, stood on the tower roof for a cooling breeze and poured water over his lily white blubber to cool down. The Somalis took one look and ran away shrieking.’ The audience laughed. ‘And at night ... Hal’s snoring kept making the Somalis think we had more machine gun ammo than we did.’ The audience laughed again. ‘It kept their heads down. But his real contribution was one of morale, encouraging the other pilots to keep going up, even when the helicopters were unserviceable. Day after day, mission after mission, they kept attacking the convoys coming towards us, keeping them at bay, taking fire all the time. And there were a few warning lights on the Huey Cobras, all ignored.’ The audience had fallen silent. ‘The thing I never understood about your military, is this focus on youngsters. I’d put Hal up against them any day. Hal’s generation are made of sterner stuff.’

‘Ladies and gentlemen, Hal Becker.’ They applauded him at length.

With the cameras off we were led out, Hal knowing a good restaurant. We were already dressed up, so used the studio’s limo to drop us around at the restaurant. The food was good, but the other guests focused on just us, which was a little off-putting. Unlike my dear girlfriend, I never understood the attraction of other people gawking at us; I found it a little unsettling. Remembering what Jimmy had said about Vietnam vets, I asked Hal about vet’s charities. Turned out there was a mini-convention come barbeque in Washington day after tomorrow, and I should have figured that. I told him we would both be attending. Katie was excited and tipsy, which meant she was randy, so we headed off at a respectable hour.

In the morning I was worrying about what Jimmy would say regarding meeting the President. And what I was supposed to say or do regarding Magestic work, and not just the celebrity suck up part – him sucking up to me and Katie for a few extra votes. As I stood in the kitchen at 6am, staring down at the already busy streets with a coffee mug in hand, I realised that I wasn’t afraid, nor even nervous. ‘Odd’, I found myself reflecting. Jean rose early and insisted on making breakfast for me; Katie would need a rocket under her to be up at this hour. If no one woke her she’d be there till noon.

The mobile phone in my pocket beeped and I took it out: *message*. It was one of those new text message things, and I tried to figure out how to open it, finally getting the short message: *Vietnam Vet meet, Hacker, offer job. Jimbo*. I pressed the red button and put the phone back in my pocket, thinking how odd it was that there was no mention of the President. I kicked up Katie at 8am and carried her to the shower, then answered the door to a courier, a thin package signed for, finding seven return tickets for Washington. It took a little thinking, but I figured they were for us three, Hal and three bodyguards. But there were four bodyguards, so I finally figured Hal would make his own way there for the meeting. And I wanted to figure it out without ringing Jimmy and seeming thick.

The bodyguards turned up with overnight bags, so that clinched it, I was right and I gave them each a plane ticket, which they were expecting. They drove us to the airport and we took a short commercial flight to Washington. Coming in to land, Washington did not look that inviting, quite rough in fact. The guys had a hire car waiting, a large people carrier, and delivered us to a hotel not far from the White House. One of the guys was ex-Secret Service, the man keenly briefing us on where to go, the layout, normal protocol, interesting facts and funny stories of Presidents past. We had time for a quick bite to eat and a shower, and I asked the same guy to confirm we'd be there on time.

Katie and Jean were nervous as hell as we drove around, but I told them it was just like Beijing, only warmer. And that he was just a regular guy. As I said the words I reminded myself that he was also a politician, and that made him a snake with his own agenda. I wondered what the real agenda was as we drove past tourists taking pictures of the famous backdrop and up to the gate.

'Holton, party of three,' the ex-Secret Service guy said, displaying some sort of ID. We were in.

We drove around to a small car park, agents in tight fitting suits stepping out and opening the doors. I stepped down, helping Katie and Jean out, the van pulling off, Oliver's hired muscle staying inside the van.

Walking through a busy corridor I said to Jean, 'Tradesman's entrance.' The poor dear looked so nervous I worried for her a little. We waited in a small room, drinks offered, the ladies

having water as I stared up at the paintings, ignorantly not knowing who any of them were. Why couldn't people label paintings?

After ten minutes the door clicked open and an officious looking man appeared. He seemed vaguely familiar, and led us through another empty room to the Oval office, finding the big man himself sat signing papers, left handed, a secretary at his elbow.

'Please, come in,' President Harvey offered as he put the end on his pen and allowed the secretary to take the papers. He stood and walked around.

'You seem taller than on the TV,' I said, making him laugh as we shook. 'This is Katie Joe, and her mum, Jean.'

He shook their hands and said hello, a lingering smile for Katie. We remained standing as a photographer entered. 'Memento pictures,' he said.

'Bollocks,' was what I wanted to say, but I resisted. We sat, and he delicately asked questions about Rescue Force and Somali as if he had not been briefed, which I was sure he had, then asked Katie about her career, her concerts, he even engaged Jean in a little chit-chat. I considered what pretext he would use to get rid of the girls. A tour came to mind.

Here it came. 'Ladies, our State Department officials would like to pick Paul's brains about politics in Somali, would you like a tour?'

They would, and off they went, making me grin, the Chief of Staff noticing. With them out the door I said, 'I figured you'd use that line. Any chance of a beer?' A beer was ordered, now just the President and his Chief of Staff. 'So, how *are* your ratings?'

'They always dip after a year or two in office. I'll play at politician a year from now, before the next election.'

'You running again?' I asked.

'You know something I don't?'

'You get back in,' I told him. He glanced at his chief. I asked him, 'So, what'll you do at the end of eight years, once you're all done with sitting in the big chair?'

'That's a heck of long way off.'

'Not really,' I said. 'We think in decades. So, what'll you do when you're a civilian again?'

He eased back. 'Guess you're about to tell me.'

‘You stay with the “M” Group, having a role to play.’

‘I do?’

‘It’s either that, or you forever sit wondering when the world’s going to end, and not knowing - being on the outside. And that’s a feeling I know. I once fell ill, and was left out of things for a while. Terrible feeling, to be on the inside, *in the know*, then left out.’

Concerned, he glanced at his Chief. ‘I figured we’d ask you some questions, not the other way around.’

‘I figured that you’d make a better job of it in Somali. Life’s little disappointments, eh?’ He didn’t seem to like that, at all. ‘You grow up thinking the States is all powerful, then you realise that power, and common sense, don’t always go together.’

The Chief bluntly asked, ‘How many more are there like Senator Pedersen?’

‘*Like ... him?*’

‘Receiving Magestic help.’

It was my turn to wind up the President of the United States. ‘I once helped Jimmy post on some letters, all US Airmail, about fifty there were.’ The Chief looked quite put out, glancing at the President. ‘They were not all politicians, they were company bosses, bankers, all sorts in there.’

The President began, ‘Some may see that as a conspiracy.’

‘I told you you’d get back in. That’s the truth, not a conspiracy. A conspiracy would be the people we’ve trashed, wrecking their careers.’

Their interest was piqued. ‘Why ... were their careers trashed?’ the President asked.

‘Because we know what they’ll do in the future, of course.’

‘Seems like you’re playing God,’ the Chief complained.

‘Let me ask *you* a question, that was asked of me: if you could go back in time, to when Hitler was a baby, could you reach into his cot and strangle him?’

‘I’d ... probably have a problem with that.’

The President said, ‘Not least, because whoever took his place may have been even worse.’

‘So, it may just be better to watch and wait, then wreck his political career – a humane way to do it,’ I said. I was feeling mischievous. ‘You’re in that chair because you were allowed to be in it, Mister President; because you’ll actually do quite well *as*

a President. The guy that was going to beat you at the next election was ... dealt with. And a hundred small decisions taken a decade ago will help you win and do well during a turbulent period of human history.'

'Jesus,' the Chief let out.

'It's very odd to hear stuff like that from someone from someone so young,' the President reflected, easing back.

'I'm more capable ... than I look,' I told them, being defensive.

'Of that ... we're sure,' the Chief said as he stood and walked to the window. He turned, his hands in his pockets. 'You handed us back a victory in Somalia.'

'You say that ... as if we're not on the same side. Look, mate, we're working around you because you're too damn arrogant to work with us. And until you realise that you'll keep screwing up and losing lives, maybe a lot of lives. You're future economy is screwed, and even if you had started to fix it two years ago it would have *still* been too late. So we're working in secret to try and fix *your* fucking economy, so future American presidents don't go to war to fix the deficit!'

'Go to war?' the President asked, his chief closing in.

'In the decades ahead you'll owe China more money than is prudent, so a Republican idiot will attack China, hoping to wipe out them, and their dollars.'

'Jesus,' the Chief let out.

'You lose everyone on the west coast, your economy fucked forever. Then the same idiots will invade Venezuela, a jungle campaign that'll make Vietnam look like a picnic. Every country in South America turns against you. *And* ... you'll lose both wars. Before that OPEC will drop the dollar as reserve currency, making your imports twice as expensive overnight. So, gentlemen, we're going to carrying on with our *conspiracy* to save *your* arses. And ... you're welcome!'

The beer finally arrived, leaving me wondering if they had popped out for it. I eased back and took many sips. 'Not bad.'

The Chief said, 'This 2025 thing. If that's so bad, why bother fixing what's in between.'

'It's survivable, just very difficult. It'll need the co-operation of many countries, especially Russia and China, which is why we contacted them way ahead of you.'

‘How much do they know?’ the President asked.

‘Just about all of it, in detail. A hell of a lot more than you.’

The President stood. ‘You’re feeding our enemies critical information.’

‘If it was *critical*, why haven’t you come and spoken to us, eh?’ I wagged an angry finger. ‘We’ve had nothing but crap from the CIA, even had some CIA shits threaten us and try and blackmail us. And they’ve tried to bug us every step, they even bugged your fucking NSA boys when they came to see us. You may be the President, but from this side of the desk it don’t look like you’re in charge of jack shit.’

He sat, issuing a sigh. ‘That will change. I was foolish to ignore this.’

‘Well, look on the bright side. You are, apparently, the only US president, past or present, *ever* allowed to join the secret “M” Group.’

‘I am?’ He glanced at his Chief.

‘Yes. There’ll be the regular “M” Group, then the real one behind it. You ... are invited to join the real one, apparently. And that came as a shock to me, since you’re going to get impeached for shagging young political interns.’

‘What?’ the Chief asked, closing in.

‘Yeah, so make sure they’re all fat and ugly,’ I told him.

The look he gave the President suggested he already knew what I was on about. He sat and took a moment, crossing his legs. ‘Do you have an agenda in Africa?’

‘We have an agenda everywhere, mate, including tampering with future presidential candidates.’

‘There’s a lot of people in this town that would not like that, if the truth got out,’ the Chief suggested.

‘Would like it even less if they knew the full truth. Guess they wouldn’t bother going to work or paying their taxes,’ I pointed out. ‘You’ll know if the full truth ever leaks out, you’ll be under permanent Martial Law, soldiers down Main Street.’

They glanced at each other.

The President finally asked, ‘Are you prepared to give a complete history to us?’

‘To some of you ... yes. The problem will be, according to Magestic, that future Republican Presidents will try and use that knowledge for the political and economic gain of the US - so

some detail will always be left out. Unlike the Chinese, you change Presidents often, and policy swings wildly from left to right. Any good work you lot do ... will be reversed and fucked up by the next guy in that seat.'

The President nodded his agreement with that idea. A knock on the door preceded the ladies returning from their tour.

'I told you ... nick some mementos,' I playfully scolded them. 'An ashtray, something.'

The President was all smiles for the ladies, as if we had just had a very friendly chat. He thanked us, and we thanked him, the tour lady leading us back to our van. I wondered if he had a little red button on his desk that could blow up the van.

Back at the hotel I used a payphone in the lobby, many coins in as I dialled the house in the UK. Cookie answered, fetching Jimmy. 'I just swore at the President.'

'Good. Don't forget the Vietnam Vet's thing tomorrow.'

'Didn't you hear what I said, I shouted at him.'

'Ever wondered why you were recruited?'

'Charming personality?' I toyed.

'Because you're a sarcastic bastard who sees through the crap, to what's really going on underneath. Usually, the first thing that comes into your head is the right thing, rude or not. You did what I expected, nothing more, nothing less. Say hello to Katie for me.'

Before he put the phone down I thought I heard a woman's voice. Dirty bugger, up to something when I was out of the house. Katie was nervous-tired and dosed, I sat and thought about things, coffee in hand as I stared at the grey Washington rooftops.

After a meal in the hotel restaurant we headed across town to do a recorded chat show, a very similar set of questions to O'Brian, but no surprise guests. They asked about how much we gave to charity, I said eighty-five percent, Katie explaining that she contributed a great deal as well; it would have been awkward otherwise. She was tired when we returned, straight to bed for her beauty sleep, so I flicked channels for hours.

The next day Hal called my mobile. I didn't even know he had the number, still jumping every time my jacket pocket trilled. I left Katie and Jean to go shopping with two of the bodyguards, who looked thrilled at the prospect, and I drove with

Hal, and the other two bodyguards, south into Virginia to the veteran's event. The meeting was held at a small airfield and looked pretty much like an air show in the UK, hotdogs and flying displays, beer tents and shops selling all sort of crap memorabilia, including German helmets from World War Two. The air was filled with distorted music from the sixties coming from several directions, the breeze tainted with the smell of onions. We grabbed hot dogs, some for the bodyguards, then zeroed in on a line of Hueys, all fitted out with a variety of weapons. At the rope barrier we stood and ate our dogs, Hal describing some of the features on the Hueys. I liked the chain gun, and asked a guy stood looking bored where I could buy some.

'They's military only, mister,' came back.

'And I'm a military buyer for numerous African states.'

The man glanced at his colleague, the two of them stepping forwards.

The second man recognised Hal. 'You were in that Somalia thing,' he said in a thick southern drawl.

'Yes, and this is my boss, Paul. He just had a meet with the President. He's the guy who rescued the UN mission in Somalia.'

'Shit...' the man let out. 'Come on back here, fellas.'

We ducked under the rope and walked to a tent behind his helicopter, magazines laid out on tables. A third man stood up.

'These are the fellas off the TV, that thing in Somali.'

'Welcome, welcome,' the third man said.

'Tell me about the chain guns,' I suggested, getting a brochure handed to me, a description given. I faced Hal, 'These good.'

'Against vehicle convoys of Somalis ... very good.'

'You do new or second hand?' I asked.

'Got six re-furbs' at a good price. A good bulk price on the ammo too. You, er, you got a shipping license?'

Hal suggested, 'It all goes to the Kenyan Army, and they got a contract with the Department of Defence.'

I agreed a price and we swapped details, an invoice and shipping document to be sent to the Kenyan Embassy, a copy to us, six Huey chain guns and a lot of ammo. And these chain guns could be reloaded from the rear of the Huey whilst in flight.

Clutching brochures, we wandered out, a quick ten minutes in the beer tent and another “dog” before finding a Veteran’s charity tent, a large marquee with many poster-boards detailing all their good work. I ducked my head and entered, finishing my dog.

A middle-aged woman in a cowboy hat, high boots and a low skirt shook a bucket in front of me. ‘Ya’ll wanna contribute some-ting?’

‘I’d like to contribute a lot. Where’s the boss, love?’

‘Where’s ya’ll from, honey?’

‘England.’

‘Oh. I’ll go fetch ‘im.’

The grey haired boss walked over, his jacket lapels detailing his many heroic actions through his medals. ‘Can I help you, son?’

‘I’d like to make a large donation.’

‘You’s English, ya’ll weren’t in Vietnam.’

‘That doesn’t mean that we appreciate your soldiers any less.’ I gestured to Hal, who listed his rank and exploits.

‘Well, we’s glad of anything you donate, son.’

I gave him a holdall of hundred dollar bills. ‘One hundred thousand dollars.’

He flicked through the wads, clearly surprised, his mouth opening, but was lost for words.

A second man approached. ‘I know you, you were on the TV, that English fella that fought off the Somali Army.’

The old guy recognised us now. ‘Shit. Come on in fellas, we got us some cold ones.’

People huddled around as we accepted cans of Bud, Hal soon telling the story of Somali, and soon quiet a small crowd of people listening in. The old guy suggested we say something at the next tent, a large marquee where it seemed anyone could simply get up and whinge about the Vietnam War. He led us down the aisle, most of the audience dressed scruffily – me standing out in my suit, rudely chucking off the speaker – who seemed a bit drunk, then took the podium.

‘Ladies and gentlemen, we have a rare treat for you today. Y’all probably seen on the TV about the big battle in Somali, the helicopter battle – four Huey Cobras up against five thousand enemy soldiers. Well, the pilots are here with us today.

Everybody, this's Hal Becker – a vet from '68, and his English boss, the young fella that rescued the UN people under fire.'

They applauded as we took to the stage. Hal went first, explaining some of the battle, but soon had questions thrown up and answered. I noticed a drinks table in a corner, and, grabbing the microphone said the beers were on me. I sent a bodyguard down with a thousand dollars, more than enough. The tent filled quickly, everyone getting a free beer, many people now stood around the edges as Hal fielded questions, gave answers and made jokes. At one point they asked if we had any jobs going.

'If you're a medic or doctor with combat experience, we might,' I answered. Judging by the crowd, none were suitably qualified; most appeared to be alcoholics in various stages of progression.

When I expressed the opinion that Hal's generation made better soldiers, the tent erupted into cheer. And I still didn't know why I was supposed to be here; it certainly wasn't for some old chain guns. We eventually gave up the podium as everyone now stood drinking, more cans ordered from storage. I mingled with the crowd, chatting to the men, finding a few Huey pilots and swapping stories.

Then someone pushed through, dragging another man. 'You said you wanted combat medics, yeah?' The second man, the man being reluctantly dragged, had a green combat jacket that said Hacker.

I shook his hand. 'You were a medic?'

'Still am,' he testily stated.

'Where you working?'

'Charities in South America. What do *you* do?'

'I run a medical charity in Africa, Kenya. We send medics into shit holes where no sane person would go.'

He slowly nodded. 'What ya looking for?'

'Experience.'

He made a face. 'Got plenty of that.'

'You good with gunshot trauma?' He lifted his eyebrows nodded. 'Improvised medical techniques, when the kit is low?'

'Story of my fucking life!'

'What's you asking price, Mister Hacker?'

‘Hacker is a nickname, got it amputating limbs in Vietnam. It’s Doctor Jim Lebante. And my price ... is what I can get. Last job was all costs, food, room and ten grand a year.’

‘My offer price, is all costs, food and room, flights, four weeks paid leave a year, and thirty thousand dollars.’ I gave him five thousand dollars and a Rescue Force card. ‘Turn up in Kenya when you’re ready.’

He stared at the money. ‘I got a funeral to go to, then I’m all yours.’

Hal shook his hand. ‘Welcome to the team. You won’t regret it, they’re good to work for.’

‘Can you fly anything?’ I asked him.

He shrugged, ‘Cessna, Huey.’

‘Excellent. Call the numbers when you land in Nairobi, explain who you are, they’ll send a plane.’

We left the drunken vet’s to it, and I feared what that tent would be like in a few hours. The bodyguards drove us back to the hotel. We picked up the girls and headed straight back to New York.

Katie had concerts in other cities and I made my excuses, catching the first available flight out. Hal was heading back as well, so he altered his ticket to be on my flight; I paid his upgrade. It gave us plenty of time to chat, and we had a lot to chat about – I was always keen to pick his brains, and he was more than keen to help me. It made him feel wanted and needed. In London I insisted he came back to the house and we gave him a room, everyone making him very welcome, even the Alsations. Tired after the flight, he went to bed midday.

In the lounge I eased down with a mug of tea and issued a sigh. ‘Got Hacker by the way.’

‘Good,’ Jimmy said. ‘He’s excellent at combat medicine, he can set-up some courses. He’s performed operations with bits of tin cans.’

‘He flies as well.’

‘He flew a Cessna when he was eleven, grew up in Alaska.’

I nodded before sipping my tea. ‘So, what you been up to while I was shouting at the US President?’

‘Me and Big Paul *disposed* of a few *problems*, that needed disposing off.’

‘Ah.’

‘The club is almost ready.’
‘Did you have a woman in here?’ I teased.
‘That’s Karen, the masseur, niece of Sharon.’
‘Oh yeah?’
‘Yes, she’s nice, and no – you can’t have a massage from her.’
‘Are you...?’
‘Don’t be nosy, young man. Oh, draft of the book on Zaire in the office, go through it. He’s just made a start on Scorpion Base.’
‘Did you see my TV chat show stuff?’
‘Yes, you did a good job. American TV is going to make a mini-movie about Dr Nash. We’ll be in it.’
‘We ... us two?’
‘No, Rescue Force, someone playing us.’
‘That’ll be odd, my mum will be confused,’ I suggested.
‘Anyway, I think the President got the message.’
‘Already contacted the British Prime Minister, urging greater use of ... us two, greater co-operation. Did you tell him fifty Magestic letters sent to the States?’
‘Yeah?’ I puzzled. ‘How’d you know that?’
‘And that we helped him into office?’
‘Yeah, and I made that bit up. How’d you know?’
‘How’d I know anything, young man?’
‘You are so weird sometimes.’
He nodded. ‘Yep. Oh, four killed at Scorpion base, group stepped on a mine.’
‘Who?’
‘Four of Rabbit’s gang clearing the airfield: Tanzanians.’
‘Hell.’
‘Nature of the game with mine clearance.’

Silo’s II

The new nightclub was ready by mid-September, 1995. It now offered two main entrances, plus a secret one, a link to the hotel next door which would allow VIPs to pop in and out unseen.

Many additional fire escapes had been built, and the Health and Safety people had been up and down the building excessively, so too the Fire Brigade. I took Katie on a tour of it on a damp Tuesday morning.

Through the main public entrance we were met by a line of brass turn styles, allowing one person in or out a time through each. Tills were now positioned on the left, a dozen high quality cameras covering all angles, a large screen displaying your face as you passed through, leaving anyone attending in no doubt about the security. Through the turn styles the corridor narrowed, cloakrooms on the right, separated for ladies and gents. You then opened into the main room, a dance floor covering one quarter of it in the far left corner. Around the edges of the room ran a line of brass railings, tables inside and out of it.

I pointed up. Around this large room ran a balcony on two sides, patrons in the member's area able to peer down at non-members and, if they wished, invite them up. Walking around the room counter-clockwise, we poked our heads into five rooms; a chill-out room – that would have no music, a ladies only room with music and bar, a retro dance room, a modern dance room and another bar, a large toilets at the end – a mini shop in both the ladies and gents. Climbing wide stairs to the second floor, we found the Chinese and Indian restaurants, plus two additional rooms, simple wine bars that would offer no music to patrons, so I puzzled why they were not called chill-out rooms. Their proximity to the restaurants convinced me that people awaiting their tables would use them.

At the balcony we stared down for a moment, passing through a door that would normally be manned by security; members being allowed in and out, the public not let in unless invited. The first room we entered was the reading room, a bank of computers lining the far wall, all fitted by our IT man Gareth with the new-fangled Windows 95. Teas and coffees would be served in here, but no alcohol allowed. Next door to it was a large chill-out bar, many comfortable seats but no music speakers. The toilets on this floor were huge, a small shop that sold all sorts, a unisex hairdressers salon at the rear, shaves for gentlemen or jacket cleaning. I peeked into the ladies as well, many seats in front of mirrors, free bits and pieces for the ladies to use.

The main member's area offered a square of four rooms facing each other; Retro room, Dance room, Wine Bar and Ladies Only. They had each been decorated to a high standard, but did not come across as dated, or old and stuffy. We took the lift down one floor and to the member's entrance. We found it blocked by a similar barrier of turn styles, but these were card swipe as per our leisure centre; members would be using their cards for unaided access. A cloakroom sat off to the left as people entered, again split by ladies and gents. Members then either climbed the stairs or entered the Red Room, as we did now. And it was still a barn of a room.

A very long bar ran down the middle of the room, bisecting it and pointing towards the stage; guests could be served on all sides of the bar. To the left and right of the bar tables were laid out, at least fifty on each side in my estimation. Signs labelled the table numbers, arrows pointing. Those at the rear were on a platform enclosed by a brass railing, the platform two foot high. Those in front were just a foot off the ground, the tables closer to the stage at ground level. With Katie having a keen professional interest, we climbed the stage and stood staring out at the room. It reminded me of a 1930s music hall.

Lifting my head I could see a wide balcony on two sides, tables set out all along it. Katie liked the room, suggesting the acoustics would be good. Since she was the opening act, she'd soon get the chance to find out. There was no way to reach the balcony from this room, and I tried to picture the layout in my mind. Back at the main entrance we turned left, noticing signs to a Snack Bar. Voices could be heard. Down a few steps we found a brightly coloured and brightly lit American style diner that was already in use, two chefs serving five security guards and four police officers in uniform. The new staff politely rose, but I waved them down, greeting the police officers. Jimmy had made it clear to the local cops that they could use the snack bar via the rear door when it was not busy, as well as late at night as in Cardiff. With the air full of intoxicating smell of pancakes we sat and had a cup of tea, and many pancakes.

On the third floor we inspected the quality rooms, finding them as good as anything either of us had ever stayed in, a plumber saying hello as he finished up on something. At the end of the corridor we found another small bar for the guests; it did

breakfasts from 7am to Noon according to the sign. On the next floor we inspected the smaller rooms, still sumptuous, and easily four-star quality. The top floor revealed staff apartments, nametags on doors, a few people coming and going. Above them sat more apartments, but with shared facilities; one bathroom to four bedrooms. Jimmy's policy was to use full time staff wherever possible, and then live-in.

Back on the ground level we stepped into the security room for a nose. It was split into two parts, a rest room with tables and sofas for the staff, plus a second room with a huge bank of monitors covering two walls entirely, and already manned twenty-four hours. The two security men said hello before explaining what all the cameras did. Basically, not a mouse could move anywhere without being seen, all footage being recorded for evidence if there was any trouble, and in several key places the cameras had microphones. There was more security than Buckingham Palace, the one man joked. He was not wrong.

That afternoon Jimmy and I made a nostalgic trip back to McKinleys, all the traders waving, many with phones to ears. The directors made us coffee in their spacious lounge; there was I time I did that for them.

'We'll get you some opening night tickets for the new club,' Jimmy offered them.

'This weekend, yes?'

'Yes,' Jimmy confirmed. 'Friday. We'll be running some special events, bankers and traders, some business meetings, international trade fairs, plus the usual list of beautiful women and celebs.'

'A good investment?' one asked.

Jimmy made a face. 'Moderate.'

'When *you* say moderate, it's excellent by everyone else's standards!' They laughed.

'Can *we* have some shares?' another man joked.

'Funny enough, quite a few people have asked that already,' Jimmy answered. 'Been thinking of making it a Plc.'

That was news to me, but I did not react. And I could see the director's grey matter working away.

Jimmy continued, 'If I did, then anyone with shares would get the run of the place, say a minimum value of five thousand

pounds worth. Building was worth five million before we renovated, so probably six or seven by now. Then there's the ongoing business – all the Pineapple bands doing regular gigs.'

I figured every flash young trader in London would know about the club within the hour, and the Plc hint.

'If you create a Plc, remember us, we'll place some shares for you – no fees!'

After leaving them, we went straight around to a pre-arranged meeting of our solicitors and accountants: they were told to create a Plc straight away, ten million shares at a pound asking price each, sold through McKinleys, forty percent kept back for us.

Next came Pineapple, Oliver visiting the UK this week, the offices now bustling and in need of a move within a year.

'We're going to create a Plc so that people can have shares in the new nightclub,' Jimmy told the assembled senior staff.

'We ... can buy shares?' Oliver asked.

'Anyone can,' I informed him.

'And the musicians themselves?'

'Everyone,' I emphasised. 'Be good for the groups, because if they have shares - and do lots of gigs there to pull in the crowds - their shares go up.'

I could see their grey matter working away.

Opening night was a pain for the security outside, trying to explain to people that it was suits only, and entrance was by invitation only; queuing up gave no one a better chance of getting in. People got pissy and the police had to escort them away. And that was despite the radio advertising. If we had space for ten thousand, we could have squeezed that many in.

The public door charged ten pounds each, but the head doorman allowed in the pretty girls free. Since there were not many registered members yet, we sent tickets to many trading companies we knew. With a mini-concert in the Red Room consisting of six of our best groups, the tickets were now being sold on. Half a dozen celebs booked rooms upstairs, many of the groups given rooms free, people we knew given a few rooms. Pineapple got the bulk of the tickets, close to a thousand, and the groups gave tickets to friends and family.

Katie opened with a familiar song, myself, Jean and Jimmy sat at a table on the balcony, a TV crew just along from us. The tables below were all full, a few people stood around the bars. I pointed down at a table to the front, a man with a headset and a large microphone, Jimmy explaining that they were a radio station, going out live. My other half performed five songs, loud applause given between each, then toured the room as the next band got ready. Cameras flashed, reporters that we had invited in, and she shook hands with many people, eventually finding her way up to us. Yes, the acoustics were good, she confirmed.

Sykes and Jack found us, both done out smart, and stood staring down for ten minutes before heading off exploring. Mackey and some of his rescuers wandered past, saying hello and chatting for five minutes. At least they did not have climbing boots on. Big Paul and Karl came and went, skulking around and checking people, doors and cameras. Looking down I noticed food being served to the tables, Jimmy explaining that it was a limited menu, tasty starters from the Chinese or Indian restaurants.

‘So they head there after,’ I realised. I asked Jimmy to watch Katie, and set-off exploring.

The chill-out room seemed to have many couples sat around chatting, the dance room only offering up a few people dancing at the moment. The Retro Room housed gangs of smartly dressed traders in shirts and colourful braces, pissed already and enjoying themselves, the pretty girls gravitating to the guys with money. The wine bar was lined with smart older couples, most well over forty, the reading room scattered with serious looking groups of men stood chatting about business, some sat at the computers. I noticed a few of the directors of McKinleys talking shop.

Burly bouncers let me though to the public area, the Indian and the Chinese restaurants only modestly attended, unlike in Cardiff; I guessed people had not heard about them yet. I also knew the Welsh stuffed their faces more, and loved their Indian food. I walked down the stairs, a few girls smiling welcomingly as I passed, finding the main room packed, many on the dance floor, more again stood staring at the girls on the dance floor. The side rooms were busy, all of them. At the main entrance Big Paul had someone around the throat, the man thrown out and passed to uniformed police officers outside.

‘Problems already?’ I asked.

‘Had his girl by the hair.’

‘Zero tolerance,’ I affirmed before easing through the brass turn styles and through the queues to the street, Big Paul close at hand. For a change he had my back. The queue was massive and I patrolled along its length. Turning at the end I pulled out a wad of tickets for the members area and issued them to pretty girls and attractive couples. By time I had finished, the numbers in the members area had been boosted by fifty. We re-entered via the members and VIPs entrance, just as a bell rang. I smiled widely. The staff had a sign up which said the bell would be rung if someone uttered, “Do you know who I am?”

Our rule was simple: if we don’t recognise you then you’re not famous enough to get in. And I didn’t recognise the man, who stood protesting that he had a string of salons. He was escorted out and told to apply for a membership or a ticket. In the cool night air I stood at the entrance and welcomed people. Two old Bond movie actors caught my eye and I invited them in, escorting them upstairs and getting them free drinks, introducing them to the gang on the balcony.

‘Oh, I love your character!’ Jean let out, giving the poor guy a big hug.

A few latter-day soap actors joined us and we made them all feel very welcome.

Half an hour later I got call to the main entrance, a former gangster, come author, was protesting his lack of welcome. He repeated to me what a well know “geezer” he was, well known in all the wrong circles. Unfortunately for him he spouted off in front of the cameras with microphones. I sent him packing to veiled threats, then handed over a copy of the tape of the police, a second copy couriered to the BBC, the idiot getting himself arrested. I mentioned the incident to Jimmy, who calmly said the guy would not be a problem. All in all, the first night was resounding success, the Saturday night packed.

The next week we held an event for civil servants past and present on the Wednesday, many “old chaps” re-acquainting themselves, Sykes in the thick of it. The following night was the first Emergency Services Charity Ball, full to capacity, our groups singing again. That second weekend we reached capacity and the staff were told to be more selective. At my suggestion we

held an English screen actors reunion, TV cameras and reporters let in, followed by a Bond actors reunion. That one I liked, but was disappointed just how camp a lot of the bad guys were, spoiling my image of them forever.

We made the papers a great deal in the weeks leading up to the floatation, the shares going quickly to 212pence, making us a lot of money. Oliver had bought a great many shares at a pound each, as did many of our groups, and even Katie. Ownership of shares granted a certain number of tickets, the more shares you had the more tickets, including free meals and stays in the hotel rooms. By time the club was settled we had recovered the cost of the hotel almost three times over.

Is that building safe?

The architect and builders had been puzzled when we had ordered the building's construction a few months earlier.

'You want a half built, *badly built*, tower block, collapsed on one side.'

'Yep. Get to work, here are the plans.'

We had bought a field next to Mapley aerodrome from a local farmer and concreted most of it over, leaving a space for the new building. That building was now ready, many senior Fire Brigade staff in attendance today. They had been confused at first, then a bit reluctant to join in today's exercise, but we had pulled a few strings and they had been nudged to take part. We could not explain everything, because we wanted it to be a surprise, a real test. Without knowing what was going on, they had been reluctant to spare men and machines for the exercise.

In the command portakabin our staff waited. Across from them stood the finished building, looking anything other than finished. It was a four storey concrete block of flats with ten flats along each side, all decorated with second hand flammable furniture. The leftmost section, the last four flats, appeared to have collapsed after a gas explosion, or earthquake, or whatever scenario we wanted to give them. That part was just a large pile of concrete rubble rising up to the second floor. It looked haphazard, but had been carefully designed.

In reality, it had all been carefully planned, the structure safer than it appeared, many hidden access tunnels under the rubble that allowed “injured” people to crawl in or out. We also had a few nasty surprises for the earnest rescuers. Under the rubble, Mackey’s cavers now lay with bottled water, heaters, food and blankets, plus fake blood and injuries painted on; they could enter or exit via a cave system. The senior officers sat in a specially made stand, a cover keeping out the elements.

‘Gentlemen,’ Jimmy began. ‘Today’s exercise is simple. The building behind has suffered a gas explosion, there are people trapped in many places. Our brief to you is nothing more than that.’ He pointed at the cameras fixed to poles. ‘The footage is available for later analysis. And yes, the Government will get to see the highlights.’ Stood next to the assembled men, Jimmy lifted his mobile phone. ‘This is Jimmy Silo at Mapley airfield, exercise Blue Sabre. I want to report a gas explosion, a building has collapsed, people are trapped, send help.’ He hung up, checking his watch. To the control portakabin he said, ‘Smoke please, some flame.’

A flame burst out of an apartment’s window, blowing out the glass, smoke billowing. More smoke rose from the rubble as we waited. Since the people taking part in the exercise were stood waiting at their respective fire stations or police stations, they took only six minutes to arrive, the air full of sirens. Four fire engines turned up, a man in a white hat taking charge, followed by half a dozen police cars and two ambulances.

Jimmy ordered, ‘Burst water main, please.’

A section of concrete exploded upwards, scaring the firemen, soon a huge plume of water drenching everyone nearby.

‘More fire!’

A second floor flat burst into flames, an engine attending it, soon Mackey’s actors being escorted out, carried out or stretched out of the main structure.

Jimmy asked the staff, ‘Are they on the third floor?’

‘Yes.’

‘Trap them!’ He faced the senior officers. ‘A fire has blocked the stairwell between floors two and three.’ He ordered, ‘Old lady and screamer!’

An old lady leant out a window, waving a hanky and trying to call for help, a woman screaming loudly from the top floor, the fire brigade kept busy.

‘Trapped man, position three!’ Jimmy ordered.

A man appeared half buried in the rubble, shouting for help. As officers began to clamber up there was some debate, the men ordered down and a ladder used, the rubble unsafe. As the ladder neared the man screamed, disappearing in a plume of concrete dust. Some of the senior officers were on their feet, some shouting advice. The trapped officers had to come down ladders. As soon as they had, the fire obstruction was switched off, smoke turned on, the broken windows now releasing billowing clouds. The fire officers got the fires out, now hunting for the source of the smoke. One source of smoke was at the top of the rubble, a hose brought to bear on it.

Jimmy faced the senior officers. ‘There are people trapped in the rubble, and you’re using enough water to drown them!’

A man ran out and shouted the hose switched off. Now a thorough search of the rubble was conducted.

Jimmy laughed, lifting a megaphone. ‘Police officers! Why are people going back into the building?’

The officers were cursing at length as the fire brigade went back in after people returning to their flats. A man was pulled from the rubble, ambulance staff attending, the man stretchered away. An hour later the firemen were grey with concrete dust, wet and tired. They brought up thermal cameras and searched the rubble at length, asking for silence and listening for knocking. It took ages to cut metal and concrete to free the next two people, who emerged with helmets and plastic goggles covering their eyes. The final person was buried deep, a tunnel cut out of the rubble, a volunteer going in. He was pulled out by a rope tied around his ankles, dragging a man as he went. It took four sets of hands to pull the man free. They finally figured they had everyone out.

Jimmy lifted his megaphone. ‘Anyone left in the building or rubble, come out now.’ A woman appeared at a window in the flats, a man easing up from the rubble. Curses were issued, accusing fingers pointed. Jimmy faced the senior officers. ‘Gentlemen, this facility can be used for simple building searches, simple fires with no victims, fires with victims, trapped

people or not, dog searches. It is available twenty-four hours a day, there is no charge, but you will have to book it in advance. In the control room you can re-ignite fires, set smoke on or off, even make false tapping sounds. We will use this for training our staff who go out to earthquakes, you may use it the rest of the time, playing back film footage to staff as a debrief.'

They thanked us, delighted with the facility and realness of it as the firemen cleaned up, huddled in groups and discussed what they may, or may not, have done differently. The next day the Prime Minister visited, we stayed away, and the exercise was repeated with different crews.

Kimballa

The American Vietnam veteran, Hacker, had his doubts about me after I had offered him a job. Then he went off and read the book, finally deciding to just give us a look over since it would not cost anything. Cosy met him at Nairobi and flew him up to the base in our old Cessna, having a long chat. Arriving at Mawlini and circling, Hacker had been surprised by the super-sized base in the middle of nowhere.

He was greeted by Coup, allocated a room and then given a meal and a few beers by Mac and Hal, the other Americans joining them, now down to three since one had stayed Stateside to milk the fame. The next day Hacker signed up, being issued a white uniform. They checked him out on the jeeps, which he passed in a day, a second day spent on maintenance. He already held a pilot's license, so was given a refresher on the Huey with Hal, getting his edge back in just a few hours. Hal spent a couple of days running exercises with him, before flying down to Nairobi with him for a Kenyan commercial helicopter license. Hacker passed first go.

For the following two weeks he was put through ordnance, a lot of which he already knew; grenades and mines had not changed much since Vietnam. He did the four-week course in two weeks and passed with flying colours, developing a reputation. Mac sent him to the clinic over the road for five days,

the border camp for five days, the Baardheere camp for five days and then on to Scorpion Base itself, the outpost still subjected to the odd half-hearted attack, and a scattering of injuries from ordnance.

When we flew back to Africa, that's where we found him. Stepping down from the Dash into blistering heat, I stood and took in the buildings. The tower now looked like new - large aerials protruding, a large metal hangar was up, another under construction, a barrack room was finished bar the roof and a second building was under construction. Foundation digging was "interesting", as the builders had put it, many old bits of ordnance unearthed. Rabbit now had a permanent five-man team here and they were kept busy. A small town of tents housed the Rifles, many jeeps parked up, soldiers walking about. Across the airfield much of the sand had been concreted over, hard standings for four Cobras and four Hueys, two of which were Rescue Force. And the perimeter now offered a decent barbed wire fence.

As we walked towards the tower I heard a "clunk" and noticed a well being drilled. 'There water here?'

'Deep down, yes,' Jimmy answered.

We entered the re-furbished tower, a generator powering lights and equipment, including a fridge.

Hal gave us both cold beers. 'How's that new nightclub?'

'Sold it,' I said.

'Sold it?'

'Sixty percent, made twelve million quid,' I told him.

'You can fix a pool here then,' he snarled. 'Fucking washing down here is terrible.'

'That new well should help,' Jimmy calmly informed him.

I took in the papers fixed to walls; flight details, arrivals and departures, team rotas, supplies and convoys due. Climbing the tower I was surprised to find two American servicemen. 'What you lot doing here, I thought you left Somalia?'

'You'd be the famous Paul Holton,' the first man said. He stood and we shook. 'We're kindly monitoring the radio traffic for you.'

'Yeah? How far away?'

'Up to a thousand miles.'

'Cool. What's Aided up to?'

‘He’s recovered a bit since they tried to unseat him.’

‘Bugger.’

The second man said, ‘We got a ship off the coast south of Mogadishu, getting the phone intercepts. He’s trying to persuade your friendly warlords to turn against you.’

‘They listening?’

‘No, they know what they’d be up against.’

A Cobra lifted off and headed east.

‘Trouble?’ I asked.

‘No, they fly out and remind people they’re here, shoot up the odd jeep. And last week a certain warlord’s compound blew up, forty clicks east of here.’

‘And...?’

‘We picked up that Mi24 on radar.’

Jimmy climbed up. ‘Gentlemen. Anything on Farouk’s brother?’

‘If all goes well, he’ll be driving down the coast road after sundown. That why you’re here?’

‘No, I just wanted to check you two are as comfortable as you could be.’

They glanced at each other. ‘Lovely spot; chef don’t need no heat to cook a fucking egg!’

Jimmy ordered, ‘Get some rest, back on at sundown, going to be a long night.’

‘Some op’s we don’t know about?’

‘It’s called ... the element of surprise. Have that tub moved north west at flank speed, and close inshore - to just five miles.’

‘Farouk’s brother and his gang ... coming by boat?’

‘Some are, some by road,’ Jimmy told them, leading me back down just as Hacker walked in.

‘Saw you land,’ he said, shaking our hands, odd to see him in his whites.

‘How you getting on?’ Jimmy asked him.

‘Great. Not much here to stretch me, but a few interesting injuries.’

‘Get some rest, you’ll be needed airborne tonight, a mission or two going down. Then tomorrow or the day after you’ll come with us, Kigoma and Zaire.’

‘Why, I ain’t been here long?’

‘More interesting medical cases there,’ Jimmy suggested. ‘Something to *stretch* you. Besides, once you’re familiar with all the ops’ we want you teaching, more than doing.’

Hacker nodded. ‘I’ll get some grub and a kip, easier to sleep in the heat.’

As Hacker stepped out, Hal asked, ‘Got an operation tonight?’

‘Yes, warn the lads,’ Jimmy confirmed. ‘All of the Cobras will go, plus the Mi24.’

‘Talk of the devil,’ Hal said, stepping into the sun as a thunderous roar announced the Mi24, stalking in at tree-top height, least it would be if there were any trees here. It landed quickly.

Mickey and Yuri joined us five minutes later as we sat sipping our beers.

‘Boss?’ Mickey said, a little surprised to see us.

‘Grab a seat, Mickey.’ They sat, accepting cold cans. ‘Get the bird ready for around 7pm, got a fishing trip for you.’

‘Fishing? A boat?’ Mickey surmised.

‘Farouk’s lot coming down by boat for a big pow-wow, decoy convoy by road.’

‘Slippery fuck, that one,’ Mickey said.

Yuri put in, ‘So we hit the road convoy first, no?’ Jimmy nodded. ‘And they think it is safe by sea. We refuel quick, no?’ Again Jimmy nodded.

‘How do we zero in on them at sea?’ Mickey asked.

‘Yank tub.’ Mickey lifted his eyebrows, Jimmy adding, ‘And when that’s going on, some house re-decorating, just to make a point.’

‘Cobra’s?’ Hal asked.

‘Yes, night attack, But Abdi’s people will set fires just prior to the attack run. But it is a half-moon night, so plenty of ground detail to fly over.’

A distant drone slowly became distinct. ‘Who’s that?’ I asked.

‘Extra Army Hueys,’ Jimmy said. ‘And, those chain guns.’

‘Cool. Give the boys an edge.’

I toured the Rifles’ tents, greeting the boys, all of whom seemed glad to see me. They now had a basic mess tent; no more camel steaks cooked over an open fire. I said hello to Rupert, asking about current operations. Turned out he didn’t know, he had just come back after a few week’s holiday. The ex-SAS guys

were lying on bunks, going out that evening, and gave me a run down of what had happened after the battle here, and the time and effort it took to clear the roads. Seems most of the debris was still on the roadside as a reminder to others. And the bridge south of us, blown-up by Hal, was being bypassed, so they had mined it. Six jeeps had been destroyed, a camel killed, but no further activity seen for weeks.

I ducked into the white Rescue Force tent, greeting familiar faces, a member of the Rifles with a badly cut arm being treated. They all seemed to be in high spirits, despite the lack of a bar or pool, but moaned when I told them that a hotel here would be a long way off. We ate with the pilots at 6pm, the sun dipping below the western horizon, the air cooling quickly. Then Jimmy called an operational meeting in the tower. He checked his watch, everyone else checking there's.

'OK, there are – hopefully – three operations going down tonight. The kick-off will be a boat convoy, three small fast boats heading down the coast just about ... now. If that's confirmed by the Yank tub, we'll hit a road convoy, making the boat convoy think it's in the clear. Mickey and Yuri will target the boat convoy ... with a little help. Check the radio frequencies with the boys upstairs, no mistakes please.

'Once that has been done, the bad guys will think we won't go straight back out, so the Cobras will refuel quickly and hit three targets in the towns south of here. At a pre-determined time Abdi's men will start fires nearby, a signal that the target is at home, and where that happy home is. If all goes well, we'll advance another twenty miles and create a new forward base in the weeks ahead.

'Now, the Jubalad boys are talking about declaring independence for the region we're already patrolling. That will piss off those further east, causing a reaction down the coast road. We'll be waiting ready. If they're stupid, we'll deal them a heavy blow, and independence for this area will survive more than just a few weeks.'

One of the American technicians came downstairs. 'Got three fast boats, forty miles up the coast. Traffic from a jeep convoy thirty miles out.' He retreated.

'OK, I guess we're on. Hal, find and hit that jeep convoy, then back here as fast as possible.' The American pilots stepped out.

‘Mickey, Yuri, wait till they’ve confirmed the attack, sit ready.’ They stepped out. To Rupert he said, ‘I need eyes on that road convoy after it’s hit, then I want an ambush for anyone coming out to nose at it. We need a line right from the coast to ten miles inland for the next two weeks – observation more than engagement. If a convoy moves, stop it.’

That left just the Kenyan radio operators as the sound of rotors filled the air. We cracked open beer cans and sat, listening to the radio chatter, and I found myself wishing that I was up there. Hacker lifted off and followed the Cobras in case one went down, his co-pilot using a hand held night sight to follow the Cobras heat signatures. All our Hueys now came fitted with radio-altimeters; we bought them to enhance our winching capability at night. The tower also now offered short-range radar in case someone got lost, all the helicopters capable of radio direction finding if necessary.

Fifteen minutes later the Cobras reported the convoy attacked, jeeps scattering and being picked off for ten minutes. They also got a surprise from a DHSK on one of the jeeps. The American technicians reported radio chatter to the boats, the Mi24 lifting off with a roar and heading southeast. The cobras returned to re-fuel, plenty of hands stood waiting to help; they were back up in ten minutes and heading southwest, the Rescue Force Huey following. One Cobra reported unserviceable and returned, possibly having taken a hit from a DHSK. They landed safely, the pilots joining us in the tower. With no radio chatter allowed, we had little to do but wait.

Forty minutes passed before Yuri came back on. ‘Five minutes to landing.’

‘Pattern clear.’

The Russian made attack helicopter came in, vibrations resonating around the tower, landing unseen on the apron, it’s engines winding down.

Mickey came in covered in sweat. He nodded towards Jimmy. ‘I think we got all three boats.’

‘Have a rest, good work.’

Mickey and Yuri sat and blew out, cold Fantas downed, sweat wiped off brows with the sleeves of flight suits.

Ten minutes later the radio crackled; Hal. ‘Mechanical fault, going down!’ I was on my feet, Jimmy following me up.

Jimmy grabbed the radio. 'Hacker, report position.'

'I'm close to Hal, but we're close to the damn town.'

'Hacker, pick him up, tell the other Cobras to destroy Hal's Cobra when you have him, over.'

'Roger.'

'I could take a Huey –'

Jimmy cut me off with a raised hand, a shake of his head. Five long minutes passed, the radio crackling with distorted traffic.

'Hacker to base.'

'Go ahead Hacker,' Jimmy said into the microphone.

'Got Hal and his gunner, heading back, Cobras have the message.'

I paced up and down. With the sound of a Huey growing I ran outside and across the apron. Hacker's Huey had its lights blazing and landed smoothly, Hal and his Kenyan gunner stepping down with two of our medics. They stepped across as the Huey powered down, the apron bathed in grey moonlight.

'Any injuries?' I asked.

'Just my pride,' Hal retorted as his grey image came into focus. 'Gearbox went. Hell, that bird's as old as I am.'

'Ancient then.'

'Watch it, whippersnapper.'

We entered the brightly lit tower.

'Still in one piece?' Jimmy asked Hal.

'Dropped from the sky in view of the buildings we hit, not more than mile at most,' Hal reported, his face covered in sweat.

Hacker stepped in as the final two Cobras landed. 'All down now.'

'You find the buildings OK?' Jimmy asked.

'Yeah, fucking great fire illuminating them,' Hal reported, grabbing a much needed Fanta.

A technician came down to us. 'Mogadishu traffic has them in a stir. Seems that Farouk and his brother were on the boats, one of his sons in the vehicle convoy, and Khalid and Mohammad Aleen killed in their homes. Scratch five warlords in one go.'

'Thanks,' Jimmy offered, the man withdrawing.

The remaining Cobra pilots entered, reporting Hal's Cobra on fire.

‘Good,’ Jimmy said. ‘Get some drink in you, some food - you deserve a rest. Dismissed, everyone. Hacker, you’ll be out with us in the morning.’

I climbed up the tower, out on the roof and up a ladder onto the roof of the glass tower. Sat there, my feet dangling, I stared east, remembering the battle. The air was cool, that same desert odour – the scent of wet concrete, or maybe that was the tower. I couldn’t tell. I locked my elbows and let my head flop back, staring at the stars, thinking about many things for half an hour.

Turning my head to the wind I could hear a faint drone in the distance. A helicopter. Scanning the horizon I could see no lights. Rolling over and lying face down I shouted, ‘Jimmy?’ Jimmy popped his head out. ‘We missing a helicopter?’

‘No, why?’

‘One approaching, a heavy.’

‘Stand to! Stand to! Incoming!’

‘Fuck!’ I slid down the ladder, the glass tower lights now off, and climbed inside, tripping over the guys as I rushed downstairs.

Jimmy shoved an AK47 into my chest. ‘Get back up there, try and spot it.’

I climbed the stairs again, scrambled out of the window and back up the ladder to the roof. The drone was growing, but whoever it was didn’t seem know where we were, the camp now blackened. Two jeeps on the road suddenly turned their lights on a sped off. I figured it was a distraction. They stopped half a mile down the road and just sat there. Turning my head like a sonar, my ears to the breeze, I figured the chopper was south east of us, two or three miles. It wasn’t a Huey or a Cobra; I knew their distinctive signatures well.

The unknown visitor crept closer as I heard boots on the concrete apron below, hurried activity, grey shadows moving about. I checked my weapon and cocked it, knocking off the safety and selecting automatic. ‘Jimmy!’

‘Yeah?’

‘It’s a mile south east, running parallel, not getting closer.’

‘Keep the updates coming.’

A minute later I saw it, a flash of grey moonlight off glass. ‘I see it. Due east! It’s coming towards us!’ The way I was

shouting everyone could hear. At five hundred yards out I shouted, 'It's an Mi2! Is it Red Cross or UN?'

'Can't raise it,' Jimmy said. 'Hold you fire! Hold your fire!'

I looked over my shoulder, the moonlight also reflecting off our helicopters. Turning back I strained to see through the dark. My eyes opened fully. Missile pods! I raised my AK and fired, soon a dozen fingers of red tracer streaking upwards, a deafening crescendo of outgoing fire.

From where I stood I could see tracer rounds bouncing off the helicopter, so it must have been receiving hits by hundreds of rounds; every tracer meant four normal rounds, a one to four ration typical. The Mi2 seemed to dip lower, then recover, now thundering over tents low enough to knock them down. The outgoing small-arms fire continued, the tracers following the outline of the grey Mi2 till its nose hit the runway. It bounced in a shower of sparks, went straight through an Army Huey, crushing it, and kept going. It was only a second, but our Huey seemed to be making its mind up before bursting into flames. A second later the Mi2 exploded with such force it wobbled me. I fell off the tower, and down twenty feet to the sand with a thud.

I woke ten minutes later, Hacker shining a light into my eyes.

'Don't try and move, you've bust a couple of ribs, nasty gash.'

'Wha ... wha,' I struggled to get out.

Hacker lifted my head and let me sip water. 'Lay back, take it easy, or I'll tie you to the bed.'

I winced in agony, my ribs protesting their treatment, then felt a needle in my arm.

Dawn brought a bright shaft of light into my tent and I eased up, letting down my legs. My ribs ached, and I found a bandage wrapped around my head. I tested all my limbs, turned my head from side to side, and decided I was still alive. Through the tent flaps I ducked, straightening to face the wreckage of the Mi2 across the runway from me. There was not much left, and we had lost an Army Huey, burnt to a shell, chain guns an all. The other helicopters had been moved away, and looked OK. With no one about except the Rifles patrolling the perimeter, I walked to the tower.

'Tea?' Jimmy asked.

'What the hell happened?' I asked in a hoarse whisper.

‘You were up on the tower when the Mi2 exploded. You fell off, silly sod. Luckily, you hit the sand instead of the concrete.’

I sipped tea for a minute. ‘Why ... why did the Mi2 explode like that?’

‘Missiles in the back, meant for us I guess. It’s an old Ethiopian Army Mi2, four charred bodies. How’re the ribs?’

I touched my right side. ‘Sore.’

‘Keep the bandage on you head for a while, or they’ll wonder why you heal so quick.’

I nodded, still groggy. ‘Was that supposed to happen?’

‘No. So don’t forget, you’re only mortal. And if *someone* hadn’t fired when he did, the Mi2 may have exploded beyond the base.’

‘Don’t know who that was,’ I said, avoiding eye contact. I finished my tea and downed a tin of meat. Hacker appeared, but not with his happy face on. ‘I know, I’ll take it easy.’

‘Any trouble breathing?’

‘No, and no headache either, vision normal,’ I told him. ‘Just fucking hungry.’

‘The Dash will be here in an hour,’ Jimmy informed us. ‘Hacker, go pack, please. Say goodbye to the scorpions.’

The Dash circled twice, having a good look at the damage, then touched down. A few replacement staff stepped, supplies unloaded. We walked across the apron, Tubby closing in and shaking his head.

‘You two have a sixth sense for finding trouble,’ Tubby said, stood with fists on hips. ‘What the fuck happened?’

‘Aideed bought an Mi2 and sent it here for us,’ Jimmy explained. ‘Almost got us as well, it was a well planned job.’

I offered Tubby my small bag. ‘Can you carry that, I’m injured.’

‘Fuck ... right ... off, scrotum features!’

‘That’s a nice way to address your employer,’ I quipped.

Tubby turned, and I followed him aboard, not interested in right seat for a change. Landing back at Mawlini, people were gawking at me, shaking their heads, some concerned for me. Mac was gutted at the loss of two helicopters, more so than any care for me. Another Cobra was sent out to Scorpion Base. With my ribs aching I grabbed a quick burger, then went to my room and lay down for an hour. Feeling better, I tried a swim, looking

silly by keeping the bandages on my head. Laying in the shade on a lounge after my swim, Doc Graham walked out, t-shirt and tracksuit, and sat beside me.

‘Been in the wars again, have we?’

‘Fell of a bleeding roof.’

‘So I’ve been hearing. Still, they’re saying that Farouk and his brother’s are dead on the news, and two other henchmen. At this rate Somali will be a peaceful place soon.’

‘It’ll take longer; Mogadishu will be a tough nut to crack. If our ground troops went in it would be a bloodbath. How’s Zaire?’

‘Lots of fighting amongst the groups, Burundi teetering on the edge as well,’ Doc Graham reported.

‘Forward Base comfortable?’

‘You wouldn’t recognise it. Building work is cheap, labourers cheap, so we build and build. Still got the French Army there, Yanks gone, and the UN make good use of it.’

‘Much in the way of casualties?’

‘Bus loads, and that’s just our small area. The Hutu’s that were displaced are on the warpath, attacking Tutsis indigenous to Zaire. We’ve been channelling supplies to Kimballa for Jimmy, so he can fight back. Hope you know what you’re doing with him.’

‘Jimmy likes to plan ahead. He figures the Hutus are in the wrong, and thinks Kimballa might make a good President of Zaire. He did, apparently, study in an American military college.’

‘Ah. CIA want him in, do they?’

‘Don’t know about that, but Jimmy wants him in.’

‘It’s all a bit odd. First we help the Tutsis, now the Hutu refugees, soon the Tutsis again through Kimballa. Still, the Hutu’s started it all I suppose.’ He focused on me. ‘I’ve heard some bad things about Kimballa.’

‘That’s why we’re going to meet the nice fella – a verbal circumcision.’

I relaxed all day, ate and drank, slept, then ate and drank some more. At dawn we were packed and ready, Hacker a bit bleary-eyed after a drinking session, Doc Graham and Hildy boarding the Dash with us, and ten of the Rifles. I took right seat, still with the silly bandage on my head, and we set off for Kigoma.

Landing back at Kigoma I noted a few new buildings, but overall it looked pretty much the same; there was little room here for new building. On the apron we halted near a Tucano in Tanzanian colours, Bob Davies sat waiting in a jeep. Everyone disembarked whilst the Dash was refuelled, Bob taking all except the Rifles to our hotel for lunch. Bob brought us up to speed on what was happening in the region, the politics and the conflicts, the situation in Burundi. We promised him more people if Burundi imploded. The camp down the road was shrinking all the time, and the base here was now eighty-percent UN staff, many NGOs making use of it.

The hotel was looking good, standing out from the other buildings on this street, the interior nicely decorated. Even the food was good. I had a nose in some of the rooms, finding them about the same as Nairobi hotels, a stark contrast to the street outside.

We made the short flight to forward base, just over the hour, and Doc Graham was right, I did not recognise it. The control tower looked brand new, a long line of single storey buildings stretching out from it in three directions. Two large hangars had been erected, plus two large barrack blocks for the Rifles, their numbers steadily increased in recent months. Rescue Force had its own hotel, complete with rooftop bar, but no pool. As we touched down and taxied around, we halted facing a white building with a huge red cross painted onto it, the base clinic.

A jeep pulled up tooting, Dunnnow at the wheel. 'G'day, part-time workers!'

'Wrecked any more Hueys?' I asked.

'Looks who's talking – tank boy! I heard some daft sod fell off the tower – instead of radioing it.'

We mounted up with our bags, ribbing each other the short distance to the hotel, soon on the rooftop for a cold drink and a meal as Doc Graham showed Hacker around. Cosy walked in and sat, informing us Kimballa would be here soon. Our man, Coy, had been running secret negotiations for almost a year, supplying money and weapons for most of that time. I removed the bandages and probed my healed scalp, combing my hair forwards with my hand.

Kimballa stepped in, in uniform, some sort of high rank that I could not make out, two cronies in camouflage clothing, escorted

by two Rifles. The Rifles remained by the door, stood like statues as our guest closed in. We stood.

‘Mister Silo, I presume,’ Kimballa said in a good western accent. ‘Your size and reputation, precede you.’

We shook, offering seats. Jimmy turned to two doctors on a nearby table. ‘Give us half an hour.’ They scampered out. Facing Kimballa, the man more than fifty in my estimation, Jimmy said, ‘Welcome to Forward Base.’

‘I have heard that *rear base* ... is most impressive,’ Kimballa responded. ‘You build hotels with bars and pools for your staff. Most impressive.’

‘I like to look after my people. They are ... *motivated*, not threatened.’

Kimballa took a moment, digesting the implication, deliberate or otherwise. ‘I know a great deal about The West, and about America. The CIA men who whisper in my ear and hold my hand ... turn cold at the mention of your name and scamper away. And you could not do what you do ... without friends in high places.’

‘True. But do I need them, or they need me?’

Kimballa smiled. ‘The relationship between pawn and king... is often a strange one.’

‘Indeed. So, how are things in Eastern Zaire?’

‘The Hutu’s out-number us, and are making themselves comfortable, although not comfortable for those of us who were born here, or live here.’

‘This we predicted, which is why we’ve helped you in secret. Our aim is to stop the fighting and help the sick, all of the sick. But ... but if a war can be shortened, then that helps produce fewer casualties, does it not?’

Kimballa slowly nodded. ‘You will forgive my ignorance, but I cannot fathom who you are. Who you really are: warrior ... or doctor.’

‘Is there a difference?’ Jimmy posed. ‘Does a doctor not want an end to fighting as much as the warrior? And if a warrior wants fighting for fighting’s sake, he is not a warrior ... but a criminal without honour.’

‘And what of the duration of this fight? What will bring a quick end?’ Kimballa nudged.

‘Attack helicopters, Kenyan Rifles, weapons and ammunition – not western mining companies backed by their various governments. They ... only wish to divert your attention for a few years to steal your treasures.’

Kimballa sipped his beer. ‘I have studied what I could about your engagement in Somalia. I have even spoken to a Kenya soldier who was there. He suggested that *you* controlled this battle, and it is good to have soldiers who believe you are a genius, a genius that cannot lose a battle. Fifty men against five thousand, almost ... biblical in its proportions.’

‘And four attack helicopters,’ I added.

‘And how many *attack helicopters* could be deployed here?’

‘That depends on you,’ Jimmy told him.

‘On ... me?’

‘Yes. If your ... *approach and attitude* ... is in line with a short conflict, then we’ll fight your small war for you, giving you a ... *political* victory.’

Kimballa carefully considered that. ‘And what yardstick will I be measured against?’

‘Mine.’ Jimmy took a breath. ‘A few days ago you caught some of your men raping young girls and simply beat them lightly. I want them hanged ... in full view. If you cannot teach your men honour, I doubt that I can help you.’

Kimballa nodded gently. ‘The mining companies wish conflict, to hide in the shadows. You wish to impose a western style legal system in the jungle.’

‘Where, on earth, is that legal system needed more ... than here?’ Jimmy posed.

‘Many have tried to bring order to the jungle,’ Kimballa reminded us. ‘And everyone wants a piece of this particular jungle.’

‘They ... were not me. And they did not have leaders of honour – like you – as their example.’

‘You would mould me into a better man?’ Kimballa noted with a smile.

‘I would help you ... reach your *true potential* as a great leader of this country in the future.’

‘You sound a little like my father did.’

With a smile, Jimmy said, ‘And as such I will *reward you* with good *toys* to play with... when you have done your chores and behaved well.’

Kimballa laughed, then sipped his beer. ‘And if I wash behind my ears...?’

‘You get a quick political victory, then assistance with your *political ambitions* from my *friends* in high places.’

‘Ah,’ Kimballa let out.

Jimmy added, checking his nails, ‘A great many army officers have progressed to the ranks of national leadership, only to show their true colours and become mindless dictators –’ Our guest blinked. ‘- never reaching their full potential for their people. When you get to the end of your life, and look backwards, what will you think of what you have done – for yourself or your country? The West will help you, fully expecting you to be a great disappointment.’ Kimballa’s features hardened. ‘Just another crack-pot African dictator. You have a fork in the road in front of you, my friend, the path you choose is your choice, I cannot make that choice for you, but I can make the road *long and hard*.’

‘A very big carrot, and a very big stick,’ Kimballa unhappily noted. ‘If I live my life ... as the man I should have been all along, I get the rewards. You are an unwelcome mirror of reflection, Mister Silo.’ He took a breath. ‘How would *you* move this conflict forwards?’

‘If you are in agreement, then we will help you recruit and train local men. But you will have to accept our discipline for your men. We will create a Congo Rifles regiment at your disposal, well trained and well equipped. And they will be backed up by attack helicopters.’

One of our helicopters flew in, Kimballa studying it as it passed. Facing Jimmy he asked, ‘And if I came to power, what would you ask for?’

‘Permission to build many clinics here.’

‘That ... *price*, is no price.’

‘If this land is peaceful, that will be my price.’

‘No ... mining concessions?’

I said, ‘In Kenya, we buy large farms, then remove the white workers and give their jobs to blacks only. All the food and the

profits go to refugee camps. If we had a mine here, its profit would go to the locals who need it, not Western interests.'

Kimballa carefully considered that. 'Warriors ... of light.' He stood, and we followed him up. 'I have a mirror to go and look into. And some men to hang. I will abide by what you ask, you may train and discipline the men.'

'Bring your best men here in a week; we'll have tents for them. Then we'll build a military base here, east of the perimeter wire. And don't worry about recruiting more men, we only need a few well trained men.'

'I have seen ... what you can do with a few well trained men.'

We shook hands and he left us. As we sat Jimmy told Cosy, 'Your work here is done, fly out when ready.'

'How's the baby?' I asked. He produced a photo. 'Beautiful girl. Sure *you're* the father?' Scowling at me, he waved and left us. I asked, 'That go as planned?'

'Yes, including your mining comments – which is exactly what we'll do. There's more oil and minerals around here than anyone realises.'

Ten minutes later, a delegation of French men stepped out; some senior soldiers in uniform, some in plain clothes. They came straight over.

'May we join you?' the lead man asked in accented English.

'Of course, Pascal.' Jimmy said in French.

'You know ... my name?'

Jimmy pointed at each man in turn, naming the men, and spoiling their day. We soon had bunch of unhappy Frenchmen as Jimmy took his satellite phone out. He dialled a number, then handed over the phone. 'It's for you.'

Puzzled, Pascal took the phone. 'Oui?' He listened at length, then handed the phone back.

Jimmy said, 'Thank you, Mister Sykes.' He hung up. 'Gentlemen, I think ... that any questions you had of me ... have just been answered.'

They got to their feet, glancing at each other, Pascal leading them out.

'Party pooper!' I said. 'They're all deflated now.'

We ordered more food, sending for our local administrator, Nbele, who I called Belly, not least because he had one. We welcomed him five minutes later and ordered him a coffee. For

ten minutes we chatted, asking if there was anything he needed or wanted, tackling problems and gripes. All seemed to be in order apart from trivia.

Jimmy told him, 'I want an army base built to the east, just beyond the perimeter, so make a gate. Put barbed wire around it, make it six hundred yards square, roads of concrete, then build barrack rooms - enough for a thousand men. I want classrooms, an assault course, a shooting range with a high wall behind it, a garage for the jeeps. Have good drains put in first. I want enough tents for four hundred men ready in a week, beds and tables and chairs.'

Belly took notes.

'We'll send you more jeeps, but always look out for second hand jeeps locally, some Toyota pickups - paint them green. These men are Congo Rifles, get uniforms and make badges and flags. We'll send weapons and ammo' when we have a secure store, so build one; the men don't go to bed with their rifles. Set-up a food tent and get supplies in, they should be well fed.'

I put in, 'There'll be English Army instructors, some from the Kenyan Rifles.'

With a page of notes taken, we thanked Belly and sent him off from our warm and humid outdoor office, the fly swatting machine not working today. Dunnaw and the gang came up around 8pm and we drank at length, catching up, recanting the story again of Scorpion Base and the tank stunt.

At 6am our new British Army instructors flew in on a UN flight from Mawlini, six of them explaining how unwelcome the nice young lady UN doctors had made them on the flight, labelling them as mercenaries.

'Learn from that,' Jimmy told them as we played host and made them coffee. 'Learn how *you* are perceived. And then next time, tell them you're Kenyan Rifles. Besides, you won't get attitude from the Rescue Force staff unless you give attitude. And if you give attitude ... we'll fly you out.'

I found biscuits and fruit and handed it out, the restaurant not yet open.

'Since you're here, we'll do the briefing, then you can get some sleep if you like,' Jimmy said as they dunked biscuits in coffee. 'One mile east of us there'll be a base built from scratch. If you want some input to layout and facilities talk with Nbele, or

just call him Belly like Paul here. There'll be tents set-up within the week, and next week you get the rabble from hell will wander in. There'll be officers from the Rifles here, and NCOs, some of whom you met at Mawlini. What you saw there, in the training programme, will be the same here, but the culture here will be hard work to start with. The Kenyan boys start with a good attitude, and we make it better. Some of the Congo boys are bloodthirsty killers and rapists. Don't ... turn your back on them.

'Discipline will be a problem to start with, not least disarming them as they come through the door. You can start them with a good wash and a medical; Doc Adam will be here. Then they get kit, boots that actually fit, and you start from there. We'll be recruiting local English teachers, because some of your recruits speak a variety of languages. And education is an important part of it, reading and writing in the evenings, watching educational films, geography, history; these are pig farmers with no knowledge of anything beyond the end of their villages. You get them up early and keep them busy all day; leave them with free time and they'll get into trouble. Organise sports, some competitions, keep them busy, their minds off raping the local girls. If you catch them raping or killing civilians, you hang them.'

'Hang ... them?'

'Yes, rope and tree. That or a firing squad; very loud, very public. Because ten percent of those coming in next week would slit your throats for the watches you're wearing. Keep side arms on in the shower. With the Somali Rifles, we identify the nutcases, then send them somewhere we know they'll be a shoot-out. And, during the shoot-out, they get shot. Very sad, never mind, they died heroes. For minor offences stop pay or food, or kick them out. Then, once you have a good group, teach them how to fight in the bush, take them as far as you can; all weapons, jeeps, mine clearance. What I want ... are the best one hundred men as a core unit. You then make them corporals, and they sort out the lower elements.'

'Who's in overall charge?'

'Kimballa is in charge of his men, and responsible, so defer to him at all times. He's westernised, he studied in The West, but needs... guidance. He has cronies that will make themselves officers, just work around them. And if the cronies are on the

make ... well, accidents happen in the jungle. Use your judgement and thin out the flock a little, but watch out for the CIA, MI6 and French agents around him. They're like flies around shit.'

'And the combat missions?'

'We'll create an intel unit, your best boys, get them to zero in on concentrations of the Hutu militias, then we strike by air for the most part. If you get in close it'll be a fur ball in the bush. For the most part they'll go to snatch or kill the Hutu leaders, quick airborne raids – in and out.'

'And the Hutus? Their capacities?'

'Half a million of them, but mostly women and kids, and the men have had an hour's training on how to point and shoot. If you get shot by one of them it's bad luck, not good aim. They're big on numbers, low on skills, but a couple of hundred of them are ex Rwandan army. They'd be your priority.'

'Will they attack here?'

'No,' Jimmy said with a smile. 'Kenyan Rifles are here, and they'll run you down and cut your heart out.'

'From what we saw at Mawlini, they're pretty good. All built like Rambo and fit as fuck. The range of training they go through was a surprise. Costs a bit.'

'I have deep pockets.'

Sipping coffees, we chatted about Somali and the battle, the restaurant opening at 7.30am. We left them to eat and rest, touring the camp, but avoiding the French over the runway. Flying out the next day we took a flight on a large UN Antonov directly to Nairobi.

The new breed

With tanned faces, we drove into Mapley to meet the new batch of recruits, some of whom were the new breed of non-medics. Mackey had them assembled and waiting in the lecturer room in the AMO building, the latest training dummy being examined, it's realistic form quite disturbing I found.

Jimmy greeted Mackey, then addressed the group; fifteen new faces. 'Welcome to Rescue Force, ladies and gentlemen.' He patrolled along them, taking in the faces. 'Doctors, raise your hands please.' Four raised hands. Jimmy pointed at two of them. 'You look rather young. Got a year to fill?' They both nodded. 'That's fine, you'll be well trained.'

He stood back and asked, 'Nurses?' getting three hands. 'And eight non-medics, yes?'

'Aye,' Mackey agreed.

Addressing the group, Jimmy began, 'The new training programme will be split for your various groups, since the senior doctors don't need basic first aid. You will, however, *all* go through advanced first aid, with plenty of time on the dummy, whether you think you're competent or not. And let me point out, that many doctors are really crap at first aid. It would be *wise* ... to sit and listen, and embarrassing to get questions wrong.

'You'll spend time in the lovely greenhouse, driving jeeps, climbing up walls and learning how to tackle fires, search buildings and find people under rubble.' He stopped. 'We have four qualified rescuers here?' They raised their hands. 'When everyone else is learning to drive and maintain jeeps, you'll do extra first aid and medical training. And you will *all* get to the gym and get yourselves fit.

'Now, has anyone *not* read the book: The Baardheere Incident?' No one raised an arm. 'Good. You will have seen from the book ... some of what we do, and there's another book soon to be published about the Rwandan mission. The training here, in cold old England, may seem a long way from Africa, but we want you to hit the ground running when you get out there, and not be a burden on the staff out in Kenya, who have other things to do. We currently have a presence in Kenya, Somalia, Tanzania and Zaire. Oh, and a new branch just opened in Hong Kong. You may end up in any of those locations, and you will probably get a short spell in each for experience.

'This course is now *at least* eight weeks for most, and it'll give you a chance to think about what you've let yourselves in for, and a chance for us to see if you're full of hot air ... and crap at what you do. No one ... is guaranteed to finish. For those of you that wish to, we can arrange rooms here for you. There's no decent canteen to speak of yet, but there are kitchens and the pub

down the road, a small but tasty little café in the hangar when it's open. And most days the burger van comes in with its very healthy offerings. Please bring in food and use the kitchens in the building next door for those who are staying here. Right, any questions?’

‘When will the earthquake unit start?’

‘Good question. It will start when we have enough people with the skills required, hopefully in around six months. We're training our medics in searching techniques, about six of them, and when we have a few more qualified we'll put our ears to the floor and listen out for earthquakes to attend.’

‘Are PPL places available?’

‘PPL places are allocated in Mawlini, short crash courses and a test in Nairobi. Places depend on time and staff, but you can always give up your evenings and weekends and find someone to teach you.’

‘And helicopter licenses?’ one of the rescue lads asked.

‘If you're a non-doctor, and likely to stay with us more than a year, we'll put you through it,’ Jimmy explained.

‘Are contracts rolling?’

‘We have a simple philosophy: if we like you, and you like us, you can stay as long as you like. If you're not happy you'll be out within a day and flown home, not held to a contract. If you leave, then want to come back a year later, you're welcome – provided you did a good year first.’

‘Can we opt-out of flying with Paul?’ one asked. They laughed.

‘Cheeky bugger,’ I said.

Smiling, Jimmy said, ‘He's safer than he seems, but tends to take on the most hazardous missions, hence the damaged aircraft.’

‘Is it true that we get weapons training?’ a doctor asked.

‘Yes. And it's important. If you crash land in the wrong spot, you may be unwelcome, you may need to sneak your way out, or even fight your way out. Handing yourself over to the local warlord would not be your first choice. Once in Africa you will attend a one week survival course that builds on the greenhouse experience here, just in case Paul is flying you and you go down in the jungle.’

‘Is there ... much danger?’ a lady doctor asked.

‘Yes.’ He closed in on her. ‘You’ll look in your shoes before putting them on, lift the toilet seat to see there’s not a deadly spider lurking, you’ll boil the water, refuse certain foods, you’ll go around in groups, you’ll pass soldiers and gunmen on the roads, you’ll fly in aircraft that are not always well serviced, and you’ll be shot at on occasion. Basically, you’ll be in some sort of danger *all the time*. That answer your question?’

‘Sort of.’

‘We send people where there is no hope, to bring hope to those in need. Here, in the UK, you’ll rarely actually save a life, because you’re not the only person around. Where we send you... you will literally stop people from dying, and dozens of them each day. Because you *will* be the only person there, and if you were not there ... they would certainly die. That, people, is what we’re about: life and death, not developing a new technique for removing fat from arses in a sterile English hospital. You’ll deliver a breach birth, you’ll save mother and child from a shallow grave, and you’ll do it every day. And the only complaint you’ll have ... will be that there are not enough hours in the day – to save more. Because when you get in that jeep and drive off, you’ll come back the next day to a few more bodies – kids that you could have saved. Here, in the UK, it’s work. Out there, it’s a body count: today I saved five, yesterday was three, and maybe tomorrow will be six. And so far, no one has left us other than for maternity leave. Anything else?’

We answered questions for ten minutes, gave out tickets to the club, and left them to a geography lesson.

Jimmy presented Mackey with a thick document. ‘That’s what I think we should teach over at Faulty Towers, have a look, give me an opinion. How’s it being used?’

‘Almost fully booked,’ he complained.

‘Then kick some off - our lads take priority. I want our people knowing how to search that building like experts. They climb up, rope off, abseil down – the works. From now on *all* do at least a week’s earthquake preparation and cave rescue.’

‘Got more old jeeps that we know what to do with,’ Mackey informed us.

‘Store them here for now,’ Jimmy suggested.

Mackey's mobile phone trilled. 'Hello?' He listened. 'OK, send 'em up.' He fumbled to get the red button, cursing the new technology, informing us, 'UN are here.'

Bob Davies, and his boss Patterson, were welcomed into Mackey's office, teas made.

'Cold enough for you?' I asked them.

'I fly a desk in London most of the time,' Patterson answered. 'Oh, we'll be coming to the Red Cross charity event your young lady is performing.'

'Two weeks,' I reminded them.

'No, next week,' Patterson corrected me, Jimmy agreeing.

'Shit, I'd be in trouble if I missed that,' I realised.

'Anyway, good news,' Patterson announced. 'The UN has sanctioned this place for pre-African training as of now. We even got you some money - per head per day.'

'No need for that,' Jimmy suggested.

'It's coming from the UK Government,' Bob informed us.

'Fair enough then, we pay tax,' I quipped.

'Liasé with Mackey, work around the other users, make use of the accommodation block if you like,' Jimmy told them. Facing Mackey he said, 'Best get a decent canteen going, sharpish.'

'Be around forty a year; four weeks here, four weeks at Mawlini,' Bob said. 'Lot of lecturers on structures, do's and don'ts.'

'Saw your collapsed building on the news,' Patterson began. 'When do you think you'll have an earthquake response team?'

'Six months. Then we'll be seeking UN approval.'

'That shouldn't be a problem,' Patterson offered us. 'Your name flies around a lot, although many can't decide if your activities in Somalia are a good thing or a bad thing.'

'Time will tell,' Jimmy said. 'And ... why doesn't the UN think about its own earthquake response team, based here?'

They glanced at each other, making faces.

Bob said, 'You know Western Somali is talking about an independent state.'

'If it's stable ... who cares,' Jimmy commented. 'So long as it's stable.'

'May I ask ... a delicate question?' Patterson floated.

'That girl was over sixteen,' I told him, making them laugh.

‘I’m sure. No, I wanted to ask ... do the American or British Government’s have an agenda in Somalia, and do they ... *pressure* you?’

‘There’s nothing in Somalia worth stealing, so they’re not interested. No minerals, no oil. And the American’s don’t want a repeat of Mogadishu. As for the governments, we do rub shoulders and swap intel’ on occasion. But would I follow their agenda? Never. They’d have to lock me up first.’

‘That’s what we figured. But some are viewing that battle in Somalia as a ... massacre,’ Patterson delicately explained. ‘As ... revenge for Mogadishu.’

‘It was a massacre, unfortunately. And more to come. And there’ll soon be some shooting in Zaire as well because, as I’ve said before, I won’t let a group of gunmen stop me from building a clinic or delivering aid. If they’re in the way, I’ll fight. As for revenge - no, just co-incidence.’

Bob said, ‘Kimballa hanged a group of his men the other week.’

‘What did the men do?’ Jimmy asked.

‘Well, rape apparently,’ Bob answered.

‘Then I’ve got no problem with that. In Somali, Abdi chops off hands for robbery ... and I don’t care, I won’t slow him down.’ He took a breath. ‘Gentlemen, the world at large leaves Africans to fight each other savagely, whilst getting minerals and diamonds off them. Someone needs to draw a line, to install some order – so I’ll do what I can to bring peace where I can. We’ll never agree on tactics, gentlemen, but our aims are the same – a peaceful and prosperous Africa.’

‘Well, you’ve achieved more in Somalia than anyone else,’ Patterson admitted. ‘Kenyans very happy with a peaceful buffer zone, and we’re back in delivering aid in the southwest.’

‘Mind if we ask what that new extension to Forward Base is?’ Bob asked.

‘Congo Rifles,’ I told him.

‘Congo Rifles ... based on the Kenyan Rifles,’ Bob realised.

‘Yep,’ I said. ‘We’ll recruit, equip, train ... and discipline. We’ll create a small force to keep peace in the region. And if they want to get paid - and to eat - they do as they’re told, not run around raping and killing.’

‘They’ll be under Kimballa’s control?’ Bob queried.

‘Yes. But if he wants them paid and fed...’ Jimmy posed.

‘He toes the line,’ Patterson finished off.

I added, ‘We’ll stick attack helicopters in Forward Base. If warlords crop up, we’ll deal with them. They’ll keep the peace, or they’ll meet a Huey Cobra head on.’

‘There’s a sizeable number of ex-Army Hutu’s forming a group, harassing the local Tutsis,’ Bob reported.

Jimmy said. ‘If they attack anyone in force, the Kenyans will get involved.’

‘How many Rifles are there now?’ Bob asked.

‘Coming up to five hundred,’ Jimmy informed them. ‘But each one is worth ten regular African soldiers. They’re better equipped and better trained than any other force in Africa.’

‘We have some with us in Somalia,’ Bob explained. ‘So far, very well disciplined, very helpful. Which is good, because – as you know – many African peacekeepers are more of a hindrance than a benefit.’

‘Bob, when dealing with Kimballa, never forget that African army officers often end up as Presidents ... some day.’

Bob stared back for several seconds. ‘He studied ... in an American military academy, they say.’

‘Very westernised ... I found him,’ I put in.

‘The Zaire Government in Kinshasa is weak, the Army weak, they hardly bother with Eastern Zaire,’ Patterson said aloud. ‘A half decent force could topple them.’

‘Well, don’t include me in the government toppling game,’ Jimmy said. ‘Not my area.’

‘And your people’s future agenda ... for Zaire?’ Bob nudged.

‘I’m going to take a greater interest than I’ve done in Kenya, build clinics all over.’

‘Well, we’ll watch and see as it develops,’ Patterson said.

‘Any intel’ you have on Hutu militias, let me have it,’ Jimmy urged.

‘We will,’ they offered.

We took them to lunch at the pub down the road, then said our goodbyes. On the way back we got a call; the nice man in the White House had delivered a shipment of aviation fuel to Mombassa for us. We exchanged a look.

Jimmy dialled Rudd and let him know, then told him to increase the budget and recruitment on the Rifles, five more

Hueys for them, five for us, and a second Dash if a cheap one was available.

An hour later, as we arrived home, Rudd called back. 'I've got a very good deal on an aircraft lease, a spare Hercules that has just finished it's UN contract, owners stuck for money. We can have two years plus servicing.'

'Take it,' Jimmy told him. 'What colour is it?'

'White already, big red cross on it,' Rudd reported, laughing.

'Good work. Oh, ask the Kenyans for a second base for the Rifles, north of Mombassa, towards the border. And hire some pilots for that Hercules.'

'They come with it, three of them.'

'Excellent. Stick our logo on it.'

I went and dug out my book on the Hercules that I pinched from the RAF, sat down and started reading.

Ballykeane

We flew from Cardiff to Dublin on a cold February morning. Hiring a car at the airport, we drove north towards the border, staying in a posh country retreat, if somewhat cold. The next morning we drove along the coast, to a place thirty miles short of the border with Northern Ireland, the weather crisp and frosty, but the rain and snow holding off. Through an open gate in high stones walls, green with mould, we pulled into the grounds of a small estate. A large, but dilapidated house greeted us, the stone residence sat on an inlet, the tide now out and revealing a thick covering of black seaweed. We parked next to a long disused fountain, now overgrown with weeds.

A perplexed looking man walked out, cap and green wellies. 'Are you lost there?'

'Are you Ted?' Jimmy asked.

'Aye, you'd be after myself then?'

'They said at the village store you owned this place. You interested in selling, Ted?'

'Selling is it? Boy, but you don't get to the point. Come on in, I get the kettle on.'

We patted a keen and excited dog as we entered, sitting at a dated wooden table in a room with low timber ceilings, a welcoming open fireplace warming us.

‘You’d be English fellas, then?’

‘We would,’ Jimmy said, patting the dog.

‘And you’s all interested in this old place?’

‘We are. So I’ll make you an offer, get the business out of the way. I’ll give you one hundred thousand English pounds to buy the land, then a wage of twenty-five thousand a year to stay on and manage it for me.’

Ted stared back for a second. ‘I stay on, in me own home, and get paid, and get the money as well?’

‘You’ll have to maintain the place for us, help some visitors,’ Jimmy informed him. ‘But *we’ll* own it.’

‘Well, I’d be a daft old bugger to pass up something like that, now wouldn’t I. And here I am, poor as a church mouse thinking of selling, and here you’s come. The good lord has a funny side after all, that he does.’

‘We’d like to hold a meeting here tomorrow, and I’d like you in on it, to see what we’d do with the place.’

‘I’ll be checking the social calendar to see if I’m free, so I will.’

I laughed; I liked this guy. He made us tea, showed us around, the views over the inlet, and we arranged to be back at 3pm the next day. As we pulled back in the next day Ted was cleaning rubbish from in front of the house, a small wood fire bellowing smoke too lazy to rise in the still air. Easing out of the hire car, he said to us, ‘I wasn’t drunk and dreaming then, you do exist.’

‘Girls always saying *that* to me,’ I quipped.

‘Bit of a ladies man, eh?’

‘You must be the only person in the UK who doesn’t know our faces,’ I told him, rubbing my cold hands.

‘I don’t get out much, not be reading the English papers. You’s could be the Prime bloody Minister and I wouldn’t know it.’

He got the kettle on, another car pulling in fifteen minutes later. Sykes stepped down with three tough looking men; he had brought protection. We greeted them, showing Sykes the view as his bodyguards scanned the area, the excitable dog whimpering

for attention. Wrapped up warm, Sykes accepted a tea, the bodyguards remaining outside, one of them hidden.

Another car pulling in caught my attention and I walked out alone. The man pulling up did a double take. Stepping out he said, 'You that fella off the telly?'

'Yes. And ... welcome.' I led two men inside, one staying with the car and eyeing Sykes' men suspiciously. We avoided introductions, simply labelling the men up as Brit or Republican. A third car pulled in, a man in a suit with two bodyguards, all of whom seemed to recognise me, the three men studying me carefully with perplexed expressions. The lead man was the Irish Security Minister himself.

Ted organised tea, struggling to find enough cups.

Jimmy began, 'Gentlemen, I'm Jimmy Silo of Pineapple records, and as most of you know I have more money than I know what to do with. I'll be buying this property so that I'm close to the border, and ... the troubled north. What I would like to do here is simple, if not illegal.'

The Irish Security Minister repeated, 'Illegal?'

'Yes. I'd like to buy weapons from people in the north, the south ... and in between.'

'Buy weapons? The Minister repeated with a heavy frown, a glance at Sykes. 'And do what with them?'

'Chop them in half.'

The Minister's eyes widened. 'Chop them in half?'

'Yes, right here. Someone drives in, gets cash for the weapons, watches the weapon cut in half, then leaves. Nothing more complicated than that.'

The Republicans glanced at each other, puzzled looks exchanged. 'This sanctioned by Whitehall?'

Sykes answered, 'Sanctioned, no. Tolerated, yes.'

'Two thousand pounds for an AK47,' Jimmy stated. 'Plus fifty pence a round of ammo. Five grand for a GPMG, six for a fifty calibre, a sliding scale for explosives, two hundred and fifty quid for a pistol.'

Ted looked on in amazement.

The Minister said, 'And you'd be looking for ... what, official permission for this ... decommissioning?'

'Yes. And your assurance that no one visiting will be harassed, followed or intercepted. The British Government will

make similar undertakings, since it's *in their interest*. I will also make sure that decommissioned weapons are never *examined* by the police. Based here will be some African ordnance trained people who have no idea of the politics, and no care either way.'

'How many weapons would you be planning on paying for?' the Minister asked.

'However many arrive. If a thousand arrive, I'll decommission a thousand.'

'We have deep pockets,' I told him.

'I know,' the Minister agreed. 'I saw the programme on the orphanage. Twenty million fooking quid.' He faced the Republicans. 'This is something you instigated?'

'First we heard of it. Came here to meet the Brit under false pretences.'

Jimmy said, 'Gentlemen, I would appreciate if all of you think about it and let me know, because I'll be buying this place anyhow,' Jimmy said. 'And if, in a separate deal, the Republicans or Loyalists wish to decommission for cash a large stockpile, we'll arrange it – with or without approval.'

'Would have thought you'd done that anyway,' the Minister stated. 'You're not one to be backwards about coming forwards.'

'I will always ask first,' Jimmy insisted.

We thanked our guests and they set off at staggered intervals, some south, some north. Sykes was the last to leave, and we discussed the practicalities of weapons disposal here. Ted agreed to sell the land, even knowing what we were planning, and helpfully said he'd find a large metal cutter and a pipe bender. We gave him cash for those purchases, as well as the details of our solicitors, who would handle the sale.

Two weeks later we got a call at the house, the Republicans offering to decommission a hundred assorted weapons. No formal word had come from the Irish Government, but Sykes said they would turn a blind eye to it. We made Sykes talk to the Northern Ireland Police, so that they would not try and watch the place, and Jimmy was confident.

We flew back over with a bag of cash, Sykes providing a car and protection. The small estate was now ours, Ted a contented employee, his dog just as excitable. True to his word, Ted found a large metal cutter, a very long handle to it, and a pipe bender. He had also bought a load of cement, as we had requested. With

Ted in our hire car we visited the local police station and told them what we were doing. They stared back, mouths open. We thanked them with hardly a word coming from them.

With me sat waiting, and watching the road on the nominated day, a fishing boat came in on the tide, four men well wrapped up in oilskins. They unloaded a crate, two carrying it up to us. Opened, it was full of UZI 9mm still in their wrapping. Jimmy counted them, then handed over twenty thousand pounds and a bottle of whiskey. We carried the weapons to the metal press and helped Ted cut them in half as the drizzle began. Each weapon was checked for a round in the chamber, cocked and checked again, then cut up.

Returning to the concrete boat jetty we waited in the rain. After some debate, they came ashore with another crate, this time ten AK47s inside, plenty of magazines and ammo. Jimmy gave them twenty-two thousand pounds and we cut the weapons in half. At the boat they asked if they could come back tomorrow. We agreed, saying we'd go to the bank in the morning, since they now had all our spare cash. Back inside the warm house we debated their method of approach, agreeing that any police action would have seen the weapons quickly dropped into the ocean. The boys from the bog were not stupid.

On the afternoon tide they were back, less nervous than the first day, Sykes' men still hidden. The first crate offered up ten AK47s, but old and worn. Still, they worked, because we checked them. Twenty thousand was handed over. The next crate offered up fifty small Chinese 9mm pistols, not dissimilar to Walther PPKs. Jimmy did some maths in his head, then asked them how much they wanted for them. They had no idea, but suggested twelve thousand. We gave them fifteen and they said they'd be back, but not when.

Ted got to work with the concrete, earnestly trying to keep his dog out of it. He dug a shallow trench, poured in the concrete, then stuffed in the broken weapons, the odd arrangement giving the appearance that the weapons were whole, just bent through the concrete, abstract modern art in the damp Irish countryside. We left Ted twenty thousand in cash and headed back to the country hotel and spa. Returning the next day, Ted pointed to a line of old FN rifles in the concrete, the cash gone. We had drawn more money, and handed Ted a pad of post-dated cheques

that could be drawn to cash at the local bank each week. That bank had received four hundred thousand pounds from us and already knew Ted, the staff a little bemused. That afternoon two Tanzanians arrived, visas sorted out by Red Cross Ireland.

‘Jesus, they’s black!’ Ted commented. Not about that fact that they were Africans, but how dark their skins were for Africans.

They were wary of the dog, since dogs in Tanzania could be rabid. We reassured them, settling them into rooms, Ted asked to keep the heating on for them. And also asked to buy them some extra-thick warm jackets; our two ordnance men were shivering in the Irish winter. Already briefed at length, we left them to it, to their six-month stint on the beautiful Irish coast.

A week later the unofficial decommissioning made the papers and we gave an interview, stating that we wished to help the peace process along any way we could. Ted started to get regular trade, fixing a large sign to the gate stating that no shotguns were taken, since a few locals tried to sell their old shotguns. The papers held a picture of the weapons in concrete and it made me laugh, Jimmy closing in. With my finger on the photograph, Jimmy also laughed; a handprint and paw prints were clearly visible, and we remember Ted tripping over the dog and cursing it at length. That moment had been immortalised.

In the weeks that followed there were days of no activity at Ballykeane, sometimes a few weapons would turn up, a large consignment every two or three weeks reported to us. And the project had eaten up two hundred thousand pounds already.

Mi24

When my satellite phone rang I was asleep for a change, fumbling for the light. I pressed a button on the phone. ‘Hello?’ I croaked.

‘Did I wake you?’ came an English voice.

‘Yeah, who’s that?’

‘Rupert, Scorpion Base, got a problem. The Yanks have intercepted some radio traffic: Aideed has himself an Mi24.’

‘He ... what?’

‘And an Mi2 armed with rockets, like the last one.’

‘I’ll call you back in ten.’ I hung up, threw on a tracksuit, and banged on Jimmy’s door. He’d been asleep as well. ‘Get dressed, meet me downstairs!’ I walked down to the kitchen and got the kettle on, making two strong coffees. As I carried them towards the office Jimmy appeared, grabbing one. In the office I said, ‘Aideed’s gone and got himself an Mi24, plus another Mi2 armed with rockets.’

‘That’s naughty.’

‘You were expecting this?’

Jimmy shook his head as he sipped his coffee.

‘You think he’ll go after Scorpion Base?’

‘For sure; why else get one. Expensive piece of kit, both helicopters, they’ll leave him broke – which could be an opportunity. Where are they now?’

‘Rupert reported that the Yank’s had contact with it.’ I called Scorpion base, confirming the last known position, and hung up. ‘North of Mogadishu.’

‘It’s got the range to reach Scorpion Base easily, so long as it doesn’t loiter too much – or get lost. Wonder where he got it?’

‘Ethiopia?’

‘They’d notice it was gone,’ he said, his eyebrows raised. ‘And the government there hates him. No, maybe ... Yemen or Eritrea, an Mi-35 enhanced version. Won’t know till we see it.’ Jimmy rang Rupert on the satellite phone. ‘Rupert, Jimmy. Listen up. Huey with chain guns will do nothing to an Mi24, neither will a Cobra unless they’re above and behind it and strike it with a missile, even then it’s doubtful. It’ll be a tough nut to crack, you need to hit it from behind and damage it enough for it to land. And a DHSK won’t bother it any. RPGs can be good, fired from directly below as it flies over. And it’s fast. So, in the short term I want slit trenches dug, get as many RPGs as you can, and set them out at 500yards. Inside that radius it’ll demolish the base. Call you later.’

‘Cobra no good?’

‘Mi24 was designed to resist the Cobras 30mm cannon, but if the Cobras hit it with ground attack missiles – maybe.’

‘Jeeps have 105mm recoilless?’

‘That would work, but you’d have to be close.’ He sat, thinking his way through the problem. ‘Even if he gets it to Scorpion Base, the damage would be limited, and we’d rebuild – our helicopters could take off before it gets there. It’s an expensive gesture ... just for that.’

‘What you thinking?’ I asked as I sat on a desk.

‘That it’s more about saving face now.’ He took a big breath. ‘If he was sensible, he’d use it to attack those attacking him – the other warlords.’

‘But is he sensible?’ I asked.

‘Or vengeful? And if he was vengeful, who would he attack?’

‘Us?’

‘He knows very little about us, he’d blame the Kenyans or...’ He grabbed the Satellite phone. ‘Rupert, go see the American technicians in the tower, get them to alert the US Navy off the coast, they’re a possible target. Thanks.’

‘US Navy?’

‘It was American pilots that did the damage, American helicopters, coming after the US attack in Mogadishu...?’

‘Yeah, I suppose. Their ships are just off shore, easy targets, but they’ve got missile defence systems.’

‘Mi24 is a tough nut, and anti-aircraft missiles are designed for soft-skinned aircraft. Still, it would be just a gesture, then he’d lose it when they strike back. No, something else going on here.’ He grabbed a map of Somalia and spread it out across the desk. ‘Right, he’ll drop the extra fuel tanks for weapons – because he’s stupid. So ... Mogadishu ... tank of gas at two hundred miles radius roughly ... refuel just outside the area we control in the north. That gives him ... two hundred miles out, two hundred back - at best – because it’ll be heavy.’

‘Mawlini?’ I puzzled.

‘It’s where everyone comes from; the helicopters, the Kenyan Rifles, the Somali Rifles. And it’s a soft target, lots of nice buildings to hit.’ He dialled the base, getting the duty officer at the Rifles. ‘Go and wake up Mac, get him to call me urgently.’

I made another round of coffees as we waited.

The Satellite phone trilled, Jimmy answering it. ‘Mac? Wake up, and listen up. Aideed has got himself an Mi24 ... yes ... it’s got the range to hit Scorpion Base, or Baardheere, but I think he’ll try and refuel it and head for you ... yes, so get on the

clock. The earliest he could be there is four or five hours. Talk to you later.'

I sent a fax to the Kenya Defence Minister, mister Idi Amin look-a-like himself, the wording certain to cause a stir.

Jimmy studied a map of Somalia. He marked a two hundred mile scale on a ruler and drew an arc from Mawlini, adding a line around the area that we already patrolled, a thin and distorted oval shape created. I closed in as Jimmy tapped the paper, the base of the oval. 'That's mountainous, just the one road.' He moved his finger north. 'That village we're friendly with, we've an outpost near there.' He tapped the apex of the oval. 'A lonely road, flat area, no one about for miles in any direction.'

'And less than two hundred miles to Mawlini, we're right on the bloody border!'

'To get a fuel truck there ... he has to use this road,' Jimmy thought aloud. He dialled Rupert on the satellite phone. 'It's Jimmy. Listen, there's a possibility that Aideed will try and attack Mawlini, a bigger spectacle, designed to save face. If he does, he'll need to re-fuel by truck at the following co-ordinates. Got a pen?' Jimmy gave the detail. 'I want hidden observation posts set-up all around that area, make that your top priority. Now comes the hard part – I want his choppers captured. Yes, Captured. When they land to refuel you can blow the fuel truck, shoot the pilots, and seize them. If that looks likely, get Mickey and Yuri up there in a Huey. Stick someone on every road north of you. If you see a fuel truck, you're in business. In the meantime, disperse some of the people there, and the aircraft. Go to work.'

'Capture them?' I questioned.

'When they're out of fuel they're just big turtles on the ground. Anyway, I'm back to bed for a few hours, nothing much will happen for a while. You kip with that phone, young man.'

At dawn, the Kenyan Air Force was in a flap, its dated Northrop F5 Tiger fighters made ready, missiles loaded. Mac informed the UN and the other NGOs, and they dispersed their staff, UN aircraft on the apron being sent off ahead of time. The Rifles mounted up and drove to the border, setting a wide cordon to look out for any approaching helicopters, a half circle of spotters thirty miles out. At the base, the Rifles lugged heavy DHSK fifty

calibres to the rooftop bars. The Tucanos were sent up, flying low level across the border and patrolling at three thousand feet, low enough to see a stalking Mi24 on the deck. Mawlini also possessed half-decent radar these days and it penetrated thirty miles across the border, many eyes now watching its orange display update every few seconds.

I answered the phone to Mac at 10am. 'How's it going?'

'Done what we can, got radar working and the Tucanos up. Even got the Cessna and Dash up looking, just in case.'

'Jimmy thinks it'll refuel at a certain spot, so we've got teams there. If it lands, we'll hit the fuel trucks.'

As time went by I patrolled up and down the office carpet, Sharon getting on with her work, Big Paul sat staring at the phone, alternating to the map. He even grabbed faxes when they came in, disappointed that they were about the club. Cookie brought in food and tea and the hours passed. I took a break, throwing tennis balls for the Alsations. Returning, the satellite phone chirped.

'Paul, it's Host, Stateside.'

'Middle of the night there?'

'More or less. Listen, Navy has the Mi24 fuelled ready to go, but have lost radar contact. We think it's in the air.'

'Your tubs safe?'

'They've moved offshore, at full alert just in case. Any clues as to where it came from?'

'Jimmy says Yemen or Eritrea.'

'And you didn't know about this ahead of time?' he teased.

'Nope. But we are well ahead of what Magestic wanted done,' I lied. 'We altered the way it goes, unfortunately.'

'I'll let you know if they get its radar ghost back.' He hung up.

I dialled Rupert. 'It's airborne, an hour to reach you, two to the rendezvous point. Stand by.' Re-dialling, I reached Mac. 'Mac, it's airborne, fuck knows where it's heading. If it is coming your way we'll see it well ahead of time. Out.'

An hour later Host was back on; intermittent radar contact, two helicopters heading northwest, a track that put them on a direct course for the rendezvous. I sent Big Paul to get Jimmy as I dialled Scorpion Base. 'It's heading for your trap! Get ready!'

When Jimmy stepped back in I informed him, 'Heading for the trap.'

We all closed in on the map as Jimmy dialled Scorpion base. 'Listen, if they get it, fly it down to you and top up the fuel, check the weapons. If all goes well, attack the following co-ordinates, but fly south around Mogadishu to do it.' He repeated them twice. 'Thanks.'

'What's at those co-ordinates?'

'Aideed's main rival.'

'He'll blame Aideed,' I realised.

'Let's hope so.'

I went back to wearing down the carpet as Sharon sorted faxes, calling Sykes every so often to let him know what was going on, just a courtesy. Sharon eventually grabbed me by the shoulders and sat me down. Then the call came, 'Fuel tanker intercepted, crew killed, took over the tanker, waved down the helicopters, crew killed on the ground, tanker and helicopters captured.'

'Outstanding,' Big Paul said as Jimmy returned. 'Pinched the bloody choppers, boss.'

'Good. Now, one good turn deserves another.' He dialled the last incoming number, ordering the helicopters refuelled, then on to the attack co-ordinates previously listed.

With intermittent reports coming in I stayed in the office all day and night, Big Paul and Karl present most of the time, Jimmy visiting his parents down in Newport. By dawn the next day Aideed's rivals had been bombed and strafed at length, even his banana plantation had been bombed, the new Mi24 back at Scorpion base. Life returned to normal, but not for Aideed. His main rival, knowing he had taken delivery of the Mi24, attacked in force, a trigger for Aideed's other enemies to get involved. We held off attacking directly because of the lack of men, but mostly because the job was being done for us.

Hutu dawn

Jimmy read a lengthy report from Zaire, cursed at the world in general and no one in particular, then asked Sharon for tickets to Nairobi. We rang Mawlini and ordered helicopters moved, our best troops made ready. Jimmy was on the warpath.

At Mawlini, we selected staff and put a team together, all the English Army instructors brought back from Somali in a hurry. The best members of the Rifles were selected, many also brought back from Somalia. Sniper rifles and M82s were packed ready, Claymores and grenades, camouflage netting. Additional Army Hueys had already been dispatched, along with four Cobras and two Pumas. From Rescue Force a field surgical team was assembled and dispatched.

With Jimmy busy, I toured the Rescue Force compound, finding several large tents for the Hong Kong trainees. A new barrack block was under construction, one floor already finished. I dropped in on Coup, finding him now with two of his own assistants, and sat in a purpose built concrete office block, a nicely decorated office with air conditioning.

‘I remember you suffering in a warm hut,’ I told him.

‘The bad old days,’ he said as we shook. ‘It was so hot I’d fall off to sleep.’

‘Still does that,’ they said, making me laugh

‘They keeping you busy?’ I asked.

He rolled his eyes. ‘Hong Kong more than doubled the staff files and programmes. Then we took on another batch of forty Kenyan nurses, forty more in Tanzania.’

‘So lots of courses to be completed,’ I realised.

‘Now recruiting in Zaire; got twenty over there already.’

‘Is Hacker teaching?’

‘Yes, combat medicine and improvised techniques – everyone has to do it. But you just pulled him off for Zaire?’

‘War breaking out between the groups down there.’

‘We had a nurse attacked, but Dunnow beat the guy senseless apparently.’

‘Good for him,’ I commended.

‘We’re teaching self-defence now,’

‘Good. What about jungle survival?’

‘Yes, we’ve put about forty through it so far. Using a camp down in southwest Tanzania, full of creepy-crawlies. They sleep

rough the first night, then build a lean-to, then a bed off the ground, improving it each day. And if they want to eat they have to catch it, or fish for it – some things eaten raw. Your people coming from the greenhouse in Swindon do well on it.’

‘Sounds like we’re making progress. You think we’ll have an earthquake team ready soon?’

‘Got thirty names on the list, but no Africans – they’d not get the visas.’

I nodded. ‘Thirty is a start.’

‘You seen Faulty Towers Two?’

‘No?’

‘We’ve got use of a disused airfield fifty miles north west of here, so we built a pile of mud houses and some breeze-block buildings, all looking like they’ve been hit by an earthquake. We put a team of victims up there, under the rubble, then load the Hercules, fly up, set-up base, search the rubble, do the simulations, stay a few nights and fly back.’

‘Excellent. Just like the real thing.’

‘UN observers went on the last one, they’re thinking of using the place and the scenario. Oh, just read the latest book, I guess most people have. We’re getting famous.’

‘Be a third one out soon: Scorpion Base. It’ll make the Rifles look good.’

‘Don’t need that, their reputation is excellent. Tanzanians were up the other week, have a look how they’re trained.’

‘It’s not the training, it’s the discipline ... and the education in the evenings,’ I told Coup. ‘If a man steps out of line, his entire platoon is punished.’

‘Abdi ... runs a tight ship,’ Coup delicately broached.

‘Needs it over there,’ I insisted. ‘Or the peacekeepers would be the ones doing the raping and killing.’

‘You heading down to Forward Base?’

‘Yeah,’ I sighed. ‘Need to kick some Hutu arse.’

I gravitated towards the rooftop bar. Claspings the wall, I locked my elbows and stared out across the compound, and found myself wondering were all the years had gone. Helicopters took off, Tucanos flew in, jeeps drove in and out. Turning, I toured amongst the staff having lunch, re-acquainting myself with a few, many new faces, some Hong Kong Chinese.

Along dusty walkways I ambled back towards the main base, stopping at the base clinic, now considerably bigger than my first visit to it. I entered a mini-ward, a few people lying on beds with various injuries. All were keen to see me and chat; some from the Rifles and some from Rescue Force. A Chinese recruit with a burnt hand caught my attention; he had tripped, putting his hand down onto a dummy mine. I nosed around the well-equipped emergency room, before sitting with the resident doctors and nurses for a cup of tea.

The next morning the team flew off in the Dash, the Hercules leaving with the newly created Task Force Alpha; they'd get there ahead of us. We refuelled at Kigoma, greeting staff and reviewing the refugee camp, touching down at Forward Base late afternoon, the Hercules already unloaded and departed. As we had flown in I glimpsed the extensive Congo Rifles camp, many buildings already up, many more under construction. I also noticed the French contingent still here. They had previously sent numerous peacekeepers into Rwanda, but had been kicked out under a dark cloud by the new Rwandan regime. They had no peacekeepers in Zaire as far as I knew, so I puzzled their small camp.

Belly met us off the Dash, driving us to his office for a long chat before driving us the short distance around to a newly finished accommodation block. As we dumped our bags into rooms I noticed two senior French offices, extending a greeting in French. They forced brief smiles and nodded. Jimmy noticed, exchanging a look with me as I practiced my Gallic shrug. In the rooftop bar we greeted many of the team, and I made a point of greeting the French we found there, offering them drinks, but getting back odd looks and polite refusals. We found an empty table and ordered food.

'French all over the camp,' I noted.

'They think I'm building up Kimballa to seize power.'

'Are you?'

'No, he'd do that all by himself. Besides, that's just what they're interested doing. Kimballa ... is a popular whore. No, we are ... shortening a lengthy and bloody process. And, starting tomorrow, we'll be shortening it a lot under the careful gaze of our Gallic cousins.'

Twenty minutes later, the same Frenchman, Pascal, walked out with a colleague. 'May we join you?' Jimmy gestured them towards seats. 'Thank you.' They ordered beers from a waiter.

'Still here then?' I asked.

'We are ... monitoring the situation here, Rwanda and Burundi.'

'Making good use of the facilities?' I asked.

'Yes, we are grateful for the free accommodation and food,' Pascal stated, seeming very guarded.

'We're all friends here,' Jimmy stated.

Pascal took a moment. 'May I ask ... about the force that has just arrived?'

'What would you like to know?'

'Their function, since they seem to have many British Special Forces soldiers with them. And now attack helicopters.'

'As you know, the Hutus are forming armed groups and attacking the indigenous Tutsis, as well as back across the Rwandan border. So we brought some additional *peacekeepers*.'

'They will operate under the UN remit?'

'No. They'll hunt down the Hutu gangs and kill them all,' Jimmy coldly stated, a fixed stare held on Pascal.

'Under ... which remit?' Pascal delicately enquired.

'Under our original remit, that of using the Kenyan Rifles to protect Rescue Force medics.'

'But you have no medics ... in Hutu areas?'

'We will soon, right under the noses of the gangs. So, they'll need *protection*.'

'A lot of protection,' I added. 'We take good care of our staff.'

Pascal nodded, a glance at his colleague. 'And when there is peace here? What of the Congo Rifles and ... Kimballa?'

'They'll help to keep the peace,' Jimmy said.

'And if they *desire* more than simply peace?'

'That's an internal Zaire problem, and not my concern. I don't care, so long as my clinics here are safe.'

'Kimballa, and the Congo Rifles, are now the strongest force this side of Kinshasa. They could ... seize power in this area.'

'Again, not my problem so long as my clinics are safe. If you're worried about him, then assassinate him, or bribe him.'

'We don't assassinate people, nor bribe them.'

‘Your nose is getting bigger,’ I said. ‘And it’s a whopper already.’ Jimmy smiled, Pascal fixing me with a look. I added, ‘You know where Kimballa lives, go around and charm him.’

‘If you wish to take control of the Congo Rifles, pay us what we’ve spent on them, then they’re all yours,’ Jimmy offered. ‘We’ll take a step back and have nothing more to do with them.’

Pascal and his colleague exchanged looks. Pascal said, ‘I have a feeling we are being played ... by experts.’

‘Call my bluff, if you think it is a bluff,’ Jimmy nudged. ‘And if you like, get your Ambassador in London to request that I pull out. I’ll will, of course, honour whatever the British Prime Minister requests.’ Jimmy held his hands wide. ‘Tell me what more we could be doing to help you sleep well at night.’

‘Invite us to planning meetings for this new campaign, and subsequent meetings with Kimballa.’

‘OK.’

Pascal stumbled. ‘OK?’

‘First meeting is 9am in the morning, don’t be late.’

‘You need a wake-up call?’ I offered.

Pascal scowled at me. ‘No. Thank you.’ Facing Jimmy, he said, ‘People like you ... don’t get Cobra’s, unless the Americans want you to have Cobras. And we are well aware of the radio traffic in and around Somalia.’

‘Was there a question in there somewhere?’ Jimmy asked.

‘I was wondering about your *real* identity, Mister Silo.’

‘You show me yours, I’ll show you mine,’ Jimmy said with a straight face.

‘You already know who, and what, I am.’ Pascal waited.

With stern features, Jimmy said, ‘You will learn in time that I don’t sleep with those I dance with. We’ll see you in the morning.’ They got up and left.

‘They going to be a pain?’ I asked.

‘No, because their government won’t associate itself with Kimballa yet, in case he turns out like every other African dictator. They just don’t like to be left out of the loop in this region. Besides, they can’t figure out who I am.’

Hacker wandered in with Doc Graham and we waved them over.

‘How’s the head?’ Hacker asked me.

‘Fine, just the odd ringing, spots before my eyes.’

Hacker said, 'You two are jinxed. If you're here, they'll be fireworks.'

'There will,' Jimmy coldly stated. 'Hutus have armed and grouped themselves, they'll be on the march soon, attacking the Tutsis here.'

'The Rifles, they peacekeeping?' Doc Graham asked.

'No, we're going to make a few surgical strikes, take out the Hutu leadership. It's either that, or try and patrol an area the size of England. I want a surgical bay ready tomorrow, Hueys on standby at five minutes notice. Hack, you'll fly behind the Cobras for a few days.'

Hack nodded affirmatively.

'Congo Rifles ready?' Doc Graham asked.

'Nope, nowhere near it, which is why we're doing it. They'd massacre anyone they find - we'll limit casualties. And, afterwards, I'll build some outpost clinics around here. Get some rest tonight, may be busy after that.'

At 9am the French stepped into the main office below the tower to strange looks from the gang. Jimmy waved them in.

Jimmy and I had been pouring over local intelligence reports, drawing many maps and diagrams onto white boards, using Jimmy's knowledge of where the groups would be concentrated, who the leaders would be. The two British Ruperts stood ready with notebooks, alongside them the Kenyan officers, plus eight ex-SAS instructors, all kitted ready for war. Alongside them stood Hal and seven pilots, the room cramped.

'Gentlemen,' Jimmy called. 'We're all here now, so operation Swift Sword will commence.' He took a breath. 'There are close to half a million Hutus now in Eastern Zaire, including many former Rwanda Army officers and soldiers – the ones that started the massacre in Rwanda, let's not forget that. Some of that Army hardware has found its way here, jeeps, mounted machineguns, RPGs, AKs, some armoured personnel carriers.

'They have designs on this region, perhaps to make it a new... *Western* Rwanda. They're attacking the indigenous Tutsis – as we already know. Before they create a civil war here, and threaten this base, we will act first. Today will see five actions on the far side of Hutu territory, and five insertions this side for latter action. You will be busy.' He detailed the five actions,

followed by the five insertions. Teams were formed, helicopter call signs confirmed, the men dispatched.

That just left the Kenyan officers, us and the French, all sat listening to the radio chatter and ticking boxes as missions progressed. The first three helicopter groups flew in a wide arc to the west and north, coming around from the north to attack three Hutu headquarters, returning via a northerly route, another wide arc. The next two helicopter groups flew in a wide arc to the east, straying into Rwandan territory, attacking from the east and leaving again in an easterly direction. All returned safely a few hours later for refuelling.

Reports were given of what was seen, what was destroyed. Two armoured personnel carriers had been destroyed, at least twenty jeeps of varying descriptions – some on the road and moving, many buildings listed as being hit. We ticked what we thought they had, and what we knew we destroyed, a good first mission. With the Hueys and Pumas fuelled, the inserts were readied, kit checked. We wished them well and waved them off, the line of helicopters flying again in a wide arc to the east. They returned after sundown, the runway lights on, all of our pilots reporting successful inserts.

Throughout the night people came and went, the French always leaving at least one man in the control room. We received a steady trickle of radio reports, movements of Hutu soldiers heading west. For some strange reason they thought French peacekeepers, based in Rwanda, were attacking them. In the quiet of the early hours, our insert teams set traps, then withdrew to hillsides above strategic crossroads.

I got two hours sleep, then returned to the command centre, Jimmy still there. ‘Making progress?’ I asked him.

‘A few gun battles overnight, the Hutus firing at each other instead of us, a few of their convoys driving into Claymores. And now we’ve got a complete picture of where they’re heading. We’ve got sniper teams picking them off at five hundred yards, and they can’t figure out where the firing is coming from. The M82s are hitting jeeps at six hundred yards plus.’

Through the day our inserts fed us reports of movements, the helicopters guided onto formations and attacking with great accuracy, but always from the east. By the end of the day some fifty vehicles were reportedly hit, but two inserts reported a long

line of soldiers heading west, forty miles north of us, up to a thousand men.

Jimmy sent for Kimballa. With the French keenly listening in, Jimmy explained the large movement and asked permission to use the Congo Rifles for an ambush. Kimballa offered to lead the action himself, his best men kitted out and armed, jeeps and trucks mounted. It took them two hours to reach the required spot, Kimballa hiding his men either side of a road junction at the end of a densely wooded valley. When the first of the Hutu soldiers were spotted, walking casually along with rifles balanced over their shoulders, our helicopters went up in force. They flew the prescribed wide arc to the east, before strafing the valley at length from east to west, retiring to the east after a thirty-minute engagement, this being the first use of the chain guns on the Hueys. The net effect was for the scattered Hutus to run west, straight into Kimballa's men, who then massacred them, leaving few alive.

Kimballa returned around midnight, ebullient, his men returning in a trickle, since they had scattered and chased down the Hutus in an ill disciplined manner. Trucks went out all night and picked them up in small groups, still fetching them the next day, our Rescue Force Hueys flying out at dawn and picking up the wounded and ferrying them back; most of the wounds having come from friendly fire in the dark. Several large tents now housed the wounded, Kimballa and Jimmy patrolling them, thanking the brave the soldiers. Kimballa had his victory, his status affirmed.

All that day our insert teams fed us intel on movements, the Cobras picking off jeeps and trucks, soon little to target. At 5pm, as the sun lowered, Jimmy took a call on the satellite phone. Facing the French he said, 'Seems that the international press is blaming your French peacekeepers for attacking Hutu refugee camps.'

The French stepped out to make their own calls.

Hal said with a smile, 'Wondered why the large detour to the east.'

Smiling, Jimmy told him. 'Dawn tomorrow: take our helicopters back. Alert the boys, to bed early.'

The Pumas were sent out after dark, guided in by the insert teams for their own extraction. Within two hours all were back,

just a few minor wounds to attend. Jimmy assembled all of the Rifles and thanked them as if a great victory had been achieved, much fist waving and chanting going on, dancing breaking out.

In the rooftop bar we sat with Hacker and Hal for some food. 'Being *stretched*?' I asked Hacker, making him smile.

'Had to work on some guys in the back of the Huey,' he reported. 'Been a while since I've done that. Made my stomach churn when Dunnaw did his reverse flare landing – I was still knelt over a patient.'

'And Ratchet,' Hal complained. 'Couple of cowboys.'

'It's important they enjoy the work, or they might not do it,' Jimmy pointed out.

Kimballa stepped in looking smug, still in his camouflage clothing. He joined us quickly and sat. 'A very efficient operation, yes?'

'It achieved its aims,' Jimmy stated.

Kimballa listed off, 'Intelligence information, a trap, helicopters to shepherd the men towards us – all in a co-ordinated ballet, no?'

'Yes, a well co-ordinated action,' Jimmy agreed. 'And now the Hutus militias have been greatly diminished before having a chance to grow and organise themselves. You can use your men to start defending your lands.'

'All your men back?' I asked.

'I think so.'

'A great leader of men ... would know so.' I told him, getting a look from Jimmy.

Kimballa studied me for a moment. 'You are correct of course, I will check later. Did the French assist today?'

'No,' Jimmy answered him. 'They watched us, because they think I am king maker, and you the prince in waiting.'

'I did not know I was so popular,' Kimballa noted. 'What do you think ... the French want?'

'To be friends of the future leader of Zaire, of course,' Jimmy stated.

'And what of you, Mister Jimmy?' Kimballa asked with a smile.

'You, sir, will get a list of all your men, and check that they are all safely back, or I'll kill you before dawn.'

Kimballa stared back as Hal and Hacker shifted uneasily in their seats. 'You would still make a better man of me.' He slowly nodded to himself, and stood. 'I have some ... parenting to do. If you will excuse me.'

'You think he'll end up in power?' Hal asked after Kimballa became a distant dark shadow.

'Vacuums suck up trash, so why not. Got a power vacuum here, and Kinshasa is a long way off.'

'We done enough damage to the Hutu's?' I asked.

'Enough for the Congo Rifles to have a chance. We bought them some time.'

At dawn our helicopters lifted off, the additional Rifles taken back out by Hercules. We left an hour later, leaving the French to deny questions of involvement in the action. It was not an action we would deny, or try and hide, but causing the French a little discomfort was an added bonus.

A new British Prime Minister, 1997

We had sold all of our shares in Apple Computers a while back, at a great profit, and now sat waiting for a dip in order to buy them back.

The day after the new Prime Minister took office - the first labour Prime Minister for quite a while - he had a security briefing, then met Sykes for a Magestic briefing with the Home Secretary. Both were stunned after the lengthy briefing, the Prime Minister stating that we wanted to meet us, despite Sykes suggesting that "distance" might be prudent. The PM was insistent. The next day Karl drove us up to London, around to the rear of Horse Guards and through to Number 10 the back way. We were checked for weapons and bugs before being led through to a waiting room, finally into the PM's office, Sykes in attendance. It was just us, the PM and Sykes.

With the door closed the PM stepped around the desk, stood stiffly facing Jimmy for a second. Then he smiled widely, hugging him. 'Great to see you again, Jimmy.'

Sykes and I exchanged looks, equally surprised.

Letting go of Jimmy, the PM shook my hand. 'I've followed your stunts with envy, Paul. Please, sit.'

With a puzzled frown, Sykes asked, 'You've ... met before?

'Jimmy came to me in 1983, told me my future,' the PM explained.

'1983?' Sykes puzzled.

'Perhaps now is a good time,' the PM suggested to Jimmy.

Jimmy faced Sykes. 'Can you keep a secret? I'm not Magestic's right hand man, and he's not a clairvoyant. I'm a time traveller, and a lot older than you, Mister Sykes.'

'You're ... you're a *time traveller*?' Sykes stumbled to get out.

'He's been to 2025,' I told Sykes.

'And beyond,' Jimmy added.

'How's your health?' the PM knowingly asked of Sykes.

'You ... know, Prime Minister?'

'Jimmy told me a long time ago how it would unfold, including you. So we'll be hoping you can keep a secret.'

Sykes shook his head. To Jimmy he said, 'You, sir, are a lying toad. And a hell of an actor.' He faced me. 'And you.'

'I'm not a time traveller,' I complained. 'Just a plain old employee. An *underling*.'

Sykes asked, 'And the future?'

'As bad as you already know,' Jimmy told him. 'And you, young man, will remain head of the UK "M" Group.'

'I will?'

'Yes, you will,' the PM confirmed. 'And with Jack.' Facing Jimmy he said, 'How many ticks in the box?'

'We're two years ahead of schedule, but one or two unpredictable moments, like Aideed's Mi24.'

'More you get ahead, the less predictable,' the PM agreed. 'Aberrations in the time line.'

Still looking shocked, Sykes said, 'May I ask, Prime Minister, how much you know of the future?'

'Next to Jimmy, more than anyone else on the planet, including Paul.'

'Yeah?' I asked.

'There are some things the PM knows, that he needs to know in case we're killed,' Jimmy explained.

‘And the way you two are going, that’s a real possibility!’ the PM playfully scolded us. Easing back, he asked, ‘Anything you need?’

‘If there is, I’ll go through Mister Sykes. And don’t forget to enjoy that seat, don’t worry too much about the future, that’s my headache.’

We shook again before leaving, and I was still a little stunned. Still, it made sense to approach future leaders when they were still college students. I found myself wondering how many more there were out there as we left.

In the car I asked, ‘Sykes be alright?’

‘Yes. But next comes Russia, which is tricky at the best of times.’

Sykes turned up the next day with Jack, obviously keen to straighten a few things out. We welcomed them into the lounge, teas offered.

Sykes sat and stared for a few seconds. ‘You ... you’re Magestic?’ Jimmy nodded. After a moment, Sykes said, ‘A hell of an actor. And you look so young. Mind if I ask how old you really are?’

Jimmy wrote a number on a piece of paper, showing it to just Sykes, whose eyes widened. Jimmy put the piece of paper onto the log fire. Sitting, he said, ‘Jack ... *does not* know some things that *we know* about you, Mister Sykes. If you chose to share things with Jack, that’s up to you.’

Sykes carefully considered that. Half turning his head, he said, ‘I was injected, otherwise ... cancer.’

‘I’m glad you were, sir. I always preferred you to ... you know who.’

Sykes regarded his junior. ‘And judging by your reaction to my mentioning of Magestic, you knew.’

‘I knew some of it,’ Jack admitted.

Sykes faced Jimmy. ‘Your body...?’

‘All sorts of wonder drugs. In the future they’ll be able age you backwards.’

‘And Paul?’

‘Injected, like you,’ I said. ‘Fit as fuck.’

‘And others?’ Sykes asked.

‘The orphans, the Rifles, a few select individuals.’

‘The new Prime Minister?’ Sykes lightly asked.

‘No.’

‘I’ve been wondering just who’s running the country,’ Sykes mentioned.

‘He is,’ Jimmy insisted. ‘I won’t interfere with domestic politics ... too much.’

‘And the US President?’

‘Knows what he needs to know for now. So too the Chinese.’

‘And the greatest threat ahead?’

‘American Presidents ... and the Brotherhood – as you know.’

‘The Americans will be a problem?’ Sykes puzzled.

‘To certain future Presidents, the knowledge of the future is neither a road map nor a warning, but a chance to *get ahead*. And if I use the carrot and stick approach, they’ll not like it.’

‘And the Chinese?’

‘Simplistic in their mono-vision of the world, and a delight to work with. Carrot works well with them, so too the Russians.’

‘What’ll Russia do in the years ahead?’

‘Turn more conservative, but in a good way; they need a dictator to control the country. In the end, China and Russia will do more to help than The West.’

‘That doesn’t completely surprise me,’ Sykes admitted. ‘Anyway, the PM wants your security beefed up a bit.’

‘Problem with that ... is that the tabloids will wonder why,’ Jimmy explained.

‘Then we’ll be discreet,’ Sykes insisted. ‘Fortunately, you chose this place well.’

‘I’ll be buying the land behind me soon, lots of houses for staff. And security personnel.’

‘We’ve rented two places in the village down the road, ear to the local gossip,’ Jack put in. ‘Ask Big Paul not to thump them if he spots them.’

I laughed at that.

Jimmy said, facing Sykes, ‘There’ll be a problem you’ll have to face in the years ahead. You ... will not age much, your dear lady wife will.’

Sykes considered that. ‘You’d arrange ... an injection for her?’ Jimmy nodded, Sykes adding, ‘I can fix a friendly doctor.’

‘No hurry,’ Jimmy suggested.

‘What about Jack?’ I asked Jimmy.

‘Again, no hurry. He can be injected in years to come, at a time when some of the wonder drugs are available – less suspicion.’ Addressing Sykes, Jimmy said, ‘We’ll need the PM’s help on establishing a good counter terrorism unit in Kenya, building on their existing unit – which isn’t much.’

Sykes made a note. ‘That would help us keep an eye on Somalia as well.’

‘Be prepared for the fact that my *influence* in that region will grow. The papers here will ask the odd awkward question, especially over Zimbabwe.’

‘That ... will be awkward all around,’ Sykes unhappily stated.

‘I’ll brief you step by step,’ Jimmy offered in an appeasing tone. ‘The Chinese will drop some weapons into Kenya for me soon, so alert the powers. And any ex-Army instructors you come up with will help.’

Mapley

With friends in high places, Mapley developed quickly. A second barrack block was constructed, small individual rooms with communal ablutions for visitors. With the Fire Brigade making good use of Faulty Towers, and the other facilities, the Government quite rightly paid for the block, the new PM visiting a month after taking office. A hotel chain began construction of a cheap hotel between Mapley and the motorway, the net effect being that we could accommodate far more visitors or trainees.

The UN started using the centre for their version of basic training, and the new canteen saw plenty of business seven days a week. Jimmy took on the franchise of a mini-market and placed the shop on the base, open early and closing late. Beyond the leisure centre we bought land, Rolf’s architect firm given the job building six nice semis for permanent staff to live in. Inside the base we began work on a block of half decent flats for staff to live in, some to be used for the people on sixteen-week courses if they wished, or UN instructing staff.

In groups of eight, staff from Mawlini came up for six weeks; courses in rescue, climbing and caving. All became expert at

crawling over, through or under Faulty Towers, trained according to the manual that Jimmy had produced. We even started to rotate the Hong Kong branch, the Fire Brigade now whinging about less access. Many of our courses at the towers were run at night for realism, and that eased the daytime use of it.

A new Hong Kong

A week before the official handover, we flew back into Hong Kong, the hard to come by tickets booked well ahead of time. Unlike many, we arrived secure in the knowledge that the handover would go well and that the Chinese would ring-fence the colony, leaving its wealth generating rationale intact. Po and Han met us in the Roller, delivering us quickly to the Mandarin, an appointment with a masseur essential after the long flight. I left Han chatting with Jimmy and headed down to the sub level.

That evening we met up for food in the hotel's the Chinese restaurant, its entrance overlooking the internal quadrangle. We tried to avoid talking shop too much, but Somali cropped up, getting us onto the topic of Rescue Force Hong Kong, now ninety-seven strong and dwarfing its parent unit in Africa; Po had gone over the top to show how much he cared, now taking a personal interest in the running of it. As we had been arriving in Hong Kong, most of the new recruits had been heading for Mawlini.

The next morning we set off to inspect the Rescue Force building, a short drive from the Mandarin to a private ferry, the craft taking us across the busy harbour, just a short walk from the receiving jetty to the new building. The first thing I noticed was the climbing wall, reaching ten stories high up one side of the building, with what looked like a party of westerners scaling it.

'American,' Po explained, pointing at the climbers. 'Now many come, go climb up.'

At the base of the climbing wall we craned our necks skyward. I was not afraid of heights, but the idea of scaling this wall scared the crap out of me; I seriously hoped Jimmy would

not say it was a necessary exercise. Around the back of the building we met the first staff and I practised my Chinese, now reasonable in light chitchat. They showed us a row of white jeeps, Rescue Force logos painted on, and already a mainland flag displayed.

Through reception, Po led us keenly on, up one floor to the sandbox and its adjoining ordnance rooms. One side of this floor was covered in sand, dirt and rocks, two students now using headset metal detectors and suitably dressed in blue body armour. The classrooms off the sandbox were glass-walled and offered a view of students practising. We stepped in, finding the walls adorned with numerous posters of mines and weapons, the table tops littered with mines from many countries, some cut in half to reveal their workings to the students. We wiped the sand off our feet on special mats, and climbed the stairs to the second floor, to a row of administrative offices positioned opposite a canteen.

In the admin office, I was surprised to find two officials of the mainland, and in uniform. Had made the introductions; the men would co-ordinate training on the mainland. A Hong Kong fire brigade officer came next, the brigade providing training on fire-fighting and building searches, as well as climbing – they had their own mountaineering unit. A westerner stepped out.

‘You must be Mister Hancock’, Jimmy said, shaking the man’s hand. Hancock was tall and thin, a dash of silver hair over his ears.

‘Your reputation precedes you, gentlemen,’ Hancock offered.

Jimmy turned his head a notch to me. ‘We were lucky to get this gentleman, just released from the UN.’

‘You going to head up this unit?’ I asked.

‘Just taken on board, not least because I live here - local wife.’

‘Handy that, on the old commute to work,’ I quipped. ‘Been out to Kenya?’

‘Many times – I know Bob Davies well, but I’ve not been up to your place. Be off there in a few weeks, check the progress of the recruits. Hear you got a Hercules?’

‘Two year lease, complete with crew,’ I informed him.

That interested Po. ‘You pay for two years, and company give pilot?’

I nodded. 'Saves buying a plane and recruiting the crew.'

Hancock led us up a level, a floor of classrooms, two of our dummies laid out and still turning my stomach with their lifelike morbidity, cold white plastic skin.

Po said, 'I give one to hospital, now twenty hospital buy. You people in Welsh-land, they must make fifty more.'

'Selling well then,' I noted.

Hancock asked, 'Have you seen the new computer control?' I shook my head. 'You can vary the heart rhythm, so the senior doctors set or vary the rhythm, the young doctors using their stethoscopes in perfect simulations. It's on the syllabus of medical universities here now. Even got variable breathing sounds, and every cardiology department in the world wants one. Unfortunately, it's called *the Silo stiffy*.'

I laughed. 'Does it last longer than two minutes?'

With the Chinese not understanding the humour, we advanced a floor to a well-stocked gym, a scattering of people using the equipment. We sat in the gym's lounge for a tea and a chat, since the floors above us were just offices and apartments.

Hancock asked, 'How long till we let the UN know we have an earthquake response team?'

Jimmy eased back. 'The basic elements of earthquake response are not that difficult, or time consuming in training. The problem comes in the form of the terrain. You may attend an earthquake in Japan, or Western Indonesia. In Japan you would only be concerned with building search and hand over, in Indonesia you'd have to live rough, travel across country, find and treat primary injuries, then struggle to remove the casualties back to base or hospital – assuming the hospital wasn't destroyed on day one. In that case, surgical teams are needed in tents close to the epicentre.'

'A massive range of different equipment and skills required,' Hancock noted. 'So each response has to be tailored, and quickly.'

Jimmy nodded. 'In Kenya, we have teams of four; a doctor, a nurse, a driver come medic and one other. That way, there's a diversity of skills in each team. You can then create variable teams, of doctor nurses, or medics and climbers when just extraction is required. In the UK we have a specially designed collapsed building, so all of your people can spend some time on

it. After that, they're ready to be deployed. The only factor remaining, is how tough they are, how they'll handle the heat, insects, going without sleep, poor food.'

'Which is why they're in Kenya now,' Hancock noted. 'Toughener and sickener.'

'What we don't want, is someone who would do fine in Japan, but poorly in rural Armenia.'

'Got any flyers?' I asked.

'Not many. Two I think.'

'We'll need at least eight of your lot checked out on Hueys,' Jimmy said.

'I have friend with Huey,' Po put in. 'I buy, use here.'

I told Hancock, 'Our Hueys in Kenya have winches, so they practice winching at length.'

After our tea break we took the lift to the top floor, permanently open windows circulating a stiff breeze, and peeked down at brave climbers coming up, a group of amateur climbers from San Francisco. And looking down scared me even more.

On the way back we stopped off at the Chinese Embassy, without Po, greeting some familiar faces. In good Chinese I offered, 'I hope your sister is a goat.' The sour-faced man told Jimmy I needed some more lessons. We sat, Jimmy answering a lengthy list of questions, a few charts appended or corrected, almost three hours of detail regurgitated. Finally, a map of Afghanistan was laid out, so I closed in.

'We have supplied the weapons as you requested, to The Northern Alliance, whilst you build a hospital for their enemies – a most puzzling scenario.'

'The aim is not to destroy the Taliban, but to achieve a long-term division, a stable division. Détente! The Northern Alliance will never be strong enough to win. If they do, they drive gunmen into Pakistan -'

'Which will be very bad.'

'Yes. So we need ... time.'

The man pointed out current battles and dispositions, Jimmy making a few comments about further types of supply. Overall, he was happy with the progression of the stalemate. Han then displayed many photographs of the treasure recovered, Jimmy indicating that some items were missing. As an aside, he marked a spot on a map of Western China where a half-decent oilfield

could be found, and at what depth. From his pocket, Jimmy handed over a typed document detailing the design aspects of an electric car before we left.

Katie and Jean flew in the next day, my long suffering girlfriend set to perform an outdoor charity concert for Rescue Force on the day of the handover, quite an honour since it had been approved by the mainland authorities. It rained on concert day, but everyone seemed to be having fun, the second and third acts also ours, the TV exposure very good. During the official ceremony we stood at the back, chatting to the last ever British Governor as he moaned about getting wet. That evening the stiffies from the Chinese embassy came over to Po's hotel and looked around at length, staying for a meal and a chat. This was now their territory, even if ring-fenced. Katie flew directly to Los Angeles the next day, Jean coming back to the UK with us.

Diana

One day in August, 1997, I woke to the news that Diana, Princess of Wales, had died in a car crash. I asked Jimmy if he knew ahead of time. He stood, glanced at the TV screen and walked out, leaving me wondering about the event, and his reaction to it. The PM wasn't happy either, since he called Jimmy directly, as had Sykes. After the calls, Jimmy went for a long walk with Karl, hardly saying a word for hours.

That evening, when everyone else had gone to bed, I sat and faced Jimmy. 'Well?'

Without lifting his eyes, he said, 'She ... would have gone on to cause ... problems for the establishment, for the UK in years to come.'

'They wanted her gone?'

'Some, yes, and there will be some conspiracy theories in the years to come.'

'You let her die,' I softly stated.

He lifted his eyes. 'Never underestimate how cold I can be, to achieve my goals,' he snarled. 'And you have no idea how hard

it was to just sit and do nothing. But that's the game I'm in – life and death. Unfortunately, more death than life.'

It was the first time I had ever seen him this morbid, or this introspective. Self-pity was not something I would have ever attributed to him, and I was sure there was a hell of a lot that I still didn't know.

'I ... guess it was a difficult choice,' I offered.

'Difficult choice?' he snarled. 'Let me tell you what a *difficult choice* is. A few years from now there'll be an earthquake that kills hundreds of thousands, makes a million homeless. And to help, to really help, we'll have to risk exposure. And if we're exposed - the world goes to shit real quickly. How's that for a ... *choice*.'

I gave it some thought. 'As you said, it's a numbers game. The highest number wins.'

'Let ten million die ... so that we can save twenty million,' he softly stated. 'Some day, when I'm gone, you'll have that call to make. You'll stand alone and make that choice.'

'I'm hoping that's not some day *too* soon. I'm not ready.'

In a strained whisper, he said, 'It's one of those careers ... where you learn on the job, as I had to.' He got up and walked out of the lounge, leaving me to sit alone and think.

Most of my adult life so far, that working with Jimmy, had been interesting and exciting, and I always had Jimmy directing me, someone to fall back on. But how would I cope alone? Could I carry things forwards without him? I knew what the stock markets would do for a long while, I knew all the key events and key players, but could I hold it all together and alter the course of history? I doubted that very much. The Prime Minister knew a lot, but Jimmy had hinted that there were some deliberate gaps in the detail. So that came back to me, a heavy weight now on my shoulders. I stepped into the office, sat down and starting reviewing files and projects with a renewed determination. Somewhere in here, in the detail, were answers to questions.

He was moody for several days, taking long drives or walks, and met the PM. That had not lifted his spirits. Only work seemed to lift him, and fortunately there was plenty of that at hand.

Making money, doing deals

Po and Han met us at River View Golf Complex in September, and we made sure we were not bugged – we went for a swim together.

Bobbing in the surf, Big Paul on the beach and looking conspicuous, Jimmy Said. ‘There’ll be an opportunity in October to make some money, and I have a use for it, so we’ll need to co-ordinate the timing carefully – without anyone copying our trades.’

‘And Apple Computer share?’ Po asked.

‘That’s longer term, hold onto them,’ Jimmy explained. The sun beat off the water’s surface, making us squint without sunglasses, the damn turtle patrolling around us like a hungry shark. ‘There’ll be a crash on the Hong Kong markets, then in Europe and America, but a quick recovery. Po, I want you to make sure that you sell everything before that day.’

‘We only have America stock,’ Po insisted. He rattled them off, Jimmy telling him which stocks to keep.

‘I want you to trade the futures, but you must be careful, so I’ll send Paul over to make the trades for you. Once the markets have crashed, you can buy a lot of stock, futures, and bet the upside. I’m looking for forty million pounds profit from you and China; fifteen from you, Po, twenty-five from China. Han, have someone with Paul, and create a secure link. Ask your kind government to set-up accounts with many banks, through proxy agents, a hundred million pounds – no more.’

At the shore we sat on the damp sand, our feet in the water, discussing many things, Po still unaware of the truth about us. Po’s nephew and niece walked over, their kids running forwards and jumping on Han. With one child each, Po and Han gave the kids piggybacks into the water as Jimmy and I stood under the beach showers.

As I dried off I clocked a lady watching Jimmy, which was nothing unusual in itself. But this one was rather gorgeous, tall and thin. ‘I think you have a fan.’

‘Irina.’

‘You know her?’

‘I will do, but not today,’ he responded, no joy in his voice.

To the sound of kids enjoying themselves, we enjoyed a long lunch under the shades of the beach bar, and I made the waiters laugh as usual by trying to order turtle soup. After lunch we grabbed scuba kit and enjoyed a dive, out beyond the reef, no sign of the tame shark. That evening I again noticed the delectable Irina as I did the rounds, greeting everyone; some familiar faces, two Rescue Force doctors. We sat with Han, Po and family, a large table for just us, Big Paul eating with the Rescue Force medics, not least because we were mostly talking in Chinese on our table.

After the meal, we all strolled around to the golf complex, earnest preparations underway for the upcoming African Union meeting. Han and Po would both be involved, a large marquee provided for Chinese exhibitors. We’d have our hands full, meetings fixed with several African leaders, not least the delegation from Zimbabwe. Under a ceiling of stars we sat in the rooftop bar and sipped beer. Well, Han and Po sipped, we downed them rapidly.

The next day we drove the gang over to the safari lodge, booking into River View after a lengthy review of some of the other lodges; the entire estate could now handle two hundred and sixty visitors at a time, and without them bumping into each other. And we were fully booked year round, despite raising the prices. When we had arrived at the lodge I had half expected to see the tame lion to bound out, but he had walked off a year ago – it was that long since I was here last, the lion occasionally fed by the staff when they saw him, but the lucky lad now accompanied two females. I guess he finally lost his fear of antelope and his fondness for jeeps. And no orphaned cubs were visible for the girls to stroke. With the staff taking our bags, we climbed to the roof bar, finding the man we had come to meet sat waiting.

‘Mister DeKraft,’ Jimmy said, shaking the man’s hand as he stood to greet us. DeKraft was a large man with a grey beard, dressed now in green khaki shirt and shorts, a hat, and appearing as if he worked here.

‘Mister Silo, Mister Holton,’ DeKraft offered in a slightly accented voice, but sounding more British than South Africa.

We sat, Han and Po off enjoying the view with the girls.

Our guest said, ‘An impressive lodge. And you have six like this one?’

‘Yes, plus one large hotel, the old Schilling place,’ Jimmy explained.

‘I know it; I knew the family. Where did he retire to?’

‘The coast,’ I said. ‘Mombassa. And you, you have a large estate just across the border. Serengeti country.’

DeKraft nodded. ‘Which is up for sale to the right people.’

‘And what *criteria* ... do you apply?’ I asked. ‘I have a note from my mum.’

Our guests smiled. ‘People who will look after the staff, and the land, which is why I’m talking to you - everyone knows you.’

‘Mind if I ask *why* ... you are selling?’ I delicately broached.

‘First, *you* have taken much of our business. But I don’t blame you, we should have advertised more. And unlike you, we can’t bring celebrities down here.’

‘Would you like to stay on where you are?’ Jimmy asked.

‘Stay on ... in what capacity?’

‘General manager, and a shareholder,’ Jimmy suggested.

Our guest eased back, taking a moment. ‘What share split?’

‘Sixty percent to us, you take a pro-rata dividend, we fill up your lodges,’

‘Sounds very reasonable. What would I sell sixty-percent for?’

‘Our people in Tanzania valued sixty percent at two million, mostly due to a large number of working farms.’

‘And if I sell, but don’t stay?’

‘You’ll stay, being buried under your favourite tree,’ Jimmy confidently suggested.

‘You’ve been spying on me.’

‘Yeah, and next time close the curtains when you take a bath, frightening sight.’

DeKraft coughed out a laugh. Facing Jimmy he said, ‘If that’s the deal – a serious offer, I’ll take it.’

‘Our solicitors have already drawn up the papers, and a cheque. All you need do is get to Nairobi, contact Rudd – who you met – and it’ll all be done in ten minutes.’

One of the girls ran over, Jimmy lifting her to a knee and explaining in Chinese what we were talking about.

‘Be bringing Chinese here then?’ DeKraft asked.

‘World’s changing,’ Jimmy said. ‘Be full of Russians and Chinese next.’

‘If you got the connections, that’s what matters.’

‘We do,’ I said. ‘And our plane will take you to Nairobi and back in the morning. 9am at the airfield.’

‘You don’t mess about, I can see why you’re successful.’ He stood. ‘If you don’t mind, I have some calls to make, some people to inform about their future.’ We stood as he left us, the girl trotting off.

An hour later a luxury coach pulled in, a large party disembarking, including the Russians. I noticed Irina. Turning my head a notch to Jimmy I said, ‘Never a lion around when you want to one to wrestle.’

‘That wouldn’t impress her, she’s an ice maiden. She’s all about the money. That’s her brother, a very rich metals broker. He, is who I’m interested in, she is the excuse.’

Jimmy stepped forwards, intercepting the group. The first group were Germans, a loud long welcome given, a few sentences exchanged. Next came an English group, also welcomed, followed by a Belgian group, Jimmy practising his Flemish and astonishing them. Finally he greeted Irina’s group in flawless Russian. It stopped them dead and they enquired if he was, actually, Russian. Denying that, he helped them book in, dispensing useful advice with the forms required.

With the new arrivals asked to meet in the rooftop bar, Jimmy stood on a chair and gave the introductory spiel normally regurgitated by our three resident tour guides. He introduced himself, and said he was the owner of this and many other hotels in five languages, before a five minute intro in each language, explaining meal times, dangers and tours, pointing out many things in the distance. Finally, in a local dialect, he ordered a welcoming cocktail for each guest. Bloody show-off.

Mingling with the new arrivals, I practised my Russian on one of the men. He asked how big our land was. I pointed and said sixty kilometres in two directions, a hundred kilometres in the westerly direction. I then tried to explain that we had bought an estate in the Serengeti, but he seemed to think we owned the whole damn Serengeti. They were surprised that we also owned the beach hotels and golf club, they had not realised, despite the maps showing our properties in Kenya. When Jimmy neared I

grabbed him, getting him to explain the new estate. He found a map and showed the area of our estate and then the new place across the border.

Irina said to me, in her accented English, 'You have girl, Katie Joe, yes?'

'Yes, she's my girlfriend, she has been here many times.'

'And famous club in London.'

'Yes, would you like to visit?'

She shrugged, tipping her head.

The man asked, 'You are here for holiday?'

'No, work, a meeting at the golf complex, African leaders.' I nodded towards Han. 'Chinese Government officials.'

Jimmy stood discussing metals futures trading to the man of interest, Irina not that keen to make small talk with me. But my spirits were lifted by a familiar resonating sound on the breeze. I smiled, walking to the wall, a Rescue Force Huey coming into view. And, surprisingly, coming in to land. Jimmy asked the man of interest if he wanted a tour of the estate. He did, and Jimmy led two men out, leaving me quite jealous. Jimmy's party passed the pilots on the grass, a few words exchanged, before both parties crossed over, the pilots coming up here; Ratchet and Spanner of all people. They greeted me with over-exuberant hugs at the bar as Jimmy wound up the rotors.

'What's he up to?' Ratchet asked.

'Secret, so keep it that way. Some Russian businessmen to impress, some deals in the making.'

Guests came over to meet the famous Rescue Force pilots as Jimmy lifted off and pulled away, soon stories of heroic deeds told, and twisted, and exaggerated. I hoped they were staying the night, because they both downed several pints before Jimmy returned. Still, the way they flew, no one would notice. When Jimmy rejoined us, half an hour later, he told Ratchet and Spanner to eat a meal, and no more booze.

That evening we ate with Po and family, taking our new Russians friends on a private tour in the morning. We grabbed two jeeps and two drivers, setting off for lion country, Irina complaining of mosquito bites and still not interested in small talk with me. After lunch we happened upon a detachment of Rifles on poacher assignment. Recognising Jimmy they jumped down and saluted. Jimmy greeted each man, handshakes

exchanged, then called over the Russian group leader, Yuri. Jimmy accepted two M16s, handing one to Yuri. With a shout to me, I threw a can of peaches as far as I could and onto a patch of dirt. Jimmy let Yuri go first, firing whilst standing, a few shots near the can. Kneeling, and taking careful aim, he managed to hit it. Still upright, Jimmy hit it five times in succession, the Rifles chanting their respects. The weapons were handed back to the solders as Jimmy thanked them, some talk from Yuri of the AK47 being a better weapon as we mounted up.

In a meandering vehicle safari we eventually reached Skids' sanctuary, finding just his staff in. Fortunately, they had a good stock of orphans, including elephants. The Russians snapped away at the animals as I climbed into a pen of lion cubs. It took a minute for them to get used to me, soon overcoming their fear and lunging at me. I sat against a wooden dog kennel being used to house them, legs stretched out, and fended off three cubs under a year old, my arms and hands soon cut all over. Returning to the lodge, Jimmy let Yuri drive the jeep, giving directions at junctions. This evening we ate our meal with the Russians, now that the ice was broken, Irina the ice maiden warming up a bit.

We bade them goodbye at midnight, having to be back at the hotel the next day, and set off for an overnight drive, Po and family having set off around 5pm. The roads were quiet and we chatted as we progressed, Big Paul asleep in the back, being pulled over by a bored traffic officer around 2am as we passed Nairobi. When we said who we were he apologised and saluted. We arrived back around 4.30am, straight to bed to get three hours kip.

In light flannel suits, we strolled around to the golf complex at 9am, the security now tight, and met Rudd and Cosy, the principle organisers of this event. We left them to greet the guests arriving, moving first to a Rescue Force marquee. Ducking in, we greeted the gang; Coup, Doc Graham, Doc Hoskins, Mac, and Hancock from Hong Kong – his whites displaying a Chinese flag. I inspected the posters and table displays, many enlarged photographs pinned to the walls, many copies of all three books available free to visitors. The aim of the tent was simple; to get more African nations interested in hosting a Rescue Force unit, the target for today being Ghana and Uganda.

The next Marquee housed the Chinese industrial delegation and we ambled through, noting numerous large displays and many handouts, thirty people on hand to assist visitors. Jimmy greeted many, chatting to Han and Po for five minutes. Checking his watch, he led me out and into the main building, collecting Rudd and Cosy for a 9.30am meeting with the Kenyan Government, the Ministers for Defence, Schools, Tourism and Foreign Affairs waiting with their aids.

The Schools Minister asked about free lunches and we agreed to extend the scheme to another fifty schools. We chatted about vocational training for kids approaching sixteen, explaining that some would join the Rifles, some would be placed at the hotels and farm, and more again would study farming. The rest would be free to do whatever they chose.

The Tourism Minister thanked us for all the extra tourists, but we made it clear we were at capacity and could not handle any more at the moment. He then handed over the details of farm and estates in default, a less than subtle hint. They were ours for the taking, no charge, so long as we stuffed them full of tourists. We agreed to look at the viability of each, all bleeding thirty-five of them, the hefty pack handed to Rudd.

The Defence Minister, mister Idi Amin look-a-like, then discussed the additional base for the Rifles, an Air Force Base forty miles north of Mombassa, construction under way, sixty men already housed there and patrolling Southern Somalia. We agreed to eventually house three hundred there, increasing the Rifles head count to eight hundred. A new Colonel had been appointed in charge of the Rifles, but worked out of Nairobi. We'd get to meet him soon. We discussed the deployments, the numbers, and how long they would stay in the various countries, as much to make them feel involved as anything else. We would be putting married quarters at both of the bases, a small school and a crèche. At the moment soldiers went home every few weeks to various parts of Kenya.

Finally, the Minister for Foreign affairs asked about Somalia. We explained we would push the buffer east, and some day deal with Aideed, for the peace of Kenya's border as much as anything else. He seemed to be hinting that sooner rather than later would be preferable. I felt like asking him for some money. They did, however, agree to release a regiment of a thousand

men to patrol the buffer zone whilst we moved east, so long as we “assisted” with the logistics.

That led us to our meeting with the Tanzanians next door. We began by explaining we had bought the DeKraft estate and would be bringing many tourists to Tanzania. That pleased them. They asked about Kigoma: was there anything they could do to help? We were recruiting for Rescue Force Tanzania, and explained that the new unit would be answerable to the Government of Tanzania, but funded by us. They delicately asked if we would like to “adopt” an infantry company for “peace keeping” duties. In other words, would we like to pay the soldiers wages. Jimmy told them that if we did such a thing, we would recruit and train as per the Rifles. They had no problem with that, and we suggested a small fifty-man unit to start with, based out of Kigoma. The Tanzania Rifles had just been borne, history in the making. We thanked them for their time, on a tight schedule, and headed to the next room, and Kimballa – President Kimballa now after a quick, but predictable, move on Kinshasa.

His guards let us in, Mister President standing to greet us along with two of his aides. ‘Well, who do we have here? A doctor, a warrior, or a king maker?’

Jimmy shook his hand. ‘One I like, one I have to be, and one I only do for the right reason.’

Kimballa smiled widely. ‘As ever, a good answer. Please, sit.’

We settled. I asked, ‘How’s the new job?’

‘A calling, not a job!’

‘I hear the French Government has – *very quickly* - recognised your legitimacy,’ I said.

‘They have. And after you attacked the Hutu militias, there were awkward questions asked.’ He leant closer. ‘You played them well. I believe they were suitably ... embarrassed and confused in equal measure.’

‘Did you account for all your men?’ I asked.

He nodded slowly. ‘I went out in a truck and found many, after I had been *persuaded* to look, and earned a reputation as a caring leader.’

‘Jimmy can be *persuasive*,’ I agreed.

‘Indeed, and I hear your names mentioned often, especially here. So, as President I can grant you permission to build a clinic ... anywhere you like.’

‘Thank you, Mister President,’ Jimmy offered. ‘I would also like permission to *keep the peace* in Eastern DRC.’

‘If you mean ... keep the Hutus in check ... I have no problem with this.’

‘We would like to continue recruiting and training the Congo Rifles at the base,’ Jimmy suggested. ‘It’s their land, they should defend it.’

‘And if I made you *Governor* of that province, what would you do?’

‘I’d think you wanted me to spend a lot of money keeping that troublesome area from bothering you in Kinshasa. You Ceasar, me Pontius Pilot.’

Kimballa laughed at length. ‘I like this. But I am serious, my friend, I will make you Governor. The French will be ... most displeased. But, since they are not welcome in that part of the world any more...’ He shrugged.

‘It would be *costly* ... for me to build in this region, only for someone else to inherit its control in years to come.’

‘Within the region, all the mines there are yours to manage, taxes to Kinshasa of course.’

‘Of course,’ Jimmy repeated with a false smile. ‘Put it in writing, please, show me you’re serious before I spend a lot of money in your charming country. A copy of the document for the UN.’

‘Consider it done.’

‘We’ll raise a Rescue Force team there, called Rescue Force DRC, your flag on the arm, your patronage.’

When we stepped out my head was spinning, Cosy and Rudd quietly stunned. I dragged Jimmy outside the hotel and in to the brilliant sunshine. ‘Did he just give us Eastern DRC to run, and to mine?’

‘Yep. And under the ground ... is oil.’

‘Jesus. Governor? Are the French going to be pissy?’

‘No, because I’ll involve them, which is more than they could expect given how popular they are in the region, not! Anyway, next meeting.’

The Zimbabwean President was waiting. ‘Mister Silo. Please, come in. And I like the hotel very much.’

‘Thank you, Mister President. Did you get the medical supplies?’

‘They were ... liberated by my countrymen, and diverted to a hospital.’

‘I hereby make a formal complaint: don’t do it again.’ We laughed. ‘I will arrange another one soon.’

‘You are most kind. And growing in reputation and stature on our continent. You must be a great disappointment to the new British Prime Minister.’

‘I hope so.’ We laughed again. ‘And President Kimballa has just offered me Governorship of Eastern DRC.’

‘Governorship?’

‘He knows that I will spend a lot of money developing the region. He also knows I will resist outside influence.’

‘An interesting concept.’

I terrible thought crossed my mind, and I fought to control my reaction.

‘One thing I would like to talk about, Mister President, is Victoria Falls. You are short of tourists because of the sanctions and bad press. I think I could help.’

‘How do you mean?’

‘If I had the concession for the falls and area, I would bring in tourists. And all profits would stay with you. I want visitors to my parks here to also visit the falls, spending a little time at each place.’

‘I will have to discuss that with the relevant persons. We will let you know what we think at a later date. In the meantime, we are interested in the farming college and teachers here. Our farms are not as productive as they could be.’

‘I am sure we can teach your people at our facility, and send teachers to Zimbabwe. I can also get cheap fertilizer from my Chinese friends, they are here at my request.’

‘So I gather. You have some influence with many persons.’

‘If you send people to us here we will teach them, no charge.’

‘That is most gracious. And we will think about the tourists.’

We chatted for five minutes longer, the delegation having to move on, so headed down to the beach bar for lunch with Big Paul, and away from the crowds. Big Paul sat in trunks, a day off, since we did not want him anywhere near the conference.

‘Governor? Fuck,’ I let out. ‘How much oil and minerals?’

‘Tens of billions of pounds worth.’

‘Jesus! And he thinks it’s a fucking wasteland full of Hutus.’

‘No, he expects a big kickback for the mining – from whoever mines there. At the moment people mine without paying any taxes, just an initial bribe to his family. All we have to do, is get the oil and minerals up, whilst making the revenues seem much smaller than they are – like the rest of the bastards already there.’

Returning to the event, we met with the governments of Ghana and Uganda, talking about hotels and tourism, before again gravitating towards the Rescue Force tent to field questions with the gang. That dragged on and on in the heat, a great deal of interest by many countries, except the Arabic countries of the north. At 5pm, with many delegates back in their rooms, we sat down to eat with Po and Han, Rudd still running around and organising people. From the rooftop bar I could see many people on the golf course, chatting as they played. I guessed that was where the deals were being done.

The evening gala was black tie and well attended, many wives putting in appearances in their colourful dresses or robes, and most of them well fed, unlike their peoples. To the Kenyan Defence Minister we played up the concerns over Aideed and others, and offered to fund a small counter-terrorism unit. He fetched the Police Chief and we repeated the concerns and offer, a further meeting promised. Po and Han were kept busy all day, shattered by 10 o’clock and off to bed. Few guests stayed up late, more meetings scheduled for the morning. We wandered back down to the beach hotel around midnight, passing many police officers, finding Cosy sat drinking alone.

Joining him, I said, ‘Alone?’

‘First time in days for a quiet drink.’

‘A bit hectic?’ I asked.

Cosy nodded. ‘Glad it’s mostly over. Was Kimballa serious?’

‘Yes,’ Jimmy suggested. ‘He thinks we’ll keep the Hutus in check.’

‘Will we?’

‘Yes. And get mining concessions worth more than he realises. *He* thinks he’s playing *us*, hoping I’ll not let another version of him rise up with money made from mining. He’s hoping I’ll kill every warlord there, saving him the trouble.’

‘Will you pop to the orphanage before you leave?’ Cosy asked.

‘Yes, we’re here a while yet,’ Jimmy suggested. ‘All OK?’

‘Those American doctors left, and the Chinese came and went. We now have one thousand two hundred children, building towards the farmland - places for older children.’

‘The farm gets Chinese fertiliser?’ I asked.

Cosy nodded. ‘The productivity is good, all the spare land now planted.’

‘So what are you these days?’ I asked. ‘Orphanage manager, or farm manager?’

‘A bit of both. I like all of it.’

‘How are the boy scouts?’ I asked.

‘There’s about a hundred boys in the scouts, another hundred in the Army Cadet unit.’

‘Expand the Army Cadet unit,’ Jimmy ordered. ‘Boys over twelve, but keep the bright kids studying. You got the computers we sent over?’

Cosy nodded. ‘Oh, we have two pregnancies.’

‘It happens,’ Jimmy said. ‘Move them to the farm, don’t let the school inspectors see them. Give them small houses and jobs. Oh, you know that land south of you, over the road?’

‘Yes.’

‘Try and buy it, build a girl’s college and a boy’s college.’

‘That would help,’ Cosy agreed.

‘Offer a nurses course, they can go straight into Rescue Force,’ I keenly suggested. ‘And boys over sixteen can join the Rifles junior section, there’s already a few young lads there.’

The day next we took a break from pressing the flesh. Big Paul drove us to the new Rifles base, meeting up with Rudd’s building manager at 9am, the same guy who had built the golf complex. The base commander came over to meet us, a senior Air Force officer, and we toured the Spartan base, a lonely group of four helicopters sat on the apron. The Rifles detachment had taken over an old barrack block across the airfield, two new buildings already under construction next to them. We grabbed the Rifles’ Kenyan officer and continued our tour, climbing the back stairs of the barrack block to its roof.

Jimmy told the builder, ‘We want barracks for five hundred men,’ surprising the base commander. ‘Room for growth.’

I took in the base, noting plenty of room inside its perimeter. It already offered a small dusty assault course and a twenty-five

yard shooting range backed by sand, and what looked like several garages.

Jimmy added, 'We'll need a large canteen, a gym, a better assault course, a hundred yard range that's enclosed, and plenty of classrooms and admin blocks. I'd say ten large classrooms at least. And outside the base, a married quarters with a hundred small houses. And let's get that fence improved, eh?' He faced the base commander. 'We will, of course, clear this with the Defence Minister. Will we be able to base a few helicopters here?'

'There is already capacity for many aircraft, just the one squadron here now,' the man answered.

'Then we may put a few Hueys here, for training and border patrol,' Jimmy informed the officer.

The commander showed us around the quiet officer's mess and we sat chatting over coffee for an hour, catching up on some of the Rifles other activities. The Rifles now had many men being put through parachute training, the best hundred selected for what we called The Pathfinders; they received twenty percent extra pay. They would then be offered free-fall training, and even practised jumping out of Hueys at just a thousand feet, static line drops. We also had a bodyguard course running; close quarter fighting with pistols.

Back at the hotel, the conference was still going, most of the leaders sat now in a large marquee and listening to speeches. At least today was cloudy, and cooler for them. We wandered in and met Rudd, explaining the building work at the air base, soon joining the gang in their tent, a few visitors nosing around and asking questions.

'Much trade?' I asked Mac.

'Lots of interest, the Ghanaian's interested as you said. And Namibia.'

'Namibia?' I questioned. 'Now that would be a great spot for a training camp, miles of open space, and coastline. But we'll tackle Ghana first.'

'Rudd's found more old jeeps than we need.'

'Store them, cover them over,' I suggested. 'Be cheaper now, than later.'

'We give plenty to the Rifles or Abdi,' Mac said. 'They got a need. You heard what he did, Abdi?'

‘What?’

‘He snuck his boys into the coastal town of Djerbi, wiped out the warlord, his family, his pet fucking dog, and left. Some around the southern towns running scared of him.’

‘Only the warlords,’ I countered. ‘And we know what he does, *all* of what he does. We’ll clear those towns soon.’

‘You’ll go into the towns?’ Mac questioned.

‘When we’re ready, and in force, one street at a time, disarming everyone.’

‘And Mogadishu?’

‘Long way off,’ I assured him.

‘They moved another fifty miles east just this week, a warlord came over to our side,’ Mac reported.

I nodded. ‘Small progress. Still, we’ll give Aideed something to think about soon. Oh, Tanzanians gave us permission to start a Rifles regiment over there.’

‘Kigoma?’

I nodded, visitors now entering the tent.

Back in the UK, Jimmy began giving Yuri in Moscow stock market and commodities tips. Yuri did well, soon paying us a visit in London with Irina. We put them up at the club-hotel and showed them around London, a Saturday night spent introducing them to celebs, Irina most impressed. And everyone was most impressed with her, the good lady tall, elegant and very beautiful. She made a big play for Jimmy and bedded him; he took one for the team. In fact he took two, because she grabbed him on the Sunday night as well.

Jimmy asked Yuri to hang onto our revenue cut, and our Russian friends departed back to Moscow.

It’s another crash, but not

October 1997 came around, and I flew over to Hong Kong with Big Paul, our lumbering bodyguard snoring happily most of the way. Jimmy went and sat in McKinleys’ offices in London, a deal worked with the directors, and his trades would be hidden

through their New York and Singapore offices. Han brought me two Chinese traders, and some sophisticated kit that linked me to a central source, then on to a dozen others, Po's trusted family trader sitting alongside me in Po's personal office. We were ready, but it wasn't exactly difficult, knowing ahead of time what the markets would do.

The day before the slide, with the markets in Asia already down, Jimmy contacted the investment bank owned by Senator Pedersen in the States and suggested several trades. Positions were closed out and they were told to wait till the markets had dropped four percent before doing anything. Jimmy and I then proceeded to open large futures positions, following the market down whilst talking in code on the phone or by email; breasts, legs, hips and eyes being metaphors that should confuse anyone listening in. We calmly sat and watched the Hong Kong markets drop six percent and made a killing in Asia, not bothering that much with the UK market in comparison. With the UK and US markets down sharply, but just two percent, we reversed quickly and bet the upside. Jimmy gave the bank in Texas modest trades on the upside, and the market recovered quickly.

'Timing is everything,' I told the impressed Chinese before I left the colony.

Back in the UK, we were hearing rumours of US banks getting their fingers burnt, a whiff of a suggestion that someone had tried to copy us via Pedersen's bank, a little slow on the turn. The bank itself did OK, but anyone copying and not paying attention could have been caught by the snap back, as we had intended; some lessons had to be learnt the hard way. Yuri in Moscow did well out of the mini-crash, Jimmy having tempted him towards the index futures action, away from his comfort zone in the commodities markets.

When the trading accounts had finally been reconciled we were eighty million pounds better off, most of the funds directed to Mawlini's registered charity and its very large security detail, a.k.a. the Rifles. Money from several other beneficiaries of our trading intel' was also sent to Mawlini, and from there it was dispersed into other accounts. Kigoma got a little money for Rescue Force Tanzania and the fledgling Tanzania Rifles, but Forward Base received the lion's share of the money for the Congo Rifles and for Rescue Force DRC, the remaining money

earmarked for projects in our newly administered province. Jimmy was, after all, now the Governor, something that had made the newspapers in many countries.

Building contractors and companies in Burundi, Uganda and Malawi had been awarded contracts, roads now hurriedly being repaired and widened in a triangle, Forward Base at the westerly apex. As the region's generous administrators, we recruited current and former politicians from Eastern DRC – including the former regional governor himself, plus a few former UN managers, and got to work, making the money go a long way by paying local wages and local rates. Forward Base grew rapidly, the Congo Rifles grew rapidly, and we used the carrot and stick approach where we could, buying up surplus weapons and giving people jobs, the Rifles shooting any armed Hutu who resisted. The Hutu camps received well-guarded clinics and well-guarded medics – pistols worn on hips, as the Rifles hid themselves along roads, in trees or on hillsides. Any group of armed men would be fired upon, any vehicles carrying armed men would be shot up by the snipers and intercepted. Jimmy had said to me: “All you need to win a conflict in Africa, is to kill the other guy at four hundred yards, because they can't shoot straight.”

True to his word, Kimballa signed over mining rights to us. The first mine, producing tin ore, had once belonged to a Belgium company. We contacted them and told them we would mine it, whilst giving them ten percent of the profit – take it or leave it. Since they had abandoned it fifteen years earlier we had a case if they went to the European courts. It was in a Hutu refugee area, so we employed Hutus to mine it at a low, but fair wage, and built a clinic at the mine, bringing in new equipment from China where needed. The Rifles kept the peace, and ore soon flowed towards Kenya on repaired road links.

With the profits from the ore coming back to the mine we employed more people, and bought more equipment, paying monthly productivity bonuses. Doc Adam injected our workforce, so sickness became none existent and productivity rocketed. Hundreds of self-assembly huts were brought in from Kenya, the journey adding to the expense. At least it would have done if we had not used ore trucks where possible. Drivers were also allowed to pick up paying passengers both ways, the revenue supplementing their wages.

I was still seeing Katie and enjoying the high life around London, lots of parties, but our fiefdom took much of my time; we were in a big hurry to recover our costs there, and to get beyond the point where Kimballa could pull the plug. We had started paying taxes to Kinshasa as soon as the first ore was sold, just to keep the main man happy, but the tonnage had been skilfully “adjusted” down.

Sitting down with the “M” Group, we explained the future oil revenues from the DRC, and made combined and long-term plans. Sykes created a small unit inside the Foreign Office for just that purpose and flew out advisors to assist us. We also petitioned the UK and US Governments for aid money to the region to come through us. What we had not revealed was that we had continued to build up the Congo Rifles on the quiet.

Fully expecting a backlash from former mine operators, including old colonial companies, we organised a meeting in London for the affected companies, bursting their balloons by offering to help where we could. The mines would, however, be expensive to police and protect; we’d need our cut. Sykes and the British Government had quiet words with British Companies, the US Governments with their companies. Still, Jimmy predicted that several groups would try and kill him, not least because many of the former warlords involved in controlling the mining for western companies had mysteriously disappeared. The meeting produced both people willing to co-operate, and those that sat with folded arms and stern faces, our solicitors present and advising us every step of the way. Actually, they determined that these companies did not have a leg to stand on and showed us a UN report that suggested they were in bed with warlords and guilty of numerous crimes. Being the sort of people we were, we made sure every reporter in Europe got a copy of the report, and nudged the UN to poke the mining companies for answers that they did not wish to give.

The day after the meeting, a cold December day, we held a meeting with representatives of the UN, the US, the UK, Belgium, France, Kenya, Tanzania, Uganda, Rwanda, Burundi and Malawi. Around a large table at the Foreign Office we assembled, senior people at the table sat with assistants immediately behind them.

‘Gentlemen,’ Jimmy called, no ladies present today. ‘I have invited you all here, and asked for your kind co-operation, in discussing Eastern DRC – and my role in that region, since President Kimballa has taken the unusual step of nominating me a governor of the turbulent region.

‘My first interest in the region came when the Rwandan crisis occurred – I sent medics in to assist where we could. After that, we built a base and sent medics to various camps, and are now involved with building many clinics. I have also been involved in the development of the Congo Rifles, since I believe that the region should be policed and defended by its own people, provided those people are more of a benefit than a hindrance. It is my aim to continue to grow the Congo Rifles until they are both police and army in the region, and outside interests are put second to local interests.

‘As you are aware, I have become involved in several mines, shipping ore out and paying taxes to Kinshasa. Some commentators have suggested that I am financially motivated, so let me state, again, that over eight-five percent of everything I earn goes directly to charity. Of the mines I have become involved with in the DRC, some profits go to their former owners – where losses could be proven, the rest of the profits go to either the Kinshasa Government or local interests. None ... of the money comes to me, nor ever will – I don’t need the money.

‘Some of you have asked what my intentions are for the region. They are this: to first create a peaceful zone, then to develop the resources for the local people – not to the benefit of outside interests. If the DRC develops, then its neighbours should also develop. It is my intention to enter into a road-building phase with profits from the mines, to the benefit of Uganda, Rwanda, Burundi and Malawi. Heading west, it is my intention to develop the roads to Kinshasa, and regional airports. Now, those are my intentions, but we’re here to discuss *your* intentions, in particular ... *interference* in my plans.’ He faced the French representative. ‘Yesterday, a group of French colonial nationals and mercenaries, working for a French Mining Group, were intercepted and detained – on their way to assassinate my people in the DRC.’

A chorus of whispers broke out.

The French representative gave a startled, ‘What?’

‘The detail was sent to the French press an hour ago, including video interviews and confessions.’

The UK representative said, ‘We’ll be looking into that with the utmost urgency and importance.’

Jimmy added, ‘The mining group in question has links to many French politicians. May I ask what the French Government has designs on, in my area?’

The French representative complained at length, the Kenyans offering more soldiers, a few fingers pointed by the Rwandans at the French.

Jimmy called them to order. ‘Gentlemen, I will make you all this promise. If, in two years time, I have created a peace in the region, all claims to mine ownership will be looked at in a British court. I cannot guarantee what President Kimballa may wish to do, but I will try and make sure that those who have lost out are compensated, as I have voluntarily done with a Belgian company. You all have the option of approaching the Kinshasa Government directly as well. If they ask me to leave the region I will. At the end of the day, I am a guest there.’

Everyone was allowed to speak in turn, followed by a question and answer session. The UN backed us, and our approach, as did the British and American Governments, and most of the Africans. When the Ugandans and Rwandans offered peacekeeping soldiers, Jimmy refused, saying they would not be necessary. The Rwandans then pointed at Hutu attacks across the border, so we offered to increase the border patrols. But the Rwandans pressed their helpfulness. Jimmy finally said that he had been entrusted as governor, and if any country moved soldiers in without his permission they would be met by force. It left the Rwandans and Ugandans appearing a little put out, especially when the UK and US offered military support if necessary. French peacekeepers were told they would be welcome, despite the French mercenaries, and protests from the Rwandans. Jimmy went so far as to invite the French back in, a formal request – and would they mind operating along the border with Rwanda. The Tanzanians offered a thousand men and we graciously accepted, saying we’d use them in the north, along the Ugandan border.

Everyone knew that the governments of Uganda and Rwanda had eyes on the mines, but no one mentioned it openly. The UK

representative indicated that Britain would send a number of military “observers” and a few aircraft. Our reporting of the Zimbabwean Government sending troops surprised a few, the UN indicating the Nigerian peace-keeping soldiers were ready to move in when requested. Jimmy said they would be most welcome, but not needed yet.

The meeting broke with me feeling that there was trouble ahead. We had invited the French in to short-circuit any objections they could have, and Red Cross France and Medicine Sans Frontier had come in at our request, in numbers, financial assistance provided. But, at the end of the day, I had to question the logic of exposing ourselves like this. The TV news that night was of the French mercenaries, great embarrassment for the French Government, videotaped confessions played, people named. We gave an interview, labelling it as “an unfortunate incident”, and explaining that the men were being flown directly back to France.

When asked, Jimmy said, ‘I doubt there will be a trial, the men are connected to powerful politicians. They’ll disappear in the system, or be acquitted.’

The men were arrested as they got off the plane the next day, in front of the French TV cameras, the French Government reeling. Some of the information sent to the press could not have come from the men themselves, but seemingly only from within the mining company, who must have wondered who talked. Several junior ministers resigned. Even the UN debated the mini-crisis, and the wider exploitation of Africa by mining companies. We spent some money around Africa and Europe to stoke the fire, and the debate raged. Even Kimballa got involved, saying that foreign provocateurs in his country would be dealt with harshly. At the end of it, hardly anyone in Europe could have missed our faces, or the debate. Jimmy gave numerous interviews, stating that African wealth should benefit the Africans, not western mining companies.

As all this was going on our helicopters went back into DRC and pounded not only the Hutu militias, but warlords controlling mines. Jimmy knew exactly who to hit, and where to find them, small groups of Rifles going in with the ex-SAS guys and assassinating the warlords, whilst making it appear to be local infighting. All the while, the Congo Rifles grew, soon two

thousand soldiers undergoing the benefit of good food, clothing, weapons and training – plus education in the evenings. All closely monitored by the modest force of French peacekeepers at the base, who still enjoyed our hospitality.

New year came, and we visited Po in Hong Kong for a break, the Rescue Force building now bustling when we toured it. They had been deployed to a few floods around the region, and minor quakes in China, but no major disasters as yet. We kept them busy with postings in Africa as they awaited something more interesting to do.

Sitting down in the Chinese Embassy, we laid out a twenty-year plan for African ores to reach China, our host always happy to entertain long-term plans. We asked them to contribute towards improvements at Mombassa docks, and help towards a long road from the West African coast through the DRC and towards our area. The cost of the road was factored into future tonnage and rates, a very detailed calculation handed over and discussed. Jimmy had to insist that no work start yet, lest people think we had the Chinese in mind all along; they would wait a year as they made plans. We gave them the name of a mining corporation that they had dealings with, and that would be a pain regarding the DRC. Gentle financial pressure was to be applied.

The new year trip was noteworthy for the fact that I was unfaithful to Katie, the move finally making me realise that life with Katie was more about the parties, than us. It had run its course after almost three years, something I had known after eighteen months. I took the coward's way out and sent her a text message. And that was that. I made the tabloids for all the wrong reasons.

Back in the DRC, we chartered a 737 and scheduled it to fly Mondays and Fridays to Kinshasa, requesting a dozen officials from the Kimballa Government and paying their wages and costs. Everything we did, most everything we did, we ran past them and they reported back, Kimballa left in no doubt that everything was above board. The UK and US Governments finally agreed on an aid package to the region, a cool four hundred million pounds at our disposal. We wasted no time. In a massive move we employed five thousand Hutus to build houses, new small towns at the refugee campsites. We employed another ten thousand directly to mine ore, taking over dozens of mines.

Goma, our nearest big town, got a face lift, a revamped hospital, and a permanent garrison of Congo Rifles, many former police officers re-hired, armed, and well paid. At the same time, we built a new camp at Forward Base, a police training academy, paying for police officers from Kinshasa to come out and work.

Each town in our region had its courthouse revamped, the security improved, judges and lawyers flown in from Kinshasa where necessary. The wild east of DRC would not be like The Wild West. The placement of French peacekeepers along the Rwandan border was a poison pill that the French had reluctantly taken, soon regretted with numerous clashes with both Hutus, and Rwandan Tutsis soldiers who blamed the French for not having done enough in the genocide. With French public opinion eventually bringing pressure, they were withdrawn and replaced by the Congo Rifles, who were Tutsis. They got along with the Rwandan Army, but killed Hutus when the Kenyans were not around. The French observers at the base, however, remained, and we tolerated them, being annoyingly helpful.

The international aid money that we had been entrusted with - was focused mainly on the long-term solution of the camps. Although Kimballa had pushed many Hutus back across the border, a large number remained. If they were not going to take up arms, they'd have to be employed, and kept busy. That also went for the indigenous peoples, many used to taking up arms for their supper. As each mine was taken over, most with no existing leadership in place, we hired as many people as we could. Many locals mined ore by themselves, or in small groups, so we set-up purchasing stations, where we would buy the ore from them and truck it out. That worked well for the diamonds, because we knew that anyone gainfully employed in diamond mining would steal most of what they found.

Magestic

Geoff Wolak. October, 2009.

Part 4

Another new house

With the time judged to be about right, Jimmy approached the owner of the land behind our house, actually three owners with all the acreage he wanted. The first small farm was up for sale, so that wasn't a problem, a quick sale and an extra one hundred and sixty acres acquired, Rolf extending the fence along a winding road that delineated the northern edge of the property. The third property would have been isolated if we could not acquire the middle property, so they were approached first. Their land consisted of almost fifty percent mixed woodland and backed onto the river, a valuable stretch for trout and salmon fishing. We sat and had a pleasant chat with the owners, asked if they want to sell "some" land, suggesting to them we wanted cottages for family and visitors. They made various non-committal noises, so we left them to it.

The area we had already purchased was cleared quickly, trees cut down, tarmac avenues laid. Those trees that remained had their branches below seven foot chopped down, many bonfires burning the debris of an afternoon. Jimmy had applied to the local council the day we had signed for the new property, a hefty planning petition to build "staff" houses in the grounds, the plans pre-prepared and professionally presented. Since they were for our staff, and internal - not on a public street or for public sale or use - only the construction needed planning permission. And with the proposed houses hidden from view of the public road, there was little for any neighbours to object about.

Foundations were laid in anticipation, gas and electric extended to non-existent premises. When the permission arrived, the builders were waiting, brought in the next day. Eight houses would now be built on an internal avenue, the tree-lined avenue leading to our house one way, to a distant gate the other way. Each new house would be two storey, four bedroom, but with high sloping roofs and loft conversions. Front grass would be communal, rear gardens segregated with six foot wooden fencing. We even put in street lighting.

When the neighbours in the middle saw the building work for the new houses they figured that we had given up on them, but gave an asking price anyway, but only if it included their whole

property. We waited a few weeks then made a low offer. The offer was accepted a week later, paid and signed in record time. That day we drove to the third property, whose owners wanted to retire abroad. We now had the three properties, the final property important for privacy, since its small rise would afford the press a view into the main central area, and one damp Monday afternoon Jimmy presented Rolf plans for the main house. Poor old Rolf asked Jimmy if he was crazy, making me laugh. So what if it was bigger than Buckingham Palace, the Palace was not that big. With his head spinning, Rolf headed up the estate to look over the topography.

As we had done on the first plot, we trimmed the trees, and all branches below seven feet, some left for ornate appreciation, some left as a barrier to being viewed from the road. Internal avenues were laid across the land as per Jimmy's précis instructions, not least to give the builders unhindered access across sodden ground. The fence was quickly extended all the way around the estate, a second fence placed fifty yards inside. That was the special fence, to be fitted with sensors, the first was to keep out the public.

I got home one day to an empty house and decided to have a nose at the new foundations, finding five yellow portakabins belonging to the builders, a guard supplied by the builders to look after their huts. A second guard approached, a man that Jimmy had just employed, another mate of Big Paul's called Rob, the guy around forty. He greeted me with two fully-grown Alsatis, pointing at his temporary home just down slope. I wasn't happy at him living there, said so, and led him down to have a look. The cabin was like a caravan on the inside, quite cosy. And came complete with four Alsatian pups in a basket.

'Your pups?'

'For this place when it's ready.'

'Be eight then,' I realised.

'Need it, fucking big place.'

'You happy with this for six months?'

'Sure, I've lived in worse. And it saves coming back and forth. When I want a warm shower I use Ricky's place, Cookie spoils me, so no big deal. With my wages I'm saving money, no rent.'

'Wife? Kids?'

‘None of the above,’ he said with a grin.

We ambled back up, throwing tennis balls for the dogs, and stopping at the muddy foundations.

‘What’s that going to be?’ he asked, pointing a concrete section.

‘Swimming pool. Rest will be a sort of basement office.’

‘Big place.’

‘Very ... big place. You’ll live in one the houses?’

‘Nope, got a cottage down by the river; Jimmy offered it, I took it. Isolation, river, woods – it’ll do me fine. What you doing down river from it, those big holes?’

‘Two fucking great ponds, linked to the river.’

‘You must be psychic - fishing’s my passion. You’ll stock them?’

‘No, they’ll have special little tunnels to the river so that fish can get in at certain water heights.’

‘You’ll have trout in there, coming and going. Be interesting to see what else turns up. If you get Dace or Grayling in there they’ll make a happy home and stay. What’s the little wall for down there?’

‘Flooding. Some years it comes a foot over the side. Your cottage at river level?’

‘Nah, four or five feet above it.’

‘Why aren’t you in there now?’ I puzzled.

‘Being gutted and done out. Three months work.’

‘Get some fly fishing rods, you can teach me. We’ll have a go at the river.’

‘Sunday I’ll be down there, after 8am.’

‘It’s a date.’

Bananas

Mickey and Yuri had been joined by two Russian pilots down on their luck and in need of some work – no matter how dangerous, both Mi24s now in use and attacking convoys or jeeps when they were spotted. Hardly a Somali gunmen would dare venture out in our area. And that area was creeping slowly towards Mogadishu;

not on the ground, but in the air. North of Mogadishu, along the Ethiopian border, we extended our influence, easily taking land that was barren and mountainous, land that no one wanted.

When Jimmy considered the time was just about right, we launched a large-scale attack at dawn, one day in June. The two Mi24s lifted off, followed by a line of six Cobras and four support Hueys, Hal and Hacker both in action. They flew directly to the important banana growing region north of Mogadishu, part controlled by Aideed, part controlled by his rivals, and the source of their rivalry; the banana sales propped up Aideed's militia. Ten small bridges over gullies were destroyed, two more significant bridges downed. Where the roads were good, half-decent tarmac surfaces, large holes were blown into them. The helicopters then set about the trucks used to move the bananas, finding them helpfully parked in neat rows. At the end of the operation, anyone wanting to move bananas to Mogadishu port would have to first borrow a few trucks, then divert a long way around the blown bridges.

Abdi had men working in the port, his spies, and no trucks came for a week. When the trucks re-appeared, Scorpion Base received a signal, the repaired bridges blown again, roads further potholed. The trickle of lorries slowed, hurting Aideed in the pocket. When Aideed, now struggling financially, met to discuss this common threat with the other warlords we were waiting, Jimmy having anticipated the meeting. Many of Abdi's men had been placed inside Aideed's militia, a small transmitter giving the helicopters a signal to close in on. With the sound of the helicopters scattering men at the meeting, the noose was tightened, the approaching Cobras making holes in the road as they approached. In an operation that lasted six hours, our helicopters returned time and again, strafing the jeeps, attacking buildings. At sundown the US Navy intercepted phone calls; Aideed, many of his lieutenants and two other warlords, were reported dead.

Abdi was now Colonel Abdi, and commanded over two thousand men, many having switching sides as a prudent move. They were well trained, well equipped, and – unlike those they fought against - well fed. The exiled government had returned, first to Baardheere, then to a coastal town, and gave our activities more credibility. We gave them money, Abdi gave them

grudging respect, and they told the world's press that they had invited us in.

With the death of Aideed we did the unexpected, and pulled back. The regular Kenyan Army took responsibility for the border, the Kenyan Rifles massing in the southwest with the Somali Rifles, under the young Colonel Abdi. The first small town on our list was surrounded, the armed men inside told to come out - or be slaughtered. They took the sensible option, not least because of fly-bys with everything we had that could stay airborne; the inhabitants must have thought we had a hundred aircraft. Abdi's men moved in and searched everyone, and every house and building, a few exchanges of gunfire. All weapons were collected in, the local leader allowed to keep a few for personal protection. Abdi left ten soldiers of the Kenyan Rifles and twenty Somali Rifles to police the small town.

The next town along the coast was larger, but the same fly-by left the residents fearing annihilation. Leaflets were dropped, armed men told to surrender – or else. Some surrendered, some threw their weapons into the harbour, and some hid their weapons. On the second day, the combined forces moved in before dawn, searching houses, setting up roadblocks. Abdi's men had already infiltrated the town, and now pointed out gunmen and warlords, the men taken away - never to be seen again. Houses and compounds belonging to the warlords were raided, weapons seized.

The third town was larger again, and again rude dawn fly-bys were duly organised. But this time Abdi's men had snuck into the town in reasonable numbers. At dawn on the prescribed day the combined forces moved in, Abdi's men hidden near the abodes of the identified, yet sleepy, warlords. When the men in question fled their rude awakening they were cut down, air strikes called in where pockets of gunmen grouped. Three towns had now been liberated, government officials moving in, along with the UN and other NGOs. To settle the populations, food trucks rumbled in from Kenya, wheat from the UN and the US. And that signalled a pause, and a consolidation, as Abdi's men spied on movements in Mogadishu.

1998. Calling International Rescue

June and July were typically very hot in Kenya, as well as in Hong Kong. With a combined training exercise well overdue, we organised an exercise with Dunnow's old mates in the Australian army – they had read the books. June and July in Oz were typically cooler by a few degrees – it being their winter, but the scheduled exercise was being held in the tropical north. The majority of our experienced staff assembled in Nairobi on June 20th, and a party of fifty-two departed by commercial airliner to Australia, heading for Cairns in the northeast. It was a long way to send our Hercules aircraft, so we simply hired three commercial Hercules, the Australian Army laying on two more for the exercise if we'd pay the fuel.

RF Hong Kong turned out in force for the exercise, sixty of them, our people billeted at a seldom used and remote Army base. The base consisted of a meandering spread of low huts, a large mess hall, and not much else. The ground was hard and parched, one small area of green grass in front of the mess being nurtured. Along roads with whitewashed curbs, we would walk or drive back and forth to the mess hall or the toilet blocks.

The first exercise involved long distance navigation in hired tourist jeeps, a four day jaunt of sleeping rough and camping along the roadside, "Roos" shot and cooked. That was followed by several days of survival training, courtesy of our Australian Army hosts, whilst Jimmy finished off a special training scenario. Po and Han came down to see how the HK teams were doing, and joined me and Jimmy as the special scenario was finished, the first mixed group of five rescuers being brought out to it, Dunnow and Ratchet amongst them. Forty miles from anywhere, in the middle of a flat expanse, our convoy of trucks disturbed the Roos and pulled up on the wreck of a large aircraft. I noticed immediately a camera fixed to a pole, trained on the wreck. With a hand over my eyes I took in the flat shimmering horizon, finding no features.

Jimmy called everyone together. 'Ratchet, you're nominated leader, Dunnow second in command for the next seven days. This ... is your scenario. That –' He pointed at the wreck with a mischievous smile. – 'was your aircraft, which crashed here.

Inside you will find a map indicating where the pilot marked his last known position before dying. Inside the aircraft is everything you're allowed to have and to use for seven days. You may, if you wish, wait to be rescued. You may decide to walk out of here - it's only forty miles to the nearest farm. If you get lost, it's sixty or seventy miles. It's your call; we're not giving you any advice. Ratchet, take your people inside.'

As Ratchet led his perplexed team of unwilling volunteers inside, we drove off in a cloud of dust and left them to it.

'How much food?' I asked with a grin.

'Enough for three days.'

'Three days?' Po repeated. 'It small.'

'*It ... is a test,*' Jimmy emphasised. 'There's fuel in the wings, water in the engines, local animals that could be trapped. They can make tools from the wrecked aircraft, and they have a satellite phone just in case. There're also two dummies in the pilot's seats; they have compasses and matches – assuming they're searched.'

Eight days later the weary group reached a farm; improvised headgear, improvised walking sticks, improvised sunglasses, cans of fuel for fires, other cans for water. Their lips were cracked, their feet raw, the local farmer shocked. Back at camp we greeted them with cold beers and quick medicals. And they were sworn to secrecy, the next group already debating whether to stay with the wreck, or head out on foot.

Isolated from the rest, their feet soaking in water, I asked the first group of victims, 'Did you find the compass?'

'No,' they puzzled.

'It was in the dead pilot's flight suit.'

'Bugger.'

'The matches?'

'Nope.' They exchanged looks.

'Same place.'

'Frigging 'ell!'

'Water in the engines?' I probed.

'Yep, got that out and cleaned it up.'

'Catch any animals?'

'Killed a small kangaroo,' they admitted.

'Made nice light tents from the parachutes?' I teased.

‘Nope,’ they groaned, looks again exchanged. ‘And fucking Wombat Fly Boy was with us!’

They got a full debrief from the Australian Army on what else they could have done, or done safer and better, two day’s rest earned, blisters tended.

The second group used the parachutes, and the water in the engine. They found the flares, the matches and the compass, then right royally screwed up the navigation and marched a hundred miles, right into a town. While that was going on our main body launched airborne rescues in isolated areas: an hour’s flight, a day’s march – camping out at night, a rescue in a collapsed building – an old mine building, followed by a march back out and a flight back.

The third group at the plane wreck were led by a HK doctor. He organised everything very well, but caught so much food they decided to stay, eventually relieved by the next team. There was no rule against waiting to be rescued, it was a test of survival skills, and the camels and kangaroos would not be missed, the team actually putting on weight.

On July the 15th we deliberately gave them a two day break in Cairns town; shopping, swimming, exploring. Everyone was refreshed when they returned on the 17th. That evening, with everyone sat eating in the large mess hall, we got a call from Hancock in Hong Kong: there’d been an earthquake in Papua New Guinea and could we help, the call no surprise to us.

With everyone conveniently gathered in one place, Jimmy stood on a chair and called for silence. ‘Listen up! There’s been an earthquake in Papua New Guinea, a bad one. It’s not far, so we’re attending. You’ve got ten minutes to pack your kit. Move it, people!’

A thunderous scrapping of chairs preceded a mass exodus. We called the airfield and asked for the Hercules to be made ready, and could the Australian Army loan us theirs as well – we’d pay the fuel. Our hosts rallied every mode of transport they could find and we headed out to the airfield. Assembled at the airfield, national teams were made up, sub-teams grouped. I patrolled the lines, giving out Australian dollars, indicating that they should be used to buy local food and shelter in Papua.

With Hancock getting us permissions for the operation we took off for Papua New Guinea, Jimmy telling the pilots to head

to the northern coast, explaining that we had UN permission, which we didn't. Ear defenders were handed out and checked, the inside of Hercules a good environment for high-tone deafness for unprotected ears. Dunnow and two others rigged hammocks, people found comfortable places to lay down, the basic seating along the insides of the fuselage unsuitable for long flights.

In little under an hour we approached the Southern Coast of Papua New Guinea, the pilots relaying to the local air traffic controllers that we were a UN emergency flight. No objections came back for a lack of a flight plan. Jimmy and I heated water, every Hercules having a small water heater, and we made tea whilst trying to remain upright in the turbulence. Teas and coffees were distributed, performed with some difficulty in the darkened hold.

Just over three hours after taking off we landed at Vanimo airfield, the tower not expecting us, but not surprised either; the north coast was a disaster zone. The first thing I spotted after landing was a bright red Huey sat on the apron. With the Hercules powering down, the trailing Hercules coming into land with their lights blazing, I walked into the small tower building and found the pilot's lounge, a few people milling around.

'Whose helicopter is that?' I shouted.

A man with a heavy frown stepped in, looking me over. 'Mine. Why?' The pilot, obviously an Australian, squinted out the window at the Hercules.

'You want a week's work at a thousand dollars a day?' I waved a wad of Australian dollars.

'Doing what?'

'I run Rescue Force, those are my UN medics. We want to get where the damage is.'

'Oh, right. You ... er ... pay fuel?'

'And your lunch, and a bonus for good work.' I gave him five thousand dollars.

'OK,' he said, making a face.

I stepped closer. 'Fuel it, get it ready.' He stepped out, and I joined the rescuers forming into groups, stood under the airport's bright lights. 'I've hired that Huey, so teams of six will go out. That's teams of *six*, some of you ... get into teams of six!'

Ten minutes later the Huey lifted off into the black night sky, Jimmy and I grabbing a man with a car, Australian dollars thrust

into his hand. He took us the short distance south to a logging company, tooting as we entered. We found another Australian.

‘We’re UN, got medics at the airport.’

‘That’s who landed.’

‘I’d like to hire some jeeps, or trucks, anything you got,’ Jimmy told him.

‘Oh, well ... I got two open top trucks.’

‘Thousand Australian dollars a day each,’ I told him, waving the money.

‘The drivers are asleep inside, mate. You can have the drivers, but I want them to stay with their trucks.’ He pointed out the two trucks, so I handed over four thousand dollars, Jimmy and I soon waking up the local men, who smelt as if they had made a home in the truck cabins.

At the airport we loaded as many people as we could onto the backs of the trucks, the small airfield now appearing cramped with the Hercules. We set-off into the dark, Jimmy knowing exactly where he was headed.

We pulled up first at a small hospital, Jimmy climbing out the truck and shouting, ‘Four doctors, four nurses!’ Eight people jumped down with their packs. ‘Do what you can here, meet back at the airport if there’s a problem – that’s the command centre.’

Knowing exactly where he was going, Jimmy drove on into the night, occasionally passing local people walking both ways, some appearing dazed. And the wet road was becoming a slalom course of debris. At the next junction we could go no further, Jimmy knocking off his engine and jumping down, signalling everyone to de-bus.

With the gang assembled, he addressed the group in the light from my truck’s beams, more than sixty people. ‘I cannot brief you well, because we don’t know what’s out there. This road goes on another thirty miles down the coast towards Aitape, and it looks blocked, so you’re on foot. If you can find local transport then hire it - or steal it. There’s been an earthquake here, and a tidal wave apparently. In your teams, follow the coast road, but don’t go far inland because it’s uninhabited jungle. I don’t want any team smaller than four people at any time.’ The Huey flew over us, back towards the airport. ‘We’ll be here with the trucks, so try and bring the injured here and we’ll ferry them back. If

we're not here, we'll be at that small hospital, or the airfield. I want three teams searching this small village, the rest of you head up the coast road in your teams, and stick to the road till it's light. And good luck.'

They marched off through in the dark, over the junction and around fallen trees, some checking nearby houses. We soon had ten dead bodies, many children, but no one alive who was injured and in need of our attention; whatever had happened here, it left healthy people or dead people, none in between. I stood at the darkened crossroads and watched the Huey head down the coast, figuring I should be up there at the controls. With the sounds of the wind reclaiming the night, I stood and stared at distant dark shadows. The white uniforms helped, but there was no illumination at all here. A cry caught my attention, but I could not figure out where it was coming from. There it was again, off to the right.

'Over here!' I called out, the sound of boots on the road signalling the approach of a team of four. 'Stop and listen. Quiet!'

We listened, catching another cry. 'It's coming from that tree,' someone said. And there were lots of trees. 'Go towards the sound.'

The man did so, and we followed him, soon a splash as he waded through water and into a field. 'Hello?' he called, getting back a cry. 'Here,' he called, and we followed his dark outline. Turning on a small torch, he illuminated two children up a tree, their mother close by and obviously dead, hanged by a branch. 'Get below, I'll go up.'

Holding the torch in his mouth, he began climbing as we stood up to our ankles in mud and water. The kids began screaming, so he simply grabbed them and unceremoniously dropped them to us, one aged around six, the other around four. The women in the group grabbed the naked kids, soothing them as we squelched back to the road. As we reached the junction a car approached from the inland direction, waved down. Peering inside we could see only the driver. 'You go hospital?' The man nodded, the kids loaded with the two women medics, the vehicle heading back the way we had come.

A few hours later, with the dawn half-light illuminating the bodies, Jimmy headed back to organise things. Two of our

groups, those that had been searching the immediate area, approached the crossroads.

‘Mount up,’ I said. ‘We’ll try and drive up that road.’

I woke up the driver, who seemed none too concerned about the carnage, and we set off down a road of grey pre-dawn images, soon swerving around fallen trees. In front of one large tree we had to stop. I had noticed chains in the rear and so grabbed them, soon tying off the tree and dragging it as the lorry reversed. It was enough of a gap, so we pressed forwards as the sun threw light over the devastated coastal area, noting numerous bodies face down in water as we progressed. We slowed as a group of locals approached. Since they displayed bright white bandages on wounds we figured they had been seen.

A mile further along, we spotted a group of four of ours tending a family, tooting and waving as we passed. Another tree was dragged with the chain, allowing us to progress further, the morning now bright and warming up. Two miles around a headland we found a small village and another crossroads, and what looked like two or three teams. I tooted as we approached, halting near them.

‘That road clear now?’ they asked, getting back a thumbs-up from me. ‘Load these people.’

I indicated for the driver to do a three-point turn, facing us the opposite way, then jumped down with the others to load the injured. One child, still conscious and wide eyed, displayed a long piece of wood right through her abdomen, the remainder injured by floating debris; twelve were loaded up. I sent a team back with them, telling the driver to come back to this spot – and wondering all the while if he would.

The truck disappeared around the headland, leaving me with a very muddy group of medics, a wide variety of nationalities. ‘Take five,’ I told them. ‘When then truck gets back, we’ll try the road again, clearing as we go.’

I closed in on Dunnaw when I recognised him. ‘How’re the feet?’

‘Still damn sore, now sopping wet.’

Ten minutes later the sound of a helicopter caught our attention, the red Huey coming into land when it saw us. As it touched down Jimmy stepped out of the rear, quickly unloaded several cardboard boxes. With a thumbs-up he closed the door

and it lifted off. Closing in on the boxes I could see water bottles, chocolate and apples.

‘Grub’s up!’ Everyone received a much-needed chocolate bar, an apple and a small bottle of water.

A long twenty minutes later the truck returned, our medics still aboard. We mounted up and pressed on, twenty medics in white aboard a dirty and dilapidated old truck; an odd site for roadside pedestrians. Around the next headland we approached a small town, part of which included a shanty town built into a hillside; people must have survived the tidal wave up there, I considered. I directed the driver towards the main square, driving through drifts of sand, soon finding other teams treating dozens of injured.

‘Unload!’ I shouted to the gang in the back, directing the driver to turn around again. I soon realised there were more injured than we had space on the truck. ‘Dunnow, grab two men, come here.’

In a ditch we yanked, pulled and pushed a trailer up onto the road and hitched it to the back of the lorry, space for ten kids in the trailer after we scooped out the sand. We put two mildly injured locals in the cab, the rest in the back and sat upright shoulder to shoulder, the kids in the trailer with one medic, the smallest lady we could find. With all the injured loaded, room for only one medic in the back, I told the driver to go slow, giving him a few dollars before sending him off.

Ratchet approached. ‘Everyone down here is dead, those up the hill are injured. Tidal wave smashed into them, so the houses below rammed into the houses above.’

‘Houses, they’re just shacks,’ I noted. ‘Many more injured up there?’

‘Fucking loads of them. We’ll need that truck back.’

‘Bring them down, it’ll take half an hour minimum for the truck.’

Tooting caught our attention, a bright yellow bus coming around the far headland. When it neared I could see Hildy driving. Stepping aboard I scanned the bus, finding a handful of injured. ‘We need the bus, lot of injured here.’ Everyone else could now see the bus; they could hardly miss it. ‘Drive up that hill and turn around if you can, the injured are up there.’ She turned and headed up as I hopped off, remaining at the

crossroads. By time she returned to the crossroads the truck was back. I said to her, 'Keep this bus, it's ours now, bring it back.'

She eased around the truck and headed off down the road as I called to the teams. 'Many more up there?' The answer was no. 'On me, everyone!' I waved them towards me, directing them onto the truck, just squeezing them all on. Stood at the rear of the truck I said, 'Is that all of ours, no one missing?' They checked off their teams, finally satisfied, and we pushed on around the next headland. As we trundled slowly along we passed people on the roadside, able-bodied locals walking along, and covered a good four miles through lush green vegetation before the next village.

Alongside a team of ours I stopped. 'What's here? Anything?'

'Mostly dead, a few minor wounds. We got two cars working.'

'Take your team back to that hospital, it's probably a bit swamped by now.'

With our driver finding the right gear, eventually, we pulled forwards. Around the next bend we happened across a small industrial complex, a team visible inside; white jackets on the top, muddied trousers on the bottom. Stopping, I tooted, a rescuer running towards us. 'What's in there?' I asked him from the truck cabin.

'Just found a large number of injured at the rear, company nurse looking after them.'

'Hop on, show us.' I directed the driver inside.

The truck bounced along uneven surfaces, past rusted metal frames and damaged buildings, wooden huts that would have stood no chance against a tidal wave. We climbed a gentle rise and stopped, many men now visible sat against a hut that had survived.

'All out!' I cried.

With everyone down, the driver turned in a wide circle and halted ready. Inside the hut I could see twenty injured, many serious, the doctors taking charge and shouting various medical conditions to each other, ranking their priorities. I fetched a water bottle, little else I could do, and offered sips to the men outside. The last man was a white, not a local. 'Here,' I said, giving him a sip.

'Where did ... you come from?' he gasped.

‘We’re Rescue Force, we flew up from Australia, but we’re normally based in Kenya.’

‘Kenya?’ He reached around behind himself, dragging forwards a jacket. ‘Nothing to do ... in the evenings here,’ he struggled to get out. ‘We read ... a lot.’

He handed me a sodden paperback, making me laugh. ‘That’s us.’ I opened the wet pages, finding the centre almost dry. Selecting my black and white image, I held the page next to my face and raised my eyebrows.

‘Fuck me,’ he whispered. ‘Of all the places, and all the fucking people to meet.’ He coughed again, now a trickle of blood down his chin.

I stopped smiling. ‘You ... OK?’

‘Don’t think so.’ He coughed up more blood.

‘Medic!’ I called. ‘Get me a doctor!’

A HK doctor knelt beside me. ‘Internal bleeding, maybe a punctured lung.’ He hurriedly placed on his stethoscope and listened to the man’s breathing for a minute. ‘Fluid in both lungs.’ He felt the man’s chest, making the man wince. ‘Ribs cracked both sides, lungs punctured.’

He stood, so I followed him up. ‘Should we get him straight to that hospital.’

The doctor led me away. ‘He doesn’t have the time. We’d need a full surgical ward right here, and then it would be touch and go.’ The doctor walked off, leaving me feeling like yanking him back. I knelt again, not knowing what to say or do.

The man stared up at me, his eyelids heavy. ‘I have ... a daughter ... in Taunton, Somerset. Tell her ... I’m sorry.’ He coughed up bright red frothy blood, his chin now covered. ‘Liked the book...’

Nothing more came from. I didn’t know at what point he died, he just stopped; there was no last gasp, no slumping or falling over, he just stopped, still staring at me. I stood up. This was all a bit too real. The rest of the injured men were being tended by our medics as I just stood there holding the damp book. Tossing the book into the bushes, I knelt down again and eased him over onto his side, checking his back pockets and pulling out his wallet. Inside I found a driver’s license, enough to identify him from. I pocketed the license, placing the wallet back.

Back at the truck, a doctor announced that they had twelve injured to move straight away. I nodded absently, helping to load them onto the back of the truck. Leaving the teams behind, I jumped into the cabin and directed the driver back to the hospital, a glance back at a line of feet sticking out of a sheet.

It was noon by time we reached the hospital. I sent the truck back without me, catching a lift along the coast and to the airport, figuring I'd should probably be organising things there. Hungry and thirsty, I jumped out at the airfield's busy gate and thanked the driver. Ambling in, feeling in no particular hurry, I noticed a number of tents, figuring they were ours. Chinese medics jogged past as I closed in on the tower, but a call caused me to turn. Jimmy waved me over to a tent, disappearing back inside. I ducked into the tent, finding Hancock from Hong Kong, plus many of our senior staff, Doc Graham and Doc Hoskins attending a map spread over a table. Jimmy thrust two tins of meat and a spoon into my hand.

'You look knackered. Get some food in you.'

Doc Graham lifted his head. 'Anymore injured at that mine?'

'Just ... minor injuries, rest I ferried to the hospital,' I reported in a low voice, feeling drained.

'How many walking wounded there?' Graham pressed.

'Thirty. More.'

A senior Chinese medic approached me, but not a HK medic, it was the same guy I'd met in Kigoma all those years ago; the People's Republic were here. 'You do not look well, Mister Holton.' He lifted a coffee mug, the contents downed quickly.

'I found a man, British worker at the mine ... he ... died in front of me. Nothing I could do.'

People raised there heads and glanced towards me. Jimmy gestured me to a chair. Sitting, I tackled the meat, accepting more coffee. With the food in me I felt better, the tent bustling with command staff coming and going. Standing and stretching, I stepped outside, now noticing function labels on the various tents. As I stood there, the red commercial Huey came in to land on the apron, four injured disgorged before it lifted off again. And the pilot was wearing white, one of ours. Ducking back into the tent I downed a bottle of water, a chocolate bar, and a coffee. 'OK, where'd you need me?'

Jimmy said, 'When the Huey gets back, go left seat. Make up a bag; a small medical kit, water, chocolate, tinned meat.'

With a renewed determination I set about my assigned task, soon left seat to Dunnnow for a run twenty miles down the coast. With Dunnnow appearing tired I took over, running back and forth till the sun disappeared below the hills. With a fuel truck attending the Huey, I ducked into the command tent. 'Where we at?'

Doc Graham stretched his aching back and sighed. 'All the urgent cases have been attended to, as far as we can reach. It's now minor wounds and dead bodies.'

Jimmy stepped in. 'Be out of here tomorrow, boys and girls, our planes will be coming back. I'm going to leave eight doctors and ten nurses, and the People's medics will stay a day or two more.'

Hancock ducked in with an Australian Army officer. Hancock reported, 'The Australian Army is trying to reach outlying areas, islands and far off spots. UN is here.'

A toot caught my attention, the yellow bus. I stepped out and looked up, a grubby-faced Hildy still driving. Thirty of our lot, sodden and dirty, stepped down. They followed me to the mess tent, all in need of a warm meal, the People's medics running the spacious canteen. Our medics had been downbeat as they stepped off the bus, but spoonful by spoonful the mood improved, even the odd joke cracked. I made teas and coffees for ten minutes, distributing them, fetching a large plastic block of water bottles. Forty minutes later everyone looked better, and sounded better, heading off to the accommodation tents for some well-earned rest as the sun set behind the hills. From the command tent I grabbed a list of personnel and totalled our inventory of warm bodies; whether they were eating, sleeping or on the toilet. Matching Doc Graham's dispersal list I tallied the numbers; twenty of ours left at the hospital, twelve still in the field at a small town clinic up the coast. We were not missing anyone. A Hercules coming in to land signalled the arrival of the world's press, but I had no intention of talking to anyone. At the back of the command tent I lay down next to a snoring Doc Hoskins and closed my eyes.

At 5am I lifted up and yawned, the tent quiet, a few of the People's medics attending the map. Scratching and yawning, I

noticed Jimmy sat in a corner. Plonking down next to him, he poured me a coffee. 'I slept well, for a change.'

'Thirty-six hours straight, burning the adrenaline. You need to remember to keep stuffing the meat down to keep going.'

'You get any kip?' I asked, yawning again.

'Hour or so.'

'All OK out there?'

'Yeah, done what we could, good first test. They performed well.'

'Did I hear that it was a planeload of reporters?'

'Yeah, they're here. We gave a few interviews last night, and they've filmed at the hospital and along the road.'

'I feel a book coming on.' As soon as I uttered the words I regretted it, remembering the Brit who died in front of me. 'When I was at the mine, yesterday, this English guy died right in front of me. Before he died he pulled out a soggy copy of the first book, he'd just read it.' I took a reflective breath. 'Small world, eh?'

'You'll get used to the death and destruction.'

'Hope not.'

'I did, eventually. But once you get beyond it, you start to take more pleasure in saving lives.' I showed Jimmy the man's ID, Jimmy adding, 'He hasn't seen his daughter for four years. He came out here to avoid the child support payments, not very honourable.'

'Some day, you'll have to explain to me how you do that.'

'I will. And don't contact his family.'

After a final look, a little hesitation, I tossed the ID away. Twelve hours later we landed back at Cairns, driven to the camp.

In the mess hall, Jimmy called everyone together. 'Ladies and gentlemen ... well done ... and thank you, that was a successful first earthquake deployment. Once you've eaten I want everyone to have a shower.' They laughed. 'You stink! After that, rest, take it easy, but all day tomorrow I want kit checked, washed, lists made up of what you're missing and what you need. We'll be flying back to Nairobi day after tomorrow. And between now and when we get back I want everyone thinking about how the deployment could have gone better. I know it was not planned, but let's think about kit, supplies and on-the-ground procedures. In the meantime, stuff your faces – that's an order.'

Arriving back at the house, I pinched one of the new golf carts – Big Paul’s now painted in camouflage colours - and sped along at six miles per hour to the gate with the new property, manual to unlock and open, then through. With the breeze in my hair I followed gentle curves through the grounds, the grass now good enough to play golf on. The building work was intense, close to sixty men coming and going, two storeys already up and scaffold clad. It was starting to look like a house, albeit a very big house that looked like a hotel.

I walked in through the front door, no doors hung yet, and across bare grey concrete, everything just bare concrete. In front of me rose wide stairs, men in yellow hard hats stepping down. Turning right, I passed two large rooms destined to be studies and offices, their windows placed above six feet and oblong; you could not look out, nor anyone peer in. Turning left at the end of this corridor, I followed yet another bare grey corridor to the pool, passing the changing rooms on the right, the twenty-metre pool was ready bar the water, tiles being cleaned. Through a large gaping hole on the left - that would be plugged by windows some day soon - I peered toward an internal courtyard. Backtracking to the stairs, I headed the other way, peeking into a large space on the left that would become a formal dining room, the kitchens off to the right. Past the dining room would be a lounge, a second lounge I remembered, a staff canteen on the right, and another room. What it was earmarked for I could not remember.

Later, I glanced at the sketches Rolf had made, what the place would look like when finished. When Jimmy thrust a printout of an email in my face I did the sums quickly. Yuri had been over-active, making a killing on the commodities markets. At this rate, he’d soon be the richest man in Russia.

The road to Mogadishu

The Pakistani peacekeepers at the airport, who did little other than sit at the airport, were notified that the Somali Rifles would

soon join them, just not how soon. At 3am the next morning, four UN Antonovs and our lone Hercules landed in a tight sequence, quickly disgorging their men, and took off before the Pakistanis had their socks on. The first wave of Rifles all sported blue UN helmets, just in case the Pakistanis wanted to see if their weapons worked after all.

Under the direct control of Abdi, the Somalis spread out around the airfield and started to occupy the Pakistani positions, politely asking the Pakistanis to give up their pillboxes and sandbagged positions. The head of the UN peacekeepers lived outside of the base and was called, arriving as a jeep convoy a mile long approached, the lead drivers in blue UN hats. The Rifles opened the gates and let their own people in, soon a thousand of them. The flustered Pakistani officers were handed a letter from the Somali Provisional Government, asking them to stand down; or at least not to interfere.

At dawn our helicopters roared across Mogadishu, trying their best to wake the slumbering population, firing at open spaces and making a lot of noise; the residents must have thought it was a full scale invasion. Landing back at the airfield, having announced their arrival, the helicopters met a convoy of trucks trundling in, crew and supplies for the helicopters, plus a detachment of Kenyan Rifles to protect the crew.

The Somali Rifles put their snipers on the perimeter, then organised themselves, unloading the trucks. Shortly after dawn, fighters from the local warlord came out to see what was going on, all being engaged at distance by the snipers. That caused a larger response, the skilful snipers soon fully engaged as the day warmed up, inflicting heavy casualties on the militias. With the sun lowering at the end of the first day, the militias tried to sneak closer, tripping claymores and being picked off under withering machinegun fire. They retreated.

The next morning, a crossroads east of the city was grabbed by sixty Kenya Rifles, soon dug in and heavily armed with anti-armour weapons. Having stopped a few vehicles, and disarmed a few disgruntled individuals, word spread. Militias from the east of the city ventured boldly out, their convoy neatly packed between two rows of claymores, and shredded; the survivors were picked-off by snipers. A second approach, this time from the north, produced a similar result.

That evening, in a simple yet daring raid, two hundred heavily armed men of the Somali Rifles walked the short distance along the coastal path from the airport and to the port, taking the port and the prison after brief, but fierce fighting, and digging in. With the coastal path defended, a slice of Mogadishu had been isolated from the militias, the all important port and airport; no banana boats would be leaving anytime soon. The militias reacted with an anticipated large-scale attack on the port, leaving many of them firing at each other as much as the Rifles. The helicopters went up, making good use of night sights and inflicting heavily casualties.

For the next four day's, snipers effectively fended off numerous attacks, and picked off men who falsely believed they were out of range. The numbers of enemy casualties were steadily rising, our casualties light in comparison. Dug in, with almost every man possessing a sniper rifle, some with M82s, we played the waiting game; every probe at the airport was effectively repulsed, claymores replaced each evening. Thinking better of it, the Pakistanis withdrew in groups by plane each evening, members of the Provisional Government flying in. At sundown each day, the best of the Somali Rifles slipped into the city and set ambushes, disappearing like ghosts after inflicting casualties. With spotters placed on rooftops, laser target designators carried, the Cobras fired missiles at suitable targets, especially trucks with anti-aircraft weapons and DHSK.

With no banana trade now possible, and many of the local warlords now dead, militias were not getting paid, bellies were empty – and not just for the militias. So before dawn each day half a dozen helicopters were loaded with grain in three layers of sacking. They flew low across the city dropping the sacks, sometimes with lethal effect. It was common for people to wake up as a sixty-pound sack of grain came through their bedroom window at forty miles per hour. Most landed in the streets, grabbed by opportunists to sell or barter. Also in the quiet pre-dawn hours, trucks would drive through safe areas and dump grain at intervals. Our roadblocks did not stop supplies entering the city, only militias and weapons; we could not be accused of blockading the city.

On the fifth day the number of gunmen attacking either the airport or the port slowed to a trickle. Abdi's men advanced

building by building and street by street, always consolidating their rear and their supply lines. The skill of the campaign came in the form of Abdi's patience, and that came from Jimmy's timing. Roads to the north, and the banana growing regions, were seized and blocked, attacks on our blockades countered with helicopter fire, since the attackers had to drive along isolated roads to reach our strategically placed blockades.

By day ten all roads to Mogadishu were blocked. Leaflets were dropped over the city, telling all militias to surrender and walk unarmed towards the airport, where a huge tented camp was now being prepared. Our advertising literature offered three meals a day and a job for those who co-operated. Fifty walked in the first day, less militia and more hungry jobseekers. They were identified, clothed where necessary, fed and cleaned up, then given lessons to occupy their time; driving, vehicle maintenance, brick building, a few selected for the Somali Rifles and sent back to Baardheere.

On the second day, no one was allowed in unless they brought their weapons with them for decommissioning, soon a trickle returning and carrying weapons, many unarmed men turned away because they were just jobseekers. As days were crossed off the calendar, more hungry gunmen wandered out, many in jeeps laden with weapons. Under UN scrutiny they were disarmed, cleaned and fed. Some were arrested and detained for their murderous intentions and past history, a few sent to Baardheere, but not arriving; Abdi would not put known killers into the Army anymore than we would.

Every day we got faxes of the progress, numbers and statistics, every day a few more streets captured, another fifty men giving up and coming out. The warlords north of the city were a bit strapped for cash, no banana harvest, and started to lose men; and to lose face. They offered to talk, but the Provisional Government was having none of it, they could smell victory. Grain was dropped over outlying villages, food convoys getting through to many. And Jimmy was nearing the end of his tick list.

One day he ordered the Kenyan Rifles to hold the airport, and for all the Somali Rifles to move forwards that evening, a big push. They moved quietly through the streets before dawn, took up rooftop positions and awaited the warming sun, enough

supplies for a week. Gunmen moving around were hit from all sides, nowhere to run. The fighting was intense on the first day, the casualties amongst the militias great, but as each new day dawned the fighting eased. And then, twenty-one days after the push had begun, the Government declared the city taken – and by Somalis, not outsiders. That was not strictly true, but no one cared; the Kenyan Rifles were flown out for a rest.

The UN moved in, noting many hangings in the days that followed liberation; scores were being settled. We nagged at the UK and US Governments, and secured two hundred million pounds for reconstruction. In a move that would kill two birds with one stone, we spent most of the money in Kenya. Firms were hired by Rudd to improve the road to Mogadishu, and as much cement as we could find was procured and driven across the border. From Po we bought two shiploads of cement and wood, the ships docking at a peaceful Mogadishu. And true to our word, we hired as many people as we could afford to within the budget. Roads were cleared, debris removed, buildings repaired street by street by some six thousand labourers.

Mogadishu hospital was a priority, reduced to rubble during the years of fighting. Rescue Force moved in under escort from the Kenya Rifles, four clinics set-up soon after the taking of the city. The place now bustled with NGOs that we had nagged, asking them to get in quickly. Banana trucks moved again, taxes grudgingly paid to the Provisional Government. The odd shootout still occurred, but overwhelming force was used to chase down the gunmen, dealt with harshly when caught. And, as in many other places, money was offered in exchange for weapons.

Two weeks after taking Mogadishu, Jimmy sent Abdi and four hundred men north to disarm the banana warlords still holding out. Those not surrendering immediately were killed. After a bloody four-week campaign, Abdi returned to Mogadishu, to be made General Abdi. His next task was the large, and lawless east of the country, not least because the Provisional Government had given BP drilling rights in a small area off the coast. Strangely enough, they struck oil straight away. A week later, citing Jimmy's recommendation, a French mining company was puzzled at being offered a sizeable contract in Somalia.

Congo diamonds

Fresh from our successes in Somalia, we stepped into a room in the Foreign Office one bright August day and met our DRC team. Our team consisted of three men we had hired to help administer our province in the DRC, supplemented by six civil servants. The wider world, and the French, had been surprised by Jimmy's ascendancy to governor, but even more surprised by how organised we were, and how much we had pushed things along. It was almost as if we knew what the future held, and had planned for it. The team gave us an update.

A group of Ugandan mercenaries had been intercepted by Hutus working for us, and massacred. Their bodies had been found by the UN the next day, identified, questions asked of the Ugandans as to what they were doing in the DRC. Drunken Rwandan soldiers were filmed in secret shooting up parts of Goma, the tape being sent to every TV station in Africa, the UN looking into it. Further south, Rwandan soldiers pushed into the DRC under the pretext of hunting down Hutus who had attacked across the border. Our helicopters attacked, allegedly having mistaken them for Hutu militias. And what were they doing twenty miles inside our border? We apologised for the tragic mix-up, but pointed out that armed groups, other than the Congo Rifles or peacekeepers, were subject to attack.

In one controversial move, our trusted ex-SAS guys intercepted six French nationals, mercenaries, in the north of our territory. Former British soldiers had fired on, and killed, former French soldiers. Two had been killed, two wounded, a total of four captured, the mercenaries Congolese associates killed. The captured French were offered interrogation at the hands of the Rifles, life imprisonment, or a confession followed by a flight out. They chose the later, revealing that they had been hired to set-off bombs in certain mining areas. They made the news, and we leaked the fact that British soldiers had killed French soldiers. The diplomats and the tabloids had a busy weekend, but at the end of the day the mercenaries had been acting like terrorists.

Coming so soon after the last French incursion, the Paris Government was again reeling, their Ambassador to the DRC expelled for seven days by a co-operative Kimballa. Just to make things worse across The Channel, the Prime Minister sent in another two hundred “observers” at our behest.

At Forward Base, some thirty administrators toiled night and day, a regional command centre set-up for NGOs. Rescue Force DRC had recruited every doctor it could find in the region, and there were not many. Medics were flown up from Kinshasa and hired. The Congo Rifles enjoyed plenty of fresh young recruits with hungry bellies, the camp now holding four thousand and growing rapidly. Kimballa had flown in once at Jimmy’s request and toured the base, meeting our people and the NGOs, impressed with the super-sized admin operation. With the man himself in London this afternoon, we were getting an up to date picture first, the civil servants briefing us as if we were their political paymasters.

Sheets of statistics were poured over, productivity graphs glanced at, diplomatic intelligence about our African neighbours offered. Sykes had deployed men where we informed him they would be needed, the offices of a few European mining companies in Africa currently bugged. Jimmy had furnished him with a list of names; once spotted around Africa to be reported to us. We thanked the team and walked the short distance to our scheduled meeting with Kimballa. Stepping in, Jimmy greeted Mister President in his native dialect, Kimballa dressed in traditional robes.

Kimballa smiled, hugging Jimmy. ‘There are not many westerners who make such an effort to learn our language. And even fewer who manage to sound as if they were born in my village.’

‘I consider that you are worth the effort,’ Jimmy responded. I shook Kimballa’s hand and we sat, two Foreign Office officials and two of Kimballa’s assistants present.

‘How you liking England?’ I asked.

‘I have been here twice before, and to America, and a few European countries,’ he rattled off. ‘I have been to France, your good friends across The Arm – as they call your channel.’

‘The French ... have been difficult for hundreds of years,’ Jimmy mentioned.

‘Indeed. And I asked the French Ambassador just the other day why their people are so interested in Eastern Congo.’

‘We know why,’ I cut in. ‘If the region is ungovernable, then anyone can take your minerals without paying for them.’

‘And you seem to be making some good progress towards a *governable* region.’

‘And when it is *governable* ... there’s no reason why your country should not be one of the richest in Africa. All it takes is the will to do it,’ Jimmy insisted.

‘And some considerable resources, from a well connected Governor! I have followed the campaign in Somalia with interest. I noted, that you only allowed Somalis to capture the city, after which the Kenyans withdrew, the exiled government brought back. Tell me, Somalia has no resources, only sand, yet you have been heavily involved for many years. Why?’

‘First, they were a threat to the region and my interests in Kenya. And second, I have always said that a small group of well-trained men could liberate Africa from tyranny. Somali only needed a small group of well-trained men to liberate it from self-destruction. It would have been ... cruel, not to have helped there. And for the record, I had nothing to do with the liberation of Somalia, I wasn’t there.’

Kimballa smiled widely. ‘You are also absent from my country, yet much is improving rapidly.’

‘And will continue to improve, year by year.’

‘You us asked for our military officers. Why?’

‘The Congo Rifles are loyal to you and your government, so you should keep an eye on them through officers you trust. We would not want another *you* to rise up.’

‘Indeed. One ... is quite enough.’

‘I wish to see your government more closely involved in what I do in your country, *everything* I do in your country, a regional government based in Goma. That way, any benefits I may bring would be quickly passed on to other parts of the country. There are warlords running mines outside of my territory - the Congo Rifles could police them.’

‘I will do as you ask, and if there are other regions that need *policing* ... as you say, inform my officials and we will give permission for them to be *policed*. And I see you have started an orphanage.’

‘Yes, it will be a large orphanage. In fact two, one in a Hutu area. When the Hutu children grow up they will be peaceful, and loyal to Kinshasa.’

‘Give me the child and I will mould him into anything,’ Kimballa recited. ‘Nietzsche.’

‘I thought that was Adolf Hitler,’ I suggested.

‘What?’ he asked.

‘Neither,’ Jimmy put in, a glance toward me. ‘It was a man called Skinner. But the principle is sound. Education ... makes the man into anything he wants. May I ask, Mister President, if there is anything that we are doing that you are not a happy with?’

‘No, you’re doing what I anticipated you would do. And I think I understand your personality. To you, Africa is a giant challenge, a giant puzzle that must be put back together. Since many have tried, and all have failed, a man like you sees it as all the more of a challenge.’

With a smile, Jimmy said, ‘You may be right. I just hope I can achieve much before the mining companies assassinate me.’

‘Let us hope they not successful. But I have noted that you sent back these men. I would have been happy to hang them as an example?’

‘When a man throws a rock at you, and misses, it causes great annoyance to the man if you hand it back and suggest a second throw.’

We all laughed. I liked that one, I’d have to remember it.

Jimmy added, ‘Why prevent your enemies from throwing rocks, when you can have the great satisfaction of annoying the hell out of them.’

Nodding, Kimballa said, ‘We are making every effort to work on the new road, maybe to soon join up with the road work at your end.’

‘I fear that road will take many years, Mister President. And while I think of it, if you can find twenty good men, I will pay their wages. I want mine inspectors, to make sure mines are legal *and* paying your taxes.’

Kimballa glanced at an aid, who made a note. ‘If anyone other than you had requested such a group, I would feel it a con trick.’

‘You may yet regret making me governor. I will be creating a lot of paperwork for you.’

‘I admit to enjoying reading reports with your name on, Mister Silo. They are always good news. And I like to play a game with visiting European diplomats. When they ask for things, I say... I will talk with Jimmy Silo and see what he thinks. It cut shorts many a meeting with great consternation and much grinding of teeth.’

Jimmy laughed, glancing at the Foreign Office staff. ‘Diplomats, and Civil Servants, are paid to be toyed with. It’s what they sign up for.’

After the meeting we met Yuri and Irina at the club, Jimmy still occasionally taking one for the team. Yuri now hung on our every word, and had just bought an Aluminium plant with his profits. Jimmy explained about the DRC, and its mining potential, Yuri salivating at the numbers; and the synergies. What luck! We explained that as soon as the security situation was sorted, we’d try and get him in there.

“M” Group

With the new British Prime Minister settled into the job, the US President well into his second term, Jimmy said the time was right for a fuller “M” Group briefing. We typically met with Host and Hadley at least twice a year, and both answered questions and offered suggestions, but it still felt as if the Americans were cherry picking what they liked, and ignoring the rest. We flew into Washington with Sykes and Jack, Han and his superior meeting us there; the British and Chinese would be joining talks on day three.

The first briefing was for the formal American “M” Group, some of the members present today also being dual members of their secret, behind the scenes, “M” Group, which was a bit odd at the moment because President Harvey knew about it, and tolerated it. In today’s meeting, held in the White House briefing room, we had the President and his Chief of Staff, his National Security team, plus Hadley, Host, Keely and a select few others.

‘Morning all,’ I loudly greeted, tackling the coffee maker in the corner. The faces, and expressions, ranged from playfully happy, to dour.

‘Lady, gentlemen,’ Jimmy offered, nodding his respects to the sole female member as he took in the faces. He shook the President’s hand. ‘You seem taller than on TV.’

President Harvey laughed. ‘And you’re just as big as on the TV. So what do we call you ... *Governor?*’

‘Now you can call him Deputy British Ambassador to the Congo,’ I told Harvey.

‘Yes?’

I added, ‘And ... UN Ambassador for Relief Projects, Central Africa. And most recently, the ink still wet, UK Deputy Ambassador to Somalia.’

‘How’d you keep track?’ the President asked with a smile as we all sat.

‘At home,’ Jimmy began, ‘I have many desks, each with a flag and title above it – so I can remember. That way I don’t send rich tourists to the Congo by mistake.’

‘We got the white boards you asked from,’ the Chief put in, Jimmy glancing over his shoulder at them.

‘First things first,’ Jimmy said. He pointed at a man who I did not recognise. ‘That gentleman has been feeding information about Magestic to his colleague – and old college buddy – at the new York times.’

If that didn’t sour the mood, I didn’t know what would.

Jimmy added, ‘Nothing will be said with him in the room.’ He waited.

With a disappointed look, President Harvey said to the man, ‘Step out, please.’

Host escorted the protesting man out, returning a few minutes later. ‘FBI heading to his apartment and desk.’

Jimmy stood and took off his jacket, approaching the white boards. ‘What I’m going to give you, is a time line of key events, cause and effect. The events I’ll detail will – most likely – not take place, because many people are working to prevent them taking place. The timeline is ... what would happen if nothing was done.’

On the first board he drew an economic timeline. On the second he drew political timelines, future political leaders given

coded numbers instead of names. The third board was concerned with wars and conflicts, the final board with The Brotherhood. For thirty minutes he added detail to each board, and how they were linked, flawlessly, and as if he had done it a hundred times before.

When finished, Jimmy sat and Hadley took over. 'The most important key event ahead of us, is Pakistan. Or, more suited, Afghanistan de-stabilising Pakistan. If that key event is bypassed or delayed, then the Brotherhood may rise up in the Horn of Africa, our after economic decline in the Middle East following wider conflicts elsewhere, and finally in 2025.'

'Seems you've got the Horn of Africa sewn up,' the President noted.

'It's all on track to becoming a peaceful region,' Jimmy informed him. 'And even if it destabilises, the Kenyans could now fend off the Brotherhood.'

'How much oil in Somalia?' someone asked.

'Enough to rebuild Somalia and to feed it's people, but little more than that. And Somalia will help to be a buffer when Yemen disintegrates after 2012. Whilst we're on the topic, the natural water supplies to Israel and the Middle East will dry up around that time, a major crisis, and costly desalination plants employed.'

They took notes.

Jimmy continued, 'Israel will pinch all of the Jordan River's water, so a major source of aggravation with the Jordanians, and the West Bank Palestinians. And your own water tables, from Vegas west through California, will all dry up, farming in California will be devastated, contributing to the ruin of the California economy, affecting the US as a whole. And New Orleans sinks into the gulf. But let's talk about the upcoming housing bubble a little. From 2001 onwards property prices will rise, far too steeply.'

'Too ... *steeply*?' someone challenged.

'Let me explain it to you, as I did to a Chinese official a while ago. If house prices rise five percent each year, everyone is happy. If they rise twenty percent each year, every is very happy, people start buying second properties against the equity on their first home, hence house prices rise further and faster because of the speculative investments. Other people see house prices rising,

and jump onto the bandwagon. When saturation is reached, and first time buyers can no longer afford to buy, people rent and house prices crash. Now, if you give a man a hundred dollars, he'll be happy. Give him two hundred dollars, then take back a hundred, he'll be very unhappy. People become unhappy when they lose what they have, not when they make ten percent a year instead of twenty.

‘A financial crisis, built around the property market, will hit in 2007. The subsequent recession will do a lot of damage, many banks going under, many people defaulting. And it comes around because the markets give two hundred dollars, then take back thirty. The solution, is to build more houses, to tighten fiscal policy, and to toughen mortgage loan regulations, no hundred percent mortgages for anyone who wants one – which will be the case at the time.’

They all diligently took notes. Doughnuts were brought in, teas and coffees dispensed, ties loosened.

Then came the first shitty question. ‘Do you favour the British Government over others? We know they’ve had financial help.’

‘I favour, and Magestic favours, those who listen ... and co-operate with us. Assistance was offered to you five years ago, but you were too damned arrogant to accept it. And if we fell out, we might just boost the Chinese and Russian economies to the detriment of yours.’

‘So it’s co-operate ... or else!’

‘Yes,’ Jimmy said, fixing on the lady who had asked the question. ‘Would you like that in writing?’

After a pause, another man asked, ‘What about the others in this country who receive Magestic letters? What’s their function?’

‘Quite simple; to save you from yourselves. And we’d never let your economy take a hit. Those people are in place, working on the assumption you’d rather lose the planet – than America lose its place as top dog. Those people are in place, because we assume that you’d rather see a hundred million Americans die in a global nuclear conflict – than ask for our assistance. Does that answer your question, dumb fuck?’

They were stunned into silence for many seconds.

‘And what of China? You said the economies would be linked?’ Hadley asked.

‘By time we get to 2007, China will be the largest lender into the US, by far. They’ll hold 1.3 trillion dollars. In order to do something constructive with those dollars, China will invest some of them here, helping to fuel future boom and bust cycles. At least, that would have been the case before I gave the Chinese the full picture.’

‘Causing what change?’ the President asked.

‘They’ll be more prudent lenders. So when your banks are issuing hundred and twenty percent home loans to anyone who can sign their names, the Chinese will not be funding your banks. That will not harm your economy, that will help to save it from itself. Remember, small rises are good, sharp rises followed by sharp dips ... are bad.’

‘And the OPEC crisis?’

‘That comes, in part, because of future Republican Presidents behaving like arseholes - people don’t want to be associated with bad dollar politics. If, and when it comes, it’ll lower the dollar by fifty percent overnight and force all you imports up by a hundred percent.’

‘And complete chaos and financial ruin,’ the President noted. ‘That’s 2015?’

‘It’s variable. If all goes well, it’ll never happen at all. But that would mean a tight fiscal policy in years ahead – and no major wars.’

‘China and Venezuela,’ Hadley noted.

‘You’ve made a lot of effort in the Congo?’ the Chief nudged.

‘It has third of the world’s mineral deposits, and more oil than Saudi Arabia.’ That woke them up. ‘Problem is, if the region is unstable and warlike, mining and drilling is near impossible. And the best areas are a thousand miles from the coast – in any direction. Build a pipeline and they’ll blow it up.’

‘What’s the outcome there?’ the President asked.

‘Unless otherwise altered, my plans are to allow the Chinese in to take most of it.’

Our hosts glanced at each other.

‘And how does that ... impact on The West?’ the President broached.

‘Positively,’ Jimmy carefully mouthed. ‘First, it will ease pressure on metal, ore and oil prices, and *you* buy from the wholesale markets. Second, it’ll help the region, because the

Chinese are cheaper to employ in the region than your experts, so I can get more done with the profits. And finally, if the Chinese do not move in, then after 2015 – when Islamic terrorists move south and attack the green belt – a future US administration will have to commit two hundred thousand soldiers to the region for ten years.’ He placed a map over a white border. ‘Where brown desert turns to green jungle – there’ll be a war zone for a long time. That can be fought by Africans and Chinese, or by the West.’

‘No way we could commit that many men for that long,’ the Chief complained. ‘And what casualties?’

‘Fifty percent casualties.’ That shocked them. Jimmy added, ‘Trust me, and leave that region to me – with your kind assistance. But, if you want the war, it’s yours to take.’

‘A ten year conflict? In desert and jungle swamps?’ the Chief baulked.

Hadley asked, ‘Should we worry about shortages of ore?’

‘Worry, no. Plan, yes. Congo will export much of the ore, it won’t all go to China.’

‘Once China is dependent on that region...’ the President hinted.

‘They’ll stay, and take on the fight for you,’ Jimmy finished off.

‘And 2025?’ President Harvey finally got around to.

‘A ... natural disaster that kills a hundred million people and reduces the global economy to zero overnight, followed by the rise of the Brotherhood.’

‘Let me ask a direct question,’ the President began. ‘Is America hit directly?’

‘No.’

Harvey glanced at his team. ‘And America survives?’

‘Intact. There’s just the small problem of no imports or exports, not much oil, martial law for ten years, the Brotherhood destroying Europe, Asia and Africa – finally arriving in South America and moving north, armed with nuclear, chemical and biological weapons. You’ll fall around 2037.’

I found myself dwelling on that date. It was the furthest pointing in time Jimmy had ever mentioned.

Jimmy continued, ‘And no, no wonderful technology to save you, no spacecraft leaving to populate other worlds – because

you're economy is screwed much earlier.' They exchanged sceptical looks. 'Oh, and the odd situation ... is where Texas breaks off and becomes independent – and does quite well.'

'Texas? Breaks off?' the President repeated. 'Typical. Is Senator Pederson their President then?'

'No,' Jimmy said with a smile.

'So,' the President said, taking a breath. 'Are you about to tell us there's a solution for all this?'

'There is, but future Presidents will try and manipulate the situation to their own benefit, fucking it all up. Which is why we have people working behind the scenes. And why certain future Presidents were ... *discredited* a long time ago. We're working on the assumption that we'll have to save your arses, without your co-operation, or your help.'

We broke for the day, leaving them to talk amongst themselves – and to plot and scheme and politic. At our hotel we joined Sykes and Jack for our evening meal, now with "protection" sat in the corner, conscious of the fact that the place may be bugged.

The next day the President and his Chief were absent, but a long list of questions awaited Jimmy. It took two hours to get through them. After a lunch break of sandwiches, the food being brought in, the questions continued, as with the Chinese. Having concluded the meeting, we dove straight around to the Russian Embassy – certain that it would get back to the White House immediately, for a meeting that was nothing to do with the "M" Group. We asked about a Rescue Force unit in Russia, all paid for by us. That evening we met Han and his superiors at the Chinese Embassy, another fact that could not have been missed.

On the third day we sent message that the venue had been moved to the British Embassy, the British PM having flown in the night before. President Harvey was not due to be present for this meeting, but turned up unexpectedly, his first meeting with our Prime Minister. Around a highly polished dark-wood table we sat, Sykes and Jack behind the PM, Han behind his superior, Minister Wen, Hadley and Host behind the President, his Chief of staff and National Security Chief present, plus the UK Ambassador to the UN – a man with a future, apparently. Polite greetings were extended to the Chinese, tea and coffee offered, people now talking in hushed, respectful tones.

‘Gentlemen,’ Jimmy called. ‘Please forgive my impertinence by assuming to kick things off. But as you are all aware, I have an agenda ... and a lot to say.’ No one objected. ‘We are here, this first tri-party meeting of British, American and Chinese officials and leaders, at my behest, so that we can discuss Magestic objectives, operations ... and aspirations, to the common good of all here. We have a vested interest ... in saving our own necks.

‘Now, as you will have all observed, I’ve been busy in Africa in recent years, and will be closely involved for ... as long as I continue to live. Somalia has been dealt with, except for the east, which should not be a problem. As you are now aware, there is a small amount of oil in Somali, not enough to get excited about, but enough to help that country recover. There are also mineral deposits which will benefit the region.

‘Now, let me point out to ... all sides, that Yemen will implode after 2012, so a strategic positioning in the area is essential in the years ahead. To that end, the Somali Government will allow a US base in the north, on the coast, and accessed by air and sea only. In any future conflict in that region, such a base will be important to *all* of those concerned. As for the Congo, it has great wealth under the ground. All it needs is a lack of conflict, and a lack of interference from its neighbours. To that end, I would like all those here to pressure the neighbouring states – Uganda and Rwanda, as well as France – not to interfere with attempts to impose a peace. After such a peace is created, mining can begin, to the benefit of all. May I ask, Mister President, if the United States has any particular objection to me closely involving the People’s Republic in that region?’

‘The US has no designs on that region, and we’ll help where we can.’

I resisted a smile.

‘OK, all parties here are aware of the housing bubble that will occur from 2000 to 2007, and let me be clear that there will be *interference* in US and UK housing, to prevent a crisis in 2007. That interference will be detailed to you before I get involved in it, and the People’s Republic will be more prudent lenders than may have otherwise been the case. Are we all agreed that a steady growth in house prices is desirable, a target figure of no more than eighteen percent per year on average?’

Our PM said, a feint hint of a grin, ‘That would keep the British voters happy.’

‘No doubt,’ the President lightly agreed.

‘In order to achieve that, it would be prudent to build more houses when the target looks like going too high, and some of the money from that would come from the People’s Republic, making them a reasonable – yet managed – profit. Are the US and UK Governments in agreement?’

‘I am,’ our PM adamantly stated, turning his head towards Harvey.

‘While I’m still in office,’ the President pointed out, tipping his head.

Wen nodded. Progress was being made, I considered.

‘OK. Afghanistan and Pakistan. We are all aware ... of what may happen if Pakistan destabilises. I would like to request that the People’s Republic are ... generous in their arms sales in future years, especially helicopters that can be used against insurgents in the hills. If, in years to come, the US could supply old Cobra helicopters, that will also help fighting in the hills. In the meantime, the UK and US need to tightly monitor Arab fighters travelling into Afghanistan, and do all they can to support the Northern Alliance in not only keeping the country split, the Taliban at bay, but also helping to target Arab fighters through the Northern Alliance; a job, which if not done internally, will require Western troops and a lengthy occupation, leading directly to the destabilisation of Pakistan. I ask the People’s Republic to supply limited weapons to the Northern Alliance.’

Wen bowed his head in acknowledgment.

‘OK, the Millennium Bug will be a giant damp squid. Nothing will happen, no problems.’

‘World not going to end,’ our PM joked.

Jimmy shook his head. ‘Finally, I ask for the UK and US to greatly increase their passive intelligence operations in sub-Saharan Africa, feeding me that intelligence. The granddaddy of the Brotherhood is already there and taking shape. I would like more old Hueys and Cobras from the US, without being too obvious about the assistance. And that region has to learn to stand on its own two feet. Now, questions please, gentlemen.’

Wen began, in his accented voice, ‘We have considered at length the unpalatable nature of 2025. Should there not be more information supplied.’

‘Only at the risk of panic now,’ Jimmy countered. ‘Great panic.’

‘We have a right to know,’ Harvey suggested, but not forcefully.

‘The three principals at this table have a right to know, that was always my intention. Would everyone else please step-out for ten minutes.’

With nods from their superiors, the men trickled out.

‘You too, Paul,’ Jimmy said to me. ‘You can’t know yet.’

Deflated, I walked out with the rest.

Jimmy took a map and laid it out. ‘Gentlemen, if this gets out the cost will be high – in lives, and economic ruin. Make no mistake, accidental disclosure – now or in the future – will come at a terrible price.’ He had their attention. ‘Watch my finger as I draw on the map, and consider the area inside – and near – the area drawn.’ He ran his finger over a large area. ‘Everything inside that region will be destroyed, everyone killed. Everything within a hundred miles will be damaged, millions injured.’

The three principals straightened, horrified looks exchanged.

‘How the hell could this planet survive that?’ the PM whispered.

‘It will survive, but not as we know it,’ Jimmy said, walking to the window and peering out.

‘Who else knows?’ Harvey asked, still shocked.

‘Just us four and Magestic; no more,’ Jimmy said without turning away from the window. ‘But, closer to the date, others will know. And in case you’re wondering, there is no benefit in trying to warn people now. You can only ... quietly prepare yourselves without revealing as to why.’

Wen insisted, ‘The People’s Republic will be ready.’

Jimmy turned. ‘You, my friend, have the benefit of an authoritarian government, the West doesn’t. You’ll do better than most.’

Harvey approached. ‘And you think our economy will already be hurting by this point?’

‘That depends on your replacements, Number Forty-Two. I can sort your economy, but the question remains, how good your countrymen will be at listening.’

‘Will the Vice President win the next election?’ Harvey asked.

‘Some steps have been taken to ... *assist* in that. But it will be a small margin. He won’t survive two terms without a miracle.’

Our PM closed in. ‘What should we be doing now, really doing?’ Wen closed in as well.

Jimmy breathed out. ‘First, start thinking about future oil prices, and start inventing technology that can generate energy; nuclear, hydroelectric, bio-fuels, wind turbines, electric cars. The less dependency on oil, the better your economies will fair in the years ahead. Then begin a process ... which is inevitable anyway; start to make the large corporations truly international, part owned by Russians and Chinese, so that in time your future Presidents are brow beat by these super corporations, instead of making foolish national decisions. If China and Russia own a third of every large western company, they won’t do anything to screw with them, and vice versa; the US owns parts of Chinese companies. Then, when future leaders want to stir up trouble, and nationalism, they’ll find it difficult.

‘You see, there’s a good reason why Britain would never attack Portugal, and that’s because there’re lots of Brits living there. If a great many British and American citizens live in Shanghai and Moscow, the chances of a conflict are reduced. And, when the time comes, the global economy will need to make a truly global response. Europe, America, South America, Russia and China will all have to tackle the crisis together, to have any chance of survival. If you start squabbling over dwindling resources, you’ll fight a global nuclear war.’

‘And does Magestic know what we do in 2025?’ Harvey puzzled.

‘No, it’s too fluid. And I don’t have a good solution for you.’

They walked around in small circles.

‘Anything you need in the Congo?’ our PM idly enquired.

‘Money. I’m going to build a huge orphanage, give them the blood, then build an army of super soldiers to defend the region from the Brotherhood. It’s a ten year plan.’

All three principals agreed to assist the orphanages. The rest of us were let back in. Seated, thirty minutes of questions on small detail were fielded by people other than the principals. And that was that, we'd broken the ice. I felt strangely relieved that it was not just our problem anymore. The three principals, Jimmy and me posed for a photograph, released to the press as a meeting to discuss aid for Central Africa, which it was - in part.

We dropped in on Senator Pedersen before leaving Washington, asking him nicely, but firmly, to lower the medical insurance premiums. His company, based in Texas, was now also operating in three neighbouring states and could number more than a million customers, a respectable annual growth of twenty-five percent. The next day we dropped in on Pineapple, New York, now occupying new offices and with a headcount of more than sixty. Sitting with the accountants, we noted the profits, paid Oliver his dividend, then transferred our dividend directly to Rescue Force, forty-six million dollars.

I lifted the satellite phone and got through to Dunnow eventually, waking him. 'Dunnow, there's good news and there's bad news.'

'What's that?'

'The good news is, you're fired. That bad news is, you're hired as temporary head of Rescue Force Australia. You'll be on a plane in a few days. Find a base, start recruiting.'

'Good on ya, mate. I was going to suggest something like that.'

Rescue Force Oz had just been born, Han told to finally create Rescue Force China, a modest three hundred rescuers to start with. And, oddly enough, Rescue Force Sri Lanka, India and Sumatra would now be formed. Sumatra I understood, but Sri Lanka? We told Coup to create a new rank, that of Group Leader, and made up five people straight away, pay rises sanctioned. Each group leader would have an assistant and an office, for those that did not already. A chief training officer was appointed, a doctor from London, and tasked with co-ordinating training, and international standards.

We arrived back at the house to news that Bob Davies had been killed in car wreck, something that caused both of us to slump down around the coffee table and sulk. It was not expected. But an hour later we got a fax to say that he was not

quite dead, just a bit dead; busted up and in a hospital in Tanzania. Doc Adam was dispatched with haste, to go visit him. And inject him if necessary.

I walked around to the new house the next day, just a few short weeks from completion, an army of decorators now attending it. Four static guards from a private firm patrolled the house, Ricky, Big Paul, Karl and Rob all keeping an eye on it twenty-four hours a day. The tabloids already had a picture of grey walls and a sketch of the layout, courtesy of an unknown builder. From the front doors, standing on a smooth tarmac road, I stared down the slope and took in the view. Two very tall pine trees bracketed the main road down to the gate, but they naturally possessed no branches below thirty feet. Below them the grass lay neatly trimmed, a wide park leading down a hundred yards to a row of regimented pine trees masking the internal fence, an ornate internal gate now visible. We had no view of the road, but no one on the road had a view of us either.

Wiping my feet, I ducked inside through thick wooden doors, through the reception hall and to the stairs. Figuring I'd try it out, I took the small lift to the third floor. Turning left, I wandered along a carpeted corridor to the north end, climbing a set of private stairs and to the flat roof. Ricky stood on guard with binoculars.

'Anything worth looking at?' I asked.

'Couple of tits.'

'Blue Tits and Grey Tits.' We laughed. I peeked out over the wall at the north end. Unfolding before me, the grass stretched up a gentle rise for three hundred yards, a large pond in the centre, a line of fir trees prevented further views. To the right, many of the original tall trees remained, cut by a winding road down towards the river and Rob's cottage. To the left I could just glimpse the staff houses, their red roofs visible the other side a row of trees. From the west wall I had a commanding view of the cobblestone courtyard, an ornate carp pond at its centre, a few benches dotted about. On my right the third storey staff quarters stretched out, yet to be filled. Underneath them sat the gym, below the gym the pool at ground level. To the left, at ground level, I could see the family guest quarters, more above them, small apartments with two bedrooms each. The top floor was again made up of small apartments for staff, or used by visitors

when needed. Backing the courtyard, the garages stretched across, single storey and with a view of the walled vegetable gardens beyond; Cookie was a keen gardener.

A floor below, I inspected my new quarters, a self-contained apartment with bedroom, lounge, bathroom, kitchen and office; I could lock myself away if I so desired. Jimmy's apartment was next door, but somehow he ended up with the smaller one, the décor almost identical to that of our London apartment. Also on our floor was a lounge come study for just us. The other side of an internal wall were more guest quarters, no access from our side. Below our apartments ran a floor of just guest quarters, fifteen of them, the two corner apartments on a grand scale, and right royally decorated. The smallest room on this floor would have cost a thousand pounds a night in London, each room en-suite with lounges, TVs, computers, views out over the grounds.

The diner was similar to that at the existing house, the lounges also familiar; it was just that there were three of them now. The two offices on this level were huge, three times bigger at least than our office down at the existing house, rows of neat desks around walls, large central desks that could be used for meetings. In the basement I opened a heavy metal door, blast proof, and followed the corridor past numerous rooms destined to be offices – private offices. At either end of the corridor two bomb shelters hid behind strong doors, both equipped with food and water, and escape tunnels that exited under the grass. They were for “just in case”, and had been finished off and made ready by some of Sykes' boys working in secret, the press not having reported them yet.

In the entrance hall I met Big Paul coming in. ‘Where you going to live?’

‘House round the back, Jill and the kid.’

‘Oh.’ We both seemed uneasy. ‘I thought you said ... you know...’

‘Well, it's that or drive back and forth each day ... you know.’

I put my hands in my pockets. ‘Oh. She ... OK?’

‘A bit odd from time to time. You know.’

‘Kid will like it up here,’ I suggested.

‘Yeah, nipper loves it here. Already been fishing a couple of times. An he can go to the upper school down in Newport if he likes.’

‘She seen the house?’

He raised his eyebrows and nodded. ‘I told her it was for just me at first, then she made a few hints about, you know, saving money.’

‘They’re nice houses alright.’

‘Jimmy’s offered her a job here, part-time, if she wants it, so extra cash.’

‘Good. Keep it in the family.’

For the grand opening of the new house we invited over Han and Po, Haldey, Host and Keely from the States, Mac, Doc Graham with Hildy and a few others from Mawlini, Rudd and family, Cosy and family, Sykes and Jack, and Rolf of course – he built the monstrosity.

The mob from Kenya arrived in a group on the Friday, allocated rooms, mostly making use of all the small apartments. The phrase “fucking hell” was used a lot for the first few hours. Po was afforded a corner suite, his bodyguards sharing an apartment. We entertained our guests in the lounge that Friday evening, Cookie working his magic, Jimmy and I taking time with each group to discuss things particular to them.

On the Saturday, Sykes and Jack turned up just before Rolf, the Americans the last to arrive around 3pm. People wandered around at length exploring the place, handy little colour coded diagrams supplied. The lounges and the diner were continuously occupied by small groups, Rudd’s kids making good use of the pool and gym. Just about everyone tried the sauna, the Jacuzzi, the steam room and pool at some point, most taking long walks around the grounds, viewing the river or the pond; there were plenty of interesting things for visitors to see or do.

At one point we grabbed the Americans, Sykes, Jack and Han and held a mini “M” Group meeting in the third lounge. Jimmy asked if anyone had any questions, problems or gripes.

Han said, ‘If you will run operations in Africa, and elsewhere from here, would it not save time if a representative of the People’s Government had a desk here?’

‘I got no problem with that,’ Jimmy responded. To Sykes he said, ‘Any objections?’

‘We’d obviously not wish discussions of substance without a British representative – if those discussions were relevant.’

‘Likewise,’ Hadley echoed.

‘I’ll accept a representative from each country to live here.’ Jimmy said. ‘And for good reason. I often pick up the papers and see a story about something I should discuss with you. If you each nominate someone, I’ll let you know if they’re acceptable to me – since they’d have to live here.’

Jokingly, I said, ‘Wanna move out of London, Jack?’

He glanced at Sykes. ‘If I was asked.’

‘What about your wife?’ I asked.

‘She was born in Gloucester, just up the road. And she never liked London.’

‘As an interim step ... I’ll nominate Jack,’ Sykes said. ‘To be ratified by the PM.’

I glanced at Jimmy before facing Jack. ‘Seen those houses with red roofs?’ He nodded. ‘You’d have one of those.’

‘Very nice.’

‘I will consult with my Government,’ Han offered.

‘I’d put in a few months,’ Keely offered, a glance from his boss. ‘I’d like to see *behind the scenes*.’

‘I got no problem with that,’ Hadley put in. ‘But again, I’d discuss it higher up.’

‘Well, let me know,’ Jimmy offered. ‘I’m easy.’

I wondered why he had built so many staff quarters and houses. Now I knew.

Jimmy added, ‘While I think of it – Sri Lanka. In 2008 China realises it wants a port in Southern Sri Lanka and so gives the Sri Lankan Army weapons to defeat the Tamils. After that, Sri Lanka is peaceful. I see no reason in not accelerating that process, so that Sri Lanka rebuilds quicker. I would suggest that the Chinese give weapons around 2005.’

‘You mentioned Sri Lanka before,’ I queried.

‘If a global conflict takes place, or the Brotherhood rise, Sri Lanka is they key marshalling location for our forces in the area. That, Deigo Garcia, and the base in Somalia.’

‘I will consult with my Government,’ Han offered.

‘India no good?’ Host asked.

‘No, Southern India has Muslims.’

‘Iraq is still a problem area,’ Hadley prompted.

‘General Masoud will make contact soon, then a stealth bomber can hit Saddam – Masoud will claim the strike a car bomb for you. After that, Masoud will co-operate with you, whilst maintaining a tight grip on the country. When he loses that grip, the region goes to hell quickly. So don’t try and enforce democracy there, the country will split up. And Basra is the hotspot for the rise of the Brotherhood. When Masoud takes over, let them sell oil, and try and improve the quality of life for Iraqis around Basra.’

With the usual suspects departed, we enjoyed a whole day of peace before Yuri, Irina and their staff arrived. Yuri got a corner suite, Irina another, Jimmy spending the rest of the day explaining to the leggy Russian lady why he had such a small apartment. Still, she was impressed to hell with the house and grounds and would have moved in if he had let her. I both practised, and improved, my Russian during their visit; it always helped to converse in a language.

Yuri brought Jimmy a gift, a diamond encrusted Faberge egg, and a posh Russian Doll set. The next day a strong glass cabinet was delivered, already on order, the gifts put on display in the dining room, small lights illuminating them. Jimmy always had an item of jewellery for Irina, it kept her quiet, and made her feel wanted. And while all this was going on, Jimmy’s masseur was in Kenya with her parents, the trip a gift from us.

Problems

Jimmy was invited to do an interview at the BBC about the DRC, a live interview with the Congo’s Ambassador to London attending. Fortunately, Jimmy had met the man several times, and had arranged a secret meeting two days before the interview. Jimmy was ready, but I was not privy to the detail.

Like many at the house, I watched the exchange live, our solicitors sat glued to their TV sets and salivating. The

programme began with a ten-minute review of life in the DRC that made it appear to be under the jackboot of tyranny, pictures of people hanging from tress, soldiers firing at refugees, attack helicopters in action, starving kids. The picture they painted made many at the house angry, others confused and saddened.

The interview opened with the lady interviewer asking, 'Mister Silo, what do have to say to say to charges of widespread murder in the region of the Congo that you administer?'

'I'd first correct you – I don't *administer* any regions of the Congo. My title of Governor is a mostly an honorary one, with little real power. I cannot set laws, I cannot organise elections, the police and army do not answer to me.'

'That's not what I understand your role to be at all – you are de-facto the ruler of that region.'

'That is not correct,' the Ambassador objected. 'No one rules our country - but us.'

To Jimmy, she said, 'You control the violent militia known as the Congo Rifles –'

'That is not correct,' the Ambassador objected. 'Colonel Ngondo is head of the Rifles in that region, and has been all along. They are not a violent militia, they are part of the National Army of the Congo.'

'And what about the British mercenaries you employ to kill people?'

'They're paid for by the UK taxpayer, they're sent by the British Government,' Jimmy calmly explained. 'They're ex-SAS soldiers with families in this country, watching this programme tonight.'

That caused her to stumble; she could hardly accuse the UK Government of murder. 'What involvement do have with numerous hangings that take place in your region?'

'Not enough.'

'Not ... enough?'

'I'm very much in favour of capital punishment for murder, and other crimes, it's the only way to keep order in lawless regions.'

'Have you ordered hangings?'

'No, but if I had the choice I'd hang some of these men myself. You see, in the Congo, men tend to favour raping virgins, some as young as ten years old, slitting the girls throats

afterwards. If it was in my power, I'd hang them myself – and not lose any sleep over it.'

'So who orders the hangings?'

'The military commanders have that authority,' Jimmy explained.

'Why not the police or courts?'

The Ambassador put in, 'There are no police, and no courts in these regions.'

'Why not?'

'Because it's a very poor and lawless area of jungle,' Jimmy explained. 'Why do you think I got involved in the first place? I've had to pay magistrates and lawyers to come up from Kinshasa, and offer then twenty-four hour protection – just to do the job.'

The Ambassador said, 'If the British Government would like to pay for a judiciary, we will be happy to talk about it. We are a very poor country.'

'We've seen footage of attack helicopters, Kenyan Helicopters, attacking refugees.'

'Fabricated camera work,' Jimmy suggested.

'Fabricated?'

'Yes. Shots from two different angles, fabricated by the cameraman – something you *will* have to defend in court. And the footage is from the old Rwandan crisis, not taken since I was involved – a complete lie.'

The lady was starting losing her composure. 'Are you profiting from illegal mining operations in the region?'

'All profits from my businesses go to charity, as you are well aware, and the Congo is no different. All profits from mines I have become involved with go towards the two orphanages I have set up.'

'The largest orphanages in the world!' the Ambassador stated, raising a pointed finger. 'Twenty thousand children.'

'And that orphanage is run like a prison, high fences with barbed wire and armed patrols. Is that right?'

'Yes.'

'Yes? It is a prison then.'

'Local men used to break in and rape the girls, so we built a secure fence.'

'Then you failed to protect the children under your care.'

‘A minute ago you were complaining about the fence being a prison, now you’re saying not enough is done to protect the kids. Make your mind up.’

‘The orphanages fall under the Schools Minister,’ the Ambassador insisted. ‘And without the money donated by Mister Silo there would be no orphanages.’

The screen went to a cartoon. Glancing at my watch, they had twenty minutes left to go.

‘Pulled the fucking programme,’ Big Paul noted.

Our phones and fax machines went into overdrive, Sharon having returned for just that contingency. We got the coffee on. The BBC’s switchboard was jammed, not least by the PM himself shouting down the phone. The next day our solicitors handed over a writ for twenty-five million pounds in damages, the tabloids lambasting the BBC as a waste of taxpayers money; the press had all been tipped off about the legal action half an hour after the programme aired. In Parliament, the opposition joined in condemning the BBC. By late afternoon the TV news, the BBC TV news, was reporting the British Ambassador to Kenya and the Congo kicked out, along with all BBC correspondents – and we didn’t even have a hand in it. Tanzania and Rwanda followed, and I’m sure Zimbabwe would have keenly followed if they actually had a British Ambassador to boot out.

Jimmy and I gave a lunchtime interview, followed by numerous interviews for the tabloids, both of us appearing on Sky News that evening. The UN, the Red Cross and other agencies got involved in the debate. The nice lady interviewer, and her controller, were both duly sacked from the BBC and hounded by the press. Now the talk turned to a rise in TV license fees to pay us what everyone thought would be a massive settlement. Since that would have made us about as popular as a tax rise, we dropped the legal action on condition that the head of news programming spent a week in the DRC, at least a day serving meals to orphans. And the BBC got the bill for our hyenas, otherwise known as solicitors.

With Jimmy not keen for people to see him as extravagant, we invited Sky News down to the house. They were obviously shocked by the size and grandeur, filming the house from the outside, but were then led on a tour by Jimmy, first to the two

offices, which bustled with more staff than normal. Jimmy explained each desk and function; the farm in Kenya, the orphanage in Kenya, the DRC, Somali relief operations and Rescue Force operations. The palatial guest quarters were displayed, Jimmy filmed in his own small apartment in contrast; bedroom, lounge, kitchen. A comment about the staff houses being better than Jimmy's quarters made it to the final footage.

In the weeks that followed, all sorts of journalists and camera crews visited the DRC, our orphanages, our well-run mines and other projects. The exposure was huge, and Jimmy ticked a box on the long path to 2025. Representatives from the Governments of Kenya, Somalia and the DRC turned up at the house as requested, given rooms and desks. They were followed by a surprise. One day Bob Davies wheeled himself in.

'Is this the home for fallen women?' he asked, seemingly quite cheerful.

'Bob, you OK?' I foolishly asked.

'No, dope, I'm paralysed,' he joked. 'Besides that, just fucking peachy.'

Jimmy appeared at my side. 'Bob is now head of Rescue Force International, to be housed in Mapley at some point, but for now he's here.' Jimmy took the wheelchair handles. 'Let's show you your desk, lots to do.'

'Slave driver already!'

Bob greeted the staff, running an eye over his new desk, everything within reach, a keyboard on a specially extendible base. Grabbing a pad and paper, he said, 'OK. What's first?'

'Keeping Dunnaw in check, for one,' I said. 'He's organising the start of Rescue Force Oz near Cairns, and he'll need plenty of hand holding.'

'He's no administrator,' Bob quipped. 'You don't have him down as director there, do you?'

'No,' Jimmy said. 'He'll not want a desk to fly, so find us someone, ex-UN if possible, or ex-army officer.' Bob took notes. 'Then there's getting the People's Rescue Force to Mawlini and doing things our way. Then, I want to hit Mackey with part-time earthquake teams, the UK Fire Brigade with the same. RF Tanzania needs work as well. So, ask for dispositions and help them to grow and organise – you're the boss of them all.'

'In at the deep end,' Bob said, blowing out.

‘There’s a physio’ coming in twice a day, pool and gym.’

‘Oh?’

‘Do as your fucking told,’ Jimmy threatened. ‘You may yet walk again.’

As I returned to the diner for pancakes, I realised why the damn place was so big. I recognised our accountant, also stuffing his face, and a second man.

‘This is Neil,’ our accountant offered. ‘Be based here.’

‘Doing what?’ I puzzled.

‘Accounts, plus co-ordinator for the hotels and clubs, leisure centre.’

‘Great, free me up a bit.’

Jack stepped in and sat next to me. ‘Alright, boss.’

‘We ... are not your bosses, remember. You’re here to keep an eye on us.’

‘OK. Boss.’

I rolled my eyes. ‘Wife settled in?’

‘She loves it, and the dog’s got plenty of space. Oh, three men from *protection* down tomorrow ... with their suitcases.’

Big Paul wandered in, making himself a tea.

‘How’s *the nipper*?’ I knowingly asked.

‘What’s he done now?’ Big Paul asked with a sigh.

‘Karl threw him into the pond.’

‘That’s how he got wet.’ He rolled his eyes. ‘Why?’

‘He smacked a car with a golf cart. Twice! And rammed into one of Rob’s Alsatians. For a big strapping lad, you’re soft on the kid.’

‘It’s a fine line with Jill, can’t push too hard, and this place has lots of fucking temptations for him.’

‘Three more *Karls* here tomorrow. Maybe *they* can keep him out of trouble.’

‘Wouldn’t bet on it, his teachers call him Bart Simpson.’

People settled into their rooms, into their work routines, and into odd little social groups. Jack and Rob played chess a few evenings a week, something that had surprised me about Rob; he didn’t seem the type. There was the fishing club: Rob, Big Paul, two of the protection guys and Neil the accountant. They fished the river and the ponds, making the odd trip to other locations, a betting pool run on the largest fish caught. The secret poker

group, that everyone knew about, met twice a week and played for plastic chips. It included two Africans, Bob Davies, David Gardener when he visited, Jack and Keely, and Sharon's husband, our American cousin being the best player. The movie club had a fluid membership, and simply consisted of people sat in the second lounge in front of a white screen and projector, films not yet released played off tapes – the dodgy tapes courtesy of Gareth the computer guy.

Jimmy and I preferred to use the gym early mornings, and most people avoided it at that time, not least because they liked their kip. Keely joined us a few times a week, not a problem with six running machines. I was now into the martial arts, Jimmy setting me exercises to perform each day, moves to practice on a lifelike dummy. Whenever I felt as I was making progress he would knock me on my arse before I saw him move. The four protection men, plus Big Paul and Ricky, were under orders from Jimmy to complete a certain number of miles per week - or else. Rob was excused, a serious knee injury preventing too much running. Monday to Wednesday, as with our leisure centre, the gym was well attended in the evenings. Kids and families used the pool of a Saturday, Jimmy and I avoiding it.

Overall, everyone was kept so busy that they enjoyed their time off, and our resident "M" Group guests were often cheekily given tasks by Bob Davies if they appeared bored.

After a month, Han turned up with suitcases, his stay being that of a fixed one-year assessment. He joined the poker group, took long walks, and started a rose Garden with Jack. In order to keep Jack and Han busy, Jimmy had tasked them with improving the grounds, a labour of love for the men. Most evenings Han could be found either reading, or watching English TV.

Bob Davies was a natural leader, and soon had people organised, well beyond his own remit. He even moved a few desks around. Some people quietly questioned his enlarged role, but Jimmy was happy with it. Bob was also brilliant at being cheeky; begging, borrowing or stealing whatever we needed from various NGOs or governments.

When in residence, we held Rescue Force meetings on a Monday morning, typically taking all day. Tuesdays would consist of meetings with the Africans in turn, typically an hour each, more general directions than specifics. Tuesday afternoon

was Neil's review of accounts, summary figures compared month on month, then a review of staff costs and claims, often some swearing at items requested. Wednesdays were formal "M" Group meetings, Sykes usually popping down. When staff asked what the "M" stood for, we joked that it was for "Mothers". Items were discussed or debated, Jimmy answering specifics. But for the most part Jimmy would read the papers each day, make notes, then inform the relevant person about a topic before he forgot about it.

Our part-time staff, those working out of the London lockup, and with no connection to Pineapple – nor contact, would sieve through music tapes each week, sending Jimmy the summary of names and song titles. He'd then email Pineapple with a list of who to sign up. Those new sign-ups would then be required to perform at the clubs in Cardiff and London.

Thursdays became the well-attended curry night at the house, an Indian chef assisting Cookie to rustle up a feast. Not many of the "guests" went to the club on a weekend, but the rest of the staff were regular attendees, Ricky organising trips for the security staff. Big Paul was now bit hen pecked, and I took no pleasure in taking the piss out of him. Keely resisted the club for four weeks, then journeyed down with us, impressing the Welsh ladies with his American accent and putting it about a bit.

I often invited down our singers from Pineapple, putting them up in the best rooms and spoiling them. And Jimmy, he was happy with his routines, especially his visiting masseur, Sharon's gorgeous niece, Nicola. He insisted there was nothing to it, but anyone making a joke would be stared at till they grew fearful.

Izmit, Turkey, August, 1999.

RF Oz had grown quickly, a suitable director found in the form of a former Army Major, a specialist in wilderness survival. Recruitment had been simple, since nearly everyone taken on board could fly something, they could all drive and maintain a jeep, and long distance navigation in hot climates was second nature to them. They had no problems with creepy-crawlies, and

dangerous animals were a fascination, everyone having a story about a mate that had been killed in some grizzly fashion. Twenty Aussies had been recruited and sent to Mawlini, the Australian Government then taking a keen interest and offering to fund and support the fledgling unit. In response, Jimmy invited the Australian Ambassador to the house, Bob Davies and others discussing RF operations at length. But Jimmy emphasised to the ambassador that RF units should appear to be politically free of bias, private organisations that could go anywhere. Within a few days the Australian Government offered to fund a further thirty people, indirectly, and would “sell” old kit at good prices. Extra bodies were recruited, many ex-Army and already ticking many of the boxes on the training schedule.

At Mawlini the Aussies were tested more than trained, and programmes altered to accommodate them. They were easy to spot around the base from their traditional Army hats; one side up, one down, and now bleached white. They all needed mine clearance training, and some cross-trained from Jet Ranger helicopters to Hueys, a simple enough course. That course would typically be followed by Hal putting the Aussie pilots under pressure, stretching their flying skills to the limit. They were mostly spared the survival course in Tanzania, many having already attended far more extensive courses. With a group of ten checked out at Mawlini they came up to Mapley, Faulty Towers attacked at length.

The People’s RF unit needed special permission to enter the UK and to attend Mapley, making it into the newspapers. They tackled Faulty Towers with admirable professionalism and dedication, each training area taken very seriously. Two weeks was all they required in the UK, several days spent on the dummies in simulations. At Mawlini they excelled again, good at just about everything they put their hands to. Each got a taste of simulated action with a Hercules flight to the isolated airstrip, a rescue of instructors pretending to be casualties, a few days camping out in the desert heat followed by a return flight.

The Sri Lankan Government had been a bit puzzled by our request, but pleased that we would be paying for extra medics in their country. An instructor from Mawlini flew out, and we bought land on the east coast, huts built. Fifteen doctors and thirty nurses were hired – mostly male nurses, their wages good

for the country. Training began at Mawlini, Mac complaining that he could not keep track of who was who arriving at Mawlini and “when would the fucking Eskimos get here?”. The Sri Lankans were dedicated, keen, technically competent, but lacked the strength and endurance often needed for deployments. Fitness was an issue cut short by Doc Adam, but only selectively, and only with Jimmy’s say so.

Sumatra was a different case altogether, it was a disaster zone at the best of times, minor earthquakes occurring most every week. The Indonesian Government took a minute to convince, offering up a shared army base in Sumatra. Recruitment was simple, since we offered wages twice the national average, attracting thirty doctors, some male nurses, no lady nurses. We could have hired hundreds, there were that many applicants. Jeeps were bought cheaply in-country, a few old Hueys floating around and purchased with contract pilots as part of the package. The Indonesians needed training in all areas, but plodded through with keen interest, each one undertaking at least twelve weeks in Mawlini before being signed off. In the UK, Faulty Towers was home from home for them; there was no one who had not either been buried alive themselves, or had searched through damaged buildings for real. They understood the scenario better than any others and took it all very seriously. As for India, the paperwork was dragging on.

By July, 1999, we had many teams in many countries to call upon. Jimmy had savaged the currency and futures markets, a great deal of money earmarked for a deployment in August. He would not say what the job was, simply that it would be a bad earthquake. Supplies had been procured and stored in Mapley under the pretext that they may needed “some day”, a great many family-sized tents organised, twenty-thousand camp beds stacked up, Bob Davies scratching his head at the expense. With the PM’s permission, an exercise called “Unity” was earmarked for Mapley in August, five Antonovs and a few Hercules hired, Bob Davies planning the show along guidelines Jimmy had given him.

On the fifth of August we greeted the teams and their leaders, most housed in tents around the airfield; all other local groups had been banned for the two-week duration, the air cadets would have to run their summer camps around us. A second barrack

block had been finished at Mapley, the ladies from several nations housed in the blocks if they wished. The airfield's canteen was a good size, but meal times had to be set by groups of nations, the bases mini-mart busy all day. Bob Davies and Coup took over an office next door to Mackey, other senior staff housed in Mackey's admin' block.

The combined exercise was to take the form of two weeks of competitions, followed by a four-day test deployment on MOD training grounds near Norfolk. A scoreboard was set up, a list of nations and events marked up. Some of those teams included British Rescuers, and a Fire Brigade team. The differences in national team sizes were not a problem, since individual scores were aggregated and averaged.

On the first day, everyone was given a time trial run around the airfield, an individual event with all times averaged. It used up the whole day to get them all around, the Chinese just ahead of Hong Kong, a British rescue team in third place. I was glad that Tubby was busy elsewhere, RF Kenya looking a bit unfit. The next day the individual wall climbs were timed, in parallel to five man teams negotiating the scaffold with a colleague in a stretcher. The British Rescuers did well on the wall, as expected, the Chinese winning on the scaffold, not least because several teams dropped their stretcher, the colleague being carried complaining loudly. By the end of the second day the Chinese were ahead, the British Mountain Rescuers second, Australia third.

On the third day the Prime Minister popped in, knowing more than I did about what Jimmy had planned for the deployment. As he toured about the various groups and nationalities, teams had to build makeshift bridges across the small gully, and again secure a stretcher across, as others rescued instructors in the nearby cave. At the end of the third day the British Rescuers were in the lead, Australia second, our mob from Kenya closing the gap, the People's RF slipping. The fourth day consisted of two person teams tested on a bank of dummies in the AMO building whilst others sat a computerised test, a hundred general rescue questions. Doctors then sat tests suitable to their skills, nurses likewise. The Sri Lankans jumped a few places, the Indonesians lifting off the bottom, the Brit Rescuers slipping two places.

From the tower, Jimmy and I stood and took in the field. 'The national teams are starting to gell a bit,' Jimmy suggested.

'Let's hope so, only got a few days.'

The fifth day consisted of trials bikes being negotiated around courses and timed, the same for jeeps and quad bikes. The foreign teams slipped, the Brits climbed and Kenya took the lead for a change, a reason for much celebration that evening. In the morning the teams all had a quick lesson in scaffolding, a little practice, then an area in which to build the same scaffold shape that now sat in plain view as example.

'Here's one I made earlier,' bounced around.

The Chinese teams made perfect shapes, albeit a bit slow and methodical. The Sri Lankan's effigy collapsed a lot, the Indonesians got there eventually – falling off a few times, but the Brit Rescuers did the best job, closely followed by Kenya. The Tanzanians injured themselves and gave up, and the Australians built higher than they should have, wasting time. On day six we gave everyone a rest, just one game in the morning, raising a large tent, many collapsing in on their erectors. Day seven was all in the pool, groups brought in and timed swimming in the morning, rescuing in the afternoon. Whilst waiting, people could improve their team scores on the rowing machines in the gym, the Australians powering through.

Day eight consisted of teams spread out and timed as they tackled a jeep with no wheels, no oil, no battery connected and no fuel. The Sri Lankans struggled, as did the Indonesians, the remainder assembling the jeep in varying times. Australia was now in the lead, the Brit Rescuers second, Kenya third, the People's RF fourth. But most important of all, they laughed and joked around the canteen in the evening, sore fingers covered in plasters.

Day nine brought a more elaborate exercise. The teams were tasked with carrying a colleague over the assault course, followed immediately by making a bridge over the gully, assembling the jeep, driving a course with the stretcher – carefully handled – then building a scaffold over a wall and getting their colleague over. In total, the average time was forty minutes, the teams sweating. The People's RF won the event, followed by Hong Kong, Australia in third place. Day ten was a rest day as we awaited the inevitable.

The following morning we woke everyone early and assembled all groups with their kitbags. Stood on the tower roof in the grey dawn light, Jimmy shouted towards four hundred rescuers. 'There has been a serious earthquake in Turkey, not far from Istanbul. We are deploying. Aircraft will be here in less than an hour, so everyone please check your kit, get into your teams. British Mountain Rescuers, you may attend if you wish, but grab white jackets from us. Fire Brigade, you'll need to contact your superiors if you wish to accompany us. For all national teams, we are contacting your governments now, we are also checking permissions from the Turkish authorities. We will move on the assumption that existing permissions are sufficient. Dismissed.'

As the quake had struck Turkey, faxes had gone to embassies and national governments, special software used to batch them. Jimmy had called the PM and asked for Air Force assistance, which was granted immediately. Our hired Antonovs were on their way from various airports, their arrival times carefully pre-planned, our own Hercules stood waiting on the apron. It's engines started up as we stepped in from the tower roof.

Below, in Bob's office, Jimmy said, 'I want Kenya and Australia on our Hercules, off as soon as their ready. We'll fax UK and European air traffic control now. Mackey, contact every volunteer you can find and ask them to assemble here. Bob, contact each home base unit and get any spare bodies we can, so that's the remaining Chinese and Hong Kong boys – flown straight to Istanbul.'

Jimmy and I made coffees and answered the phone, many embassies spoken with, before setting about the task of getting supplies onto the planes. The media had been tipped off as soon as the quake had registered, the first TV crew at the gates and let in around 10am. They had just set up in front of the tower when our white Hercules powered off. Little over ten minutes later the first RAF Hercules landed, picking up sixty people and lifting off quickly. That process was repeated till we had just twenty warm bodies remaining. With the assistance of British Rescuers, and the Fire Brigade, we loaded supplies onto the Antonovs using small forklift trucks; tents, blankets, camp beds.

Then it fell eerily quiet on the airfield. With a tea in a plastic cup I wandered out as the day warmed up. Bending down, I

picked up a RF cap someone had dropped, wishing I was on a plane. But not this time, I had to learn to send people out. I approached the TV crew as they stood about with their own plastic cups. 'All gone I'm afraid,' I said.

'Not going with them?'

'No, we're co-ordinating the effort here, trying to get a shit load of tents and blankets organised. Besides, when I get involved in stunts I get told off a lot.'

'Do you want to give an interview?'

'Bit later, when we know what's happening. It's five or six hours in a Hercules to Turkey.'

The day warmed up, Han brought over from the house along with the Africans; they all had nationals deployed. We set-up a command centre, phones and faxes available.

The Fire Brigade got permission, and Mackey's rescuers called in to say they were on their way. Jimmy opened a store of white jackets, all sizes, this batch printed with simply "Rescue", Union Jacks on the sleeves. Each man got a jacket, some already wearing various jackets describing their skills. A hired Antonov touched down and we loaded forty men, extra food and water, money given to team leaders for hotels and transport.

A lorry appeared, halting on the apron and being tended now by forklift. Nosing, I broke open a card box. Inside I found plastic packs that contained water, chocolate, tea and coffee, powdered milk and tinned meat, toilet roll. I remembered it was our equivalent of army field rations. These would arrive a day after deployment, for our people to replenish stocks. They were also excellent for people without homes. A white UN Antonov landed and taxied around as I watched, soon disgorging numerous empty flat pallets from the rear. The boxes were loaded, the TV crew having something to film, something more interesting than me.

As the day wore on, more and more individual rescuers turned up. I entertained them all in the AMO training rooms, fetching snacks from the shop and making the tea. At 6pm we totalled forty and called in another Antonov, the men duly loaded and sent on their way as I stood and jealously watched. By midnight another twenty had arrived, told to get some sleep, the next plane due in the morning. Some of this lot had driven down from Scotland, an eight-hour drive.

By this time our teams were reporting in via their satellite phones; "Sit Reps". They had landed at Istanbul airport to much faffing about paperwork from the officials, eventually let through. The British Embassy was nominated as command central, Doc Graham heading there with his assistant, plus the national leaders from each group. Outside the airport our people hired buses, hard cash offered, and quickly reached the areas most devastated. With roads blocked they got off and walked, stopping to help wherever they found large buildings collapsed. That first night they supported the Turkish authorities and scrambled over and under buildings in the main towns, life-saving first aid given. The next day they were split by teams and sent to other towns and villages, no group totalling less than twelve rescuers.

The remainder of our people turned up in Turkey that evening, large numbers from China and Hong Kong, another fifty from Africa, small groups from the UK. Supplies were flown out steadily, tens of thousands of tents and blankets. All the while Jimmy and I camped out at Mapley, plenty of spare beds available. Bob Davies worked tirelessly on the phone all day, people encouraged, bullied, offered bribes or just down right threatened. Red tape was cut through, supplies forced through, and in Turkey those supplies were driven to where they were needed. And as the days unfolded the scale of the disaster became apparent; an estimated twenty thousand dead, a hundred thousand injured, and a million homeless. Spare tents were sought from around Africa and flown up, dusty old UNHCR tents that had seen better days, and had seen the odd refugee crisis.

Five days in, few were being found alive and the recall was duly issued, two RAF Tristar aircraft sent to bring back those who had flown out from Mapley, the jets landing back at RAF Brize Norton at noon on the sixth day. The additional African rescuers came with them, some in an Antonov later in the day after Doc Graham had performed a head count; he accompanied the last non-Chinese group out. The Chinese would fly their people directly home.

Drab green RAF buses signalled the arrival of our people, their old tents or rooms re-occupied, much-needed showers taken, food downed. The buses came back and forth for an hour

from the nearby RAF base. When cleaned up, the British and Australians were allowed to give interviews to the press. Doc Graham, Ratchet, Spanner and the senior staff arrived around 6pm, straight into a logistical debrief; people, numbers, and injuries sustained being dealt with. We found out that a Chinese rescuer had been killed, another had crushed an arm in the same incident. Two of ours had suffered broken arms, and minor injuries were in the dozens; everyone displayed cuts and scrapes.

The sombre mood improved after some food and a cleanup, lager cans staked high in the canteen and free for everyone. Jimmy and I toured around, greeting people, discussing what they had been involved with. Some had walked thirty miles or more from the main town, out to remote areas. Many had bought supplies locally, many more again having food gratefully handed to them. As they were pulling out, the tents were finally arriving and being distributed where people had lost their homes. That evening, some got drunk, some put on music in the canteen and danced around, others walked around chatting. People could be seen hugging new friends from different teams, but many just went to bed.

With dawn rising on an overcast English day, everyone was told to wash their kit, check and replenish. The press seemed to have lost interest as our team leaders organised their staff. At noon all team leaders were called into the lecture room, a debrief held, questions asked, comments taken, problems and suggestions aired. One comment, about not being prepared, met with the following response from Jimmy.

‘Can you predict earthquakes? No, then every single response will be a surprise. All rescue force staff must be packed and ready to go at all times. Group leaders must regularly check that kitbags are correct, and correctly stocked. You never know when the phone may ring.’

The main gripe was a lack of jeeps on the ground, and we indicated that we’d look at getting jeeps onto Antonovs in the future. In this case, there were no jeeps in the UK available anyhow. Everyone was thanked, told that planes would take them home the next day. Jimmy would accompany the Sri Lankans and the Indonesians, the Australians would leave a day later, and I would accompany our people back to Africa.

We drove back to the house that evening, the first time back for six days. After packing bags, we both tackled a mountain of paperwork, faxes, and emails – many replied to. It was restful to sleep in my own bed, even if it was for just three hours. At 5am we headed back down the motorway, myself to Mapley whilst Jimmy continued on to Gatwick. At Gatwick Jimmy met the cleaned up rescuers from Sri Lanka and Indonesia, leading them aboard a chartered 747. I boarded an Antonov with the first batch of our people; we were over Southern France when Jimmy's plane headed off for Sri Lanka, the 747 only a third full.

At Mawlini, the next morning, I met with Mac and helped tackle the paperwork, three more plane loads arriving during the day, the last around 6pm. Rooms were found for the non-residents, everyone gravitating towards the rooftop bar later, and most everyone drunk as usual. In the morning I accompanied the small Tanzanian unit as they were sent onwards in the Dash, six staff heading back towards the DRC. A quick tour of Kigoma was organised for my benefit, people greeted. Another party was held that evening at the rooftop bar, UN and NGO staff present and interested in the detail of operation. The next morning I would have to reverse my journey with a different purpose.

With a cleaned up detachment in tow, we flew down to the new Tanzanian capital, Dodoma, and everyone pretty much sick of planes by this point. The Tanzanian press were waiting, Rudd having a hand in things, and we gave interviews at the airport, a Government Minister putting in an appearance to say how proud he was of our contribution. A short hour later we flew back to Kigoma, the job done. Giving a lift to a few UN staff, we flew up to Nairobi, the cleaned up Mawlini group bussed down for the next day. I spent the night in the apartment Tubby kept in Nairobi, Sue cooking a meal. Neither of had them been on the deployment, their flying skills too valuable down here, and I explained what I knew of what happened on the ground.

In the morning Rudd picked us up, the four of us meeting the gang outside the familiar Government buildings. Another round of interviews, more poses for photographers, more Ministers smiled at. At least we now had a decent group photograph. After the reception the gang got bussed back up to base, I hopped on a flight for Dubai, from there onwards to Singapore and Hong Kong.

Jimmy had repeated the tortuous process in Sri Lanka, meeting their President and thanking him for his people's contribution. He was on the ground for two hours. In Jakarta the press were waiting, having been tipped off. Interviews were given at length, much time afforded to the publicity drive. His chartered 747, now quite empty, returned to the UK as he flew on the next morning to Australia, arriving just before the Australian detachment returned. He met them off the plane, a hotel room waiting for each of them in a Sydney hotel, TV interviews scheduled. At this point I was half way to Hong Kong from Singapore.

Jimmy hopped on an early flight north to meet me, as I was sleeping comfortably in the Mandarin. At breakfast he was booked in, washed and fresh.

'Timing ... is everything,' I suggested.

'Indeed.'

Po met us after breakfast, a trip across the bay and to the RF HK building, a TV crew already in attendance. We gave an interview before greeting all the staff, many of who had taken part in the deployment without attending the Mapley games. Two stood with arms in plaster, a few with wrists bandaged, Hancock noting their fondness for tunnelling into collapsed buildings, and the subsequent injuries accrued. They would be told off, in time, their approach refined. Po gave an interview in a lounge upstairs before we all headed back across the bay for two additional interviews, at two separate TV stations. And I was getting sick of it. At the Mandarin I headed straight down to get a massage. Led on the bed, the lady remembering me, I relaxed. I was half asleep when it happened.

I heard a question, a shout, a scream. It took a full three seconds to wake properly and spin around. The blade stuck into my side. For some reason I instinctively moved my elbow, lessening the effect. Grabbing the man's wrist, I held tightly and just stared at him in abject surprise. He was a local, short and skinny. He threw a punch with his other hand, which I caught easily, surprising myself. With my left thumb against his wrist I increased the pressure as Jimmy had taught me, the man wincing, then screaming, dropping to his knees. Holding the man firm, I took in the masseur, unconscious and bleeding, my own side covered in blood. The door burst open and two women looked in,

shrieking and closing the door quickly. My Assailant dropped his knife. I let go of his left wrist and smashed down onto his bent right wrist as I had been taught, getting a piercing shrill from my attacker. I pulled his arm past my left hip, twisted, then slammed down onto his elbow with my right fist, bending it the wrong way. I was still holding him when a security guard burst in, grabbing my attacker around the neck and dragging him out.

I pulled on my tracksuit bottoms, over my swimming trunks, stopping to look at my wound, and wondering if I was going to die. The blood was not pumping, no arterial bleed. Holding a towel to it, I examined the masseur, finding a strong steady pulse. Without having heard anyone enter I was grabbed and led out, dozens of faces, people staring at my blood. The chill corridor I was led along helped to wake me from the shock, soon being gawked at by stunned guests as blue lights flickered from the streets. From the corner of my eye I clocked Jimmy's huge form, Po with him.

Jimmy pulled the towel away. 'It's non fatal.'

I couldn't even think of a witty comeback. I boarded the ambulance without a word, leaving Jimmy and Po stood in the hotel entrance. As I lay down my injury started to sting, and I wondered why I needed to be strapped in; that worried me more than the wound. The roof of the ambulance was inspected at length as we sped along unseen streets, the paramedic looking a bit weird upside down. My wounded body was bumped out on a trolley into a chill wind and ceiling lights flashed by, my side now protesting having been stabbed, people shouting and fussing. And all I could think off was 'What a smooth floor we must be on?' A needle entered my arm, and I woke to pastel blue curtains.

'Still alive?' came Jimmy's calm voice.

I touched my side, little pain evident. 'I was ... stabbed.'

'Yep. You treat your masseurs like that ... that's what happens.'

I turned my head. 'What?'

'The man who stabbed you, has connections to known gangs, so he was hired. We're not sure who yet. And you, young man, you broke his wrist and elbow, most effectively.'

'How long...'

‘Overnight. Oh, I’ve spoken with your parents. Told them it was the masseur’s husband.’

‘This...’

‘Was not supposed to happen, no.’

Po ducked his head in. ‘Hello Mister Paul. You good, no?’

‘I think so.’

Po informed Jimmy of something in Chinese.

Jimmy faced me. ‘Your masseur, in her youth, was married to a gang member, then ran away and started a new life; they just found her, so you ... were in the way. And Po’s family have just declared war on this gang. So, this was not about ... us.’ He stood. ‘There are guards outside the door, don’t go far, I’ll be back in a few days.’

I counted the ceiling tiles, in both directions. Several times. Then I added them up, multiplied, then cursed. My boredom was only broken every three hours by a nurse spoon-feeding me soup. By the next morning my side had stopped hurting. When the doctor eased off my dressing he squinted at it, at the chart, at me, and then put the dressing back. All was ‘vely’ good. Too good, I figured.

At noon, a knock at the door preceded a smiley, and beautiful face; Ling. Things were looking up, unless she had a knife. She inspected my rapidly healing wound, lifting my spirits with a blowjob followed by a bed massage of all my limbs. All told, she was with me around two hours. An hour later a cute young nurse entered, explaining that Po had sent her. She gave me another blowjob, as I considered that Po did know about his daughter’s visit. When my usual nurse brought in my soup she smelt the massage oils, which I explained truthfully. After soup she gave me a bed bath.

Hancock popped in the next day for a chat, followed by Po, then the Manager of the Mandarin, who apologised at length. I found myself wondering if Po had threatened him. And it seemed that getting stabbed inside the hotel triggered an insurance claim. I asked how the girl was, being informed that she was just a few doors down and fine. As for the insurance, I wanted it paid to Rescue Force. That was not possible, apparently, it had to be paid to me. But it was tax free, so I could send it on. I thanked him, and told him not to worry. The room’s TV allowed me to practise some Chinese, but, bored with that, I asked Po’s security

to step in, and chatted away at length, now very bored of my medical incarceration.

The next morning the quack was puzzled at my scar. I insisted that I sign myself out, not wishing him to investigate my recuperative powers any further, soon back in the Mandarin in a tracksuit, finding my room as I had left it. After a decent meal courtesy of room service, I tempted fate with a massage, Po's men stood outside. Returning to my room I met Jimmy coming the other way.

‘All better?’ he asked.

‘Fine. Quack was asking questions about my quick healing so I skipped prison.’ He nodded. ‘How was Beijing?’

‘Plenty of ceremony, hand shaking, interviews. I did some “M” Group stuff whilst I was there, and attended a funeral.’

‘The guy we lost?’

Jimmy nodded. ‘I’m off for a curry.’

I lifted my eyebrows. ‘I’ll see you in there in ten.’

Sat eating, I said, ‘I was half asleep. That guy could have killed me.’

‘Your reflexes are better than most, and you did well after you got going. But ... this guy is no reason not to relax. I’ll warn you when I *know* people are trying to kill us.’

‘And if I *was* killed?’

He took a moment. ‘It wouldn’t be the first time I’ve seen you killed.’

‘That is so ... weird and freaky. Let’s not talk about that, OK. Let’s ... just press on, eh?’

‘A good attitude, young man.’

Arriving back into Gatwick, a dozen photographers and reports awaited us. With Karl grabbing our bags, we led them towards the bar and bought everyone drinks, the detail disgorged till they seemed about done. I did not, as asked, show them the scar. I hit my own bed feeling like I’d been around the world.

Vice Presidents, Generals and others

The incumbent Vice President won the race for the White House, a lot of effort to stay where you were, I considered. True to form, he did not offer the former President a job. I found myself wondering how that conversation went.

One of the last things that Harvey signed off before he left was the assassination of Saddam Hussein, the Iraqi dictator making the mistake of staying the night in a modest house in Tirkrit one evening. His sons survived, only to be arrested and held as General Masoud grabbed power. And Jimmy ticked a box.

A few days later, General Abdi and several Ministers of the new Somali Government came to visit, snubbing Whitehall a little by coming straight to us. This was Abdi's first trip aboard, the first time in a commercial jet liner, the first time to see the "wet green land", and the first time to see a house like ours. We gave our visitors palatial rooms to rattle around in, a meal organised in the dining hall that evening, many attending. Sykes came down with a Whitehall mandarin and the new Somalia Ambassador to London, Keely, Han and Jack attending as a courtesy. And because they would have asked about it afterward anyway, being a pain.

'How's Mogadishu?' I asked the senior Somali official as Abdi tackled chicken tikka starter.

'It will take many years to ... make repairs and heal our wounds.'

'Oil revenue coming in?' I probed.

'Yes, we have been given *credits* abroad and buy many much needed items from the west.'

'The French at that mine?' I added.

'Yes, they employ many local people and ship the ore through Mogadishu Port, increasing trade.'

'Sounds like progress,' I suggested.

'Indeed. And your medical centres are much needed, still much fighting.'

'Yes?' I puzzled.

'Young men, used to a more ... easy living, find working for their food a difficult adjustment.'

Jimmy asked Abdi, 'And the east and north?'

‘Some small groups resist,’ he answered. ‘It is a problem of distance and space, more than fighting. And what of you, how is business?’

‘Business is good,’ Jimmy said with a smile.

‘I read of what you did in Turkey,’ Abdi mentioned. ‘Many countries working together, and many here at this table.’

‘Oh, no,’ Jimmy corrected him. ‘Mister Han does the Chinese laundry, Mister Keely teaches poker in the evenings, and Jack here tends my garden.’

‘For the most part,’ Han commented, ‘that is true. And Mister Paul provides for the gossip – as the English say – on poker night.’

‘You talk about me?’ I challenged.

‘We have a pool on women and accidents,’ Keely explained. ‘I have you down for a car crash with one of the Spice Girls in there.’

‘I have read all three books,’ Abdi proudly stated. ‘But some words I needed help with. Still, a man should always widen his horizons through language.’

I could hear some of Jimmy in there, and Abdi still looked young in his ill-fitting General’s outfit. ‘Be a fourth and fifth book soon,’ I informed him.

‘The fourth book is available,’ Han put in. ‘I am reading it now.’

Abdi focused on Jimmy. ‘We have had a small incursion by the Ethiopians. How would *you* deal with them?’

‘Have you captured their men?’ Jimmy asked. Abi nodding.

I put in, ‘Then clean them, feed them well, give them money, thank them and send them back.’ The Somalis were puzzled. I added, ‘If someone throws a rock at you, hand it back cleaned and offer them another throw. It will annoy them no end.’

Jimmy grinned. To Abdi he said, ‘This is what I would do. You want good relations with your neighbours, all of your neighbours, even when they behave like children.’

‘Tell me, Mister Jimmy, do you think they have designs on our land?’ Abdi asked, many eyes now on Jimmy.

‘No,’ Jimmy adamantly stated. ‘Remember, a government is made up of many people, few who agree with each other. And the people in the government change often.’

I could see Abdi considering that. ‘The new American President was the old Deputy President, yes?’ Jimmy nodded. ‘But he will not give his old friend a place in his government?’

‘It’s complicated,’ Jimmy began. ‘But always remember that politicians have a lot of pride, what we call *ego*. To reach a high position, and to accept a lower job is ... very difficult for the ego, especially if you’re an American.’

Abi focused on Keely. ‘And how do you like this new man?’

‘Ooh,’ I let out, Abdi taking in the faces.

‘I work for the government, so I *don’t have* an opinion about my political paymasters,’ Keely explained.

‘He’s a political eunuch,’ I explained to Abdi, making his ambassador laugh.

Jimmy said with a grin, ‘If I was you, Abdi, I would avoid politics for many years to come.’ The Somalis took great interest in that statement, as did the others. ‘It is best for you to use your heart to defend the security of your nation, till that need has passed.’

Abdi, and the Somalis, got the message, people exchanging looks from under their eyebrows.

‘May I ask,’ the ambassador began, ‘about the farm land in Kenya that you *purchased* for us.’ He did not seem happy with the project.

‘Your land has a limited potential for food growing, now and in the future,’ Jimmy explained as our main courses were brought out. ‘If I use aid money to employ Kenyans, they get a benefit. You get the food, so you get a benefit, and your two countries become closer. Two birds, one stone.’

Abdi sat nodding. ‘The Ethiopians have tanks. Should we buy tanks?’

‘Yes, from the Chinese,’ Jimmy suggested. ‘No more than a hundred, they could defend Mogadishu if need be. And to pay for them, you could offer ores from your old mines in the north. I’m sure they have more potential that you realise, they just need experts to survey them.’

Han piped up with, ‘I am sure that my Government will assist with such surveys, at no cost.’

‘We are grateful,’ the senior Somali said towards Han. ‘Please communicate with our man here.’

‘I know him well,’ Han pointed out, and I wondered why he was not in on the dinner. Perhaps he was not important enough.

Jimmy asked the Somali leader about counter-terrorism.

‘We are happy to receive your people, and co-operate with the regional government agencies.’

Sykes put in, ‘We are building up a team with our American colleagues, and the Kenyans. They will work out of Nairobi for now, since we already have the structures in place, but will inform you of any insurgents.’

‘Of which there are many,’ Abdi noted. ‘We are a country of a thousand villages, with a thousand chiefs’

Jimmy said, ‘That will change when prosperity reaches the villages, assuming it is allowed to reach them – and not concentrated around Mogadishu. Jobs, and education, are your weapons of the future.’

Big Paul knocked, stepped in and handed Jimmy a fax, withdrawing quickly.

Jimmy scanned the detail. ‘Ah, it would seem that my Russian associates are interested in the modest Aluminium deposits in your country. If you are happy enough, they’ll test drill a few areas to see how extensive the deposit is.’

‘Would the Chinese not do that as well?’ Abdi puzzled.

Jimmy focused on him. ‘A girl does not get into bed with her first suitor!’ They laughed.

I said, ‘And in this country they try them *all* out first.’

After desert we stood in the third lounge with drinks, non-alcoholic for the Somalis.

Sykes and his Whitehall buddy cornered Jimmy. ‘Would we not wish to sell them some arms?’ Sykes nudged.

‘Two words come to mind, gentlemen.’ They blinked. ‘Bargain... basement. You’d not make anything, otherwise ... yes, of course I’d get you in there. The People’s Republic will throw a few tanks at them for cost price, less twenty percent. But let BP know that there is more black gold than ... anticipated. I just want it fished up slowly.’

The next morning we risked the rain and dressed our guests in green wax coats and hats, teaching them fly fishing in the ponds to start with, then the river. To say they looked a bit odd...

After lunch Jimmy took Abdi for a long walk around the grounds, protection following close by. That evening the

Ambassadors of Kenya, the DRC and Tanzania joined us, another meal, more cocktails, an informal meeting. A golf putting green appeared overnight, I saw it in the morning from my room, and everyone relaxed with a little limited-range golf. The cheeky sign in the grass said, "River View Golf Complex II".

Sykes and his colleague headed back, the Ambassadors having just been down for the evening. The Somalis enjoyed one more evening, trying the pool and saunas, proudly shown around the rose garden by Han and Jack. When it rained they found it fascinating, lifting their faces to the falling drops. We bid them farewell, promising to visit Mogadishu ... at some point.

From Russia with love

Jimmy had arranged for all five of our books to be translated into many languages, including Chinese and Russian, and ten thousand books in Russian had been forwarded to Yuri earlier in the year. He had been tasked with sending them on to Medical Universities around the country, but would also, no doubt, sit down and read them.

By time we arrived in Moscow in late October he had an idea: why don't we create a RF Moscow unit? We explained the red tape after landing, as he drove us along in a sumptuous limo from Domodedovo airport towards town. Flying in, I had thought: what a shit hole! Driving in, I thought: yep, a shit hole, nothing but white high-rise Stalinist blocks as far as the eye could see. How people got themselves home when drunk was a mystery to me, the blocks all looked the same.

The limo pulled into what looked like a run down apartment block on the outside, the inside highly decorated. The lift from the parking level appeared to be gold-plated, Yuri's apartment huge and expensively furnished, if not a little 1970s pimp in style. It seemed like he had taken over the entire top floor and had converted the old apartments into one large apartment, a dozen small suites available for him, his family and his guests.

That first afternoon Jimmy had requested a trip to the local teaching hospital, so after lunch we set off in the limo again. Crossing the river I glimpsed the famous Kremlin walls, which I was told meant Hill Fort – or defended hill, and that Red Square was nothing communist, but a play on words; red and beautiful sounding alike in Russian. It had been Beautiful Square before Stalin changed an inflection.

At the medical university we found the principal, eventually, passing a few doctors that looked like bread bakers in their tall white hats. Jimmy asked the principal if many of his students made use of the student flights scheme. They did. Jimmy then explained that he had both started it, and funded it all, shocking the man. To top that, he handed over a letter from a British medical equipment supplier, granting the university a million pounds credit for equipment. Not to be outdone by that, and typically Yuri, our Russian host explained that he would be buying a million pounds worth of the latest equipment and handing it over. I took a snap of the happy group, the principal needing a glass of water and a sit down.

That evening, after Yuri's cook provided us a bland meal, our hosts took us to an exclusive and expensive nightclub, thousands of dollars just to get in. Given a choice, the MacDonalds we passed on the way would have been better than this place; it offered idiot bodyguards on steroids, their idiot gangster bosses, and skinny hookers. Still, we settled at a table upstairs and tackled a starter, with champagne to wash it down.

Little more than fifteen minutes later a group passed, a look exchanged with Yuri, an insult inferred. Jimmy stood and made reference to the man's parentage as I counted eight bodyguards, all Jimmy's size, or bigger. Stood there, calm as ever, Jimmy insulted the guy's bodyguards, producing a wad from his jacket. A hundred thousand dollar bet was offered, that Jimmy could take down all of the bodyguards in sequence. People moved out of the way, tables being cleared by frightened guests, and I thought, "bloody hell". Jimmy placed the wad on a recently vacated table, taking off his jacket, leaving me stunned at what he was doing. I swallowed. The insult thrower nodded one of his men forwards.

Jimmy crippled the man in an instant, causing a second man to move, and knocked flying into a third. Two men, that were not

blocked by bodies on the floor, moved forwards, both struck down with effortless grace. The next man jumped over his buddies, meeting a flying kick as he landed and crumpled. Stepping over an unconscious man, Jimmy walked around to the remaining three men, the insult thrower now urging them on. They fared no better, some horrible noise produces as joints buckled and bones broke.

Jimmy retrieved the wad. He handed it to the man, saying, 'I apologise for that vulgar display. This is towards their medical bills and some new bodyguards. And why don't you join us for a drink.' Replacing his jacket, Jimmy sat, the crowds staring.

The insult thrower, still holding the wad, stepped over and sat as the club's staff attended the injured men, no concern for his bodyguards. After a few seconds staring at the side of Jimmy's head, he said, 'We have not been introduced.'

Yuri said, 'Marko, this is the famous Jimmy Silo from England.'

'British? You sound Russian.'

'He speaks many languages fluently,' Yuri proudly informed our guest. 'And he fights quite well too.'

'So I see.'

Jimmy dabbed his knuckles with a napkin. 'Fighting, is normally the last recourse of the intellectually challenged. I try and avoid such vulgar displays. That was rude, and I apologise.'

Irina did not seem put off, quite the opposite.

'You won the bet,' Marko pointed out. He handed back the wad. 'You English are strange.'

'What business are you in, Marko?' Jimmy asked, still attending his knuckles.

'Diamonds and gold.'

I hid a smile as Jimmy glanced at me.

'Interesting', Jimmy noted. 'I own all the mining rights to the Eastern Congo, I'm the Governor there.'

'You!' Marko just realised who he was sat next to, his face going through a wide range of emotions; shock, surprise, excitement and wonder. 'If I'd known –'

'You'd not have been insulting to my business associate here?' Jimmy posed.

'I ... apologise,' Marko forced out, as if it was not something he did very often.

Jimmy handed him a card. 'We'll have to talk about the Congo in detail at some point.'

'It's where you have the world's largest orphanage,' Marko noted.

'Yes, twenty thousand children,' Jimmy confirmed.

'You have business in Moscow?' Marko enquired, a glance toward Yuri.

'I'm going to open a medical rescue charity, I have them all around the world,' Jimmy explained.

Yuri said, 'You saw the rescuers at that quake in Turkey? They are all paid for by him, ten countries.'

'I saw it on the news, yes.'

'Well, Marko, let me explain how I do business. People get mining concessions in regions I control ... if they assist me with my medical charities.'

Both Marko, and Yuri, got the message as the manager put in an appearance, not a happy bunny at all. We retired to Yuri's apartment, Jimmy offering to protect Marko and making him laugh. Yuri accepted his unwelcome guest well enough, Marko using the phone to order a car and driver. We sat around the lounge and discussed the only topic of interest to the Russians, the Congo, Marko making his excuses an hour later. Jimmy had no choice but to retire at a normal human bedtime, with Irina, leaving me in my room with a paperback, and feeling oddly jealous for a change.

The next morning we set off to meet the Deputy Mayor of Moscow, our donation to the University making the papers and the TV news. Yuri had clout and pull, and Marko turning up added to the weight of force and influence. But it was not a difficult sale: could we start a team of rescuers here, and pay for it all, whilst Russia gets the credit? It was a done deal, Yuri taking the lead as principal member of the board of trustees for the charity to be set-up. Jimmy handed him a detailed document of structures and procedures, asking him to find a suitable airfield nearby. Marko knew of one, he flew out of it often in his helicopter; it all fell into place as if Jimmy knew how it would ahead of time.

Marko had business to attend to, not least some new hired help, and so Yuri and Irina took us to the airfield in the limo. The airfield was large, not too far outside of Moscow, and already

offered a modern and functional tower, hangars and a few other buildings, Yuri promising to get the lease soon. We suggested Yuri visit Mapley as an example on his next trip to the UK, and start the recruitment process in the meantime; doctors, nurses, fire brigade staff, ambulance staff and paramedics; they would all need basic English, to cope with Africa and other countries.

Driving back, Yuri took detailed notes, annotating the document Jimmy had given him, and I was sure he'd be off to a running start. We explained that the commissions he owed us should be used to pay for RF Moscow, some nine million pounds already. That shocked him more than Jimmy's vulgar fighting display. Was all of it to be used? Yes, kept in the charity for the long term.

They treated us to lunch near Red Square, followed by a tourist wander around the outside of the Kremlin under grey skies. At 3pm Jimmy said he had an appointment inside, Yuri puzzling that. We asked for a car at 5pm. Passing through the tourist entrance, and paying a few roubles, we walked up a ramp and ventured inside the walls. I was surprised by how many churches there were inside the Communist citadel, the whole thing seemed to consist of just churches. We passed a huge cannon, the largest ever built – at least the widest bore of any cannon, Jimmy playing at tour guide as if he had been here a hundred times before. Approaching a white and yellow office block he told a guard he was expected, and by whom. An official appeared within a few seconds, obviously stood waiting, and ushered us quickly inside. Along bland corridors we marched behind the official, into a warmer corridor and past four guards into a large office, four officials sat around a small coffee table, guards in suits stood like statues in far corners. Jimmy greeted the men as they stood, leaning and shaking the hand of the shorter man, the Deputy President Mikhail. Offered seats, we sat, tea and coffee offered.

'You look young,' Mikhail noted.

'My body has been genetically altered,' Jimmy responded. 'I do not age.'

They puzzled that, hard frowns taking hold.

'And you can predict the future with great accuracy,' Mikhail noted, seeming very cool and reserved.

‘No, I can remember my past, that will be your future. I’m a time traveller.’

The hard frowns became wide eyes as people sat up, looks exchanged.

Jimmy added, ‘The time machine was built by a consortium of Russian and Chinese companies, after the Americans began work on one of theirs,’ he lied. ‘In the year 2027. I was selected as the traveller.’

They sat staring, mouths open.

‘What ... what is your purpose?’ a man asked.

‘To help prevent World War Three, and to stop certain future American Presidents from making terrible mistakes.’

‘You are Russian?’

‘No, English.’

‘You speak with a Moscow accent.’

I said, ‘He speaks Chinese with a Beijing accent as well.’

‘And you?’ they asked.

‘Just an assistant. But I have been injected with his blood, so I can run a marathon in less than two hours.’

‘Injected?’ they puzzled.

Jimmy explained, ‘If I inject my blood into someone they take on super-human qualities, immune to all diseases known to man – and a few you have not yet discovered. If you get a few soldiers together, I will inject them so that you can study them. The Chinese are already doing this, so are other governments.’

‘Who else knows about this?’

‘British, the Americans and the Chinese Governments, representatives from each live at my house in Great Britain.’

‘The Americans know?’

‘They Americans know ... what I want them to know. The Chinese know more, they were the first government I contacted.’

‘How did you find the letters?’ I asked.

‘Very ... accurate and useful,’ they guardedly admitted.

Mikhail asked, ‘What is your mission remit?’

‘To help you and the Chinese build up, and to provide a buffer to future American aggression.’

‘You know when and where that aggression will take place?’ Mikhail pressed.

‘Yes,’ Jimmy agreed. ‘And when you are ready I will give you a route map of the next twenty years.’

Mikhail turned his head to one of his men. 'Cancel all my appointments today.' The man got up, heading towards the door. 'I would like this information now. If we sent you – a future Russian group - then you are working for us.'

Jimmy smiled. 'I was chosen, because in the future I am the head of the United Nations. I did not *work* ... for anyone.'

'UN Secretary General?' they puzzled.

'Yes, my friend. So do not assume that I follow orders from anyone. Now, you have black boards or white boards?'

'Upstairs,' a man said. They stood.

In a room upstairs we found both white boards and paper pads on easels, Jimmy grabbing four. I switched off and peered out off the window at the tourists as Jimmy gave the spiel for an hour, many questions asked, many points gone over. All in all, they were delighted with the way the Russian economy would unfold. Jimmy offered to work a deal through Yuri, whereby we gave him trades and he made money for the Russian Government, but discreetly. Jimmy explained that any large trades made by the Russians would be noticed by The West and countered. Secrecy was required, something that seemed to cheer them no end.

They then asked about future Russian leaders. Jimmy informed them with a grin that Mikhail would be President for eight years, then Prime Minister for another eight years, followed by returning to President for a third set of eight years. I think I saw the little guy actually grow an inch. Jimmy explained about the "M" Group, the secret one, and the very secret one, a representative asked for at the house and readily agreed to. They offered us a large batch of bodyguards, but we resisted, it would draw attention. We finally accepted two men. They would not let us leave without giving blood to four perplexed, and hesitant guards.

We walked out like tourists, our two men shadowing us to the car only. Yuri met us a 5pm as scheduled, delicately pushy about our mysterious meeting. We explained that we had business with the Government concerning arms sales to Somalia. That deflected Yuri, who suggested such things were dangerous. If only he knew. The bodyguards rang Yuri's bell and explained who and what they were about, Jimmy asking the two men to sit in the lounge and read the papers as we discussed Rescue Force with Yuri.

Explaining some urgent business, we packed and headed to the airport, tickets booked for us that day and waiting at the airport. We touched down at Gatwick around 1am.

Two day's later a middle-aged Russian diplomat named Paul turned up. We named him Ivan so that no one would be mixed up, and he greeted the "M" Group houseguests. As anticipated, the Russian President-to-be took a seat on the board of the Rescue Force charity. It was almost as if we had planned it that way.

With Jimmy out of the house, a few days later, we got a fax from the nice man in the White House, the good gentleman in his final year. It offered 55 ex-National Guard Hueys if we wanted them, twelve Cobras. We'd have to pay a scraping fee so that it did not look suspicious, just a couple of million. I faxed back straight away and said yes, followed by a chat to the Kenyan at the house, letting him know that the Kenyan Army would take delivery and we'd pay.

I rang Coup. 'How much space we got for more helicopters?'

'Fuck all, they're all back from Somali.'

'OK, how about the base near Mombassa?'

'Loads of space, get ten or twenty in there.'

'I see. Right. You know the far side of the Rifles helo base, what's there?'

'Nothing but a wasteland used for training.'

'Build another helo compound, room for ... oh ... fifty or sixty helicopters.'

'Fifty or sixty? You mad?'

'We only need them there in storage. We're going to see which one's are best, send them off around the world for other units to use. You'll only keep a few if you want them.'

'Oh. What are they?'

'Fifty Hueys and another dozen Cobras.'

'Easy enough to stick a fence up, we've still got a shit load of barbed wire,' Coup reported.

'Do it, they'll take eight weeks to reach you. But I want a small hangar and workshop, some concrete.'

'How was Moscow?' Coup asked.

'We've started a unit there, airfield outside of Moscow.'

'They be coming down here for basic training?'

‘Yep, but they speak English. All OK there?’

‘More nationalities than you could poke a stick at. We got twenty from Ghana.’

‘Ah, good, I wondered about them. They any good?’

‘Yeah, good bunch. We’ve got a cricket competition and football programme. But we had to clear the pitch of mines.’

‘Mines?’

‘Yeah, someone put a few practise mines around the football pitch.’

I laughed. ‘You built another bar I hear?’

‘Back of the senior staff quarters, segregate the drunken senior staff from the drunken junior staff. Jimmy insisted that we not be drunk in front of new recruits.’

‘Damn right.’

‘Got a problem with the Indonesians as well, they don’t approve of the drinking, so we have a non-alcoholic bar for them. Some of the Africans are devout Christians and don’t like it either.’

‘Be less of a bunch of piss-heads then,’ I suggested.

‘Can’t take out all of the fun with being here. Still, we keep them so tired they’re in bed early!’

When Jimmy returned I showed him the fax. He informed me, ‘I’ve ordered sixty extra fuel tanks. Puts the range to almost six hundred miles.’

‘Six hundred? Shit. But we lose space and bodies with those tanks.’

‘Not really, we don’t normally have more than four or five in the back, they can take ten or twelve. Oh, order up winches for them all pronto, we’ll need them for an op’ in February.’

Let’s party like it’s 1999

TBA...

Helicopter hops

The new batch of Hueys arrived at Mombassa port in January. When asked, I confirmed with Coup that there was no hurry for them to be made ready. An hour later Jimmy informed me there would be a mass deployment, so I rang Coup back and told there was now a need for them – and could he get a move on; extra fuel tanks and winches as with our other Hueys.

At about the same time a new training module was created, that of boat handling, people being sent off to a lake Turkana in groups of ten. They were pushed through an intensive five-day boat course, rescuing people out of the water, from muddy banks and off of waterlogged trees. Everyone was required to maintain the boat's engine in turn, to re-fuel it and change oil, and swim for people whilst fully clothed; winching people out of the water was practiced in parallel by the Huey pilots - it made a change from the desert!

When six of the new Huey's had been checked over, test flown by Hal and others, they were left in their green colours and flown down to Mombassa base, Kenyan pilots awaiting them. Four more went to RF Tanzania, four to the Rifles Tanzania, pilots having been selected and cross-trained many months earlier. Ten Hueys were sent to Forward Base and scheduled to be used for internal flights by our facilitators there, as well as to be available for use by the Congo Rifles. But, for now they would be flown by contract pilots, the pilots a hardy bunch living around Africa, many of them former mercenaries.

Six of the new Cobras had been checked out by our pilots and flown down to the Tanzanian Rifles base south of Kigoma, where Jimmy said they would be needed in the near future. Oddly enough, we got a request from the Rwandan Government as to why there was a "militarisation of the region", Jimmy suggesting that they would creep across the border again. Mac arranged for ten of the new Hueys to be painted white, five shipped off to Australia, five to Sumatra. We took on board six more for Mawlini, just enough pilots amongst the staff; five of our British lads, basic rescuers, had keenly learnt to fly. All in, Mawlini offered more than twenty operational RF Hueys.

When February came around, Jimmy explained the Mozambique floods that would be. We made secret plans. Unaware of those plans, Bob Davies asked the UN for as many Mi8s they could muster for a combined exercise, and for us to hire them for the exercise – their Russian pilots included. And the first batch of Russian RF trainees were now gladly avoiding the Moscow chill and enjoying the pools and bars at Mawlini. To make sure that they were up to speed for Mozambique, Jimmy had altered their training programme so that mine clearance would be last, not first. Eight of them were qualified Mi8 pilots, hired for their specific flying qualifications, two of those familiar with Hueys.

Exercise “Desert Wind” was scheduled for February 10th at Mawlini, the Australians joining in since they had many Huey pilots to call upon. RF Tanzania and RF DRC sent up sixty people in total, housed in tents when they arrived on the 9th, rain now pelting Mozambique more than a thousand miles to the south.

Arriving back in Mawlini, the new lecture hall had impressed me, seats for two hundred at a push, and air-conditioned; I thought back to my days at Kingston Polytechnic. A new barrack block had also been thrown up to cope with the foreign trainees, ten to a room, and thirty rooms in a long two-storey block. We called all the senior staff and team leaders together in the lecture hall at 9am the next morning, warmly greeting the new Russian participants.

‘OK, boys and girls, fools and heroes,’ Jimmy began. ‘Exercise Desert Wind is a helicopter hop exercise. The scenario is this: an area needs assistance, but is just out of range of our helicopters from whatever forward base we are using to assemble. So, fuel trucks – and navigation – are key. We’ll make use of the old airfield northwest for a drop-and-search, but to get there no Huey will be allowed more than a quarter tank. That’s ... a *quarter* tank. And to get there you will first need to re-fuel at four designated rendezvous sites right in the middle of nowhere, some in Kenya, some in Somalia. He drew on the board the square route, annotating the grid co-ordinates of the re-fuel points. People took notes as he read them out.

‘You *must* spend the night at the second hop, advancing the next day to the third, then the rescue itself, back to the third hop

for the night and a reverse route out. That's three days. Now, the senior staff will need to plan this with many things in mind. First, how to move twenty something helicopters without colliding and killing anyone.' He let them think about it. 'Second, how to schedule, land and refuel a fleet of helicopters efficiently, how to group by squadron, communication protocols, call signs. You have till the morning. Mac, over to you.'

We left them to it, touring the Rifles base with Big Paul. The compound bustled, nearly all the soldiers back from Somalia, the main deployment for them now being the Congo, two month postings. At any one time a third of them were in the Congo, some back on the border, some training at Mombassa base. Many now proudly sported parachute wings on their arms, others displaying marksman's badges, some displaying their qualification as a medic. Driving through, we toured the helicopter compound, two long lines of Cobras sat doing very little. Beyond them we entered the storage area, twenty aircraft under dusty bed sheets, two being worked on.

'More choppers than pilots,' Big Paul helpfully noted.

Back at the rooftop bar, Jimmy and I sat and enjoyed cold beers under Fanta shades, a slightly cooling breeze crossing the roof, Big Paul off for jaunt in a Huey with a Kenyan pilot co-seat.

'When do we deploy?' I asked, not meaning the exercise.

'After the exercise,' Jimmy responded. 'And then by debate, or it'll seem odd – getting an emergency every time we have a exercise.'

After a leisurely bite to eat we re-entered the lecture hall, Hal and Hacker taking a lead role in the proceedings. Hal was, after all, the most experienced pilot. On the board he had drawn proposed helo formations.

'OK,' Mac said to the group. 'Groups of four at most, staggered side by side with the two on the right twenty feet higher, yes?' Everyone was in agreement. 'The distance between the groups to be no less than half a mile. OK, refuelling times?'

We listened for an hour, everyone getting a one hour lunch break, Hal and Hacker invited to join us.

'Tough scenario?' I asked Hal.

‘Not really, did lots of hops in Vietnam,’ Hal responded. ‘The trick is finding the tanker - and not running out of gas. But if you get lost, the sequence is disrupted for the guys behind you.’

At 4pm they presented us their plan, in detail, Jimmy giving the go-ahead for a dawn lift-off. The tankers were sent out, escorted by the Rifles. All was set. That evening we called Rudd and asked him to find any spare fuel tankers he could in Mozambique and South Africa, but to keep it quiet, notifying only us.

At dawn the helicopters lifted off in staggered formations, heading southeast into Somalia for the first refuelling point, each helicopter packed with rescuers grouped by nationality. If the UN staff on the base were not already awake, they were now; bleary eyed people peering out of windows of the UN hotel and cursing. With the last group disappearing into the distance, four Mi8s, we ambled down to the tower. Sitting out of the way, we listened in to the radio chatter as the day warmed up. The first group of four refuelled on time, the second a few minutes behind schedule. The third group got a little lost and overshot the tankers, turning to find it, eight minutes late.

The last group of four Hueys got a shock, not least for one of the Australian pilots; he landed on a mine. It was an anti-personnel mine, just smashing his foot-well glass, but he could not risk proceeding. Jimmy grabbed the radio and ordered the helicopter abandoned, the crews to double up in the remaining three Hueys or the trailing Mi8s. They flew on without it, the Rifles babysitting. The Mi2s landed at the same site, but with some trepidation. Refuelled without incident, they re-joined the exercise.

They reached the second refuelling point just before sundown, the helicopters grouped on the ground, rescuers and crews eating cold rations and sleeping in the desert, gossiping about the Huey that had landed on a mine; at least it hadn’t been Dunnaw piloting. In the grey dawn light they checked their aircraft, lifting off in tightly controlled sequences, cautious because of the dust storms created by preceding aircraft. The old airfield was reached in an hour, the rescuers going to work and searching the ruins, something of overkill with the numbers deployed; the sight of twenty white helicopters on the ground quite amazing – I flew over them in a Cessna. At 3pm a whistle blew, people re-

grouping, whether they had searched all the buildings or not. Again in their tight sequences, they lifted off and headed east. At 4pm the next day the last group flew back in to Mawlini, one bird short; it had set down near the border with a fault. After a few well-earned cold drinks, the senior staff and team leaders met us in the lecture room.

Jimmy asked, 'So who landed on a mine?' The Australian pilot raised an arm, being jeered. 'Not related to Dunnow, are you?'

Jimmy made observations, took comments from Hal and Hacker, listened patiently to the Russian pilots and senior staff, then opened the floor to a general discussion. 'Overall, I'm happy. Moving that many helicopters is not easy, and I doubt we would ever do such a thing for real. Getting the helicopters to an earthquake zone is tricky, and lengthy. But we will, in the future, put Hueys in the backs of Antonovs.' The gang were thanked, and dismissed.

The next day, as anticipated, a senior UN official came and found Mac, Mac sending him to us on the rooftop bar. We shook his hand, getting him a beer.

'How's Bob Davies doing?' he asked.

'Fine, even taking a few steps with the physio in the gym,' Jimmy replied.

'Oh, excellent. And he's got a job at the palace'.

'Palace?' I queried. 'You mean ... our little house?'

'Not so little, I've seen the photos. Anyway, we were wondering if you'd help out in Mozambique.'

'Mozambique?' I repeated. 'No wars or earthquakes *there*.'

'But major floods, and getting worse every day. Some main hospitals swamped.'

'What do you need?' Jimmy asked.

'Doctors and nurses, triage tent - the hospital is a write-off in Beira. Some helicopters would be nice, you've got four of our usual Mi8s here.'

'Of course,' Jimmy acknowledged. 'But if we're going to do this, then let's do it well. Could you brief the team on the situation there?'

'Sure.'

We stood. Jimmy grabbed the bar phone, calling Coup. 'Coup, I want an emergency meeting of all senior staff in the

lecture room in ten minutes, get the Hercules and Dash ready for a deployment.'

We listened to our own tannoy message go out as we walked down the stairs.

After the briefing by the UN, Jimmy took the floor. 'Opinions, people?'

Doc Graham said, 'It's a three point operation. First, a replacement primary care scenario – we replace the flooded hospital. Then you've got people up on their roofs, that's helicopter and boat rescue. Then the aftercare with dysentery, so medical teams remain.'

Hal waved a hand. 'In case anyone hasn't looked at a map lately – it's a fucking long way off for a helicopter.'

Jimmy suggested, 'The Mi8s could make it in a few days, we'll take those.'

One of Coup's assistants stepped in. 'Sorry to disturb you, Jimmy, but the Mozambique authorities have made a *formal* application to the Kenyan Government for assistance.'

'And, no doubt, the Government volunteered us,' Jimmy noted. 'OK, boys and girls, I want a plan on that board in thirty minutes, a plan for a full mobilisation of all African units, plus the Rifles from here and Tanzania. We'll need refuelling trucks in Southern Tanzania and in Mozambique, I'll get that sorted.'

Hal said, 'We going to fly down there – in the Hueys? It's twelve hundred miles.'

'Sixteen hundred, actually,' Jimmy corrected him. 'With the extra fuel tanks that's three hops, four to be prudent – two hops a day, no night flying.'

'Assuming no mechanical faults,' Hal pointed out. 'They're old ladies.'

'We'll have you with us, so what can go wrong, eh? I hear you're good with old ladies.' People laughed at Hal. 'Go to work, people.'

In Coup's office we called the house and notified Bob Davies of the situation, asking him to talk to the Mozambique authorities, permissions for us and the Rifles – which were implied in their request, the same of the Tanzanians. Calling Rudd, we discovered he could hire nine fuel trucks, enough for an operation inside Mozambique. We told him to arrange plenty of fuel at Mombassa field, at Dar Es Salaam airport, and inside

Mozambique at Beira airport, we'd base the helicopters there. The senior officer of the Rifles was duly contacted, told to have all available – and trained - men ready to move in the hour, all jeeps and trucks to be made ready, all helicopters. He was also told him that no weapons other than pistols should be carried, and then just by NCOs and officers; this was a mercy mission, we did not want Mozambique to think they were being invaded.

Back in the lecture hall, half an hour later, Jimmy asked, 'Well?'

'Got a plan,' Mac confidently suggested. 'Refuel at Mombassa field, then in Tanzania at Das Es Salaam, then southern Tanzania -'

'Rudd's got tankers on their way now,' Jimmy said.

'Rest go by jeep, it'll take two days straight, triage tent by Hercules,' Mac explained.

Jimmy hesitated. 'Is this helicopter hop do-able, or are we being ambitious?'

The gang glanced at each other. Hal said, 'If the fuel is waiting – and no hop greater than four hundred miles - then yeah, it's doable. We got spares on the birds, and I'll stuff my bird with extras.'

Jimmy slowly nodded. 'OK. I'll take a Huey, Paul another, Big Paul a third – less experienced pilots left seat. Mombassa field will fit everyone, so that's the first marshalling point. Have two members of the Rifles in each jeep. OK people, mobilise and deploy!'

As we walked out, the tanoy sounded again. 'All Rescue Force staff, prepare for deployment to Mozambique, this is not a drill.'

I signed the logbook and grabbed RF012, an Australian pilot left seat, three of his team in the back sitting amongst plastic packs of emergency rations. Assigned as lead aircraft for group One, I checked my little squadron, reminded them of take-off sequence, and pulled back on the cyclical control. Soon over parched brown dirt, I smiled widely, back in the seat and on an operation. 'OK, boys and girls, your pilot today is Crazy Paul. And you can be sure that if you're in a chopper with me ... nothing will happen, it'll be a smooth ride.'

My co-pilot glanced at me. 'We read the fucking books, mate.'

I glanced over my shoulder at the team, smiling, then peered over my right shoulder, finding my number two fifty yards back and twenty feet higher. It was if they had practised it. 'Don't you just love this; mucking about in helicopters, off on missions. This is what gives me a hard-on, not making money or shagging beautiful girls!'

My co-pilot said, 'I'd take some of the money and celebrity babes, mate.'

'Uh ... excuse me, there are ladies in the back,' came a voice.

'Love, if you passed Rescue Force basic training - you're no lady,' I pointed out, her colleagues laughing.

We spotted the highway after fifteen minutes and followed it south towards Mombassa, passing Tubby's favourite café and buzzing it at low level. A long four hours after lifting off I called the field's tower, announcing the arrival of thirty-two helicopters. The tower clarified the message: yep, thirty-two helicopters inbound, so clear all other traffic please.

I put down on the grass that edged the runway, the far left end of the field, already viewing the fuel truck driving out. Greeting the tanker driver, I found our credit was good. As I stood on the edge of the runway with the Australians, the second and third groups appeared, soon a long line of white Hueys edging the runway, opposite them four white UN Mi8's, eight green Army Hueys. And that was just so far.

Cosy drove out to me, tooting. 'All OK, Paul?'

'Pay the fuel tanker guy, will you,' I said, as a cameraman clambered out of the car.

'We have an account, no need.' Cosy thumbed behind himself. 'And this guys wants to come with you, Rudd organised it.'

'Yeah? Oh, OK. While you're here, see if you can rustle up thirty fuel cans.'

Cosy drove off, soon back with five fuel cans. The tanker guy filled them, and I directed each of my team's to have a can in the back. Just in case. We sat and waited for the last helicopter to be fuelled, finally winding up the rotors and diligently performing our checks. All was in order.

'Group One, and all helicopters, standby. Tower, this is Romeo Foxtrot Twelve, taking off. How's the pattern over?'

'Traffic north, low and slow, south is clear, over.'

We were soon passing over River View, a deliberate small detour, many fond memories surfacing and making me smile. 'That's the hotel and golf complex we own.'

The Australians had not visited, and peered down. As they did so, a young lady doctor in the shallow surf turned around and looked up, a hand over her eyes. She had read the books, conveniently finding them in her room. Now she realised that she was looking at the physical embodiment of the characters in those books, and took a keen interest with many others on the beach. As she stood there, a line of white helicopters a mile long thundered past. She counted at least thirty, wondering where they were off to. A thought had entered her mind, a thought about the future.

Dar Es Salaam International Airport sat on the western edge of the city, but I did not set a course, I followed the coast south as it curved around to the east, not wanting to fly out over the sea, which would have been the shortest route. This next leg of navigation would not be hard; sea on the left, land on the right - even Big Paul could cope with that. We had enough daylight to reach the city, but even if we lost the sun the city lights would be a hell of a beacon. As it turned out, the sun presented us with a huge red navigational aid, a beautiful sunset; so long as it was in my three o'clock position I was on course. I contacted the Tanzanian tower ten miles out, my co-pilot having checked their frequency first. We identified ourselves as Rescue Force Kenya, and they were expecting us, just not thirty of us. We requested permission to land on the grass. Since they had no more flights due till the morning that was not a problem - just highly unusual.

We touched down in a line facing the tower, the press waiting in the lounges to film us in the dying light. I heard Jimmy contact the tower, putting down to our right, Big Paul just following him in without tower contact. Hell, they could see us. Everyone disembarked for the refuelling, the next leg scheduled for dawn. Lines of white uniforms converged on the arrivals lounge, the toilets queued for, the small shop doing brisk trade as the press were let through. Airport officials welcomed us, no doubt Rudd's work, or maybe Bob Davies. And my cameraman, he sat with small groups getting personal perspectives.

Stepping away from the throng, I phoned the house. 'Bob awake?' I asked Ricky.

‘Yeah, they’ll all in there mucking out.’ He put me through.

‘Bob? Got the next refuelling position?’

He read out the co-ordinates. I double checked them, got an area name, Lindi, and ground description, checking the map I had stuffed into my pocket. This next leg would again be simple: down the coast till you either see the airfield, or run out of fuel. I offered to give Jimmy the detail, but he just stared at me; of course he knew where it was. I handed the detail to the other pilots, explaining that Jimmy would take the lead in the morning.

People lay on hard floors, or the seats, and settled in, packs opened and food retrieved, the arrivals hall now full. Jimmy grabbed the airport manager and rustled up some food, a few pillows and blankets for the ladies. The café upstairs enjoyed an hour of brisk trade, people allowed up in modest groups. At eleven o’clock Jimmy ordered quiet, everyone resting ready for the morning. Not trusting the fuel tanker driver, I sat in each Huey in turn and switched the power on long enough to read the fuel gauges. Good job I did, one had been missed. I found the driver and sent the man back to it, the man protesting the hour.

At dawn we issued chocolate and glucose tablets to the pilots, fetching coffees from a vending machine, as well as from the pilots lounge. People stretched their aching backs, whinged, had a pee, then splashed cold water on their faces. Rescue Force was awake, but teeth had not been brushed. Yawning, everyone reclaimed their transport as it started to rain.

With rotors turning, Jimmy used the radio to order the birds up in sequence, left to right, following his group. I waited my turn, thanking the tower as a courtesy as I passed city houses below, our resident cameraman filming out of an open door. I caught up to Jimmy’s group, a visual on their lights, and eased back, counting off my team; three little chicks were behind mother hen as the weather became suitable for only ducks, a little turbulent for the people in the rear. Flying through the rain was not something I had experienced since basic training in the UK, dozens of water drops now racing each other down the windscreen, a little condensation collecting on the inside. Three hours later, swigging water from a bottle, I checked the fuel. We should hit the isolated airfield in thirty minutes. And thirty minutes later my little chicks were radioing their navigational concerns.

Jimmy came on. 'Stop whinging, we've had a head wind, so we're late. Fifteen miles out.' Jimmy came back on a few minutes later. 'Follow my lead, land right to left in sequence. Big Paul, left is the arm with the watch on.'

We laughed as a curse came back over the airways, soon following the helicopters in front of us down. Landings were bouncy, a bit of a cross wind, but everyone hit the deck in one piece. A hell of a rainstorm moved over us, no one getting out as the poor tanker driver struggled to refuel us for the next leg. If the chopper burst into flames we'd jump out, we agreed.

I called Bob Davies on the sat phone as we waited. 'You awake?'

'Yeah, got fuck all sleep. Your next leg is just about four hundred and eighty miles.' He gave me the co-ordinates. 'You could save time and fuel by a direct course, this'll keep you on the coast.'

'The weather's terrible, so a coastal route is better for navigation if it gets furry out there. There's a cyclone ahead of us, and I don't want to put down in the jungle.'

'Weather should clear for a day or two, then get worse.' I radioed the next leg to the group, confirming it with Jimmy: Angoche airfield.

It took an hour to refuel everyone, a few pilots complaining of less than full tanks. Still, they had enough. With the rain easing off Jimmy ordered a review, anyone with any mechanical faults? None came in, so he lifted off and headed southwest along the coast. Four hours later we touched down at a large, yet seldom used airfield, two white UN Antonovs sat on the apron. Unable to contact the tower, if it was manned at all, we set down wherever we liked, two fuel trucks visible. They wanted cash, twelve thousand dollars, which Jimmy handed over.

The guy in charge of the airfield came out and complained at length. We said we were UN medics heading to the floods, and would he kindly fuck off. The group was refuelled before he returned, and we left without again talking to the tower, the next leg the final hop to Beira airport and our base of operations. As we again followed the coast, the flooding became apparent, large areas of water appearing blue from the sky reflecting off them, some areas flooded with brown water. I glimpsed people on their roofs, crowds huddled on stretches of road above the flood level.

Beira airport contacted us as we approached in the fading light, a familiar voice, one of ours. Approaching, I could see the town under water, the angry river creating a huge brown plume in the blue ocean. The airport was above water, but only just, surrounded by flooded fields. I clocked our Hercules and Dash on the brightly light apron, a white UN Antonov on the runway; it was home from home, the advance party already in residence.

The small terminal building bustled with white jackets and UN staff. I followed Jimmy, and he followed signs on the walls towards “RFHQ”, finding Doc Graham and Doc Hoskins buried under maps and paperwork.

‘Made it then,’ Doc Hoskins quipped.

‘How’s the water level?’ Jimmy asked.

‘Rising all the time,’ they informed us. ‘And a storm on its way.’

‘Where’s the triage tent?’ I asked.

‘Just outside, out the front. Local hospital is suitable only for ducks,’ Doc Graham informed us. He straightened. ‘Need those birds off at dawn, lots of villages cut off.’

Jimmy nodded. ‘What’s the fuel situation?’

‘Not great, some tankers made it through. You may need to fly sixty miles just to refuel.’

‘No big deal,’ I said. ‘We can take fuel cans and bring them back. Or Send an Mi8 on a fuel run.’

‘Vehicle convoy?’ Jimmy asked.

‘Forty miles away, and not getting any closer,’ Doc Graham explained. ‘As soon as they advance a mile they find people to treat. They’ve split into four groups and they’re doing what they can, the Rifles with them. One group is a hundred and twenty miles away.’

‘It’s all part of the same effort,’ Jimmy said with a shrug. ‘What’s it like between here and Moputu?’

‘A hundred mile lake. No good unless you’re flying.’

Doc Hoskins asked, ‘Your people flying with life preservers?’

‘Nope,’ I responded.

‘Might be an idea, it’s deep out there.’

‘Storage bins,’ Jimmy reminded me.

‘Ah, yes.’ I faced Hoskins. ‘Little life preservers in the storage bins, I’ll mention it to the troops.’

Doc Graham said, 'We've taken over a hangar for dossing down, not comfortable, but some space here upstairs as well. Have a look.'

Jimmy nodded, 'First, give me dispositions and stores.'

It took twenty minutes to get the full picture, a few moves suggested. With the light fading quickly, and the sky overcast, there was little we could do. We walked around to the hangar, finding tents erected inside. Ratchet and Spanner walked out, waving.

'Isn't it bad luck to raise a tent indoors?' I quipped.

A medic said, 'They're designed for deserts, not swamps. Outside you get soaked.'

We grabbed bunks, dumping down the bags we had brought with us. The gang offered us folding chairs around a gas heater, tins of meat handed to us, coffees without milk or sugar. Through the drizzle I retrieved four emergency packs from my helicopter, plonking them down to a sedate cheer from the happy campers, not least the provision of extra toilet paper. Others copied my actions, soon all the packs pinched. They told us stories of the Hercules flight, and yesterday's triage set-up; a line of injured a hundred yards long, three babies delivered. As we sat there in our damp clothes, lorries and jeeps were directed in so that they blocked the rain and wind at the mouth of the hangar, some people choosing to sleep in the backs of the trucks in their teams.

Half an hour later I clambered into the back of a truck full of Australians. With the flap down and a small gas fire going it was warm and cosy, the Aussies in high spirits.

'That flight some kinda record?' they asked.

'Probably,' I said. 'Pushing the old Hueys a bit. They'll cool their old bones tonight, have a few problems in the morning.'

After tea, and what passed for toast, I slipped back out into the colder hangar air. In the larger ten I found Jimmy, Hal, Hacker and a few other pilots, a small heater going and throwing a dull yellow glow around the tent. 'Cosy in those lorries.'

'They'll set fire to the bloody things,' Hal suggested. 'What's for the morning?'

Jimmy said, 'We'll split sectors, then random searches for the stranded and injured, but you'll have to refuel sixty miles up the coast, then back here.'

‘It’s never easy, is it?’ Hal whinged.

‘This is Rescue Force,’ Hacker said. ‘We go where sane people wouldn’t dare. That’s what Paul told me when he recruited me.’

‘He wasn’t wrong,’ Hal agreed.

Jimmy and I grabbed camp beds around midnight, both a little tired from the flight, but mostly a bit run down for a lack of decent protein. At 4am we were awake, looks exchanged through the dark. We slipped out quietly, walking over to the terminal building in the dark. Stepping softly, so as to not wake anyone, we pinched a few tins and sat spooning out the corned beef. Feeling better, we walked down to the large triage tent, noticing lights on inside. A Kenyan nurse greeted us with a smile, a doctor face down at his desk and snoring. A Tanzania nurse made us tea, this time with milk and sugar, and we sat quietly surrounded by thirty injured people, all of them sleeping soundly.

Inside the next tent we had a nose, greeting another nurse, some fifty people laying on camp beds. At the airport gates we greeted members of the Kenyan Rifles in the grey pre-dawn gloom, two rather sorry looking Mozambique police officers acknowledged. Staring through the gates, I could see dozens of plastic make-do shelters along the road, floodwater visible beyond them. Walking away from the direction of our hangar, we happened across the Kenyan Rifles tent, greeting the sentry and ducking in. Half of the lads were awake, sat around a heater, and Jimmy waved them down when they stood. Sitting, we accepted tea and tinned meat, soon chatting quietly. We were still there as the dawn light peeped through the tent flaps, the NCO getting his men ready for their duty shift.

On the apron, we figured we’d use the Hueys as alarm clocks. In our respective Hueys we powered up, ran through the checks and turned the rotors. After winding down, I headed into the hangar to find my crew. Lifting the flaps on the lorry, I found two awake, the rest still slumbering. ‘Let’s be having you, you lazy bunch of Kiwis!’

‘Kiwis? There’s no need to be rude, mate.’

With my crew cursing under their breath at no one in particular, and everything in general, I kicked up Doc Graham, pinching a map. Sat studying it, I chose an area I thought would

need our attention, a small island, a river on either of side it. I grabbed a pilot for left seat and a winch operator, explaining that was all I needed – more space in the back for trapped people. Waking the airfield, I pulled up to forty feet and ordered the winch down and back up. It worked. I spun the tail, nosed down and headed off southwest at speed.

Five minutes later I said, ‘Navigation will be interesting, there’re no fucking features, just water!’

‘If we get lost, hit the coast and back up, it’s the only way.’

He had hardly finished the words when we both noticed someone waving.

‘Winch ready, start lowering now!’ I brought the bird to a hover forty feet above the isolated shack, a man and a child stranded, but not injured.

Now with our guests on board, the winch operator wrapped our first two locals in blankets. I turned one-eighty and dropped them in the town, a quick dust off. Back on the same heading we passed their shack and pressed on over turbulent brown water. On a patch of exposed ground we spotted eight people; since three were kids I figured I’d risk the numbers. With no way of telling them to move over, I buffeted them into the water, waving them forwards once my skids hit something solid. As they boarded I noticed cuts and open wounds, some of the men in a bad way. With the doors closed I pulled back, nosing forwards and skimming the water as I gained speed, finally pulling up and climbing – a heavy take-off. A reciprocal course was selected.

‘Romeo Foxtrot twelve to tower. Anyone on?’

‘Receiving you, Paul.’

‘Inbound with half a dozen injured. Get me some medics on the apron. Out.’

Approaching the airfield, we passed three Hueys on our left heading off, rude messages exchanged about the ungodly hour. I touched down smoothly and quickly, my passengers assisted out by waiting teams. With the doors closed I lifted up again, only then informing the tower I was departing. I made eight trips that day, bringing back more than forty injured. At 3pm I took a break, letting my co-pilot take right seat and fly the Huey out alone to the refuelling point and back. In the commanders office I found Jimmy sat with the senior staff.

‘Well?’ Jimmy asked.

‘Eight trips, forty odd injured or stranded. Couple winched up.’

‘I lost one off the winch,’ Jimmy informed me, his head lowered.

‘Lost ... one?’

‘Woman. She seemed to be in the harness well enough, but slipped out, into the river and under. No sign.’

‘Christ.’

‘For her kids, my co-pilot hovered, and I operated the winch as the guy in the back went down. Got her three kids, but not her.’

‘It happens,’ I offered. ‘I didn’t send a man down when I fetched mine up. Sometimes I lifted two people at the same time.’

‘Big Paul took down a power line,’ Jimmy mentioned. ‘No power at the time, so he was lucky, his bird OK.’

‘Any other incidents?’ I probed.

Doc Graham said, ‘Got a bird down at the refuel trucks, gearbox they reckon. Hal’s flown out there. We’ve got more tents coming in, two hundred injured a day here.’

‘What about the hospital?’ I asked. ‘Upstairs?’

‘That’s fine, hundred patients in it,’ Doc Graham explained. ‘But no water or electricity. We’ve got nurses down there now, can’t move some of the injured out.’

The sound of heavy helicopters caused me to peer out of the window, four Mi8s slinging four of our jeeps. ‘That’s handy, the Mi8s bringing in four jeeps.’

‘We’ll get around the town with them,’ Doc Graham suggested.

I spent that evening wandering around the troops and keeping spirits up. In one tent I found Big Paul and a team bonding around a heater, sitting for ten minutes and cracking jokes. The Aussies made me tea, but I resisted the toast this time, the unwelcome sound of the rain pelting the canvass roof as we sat there. The weather got worse as the hours passed, the wind picking up, even inside the hangar. With no let up, and concerned about some of the tents, I grabbed a jacket and cap and headed around to the Rifles. They had used concrete blocks to weigh down the edges of their own tent. Now, under my direction, we performed the same exercise on the triage and

recovery tents, and none too soon. It was difficult to see in the dark, and the rain was now coming in sideways. Inside the tent I assured the nurses that it would hold, some of the injured frightened by the storm. With the tents still flapping, I grabbed two jeeps and parked them alongside tents, directly on top of the concrete blocks, the Rifles moving a lorry to the tent flaps, affording the entrance plenty of protection from the wind and rain. Before I left I ordered four of the Rifles to remain inside the tent and keep an eye on it.

In the hangar, conditions were not good for the staff, a chill moist wind making everything damp, a layer of water over the concrete floor. I found Jimmy and the others in the command tent. 'Rough out there.'

'Not much better in here,' Hal complained.

'Triage tent OK?' Jimmy asked.

'I parked jeeps on the side flaps, lorry at the door, four Rifles inside.'

Hal tapped water with his foot. 'Are we sinking?'

Jimmy dabbed a finger into the water and tasted it. 'Sea water. So ... yeah, we're sinking.'

I grabbed a large torch and fought my way around to the rear of the hangar, bent double in the wind whilst trying to shine the torch towards the nearby coastline. I saw nothing but water as far as I could penetrate the gloom with the torch. Back inside, I said, 'Tides in. Right up to the back door.' I lay on a camp bed with wet boots. 'If it reaches my arse, I'm moving into the tower.'

Before dawn I ventured out, no one else in a hurry to make that journey, finding a centimetre of water across the airfield, and, more importantly, the runway. 'That should make landing interesting,' I said to myself, heading to the tower with my head down against the rain. In the tower I discovered that our Hercules was inbound, an hour away. 'Do they know?' I asked our controller.

'It's patchy, not deep,' the controller said. 'I drove down it.' I stared at him. 'We need the supplies.'

'We need the Hercules not skidding off the fucking runway as well!'

'Well ... we can divert if you want. But I'd say they can do it.'

'Well then, let's get the kettle on and see, shall we?'

The dawn light revealed an overcast sky, a cloud ceiling of little more than a thousand feet, a nifty crosswind. When our Hercules finally made contact I took the radio. 'Inbound Hercules, this is Paul Holton at the tower. Please be advised, we have a twenty-knot crosswind, cloud ceiling of a thousand feet and water on the runway. Do you wish to divert, over?'

'Romeo Foxtrot One Niner to Biera tower. How much water on the runway?'

'Tower to One Niner, centimetre on the runway. It looks worse than it is, over,' our controller informed them, exchanging a look with me.

'One Niner inbound.'

They broke through the cloud layer a mile away and banked, coming around in a wide arc, their lights blazing. Their landing was fine, and they taxied around to the apron. Inside the terminal building the pilot said, 'Won't be taking off in that.'

'No?' I questioned.

'No, it'll slow us too much. Have to do a fast taxi down it to test conditions, but I guess we need a day for it to go. Landing in the slush slows you nicely, taking off is a big no no.'

At least we had our supplies, lots of emergency packs with toilet paper and chocolate, but not much chance of further re-supply, the Antonovs warned off beginning their journey, or being diverted. And the weather worsened quickly, the cloud base now little more than a hundred feet. The jeep crews bravely ventured out to do what they could, no helicopters allowed up. When a jeep returned with word of a large grain warehouse up the road, empty and dry, we decided to commandeer it. The patients were shuttled up there in two buses, soon several hundred people inside the dry warehouse, most of our doctors present, the old triage tent sodden and abandoned. All that day our jeeps penetrated ten or fifteen miles along the main roads, bringing back injured where necessary.

At dusk, the electricity to the airport died on us. Now we were wet, blind, and pretty damned useless. Jeeps ran their engines and provided some illumination to the hangar and the terminal, small generators powering the radios. All day we had run jeeps and trucks out along the roads, stopping when we could no longer discern the road from the ditches alongside them, a lorry having to tow a waterlogged jeep out of a ditch in the dark and

driving rain. With the weather expected to get even worse, supplies were sent to the warehouse before everyone was ordered to hunker down, our aircraft now in danger of being damaged. People grabbed ropes, concrete blocks, and fashioned anchors for the Huey blades in pitch blackness, rain coming in sideways.

With everyone in the hangar already damp, a sheet tore off the roof, the rain pouring in, Jimmy ordering everyone to the terminal. Excess furniture in the terminal was tossed out, many heaters used to warm up the place, people making themselves comfortable wherever they could, some on the chairs, some below the same chairs. It was cosy that night, the stink of damp clothing filling the air. At 1am a sheet off the hangar roof smashed through a tower window, injuring two people and making a large area wet. We pushed the same sheet of metal back out the window and wedged it against the outside, to block the hole, a ghostly whistling sound created. In frustration, people up-ended a long desk and placed it against the hole, a blanket used to plug gaps. The Rifles slept in their jeeps and lorries without complaint, toughing it out. Then it got worse. The floor of the terminal's lower level started to take on water, people waking to find themselves in an inch of water. Cursing, they moved upstairs, some sleeping on top of check-in desks.

Dawn brought no respite, just a little better illumination on our dire situation. I grabbed a jeep, people still asleep in the back, and tried the runway, estimating two or three inches of water. And from the tower I could see at least one Huey with a cracked windscreen. We were taking a battering.

The Hercules crew had returned to it during the night, run up an engine and kept themselves nice and warm, now thirty people on board. All day people tried to dry off clothes and warm up water for drinks. They ran generators hot, drying clothes over them, their time rationed; under garments, like t-shirts, were given priority. And all the while our jeeps and lorries pushed as far as they dare, finding injured or stranded people, my daring cameraman braving some of these trips. That night it again howled, people sat around playing cards, chatting, or trying in earnest to manufacture more elaborate and comfortable places to sleep. Shelves were tested for strength, the ladies then sleeping in them like bunk beds. A Rifles lorry pulled up at one point with a

load of blankets pilfered from the town, and still in their plastic. They were dry, and much appreciated.

At dawn I was groggy, cold and damp, but my eye opened to a ray of sunshine. I lifted up and thrust my face towards the window, finding a clear sky on one side, dark clouds on the other; but at least the rainstorm seemed to be moving parallel, not towards us. I climbed the stairs and onto the roof, taking in the airfield. From my vantage point I could see a strange optical illusion, the water on the airfield seeming higher than the surrounding land. I studied it at length, then realised that the small wall around the airfield was holding up the draining of the runway water. I grabbed the Rifles, and they found pickaxes and shovels, soon smashing up walls and digging trenches, all the while stood in three inches of water. As soon as the trenches were dug the water flowed quickly, which meant it was working. I ordered dozens of trenches dug on two sides, helping out myself. The rain had been trapped by the rising tidal surge, that surge having receded overnight.

As I stood there I could see bits of tarmac starting to reveal themselves, so I ordered some of the shallow trenches to be extended well into the airfield, right up to the runway, the sun now out, the day warming up. The Rifles retrieved sweeping brushes from the terminal and began to sweep water off the runway and towards the trenches. Jackets were taken off and placed on jeeps, turns taken to sweep the water, soon large patches of tarmac revealed.

The Hercules pilots walked over, inspecting the runway in the sunshine. 'Hour or two and that'll be good enough to take off from.'

'What it needs, is a hairdryer,' I said, ordering the jeeps moved off the runway. With soaking wet feet, I unclipped the blades of my Huey and started her up, soon skimming sideways to the runway. At just about six feet, I flew down the runway and back several times, the downward pressure squeezing and blowing water off the runway and into the trenches. After four passes I put down on the wet apron, a few sections of the runway's tarmac changing colour as it dried. And on the apron I could see water swirling around the drains, meaning that they were working, not blocked anymore. We were in business. I

grabbed my crew and flew off in brilliant sunshine, my legs still soaking wet, my feet a bit numb.

By time I returned, some three hours later, the Hercules was gone, half of the Hueys up and about somewhere, the Mi8s deployed. During the day I had dumped my injured at the warehouse, the original triage tent now being dried out and made ready for potential further use. 'Lovely day,' I said as I plonked down in the command office, Jimmy handing me a tin of meat.

An Antonov touched down. Jimmy said, 'We'll be out on that, work to do elsewhere. Go pack.'

I nodded absently as I ate. 'That damaged Huey salvageable?'

'Hal says no,' Jimmy informed me. 'We'll leave it here, salvage what parts we can. The two with cracked glass are operable.'

We detached Big Paul from his team - they had bonded, and boarded the Antonov, wishing people well. They let us off in Nairobi, straight onto the Dash in the dark, a discreet flight to Kigoma. At Kigoma, four members of the Rifles Pathfinders boarded, camouflage clothing, utility waistcoats, M4 assault rifles. They handed Big Paul a bag, our trusty bodyguard changing his clothes at the rear of the plane, soon dressed like the Rifles; it did not bode well for our trip to Forward Base. After a quick refuelling, we headed on to Forward Base, flying in a wide arc and avoiding Burundi or Rwandan airspace. Eighteen hours after leaving Mozambique we touched down in the DRC in the dark, our arrival unannounced, the Dash landing without its lights on.

Two jeeps approached the aircraft on the runway, without their headlights on. We boarded the jeeps, the Dash taking off immediately. The jeeps took us directly to the Congo Rifles compound through well-guarded gates, and to the command centre. I had not seen this building before; three storeys and bigger than our house, all the lights now out. We were led inside, along corridors illuminated by torches held by the Rifles, and down to a lower level, a basement. The room we approached was brightly lit, warm, with many overlapping conversations emanating from it, the background noise dipping as we entered.

'This a private party, or can anyone join in?' I asked, shaking hands with Keely. Beyond him some twenty men in various national uniforms stood around a large map and battle board.

‘Dried off, have you?’ Keely asked.

‘Just about, still wet behind the ears though.’

Jimmy introduced me to Russian Army officers and I practised my Russian. Next came two Chinese Army officers, my Chinese now tested. Beyond them we greeted two British Army officers, SAS, then our own Rupert. Beyond them we greeted a representative of Kimballa, plus officers of the Congo and Kenya Rifles. It was quite a crowd.

Jimmy picked up a sheet of paper and handed it to me as I took in a line of radio operators. The page detailed a helicopter hop, Mi24s flying off a ship off the coast, three stops to get here.

‘You just never now when you need to practise helicopter hops,’ I quipped.

‘OK,’ Jimmy loudly called. ‘Keely, what signal intel?’

Everyone approached the table, and its large map of our area.

Keely said, pointing, ‘The PUF guerrillas are moving in from the north, the MLF are moving up from the south, and the Rwanda Army is moving west across their border, their lead columns not more than twenty miles from here. The Tanzanians on the border were withdrawn two days ago.’

‘Numbers?’ Jimmy asked.

‘Estimated two thousand five hundred PUF fighters, supplemented with Ugandan irregulars, tightly grouped. In the south: three thousand plus MLF, spread out into four main groups. And ten thousand Rwandan soldiers, who could be *here* by dawn.’

Jimmy faced the Russians. ‘Helicopters ready?’

‘Da!’

‘Forward air controllers ready?’

‘Da!’

He faced the Chinese. ‘Supplies delivered?’

‘Yes.’

To the SAS he said, ‘People in place?’

‘And reporting back the movements,’ they confirmed.

To the Kenyan Rifles he asked, ‘In place?’

‘Yes, sir.’

Finally, to the Congo Rifles officer, he asked, ‘Ready to tackle the Rwandans?’

‘Yes, sir. We are ready to defend our land.’

‘OK. Good.’ He checked his watch. ‘Launch the Cobras from Kigoma.’ A radio signal was dispatched to the Tanzania Rifles. He faced me. ‘The Cobras here are sat quietly, and quietly being observed.’

‘Ah,’ I let out.

He faced the Russians. ‘Launch the first wave, please.’

‘Mi24s?’ I queried.

‘We’ve twelve that we bought, twelve on loan.’ He lifted his gaze to the SAS. ‘Wake up calls, please.’

The first officer tapped a radio operator on the shoulder. ‘Execute plan - Interrupted Slumber.’

I asked, ‘What’s that?’

‘The Rwandans have pitched their camp in a rather poor area, surrounded by nasty little things, not least more claymores than trees. Oh, and a whole squadron of hairy-arsed troopers.’ True to form, Big Paul appeared as if he wished to be in there with them.

Ten miles inside our border, Rwandan tents, jeeps and lorries exploded, men shredded by the ball bearings propelled by exploding claymores. At the border itself, roads and bridges over gullies were blown, hampering a retreat, but also hampering re-supply. Two strategic bridges were blown, collapsing into the river they spanned, a surprise for the column moving over them at the time. From either side of the far bank, GPMGs opened up, our teams soon withdrawing as the Rwandans – thinking the bridge defended – opened up on their own forces already across. Along the wooded valley that the advance column had already probed the Rifles fired down, hit and run tactics. Hidden SAS teams called in accurate mortar fire, the column scattering.

In the north, the PUF approached Hutu refugee areas, unaware of the shadowy figures hidden in the undergrowth watching them; co-ordinates were being relayed back, handed to the Russians. Ten minutes later, with the sounds of helicopters approaching, phosphorous grenades landed alongside PUF concentrations; the Mi24 gunner had only to fire at the brilliant white points of light. Visible only from above, green lights pinpointed friendly forces. Twelve angry Mi24s roared in firing, four columns of three aircraft, looping around and strafing a second time. In the noise and confusion created, the Congo Rifles opened up from the hillsides, many of the roads crossing the northern border now blown.

In the south, the Kenyan Rifles made like trees and silently observed the MLF passing by. As the Cobras approached, more phosphorous illuminated startled guerrilla concentrations. With missiles raining down, the Congo Rifles moved forwards and opened up, again employing hit and run tactics. Narrow roads in tight gorges were blown at the border, the Congo Rifles firing down unseen from high above; the MLF were trapped.

I sipped coffee with Big Paul as the reports were relayed. 'Whoever's watching this base ... is scratching their fucking heads right about now.'

'All quiet as fuck up top, 'cept the Yanks with scanners finding the fifth column,' Big Paul commented.

'Second wave,' Jimmy said to the Russians.

Our co-ordinator, Belly, walked in, a little bleary-eyed. 'The faxes have gone. The Congo Government has complained to the UN about the attacks on our borders.'

Jimmy nodded. With a hand on the map he said, 'Congo Rifles, Company "A", forwards, please.'

That command dispatched six hundred of the Rifles towards the front ranks of the now bewildered Rwandan Army, their jobs being to halt the advance - and to keep them busy.

'Cobras returning to re-fuel,' came a voice. 'Hueys with chain guns advancing on a parallel course.'

Our Cobras were returning to Kigoma on an easterly course, Hueys coming out on a westerly course, ten of them fitted with chain guns. In the north, the PUF suffered underneath a second wave of Mi24s, the area bright with parachute flares and phosphorous, our soldiers picking off the guerrillas before disappearing back into the shadows.

The Rwandan army were now awake, dispersed and digging in, but all the time suffering accurate mortar fire and sniper fire, burning vehicles inconveniently illuminating their positions. With the first squadron of Mi24s refuelled and re-armed at a secret location, they took off and attacked the jammed-up Rwandan columns either side of the border, attacking a few miles into Rwanda itself. The columns were boxed in and decimated. With the Rwanda soldiers running to the jungle, the helicopters returned to base.

Jimmy said, 'It's now attrition till they re-group, man against man. And my money is on the Rifles.'

Some time later, a man announced, 'Dawn in thirty minutes.'

The Russians said, heavily accented, 'Crews down and resting.'

'Hueys back in Kigoma,' came a report.

'It's now a sniper campaign for today,' Jimmy announced, sitting and grabbing a few tins.

Officers sat, stretched out, crossed legs and folded arms. Eyes were closed.

The Congo Rifles "A" Company had already been waiting in position, just a few miles from the Rwandans, and now advanced silently in their platoons through the jungle, routes that they had trained along previously. When the first units reached visual distance of the enemy, they found the Rwandans loading injured onto trucks. They hid themselves. A single sniper would then open up, slow and carefully aimed shots. The Rwandans would then send their own platoons to where the firing was coming from, only to be opened up on at close range by twelve men, several with GPMGs. After a five-minute engagement the Rifles slipped out backwards and ran to another location. All along the Rwandan bulge inside our borders, they were attacked and harassed with hit and run tactics all day. Close to the border, the SAS teams watched the Rwandans try and reach the border from both sides around the damaged bridges and roads, tripping claymores all day, mortar fire directed in. By dusk that first day the Rwandans had lost a thousand dead, that many again wounded.

Whilst this was going on the UN Security Council was condemning the Rwandan "invasion" and demanding its removal, the Rwandan Government bewildered by the coherent UN reaction, as well as it loses on the ground.

As night fell the helicopters lifted off, but not to attack the columns or valleys. They flew low level directly to Kigali, the Rwandan capital, and struck the parliament building, civic buildings, the airport terminal, the TV station and transmitter, then pounded the presidential palace at length. They returned at low level as the Rwandan Air Force, what it was, tried to rally a defence. The principal power lines to the city blew and power lines fell, the city plunged into darkness and panic. Naturally, the Rwandans recalled all soldiers to defend the beloved homeland

and the beloved capital. A few working bridges would have helped.

One squadron of Mi24s set off for the coast, and their refuelling stops, the second would remain at their hidden base. And all the while the six Cobras stationed here sat gathering dust in plain sight. Four people had been grabbed with radios, zeroed in on by Keely's boys and their electric gizmos. Their torture was brutal, but short, names given up, other saboteurs arrested.

All through the night the Rwandans, the PUF and the MLF withdrew in disorganised order, harassed and picked off by the Rifles; the invaders had not slept for the better part of three days. At dawn a full-scale attack was sanctioned, all spare troops sent into the jungle to hunt down stragglers, few prisoners taken. The damage at Kigali was all over the news around Africa and the world, but most countries still condemning the Rwandans with having invaded the DRC.

At lunchtime we drove over to the hotel and enjoyed a leisurely lunch, greeting UN and Rescue Force staff, Big Paul playing bodyguard and staring at people. We even said hello to a few French UN workers, French Red Cross and Medicine Sans Frontiere staff. We were now, officially, at Forward Base, that fact bound to be reported. As we sat eating, a Dash landed in Rescue Force colours, and with our markings. Tubby got off and joined us for lunch, and we all pretended we did not know what would come next.

Belly requested flight clearance for the Dash to fly across northern Rwanda, Southern Uganda and on to Kenya. He got no reply. At 4pm we drove around to the command bunker, thanked the officers for their assistance, then drove out of a side entrance. As we did that, Big Paul took two Russians dressed like us - same height and build - around to the Dash. The men bordered with four Kenyan Rifles bodyguards, Big Paul taking a lingering cigarette on the tarmac, his face in full view of anyone in the hotel or rooftop bar. With his cigarette tossed away, he boarded the Dash. They took off and headed northeast.

We lifted off in a green Huey and flew south, then east towards Kigoma. At the Tanzania Rifles base, the old refugee camp, we waited, chatting to the officers. An hour after sundown a Huey landed, Big Paul, Tubby and the Kenya bodyguards stepping down.

I closed in on Tubby. 'How'd it go, fat boy?'

'A brief exhilaration - like my first *and only* sexual experience.'

I laughed, looking Big Paul over. 'Still in one piece?'

'Yeah, easy jump, ten thousand feet.'

Beyond him I thanked the Kenyans, a thousand dollars for each man. We sat in the officers lounge and enjoyed a tea as we discussed the expensive stunt, a Tanzanian soon stepping in and informing us that our Dash was being reported as having been shot down by a missile over the Rwandan / Ugandan border. What no one else knew, was that an American AWACS had tracked the Dash and the missile, pin pointing its launch to Rwandan soil. I called the house, and told them we were not dead, even if reported as dead, an odd conversation. I next called my parents and said I was not dead, should they see the news. As I hung up Doc Graham called.

'Paul? You're not dead.'

'No, we weren't on the plane.'

'Tubby?'

'Fat as ever, just as ugly, sat here. Don't worry.'

Mac called immediately, so I repeated the words. And the damn phone did not stop; the UN, the Red Cross, Pineapple Records, the nightclubs.

With the shooting down of our plane, even though we were alive, the Kenya Government moved soldiers west, as did the Tanzanians, both threatening the Rwandans.

Then Kimballa called. 'You are alive and well, Mister Paul?'

'Yes, Mister President. Are you well?'

'Very well, and enjoying the news. The damage in Kigali was most agreeable. What of the PUF and MLF?'

'Massacred, Mister President. It will be a long time before they return or bother anyone again.'

'Good, good. I am visiting the England soon, I will visit you at *the palace*.'

I rolled my eyes. 'You are always welcome, sir.'

'Have a good flight back.' He hung up.

Jimmy handed Tubby ten grand without anyone noticing; a profitable two minute parachute jump. We drove up to Kigoma field, greeted a few people we knew, assured them we were quiet alive, then boarded the Dash, the real Dash. The other had cost

forty thousand pounds, just for the one flight. And the state it was in, it could have just about made the one flight. We touched down in Nairobi in the small hours, booking into our favourite hotel, the Kenyan bodyguards remaining close by.

In the morning, we held a news conference at a Government building, the world's press interested in many things. We explained the Dash, and the parachutes, by claiming a high ranking Rwandan Minister had tipped us off, asking for money – which we said we paid; I guess that would have made the Rwandans suspicious of each other. We suggested that we arrived in the DRC *after* the fighting had started, then condemned the blatant Rwandan aggression. Since Kimballa was claiming credit for the attack on Kigali, we had nothing to defend. We finally got onto questions of Mozambique, the African news having shown footage of the helicopters in action, and on their way down there.

After the lengthy news conference, a good hour, we met with the Kenyan Government and thanked them for their soldiers. They thanked us for the good publicity, Rescue Force now synonymous with Kenya. An hour later we met Rudd and Cosy, much staring and “fucking hell, boss”. We caught up on business, the hotels, the orphanage – now with three thousand kids, and Somalia. All seemed to be on track. We agreed to start an orphanage in Mogadishu, extra funds for the giant orphanage in the DRC. Then, as an afterthought, Rudd informed us that Hal was in hospital here, with a serious fever.

Jimmy lifted him by the neck. ‘That ... I should have known about first,’ he growled.

A terrified, and silent Rudd, drove us to the hospital at speed, the bodyguards following. At the hospital we found Hal in a coma, cornering his doctor and getting a brief. It did not look good for Hal. We asked for time alone, Rudd asked to organise a private hospital. In Hal's room, Cosy watching the door, Jimmy self extracted blood, a small amount, and injected Hal in the leg, not wishing to leave a track mark on the arm, the needle dumped out the window. When Rudd returned, he softly informed us that he had arranged a room, but that they were not happy to accept Hal in this state. They'd come and make an assessment here.

Jimmy slowly nodded to himself. ‘We can see how Hal is tomorrow. Move our flights, or cancel and buy again.’ He slowly

cranked his head around to Rudd. 'My staff, Rudd, will always be more important than facts and figures.'

'Yes. Sorry.'

'It's not your fault, *someone* at Rescue Force should have informed me.' He nodded toward me.

I stepped out and shouted down the phone at Coup. It turned out the doctors reported he just had mild pneumonia, no one at the hospital had informed them of anything else. I told Coup to get hold of the hospital administrator and rip him a new asshole. Back in Hal's room, I said, 'Fuck up this end, the quack here didn't inform base.'

Calmer, Jimmy led us out, and back to the hotel, Rudd and Cosy back to work. Jimmy said little till we had downed a pint in the rooftop bar, Big Paul and the bodyguards sat in a corner.

'This not supposed to happen?' I asked.

He shook his head. 'Bit of a shock, we need Hal.' Four beers later, he explained some of Hal's future role.

Two men stepped out, stupidly obvious, blacks with hard stares and bulging jackets. They made a fatal mistake by reaching into their jackets. Jimmy didn't even bother to move as the two men were hit by dozens of rounds from Big Paul and the bodyguards, guests screaming and ducking.

'Fucking amateurs,' Jimmy quietly cursed, finishing his beer as I lifted up off the floor and breathed again.

Big Paul searched the bloodied bodies, removing their weapons, one of our bodyguards using the bar phone. Sirens soon filled the air, police stepping out and ordering the shocked guests below. Twenty minutes later, the Police Chief and Defence Minister stepped out onto the rooftop bar, a quick look at the bloody sheets covering the two men.

'Are you OK?' they asked. Jimmy had not bothering to stand, our guests sitting.

'We are ... unharmed.'

'And these men?'

'Probably Rwandan,' Jimmy calmly stated.

'We will check their identities,' the Police Chief offered. 'Do you need more protection?'

'No,' Jimmy replied. 'Your people did an excellent job.'

The Ministers glanced at their men as they sat nearby.

With the Ministers gone, and the bodies now gone, the floor being cleaned, Jimmy rang Rudd. ‘Rudd, get me two hundred thousand in cash for tonight if possible, if not the morning. And you’ll see on the news that two gunmen just tried to kill us, our security detail killed them. I’m sending two men to you, some to Cosy, let him know. And don’t worry or fuss.’

With bodyguards from the Pathfinders on their way to Rudd and Cosy, we dispatched a few more to the hotels, Skids & Co alerted. The Safari parks were secure, anyone approaching would be seen, and many people there were armed. The guards at the hotels had always been armed, but they were no experts.

Calmly, Jimmy ordered food from a terrified waiter, reassuring the man. Sykes called, concerned, and we discussed the Rwandans, Jimmy suggesting that he had anticipated the attack. When Rudd arrived, and eventually got let into the hotel, he placed down the cash and sat looking shocked.

Jimmy said, ‘Kindly get a list of guests, compensating them each ten thousand.’

Rudd nodded. ‘These men ... Rwandans?’

‘Probably,’ Jimmy said. ‘Don’t be too concerned, you’re not important enough to kill. Besides, you’re Dutch. People don’t assassinate the Dutch.’ Rudd did not look convinced. ‘This will settle down, but security will be tighter for a while.’

‘They want you out of the Congo, so they can steal the diamonds,’ Rudd suggested.

‘Yes, and I’m going to fix the Congo, so it’s a fight I’m afraid.’

‘The news says the Tanzanians are threatening war on Rwanda.’

‘That ... should calm them down a bit,’ Jimmy suggested. ‘Give out the money, go home, and don’t worry. Oh, and some more security to the orphanage, just in case.’

With Rudd gone I said, ‘Made the fucking news again – for all the wrong reasons!’

‘Yeah,’ Jimmy sighed. ‘Would have been nice to focus on Mozambique. But I did not make the world as it is, I’m just the man trying to fix it.’

‘Know now why we have that house, and a bloody great fence; the London apartment would make us vulnerable. We in a shooting war now?’

‘Yes, and no. This was expected. But one good turn deserves another. I’ll give the French mining companies concessions next to the Rwandan border.’

‘Nice peaceful spot,’ I quipped. ‘They behind this?’

‘Partly. Mostly it’s the Rwandans after the diamonds and gold.’

‘Right now, those mining dickheads must be wondering just where the firepower came from. And parachutes on the plane – that’ll make them scratch their heads.’

‘This will have cost them a lot. They’ll be hurting for some time.’

A middle aged couple walked out, showing the bodyguards their room keys. They came over to us. ‘Some bastard tries to shot you – for all the good work you’ve done in the Congo – and you offer *us* compensation? We won’t be taking your money, Mister Silo, give it to the damn orphanage!’

Jimmy smiled. ‘A good attitude. Please, have a seat.’ They sat. ‘Where are you from?’

‘Poole, Dorest.’

‘Know it well, I like Lilliput.’

‘Lilliput?’ I queried.

‘Real area of the town,’ they explained, Jimmy beckoning a nervous waiter for them. A young woman stepped out, also showing her key, and stepped over. ‘This is our Cassie, just finished Med School.’

She sat with a huge smile. ‘You two certainly grab the headlines. You’re worse in real life ... than in the book I read.’

Jimmy laughed. ‘Careful, young lady, you may end up working for us reprobates some day.’

‘I start at St. Barts, London, next week.’

‘Bring your friends to the club, we’ll get you some tickets,’ I offered.

We detailed the mission to Mozambique for them, a few other guests wandering back to the bar. Then we explained some about the DRC and the troubles, finally the parachutes, their mouths opening as they listened.

Cassie said, ‘So, when you’re not working, what do you do for excitement?’

We both laughed loudly. ‘Fishing,’ I said, Jimmy agreeing with a nod.

Tubby and Sue turned up in their whites, let straight in. Cassie stood and greeted Tubby with, ‘You were in the book.’

We pulled tables together, ordering more food and drink, Tubby and Sue concerned for us – for a whole minute, before grabbing beers. When Tubby informed them that he had jumped out of the Dash they were amazed. We drank till late, the bar modestly attended, setting off at dawn for the hospital. Hal was awake and coherent, telling us to stop fussing. Once again, we moved our tickets, this time back to the original day.

We said goodbye to the bodyguards at the airport, Big Paul handing back a pistol. Our plane was a 747, and we got a few odd looks from the passengers in first class. At Gatwick we slipped out the side entrance and headed home, Keely arriving back at about the same time. I made a tea, no one else around, then sat in the lounge looking at the rain for an hour, and wondering where my real life was.

In the days that followed, the “M” Group guests expressed their concerns for our safety in a variety of ways, messages relayed from their governments. Po was deeply concerned, as usual, but we reassured him. We gave a few interviews, the situation in region worsening, the UN, plus many principal countries, getting involved. Tanzania and Kenya were still threatening Rwanda, Kigali still had no electricity, and the Rwandans protested how many casualties they suffered. Since they had suffered the casualties in the DRC, no one had any sympathy for them. They had lost almost six thousand men, that many again wounded, a dramatic strain on their resources, exacerbated by principal donor countries withdrawing aid to them.

No one complained about the PUF and MLF guerrillas, their corpses left rotting in the jungle; they had no official sponsors. The Congo Rifles hunted down the stragglers ruthlessly, even crossing the borders in pursuit; Ugandan border guards had been killed in their dozens.

A peace conference was called in Paris, attended by all the nations involved, but not by us. We urged the Kenyans and Tanzanians to pull back, that move leaked to the press. Information extracted from captured prisoners hit the news headlines around the world, blame again pointed at various mining companies. Some Africa nations even issued arrest

warrants for the directors of various companies, mine managers in Tanzania briefly held for questioning. As we were busy trying to put together a programme, and ultimately a book, on all the good work in Mozambique, many TV channels debated the pre-planned and deliberate attack on the Eastern DRC, mining companies named; French and Belgian Governments again felt the unwelcome heat. UN officials descended on mass to the area, preparing a report for the Security Council, the French dreading the outcome.

There was no mention of the SAS, nor the Chinese or Americans in the press, but the Russians were noted as having sold Mi24s to Kimballa. So what, Africa was full of warlords buying from the Russians. Kimballa further cheered the Rwandans with the delivery of twenty Russian tanks, oddly enough delivered via Kenya, Tanzania and Burundi, the roads from Kinshasa to our area unsuitable. The Congo Rifles now listed four thousand well trained and well equipped men, two hundred jeeps, a squadron of Mi24s, a squadron of Hueys, a squadron of Cobras, and now tanks. They had 81mm mortars, and a very high percentage of sniper rifles per platoon, no shortage of ammo, and western instructors.

In a move ahead of time, Jimmy requested – and got – ten thousand Chinese peace keepers, a base made for them quickly just west of Forward Base. They came armed to the teeth, ready for a fight, and to stay, the UN noting the numerous “concrete” buildings being erected.

The Paris Accord imposed a peace, the Rwandans agreeing not to enter the DRC – even if provoked by Hutus, and the Tanzanian and Kenyans moved back their troops, not that they would have attacked anyway, it was all posturing. The UN interim report suggested some involvement of mining corporations in provoking the fighting, Jimmy encouraging everyone not to push that point too hard. Rwanda was finally offered a return of aid if they stayed out of the DRC. The Chinese moved into position and manned every border crossing, letting each surrounded country know they were there. Since the Chinese were buying ore from these countries, firing on the Chinese peacekeepers was unthinkable. And that move was at least four years ahead of schedule, Jimmy suggested.

Peace re-claimed the Eastern DRC ahead of schedule. We looked west, to Sierra Leone and Liberia.

The British SAS contingent left the DRC quietly, heading to River View beach hotel with just a few minor wounds, five days of well-earned rest – a free bar, a contingent of unarmed Kenyan Rifles making sure they did not wreck the place. They returned from Kenya by RAF flight, nothing out of the ordinary since they trained in Kenya on a regular basis.

Back in the UK, we invited them to the Cardiff club a week later, a free meal and a free bar.

Little more than a month after the conflict in the DRC, we issued Yuri the right to an Aluminium mine, Marko the right to buy up diamonds wholesale from us. Marko purchased his first batch, appraised them, then bought every batch we had to offer, soon a large pile of cash generated. Fifty percent went to Kimballa's Government, fifty percent to the regional projects; the orphanage, the Congo Rifles, and infrastructure projects. And the road to Kinshasa was improving day by day.

The Chinese took over the running of six Aluminium mines, shipping the ore through Burundi to Tanzania, where it was smelted, the ingots sent to China by ship. Smelting in Tanzania was a condition we imposed, it meant jobs for the Tanzanians. And the taxes flowed back into the DRC. American and British mining corporations were allocated mines, we did not make good on the threat to give French companies the mines straddling the Rwandan border; they went to the Chinese. All told, the region as a project was now four years ahead of schedule, the Chinese mining operations a good six years ahead of Jimmy's original plan – as he described it.

The RF deployment to Mozambique lasted six weeks before Jimmy ordered the main body to return, the helicopter hops reversed. The Mi8s would remain with the UN, and some of our doctors would help with dysentery and cholera outbreaks, a handful of jeeps kept in Beira. The airport authorities had disappeared before the place flooded, they had left us to it. Returning, they had not been pleased with the mess. Our staff had moved out to a hotel in the town, cleaning the terminal as

best they could before leaving. Despite the fact that most of the damage had been down to the storm, we paid the authorities to re-decorate.

At the time that our helicopters were returning to Mawlini, Jimmy showed me a fax. As the last flight of Hueys had returned to Mawlini one developed a fire a minute before it came into land. The Australian pilot put it on the deck immediately, just outside the fence, ordering everyone to jump clear at ten feet. One lady doctor was a bit slow, still inside when he hit the sand, but thrown clear. The pilots made it out, the Huey burning fiercely. And the lady doctor, Dr Jane Hicks, suffered a dislocated shoulder. I smiled widely, shaking my head; it was the same lady doctor that had crashed with Dunnow in the DRC, the star of our book about the Rwandan crisis.

And my cameraman in Mozambique, he came to the UK to interview us. His extensive footage of the operation took a month to put into a coherent one-hour story, shown in the UK and around Africa. It portrayed the journey as miraculous and epic, the deployment a human battle against the elements. He had filmed the howling wind, people lying in water, and the triage tent being buffeted. And our friendly writer, he was already half way through the next book: *Rescue Force, mission Mozambique*.

Moving on

After most of the RF staff had returned from Mozambique, Jimmy produced a new training schedule, and it would mean that some people would have to undergo up to six months of training. But the individual modules could be fast-tracked if people already had the skills, so a fit and skilled Army doctor may just qualify in four or five weeks at a push. Fitness training, and fitness tests, had been introduced at Mawlini, a series of walks to be completed out in the desert, slotted in during the other training modules. They would culminate in a four-day exercise, thirty miles a day covered, the last leg without any sleep and a thirty-six hour time-limited hike. I studied the new schedule for several

days, making a few suggestions, and discussing them with Bob and Jimmy.

With a new command centre building at Mapley just about finished, we drove over there early one morning. On the way, Jimmy called the house on his mobile. 'Sharon, Jimmy. Advertise for a personal assistant for me, London papers.' He gave the details, then assured Sharon she was not fired, nor doing a bad job; this P.A. would travel with us. When he hung up, I jokingly asked if I was now redundant. 'Your admin skills are limited. We need someone who can spell big words.'

'I can spell,' I mock protested. 'And do joined up writing.'

'Your handwriting is worse than mine,' Big Paul commented from up front.

'Watch out for power lines as you drive, numb nuts!' I retorted.

At the airfield we paused to let a line of cadets cross the road, before stopping at the admin building to meet Mackey, Rolf stood ready to show us around the new building. It stood opposite Mackey's admin building, away from the airfield and towards the leisure centre. It was roughly the same size as the existing building width ways, but stood three storeys high, not two. Through a double set of glass doors we entered, finding a large reception desk on the right, a waiting room on the left. Behind the reception counter, several desks were laid out like a typical office. A ladies and gents came next, positioned opposite each other, sat at the base of a large central stairway that dominated the ground floor. We did not climb the stairs immediately, but skirted around them, finding two lifts opposite each other, past them a series of offices, the last room fitted out as a small staff canteen.

Finally climbing the wide stairs, we opened to a balcony and corridor. Starting at the far left end of the corridor, we poked our noses into each office in turn, each room big enough only for four people at most. And they resembled the offices in the house, high windows and no view. Back towards the stairs we found a large room dominated by a monstrous central table, ten six square. The walls of this room were already adorned with numerous maps, clocks displaying eight time zones. Around the edges of this room sat a dozen desks flush against the walls, big

enough for two people sat opposite each other. Two sofas lined one wall.

From a cabinet, Jimmy grabbed a plastic bag and emptied the contents onto the map table, at first glance just kids toys. 'Helicopters, jeeps, trucks, the Dash, the Hercules.'

I picked up a model Huey just an inch long. 'For dispositions on deployment. A battle board.'

Jimmy grabbed small plastic blocks with national flags pinned into their tops. With a marker pen he wrote "100" on one, retrieved a stick with a flat end and pushed it across the table.

Mackey said with a smile, 'Just like Churchill!'

We peered through a large window that offered a partial view of the airfield, a thick set of curtains tested and drawn. The room opposite met the same dimensions, but consisted of classroom styles desks facing white boards, a large "teachers" desk at the front and facing back, sat on a raised podium. Around the walls ran a continuous desktop, cut by two-dozen small dividers.

Jimmy said, 'For operational planning and briefing, the directors sit at the top, the group or national leaders sit out front.'

Climbing a final set of stairs we found a nicely decorated office with a large window facing out over the airfield, a side door through to an adjoining office.

'Bob's office,' Jimmy informed us.

Along the corridor, the next door revealed a comfortable lounge with a breakfast bar and kitchen, and a toilet. Opposite Bob's office-to-be, we found a duplicate office and side room, beyond it another lounge. This one had no kitchen, but eight single beds laid out behind a partition.

'For when the staff are knackered - and don't want to go home,' I told Mackey.

The last three doors of this floor revealed three self contained apartments, decorated in line with our London apartment.

'Bob'll live here?' I asked, Jimmy nodding.

Jimmy led us to a final small stairwell, and up onto the roof. We found no rooftop bar, but a flat roof with a waist-high wall and a great panoramic view, four weatherproof plastic benches and a stack of white plastic chairs awaiting some interest. In a stiff breeze, we stood and looked out over the airfield.

'Time to raise Rescue Force UK,' Jimmy suggested. 'I'll ask Coup to advertise internally for a handful of instructors to work

out of here. The training standards guy and his assistant will come up here, and I've asked some of the senior staff if they want directors jobs up here. In the meantime, we'll run some TV ads for staff.'

'TV? Expensive,' I cautioned.

'We've got the credibility, just need to sex it up a bit.' Jimmy faced Mackey. 'How many waiting to join?'

'About twenty, but half of those are non medics,' Mackey replied.

'We need fifty good people here,' Jimmy said, a reflective sigh issued as he took in the airfield. 'But we'll get them operating around the UK, helping the police. I've asked the PM if he'll allow paramedics to do a one-year transfer to us, whilst their jobs are safeguarded. We're only asking for twenty or thirty, so it should be OK. Same for the Army and RAF, a twelve month posting.'

Back at the house we got to work on advertising the new vacancies, looking for secretaries who lived around Swindon to work in Mapley, plus people experienced in logistics or NGO relief operations. Adverts went to every Army and RAF base, the pay offered being on par, but not great.

The PM had already been prepped on the idea of paramedics or military personnel getting a one-year paid sabbatical, but extended it to the police and the fire brigade. With a massive response from the UK emergency services coming in, a parallel unit was put together on paper for all those on one year placements; their emphasis would be on operating mostly around the UK, and Jimmy allowed for over a hundred.

Three weeks after advertising for an executive P.A. we had a shortlist, six ladies invited to the house since it was a live-in position. One was put off by the security, especially when we said they carried guns, and departed sharpish. One did not quite understand the concept that they were no fixed hours or holiday entitlements, and that she may be away six weeks at a stretch. She was driven back to the station. The next three were very efficient, had glowing references, and had all worked for either celebs or the directors of international companies. But they seemed to lack a sense of humour. We told them we would let them now.

The final candidate, named Helen, was stunning; tall, auburn haired – almost blonde, and perfectly kept together. She reminded me of Jimmy's ex, Liz; this final candidate was "posh totty". According to her CV she was sporty, running and swimming, she had flying lessons, she'd been parachuting, she loved Africa and had no particular ties in the UK. Her last job was for the boss of an oil company, a job that involved a lot of travel, the good lady speaking French, Italian, Spanish, some German and some Russian. So far, she was the only serious candidate.

Jimmy gave her a scenario. 'You're stuck with us in ... Mozambique, one hotel room left. We've been driving across Africa for three days, we all stink – and the water and electricity cuts out. What do you do?'

'I go down to the bar – if it wasn't open I'd break in – and I'd buy whiskey to clean our teeth and cleanse orifices of bacteria, soda water to wash it off. If there was just the one bed I'd expect to be in the middle, but allowed to sleep on whoever is softest to cuddle up to. If you snored you'd get an elbow.'

I stared for several seconds. 'Oh.'

Jimmy hid a smile. 'And if the President of a nation being visited got ... *frisky* with you?'

'I'd ask for a large diamond ring and a house, and not before. That usually cools them off - rich and powerful men prefer their wealth to a quick leg-over.'

I was still staring. Jimmy asked, 'A journalist offers you a million for an exclusive on us?'

'I'd take the money.'

'You would?' I found myself asking.

'I'd retire to a small island and drink cocktails all day.' She held her playful gaze on me.

Jimmy asked, 'And if, after being with us for a week, the tabloids had you down as being in a relationship with one of us?'

'Well, since you both qualify as some of the most eligible bachelors in the country, if not the world, I'd have to see that as a good thing - my friends would be jealous.' I smiled widely, then forced it away. Facing me, she said, 'You're currently number five in the UK.'

'Me? Fifth?' I questioned. I thumbed towards Jimmy. 'What's he?'

‘About twenty five, I think.’

I laughed, proudly.

‘They have you, Mister Silo, down as mysterious and dangerous, popular with the ladies over thirty-five.’

I was still smiling.

‘So,’ Jimmy asked. ‘How do you feel about ... threats to us?’

‘My last boss was hounded by Green Peace, and in Africa we had armed guards everywhere we went. What would be different?’

Jimmy and I exchanged looks.

‘Final question,’ Jimmy began. ‘A senior politician, or member of the security services, approaches you, plays on your patriot nature, and tells you we’re a threat to national security – and would you mind spying on us. What do you do?’

She had lost some of her composure. ‘I’d make my own assessment, and if I thought you were up to no good I’d leave, letting the authorities know what I knew.’

Jimmy stared at her for several seconds. ‘We’ll let you know in a few days.’ He stood. ‘Thanks for coming down.’

With Helen gone, I said. ‘Well?’

‘Wait a day and hire her.’

‘She is good,’ I agreed.

‘She ... is your future wife.’

I stood rigid, staring for ten seconds. I pointed, but I didn’t know at what. ‘She...’

‘Is your future wife, but don’t ask her out for four months or so, play it cool.’

I was still staring, and still pointing at the wall.

Jimmy added, ‘Get yourself a smart car or two, and buy an Agusta helicopter for us to use, have an area out the back concreted over. Do the conversion quickly, like ... tomorrow.’ He left me stood there, and I recalled the conversation I had with him two years ago.

Ten minutes later I went for a walk around the grounds. Married, I considered. Four months, then we ... well, I suppose we get it together. And then, well ... me and her forever. I got scared at the idea, but if Jimmy said it would happen... I blew out a lot, but it was not helping. Was I ready for marriage? But, then again, maybe we’d date for a long time, years maybe, and then maybe kids. Kids? Oh my god, kids, Jimmy had said two

daughters, after he had mentioned it the first time. Two daughters, and married? Well, mum and dad would be happy.

In the lounge, I downed a few large whiskeys. Han sat, and noticed my expression.

‘Is all OK, Paul?’ Han enquired.

I blew out. ‘Jimmy just informed me of my ... future. My future... family.’

‘And this ... worries you?’

‘Well, I ... would not have chosen to marry at this point.’

‘I see. And when would have been a good point? 2015? 2025?’

I focused on him, and held my gaze for several seconds. ‘You’re saying ... make the most of it.’

‘I have some experience of these things,’ he softly stated, looking away.

I suddenly felt very sorry for him, knowing his own sad family history, something we had never discussed openly. If we had, how would I have even related it to it? It was a powerful nudge towards living for now, and I found myself nodding absently. With my head spinning, I had to drink myself to sleep that night.

At 5am I found Jimmy in the diner. Sitting, I said, ‘Some sage advice would help.’

He studied me. ‘You’ll be very happy. Ten years from now, if you had the chance to go back and change it, you wouldn’t – for anything. You may, at times, curse her – and curse me – that’s life, but you would never change it. And I would never change it for you.’

‘Do ... well, me and her ... do we have a role, a strategic role in things?’

‘A higher purpose? No, not really. But she does help us, and you being with her helps *you* a lot. It ... anchors you to a path. Her *role* – as you say – in the grand scheme is not great, but it is a role. As is ... Cosy and Anna. Not a huge role, but still necessary.’

‘My being with her is not something you’ve ... organised?’

He shook his head. ‘No. But it is something I am happy to allow to happen, because it’s a benefit to you, therefore to the mission.’

After breakfast, and a swim, I headed out to buy an Aston Martin in Cardiff, a nearly new Augusta found and ordered. When the Augusta owner realised it was me, he flew it straight down and left it; full tank of gas, logbook, one careful owner. Karl drove him back to Wiltshire after coffee and a chat, and I read the manual, an instructor booked in for the morning.

Sykes came down two days later for an “urgent secret chat”. Even I was excluded. He began with, ‘I have my suspicions about your new PA to be.’

‘Oh yes?’ Jimmy said. ‘Do tell.’

‘There’s nothing definite, but I suspect she’s on the books at MI5.’

‘Why do you think that?’

‘She’s worked for three powerful men since college. And they’ve all been of interest to us. MI5 got the inside track on each of them - so.’

‘So, you think she was ... what, sent to spy on us? Nice bit of leg to tempt me, deflect me from her rifling through my files here. Well, first of all, nothing is written down – nothing of interest. And second, she *is* working for MI5 – for General Timkins.’

‘You ... know!’

‘Of course I bleeding know. I’m me.’

‘Then why –’

‘Keep you friends close...’

‘Your enemies closer still,’ Sykes finished off. ‘You’re taking a hell of a risk.’

‘Again, I’m me. She’s here to snuggle up to me and get into bed. But ... that’s not how it will turn out. She’ll marry Paul.’

‘Marry him! You mean -’

‘She’ll convert to our side. Yes, so relax. When the time is right I’ll deal with the good general, and you can deal with one other inside MI5. In the meantime, I want the file to say that she is clean.’

‘It says that now, it’s just the associations,’ Sykes pointed out. ‘No one except the likes of me would make the connections.’

‘Good. Lunch then?’

Helen turned up the following week, two suitcases and several plastic suit carriers, everyone nosing to see who she was. So far, only Sharon knew that we had hired someone.

In the hallway, Jimmy stopped her dead and called me over. 'Leave your stuff there for a ten minutes,' he told her. Facing me, he said, 'Paul, show Helen around the house, and external houses, at length, and ask the nice young lady where she would like to live.' He left us to it.

'OK,' I said. 'Let's start with the posh rooms, shall we.' She gestured me onwards and we climbed up one flight of stairs. 'All of the rooms on this floor are typically guest quarters, but we don't have anyone living here – but that's not to say you couldn't ask to.' I opened the door of a corner suite.

'Oh, very nice,' she let out. After a five minute nose she said, 'But not very practical. What else is available?'

I showed her one middle suite, then led to the end of the corridor and up a level to the apartments above the gym. 'These are known as the Gym Flats, because the gym is below us.'

She looked around one flat at length. Since they were all the same size and layout, we took the lift down and walked past the offices and the lounges, turning right to the guest family apartments. These were larger, and two-bedroom, but she did not wish to live on the ground floor. Upstairs, we viewed the same apartment, but a first floor version, repeating the same viewing on the top floor, the view of the grounds taken in. Leaving the main house, I showed her one of the red roof houses.

'I'd be rattling around in here,' she suggested. 'Very nice, but also too big.'

'Final option is the original house, down the hill.'

'If you called for me, it would be a bit of a trek in my dressing gown.' I lifted an eyebrow. 'I'll take a top floor front apartment, the second one you showed me.'

'Sold.' I helped her move her things in, then led her back down to Jimmy as he sat with Bob. 'What would you like done with this lady?'

Jimmy lifted his head. 'Every room, and every person in this house, then the grounds, then the old house, the club in Cardiff, Mapley, the London apartments and club, then stop for coffee.'

'Oh. Is that all?' I quipped as Bob smiled up at me. 'Helen, this is Bob Davies, Director of Rescue Force International –

formerly of the UN. He likes tea with milk and no sugar, Sharon's home made cake, and bossing people about.'

'Nice to meet you,' Bob said, shaking hands with Helen.

'You've met Sharon, she works nine till four, and mothers everyone.' Sharon lifted her head from a pile of papers and smiled. I pointed, 'That's my desk, this is Bob's, that's Jimmy's, those are Sharon's, and the one in the corner there is yours.'

'And who do I answer to, and take work from?' Helen asked.

'You answer to me,' Jimmy said without looking up. 'But you will also do any reasonable task that Paul asks of you, and assist anyone else around the house if they ask you to perform a reasonable task, if you're not busy doing something for me. You do not take orders from Sharon, but you may ask Sharon to do things that are better suited to Sharon than yourself. If we're abroad, and I ask you to do something, then instructing Sharon to do it is fine. Your primary task is to save me time, your secondary role will be to handle communications to a variety of people, and handle the press communications. Paul, go be useful.'

I led Helen out, taking her the short distance to the second office, finding a handful of people sat at their desks. Halting, I wondered how I would describe some of the people and their roles. Speaking softly, I said, 'The African gentlemen here are representatives of their countries, mini-ambassadors if you like. We have representatives from Kenya, Somali, Tanzania and the DRC. They could not give you a task, or vice versa, but you could ask them to pass on information, and ask for details and permissions from their governments for our operations in their countries. They live in the house or grounds.'

'Quite a gathering,' she puzzled.

I introduced each one in turn. Han stood and bowed when we reached him. 'This is Mister Han of the People's Republic of China. We have business dealings in Hong Kong and with the Chinese in the DRC.'

'That ... warrants a full time liaison? Wow.'

Keely sat grinning up, finally standing. 'Ma'am,' he let out, the first time I'd ever heard him use that salutation.

'Keely here, is actually called Donnelly, but I call him Keely.' She gave me a confused look. 'Long story. He liases with Uncle Sam, and teaches poker master class.'

‘Thursday night, if you want to play around.’

‘Play ... *a round*, did you mean?’ Helen clarified.

‘Sorry, Ma’am, it’s the accent.’

I shot him a look, leading Helen out. In the diner I found Jack. ‘This is Jack, he works at the foreign office – and does the rose garden.’

‘Nice to meet you,’ Jack offered. ‘You must be Jimmy’s new PA.’

‘And this is Cookie,’ I said.

Helen faced Cookie. ‘Don’t tell me, you’re the cook?’

‘Did the apron give it away, love?’ Cookie asked.

‘Tell him all your favourites and he’ll get them in,’ I suggested.

‘Very accommodating,’ Helen approved.

In the lounge I found Dave Gardener. ‘This is Dave the Gardener, visiting us. He represents the Israeli Government –’

‘And does the gardening?’ she finished off.

‘A passion I have for damp English gardens, but not here, my own. Although when I visit I do get involved.’

Big Paul stopped in the corridor, eyeing the newcomer with a professional interest.

Gesturing to him, I said, ‘This is Big Paul, driver, sometimes helicopter pilot ... and security guard.’

‘You a singer, love?’ he asked, shaking her hand.

‘Only in the shower,’ she responded.

‘Helen here, is Jimmy’s new PA,’ I explained.

‘P ... A?’ Big Paul asked with a frown.

‘Personal assistant,’ I carefully mouthed. ‘She’ll be travelling with us some times.’

‘Really? She don’t look stupid.’ He shrugged and walked off.

‘Stupid?’ Helen queried.

‘We suffer the odd ... mishap abroad.’

Dave laughed, getting glared at by me. I led Helen out, and to the second lounge. ‘This is Ivan, from Russia.’

Helen practised some of her Russian, finally saying, ‘You call him Ivan because you already have two Pauls?’ I nodded. As I led her down the corridor she said, ‘So, you give people pet names, and supplant their natural surnames with occupations or characteristics.’

‘Makes it easier to remember them.’

‘And you’ll be calling me ... what?’

I made brief eye contact. ‘You already have a nick name.’

‘And...?’

‘Posh totty.’

‘It could be worse,’ she sighed.

I showed her the pool area, and she was very impressed. Up the stairs I displayed all the gym equipment, Helen lingering at the lifelike upright dummies and puzzling them.

‘You fight?’ she asked me directly.

‘Yes. It’s ... necessary when abroad.’

‘You were stabbed what, face down *arse up* on a massage table?’ she toyed.

I took a measured breath. ‘I was stabbed as I jumped up.’ I touched my side.

‘And broke the man’s wrist and arm, taking his knife off of him?’

‘You read the papers,’ I noted.

‘Does Jimmy do any martial arts?’

‘Yes, but no one around here would risk sparing with him.’

‘Why?’ she asked with a frown.

‘You saw Big Paul. You’d need ten like him just to have a chance against Jimmy.’

‘He can be ... violent?’

‘Oh, no. I’ve only ever seen him fight twice since I’ve known him.’

‘And ... what happened?’ she nudged.

‘He took on six the first time, eight the second.’

‘And ...?’

I lifted my eyebrows. ‘I think he had a hair out of place the second time.’

‘Then I shall feel safer when I’m abroad with you.’

I did not quite how to take that, but led her on. I showed her the garages, Cookies garden, the rose garden, then drove her about the grounds in a golf cart, introducing Rob, his Alsations, and two of the protection guys, explaining that there were four. I could see she was struggling to understand the security, hoping Jimmy would explain it all away. We viewed the old house, met Jimmy’s parents and Ricky, then returned to the house for lunch. She asked to speak with Jimmy, who joined us for lunch.

‘Mister Silo. Boss,’ she began. ‘You have a house bigger than Buckingham Palace, more security than the Prime Minister, and representatives from all the world’s most powerful – and most dangerous – nations. Perhaps now ... would be a good time to let me know what I’ve let myself in for.’

It was unexpected, certainly for me, and I was suddenly worried that my future wife to be might leave us on her first day. I swallowed.

Jimmy calmly explained, ‘There are two things that I involve myself with, that are of interest to the world’s powers. First, Rescue Force. Our medics are *courted* by many as a great political tool, flying the flag of national pride around the world. And, as you know, that flag has been flying for some time around war torn and troublesome Africa. As a result of our work in Africa we have a lot of good contacts, and a lot of respect on the continent - I even talk to the Zimbabwe Government. As a direct result of my work in Africa, various African Governments offer me mining concessions. That means that I’m courted by the worlds governments, who wish to get at the minerals and oil. I’m also seen as an honest broker by many on the continent, broking deals for corporations and governments alike. A good example of that is the DRC, where I was made Governor out of respect, President Kimballa knowing that I would organise his own mining concessions better than he could – without looking for any profit for myself. I also provide a function to many governments who wish to talk to each other, but cannot be *seen* to be talking to each other. Each side trusts me, and knows that I cannot be bought, bribed or threatened.’

She nodded slowly. ‘For the UK Government to give you four armed officers is ... unprecedented.’

‘They’re protecting their investment in me, and wouldn’t won’t any mining corporations or hostile governments to bump me off. That BP oilrig off Somalia - I got the deal for the UK Government. And my friends in Somalia, they let me know what’s happening with Islamic extremists around the region, I let the UK Government know. A ... *symbiotic* relationship.’

‘Wow. I never knew there was so much intrigue here.’

‘You’re involved with something far more important than you realise,’ Jimmy emphasised.

‘And *all* your profits go to charity?’

‘Pretty much. My mining operations in the Congo make more than ten million a month, most of which goes on roads, building projects, or the orphanages.’

‘And they really have twenty thousand children?’

‘A thousand kids a month die in the DRC, so it’s no great figure; we administer an area bigger than the UK. Kimballa is over soon, you’ll meet him.’

‘Look at it this way,’ I said. ‘If there was anything less than upright and honourable about what we do ... would we get UK Government support?’

Sharon brought in the sat phone. ‘The nice man in Number 10.’ Jimmy put the phone to his ear and stepped out.

Facing me, Helen said, ‘The Prime Minister?’ I nodded. ‘He calls often?’

‘You’ll soon be taking his calls for Jimmy.’ I hesitated. ‘Is this all a bit too much for you?’

She seemed immediately defensive. ‘No, it’s just ... that I don’t understand it all yet. It’s all very unusual, that’s all.’

‘Not afraid of challenges are you?’ I pushed.

‘No,’ she carefully mouthed. ‘But the job description was –’

‘Deliberately vague,’ I finished off. ‘Yes, we know. Why don’t you give it a few weeks.’

‘I will. And I’m not stupid, those *government* representatives are more like intelligence officers.’

‘You may think that, I could not possibly comment,’ I said with a smile.

‘The standard response used by *shadowy figures* in that profession.’

I clicked my fingers. ‘Miss Money Penny. That’s what we’ll call you!’

She grabbed my finger, pulled my hand toward her and bit down on the end of my finger. I was immediately aroused.

As Jimmy returned and sat, I said, ‘Your posh totty just bit my bloody finger.’

‘Could have been worse, stop annoying her.’

‘Thank you, boss,’ Helen offered.

Jimmy added, ‘After lunch, show Money Penny around Mapley, use the helicopter with the ejector seat.’

Helen let out an exasperated sigh. ‘Does he have an Aston Martin?’ Jimmy nodded.

After lunch I powered up the Augusta, Big Paul left seat and Helen in the plush reclining seats in back. I needed to move the Augusta anyway, there was no diagnostic kit here, no technicians, and no fuel truck; it would be housed at Mapley most of the time. We sped across Welsh countryside and crossed the Severn River. When I remember about the no fly zone around Berkeley Nuclear power station I banked hard, following the M4, soon to Mapley. I made a deliberately smooth landing, I even remembered the undercarriage in time.

A group of new RF recruits were undergoing basic training, all keen to meet me. I stood and chatted for ten minutes before showing Helen the base from the roof of the new block, just about all the training stations visible. As we walked back to the Augusta, now topped up with fuel, a police helicopter landed nearby. Powering down, they walked over.

‘Hey, Paul.’ We shook hands. ‘New ride?’

I wondered what the guy meant for a moment. ‘Got the range,’ I said. ‘Can reach a lot of places around the UK.’ The pilots put their heads in, asking about the amazing helicopter trip down to Mozambique.

Back at the house, I double-checked that the gear was down, landing smoothly again. Helen was given Rescue Force literature to read by Jimmy, booked in with me for a trip to the Cardiff club in the morning, followed by a flight to London and a review of the London club, Pineapple and the apartment. That evening she ate with the gang in the diner, asking many natural questions. She retired to her apartment straight after, then turned up in the pool later. When Ricky called me I stepped into the camera room. I told him off for zooming in on her, but had a good look anyway. And ... wow! She caused quite a stir that night. On the third day, I handed her back to Jimmy.

We had hired two secretaries for Mapley, they would start in two weeks time. We had also hired two former Army Medical Officers, both of the men in their forties. They would not be practising medicine, but directing operations in Mapley and training the UK Supplemental Group, those on a twelve-month sabbatical. Bob Davies had been over to see the new place, but preferred the house. “Tough”, Jimmy had told him; Mapley may be quiet now, but would grow rapidly. Bob liked the office and

the apartment, who wouldn't, but the house had a buzz and a camaraderie.

With the two new secretaries, and their families, off to Mawlini for a week, followed by a stay at the beach hotel, we held a meeting with the two new facilitators, Bob Davies, and a few from Mawlini: Mac, Coup, Doc Graham, Doc Hoskins, Ratchet and Spanner, our training standards co-ordinator. Hancock from Hong Kong joined us, Helen sat in on this meeting in the lounge and taking notes, Han listening in as a courtesy.

'OK,' Jimmy began. 'Rescue Force UK: cold and wet. We have a good base at Mapley, sufficient facilities for basic training, both for RF in general, and the new supplemental group. First, that supplemental group. I obviously want the UK public to be behind *us*, by being behind *them*. I see the day when we have a few helicopters at Mapley with police pilots, ready to go at a moment's notice, and flying to a pile-up on the motorways. Since everyone in the chopper will be a UK Government employee, there'll be no problems with licenses or insurances.'

'How many interested?' Coup asked.

'Hundreds,' Jimmy emphasised. 'It gets them out of their regular jobs for a year. Some may see it as an easy option, so we'll have to recruit carefully.'

'They'll come down to me?' Mac asked.

'They come down to you ... for a few weeks, little more, for experience as much as anything.' He held up a finger. 'But, if there was a major earthquake, for instance Turkey, the UK Government would have no problem with sending them out.'

'So they all need the basics covered,' Coup noted.

'They'll not need mine training,' I said.

'Saves a lot of time,' Mac noted.

'Or jungle survival,' I added.

'No, but they'll need to be shit hot on Faulty Towers,' Jimmy suggested. 'Then first aid, extracting people from cars, searching woodland for missing kids, cave rescues, mountain rescues. We've got them for a year, so we want them productive after three months.'

'And the regulars?' Coup asked.

‘Same as now, but a longer training schedule. As time goes on we obviously desire a more detailed, and better, training schedule, refining things as we go. I want everyone from RF units around the world to be *at least* shit hot with the Mapley subjects. And if they’re already well trained – like the Chinese – we need only test them.’

Han raised a finger, catching Jimmy’s attention. ‘My Government has built its own Faulty Towers. Next to it, a large village of damaged houses, and a tower some ten stories high.’

‘Good,’ Jimmy said. ‘We’ll rotate groups there for a week or two.’

Hancock said, ‘The Aussies have a mine, good mile across, lots of buildings damaged, and caves, collapsed cranes blocking roads, the works.’

‘Excellent. In which case, the rotations should be annual swaps.’

‘Be another games this year?’ Hancock asked.

‘Oh, yes, an annual event. Competition between the teams is good.’

Hancock added with a smile, ‘The Aussies have been winding up the Chinese as to who would have won.’

Han said, ‘I think you will find that our teams skill with jeeps has improved.’

‘You see,’ Jimmy said. ‘Competition is good. Right, Mapley HQ. In little over two weeks Mapley will become the international HQ for Rescue Force, Bob Davies sat there twenty-four hours a day.’

‘You’ll live there?’ Doc Graham asked Bob.

‘Yes, it’s all very nice. Not as nice as here, but then again ... where is?’ They laughed.

Jimmy faced our training standards guy. ‘You happy to move up?’

‘Yes, Mawlini is a pain for international travel. If I’m to co-ordinate them all, then being an hour down the motorway from Heathrow airport is a great benefit.’

‘Your assistant?’ Jimmy asked.

‘Yes, happy to move. He likes Africa, but not to stay permanently.’

Jimmy faced Doc Graham. 'You want a promotion, a house and more money? Director of RF UK, and the supplemental team?'

'I'd still go out to deployments?' Doc Graham asked, easing back.

'Yes, but in a supervisory role – three or four times a year. You'll be head of the UK's flagship unit, lots of prestige, tea with the Queen.'

'Can I ... bring a few people up?' Doc Graham risked.

'Three, in consultation with Mac and others.'

'I'd want Hildy, of course, then my assistant, and Jane Hicks.'

'Have they expressed an interest?' Jimmy asked.

'Yes, I've discussed it with them.'

'Mac? Coup?'

Coup said, 'It's not grabbing all the talent, Jane's only good for falling out of helicopters.' Everyone laughed.

Mac said, 'She had to be restrained from hitting that Aussie pilot, broken arm or not! So, who'll head up Kenya under me?'

'That job will first be offered to Doc Hoskins.'

'I'll take it,' came quickly back.

'Mac?' Jimmy called. 'You accept him?'

'Aye, he buys a round now and then.'

Jimmy said, 'Ratchet, Spanner, you'll now be looked at for group leader positions, unusual for non doctors.'

'Ratchet ... and Spanner?' Helen queried, everyone laughing.

'Robert Ratchet ... and James Spaniel,' Jimmy corrected her. He faced our two new facilitators. 'Your positions will be that of operational co-ordinators first – that means you panic twice a year when there's an earthquake – and thereafter deputies to Doc Graham, heavily involved in the supplemental group.'

'And Mackey?' I asked.

'Stays where he is, doing what he's doing, but under Bob. RF UK is a customer of the airfield, asking for facilities, but getting priority. Doc Graham, your first priority is recruitment. We'll be running a series of ads.' Jimmy glanced at me, and I loaded a tape into the video recorder, turning the TV on. 'There are three in sequence.'

'The one's shot in Mawlini?' Mac asked. 'We ain't seen 'em yet.'

The first two-minute advert started with a war scene in an Africa desert, RF medics helping injured locals to a Huey and taking off, flying into the sunset to the soundtrack of the Rolling Stones song Paint it Black. People nodded approvingly. The next advert consisted of a collage of different training tasks and activities, giving the impression that RF staff were always busy and pushed. The third advert I liked the most. It began with kids playing in the street, the roar of helicopters getting louder, soon the kids and others looking up and pointing as a squadron of twenty Hueys roared past. People stopped cars and looked up, pointing.

‘OK, opinions,’ Jimmy called.

“Good” was the consensus.

I said, ‘Show of hands. First one ... second one ... final one.’ The vote was for the second one.

Hancock suggested, ‘It gets the exciting training across.’

‘We’ll experiment with them all,’ Jimmy suggested. ‘That last one goes out around Africa soon, in Kenya in a week. Oh, I’m going to buy a small castle in Scotland, on a loch, a training facility for RF UK – and anyone else; lots of steep hills nearby, and a small island. What I’m thinking with the island - is survival. Stick some chickens and pigs on it, dump a group and see how they do. I’ll also get all our helo pilots up for some poor weather training in the mountains.’

We chatted for twenty minutes. After a fifteen-minute break for cleaning-up, we all settled about the large dining room table, a lengthy three-course meal served up. Many topics were discussed over the meal, gripes listened to, suggestions made, Helen getting a good grounding in the gangs personalities. Retiring to the lounge, all of our lot got drunk, as usual, all staying the night, some doubled up. The next morning they were up late, taking it easy, using the pool or sauna and relaxing. We took everyone to Mapley in the afternoon, four cars and two small luxury coaches. I let Helen drive me there in the Aston Martin. Some were seeing the base for the first time, others already familiar with it. Mackey joined us, and gave a quick lecture from the rooftop vantage point. The large sign over the door of this building now labelled it as “Rescue Force UK & International”. Doc Graham checked out his office, as did the two new facilitators, impressed by the facilities. Doc Graham

also had a house waiting, just down from the leisure centre, one of the facilitators allocated an apartment on the base.

Checking his watch, Jimmy said he had a surprise for us. We walked to the runway, our Huey powering up. With a wave from Jimmy the Huey lifted off, hovering around two hundred feet above the runway. A door opened, soon numerous small parachutes drifting down towards us. Attached to the parachutes, we noticed the clear plastic emergency packs. They hit the grass without bursting open, the water bottles intact. With the Huey landing, we picked up the packs, stretching out and examining the clear plastic parachutes.

Jimmy said, 'They're cheap to make, just a few pence each for the parachutes if produced in large quantities. If we can't reach a certain area then we can throw these out. Problem is, we can't dump thousands in one go, you have to pull the cord on the parachute, then throw it.

Big Paul brought over two unused packs. Jimmy took one, pulled the chord to release the parachute, and threw it up into the air, the pack drifting down.

'Could have used them Mozambique,' Doc Graham complained, examining the parachute.

'Next time,' Jimmy offered him. 'I'm working on a pallet system for the Hercules, to drop hundreds at a time.'

The gang came back for a second night, another meal and boozing session, Helen quietly questioning their raucous nature. They were driven to Gatwick late the following afternoon, spending the night in a hotel before flying off early the next morning.

RF International now had a base, and RF UK had been born. Bob Davies was tasked with contacting each RF unit and requesting a full-time representative for Mapley, live-in positions. Each position was for six months in rotation, and an experienced person was requested, someone very knowledgeable about the teams, any national issues and the local terrain particular to the teams.

As the days ticked by, Helen became suspicious of the "M" Group meeting, even questioning us directly on what went on behind closed doors; she could not believe that the nations represented would co-operate on anything. When the Prime

Minister made a secret visit by helicopter she greeted him, having spoken on the phone many times, but was then peeved to be kept out of an “M” Group meeting with him attending. In a carefully orchestrated move, she was called in with files on the DRC, lingering long enough to hear Han and Keely protesting each other’s involvement in certain Africa countries. Jimmy had to say “thank you”, and hold his gaze to make her leave. I don’t know why, but I enjoyed her jealousy of those attending.

Three weeks later, and with Helen fully briefed and up to speed, we journeyed to Mapley, the house a little quieter now without Bob Davies. The RF national representatives were in place, all eleven of them. It made for a great photograph in front of the HQ, everyone in their whites, shoulder badge national flags toward the camera. And Bob Davies stood up out of his wheelchair for the photo, copies sent to all the world’s media by Helen, with a full description of the nature of Rescue Force.

India had finally come on board, a small unit created in the southeast of the vast country, just thirty strong at the moment. Uganda had been delayed, not least because of their government’s involvement in the PUF attack on the DRC. Ghana was growing and improving rapidly, Australia some sixty strong and earning merits points at home by helping out at forest fires and floods. For the most part, the representatives at HQ organised team swaps and joint exercises, and there were always plenty of new recruits rotating in and out of Mawlini.

Trial by fire

Five weeks after joining us, Helen accompanied us to Africa, the gang flying down to Nairobi first class. Rudd and Cosy met us at the airport, along with ten bodyguards from the Pathfinders imposed on us by the Kenyan Government. Big Paul tooled up as Jimmy caught up on gossip with the bodyguards, conversing in their local dialect; families, babies, new houses, promotions. With a Rifles jeep at the front, one behind, and feeling like royalty – or someone very unpopular and under threat - we

journeyed to Rudd's office, introductions made to Helen on the way. At the office we greeted the two local secretaries, sitting and reviewing business, as much for Helen's benefit as anything. After a two hour meeting we retired to our favourite hotel, soon eating at the rooftop bar. If the patrons were nervous, they did not show it. Either that, or they did not recognise us or clock the beefy security detail.

'This is where you met Judy,' Helen noted.

'That wasn't in the books,' I responded.

'You'd be surprised what we gossip about on Poker Night,' she toyed. 'So, you thought she was a spy – and took one for the team.'

I tried, and failed, to hide the smile. 'I'm a dedicated individual.'

'Hmmm,' she let out. By 9pm she was in bed, a mere mortal, and jet lagged.

The next morning we drove down to Mombassa in convoy, staying at the golf complex for a change since the huts at the original beach hotel were not very secure. The hotel manager, responsible for all three hotels, gave us a detailed report of attendances and events. We already knew the figures, but went through the motions anyway, asking questions, and answering his questions in turn. After the meeting broke we noticed and greeted a few of Po's family members, conversing in Chinese, and introducing them to our new PA. As for Helen, she examined the hotel at length, taking in all the views from the rooftop. As a group, a large group, we toured the other hotels, stopping at the beach bar and greeting staff from Pineapple, plus tourists that just wanted to meet us and say hello. Jimmy chatted to a German couple for five minutes.

After a quick bite to eat we greeted Steffan and Lotti, taking Helen for a dive; she was already qualified to PADI Rescue Diver standard and both competent and confident under the water. A new friendly shark startled her, but she relaxed enough to watch us feed it, the old turtle taking his chances with the shark and jumping the queue for some food. Showered after the dive, we sat on plastic loungers in the shallows, our feet in the water, enjoying the sun. And I had to try and not to stare at her body. Somehow, it just felt as if it was mine to possess.

On the second day we slowly ambled around to the zoo behind the hotel, taking time to stop and feed the cubs, and displaying a keen managerial interest in each keeper's section. Noticing two fourteen-year-old boys in blue uniforms helping out, I asked about them. They were from the orphanage, on day release job experience, and I explained it to Helen. Calling the boys over, we found them very polite, their English good. And they both recognised us from our photographs; seems that it was part of the curriculum, recognising the pair of us.

We made our way up to the boy's orphanage home after an hour at the zoo, meeting Cosy and Anna, and their rapidly growing daughter, Mary. I lifted up the two year old, the girl holding my nose with some interest, and a good grip. Helen pinched the infant straight away, getting a better response than I had, the kid smiling and gurgling. Sitting in spacious air-conditioned offices, we chatted for an hour about the progress of the orphanage, two new sixth form colleges now sat across the road, three hundred boys and girls attending them. Anna reported that the colleges offered two-year nursing courses for both sexes. It also offered a cadetship to the Rifles, two days a week spent at the Rifles base north of Mombassa, the remaining time spent on subjects such as electronics, communications or mechanical engineering. The Rescue Force cadetship now being offered covered all the subjects that the youths would use in later life, plus further English, maths and computer studies. Helen was most impressed with the cradle to grave approach, reluctant to give the infant Mary back. Cosy led us up to the roof, pointing out the two new colleges to the south, many new buildings tucked in around the original structures of the main orphanage.

I pointed, addressing Helen. 'As far as you can see, that's orphanage land. Three thousand kids.'

She put a hand over her eyes, surveying rows of four blocks stretching out to the horizon, thirty-six blocks in the main group, many ancillary buildings.

I added, 'Up the road is our farm, three miles by three miles. It grows all the food for here, and we give fifty local schools free lunches for the kids.'

She took in the regimented rows of kids marching about. 'It's very ... *military* in nature.'

Jimmy said, 'Keeping control of three thousand kids is not easy. But they're very well treated, well educated, but more than that ... they have a chance of a life. The educational standards here, for sixteen year olds, are the highest in the country. A certificate from Ebede helps them to get a job.'

I put in, 'And four hundred of the kids here are not orphans.'

'No?' Helen queried.

'No, the locals board them here. They go home on weekends. Another three hundred are day attendees.'

'You charge for that?'

'Nope,' I said with a shrug. 'It helps the country, the country helps us.'

On the third day we packed up, and journeyed the short distance to Mombassa field, the Dash awaiting us. Surprising Tubby, I offered Helen right seat, getting a look from Jimmy. It was a shaky take-off. Helen came back after half an hour, not a keen pilot, and I took right seat. Landing at Mawlini, we dismissed the bodyguards for a week, the lads off visiting old friends in the Rifles camp. Most of the senior RF staff had already met Helen at the house, and now we introduced a few new faces, some known by name, nickname or dodgy reputation. In Mac's office she stared long and hard at a large photograph of what the base used to look like, the only common feature being the runway.

Mac stood at her shoulder. 'The lease says ... when we leave we have to put it back the way it was!'

At the UN hotel, she said, 'The famous rooftop bar,' taking in the image she had seen in the books. From the wall she stared out as I described everything. 'And you built all this, and paid for it?'

'Didn't build those two little UN sheds up the top end,' I pointed out, getting a look from her.

As we sat drinking and chatting, many people paid their respects, Jimmy standing and greeting some. The Rifles officers saluted as they presented themselves, as did our British Rupert, something she puzzled – and questioned.

'They're ... just being respectful,' I suggested.

'They ... are British and Kenyan Army,' she pointed out, awaiting a response.

'We fund them, so that they protect our medics,' I explained.

‘You ... *fund* them?’

Jimmy cut in with, ‘Just under a thousand men, thirty helicopters, two hundred jeeps, all the world’s best weaponry. We also fund the Tanzanian Rifles, and the Congo Rifles - another four thousand men, thirty helicopters, hundreds of jeeps. And attack helicopters, here and the DRC. We used to fund the Somalia Rifles, but they’re now paid for by their own government. Did you ... have a question?’

‘It’s just ... that I’ve never come across anyone *funding* their own army like this.’

‘It’s not *our* army,’ I pointed out, being defensive. ‘Think of them like ... hired security guards. They keep the bad guys at bay whilst we ... rebuild places.’

‘Oh,’ she said after a moment, two Somali officials walking out.

‘Are we disturbing you?’ they asked Jimmy. The two officials stood with jet black faces and buck teeth, smart grey suites that seem two sizes too big.

‘No, not at all.’ He grabbed seats for them both, ordering soft drinks, conversing in Arabic for a minute. Arabic was not the native Somali language, like Kenya they had several dialects, but most Somalis understood basic Arabic. He Introduced Helen, and she offered a simple greeting in Arabic.

The first Somali said, ‘The French mining group, they wish other areas.’

‘You should allow them to expand the mine they are in, outwards five miles, but no other areas yet. My Russian friends will visit you soon to open a mine – and they will pay up front for the concession.’

The Somalis nodded their acceptance.

‘How’s the building work in Mogadishu?’ I asked.

‘Your company employs twenty-five thousand men, all kept busy, much improvement.’

‘Enough building materials from here?’ I asked.

‘Yes, ten trucks a day, cement, blocks, wood, paint,’ they listed.

‘And the banana plantations?’ Jimmy enquired.

‘Your people are there, productivity better. We make irrigation, and take fertilizer from your people in China. Sales are good, two ships a week.’

‘And food from here?’ Jimmy asked.

‘Twenty trucks a day, two ships a week at the port. The President asks for water purification equipment and experts.’

‘Send a request to your representative at the house, we’ll sort it quickly for you, my friend,’ Jimmy offered.

‘How are the clinics?’ I asked them.

‘Twelve in the towns, six in Mogadishu districts. And three hospitals in the city are rebuilt, many foreign doctors now.’

‘Sounds like progress,’ I approved. ‘The orphanage?’

‘The building is finished, many children,’ they happily reported with toothy smiles, both in need of a trip to the dentist.

We chatted for ten minutes, the Somalis thanking us as they left.

‘If you don’t mind me asking, but what positions do those gentlemen hold in Somalia?’ Helen delicately enquired.

‘Government Ministers,’ Jimmy replied. ‘And in answer to your question, we paid for the Somali Rifles, had warlords removed, and are now busily rebuilding the entire country. The US and UK aid package comes through us – so we can exert influence.’

‘Oh.’

Big Paul stood, drew his weapon and placed it to the head of UN official. It was an unusual move, even for him.

Jimmy put down his knife and fork and stood, a nod at the barman. I followed him towards the worried looking man, Jimmy asking, ‘Was he eating too loud?’

‘I know his face, but I can’t place him.’

‘And you feel that warrants a gun to his head?’ Jimmy calmly enquired.

‘Something about him ain’t right,’ Big Paul insisted.

‘Stand up, please,’ Jimmy told the man, his two female companions standing and moving back. Jimmy faced the two women. ‘Do you know this man?’

‘He was on our flight,’ they said in French accents.

‘Beyond being on your flight, do you know him?’ Jimmy pressed. They shook their heads, Jimmy taking out his satellite phone. He called the house. ‘Bob, Jimmy. Got a problem here, a Frenchman, UN, who may be a spy of some sort. I’m putting you on with him.’ Jimmy handed over the phone, the suspect answering questions in English. So far, he seemed legitimate.

Handing back the phone, Bob said he could be genuine, but did not know one man he should have.

Waving the man to his seat, Jimmy ordered the resident UN manager over, the bodyguards bursting out and surrounding the worried official. The UN manager was both worried, and horrified at the treatment of a member of his staff. Jimmy was insistent: check him out.

As we stood in the heat, the manager asked a lot of questions. He finally said, 'He seems genuine, but I was not expecting him.'

'Call Paris, someone you know personally, get a description,' Jimmy insisted. All the while, Helen seemed very concerned at our actions, and I was wishing the scene would just go away, quietly cursing Big Paul.

The UN manager finally handed back Jimmy's satellite phone, looking deflated. 'The man he is supposed to be – is in bed very sick.'

Jimmy sat opposite the man. 'Co-operate, and you'll not be harmed, but flown straight out. Fail to co-operate, we hand you to the Rifles for ... interrogation.'

'I choose ... the flight out,' the man said with some attitude.

'And...?'

He glanced at the crowd from under his eyebrows. Almost whispering, he said, 'DGSE.'

'And your purpose here?' Jimmy calmly enquired. 'Did you come here to ... kill anyone?'

'No,' he insisted. 'Passive monitoring.'

'Your government is welcome to send as many officials as they like to look around here, or interview the staff. You know that. So don't insult my intelligence with ... *passive monitoring*.' Jimmy lifted his head to the guards. 'I want him treated well, not harmed. Take to Nairobi, photograph, fingerprint, deport him to France.' Jimmy stood. Facing the man, Jimmy pointed to the meal. 'Did you pay for that?'

After a moment, the man said, 'Not yet.'

Jimmy waved his fingers, the man leaving a few notes on the table, plus a small tip. The bodyguards escorted him out. Jimmy turned to the two French ladies. 'If you ever discover why your government is so intent on spying in us, kindly let me know, because it puzzles me. Please, finish your meal. Bon appetite.'

We sat as Mac stepped in. ‘We need to screen all the fucking UN people now?’ he complained.

‘No, no big deal. They like to spy on us, so let them.’

‘Eat at the bloody RF hotel next time, huh!’

With Mac gone, Helen asked. ‘Why *are* the French spying on you?’

‘They’ve long had a colonial interest in many parts of Africa, and they don’t like being left out of the loop.’

‘No French in the “M” Group,’ she noted.

‘No. And their mining corporations lost out in the Congo.’

‘How so?’ she probed.

‘Before we got involved, anyone could set up a mine and take ore or diamonds, the Kinshasa Government too weak to police the region. The French mining companies made a lot of money, and *they* have influence with the French Government.’

‘But you said you gave them a mining concession in Somalia, and I just heard you agree for them to expand it?’ Helen puzzled.

‘They want more. They want ... chaos in Africa, that way to *take* the ore, not pay for it.’

‘That’s terrible,’ Helen said, on our side for a change. ‘And you just sent that guy back to try again later.’

‘Oh, I didn’t say that,’ Jimmy said with a grin. He lifted his satellite phone. ‘Rudd? Jimmy. The Rifles have captured a French spy at Mawlini, he’ll be deported; make a big splash, his face in the papers. Thanks.’ He dialled the house. ‘Han, we just caught a French spy at Mawlini, let the “M” Group know, and you know what to do. Thanks.’

I told Helen, ‘We’ll get them some unwelcome press, some heat from the various governments.’

‘And around here, you can order people deported,’ Helen noted. ‘You are influential gentlemen.’

So far, I could not work her out. She was impressed by much of what we did, but was also naturally inquisitive and suspicious. Sharon was not like that at all, and Helen knew who and what we were when applying for the damn job. Her attitude was a growing source of frustration for me.

We flew down to River View Safari Park the next day. After booking in I decided to ignore her; I’d had enough. If Jimmy wanted to defend what we did, that was up to him. As for her

being my future wife, I was starting to doubt that. Future murder victim came to mind.

I played with a few cubs for a while, fed them, spoke to guests and enjoyed the view with a cold beer. I grabbed a sandwich, a few tins, and pinched a driver and tracker, heading off in a random direction. We got back just before sundown. Fortunately, Jimmy and Helen sat a large table with several guests; talk of work would be limited.

Jimmy asked me, 'Anything interesting out there?'

'I thought I saw our lion.'

'He stays close, apparently,' Jimmy answered.

'And a fox, those long eared things.'

'The Serengeti lodge is now at capacity, DeKraft was up here the other day.'

'Good. We'll have to visit.' I got into a conversation with a man from Gibraltar, ignoring Helen. It made a pleasant change to find someone truly impressed by all we did, and I relaxed a bit. After the meal I sat in the bar with the man, slowly drinking away the evening. Jimmy and Helen eventually joined us, the man off to his poor forgotten wife.

Jimmy said, 'Helen thinks you're avoiding her.'

'She'd be right,' I said, focused on the dark savannah. 'Still, she's your PA, not mine – thankfully.'

'You think we made a mistake in hiring her?' Jimmy calmly asked, easing back with his beer.

Without facing either of them, I said, 'I think we have enough problems without our own staff acting like ungrateful bitches.'

'Kindly clarify *ungrateful bitch*?' Helen testily asked.

I turned my head a notch. 'You got the job a hell of a lot of people would like, and you question what we do more than the fucking French.'

'Oh. Well, I don't think I'm ungrateful, I just don't understand what you do. It is all ... rather puzzling.'

'That's fair,' Jimmy commented.

I faced her again. 'We make a lot of money, and spend it helping people. Even *you* ... could understand that, Blondie.'

'Blondie?' she softly repeated. 'You employed me because of my high IQ and inquisitive mind. I don't like things I don't understand, and much that you do makes no sense *at all*.'

'That's fair,' Jimmy conceded.

‘I shall try and limit the probing questions to Mister Silo alone in future,’ she offered me.

‘Good.’

We sat in silence for a while, then she excused herself, we were up at dawn for a safari.

‘You sure I marry her?’ I questioned. ‘Not strangle her?’

‘There’s a very fine line ... between love and hate. She’ll get better and adjust. I’ll ... educate her.’

‘And quickly.’

‘Well at least she respects you more now, girls like men to tell them off. You’ve been a bit ... soft with her.’

‘I won’t in future,’ I threatened.

In the morning I was up early, a long breakfast with Jimmy.

Helen joined us an hour later, noting our plates. ‘You two don’t sleep much.’

‘Clear consciences,’ I quipped. ‘A few pages of the bible and we’re out like a light.’

She helped herself to tea and biscuits, not a breakfast person, and we set off after kicking Big Paul’s lazy carcass out of bed. Five miles south of the lodge, we stopped and entered a small Rifles camp, three jeeps and two tents. They made us coffee and offered up cooked chicken. Heading on, we followed the river for a while, noting the crocodiles. For the first time we spotted an African Kingfisher skimming the water for fish. And Helen, she kept the conversation to animals. Crossing a tarmac road, a RF jeep approached, heading the other way. We waved them down.

‘Jimbo!’ came an Australian voice. ‘Paul, you reprobate!’

I greeted the Aussies with a huge smile, the team piling out, soon a four-way conversation going on. Two of the team greeted Big Paul warmly, jokes about helicopters and power lines bandied about; this lot had been deployed to Mozambique. They tried to explain to Helen what it was like in the Biera Airport terminal building, waking up in water. For fifteen minutes we stood and blocked the road, not that it saw much traffic. Setting off again, we headed towards Skids’ sanctuary.

On the approach road to the sanctuary, Jimmy faced me and said, ‘Something’s not right,’ Big Paul glancing towards us. ‘At the lodge, a face. A face that I can’t place.’

‘Who?’ I nudged.

‘Like our good bodyguard here, just a feeling about a face. When we get to Skids I’ll call and check the lodge register. Big Paul, stay awake please.’

Big Paul checked his M16.

‘Should I be worried?’ Helen asked.

‘Only about their cooking,’ Jimmy quipped.

With the thatch roof of Skids large house coming into view, Jimmy seemed to be studying the jeep with a puzzled frown. Facing the house, he said, ‘No one to greet us.’

‘They working?’ I asked.

‘Pull up,’ he told the driver. ‘Everyone out.’

I was bent double, holding the sides of the jeep, when the blast hit me.

A wave of flame engulfed me, my eyes closing automatically. Then I was airborne and tumbling – sky, dirt, sky, dirt - pain starting to register from my face and hands. I hit a thorn bush, going right through, the flesh being torn off my arms, hands and head. My shoulder impacted the ground, my vision filled with sandy earth, parched grass and a large beetle. With my legs on fire, I screamed, reaching down to them with hands that no longer responded. Rolling in the sandy soil, for how long I couldn’t tell, I doused the fire on my trousers.

Gunfire. Was that gunfire? Screaming?

In the press-up position I tried to stand, the sand sticking to my bloodied hands. Upright finally I felt dizzy and sick, fighting to get my bearings, smoke blocking my view, blood trickling down my face. Turning, I thought I could see the jeep. Taking a step I winched in agony, screaming aloud with anger and determination, desperate to get back to the jeep to help my friends. And Helen. I fought away the pain and plodded on, stumbling to my knees twice. Again I thought I heard gunfire.

Through the smoke I plodded along, all the while my legs feeling as if they were on fire, each movement of my trousers agony, the beige trousers now dark red with my blood. At the jeep I could feel the heat of the fire, but could not hear it. It was oddly silent. And in the sand, more blood, lots of blood. I peered through the smoke to the jeep, the driver dead at the wheel, no one else visible.

A large figure came through the smoke, Jimmy carrying an M16 prone. And I only recognised him by outline, his face

covered in blood, his clothes, his arms, ribs visible in his trousers. He grabbed me under the armpit and dragged me quickly towards the house, a trail of blood snaking through the sand, drag marks visible. In the darkened interior it took a moment for my eyes to adjust, blinking away the blood. Big Paul lay face down, tourniquets on his legs, and on the floor beside him enough blood to swim in. Next to him lay Helen, just a pile of bloodied clothing, and still smouldering. I stopped dead as Jimmy let go of me, stood staring down in shock. I just stood staring down at her seemingly lifeless body.

For what seemed an age I just stood there. Lifting my head, I noticed four other bodies, but they had not been with us on the jeep; three local women, one white man, enough blood to make me feel sick.

Jimmy reappeared with a charred medical kit, snatching it open. He broke open a plastic case, revealing a syringe set. From his arm he hurriedly extracted blood, soon injecting into Big Paul's legs in many places. After a second extraction, he injected the seemingly lifeless Big Paul in the arm. And I just stood there, in a silent world of my own. Switching hands, Jimmy extracted a full vial from his right arm, soon injecting Helen in her limp arm.

Standing, he took me by the shoulders and sat me down. Rushing to the kitchen and back, he emptied a bucket of water over me, my legs coming back to life with excruciating pain. He drank some of the water from the bucket, offering me some before retrieving another bucket full. Water was splashed over Helen and Big Paul in turn, the floor now awash with blood and water, and trickling out of the door. With my face contorted in pain, I eased forwards and knelt, pointing at Big Paul's legs.

Jimmy retrieved pads from the medical kit, placed them on Big Paul's legs, then my hands on top of the pads. I pressed down, my finger tips now in warm blood. Jimmy lifted two haemostats, opened a wound with his fingers and reached in like a dentist pulling a tooth. With what water was left in the bucket he splashed the wound, putting his face close and examining it. Releasing the tourniquets, he studied the wound, his fingers probing it at length. He jammed in a white pad, pulling it out red and examining the wound further, finally satisfied. He turned to me.

He said something, but I could not hear. From head to toe, he ran his bloodied hands over me, checking for wounds or fractures, easing off my shirt and discarding it. With another bucket of water he carefully soaked my legs, the rest of the bucket's contents applied to Helen's legs as she lay lifeless. Sitting me down, he pulled my shoes off, my feet numb and not protesting, the socks pulled off and discarded. Next came the trousers. He pointed, and motioned for me to take them off. I stood, fumbling to undue my belt, my thumbs not wishing to cooperate. As if sitting on the toilet, I bent down and lowered my trousers, horrified at what I found; red and white blistered skin, blackened patches. Burnt skin. Jimmy indicated that I should stay standing, and I stepped out of my trousers, my shins a colour that I could not describe. And all the while, my world was that of silent pain.

With my legs exposed, he poured more water. For the most part, they were numb, the odd shooting pain making me wince. From the kitchen he brought a rope, throwing it over a rafter and making a loop. He helped me forwards, into the loop as if being winched by a helicopter. Hanging there, supported, I drifted into unconsciousness.

With the sound of another jeep registering, Jimmy ran out with the M16, soon recognising Skids and Trev as they sped around the burning jeep, pulling up in a cloud of dust. Jumping down with their weapons they approached Jimmy with incredulous stares.

‘Jimmy, wha ... what the fuck happened?’

‘Mine in the road, remote detonated,’ he reported, getting his breath. ‘I killed two gunmen.’ They looked past him towards the house, a watery line of blood flowing down to the sandy dirt of the road. ‘Your mate ... is dead, and the women.’

They rushed past, a scene of carnage greeting them. Stepping carefully through water and blood, they took in the view of me hung up, my wounds, the others laying in the recovery position. They stepped past us, finding their dead friend, and their dead local girlfriends. Jimmy returned to the house, tending Helen as Skids and Trev stood over what had been their life.

‘Check the perimeter,’ Jimmy barked. ‘They may still be out there. I shot two, maybe more close by. South, look south.’

With Skids and Trev stepping again through the blood, still stunned by the scene and glancing back, they stepped out. Jimmy grabbed the radio with slippery fingers. 'Silo for River View.'

'River View rangers hut here, go ahead Jimmy.'

'Get hold of Doc Adam in Mawlini, I want him down to Skids' farm as fast as possible. Then get Cosy and Anna from Mombassa urgently, we've ... got an injured man here.'

'Your want aero-med rescue?' came a concerned voice.

'No, just do as I ask. We have armed poachers south of Skids' farm, I want people looking towards the border.'

'Poachers shot a man?'

'No, but he has some burns. Silo out.' He returned to Helen, stripping her. By time Skids returned, two hours later, she was trussed up like me, naked, Big Paul stripped down to his pants and spotted with white adhesive pads. With Jimmy's shirt and trousers now off, Skids stopped dead.

'Jimmy, those burns are fatal, we got to get a helo for you.'

'No,' Jimmy said in a forced whisper. 'But I need your help.' Skids hesitated. 'Snap out of it man, do as I ask! Get me some protein, tinned meat, anything. And water, lots of water.'

At some point Jimmy woke me, forcing me to drink plenty of water, and to take some tinned meat. It was night when I woke, now facing Cosy and Anna working on Big Paul. They eased me down. When I screamed in agony I was injected by Anna, soon out of it again. In the morning I was slapped awake by Jimmy, soon drinking a pint of water before being lifted out of the harness again, my armpits raw. They laid me down on a wet plastic sheet, cool to the touch, a mattress underneath. Lifting my head, Anna fed me a tin of meat, more water to wash it down with.

'Helen?' I asked.

'Alive,' was all I got back. I closed my eyes in agony as they applied cream to my limbs.

I was dreaming that I was on fire. I heard Helen scream, but could not reach her. Nudged awake, I noticed it was sundown. Anna propped me up and gave me a drink before feeding me three tins of meat, one straight after the other. A hot sugary tea followed. Turning my head, and looking over a blood-soaked sofa, I could see Helen being force-fed tinned meat, most of her face bandaged, a blanket up around her neck. After the feeding

she sobbed uncontrollably, injected with a sedative and laid back. With an angered determination I eased up, stood in my pants and covered in cream, my skin red underneath.

Jimmy stepped in with his shirt off, one side of his torso still reddened, but otherwise looking fine. 'You still with us?'

'What ... happened?'

Cosy and Anna exchanged looks.

Jimmy said, 'Mine under the jeep, two gunmen in the bushes. Skids and Trev killed six more up the road. They ... killed the women here, and Skids mate. They're ... buried out the back.'

'And Big Paul?' I croaked out.

'He'll make it. Unfortunately, he had never been injected till now. Lay down, eat and drink as much as you can.'

Anna spoon-fed me more tinned meat as Skids stepped in looking haggard. He sat, staring dispassionately at me. 'You should be dead. You should all ... be fucking dead. Someone wanna explain that.' He faced Jimmy. 'And you, injecting Paul and the woman with your blood – what the fucks all that about?'

Jimmy sat opposite Skids, taking a breath, a glance towards Anna. 'Many years ago, the Americans made a medical break through, a drug that speeds up your metabolism, healing you quickly. Unfortunately, it costs ten million an injection. Paul and I had injections, so we heal very quickly if we get water and protein. And my blood has a concentration, so if I inject someone else they'll heal quickly till it wears off.'

Skids pointed at Anna and Cosy. 'These two ain't looking surprised at that.'

'We experimented with the drug at the orphanage, kids that were terminal. Had some successes.' Anna and Cosy again exchanged looks.

'At ten million a pop – it ain't gunna fucking catch on, is it?' Skids snarled.

Jimmy informed him, 'UK forensic team here in the morning, they'll go over the jeep and ordnance. And the bodies.'

'You know who's behind this?' Skids asked, his eyes tired.

'Could be a number of groups, we'll see where the evidence takes us.' Skids stood. 'Skids,' Jimmy called, his head lowered. 'They came for me; this is my fault. I'm ... sorry for your loss.'

Skids glanced towards me, peering through cold, dead eyes. 'Those that live by the sword. We should have fucking retired

when we could have.’ He stepped out, the door slamming behind him.

Voices woke me later, strange faces, Jimmy giving instructions to people. I turned my head and eased onto an elbow, facing Helen as she stared back with a haunted look. ‘You OK?’ She did not respond. I eased up, Anna and Cosy both snoozing. Grabbing a towel I wiped grease off my skin, registering little pain. I was still in my pants, my old trousers nowhere to be seen, not that they were in a good state. I stepped across the room quietly and into a bedroom, finding Doc Adam attending Big Paul on a bed. He looked up. ‘How is he?’

‘He will be OK, he has the blood.’

‘Any clothes?’

Doc Adam opened a wardrobe, handing me green shorts and a t-shirt. I put them on with little pain, returning to the lounge. Next to Helen I eased down, lifting a water bottle.

‘Drink,’ I whispered. She took a few mouthfuls whilst staring out of focus. Putting down the water, I grabbed a half eaten tin, swiping off flies, and soon fed her corned beef without protest. Grabbing a pack of wet-wipes, I cleaned her face gently, but at length. I got some of the blood out of her hair, easing off her bandages and examining a set of stitches that seemed well healed already.

Easing the blanket lower, I lifted her reddened arms and cleaned them with the wet wipes, Anna now awake and smiling encouragingly. With both arms and hands wiped down, nails cleaned as best as I could, I tackled her neck as she stared out of focus. Kneeling, and lifting the blanket, I cleaned her feet and legs with a cloth dipped into a bucket of water. After a moment’s hesitation, a loud breath issued, I pulled back the blanket and wiped down the rest of her, scabs coming away and revealing new pink skin. The smell was horrendous, but I wasn’t sure if that was Helen, or me. Having cleaned her torso and armpits, I covered that section with the blanket and revealed a messy groin area; a very messy groin area, a recent bowel movement.

Anna handed me a large cloth and some paper towels, and I cleaned Helen like a newborn, removing the stinking cloth and paper, pulling the blanket back down. I washed myself in a bathroom, my hair under the shower, and dried off. After using the toilet I returned to Helen. Dragging over my own single

mattress, I placed it down next to hers. Lying down alongside her, I pulled her over to me, her head on my chest. As I slowly ran my hands through her hair she closed her eyes.

When Jimmy returned, he stopped to study us. 'Every dark cloud.'

I lay there staring at the door for hours, perhaps six hours, people coming and going, all the while listening to her breathing.

Finally awake, she started sobbing straight away. 'I'm scarred for life.'

'What scars are those?' I asked.

She held up her hands, turning them in and out.

'What scars?' I softly pressed.

She sat up and lifted the blanket, studying her legs, legs that had been shredded. She found only a few red marks. Anna approached with shorts and t-shirt, handing them to Helen.

I stood up, lifting Helen by the armpits and leading her to a bedroom. 'Get dressed,' I whispered.

She re-emerged as Jimmy stepped back in. He closed in on her. 'You OK?'

'Did I dream it?' she puzzled with a heavy frown, running her hands through matted hair.

'No, it was a car bomb.'

'My ... legs.'

'Were shredded.' He led her to a seat, Anna and Cosy closing in, Anna offering a hot tea. Helen took it, cradling the mug as she sipped.

'There's something you need to know. But first, Paul, there's something *you* need to know. Helen ... was sent to spy on us.'

My mind was a blank.

Helen lifted her head. 'You know?' she said, softly, as if asked an innocuous question.

'I knew ... more than a hundred years ago, young lady.'

Helen glanced at Anna, Cosy and me. Anna smiled. 'He is much older than he seems.'

Jimmy said, 'Which is why the good General wanted you to spy on us, despite the fact the British Prime Minister knows about me. If the General was caught he'd go to prison – as would you, so don't worry about him.'

'A ... spy?' I queried of Jimmy, my brain a bit slow.

He nodded. 'But a very nice one.'

‘You ... you don’t mind,’ she puzzled.

‘One of the reasons they asked you to spy on me - is my blood. My blood ... has very unusual properties. If injected into someone else they heal very quickly. It cures all diseases known to man; AIDS, cancer, you name it.’

Helen took in the faces. ‘You ... you injected me with your own blood.’ She closed her eyes and shook her head. ‘What?’

‘Look at your legs,’ Anna told Helen. ‘They were shredded in the car bomb attack, and you were burnt all over. And us, we were injected by Jimmy many years ago.’

‘I was injected as well,’ I put in, my voice hoarse. ‘My legs had third degree burns.’ I coughed. ‘Fatal, normally.’

‘As were *your* injuries,’ Anna told Helen. ‘You should be dead now. At best – horribly disfigured.’

Jimmy said, ‘A day from now you skin will be perfect, better than before. Just eat a lot, drink water, and take it easy.’

He led Cosy outside as Anna relayed the story of Mary in the war, Helen sat cradling her tea mug as she listened to the incredible story.

When Jimmy returned, Helen asked him to sit. ‘How could you have been in the Second World War?’

He took a moment. ‘When you were ten, and in boarding school, a gift came from an anonymous admirer, a silver necklace and a locket, one you keep hidden at your mother’s house.’ Helen bolted upright, her eyes wide. ‘If you open the locket, it says Magestic – spelt with a “g”.’ She gasped. ‘I sent it. I’ve been looking out for you ever since.’

Anna smiled widely. ‘See.’

“‘M” Group,’ I told her, tackling a new tin of Spam. ‘Magestic Group. All the world’s most powerful leaders listen to Jimmy. Just not the French.’

Doc Adam stepped out.

‘Big Paul OK?’ I asked.

‘His wounds have knitted very quickly and well. Jimmy gave him a lot of blood, praise God. I must go now, be well my friends.’

‘Take care, Doc,’ I offered, Anna giving him a hug.

Big Paul appeared in the doorway a minute later, struggling to walk. ‘Fuck I’m hungry.’

I grabbed two tins for him, pushing him back to bed. 'Eat these, then rest, you were badly chopped up.'

'Jimmy, he –'

'Injected you, or you wouldn't be with us.'

'The legs,' he coughed out. 'They'll ... heal up?'

'Good as new, if not a hell of a lot better. Not so much as a scar. Now sit the fuck down and eat.'

Big Paul winced as he sat, then accepted a tin. I stood over him as he spooned out a mouthful, returning to the lounge when I was satisfied I had a co-operative patient. With Helen also sat eating, I stepped outside, wincing in the bright light, a hand over my eyes; I had no idea where my sunglasses were, probably in the dirt somewhere. Jimmy stood with two men over a line of bodies under sheets. In the distance, I could see four men attending the burnt out jeep, taking swabs and collecting dirt samples. Barefoot, I stepped gingerly across the sandy soil; green shorts, and a green t-shirt that said "Kill 'em all, let God sort 'em out!" I walked up to Jimmy, the soles of my feet sensitive.

'Still with us?' Jimmy asked, a glance past me towards the house.

'Just. Who're they?'

'British forensics, trying to get a footprint on the bomb and the men. So far, the two principals are Belgians who served in the French Foreign Legion. Last known address was Angola. Their six black mates were Tanzanians, just the hired help.'

'Wha ... what happened?' I struggled with, my head hurting, my eyes just about closed.

'They came in the morning before we got here, after Skids and Trev had driven off. They killed the third man, the women, the fucking dog. Then waited for us.'

'Did we tell anyone ... you know ... were coming here?'

'I seem to remember saying we'd go see the sanctuary. Someone at the lodge heard it, but these guys must have been close by anyway. If they didn't get us here, they may have attacked the lodge instead.'

'What, two of them? The rangers are armed.'

'Yeah, I've been puzzling that as well. The other possibility is Skids and Co, but I doubt that. More likely someone wanted Skids and Co out of the way first, then come for us. It's a work in progress, no one alive to question.'

Skids drove back in, skirting around the burnt out jeep. Pulling up, he reported, 'The Rifles shot-up a jeep of four white men at the border, bodies on their way here.'

'So they were waiting to hit the lodge if this pair missed us down here,' Jimmy suggested.

'Could be more out there,' Skids noted, taking off his hat and wiping his brow with his sleeve. 'Got a hundred of the Rifles down there, all the park rangers.'

'Anything in the news?' Jimmy asked Skids directly.

'Not so far.' Skids stepped closer and lifted Jimmy's shirt. Making eye contact, he said, 'That's some fucking wonder drug.' He looked me over. 'Got any more?'

'In the fridge, enough for the two of you – if you want it.'

Skids took in the line of bodies, glanced at both of us, then stepped inside.

A line of jeeps approached: Pathfinders and someone else. A minute later the Defence Minister himself stepped down, dressed now in civilian clothes. He stood and took in the burnt out jeep, turning to the line of bodies. Stepping up to us, he said, 'I have been informed of the ... poachers. Perhaps you would honour me with the truth - this was no *poaching* incident, Mr Silo.'

'No, they came for me.'

'Rwandans?'

'We don't know yet, we're investigating. And it's important for tourism in Kenya ... that this remains a poaching incident that is played down.'

The Minister regarded us both carefully for a moment. 'Of that, we are in agreement.' Facing me, the Minister said, 'You are not well?'

'Minor injuries, some our staff hurt,' I told him.

'You ... were in the jeep?' he puzzled.

'No, we stepped out before the blast, the driver was still sat in it,' Jimmy informed the Minister.

'I see. You ... were very lucky. And the men at the border?'

'Poachers,' Jimmy insisted.

'I see.'

Jimmy firmly nudged the Minister back to his jeep, and back to Nairobi, promising to keep him informed. The man departed with an escort, one jeep of bodyguards remaining. Jimmy told them to protect the house. Back inside, I gulped down tepid

water, sitting next to Helen. Finishing her tin, she put a pillow on my lap and lay down. I found myself running my fingers through her hair again.

‘How long did you look after me?’ she asked in a weak voice.

‘Dunno. Day or two, it’s all a blur.’

She closed her eyes. When I opened mine, Anna and Cosy were gone, Skids and Trev sat staring with cold eyes, the floor now clean, a fire going. Jimmy appeared at my shoulder, handing me a chocolate bar and a bottle of water. Helen stirred, and he offered her the same.

‘We’ll leave soon, back into the lodge at night to get changed, have a decent meal,’ Jimmy informed us.

Big Paul appeared, yawning and scratching his balls. ‘Fuck I’m hungry.’

Jimmy thrust a tin towards him. ‘Be leaving soon, find some clothes.’

Still in his pants, Big Paul sat, revealing long scars on his legs, numerous reddened patches.

‘Will they heal?’ I asked Jimmy, pointing towards Big Paul’s legs.

‘Not as well as we’d like. I’ll get a plastic surgeon to tidy them up. After that the scars will go. I’m afraid I had to do a bit of DIY artery repair.’

‘I should have bled out,’ Big Paul noted between mouthfuls, seemingly none too concerned.

‘I injected you with a pint every hour, twelve pints in total.’

‘We compatible blood types?’ Big Paul puzzled.

‘No,’ Jimmy replied. ‘But with my blood it doesn’t matter.’

‘Neat fucking trick,’ Skids said from across the room.

Jimmy turned his head towards our hosts. ‘You’ll be compensated for the loss you’ve suffered here. You also be required to be just as discreet ... *as you were in the past*, or we’ll fall out.’ He held his gaze on them. ‘Are we reasonably clear about that, gentlemen.’

After a moment, they both nodded.

We drove back in the dark, the bodyguards dropping us at our rooms, our keys having been retrieved from tattered and bloodied clothes. We all showered, grabbed fresh clothes, then met in the bar at 10.30pm, food ordered - lots of food ordered, beers downed in mostly silence.

Jimmy said, 'Since the three of you are here, I'd like to take this opportunity ... to apologise for what you went through. Helen, Big Paul, you'll both be compensated in cash when we get back.'

'Sounds good,' Big Paul offered. 'How much?'

'A quarter million.'

'And then?' Helen asked.

'And then ... what?' Jimmy nudged.

'And then ... what happens? We just try and forget this happened?'

'We move on,' I said without looking up.

'I'm not sure I can,' Helen suggested.

'You have no choice,' Jimmy told her.

'No ... choice?' she queried.

'You knew what you were doing when you agreed to spy on us; that decision came with consequences. Whichever way it went, you would be facing a lengthy jail sentence. Now that you know about us, Her Majesties intelligence services will not let you walk the streets with what you know.'

'So ... I'm a prisoner?'

'Not yet, you're not,' Jimmy explained. 'But the day you stop working for me they'll be waiting, you and the General in the dock.'

'I was doing my duty,' she quietly protested.

'I'm sure the judge will accept that,' Jimmy sarcastically offered.

'You didn't give me that locket as a kid ... just to throw me to the wolves!'

Jimmy smiled towards me. 'She's not stupid, is she?' Facing her, he said, 'I could give you the money, and a head start. So long as you can outwit the security services of the UK, America, Russia, China and Israel ... you'll do fine.'

Big Paul laughed, getting a chip thrown at him from Helen.

'You could ask them to leave me alone, I've seen the influence you have,' she pressed.

'Why do you want to leave, you just started working for us?' I asked.

'Something about being *blown-up* comes to mind!'

'You'll get used to it,' Big Paul stated, getting stared at by the three of us.

‘OK,’ Jimmy began. ‘Here’s my best deal. You work a twelve month contract, I’ll give you a million quid and a change of identity, faking your death. How’s that?’

‘Why *the fuck* ... would you want me working for you, *boss*, when you know I was sent to spy on you?’ Helen testily asked.

‘Big Paul?’ Jimmy called.

Big Paul looked up, and faced her. ‘That stuff with the blood, that’s just a small part of it. He’s a fucking time traveller – that’s why all the world’s leaders have him on speed dial.’

She straightened, wide-eyed. ‘A ... time traveller?’

I said, ‘He knows what the stock markets will do next week, hence the money we make. For the past ten years he’s been tipping off the world about disasters, plane crashes, earthquakes, assassinations, wars.’

‘This is getting so weird,’ she said, shaking her head.

‘Would you like to know your own future?’ Jimmy asked her as he cut up his steak.

‘My ... future?’

‘Why’d you think he hired you, dopey!’ Big Paul told her. ‘Fuck, for a smart bird she’s a bit slow.’

She threw another chip.

‘Blonde, you see,’ I told Big Paul.

She heaved a big breath. ‘So what’s in my future?’

‘Well, ten years from now you’ll be married, you’ll have two gorgeous daughters – both musical, a great house, a high paying job, lots of respect, and lots of work satisfaction.’ That shut her up. Jimmy added, ‘And your daughters will grow up to have a significant effect on the future development of mankind.’

I was keeping quiet, thinking about many things. Not least, did I even want to marry her?

‘And I get to that ... future position –’ Helen said.

‘By taking advice from Uncle Jimmy,’ Jimmy told her.

Big Paul said, ‘When I first met Jimmy, he told me when and where I’d get back together with Jill – right spooky.’

‘And he told me I had a destiny,’ I put in. ‘And, for a smart bird, you haven’t ask the main question: why go back in time?’

‘So why go back in time?’ she testily asked.

‘Prevent World War Three,’ Jimmy coldly stated, his gaze held on her. ‘Kicks off in a few years. Unless...’

‘Unless you prevent it,’ she realised.

‘And to do that I need a good team, people that I know – from the future – have it in them to make a difference. As of now you’re on the team, not least for your daughter’s sake. Your *future* daughters, who will never be born if you’re in prison.’

‘So,’ I said. ‘Door number one – nice house, good pay, nice family. Or door number two – the booby prize. Place your bets, ladies and gentlemen.’

‘Not much of a choice,’ she conceded.

‘It never was,’ Jimmy said. To me, he said, ‘She lost her virginity at fifteen –’

‘Hey!’

‘To the grounds keeper of her school.’

‘Hey!’

‘And she once fashioned a dildo out of wood.’

She slapped Jimmy’s arm. ‘Enough!’ She forced a breath. ‘God, how much do you know about me?’

‘All of it,’ Jimmy told her. ‘Test me.’

She hesitated. ‘Who did I stab?’

‘You’re step uncle, Patrick Tailor, in your garden shed.’ She put a hand to her mouth. Jimmy calmly added, ‘A week before I killed him.’

‘You topped him?’ Big Paul puzzled.

‘He would have done something ... *not nice* to Helen.’ She stared back, Jimmy adding, ‘In Nigeria, when you accompanied your old boss – but got lost, four men surrounded you.’

‘That was her?’ Big Paul asked. She focused on him. ‘I shot them from the roof. Sorry if I scared you, love.’

Her eyes moistened. ‘You saved me,’ she realised.

‘I didn’t love, I was just following orders,’ Big Paul said, stuffing his face.

Jimmy placed his hand on hers. ‘I’ve been looking out for you for a long, long time.’

She got up and ran to her room.

‘She be alright?’ I asked.

‘Yes. And tomorrow we’ll fly back and plan a war. Some bastard will pay for this.’

In the morning, Skids radioed to say he had our “package”. We grabbed a quiet and moody Helen and set off, bodyguards in tow.

Outside of Skids house we found a man sat in a jeep, trussed up and held by Pathfinders.

‘They got him before he boarded a plane,’ Skids informed us. ‘He connected?’

With a wave from Jimmy, the Rifles bundled the man out. ‘I recognise your face from Forward Base in the DRC.’ He lifted the man, slamming him against the jeep. I could see a cut lip and bruised eye. ‘And you were at the lodge. Now, tell me what I need to know and I’ll stick you on plane – you know I will. Now, who hired you?’

The man took in the faces. ‘APIC Mines. Renee Shultzman,’ he said with an accent.

‘To do what?’

He hesitated, glancing at the various faces. ‘To kill the English soldiers here, and you and your people.’

Jimmy waved Helen closer. ‘This is the man who organised the attack. It was his bomb that burnt you.’ He took a big step backwards. And waited.

Helen did not hesitate. She punched him in the mouth, took a half step backwards and kicked him in the groin, finally stamping down on his shins and making him scream.

Big Paul tipped his head towards me. ‘You wouldn’t want to criticise her fucking cooking.’

‘No,’ I agreed, stood wide-eyed.

Jimmy waved the Pathfinders to the jeep, telling them to drive down the road and wait. Our bodyguards mounted up. Jimmy faced Skids. ‘He’s all yours.’

‘You said I could go!’ the man protested.

‘Lions need to eat. Sorry.’

We mounted up as Skids and Trev dragged the man off to his unpleasant fate, driving back to the lodge without speaking. At the lodge we packed quickly, picked up at the grass strip by Tubby and flown to Nairobi. Eighteen hours later I sat with a cup of tea, staring out at the grass in the dawn light.

At 9am an “M” Group meeting was called, Sykes taking the unusual step of an early helicopter flight down to us. The men assembled, Jimmy finally walking in with Helen in tow, her presence puzzled.

‘Gentlemen,’ Jimmy called as we sat about the lounge. ‘Let us welcome the latest member of the “M” Group, Helen.’

‘Are you sure?’ Sykes cautioned.

‘She’s been ... converted,’ Jimmy said to Sykes. ‘And she has a destiny. Why’d you think I hired her?’

‘And how much does she know?’ Sykes pressed.

‘Just the basics. But, after the car bomb, I had to inject her – no choice. That brought my plans for her forward by around a year.’

‘Welcome,’ Han offered, the group smiling and nodding towards her.

‘First of all,’ Sykes began. ‘The group, and its governments, would like to protest your ... reckless disregard for you own safety.’

Jimmy turned to me. ‘Are you feeling wanted, needed and loved?’

‘I have a warm glowy feeling all over,’ I sarcastically stated. ‘It’s as if they like us, and not just need us for what we can provide them.’

Jimmy nodded. Facing the group, he said, ‘We’re touched, but let me make something clear: this future we’re moulding... is not guaranteed, *we* are mortal, and getting to 2025 will be difficult every step of the way. If you think I can get you there without tripping a few times ... you’re mistaken.’ He let them think about it. ‘Now, we have a problem with APIC Mines, not least their desire to kill us, and de-stabilise the Congo. This, is what I would like to happen.’ He gave the detail.

That evening the TV news in Belgium and France was dominated by APIC, their share price having dropped ninety percent before closing. The Chinese Government, large customers of APIC, had cancelled all contracts. That, in itself, was a problem for APIC, but when the Chinese cited “terrorist charges in Africa” as the reason the company took a nose dive, China indicating that it would not be paying what it owed the company. At the same time, the Kinshasa Government accused APIC of terrorism, arrest warrants issued, the UN launching an investigation into APIC’s Africa operations, and involvement in the futile Congo invasion.

The next morning the Financial Times was full of APIC stories, the companies share price down to twenty pence from

two pounds ten. Since two Belgian Government Ministers were on the board, they resigned, now being hounded by the press of many nations. Two APIC board members were, unfortunately, in China and trying to get more business, now arrested on non-specific terrorist charges. When the share price touched fifteen pence, the Russian Government - acting through proxies, started buying heavily. They approach principal shareholders who were keen to be distanced from the scandal, buying up blocks at knock down prices. Our friends in low places were also buying shares, especially the Israelis. By the end of the day the Russian Oligarch tasked with the share purchase had enough of a block to launch a bid for control of the company. The existing board and chairman were sacked, a Russian board taking over in record time. They promised an immediate cleanup, inviting in the UN, the French and Belgium police, and Interpol. The share price started to recover.

Jimmy, as Governor of the Eastern DRC, issued a writ for damages for APIC's involvement in the DRC invasion. In a move that stunned the financial press, APIC offered to settle out of court, further condemning the former directors by implication. China, having been "reassured", resumed its contracts, paid its bill, and added a few extra contracts, the share price back up to two pounds, the Financial Times still full of the story. When the Kinshasa Government confirmed that the newly reformed company would be allowed into the DRC, its share price topped two pounds fifty, our friends in low places making plenty of money.

A week after destroying the company, we received two hundred and fifty million in damages, paid to the corporation we used to develop the DRC. We had hurt APIC where it mattered – in their pockets, Mossad taking care of Renee Shultzman for us.

Helen had been subdued for many days after returning, and she mostly ate her meals in her own apartment. She had received the compensation Jimmy had promised her, but that had not fixed a smile to her face. Then, on the Monday, she turned up in the gym around 6am, getting on a treadmill and running for an hour. The three of us ran together, nothing said. The next day Big Paul started using the gym early, his legs still giving him some pain, a physiotherapist used; tendons had knitted back together, but not

quite correctly; surgery was planned. For a ten-minute period, all four of us attended the line of treadmills.

That evening I asked Helen if she fancied a meal out, a break from the house. She took a few seconds, then agreed, Karl driving us to a local country pub, quiet on a Monday. She downed a large white wine quickly.

‘You feel like a prisoner?’ I delicately broached.

‘A bit, I suppose. But like Jimmy said, I chose the assignment, I knew the risks.’

‘It’s not an unpleasant assignment,’ I suggested. ‘And you’re part of something important.’

‘It’s ... a challenge,’ she conceded.

After a moment’s thought, I said, ‘If you want out, I’m sure we can arrange a new identity, some money, a Caribbean island.’

‘And be on the run?’

‘One word from Jimmy - and no one will touch you,’ I assured her.

‘You trying to get rid of me?’

‘No, I’m trying to help you.’

She had been avoiding eye contact, but now studied me. ‘Why, pray tell?’

‘That’s better, more like the old acidic you.’ She raised an eyebrow. I continued, ‘As to why ... Jimmy says you have a destiny, a part to play, and he’s never wrong.’

She accepted another wine. Staring into it, she said, ‘That uncle I stabbed, he ... would have raped me.’ She took a sip. ‘They found him hanged; supposedly suicide. And those men in Nigeria ... well, that would have been horrendous.’

‘Is there an *I’m grateful* in there somewhere?’

She looked up. ‘I suppose,’ she conceded, breathing out.

‘So what’s the problem?’

‘How did you react when you found out?’

‘Ah, Jimmy played me well. He told me I’d be rich and successful, lots of pretty girls.’

‘He played to your faults.’

‘And then he hit below the belt, talk of plane crashes and saving lives – made me feel very guilty. But I got buttered up for six months first; money, girls – I was a bit backward with the ladies at twenty-three.’

‘And now you have your pick,’ she noted.

‘Not quite, I have to be very careful who I date. The smart ones question what we do, the dippy one’s don’t – but aren’t worth dating then.’

‘And Katie Joe? What happened there?’

‘Her ... love hate relationship with the press pissed me off. She courted publicity, then whinged when she got it. It was all about the size of her arse and the latest tabloid review. That got on my tits.’

‘Jimmy’s masseur...?’

‘We don’t know,’ I said with a smile. ‘And anyone asking risks death. Or worse!’

‘I was ... *chosen* for this because I was supposed to remind him of Liz.’

‘You do,’ I said. ‘But he would never get involved with someone he worked with. If your friends in intelligence thought that, then they’re thick.’

‘You don’t think I could have worked my charm?’ she toyed.

‘Nope, not a hope in hell.’

‘What do you know that I don’t?’ she asked, squinting at me.

‘Your destiny.’

‘Do tell.’

‘Nope. Not allowed. Sorry.’ I was enjoying teasing her.

‘I bet I could make you with a good tickling.’

I noticed her glass empty. Again. She ordered another. If she was like the rest of us, the booze would have little effect.

With a fresh wine, she said, ‘You saw me naked.’

‘You saw me in my pants,’ I countered.

‘And you wiped my arse.’

‘You say that ... as if you’re surprised I’d look after you. You’re part of the team. Of course I’d look after you.’

‘Not because you fancied me?’ she toyed.

‘I’ve seen your shitty arse, love,’ I said, making a face. ‘Enough to put any man off.’

‘Hey!’ she playfully scolded. ‘That ... part should be consigned to a deep dark place.’

‘Trust me, it is.’

‘I go on one trip with you ... and get burnt alive.’ She shook her head.

‘It’s a dangerous game,’ I conceded, our starters placed down. I glanced at Karl and his oppo sat in the corner, stuffing their faces. ‘What’ll you do?’

‘Do?’

‘Stay or go?’

‘Jimmy said I’d have to serve my year long penance.’ She made a face. ‘It’ll give me time to re-think my life.’

‘No more spy work after?’

‘No,’ she firmly stated. ‘Fool’s game; let someone else do it.’

‘What would you do, right now, if this had never happened and you weren’t playing at being a spy?’

She gave it some thought. ‘The notion of two musical daughters appealed to me. I’ve been thinking about that a lot.’

‘You’re twenty-eight, so settling age, I suppose. What about work?’

‘Find a nice rich man and be a lazy cow.’

‘Are there *nice* rich men?’ I challenged.

‘Not really, they’re all driven – or complete arses.’

‘I can’t quite see you sat at home all day. You’d need something to keep you sharp.’

‘I fancy writing a novel.’

‘Why not do that now, you only sleep a few hours, like us? You could get in two or three hours a day. There’s one book that Jimmy was going to commission someone to write – The Future of Africa. Why don’t you tackle that, we’d make sure it got published and widely read.’

‘I couldn’t publish as me, they’d know,’ she complained.

‘They ... will disappear, or go to prison. Don’t worry about *they*. If Jimmy scrubs your past, you’ll be fine.’

‘You’re being very accommodating, young sir.’

‘Trying to get you back on your feet, and your old acidic self, less of a mopey bitch.’

She downed the remainder of her third wine, another ordered from a surprised waiter. We chatted and ate till the staff asked us nicely if we’d fuck off home, Karl yawning. She did not appear drunk, but had packed away enough to down a horse, the waiters now convinced we were both alcoholics. At the house we linked elbows as we walked in.

‘Walk me to my abode,’ Helen suggested, now sounding a little drunk. ‘There could be assassins waiting.’

‘I wouldn’t joke about stuff like that, not around here.’

In her apartment she got the kettle on as I examined what she had done with the place, the little feminine touches. The pictures on the wall were moody landscapes, fogs at dawn, the CD collection mostly classical, the newspapers broadsheets, and the magazines all about decorating posh homes.

She sat, placing down my tea. ‘Stop nosing.’

‘I paid for half this house, so I’ll nose if I want, *employee*.’

‘He can predict the stock markets, where’s the challenge in that?’ she challenged as she plonked down.

‘That’s not the point – we use the money to fix things, and pay for Rescue Force and the orphanages.’

‘Yeah, you’re such *lovely* people.’

Shaking my head, I stood up, and walked out. Ten minutes later she knocked on my apartment door. Then banged on it. Still dressed, I opened the reinforced door. ‘What!’

‘You misunderstood me,’ she said, barging in. I closed the door as she added, ‘I don’t want to be fighting with you. I ... don’t want to be fighting with anyone.’

‘Perhaps you should just shut your trap more often,’ I helpfully suggested as we both flopped onto the sofa.

‘This is difficult for me,’ she began.

‘What is?’ I pressed.

‘I was ... I did not really want the assignment, but it *was* a challenge. I didn’t even know if I’d get the damn job. And now all this, all this ... fucking time travel stuff. It’s ... hard. I just don’t know where I am, what I’m supposed to do. Am I the enemy, a prisoner, a PA?’

I was sympathetic. ‘Yes, it must be a bit confusing. But all you need to do is make a choice. Just say – I’m on the team, I want to help fix the world.’

‘I’m on the team, I want to help fix the world. I do.’

‘Great. I’ll take you back to your room.’ I stood.

‘No. I like you running your fingers through my hair. Could you be a love ... and do that for me.’ She help up a hand.

I helped her up. On the bed we lay fully clothed, and I ran my fingers through her hair till she fell asleep.

At 5am she woke me with a tea, placing it down on the bedside cabinet, sipping one herself. ‘I’m not normally so relaxed with men. You like a well worn old pair of slippers.’

‘Thanks, I think.’

‘It’s odd. It’s as if I know you.’

After her tea, she headed back to her own room to cleanup, I headed down to the gym.

Jimmy said, ‘Well?’

‘Just like Katie: fully clothed on the bed. I’m beginning to worry about my animal magnetism.’

‘Give it time.’

She joined us thirty minutes later, running in her spandex and looking very sexy, Jimmy not saying anything.

When Big Paul appeared, he said, ‘Morning slack draws,’ to her. She stopped the machine and stared at me.

‘Cameras,’ I carefully mouthed. ‘And security staff all night with nothing to do,’ I explained.

She reached across and punched Big Paul on the shoulder before re-starting her treadmill. At breakfast we managed to get a smile out of her, the four of us ravenously devouring Cookie’s creations. We were busy that week, everyone with their noses in files, and Helen seemed much better. She took over a few tasks from me, collating figures. On the Thursday I found her shouting down the phone at a supplier. Smiling, I went and found Jimmy.

‘She’s chewing some guy out down the phone,’ I reported. He stared at me. ‘She’s trying to get us a better deal, she’s taking *our side* against his.’

Jimmy nodded. ‘It’s a good sign. Now go and ask her to do that in a quiet, yet acidic and condescending tone.’

The following day, the Friday, I asked her if she wanted to go to the club in Cardiff. She thought about it, then suggested the London club. I grabbed Karl and his mate, and we drove out around 4pm. I thought I saw the masseur’s car pass as we drove down towards Newport. When the kids are away, I thought to myself. We parked in the basement of the old apartment, bags dumped into rooms, Helen in Jimmy’s old room, and grabbed a taxi around to the club at 8pm. In the VIP area we walked straight into Katie and her new man. I seemed to remember something from the tabloids, but could remember nothing about him.

‘Katie,’ I flatly greeted her as we halted.

‘Paul. This is my fiancé, Rod,’ she got out quickly.

‘This is Jimmy’s new PA, Helen,’ I said.

They shook, I shook his hand with a thin, formal smile.

‘So, no one trying to shoot you lately?’ Katie toyed.

I exchanged a look with Helen. ‘Not in the last week, no. So what do you do, Rod?’

‘I’m sure you already know,’ he came back with.

‘Paul doesn’t read the papers,’ Katie put in. ‘Just the Financial Times. Rod is in jewellery.’

‘Rod Jason, yes?’ Helen asked.

‘Yes, the Jason family.’

‘The *infamous* Jason family,’ Helen pointed out.

‘Excuse me?’ Rod demanded.

Helen said, ‘You were arrested for VAT fraud a few years back, your father jailed for six months, were you not?’

Katie stopped smiling.

‘I was acquitted,’ Rod insisted.

‘No, you were let go because you sold out the other directors. They took the rap, and you had police protection for six months. You were guilty, just a Judas,’ Helen insisted.

Rod stormed off, dragging Katie as he did.

‘Well, that could have gone better,’ I said.

‘He’s a gangster, you should warn her,’ Helen suggested.

‘I think you just did.’

‘No, properly, before she makes a mistake.’

I stared at her for a moment, then lifted my mobile, calling Jimmy. He sounded out of breath. ‘Jimmy, Katie is about to marry some idiot called Rod Jason –’

‘They won’t marry. Don’t worry.’ He hung up.

I held the mobile for a moment. ‘Jimmy says they won’t marry.’

‘For the best, she would have been hurt.’

I stood squarely facing Helen. ‘And you wish to get involved because...?’

‘I don’t like men *like that* hurting women.’

‘Oh,’ I said, nodding as I thought about it.

We walked around to the Indian restaurant and packed away a three-course meal with plenty of beer for me, plenty of wine for Helen. Two hours later, back in the VIP area, we mingled, many people recognising me and saying hello. And many people enquired if Helen was my new girlfriend. We chatted to staff from McKinleys, they’d made a few quid from APIC Mines,

then stood with a group of our singers, Helen quite taken with the celebs.

Katie reappeared alone an hour later, looking less than well kept together. She stormed over to me. Noticing her, Helen closed in. 'Why did you do that!' Katie asked me in an angered, whisper.

'He didn't, I did,' Helen loudly cut in with. 'Because I know men like that, and I didn't want to see him hurt you.' She led Katie forcefully to a quiet area, Katie now tearful. 'Did you ask him?' Katie did not reply. 'Then he must have told you the truth. He's a crook! And you would have lasted six months before he wrecked your career.' Helen produced a tissue, and gently dabbed Katie's eyes, cleaning up her mascara smudges. From a table, she lifted her own white wine. 'Down that.'

Katie did as asked, helped down into a corner seat.

Helen lifted her head to me, 'Give us ten.'

I took a breath, and left them to it, wondering what the morning papers would say. Karl and his mate asked what the drama was, so I explained it as we stood chatting in line of sight. Helen eventually escorted Katie to a taxi, returning to us in the VIP area.

'She OK?' I asked.

'She'll be fine, just as soon as the tabloids have finished with her. Still, for the best.'

I fetched her a fresh wine. 'You ever been engaged?'

'Nope, not even close. It's all been work, work, work since college.'

I most definitely did not want her to clarify just what "work" entailed. We returned to the celebs, Helen enjoying the chit chat, especially the respect she got when she told people she was Jimmy's PA. An hour later, with a group of singers grabbing us, we were led into the Retro room, soon dancing to the kind of crappy old songs that you normally hear at wedding receptions; and enjoying them greatly. Helen seemed to connect with a girl band, and seemed to be enjoying herself, the first time since Kenya. I got propositioned a few times, but politely declined, saying no to a few real stunners, and a couple of tipsy singers.

'Why you turning the girls away?' Helen shouted into my ear at one point.

'You're my date for the evening.'

‘Am I?’ She went back to her dancing.

Needing a break, I stepped out of the Retro room and into one of the chill-out rooms, grabbing a beer and chatting to Karl and his mate, now a bead of cooling sweat on my brow.

Karl said, ‘There’re more beautiful women in here than you poke a stick at.’

‘We don’t let the mingers in!’ I joked.

‘So, you and ... Helen?’

‘Guys, I have no idea either way. When I figure it out, I’ll let you know.’

Helen walked around the corner with two men in tow. Stopping at us, she said, ‘This is my date, Paul Holton, and these are his armed bodyguards.’ The two men backed up quickly and out.

‘Problems?’ I asked.

‘No, they just needed a cold shower. But it’s nice to take your name in vain. I told a guy earlier I was Jimmy’s girlfriend - should have seen the look on his face. Right, I’m done, shopping in the morning. Take me home, guys.’

At the apartment block, Karl and his mate ducked into Big Paul’s old apartment, I led Helen back to the main apartment, putting the kettle on.

‘It’s not all bad, working for you two,’ she shouted from the lounge.

‘Very little of it ... *is bad*,’ I countered, placing her tea down on the coffee table. ‘Except getting blown up.’

‘And your nosy staff.’

‘It is a bit of a gossip shop,’ I admitted.

‘You could have pulled tonight,’ she toyed, a glint in her eye.

‘I can pull anytime, anywhere, not just in nightclubs,’ I defensively pointed out. ‘But like Katie, I have to be careful *who* I date.’

‘And then you date them for a year or so, two years with Katie.’

‘Learnt that at Poker Night?’

‘No, that was in the papers last week. You really should scan the tabloids.’

I cradled my tea mug. ‘I used to, but it gets a bit silly – caring about what people say.’

‘Your staff think we’re at it,’ she toyed.

‘I have bigger concerns,’ I told her. ‘Stuff like that doesn’t bother me.’

‘In Kenya, you nursed me, right after getting pissy with me in the lodge. Why so much care?’

‘You ... have an important destiny. It’s good enough for Jimmy, so good enough for me.’

‘Do you know what that destiny is?’

‘Yes.’

‘And...?’

‘Not allowed, so don’t ask.’

‘Bet I could get it out if you.’

‘Bet you couldn’t.’

She put down her mug and stepped around, straddling me. ‘Please, boss, can you tell me what it is.’ I shook my head. She lifted off her top. ‘Please, boss, I’ll be a good girl,’ she whispered, leaning in and nibbling my ear, her boobs in my face. I resisted for a good five seconds before throwing her onto her back on the sofa, biting at her nipples and making her shriek. And I hoped the floor was relaying the sounds to the guys below.

In the morning we were both up early, having stayed in my old bed. Showering together led to a marathon sex session, and another shower before breakfast.

Sat in a robe, she faced me, toast in hand. ‘So, where do we go from here?’

‘Shopping.’

‘And after that?’

‘Where would you like it to go?’

‘You normally see girls for a year, after which ... I guess Jimmy would release me from servitude. Be a pleasant enough year.’

‘That’s the nicest thing a girl has ever said to me,’ I quipped. ‘Next you’ll be comparing me to an old pair of slippers.’

‘And ... being your woman, your ... bit of stuff, I’d expect a good shopping allowance.’

‘Oh, of course,’ I said, mockingly. I fetched the credit card Jimmy had given me a few days ago, and handed it over.

‘It’s in my name,’ she puzzled, pulling off a small sticker with the pin code.

‘Ten grand a month limit.’

She focused on me. ‘You had a ... ready made card in my name ... with a ten grand a month limit?’

‘Had it made up when you started with us,’ I lied, although I was not sure when Jimmy had ordered it.

‘And it’s to be used for...?’

‘Anything you like. Go clothes shopping, I’m sure Karl would love to trail you around.’

She stood. ‘It may be a pleasant year after all.’

At 4pm she burst in with a dozen bags, and three singers, Karl weighted down with bags. I welcomed the girls, laughing at Karl as he muttered under his breath. I had stayed in the apartment, buying the papers, and the tabloids for a change, and sat reading all day, making a few calls. It had been nice to just sit in the old apartment and chill out. The girls plonked down their bags in piles, teas organised. Seemed we were out with them that evening, whether I liked it or not.

With the singers gone, Helen dragged me to the bedroom, another marathon session initiated; we were so tired afterward we actually had a quick nap before going out. Helen called it “post shopping-high sex”. At Po’s Chinese restaurant we met the girls, enjoying a lengthy meal. Fortunately, one of the girls brought her boyfriend along, another singer, but also a car and plane geek. I had someone to talk to. We hit the club around 10.30pm, straight into the busy VIP area. I spent thirty minutes greeting people I knew, and some who just wanted to meet me. When I noticed a few girls interested in Karl and his mate, and what they did for a living, I stepped in and gave the guys a good write-up, explaining that they were “on duty”, but allowed to spend the evening chatting to pretty girls. Then a large figure loomed near: Jimmy. Big Paul and Keely were with him, two doormen in tow.

Jimmy took me to one side. ‘Well?’

‘We’re an item. And she has the credit card,’ I happily reported. ‘Last night in here she let her hair down - it did her good. We had *post shopping sex*!’

‘Excellent. I’ve got a room here, you use the apartment.’

We joined Helen, who thanked Jimmy for the credit card. He thumbed towards me. ‘Coming out of his account.’

‘He won’t tell me what my future is,’ she mock complained.

‘I will, in four weeks, relax.’

The music seemed better than normal that night, the beer tasted better, and was happier than I had been in quite a while. But it took this evening for me to realise that.

On Monday morning, back in the office, Helen playfully referred to me as Mister Holton. Everyone knew about us, but no one said anything openly.

After the meeting we got a call. 'Could we receive the French Interior Minister today?' Jimmy confirmed that we could, and suggested he take a helicopter from London, kindly paid for on our account. At 2pm the Minister arrived in a commercial Agusta. Helen greeted the French delegation, fluently conversing with our guests as she walked them in. She stopped to explain Karl and his buddies when asked. In the lounge we welcomed the delegation, three men, the "M" Group tucked away, but listening in; we had bugged our own lounge.

'Minister,' Jimmy greeted, gesturing him towards a seat, French coffee offered for our guests, Helen acting as translator. Sitting, Jimmy began with, 'It's an honour to receive you. How can we help the French Government?'

Our three guests spoke English well enough. The Minister began with, 'We are obviously aware of a lot more of what *happens* in Africa, than the public and the press.'

'I would be disappointed in your security services if you were not,' Jimmy told him.

'We are also certain that the APIC Mines takeover was ... contrived.'

'Are you suggesting that the Chinese and Russian Governments were duplicitous in the takeover? It would seem... *unwise* to make such an allegation, since trade, and relations may be adversely affected with both those nations.'

The Minister hesitated. 'That would be a ... concern. We also have the concern of our citizens being held in China.'

'If you are suggesting that APIC Mines are innocent, then I am afraid I would have to release enough information to the press to bring down the French Government.'

They shifted uneasily. The Minister said, 'We did not come here to make this situation worse, but to find a ... solution.'

'What did you have in mind?'

‘We do not condone the actions of APIC, of French mining companies, and of the involvement of some of our ministers. But we would, naturally, not wish to see our influence in Africa diminished, either politically or economically. And your influence in the region is both great, and a great puzzle to us.’

Jimmy held his hands wide. ‘Gentlemen, if you’re nice to the people of Africa, they’ll wish to do business with you. It’s no more complicated than that. And I’ve never asked anyone to operate against French interests. When we catch your people spying on us, or trying to kill our people, we send them back – as you’re well aware.’

‘Those *people* ... were not sanctioned from the top,’ the Minister insisted.

‘I’m sorry to hear you’ve lost control of your intelligence services,’ Jimmy offered.

‘We have not ... lost control,’ the Minister unhappily insisted.

‘Then may I ask, if any more DGSE spies will appear at my facilities in the future?’

‘They have functions other than monitoring you, but may occur in areas where you have an interest.’

‘In which case, let them identify themselves to me ... and we’ll sit and have a coffee when we meet.’

The Minister lifted an eyebrow. ‘That is a kind offer,’ he mockingly stated. He crossed his legs. ‘Now, we would like to ask what your plans are for the Democratic Republic of Congo?’

‘Can you be more ... specific?’

‘Your plans for mining,’ the Minister clarified.

‘Once peace has been established, any and all mining companies will be welcome. What you must keep in mind is that the currently mined totals are less than one percent of what could be mined – if the country had a peace, and a decent infrastructure. It’s the fighting that’s keeping the ore under the ground.’

‘And would you co-operate with us, in infrastructure projects in the region?’

‘Of course, any help you offer be will be appreciated. I have no problem with France, or its mining corporations – those operating inside the law, that is. As you will have seen, I recommended to the Somalis that a French company be allowed in.’

‘Indeed. And French companies will not be disadvantaged in the Congo?’

‘Not at all; when there is a peace, all companies will be allowed to make tenders in the region I have influence. And Kimballa can always override me.’

‘Unlikely. He fears you.’

‘I doubt that. And why is an Interior Minister here to discuss matters of commerce? A bit beyond your remit.’ Jimmy waited.

‘We know that there is a ... combined intelligence bureau operating in many central Africa nations, and that there seems to be many non-English living here. Our recent approach to your Prime Minister was *unprecedented* - he told us to come and talk to you directly, someone without political high office.’

‘Maybe he was just busy,’ I helpfully put in.

‘Gentlemen, what is it that I can help you with?’ Jimmy pressed.

‘We naturally wish to assist you in Africa, not be on opposite sides. We are close nations in Europe, and co-operate on many things. This ... departure from that is a great concern to many.’

‘As it should be,’ Jimmy firmly stated. ‘It should be a concern for the French people, and the wider Europe, that French mining companies should be trying to rape Africa, to kill its people and steal its ore. That is something I will not allow. I’m going to fix the Congo with or without you. The people will have roads, education, hospitals ... and security. They will have what they deserve to have with the riches under their feet!’

The Minister took a breath. ‘That ... I agree with, as would any sane person. May we ... move on from that premise?’

‘Of course,’ Jimmy said with forced civility. ‘What would you like me to do?’

‘We would like to co-operate on combined intelligence matters in Africa, we would like to assist on infrastructure projects in Eastern Congo, and we would like a fair and equitable chance of future mining operations.’

‘I agree to all three, as far as they are within my power to influence. I will send you formal requests for assistance with certain projects. Now, Interior Minister, perhaps you would like to get to why you really came here.’

The Minister glanced at his colleagues. ‘We know that you have the ear of the British Prime Minister, the American

President, the Chinese Government, and the Russian Government. We have also seen what you can *magic out of a hat* in Africa. We've seen the Kenyans allow you your own army, so to the Tanzanians and the Congo and Somalia. What you did in Somalia was ... unprecedented. We are not just curious, we are utterly confused as to who you are, which is why some see you as a threat.'

'Indeed,' Jimmy let out. 'Well, would your two colleagues like to step out for a minute?'

After a moment the Minister nodded towards his associates. With them out of earshot, Jimmy said, 'Your ambassador in London has been receiving letters from a powerful clairvoyant named Magestic.' The Minister bolted upright, Jimmy adding. 'I'm his right hand man. I get detailed instructions, including when and where your agents will turn up in Africa. You may let your President know that. Who he chooses to inform is up to him.'

'Why did we not know this before?'

'The time was not right. It is now, because you came and asked nicely to join the club.'

'How much do you know –'

'About the future? Pretty much everything.'

The Minister turned to me. 'And you?'

'I'm *his* right hand man.'

He turned further towards Helen.

'I make the tea ... and look good.'

Jimmy addressed Helen. 'Miss Money Penny, call in the "M" Group, please.' She stood and stepped out, the gang appearing and lining up. Jimmy named each nation represented, and no, the French could not send a representative yet. With his head spinning, the Minister was nudged back towards the waiting helicopter as an "M" Group meeting was held in the second lounge, the first being checked for bugs. 'Questions, gentlemen?'

Han asked, 'They will be given mining concessions in the Congo?'

'Some. If they were kept out, they would continue to be aggressive. We need ... peace and quiet in the region. And as I said, less than one percent is known about or mined, the good areas have not yet been discovered.'

Ivan asked, 'They will make accusations about APIC?'

‘No, I don’t think so. It would hurt them to keep that in the news. They want closure on it.’

Jack asked, ‘Can I tell the PM that relations will be improved and normalised?’

‘You can.’

Keely asked, ‘When will oil flow from the DRC?’

‘Not for a long time, it’s in a bad position. The best way to use the oil there - is to refine it on sight, sell it around Africa – so that Africa doesn’t import oil. That will help to lower the global oil price. If the refined petrol is used internally, the ore can be taken to the coast cheaply. Remember, it’s a thousand miles to lay a pipeline, the best route out through Tanzania. China needs to consider that cheap internal oil will make the extraction of ore in the whole of Africa much cheaper.’

Jimmy took a moment. ‘I made a mistake in Kenya the other week. My plans are ahead of schedule, so the *predictability* has been affected to a small degree. It’s good that some things are ahead of schedule, bad in other ways. I will be ... more careful in future. Oh, Mister Han, would you be so kind as to release and expel the APIC people in your country.’

Loose ends

A week later, Jimmy said we needed to deal with someone, and we set out on a long drive down to Kent. At 5pm we approached a cottage, Jimmy kicking the door off its hinges.

‘Subtle. Bell not working?’ I asked as we entered.

A startled man stood in his lounge, bald and sixty years old. ‘Silo!’ The pictures on the walls suggested a military background. A young woman appeared from the kitchen, startled and afraid. Then amazed to see the two of us.

‘Sit down!’ Jimmy barked at them both, Karl and his mate filling the view behind us.

The man and his daughter sat, staring up at us.

‘Paul, this is the nice gentleman that hired Helen.’

‘Ah.’ I took a nice photograph off the wall, and smashed it against the fireplace. ‘Sorry, old chap.’

‘What the hell are you doing!’ the daughter shouted. ‘What are you doing here?’

Jimmy sat near here. ‘Well, here’s the thing. Your dear father, the good General here, has been spying on someone ... directly against the wishes of the Prime Minister. I’ve just had a cup of tea with the Prime Minister, and I think I’ve worked a deal to keep him out of prison for the rest of his life.’

The daughter turned to her father, who simply lowered his head. ‘Dad?’ She got no answer. ‘Dad?’

‘So,’ Jimmy began. ‘The deal I’ve worked out involves you retiring abroad within thirty days, or you go to prison, your face in the papers. And, since your daughter here wishes a career in law – might best be avoided.’

‘Dad!’ she shouted. ‘What is he talking about?’

Jimmy stood. ‘You’ve got thirty days to leave the country. And, if I should ever hear from you again, it will be your daughter I turn my attentions to.’ He stepped out.

‘Been nice chatting,’ I said to the daughter. In the car I asked, ‘Will he make trouble?’

‘Not if he wants to avoid prison. Sykes will drop in tomorrow for an *unpleasant* chat.’

We drove all the way back; four hours.

The following week Rolf turned up with plans and sketches for a new house in the grounds. When I nosed, Jimmy said it was for me.

‘Kicking me out?’ I toyed.

‘You may want some privacy.’

I took a moment. ‘Well, yeah, might do. Where will it be built?’

‘Left of the pond, nice view out from the top floor, view of the pond the other way. But, don’t tell the missus yet. Just say that you’re considering you own pad. Let her ... have an input.’

I put the drawings in my room. That evening, when she popped in, she noticed them. Well, she couldn’t miss them where I had left them.

‘What’s this?’

‘I was thinking of building my own place, just up by the lake. Privacy from here.’

Jimmy must have known, because the next three hours was spent discussing the design and layout, what furniture would look good where. We did not row about the design, but she had strong opinions about the place, and seemed to have some very good ideas about the kind of stuff I would have never considered. Unknown to me, the foundations had been started already, the area taped off like a crime scene. The next morning, I invited Rolf over with his sketchpad, handing him to Helen around 3pm, the poor lad enduring two hours of discussion. He headed off to make a few more drawings. With the new drawings from Rolf approved by Helen, and agreed by Jimmy, Rolf was given the go ahead, told to complete it in record time for a bonus, twenty-four hour crews.

The new house would face southwest, no views of the main house, its rear facing the lake. It would offer eight bedrooms, two floors, but with a loft area suitable for an office or study. The front door would open to a series of terraces stepping down the gentle slope, the main access being at the rear, where a road would run past. The lounge would be large, the dining room big enough for dinner parties of twelve or more. I agreed to let Helen decorate, and her spare waking hours were spent trawling through house magazines, many pages torn out. At bedtime, I would often have to throw the magazines out of bed and demand some attention.

With Jimmy indicating an earthquake in Sumatra in June, we increased the budget of RF Indonesia and encouraged them to recruit another hundred people, keen medics easy to find in Indonesia for the kind of money we were offering. They would undertake training in Mapley, followed by a month or two in Mawlini depending on their competence levels.

A large combined exercise of international RF units, that now included a small detachment from Israel, was scheduled for the end of May in North West Australia, a short distance to Sumatra. It would be attended by some four hundred people.

Five weeks after getting together with Helen, and comfortably settled into a relationship – the two of us known affectionately

around the house as the bionic couple – Jimmy presented me with a gift in front of Helen.

‘Your five week anniversary,’ he said, Sharon avoiding eye contact and making me suspicious.

With Jimmy sat smugly watching us, I tore off the wrapping paper, to reveal a long thin pregnancy tester kit. I stared at it for several seconds, before Helen leant in and peeked at it. She snatched it off me and stared at it herself. Heaving a big breath, I took her by the elbow and dragged her out, and up to my apartment.

‘I’m on the pill,’ she protested.

‘It’s Jimmy!’ I countered.

‘But I’m on the pill...’

Several classes of water later, she emerged from the bathroom. ‘It ... it’s positive.’

I stood staring at her as a knock came at the door. I opened the door to Jimmy. He strode in, telling us to sit on the sofa. He sat opposite.

‘So...’ he let out.

‘It’s positive,’ she said.

‘Good,’ Jimmy responded.

‘Good?’ I queried.

‘You wondering now why I got that new house started?’ Jimmy teased. ‘It’ll be ready in three months or less.’

‘You knew?’ I found myself asking.

‘Of course I knew,’ he loudly stated. ‘You’ve both got my blood, so you’re as fertile as a field of drunk fucking rabbits. Besides, Helen’s been on that old brand of pill for so long her body has adjusted. I mean, six years with the same brand.’

I faced Helen. ‘Six years?’

‘I’m pregnant,’ she said with a smile, not a reaction I had expected.

‘And you have plenty of money, a nice house being built, and a man that likes you a lot - and will stick by you,’ Jimmy listed off. My mind was blank. Jimmy added, ‘You remember me telling you that you had a future, a destiny? Well, it’s more about your daughter than you I’m afraid. Still, the girl will need to be raised and nurtured in a loving environment. Marriage ... comes to mind.’

‘Marriage?’ I asked.

‘I accept,’ Helen said, stunning me.

‘You do?’ my mouth asked without any prompting from me.

‘I do.’

‘She does, so you’ll need a huge ring,’ Jimmy encouraged.

My head was spinning.

‘Helen,’ Jimmy called. ‘Go get a cup of tea downstairs.’ Still holding the pee stained pregnancy kit, she stepped towards the door. Jimmy called, ‘Helen? The kit?’

She put it down before closing the door.

‘Marriage?’ I repeated, staring at the carpet.

‘How many people, through their lives, have wondered if they would meet the right person, and should they settle with that person? You, are in a good position, in knowing – via me – that she is the right person, and that it’ll all turn out well. What could be simpler?’

‘A baby?’ I said, not knowing why.

‘A baby girl, who’ll be very bright, and no trouble at all to raise.’ He stood. ‘There’ll be a party on the weekend to celebrate. Oh, and Paul, any hesitation on your part, any at all, and you may harm your future irreparably.’ He lifted me by the armpits. Standing, he smiled, then slapped me hard.

‘Ow. What the fuck was that for?’

‘Wake up, and pay attention, or you’ll spend the rest of your life regretting this day. You *must not* show any hesitation about this. Right now, your future self is screaming through time for you to do the right thing.’ He raised a hand, as if to hit me again.

I stepped back, rubbing my face. ‘Stop hitting me.’

He offered a hand to shake, and we clasped hands. ‘I think congratulations are in order.’

‘Well, yeah, thanks. I think.’

‘Get a grip quickly, or you lose everything. Just ... try and imagine Anna’s kid, Mary. You’ll have one of those, and no sleepless nights because you’ll have a nanny. And when you want to pop out, there’s one or two people around here who can baby-sit.’ He reached into his jacket pocked and produced a ring case, handing it over. ‘She’ll like it, she did before.’

My chest heaved itself. ‘Would have been nice to get to know her.’

‘No, it wouldn’t have. Her past, and her attitude, have been wiped. You would not have liked the old Helen so much. You

will like the ... maternal, house decorating Helen better.' He took a breath. 'Right now, young man, I am very ... very jealous of what you have. If you screw this up I'll do a lot more than just slap you.' He stepped out.

I stood there with the ring. I was thirty-six, and most days felt like I was well past my sell-by date. The image of Anna's daughter lingered. Did I want one just like that? Yes, I did, and I smiled for a moment.

I found Helen in the diner, Jack and Keely at a table, Han on a stool. 'Gentlemen, I need some witnesses.' I knelt, Helen beaming. 'Helen, PA and spy, would you marry me?'

The diner fell silent as I offered the ring. She took it out and placed it on, the ring fitting perfectly – of course.

'Yes,' she adamantly stated.

I stood and we kissed, the gang stunned. Holding Helen around the waist, I said, 'Jimmy says it was our future. And he's never wrong. Oh, and Helen is pregnant.'

Jack stood and shook my hand. 'Congratulations. I think a party is in order.'

'Friday,' I said. 'I have to break the news to my mum.'

Han offered his congratulations, Keely shaking his head and smiling. In the office, Helen showed Sharon the sparkler.

From his computer screen, Jimmy said, 'You've got the rest of the day off. But tomorrow morning I want the silly smiles gone, and back to work!'

I led Helen back to my apartment, and we lay on the bed clothed. 'Wow,' I said. 'What a day.'

She put her chin on my chest. 'Afraid?'

'A bit. But Jimmy says it's our future, and that you'll be a great mum.'

'He said that?' she asked with a huge smile.

'Yep. You'll do an excellent job of raising our daughter. Well, daughters.'

'Daughters?'

'He says two, and they have a destiny.'

'The new house...?'

'He knew, and got it started,' I explained.

She put her head flat on my chest. 'Before I took this job, I thought about just getting some guy to make me pregnant.'

I stroked her hair. 'You wanted kids that badly?'

‘Still do, more than anything. You?’

‘When I see other people’s kids I want to play with them, but the whole ... *mission thing* has always put a dampener on things. Now, if Jimmy says it’s to be, then ... that’s fine, I suppose. But let’s agree on one thing.’

‘What?’ She asked.

‘Not to ask him how it turns out.’

‘God, yes; I hate knowing how things will turn out.’

‘I think ... I think that if we had a year together, we would have stayed together.’

‘We must have done before, for him to know.’

‘Yeah, well he’s all mystery - and low on explanations.’

‘He’ll never marry?’

‘No, he can’t take the risk. And we won’t age.’

She lifted her head with a frown. ‘Not age?’

‘Nope. You, me, Jimmy – fifty years from now we’ll just like this. Didn’t I tell you that?’

She sat up. ‘No.’ She took a breath. ‘I won’t age?’

‘Not much. So when our kids are thirty, we’ll look like brothers and sisters.’

‘Will she be ... normal?’

‘Yes, just like Anna’s daughter. She’s not guaranteed to have your blood, or mine. She’ll grow a bit faster, that’s all. And Anna came to term in seven months. Will your parents...?’

‘I don’t talk to my father, my mum will be happy, but she’s a bit ... Cuckoo. Hit the bottle a few years back, I don’t see her much.’

‘Jimmy could probably fix her,’ I suggested.

‘Fix her? You mean ... inject her?’

‘It reduces the effect of the alcohol, repairs damaged brain cells.’

‘Not sure I care about her anymore.’

‘Maybe you will ... if she’s, you know, *better*?’

She made a face. ‘Maybe. We’ll see. So, party on Friday at the London club. Big splash, let everyone know in one go.’

‘If we let the tabloids in, they’ll know in Eskimo country.’

Sumatra, June earthquake

This was one deployment that we would not be attending; Jimmy said we needed to practice using the command centre. We had popped over to see Bob Davies a few times to help plan the exercises in Australia, and now turned up on day one, reading reports of activities, games and competitions. So far, the Aussies were just ahead of the Chinese on points, the competition fierce. We made a point of talking with all of the national representatives, getting to know them, some already known to us.

Bob Davies was now settled in, personal pictures on the walls, his desk covered in papers and files, his secretary kept busy. After greeting Bob, we sat and had tea with Doc Graham and Hildy, checking up on the fledgling UK unit. Thirty-five people had been recruited for the basic unit, two hundred for the supplemental unit, all now undergoing training around Mapley and being pushed hard. In addition to Faulty Towers, the airfield now offered a very large shed full of old cars. Fire Brigade instructors would teach vehicle kinetics – what happened when a car hit something like a pedestrian – and vehicle extraction. Teams of trainees would cut the top of a car off, or smash windows, forcing doors with crowbars; the supplemental team would have a role in UK motorway pile-ups. In consideration of inclement UK weather, Doc Graham had ordered clothing suitable for our cool shores, all produced for us in white and labelled as “Rescue Force UK”.

The next morning we checked the weather forecast early, made a decision, then ordered our Agusta flown over with a commercial pilot; we had a few days to the earthquake. With myself co-piloting, we flew north up the M5/M6 and to Blackpool to refuel, flying on into Scotland, the weather holding. We eventually landed at a Prestwick airport in late afternoon. Refuelled, we checked the maps, and set off across the Isle of Aran towards a castle on a loch, hoping to arrive before sundown. Jimmy directed the pilot in from the ocean side of the loch so that we’d have a good view of the area, our Augusta cheekily putting down in their quiet car park.

‘Beautiful,’ Helen commended as we walked toward the small castle, Big Paul cheekily roped into lugging her bag.

The castle sat on a promontory, water on three sides, the tide now out and revealing black seaweed. This old stone edifice dominated the top of the loch, the loch itself bordered by steep hills on either side, one in shade, one catching the late sun. Facing away from the castle, I could see a gently climbing valley, criss-crossed by small fields marked by traditional stone walls, the access road snaking up the middle of the valley.

The laird of the castle came out in traditional dress, tweed, a pack of small dogs darting about. ‘Yee have a mechanical fault?’ he puzzled.

‘No, Douglas, we came to see you,’ Jimmy said as we closed in on the man, patting the excited dogs.

The man stopped dead. ‘I know you. Off the TV, those ... rescue people.’

‘That’s us,’ Jimmy told him, shaking his hand. ‘And I heard this place may be up for sale.’

‘Aye, it is.’ Douglas eyed the waiting helicopter.

Jimmy told him, ‘I’ll take it, *if* you give us a few rooms tonight.’

‘You not want to know how much?’ Douglas asked.

‘I’m sure you won’t cheat me,’ Jimmy suggested. He faced the Augusta and waved it up; it would return the next afternoon.

Douglas led us inside, through heavy wooden doors studded with iron, their authenticity lessened by the plaque of recommendation by the British Board of Bed & Breakfasts. Through a small courtyard we entered an entrance hall, turning right and ducking our heads into a lounge and bar, the castle offering bed and breakfast to the public. We settled about the lounge on dated furniture as our host ordered teas from a young girl in an apron.

Douglas stood with his back to a log fire, his hands behind his back. ‘You mind if I ask what you’ll do with the old place – *if* I sell to thee?’

‘It’ll be an outdoor training centre for rescue medics,’ Jimmy explained. ‘Hill walking, mountain rescue practice.’

Douglas nodded, seeming quite happy with our intended use for his home. Back in character, he asked, ‘And the staff here?’

‘Would be welcome to stay on. If anything, we’d need more. And you’re welcome to stay as well if you like.’

‘Me? Stay on here?’

‘Why not, you know the area and the people,’ Jimmy suggested.

‘In what capacity?’

‘Helping to run the training, running this place. We’d build some wooden huts outside, so at peak training season you may have a hundred people here. Could do with someone of your skills.’

Douglas studied Jimmy for a moment. ‘The asking price was six hundred thousand.’

‘Fine,’ Jimmy replied. ‘You may consider this a firm offer, money transferred tomorrow.’

‘Jesus, but yee don’t hang about.’

It was done deal, the “laird” staying on and offered a salary. He showed us to our rooms, the room allocated for me and Helen found up a winding staircase. The small bedroom was dominated by a giant four-posted bed, wood panelling covering the walls, the low window offering a good view if you got on your knees. Seems the original castle builders were all three feet tall.

‘It’s lovely,’ Helen offered, bouncing on the bed. ‘You won’t gut it, will you?’

‘No, this’ll stay the same, but we’ll build barracks around the back for the trainees. The UK Supplemental teams will come up here, some of the regular RF units.’

‘The Kenyans would freeze to death!’

‘They’re all from warm climates, save the UK. But they need to be flexible, to go anywhere.’

We enjoyed a lengthy meal around a heavy wooden table, ghostly sets of silver armour staring down at us, the walls adorned with shields of various clans, Douglas relaying tales of noblemen past. After the meal we sat about a huge log fire, sampling many whiskeys. Every time Douglas asked Jimmy to try a whiskey, Jimmy knew what it was, astonishing our host. It was as if he’d been here before. At midnight Douglas retired, a bit drunk, but we remained till 2am, chatting around the fire.

Our breakfasts were enjoyably large, and included local sausages, all ravenously downed. After breakfast, and a leisurely tea in the lounge, we took a walk down to a jetty on the loch in bright sunshine, big Paul keen to try the fishing at some point. In still warm air, we strolled around to a field with a wooden hut stuffed full of yellow and red canoes; Doc Graham would be

tasked with bringing in additional huts. The side of the field was delineated by a traditional stone wall, a peek over the wall revealing a fast flowing stream.

‘Trout stream,’ Jimmy informed us. ‘Comes with the castle, as do the loch sides.’

Ambling back, Jimmy stopped and pointed: otters playing in the loch, a delight to see. We said our goodbyes, the Augusta returning for us after lunch, Douglas receiving a fax of our offer and confirmation of funds transferred. And we politely refused to pay for our stay, making him laugh. As we flew off, our training standards guy was heading the opposite way on a flight to Glasgow airport, heading here to make an assessment.

When the news of the Sumatra earthquake appeared on British TV, we were at Mapley and discussing the castle with Bob.

Doc Graham knocked and entered. ‘There’s been a big earthquake in Western Sumatra – and we’ve got *their* bleeding rescuers in Oz.’

Jimmy faced Bob. ‘They’ll want to be home, arrange transport, please.’

‘We attending this?’ Doc Graham asked, closing in. ‘We’ve got the Hercules there, four of them. And it’s a single leg flight to the area affected.’

Jimmy stood, and I followed him up, looks exchanged. ‘Bob, you’re the international director. Is it ... practical and appropriate?’

‘It’s a simple hop, and the Indonesian lads have a base in Western Sumatra. So yeah, simple enough.’

Jimmy said, ‘Call all national representatives to the control room.’

Bob hit a button on his phone, a tanoy coming to life. ‘All Rescue Force national representatives to the control room, this is not a drill, we are deploying.’

In the control room, the representatives sat facing Bob and Doc Graham, we sat at the back. Doc Graham operated a slide machine, a map of the area affected being displayed. He gave a rundown of the situation, Bob Davies calling for opinions. RF Indonesia was a definite for a full turnout, and they were probably already heading there. Australia was in, so too Sri Lanka, the Africans figuring they’d take too long to get there. RF

China and Hong Kong offered good numbers, but Jimmy limited them. Bob called for Jimmy's final say.

'Bob, you don't need my final say, you have a reserve budget for things like this. *You* can order such a deployment. I'd only get involved for a specific reason, or an overspend.'

'Then we go,' Bob firmly said. To the national representatives he said, 'Go tell your governments, meeting in the map room in one hour. Those with people deploying, work from here after the meeting, computers and phones. This ... is the control room, it says so on the door.'

The exercise in Australia got promptly cancelled, the staff kitted out and made ready, the four Hercules aircraft soon in the air.

I said to Jimmy, whispering, 'This is no fun – at all. I want to be there.'

'You're a leader, not a doer. Anyway, make yourself useful. Go to the shop and get chocolate and sweets, cans, they'll be here a long time. Then grab a room, we're staying.'

I led Helen off to the shop.

Jimmy called Mawlini. 'Coups, there's a deployment to an earthquake in Sumatra, no Africans going unless they're already in Oz, would take too long. But put together a disease control team, send them off in five days. Thanks.'

When Helen returned, Jimmy told her to prepare a press release, and I'd have to admit it, her written English was far better than mine. She typed up a page and ran it past Jimmy, faxing it to the tabloids, TV and radio, soon fielding the press calls coming in. In effect, she had become the de-facto press secretary for the deployment, busy on that first day.

Our teams from Oz had landed in Western Sumatra, no problems with permissions, the first team off the plane being Indonesian themselves. The senior man on the ground, Doc Hoskins, split the Indonesian teams so that there was one Indonesian for each team acting as guide and translator. They moved out in hired vehicles, and hired buses, to the effected areas. Most of the houses in the area had been constructed of wood, and few had collapsed with the quake. Mosques, schools and hospitals had crumbled, and our teams created an out-door hospital along the damaged walls of the original main regional hospital.

On the second day we had teams telling us that they had treated all of the effected and injured in their areas, and so were moving on; it soon became apparent that they were not swamped with casualties where they were. They split into smaller teams and ventured out to find trade. The Chinese and Hong Kong units turned up in strength, immediately directed towards areas that the first wave of rescuers had not touched. By the end of the second day we were certain that our six hundred rescuers were all that was needed in the region, soon treating diseases and delivering babies alongside trauma injuries. As far as deployments went, this was running smoothly, and most of the casualties had access to a medic.

By the third day our people were spread far and wide, finding villages that had not seen any help so far, our people treating minor wounds, and a range of ailments that were present prior to the earthquake. We gave the teams one more day, then a return to base order, the competition teams back to Oz; this time they would finish the competition. Karl drove us home that evening, things winding down, but we arrived home to an emergency “M” Group meeting.

Someone had shot dead the phoney Magestic clairvoyant from Brighton, the man we had given money to adopt the name. He had received plenty of press attention in the past few years, getting many predictions right. The second Magestic phoney, from Blackpool, was missing. Jack was busy calling around to get details, Keely checking out the phoney Magestics in the USA; so far, the problem was limited to the UK. Then came the bad news, that was actually good news. The Blackpool Magestic, pissed off with the success of the Brighton Magestic, had blasted him dead with a shotgun. It was bad, in that we’d have to create a few more, good in that no intelligence agency was bumping them off. People relaxed, Cookie rustling up a curry in the diner, the Sumatra deployment discussed.

The next morning bought more bad news, three Chinese peacekeepers killed in the DRC, four more wounded. They had been on a border post with Zambia, the culprits probably a regrouped faction of the MLF. War was declared. For the first time, the basement was brought into use, a large table covered in a map of the DRC and Zambia region, the representatives of Kenya, the DRC and Tanzania in on the planning. Extra

members of the Kenya Rifles were dispatched, the Mi24s and Cobras made ready.

Phase one involved the Kenya Rifles and Congo Rifles infiltrating across the border and setting up Ops; observation posts. That was done quickly. We now had twenty OPs strung along the border, another twenty a few miles in and positioned above road junctions. At the border crossing where the Chinese had been shot the peacekeepers were pulled back five miles to offer up a nice tempting gap in the lines. At night the DRC police and army withdrew as well; the door was left wide open.

On the third night, interesting reports came in, coffee was made, and people stood around the map board. An OP ten miles across the border reported vehicles, six of them, an OP a mile out confirming the convoy. A trap was set. It was midnight when the MLF crossed the border, another thirty minutes to reach a blocked road. When they stopped to inspect the felled tree, they were cut down, three prisoners taken and “questioned” by the Congo Rifles as to where they had come from. They were from a town we had suspected. The Kenya Rifles lifted off in ten Hueys, landing in the next valley to the town and walking through the night to the ridge above the town. I got to bed around 3am and snuggled up to Helen, waking her with my cold hands.

All the next day our spotters observed movement in the town, normal domestic day to day life, as well as jeeps of armed men, identifying which buildings were housing commanders and guerrillas. An hour before sundown a squadron of angry Mi24s roared in, targeting the nominated buildings. Behind them, the Cobras flew in, picking off individual jeeps, the towns people now scattering to the hillside jungle, and straight into the sights of the Rifles, anyone in uniform, or carrying an AK, being cut down. Without wanting to enter the town at night, the Rifles surrounded the town and waited, picking off gunmen as they tried to drive south, further into Zambia.

At dawn the Rifles moved in from all sides, a jeep convoy from the border joining them after a long drive down from the Congo Rifles base. Senior men of the MLF were wounded, but taken alive and extracted, all others shot on sight, weapons confiscated. And all the while we denied to the Zambian authorities that we were there. The operation ended with ten prisoners brought back up to Forward Base, several hundred

MLF irregulars killed, two Congo Rifles killed in the crossfire, a number of minor wounds accrued. At Forward Base the Chinese were in on the interrogations; we wanted answers. After several days of interrogation, it seemed that it was just a local incident, no one behind the attack. Life in the DRC returned to its normal cycle of low-level violence and grinding poverty. We left the Rifles on the border, regular helicopter passes flown to remind anyone in the MLF that we were there.

Supplemental group

The applicants to the UK Rescue Force Supplemental Group had all been signed up on the same day, medical fitness and general fitness guaranteed by their employer, the UK Government, ahead of time. They came from the police, the fire brigade, the ambulance services, the NHS, the coastguard and the armed services, a few of the number army medics. On day one they had been given an orientation lecture, being allocated rooms or apartments, some sharing. A few lived within driving distance, and the selection process had factored in families and commitments, married men living a long way off turned down; this one a one year attachment, not worth moving homes and schools for.

That first day, they had all filled in forms listing relevant skills, the instructing staff then working out groups based on skills. Two army doctors, and three NHS doctors, were given supervisory roles straight away, fire brigade staff given team leader status. Only a few had experience of off-road jeep driving, so that was the start point. The intake was split into practical smaller groups, so that when some were out driving, in our limited number of jeeps, others were in the pool, on the wall or in the cave. By the end of that first week people were tired, but they all had experienced some aspects of rescue.

The training programme of next three weeks followed the same format, groups rotating, some people being signed off on skills early. Such people were then granted time on the fun stuff; scuba diving, flying in the Tucano or the Huey. Everyone was

required to complete the climbing walls and the cave extractions first. Once they had done so, groups of ten headed to a nearby quarry, where they tackled a hundred foot sheer face. They were required to climb up, plus abseil back down, a nurse refusing and quitting. Following the successful completion of the quarry, the groups headed up to the Lake District for a five-day residential climbing course, the course broken with some pleasant walks in the hills. First aid training was on-going, and in modules, many already having the required skills, and simply sitting written, oral and practical tests. Those with no medical skills had a lot of homework.

At the end of the first month two had quit, and one man had been kicked out for liking his beer too much. Two more were given warnings about conduct about the canteen in the evenings

A week after the Sumatra earthquake had been wound down, the recruits were told to pack their standard rucksacks for a ten-day exercise, and to assemble on the Sunday night at 7pm. Grouped on the grass in front of the tower the recruits were individually looked over, rucksacks checked. They were each allocated a water and food ration, scratching their heads as to what the exercise might be. Our Huey flew in, followed by three hired Hueys in a variety of inappropriate colours. Groups of six were shouted at, to quickly board the helicopters, soon being ferried down to RAF Lyneham, where four Hercules sat waiting. They boarded without time to think, nudged into seats by experienced RF staff up from Kenya, ear defenders issued. The minute that the first Hercules was fully loaded it lifted off, the bewildered recruits wondering where they may be heading.

They were told not to sleep till midnight, allowed just six hours. Our staff wrote notes on a small white board, walking around and issuing silent messages. People ate what they were told, when they were told, and used the toilet at fixed times. At one point the staff issued packs of wet wipes, everyone ordered to wipe hands, face, armpits and groin area in full view of each other. The next evening they touched down at Mawlini, the place they had heard so much about.

Straight off the plane, they were allocated jeeps, formed up into a long convoy, and drove out the base following the instructors. At the Somali border they made camp in the amber dusk light; tents up, fires soon going. At dawn they were rudely

awoken, shouted at to get the tents down quickly. They again drove off in convoy, but without any breakfast. And they drove all day, taking turns at the wheel. At dusk they found themselves in lion country, on our land at River view. The jeeps made circular camps, the recruits given freshly killed pigs and chickens to cook over open fires. That evening they slept to the sounds of lonesome male lions, hyenas and crickets.

The next day the huge convoy drove to the escarpment. Backpacks were topped up with water and rations, the group setting out on foot in pairs, a long line scuffing up dirt, a ten-mile march in the heat. At dusk they again camped out, unaware that the Rifles were close by, a meal of tinned meat and water. At dawn they reversed their course, glimpsing lions, giraffe, elephants. Back at the escarpment they mounted up, turns taken on the seven-hour drive back up to Mawlini, arriving at dawn. Without a break they marched out to the busy airfield, twenty RF Hueys sat waiting with ten Army Hueys, plus two Pumas. The recruits boarded the helicopters in their teams. With doors open, safety ropes employed, the recruits flew low level up to the disused airfield, rudely plonked down into the heat and sand. Tents were set-up, a command tent and medical tent pitched, rescue teams formed. They spent three hours searching the make-believe collapsed buildings, an earthquake simulation with our instructors pretending to be casualties. In the medical tent, Silo Stiffy dummies were examined at length. Darkness brought some rest and relief, fires roasting pigs and chickens, the recruits allowed to get a good nights sleep.

Back at Mawlini, they were split into groups of twenty-five and given tours of all the facilities, each allowed a cold beer in the rooftop bars – the first pause for breath and reflection. At noon they drove out in their jeeps, the long drive down to Mombassa, a convoy a mile long. At Mombassa Field the Rifles were waiting to take the jeeps back, the recruits boarding air conditioned buses for the short distance to our beach hotel, which now stood empty of guests. And there we met them.

In the car park, Jimmy stood on the bonnet of a zoo jeep. ‘Ladies and gentlemen, what you have just been through, is what you may experience should you attend a Rescue Force earthquake deployment. The difference would be that a proper deployment would last longer – and be much tougher. You have

been given some experience, without the dangers often involved in deployments. In recognition of what you've endured for the past week, you now have three days at this beach hotel, followed by a commercial airliner back to the UK. Relax, kick back, have some fun.'

We greeted each of the recruits, helping to issue room keys. For the most part, they slept that afternoon, the beach quiet. Helen and I enjoyed a dive in the bay for an hour, watching the sun set later on the roof of the golf complex. The next morning the beach was full, people snorkelling, some diving, others fooling around on the plastic pedal boats. Mac and Doc Hoskins turned up, taking time to talk with many groups and doing the rounds with Jimmy; hearts and minds. That evening, after the evening meal, a film of the Mozambique deployment was played on a white screen, the hour-long programme that had been shot by the cameraman that had flown with me. The hope was that some of these would join us in years to come, hopefully not deterred by the hardships illustrated in the film, or the hardships they had just endured.

A week after the recruits returned to Mapley, Doc Graham noted an improved attitude, a quiet determination to pass tests and improve skills; and a growing sense of camaraderie. Seeing that the time was right, Jimmy invited Doc Graham, Hildy and Bob Davies to the house for dinner, Bob meeting the household gang again and catching up on the gossip.

Over dinner, Jimmy said, 'I think we can get the first UK units up to speed in a few weeks, get them doing some practical work and, more importantly, some newspaper column inches. I've given Rolf the architect, who's not called Rolf –' Everyone laughed. '- the plans for a helicopter station just behind the apron, left of the control tower as you face the field. It'll be three hangars, big enough for a Huey or a BO105. I've ordered two BO105s to police specifications, and asked Wiltshire police to round up some police pilots for us. Our Huey, and the 105s, will be painted white, our Huey to get some extra kit to police specs. Once the choppers are ready, I suggest the following.

'First, a team on permanent rotating standby at the helicopter bay, covering the M4, M5, M40 triangle and linked to the 999 service and the Wiltshire aero-meds. They'll be an ... extension,

for serious problems. They can also involve themselves in things like missing people. And, since we're five minutes from the M4 motorway, two jeeps kitted out ready to go at all times, to a similar remit – we'll help if we're asked to.'

He made eye contact with Doc Graham. 'I want some additions to the jackets they wear. Make them say ... NHS doctor, Fire Brigade, Paramedic, Nurse, where the person wearing the jacket is already employed to do that. That way, when they arrive on scene the other emergency services won't get pissy, they'll recognise their own kind. I suggest that the aero-meds should be doctors and paramedics, always a doctor in each jeep with an advanced resuscitation kit, typical paramedic standard, plus tents and camp beds for mass casualty situations.

'Then, once we've ordered a few more Hueys, I'd like to see a Mid Wales air ambulance service, same for Scotland. Unlike the BO105s, our Huey's could deliver six or eight people, or pick-up as many as that. So if there's a bad car wreck in the middle of nowhere we can put a doctor down, and lift most – if not all of the casualties – in one go.'

'That's a big step,' Bob noted.

'If we're to get the UK public behind us, we need to be seen to be *giving back*. There are almost two hundred people in the supplemental group. They, and RF UK, need to stay sharp, and the best way to achieve that is through live rescues. So I see ten in Wales, twenty in Scotland on rotations, always twelve on standby in Swindon. We'll get Mackey involved, sticking a Huey in Cumbria, Mid Wales, and Scotland.'

'You out to pinch work off the RAF?' Doc Graham asked with a smile.

'No, to supplement them,' Jimmy replied. 'If they have a rescue to go to, we can move a stroke patient, save them acting as taxi.'

'Do they know?' Bob asked.

'I'll mention it to the PM when we're ready,' Jimmy suggested.

'Nice working relationship you have with the Prime Minister,' Doc Graham noted.

'He's a politician. Being seen stood next to us makes him look good.' We all laughed. 'Everyone loves the emergency services.'

‘We’ll bring birds up from Africa?’ I asked.

‘No, they have to be brand new and top spec to operate in the UK,’ Jimmy suggested. ‘Signed off by the Home Office and Transport Department. I’ve ordered six helicopters to be ready, and another four in six months. Then we’ll think about some pilots, most likely ex-services or ex-police.’

‘Or police pilots on attachment to the supplement group,’ Helen suggested.

‘That would be best, and cheapest,’ Jimmy said to her. Facing Doc Graham, he added, ‘Consider it an initiative, go ahead and make some plans. First we need the hangars, then a pilot’s room, then a kit store. Chat to Mackey about the remote locations.’

We had a plan, the two BO105s turning up with two police pilots and two navigators, keenly out of retirement, the men living within commuting distance. The pilot’s room was a corner office of the control tower building for now, the aircraft housed on the apron and serviced by the technicians for the existing Wiltshire aero-meds; they were identical and interchangeable. They flew four one-hour jaunts with existing police pilot instructors, duly signed off and licensed. Wiltshire police, fire and ambulance services were notified on a Monday morning, a doctor and paramedic sat ready for each helo. And we waited.

On the Tuesday afternoon the first call came in, a pile-up on the M4, long queues both ways. Both our birds were airborne in minutes, soon twenty miles along the M4 and landing in a field. We had placed four medics on the tarmac eleven minutes before the first ambulance arrived, the injured being stabilised. With the injured motorists being ferried by ambulance, our medics rejoined their aircraft and flew back, Helen putting out a news release immediately. We made the six o’clock news.

The next call, on the following Saturday, was right up our street; a missing kid in a river in Oxfordshire. A hired bus with forty recruits, plus six jeeps, drove out the gates and journeyed the thirty miles north east to the scene, dumping seventy people into the search grid whilst our helicopters buzzed overhead. The kid was found by one of our firemen, slightly hypothermic from being stuck in branches in the water, attended by a one of our doctors and airlifted to hospital by us. RF UK Supplemental Group had come of age.

A bar had been commissioned at Mapley when the recruits had started their twelve-month stint. It was now finished. It offered a wide range of bar meals, a small cosy area for formal meals, and a large lounge and bar capable of holding two hundred or more. It got christened properly a week after the kid had been rescued, the PM coming down for a photo opportunity, the establishment named "The Thunderbirds Bar" after a vote of recruits.

Three months after starting, we had good bunch of rescuers, morale high. That morale was increased with the arrival of four white Hueys, powerful Bell 214s with extended range fuel tanks and winches; just about everyone volunteering for the helo-teams. After a weeklong shakedown the Hueys were certified, but we only had two Huey trained pilots so far, four commercial pilots hired and put through their paces by Hal in the Welsh hills. Jimmy had his doubts about them. The RAF assisted with training for winch operators, the CAA signing off the helicopters and crews, but then came a wait whilst the Government signed us off to carry out rescues in the UK. They were not happy with commercial pilots, not yet, so we located more retired police pilots, retired at a young forty years old. They cross-trained quickly, Hal again giving them Huey specific advice. After a long drawn out process we were finally ready for the October, refusing to use the lightweight BO105s in the mountains.

Mackey's people had quickly converted a rescue station in the Snowdonia National Park for one Huey, another sited on military training grounds near Brecon, South Wales. Two more were deployed to Central Scotland, the mountain rescue teams there all keen to have one. Each Huey had an assigned crew of twelve so that a twenty-four hour cycle would be covered, along with provisions for crew downtime. That put twenty-four RF staff in Scotland, twenty-four in Wales, both sets on eight-week rotations. RF jeeps were kept alongside the helicopters, allowing ground support to rescues and the deployment of medics. And we urgently set about training pilots, two brought up from Kenya to be re-assessed by the CAA in the UK.

At Mapley, we could now offer the emergency services two BO105s, four Hueys and twelve jeeps, and they were kept busy; hardly a day passed when our helicopters were not flying out to a motorway pile-up inside our designated triangle. A white Huey

landing on a motorway became a common scene, often glimpsed on the TV news.

Then, one weekend, I caught the evening news, and felt prouder than I had ever been. A police officer was interviewed at the scene of an accident: "When we got here we found twelve vehicles involved in the pile-up, just the one patrol car, the ambulances stuck in traffic. It was just the two of us. Then we heard a helicopter and looked up, two white Rescue Force helicopters landing on the side of the motorway - a beautiful sight. Every injured driver had their own personal medic, the worst casualties airlifted out in minutes." I rang Doc Graham I told him about it, and how proud of the gang I was. Walking around the house, I told everyone I could find, finally relaying the story to Helen in my apartment. She had to tell me calm down.

I had a look at her abdomen every day, but could not see much of difference. There definitely was a bulge, but mostly I just blew raspberries in her bellybutton. When she increased her bras a cup size I took to relaying the changes to the guys at poker night.

By time the new house was finished my dear fiancé was showing. We organised a house warming, inviting just a few people over for the first night; Jimmy, Bob Davies, Big Paul and wife, Doc Graham and Hildy, Sharon and husband, Oliver Standish and wife because they happened to be visiting Wales. Helen cooked, with a little help that I was not supposed to know about. Our large dining room now seemed smaller, dominated by an old oak table that Helen had discovered in a second-hand furniture shop. Professionals had restored it for us, Helen insisting that they could not be found today. The end result was impressive. She had picked out all of the furniture for the house, Jimmy reminding me not to interfere. In truth, she had done a very good job. I found very little to complain about.

The evening went well, the meal tasty and ample. Everyone hung around till midnight drinking, many having just a short walk to either their usual abodes, or their rooms for the night. That night was the first time we stayed overnight in the new house and, with everyone gone, I walked around and checked all the windows and doors like a normal person; I had not done that

for about six years. I knocked the lights off and climbed the stairs, feeling a bit odd. Our bedroom offered a large en-suite bathroom and we christened it. Climbing into bed, we lay there taking in the room, the walk-in wardrobes and the ceiling.

‘Feel odd?’ I asked.

‘A bit, but that’s just new house stuff – same for everyone.’

‘It smells nice.’

‘That’s the new carpet smell.’

We took in the room.

‘No bodyguards,’ I said. ‘That’s what’s different.’

She turned her head to me. ‘Cameras from the main house are focused on us, six on the walls, dog patrols, high fence. And if anyone breaks in I’m on the door side.’

‘It’s not burglars I’m worried about, it’s the highly trained assassins.’ I blew out. ‘Just feels a bit odd, probably because I was sharing for so long.’

‘You’re still sharing, sweetie.’

‘Yeah, but I can’t talk *man-talk* to you. You’re ... you know, the missus,’ I toyed.

‘Man-talk? You mean girls with big tits at the club.’

‘Yeah, stuff like that.’

‘And did Jimmy often talk about stuff like that?’

‘No. But I’m sure he would have if I had wanted to.’

‘You don’t need to talk boobs when you have a great pair right here. And getting bigger.’ After a moment she asked, ‘Do you miss anything? Really miss it?’

‘Nope. I’d much rather be with you, I never really get tired of your company. Not yet anyway, give it ten years.’

‘Charming.’ She snuggled up, her head on my chest as I ran my fingers through her hair.

‘Jimmy said we’d get along well. He also said that home life with you would be a good contrast to *problems* with the mission, and people shooting at us. Which is good, and bad. Good in that the home life is there, bad in that the mission is so fucking hard sometimes – and set to get much worse.’

‘I feel like I’m part of the team now,’ she softly stated.

‘Jimmy says you have an important role,’ I offered. ‘But we’ll all hit some problems around 2005.’

‘What problems?’

‘Finally risking getting exposed to the wider world, which is why we have a great big fence and dogs. Jimmy says that we’ll blag it till 2010, then be exposed for sure. He says he has a few tricks up his sleeve, but he’s not confident. He says the Yanks will expose us.’ I looked down. ‘You awake?’ No response came back. I reached up and pulled the cord for the bedside lights.

The next evening we invited over the “M” Group and Sykes, a meal prepared by Cookie and Sandra, carried over and re-warmed. Everyone had a good nose around the house before the meal, finding the house modest in comparison to its large neighbour. The meal went off well, little talk of world politics, much pulling on my leg about marriage, kids, balls and chains and the loss of the bachelor lifestyle. After the meal we broke into small groups and sat around chatting, drinking wine. Helen showed Jack and Han around upstairs, and the attic room, the main topic of conversation downstairs being the US Presidential elections.

Cuba

Jimmy asked Helen and me to pack a bag ready for the Monday, and not to forget the sun tan cream, little more than that. We were ready, the cars loaded up with our luggage, sun cream packed.

‘Where we off?’ I asked as we headed out of the main gate.

‘Cuba,’ Jimmy replied.

‘I heard it’s nice,’ I said. ‘Met a few people who’ve been.’

‘There’s a small island in the north, great scuba diving,’ Jimmy explained. ‘I’m going to buy a hotel near there. Also going to meet the Cuban Government.’

‘Castro?’ I questioned, wide-eyed.

‘If he’s well, he’s a bit ... batty these days, his brother doing a lot of the work. And as we get there, Doc Graham should be touching down in the Dominican Republic to talk to their government about an RF unit there.’

‘They’re dirt poor,’ Helen put in. ‘Recruitment *should not* be difficult.’

‘Exactly,’ Jimmy noted. ‘That’s why I like these third-world countries; we get three or four medics for the cost of one over here.’

Sixteen hours later we landed in Parado, Northern Cuba, the tourist hotspot. A small luxury coach awaited us, room for the four of us for a forty-minute drive to the resort. We progressed slowly through green and lush countryside, noting many palm trees backing the coastal road, glimpses of an inviting ocean. Two sets of gates were negotiated to reach the hotel, finally halting in front of a wood and thatch gate arch that would not have been out of place in Kenya. Jimmy led us inside, passports handed over, three adjoining rooms on the top floor allocated to us of this four storey, two hundred-room hotel.

From the balcony the pool looked great, a large oval surrounded by parkland dotted with short and stubby palm trees, the hotel offering its own section of adjoining beach. Brilliant white sand beckoned. Helen and I took a stroll down to the pool, across the grass and to the beach, finding that it stretched out in either direction for miles; we could see no interruption to it.

That first night, and the next day, we simply flopped around the pool, setting off towards Havana on the third day with overnight bags, a private mini-bus hired. It took a good three hours to reach the capital, passing spectacular vintage cars all the way, open topped American cars from the fifties that had been lovingly maintained. We booked into a small boutique hotel on a charmingly dated street; stone walls with peeling paint. In our room I could have imagined Hemingway banging away at a typewriter, writing *The Old Man and the Sea*.

I didn’t know where the bus driver slept, but he was there in the morning, taking us across the city and to the government buildings. At the gates, Jimmy handed over a page of detail, conversing in Spanish with the guards. We were directed through, and to a second set of gates. I guessed they did gates in pairs in this country. The paper was flashed again, the bus driver told to park up; we’d have to walk. Jimmy found the door he wanted as if he had been here before, and greeted the receptionist, handing over our invite. After a twenty-minute wait

on hard benches, nothing more interesting to view than the ceiling fans, we eventually made it to the Health Minister. Jimmy greeted, and thanked the man in Spanish, but our host spoke reasonable English.

‘You are Rescue Force International medical charity, yes?’

‘Yes we are, and we thank you for your time today,’ Jimmy began.

‘And how can the People’s Government assist you today?’

‘We already run rescue units in China, Russia and Africa – they respond to earthquakes and floods – and we would like to create one here, on your beautiful island.’

‘And ... what would that involve?’ the Minister puzzled.

‘We would buy or rent land and buildings, then recruit doctors and nurses, training them in disaster response. They would then join the other units when an earthquake hits somewhere in the world. And we could pay for everything.’

‘*You* would pay?’ the Minister puzzled. His phone went. ‘Excuse me.’ He answered it. ‘Yes?’ His face dropped. ‘Mister President! Yes, they are here now, sir.’ He listened. ‘I will, sir, rest assured.’ He placed the receiver down, taking a moment. Resting his arms on his desk he asked, ‘What would you need?’

‘An airfield, buildings, land to make training areas. Then we would recruit a hundred medics and begin a training programme.’

‘How long are you in Cuba?’

‘Ten days,’ Jimmy answered.

‘I will show you an airfield tomorrow myself, we’ll assign a hundred medics to you within days. And *we* ... will pay for it. What else would you require?’

Jimmy handed over a brief document, typed in Spanish.

The Minister read the detail, nodding as he stood. ‘Leave this with me, please. Return to your hotel, I’ll call you later.’

We stood. Jimmy told the Minister, ‘The best way for you speed this process along, would be send a representative first to England, then Kenya. All of the training facilities are available to be viewed, in both locations, and you’ll find the details on the last page. They are expecting you.’

Outside, I said, ‘Did he get a nudge?’

‘Chinese and Russian nudges, this morning.’

‘It’s good to have friends in high places,’ I said. ‘Sounded like Castro himself kicked his butt.’

‘He did. And they’ll produce a unit to rival the Chinese, a great team. Tonight, we should get a visitor.’

‘Not the old boy himself?’ I keenly questioned.

‘Wait and see.’

At the hotel, we sat about eating and drinking in a cool marble courtyard, wicker chairs and some very quiet parrots in cages. I got no “pretty polly” from them; guess they only understood Spanish. At 6pm an official in a suit came and found us, a uniformed police officer behind him. We stood, the official explaining that “his excellency” the President’s brother wanted a word, a limo waiting. It would have been impolite to refuse.

Fifteen minutes later we entered another marble courtyard, this one larger and with a lively fountain at its centre. Our host, dressed now in green fatigues, shook my hand, assuming that Jimmy and Big Paul were bodyguards. I grinned, Jimmy introducing himself and labelling me as his assistant.

Settled, Jimmy began, ‘We thank you for seeing us, sir.’

‘I have been doing some research on you - we are not without resources. And it is an honour to meet you. I welcome you to our country.’

‘Thank you. I will be looking to buy a hotel here, if I get permission.’

‘We will arrange it, my friend. Now, tell me, how many men do the Russians have in their rescue unit?’

‘About thirty.’

‘And the Chinese?’

‘About three hundred.’

‘Three hundred? That is a big unit.’

‘They use it for internal disasters, of which there are many in their country,’ Jimmy explained.

‘And the English?’

‘About thirty.’

‘Americans?’

‘They do not have a unit.’

‘No?’

‘No, I find them hard work to deal with.’

Our host nodded to himself. ‘Rumour has it, we also find them hard work.’

We laughed. 'I have heard this also,' Jimmy said with a smile. 'And if we create a unit here, I will make sure the Americans are jealous.'

'You have no love for them?'

'They are what they are: it's a case of ... cats and dogs. I prefer the Chinese because of their clarity of purpose. They do not change leaders and policies every week.'

'You are a socialist?'

'I am a capitalist to make money, a socialist when I give it all away. I am a whore.'

Our host laughed. 'As are all politicians!'

'You will find, with the rescue unit, that a few medics helping at a disaster – with a national flag on their arms – create a lot of TV minutes, and a loud political message.'

Our host lit a cigar, offering a box to us. We all refused. Holding the cigar, and exhaling, he said, 'You think like a politician, more than a whore.'

'I am involved in the politics of the heart, that which binds all peoples, and is beyond the reach – and corruption – of the politicians. I influence many people ... without holding high office.'

'So I have been discovering.' He took a moment to study Jimmy. 'How quickly could you put a unit together?'

'Four weeks. It's something that we are expert at.'

'You will have every assistance.'

'And I'm sure that the unit will find much business in Central America. But please let me make one thing clear: for the unit to integrate with other nations, and to be welcome in all countries, it must appear – at least – to be non-political; under my control, and not yours.'

Our host took a moment. 'How do the other countries do it?'

'Most units are completely independent – paid for by myself. The Chinese unit is state run, but I decide on their deployments overseas, through our headquarters in England.'

'And the Russian?'

'Mostly paid for by myself.'

Our host took a long drag and exhaled. 'And if we wished to... gain more exposure?'

'That's something that I will plan for you - you need not worry; I will always have your best interests at heart. Your team

will be kept busy, you flag appearing in many countries, including England, Russia, China and Africa. If the Chinese Government trusts me, then I think can you too, my friend.'

Our host stood. 'Tomorrow we'll show you an airfield.' He put out a hand and shook Jimmy's hand, turning quickly and disappearing with his aides.

At our hotel we extended our stay, sending word to the beach hotel. After a quick wash we grabbed a taxi, driving around to the Chinese embassy. They were not expecting us, but Jimmy blagged our way in, soon sitting in another courtyard, this one decorated in a Chinese style. The Ambassador came downstairs and greeted us, well aware of who we were, Jimmy cheekily asking for some good home cooked Chinese food. Two hours later we were still sat there, chatting and joking to the Ambassador and his staff. The only official thing we discussed was as formal request that some Chinese send some instructors to assist in creating the Cuban unit. I think the fax went out before Jimmy had finished the sentence.

In the morning the Cuban official was back, and we followed his vehicles in our mini-bus, the driver now puzzling just who the heck we were, a police officer sat next to him. The airfield they led us towards we found little more than ten miles outside of Havana, its buildings a little dilapidated, but not as bad as some airfields we had occupied.

'How far are we from the US Marines?' I quietly asked Jimmy. 'Bay of Pigs and all that?'

'Long way off. We're north, they're south east.'

The official asked us if the airfield would do, Jimmy immediately agreeing that it would. We poked our noses into the tower, which was fine structurally. It even had electricity. From the tower itself we peered out, taking snaps, asking questions of the length of the runway, the condition of its lights. Satisfied with the airfield, Jimmy handed our Cuban minder a sheet of paper, the details of our training standards guy, explaining that Coup and Hacker would be arriving the next day. We also mentioned the Chinese, now on their way; the Chinese, and our people, would stay two weeks and help set-up the new unit. Not to be outdone by that, the official informed us that when we flew back to the UK their guys would accompany us. They were

falling over themselves to get their unit up and running. If only everything we did was this simple.

It was nice to get back to the beach hotel and just flop about in the surf with Helen. A lot of the time we were like a pair of teenagers, often getting a disapproving look from “Old Man Silo”, as we had started calling him. And it turned out the hotel that we were now staying at was up for sale, owned by a Spanish hotel chain. We made an offer by fax from the UK, accepted immediately. I wondered if we’d be let off paying for the room, then realised that our trip was all part of a package paid upfront. Knowing that Steffan and Lotti desired a change of scene, I brought up the subject with Jimmy. He had no objections, so I rang Kenya; early morning this end, late night their end. They were delighted, the deal done, just as soon as they could recruit new instructors for Kenya.

We enjoyed a relaxing few days diving and sunbathing whilst things at the airfield got moving without us. We ate too much and lounged around, driving back to the airfield a day before our planned departure. What a contrast. Twenty large green tents now stood in a line on the grass behind the tower, two white RF tents from Kenya next to them, two white tents from RF China beside them. A handful of Cuban army jeeps were already painted white, and many white jackets could be seen near the tower. The Cubans recruits, however, we all in green army fatigues for now. Stepping down from the bus, I could see a small army of builders tackling new foundations, as well as repairs of the existing buildings. Hacker and Coup walked out to us.

‘What you doing here, Yank?’ I joked. We shook.

‘Not invading,’ Hacker said, a glance over his shoulder. ‘If Uncle Sam knew I was here...’

‘Were you at the Bay of Pigs?’ I teased.

‘No, fucker.’

‘How’s this lot doing?’ I asked.

‘Keen as hell,’ Coup answered. ‘Anything we want is sorted straight away.’

Jimmy approached, shaking the guys hands. ‘Listen, use the tents for now, but get me the best team of eighty you can for January the first, some Cuban demonstration of skills or parade or other. Send them to the UK, then Kenya, push them along.’

‘That’s only two months,’ Coup warned.

‘I know, just do what you can. This lot are all shit hot anyway.’

‘They look good so far,’ Hacker agreed.

‘I’ve bought some old Hueys from around the region, they’ll be here in a week, so sort some pilots. If this lot deploy to Central America for an earthquake there’ll be Hueys on hand, so they need the exposure. I’ll rent a Hercules or two before Christmas.’

‘What’s the rush?’ Hacker asked.

‘Politics,’ Jimmy carefully mouthed.

‘No need to swear,’ Hacker quipped. ‘How long you down here?’

‘An hour, we’re out tomorrow,’ Jimmy told him.

They gave us the tour, meeting the Chinese instructors, then the Cuban senior staff assigned to the unit, all currently serving army officers or army doctors. A basic assault course had already been constructed, the perimeter fence being attended by builders, and the foundations for numerous buildings were taking root. In the command tent we found large black and white photographs of the facilities at Mapley that Coup had fetched over; seemed these guys were aiming at a straight copy. The Chinese Ambassador put in an appearance, driving out to us with his opposite number in the Cuban Foreign Ministry. We showed them a large diagram of the airfield, discussing various buildings and training areas under construction.

Stood on the tower roof with Helen I remarked, ‘I’ve done this once or twice before.’

‘Mawlini was the first, that picture on the wall in Mac’s office.’

‘Yes, nothing there but three small huts, and lot of hot sand. It’s getting easier though.’

‘We’ll advertise the new hotel through the Pineapple magazine?’

I nodded. ‘Some people visit our places just to tell their friends they’ve been. Still, it makes us money. Now that we’re here, Jimmy says there’ll be a domino effect around Central America.’

‘They’ll want their own RF units.’

‘Yes, and we’ll need to generate some money, it’s getting expensive.’

‘Two million a month at least,’ Helen noted. ‘But the reserves are big, sixty million sat around, a lot of that with Mac and Rudd.’ It seemed to be a question.

I faced her. ‘If anything happens to us, Rescue Force goes on - at least for a while.’

She took a moment. ‘Jimmy won’t tell me what happened between you and me the first time around.’

‘Do you want to know the future? I don’t.’

‘Not the future, how we met and dated.’

‘He said we dated for two years and got married.’ I took a breath. ‘You were sent to snuggle up to him, but got no where, so snuggled up to me instead.’

‘Sounds about right.’

‘And I, apparently, knew all along.’

‘The first time around, you said Jimmy went to Canada – you stayed in London. And died.’

‘He said I would not leave my family, which I also thought was my parents. But he meant you, and the sprogs. But don’t ... ask too many questions in that area, there’s some giant secret he’s keeping. It would be harmful if the “M” Group found out, apparently.’

She faced me squarely. ‘Even if he went to Canada, then back in time, he couldn’t possibly know what he does, or do what he does. There’s something else; telepathy or clairvoyance.’

I took in the airfield. ‘Some things you just have to accept. My own theory is that he can jump back and forth – or they can pull him back and forth. I know he spent ten years odd in China, ten years living in Kenya, another ten in Russia – but when exactly? When did he find the time to do all that?’

‘Do you think he can fix it all?’ she softly asked.

‘He doesn’t think so. He keeps hinting that I’ll come up with a good idea or two.’

‘I think 2025 is a massive earthquake.’

‘Why?’

‘Look where we are, always building up rescue force earthquake rescuers,’ she suggested.

‘Even a million rescuers wouldn’t fix a major quake. And if they did, the world economy is still screwed, so the Brotherhood rise. That’s not solution, that’s a sticking plaster.’

‘If he didn’t have a solution he wouldn’t be here,’ she quietly insisted. We walked down, boarded our bus and thought about the return trip, chilly old Wales.

Anglo-French relationships

With the Welsh weather keeping us all indoors – and Helen now huge, Jimmy announced that the time was right for the French to join “M” Group.

Their President, Chambon, had invited us over within a few days of their Interior Minister visiting. Jimmy politely told them that the time was not right. The invites kept coming, and even a nudge from Sykes and the PM, who were getting some heat from their counterparts. Jimmy finally said he would meet Chambon, at the house, no more than two advisors and two bodyguards. Chambon moved his diary around and jumped on a plane the next day, Jimmy explaining to me that the man had a fascination with the occult, and time travel.

The French delegation flew into Cardiff Airport, where cars from the Foreign Office awaited; they had only to endure a forty-minute drive to us, a police escort cutting its way through the traffic. Helen met the vehicles, fluent in French, and brought the guests inside, chatting about babies. We met them in the dining room, the existing “M” Group stood waiting with Sykes. The French President shook Jimmy’s hand, looking a bit perplexed at the number of people in on the meeting. Helen explained, in French, that they were members of the Magestic Group, surprising our guest, and listed names and countries. By time she had finished Chambon seemed most put out; put out and having been left out up to now. Everyone sat, Helen acting as translator.

‘Welcome to my home,’ Jimmy began. ‘And welcome, also, to the Magestic Group. If you are wondering why the French nation was never invited before this time, then I’ll explain. First, the principal strongest countries were contacted; America, Russia

and China. The UK was involved because I needed their kind assistance on my home turf. Others have not been involved, yet, because of risk of containment, and because it would have served no useful purpose. France was not considered for many reasons, not least your policies in Africa – which we have seen *and felt* first hand. What you may not be aware of, Mister President, is that there have been a dozen attempts on our lives, and on the lives of our people in Africa, all at the hands of French and Belgians, motivated by mining companies. At least, I hope ... it was motivated by mining companies.’

Chambon objected, and denied any involvement.

Jimmy continued, ‘Then I suggest you get a tighter grip on your nationals. Twenty French nationals were caught and interrogated, most of whom turned out to be *agents* of some sort, past or present.’

Chambon seemed annoyed, but controlled it. He insisted that measures had been taken, and would be taken in the future. Then he asked, ‘Your policy in Africa, it is Magestic’s policy?’

‘Yes.’

‘And the long term goal? It seems to be to hand African ore to the Chinese.’

‘In years to come, Islamic extremists will move south from the Sahara and attack the African states. If I had not become involved with those states, they would have fallen at a later date.’

‘The West would surely step in,’ Chambon puzzled.

‘The West, at the time, would be embroiled in World War Three.’ The French stiffened, glancing at each other. Jimmy added, ‘Cause and effect, Mister President. One would not happen without the other. So my efforts in Africa are to strengthen that region, to prepare them for a potential future attack. And the Chinese are best suited to benefit from the ore, whilst offering military assistance when the time is right.’

‘We have a great deal of experience to offer ... in Saharan Africa.’

‘That is true, and we will welcome it. Now that you know what we are trying to achieve, you can assist. And before you ask, I will give you a briefing of the main problems that the world will face between now and 2025. But that briefing will come at a price.’

‘A price?’

‘Do you have a paper and pen?’ Jimmy cheekily nudged. Chambon readied himself. ‘First, I want you to create a Rescue Force unit of fifty people, modelled on the UK unit.’

Chambon smiled. ‘It is already in progress.’

‘Second, I want a small clinic and a nursing college set-up next to our orphanage in Kenya, which will need to be English speaking. It will be your clinic, flying the French flag. Third, I want you to get involved in the student exchange programme, in particular with Russian and Chinese students. Next, I want you to promote tourism to Cuba, not least because it will upset the Americans.’

Chambon glanced at Keely. ‘The French have never upset the Americans,’ he said, less than convincingly. It caused a few smirks.

‘And finally, the most important condition: I want you to join with the Chinese and Russians in opposing any UN Security Council resolution put forwards by the Americans that involves an American attack on Iraq or Afghanistan.’

Chambon eased back and coolly regarded Jimmy. ‘That is a real possibility? War in Iraq?’

‘Yes, and it will lead directly to a global conflict. You *must* make every effort to support General Masoud, no matter how badly he behaves, and to assist their oil development. Oil must flow to keep prices stable, and to build Iraq. If Iraq disintegrates, it’s all over.’

‘All ... over?’ Chambon wanted to clarified.

‘End of the world – all over,’ Jimmy emphasised.

‘Can you ... expand upon that?’ Chambon nudged.

‘I’ll give your people a full three hour briefing. In simple terms, there are a number of key events between now and 2025 that give rise to an Islamic terrorist group called the Brotherhood. If they rise, they will destroy everything, a million suicide bombers sneaking across Europe.’

‘And this 2025?’ Chambon asked.

‘At that date their rise is unavoidable,’ Jimmy coldly stated. ‘You can only prepare for it as best as possible. Even with all the nations represented at this table working together, the chance of success for us is very small. And the chances of the various governments working together is ... slim at best.’

Chambon put his pen down. 'This has not all come about ... just to fail.'

'I say that often,' Helen put in.

'As do we,' Han offered.

Chambon firmly suggested, 'Magestic did not just appear from thin air to lead us towards a failure. I don't accept that.'

'Success in 2025 is easy,' Jimmy began. 'All we need is most of the world's people co-operating with each other, at a time of oil shortages, food shortages, economic strife and global pandemics.' He took in the silent faces. 'When people in America are suffering, they won't care about the Middle East, or Africa. That will give the Brotherhood their foothold. Politicians in Europe will be eyeing their ratings, not throwing lives away to fight in the desert – or to defend Israel. If the Brotherhood rose up tomorrow we would do well. But they won't, they'll rise when we're weak, when our economies are in turmoil, when bellies are empty.'

Chambon looked deflated. 'You are a realist,' he conceded. He sighed. 'Is there a ... route map to avoid those problems?'

'There is, and you'll get it.'

Chambon took a moment. 'You are younger than I would have figured, but with a very old head.'

Jimmy smiled. 'We have been injected with a special drug. In 2025 we'll look just as we do now.'

'Drug? What drug?'

'A drug Magestic designed. It cures all diseases known to man.'

Chambon glanced at the "M" Group, angered. 'And you all knew of this drug?'

Keely said, 'It's no miracle cure, and so far our scientists can't make head or tail of it.'

'Neither can ours,' Han and Ivan put in.

Jimmy said, 'At the moment, the only way I know to reproduce it is through direct blood to blood transfer, which could not be explained to the public – or used for large scale inoculations.'

'And they're side effects,' Keely put in.

'Side effect?' Chambon questioned.

Keely explained, 'Increased appetite; in healthy people, rapid weight gain is a problem. And because you'd be much healthier,

obese people would not get heart disease or diabetes. If you used it on a wide population you'd have healthy thirty-stone people not able to get out their front doors. But the one good thing is the high metabolism. If someone cannot eat for five days, they'd lose twenty stone quickly.'

Chambon puzzled that. 'Then why was it developed?'

Jimmy said, 'After the various governments have figured it out there'll be a few pandemics, not before. The inoculations will be ready in time; ten years.'

Keely put in, 'We're terrified of it - if it got out. Our population is already heading towards unhealthy oblivion. With this, we'd bankrupt our health insurers.'

Dave Gardener offered, 'Israel will co-operate with you, we can hand you what we already know. It will save you a few years, if we can enter into a joint venture.'

I cocked an eyebrow at that, Jimmy not reacting. Chambon offered Dave his thanks.

Jimmy said, 'You'll then be at a point in this process where our activities do not disadvantage France.'

'And ... Germany?' Chambon posed with a wave of his hand.

'Will suffer no particular problems in the years ahead, no wars, no crisis. My only criticism of them ... is a lack of interest in world affairs, because of their history. They need to move beyond it and to re-arm. And in answer to your real question, if you discuss what we've told you with them, then you *will not* join this group or get further assistance. The dissemination of that information is not something to be taken lightly - European partners or not. If this group is exposed, then we may well see a global conflict prior to 2025. By displaying loyalty to the Germans, or others, you risk the planet.'

'Will the detail of this group be made public in the future?' Chambon asked.

'Yes, around 2010. But not by choice.'

'Not by choice?' Chambon queried.

'There will be a number of disasters. In order to save a lot of lives we'll have to risk exposure - and warn people in advance. It's difficult to warn people ... of a pending earthquake.'

'Why tell people?'

'Why tell *yourselves* ... when we could have endured further assassination attempts?' Jimmy testily asked. 'Because it's

necessary. And because I won't sit back and watch millions die when I can help.' Chambon was about to say something, but Jimmy cut him off. 'There will be devastating earthquakes in Italy and Greece. Are you saying that we should not warn them?'

Silence gripped the table.

'It is a ... difficult scenario,' Chambon finally admitted.

'Which is why *I'll* decide, and not by vote.'

'You?' Chambon queried.

'Me,' Jimmy firmly stated. 'Because the nations represented here could never reach a consensus. So I'll decide, and I'll take the risk of being condemned by all sides.' He pointed directly at Chambon. 'What would the Europeans do to you, if you knew of a massive earthquake about to hit Athens – yet did nothing and millions died.'

Chambon lowered his gaze for a moment. 'I expect I would face the guillotine.' He raised his head and took in the faces. 'Will ... Athens be struck?'

'Yes, and Italy.'

'How will you warn them?'

'Between now and then I'm going to develop earthquake prediction software, and I'll have some spectacular successes. I'll warn the people months ahead of time.'

'This ... software?' Chambon puzzled.

'Won't work, its results will be fiddled.'

'Ah, I see. And Rescue Force?'

'Is under my control,' Jimmy pointed out with a false smile.

Chambon smiled and nodded. 'A beautiful symmetry. Bravo, Mister Silo, bravo. You know, I have studied your life and work, and a lot more makes sense now, especially Kenya and the Congo. We considered many things, and many angles. With the knowledge you have you could make a lot of money, yet you ask us for clinics and medics, and give all your money to charity – notwithstanding this house. One of our best people referred to your *position* ... as the greatest gift. I think I know otherwise. It is no gift, it is a curse – a very great burden you carry around. To be chosen for this burden, you must have a strength of character beyond anything of the rest of us in this room.'

Jimmy took a moment. 'You're not as stupid as your newspapers suggest, Mister President. But remember always, the motto of Rescue force: fools and heroes. It's a fool who rushes in

to save lives, only a hero afterwards. You may consider me the well meaning fool ... till 2025 judges my efforts.'

A week later the French liaison to the "M" Group arrived. Jimmy had resisted all attempts to have one here, there were even raised voices with the Prime Minister and Sykes. People thought that Jimmy did not trust the French, but he was not being very forthcoming about his reasons, and objections. With the person in question on their way, he was moody and quiet, avoiding the gym, and evening meals with the others.

On the day of the liaison's arrival I walked out to the car, passing Big Paul coming in shaking his head and smirking. I opened the car door, finding a lady just finishing a mobile call. A lady!

She stepped down, and I smiled from one ear to the other like a grinning idiot. 'Is ... something wrong?' she asked in a delightfully sexy accent.

'Everything, and nothing.'

She puzzled that with a frown as I led her inside.

Helen came around the corner and stopped dead. 'Oh ... my... god.' She turned around and scampered off.

'Am I not welcome here?' the lady unhappily asked.

'It's not that. My fiancé ... she's pregnant, so a bit loopy. Don't bother about it.' I was still smiling like an idiot. 'What's your name?'

'Michelle.'

'Follow me, Michelle.' I led her down to the lounge, where I knew Jimmy was sat with some of the "M" Group guys.

Keely stepped out and halted, soon smiling widely, too widely as he walked past. Michelle watched him go. 'I was told you would co-operate!'

'Please, wait here.' I stepped into the lounge, still with a huge grin, catching the looks of the guys.

Jimmy looked glumly up at me. 'Fuck ... right ... off!'

'The, er, the French liaison is here,' I reported, the guys puzzling my expression. 'Michelle!' I called.

She stepped in, the guys standing.

'Oh dear,' Jack said, just loud enough for her to hear.

Han shook her hand. 'Welcome to the house, and to the "M" Group, on behalf of the People's Republic.'

Jack shook her hand. 'Welcome on behalf of the British Government.'

Jimmy was still sat as I walked out.

In the office Helen quietly said, 'My god!'

'I know.'

'They can't get away with that, it's outrageous!'

'Yeah,' I teased. 'Not something UK intelligence agencies would do.'

She slapped my arm.

'What is it?' Sharon puzzled.

'The new French liaison,' Helen explained. 'She's stunning, and a dead ringer for Jimmy's ex, Liz.'

'Oh, hell,' Sharon let out.

I led Helen outside, the two of us giggling like teenagers. I lifted my mobile and selected the PM's office. 'It's Paul Holton. Is His Majesty in? Yes, it's important.'

'Paul?'

'Mister Prime Minister, small problem. The French liaison is here.'

'So?'

'She's a she, a stunner, and a dead ringer for Jimmy's ex.'

'What? They're sent a honey trap? Cheeky blighters!'

'I'd suggest you avoid the big guy for a while, a year or two.'

'Christ. Let me know if it goes pear shaped.'

'I'm sure he'll take one for the national interest.' I hung up laughing.

Jimmy stared up at her for a long time, then stood. 'Follow me, Michelle.'

He led her to his private apartment, which she questioned on entry, not least its small size. He opened a cabinet and retrieved an A4 colour photograph.

Handing it over, he told her, 'They sent *you* ... because you look just like my ex-girlfriend.'

She studied the photograph. 'My god, I do look like her.'
